EDINBURGH: T. & T. CLARK
1910

PREFACE

BESIDES general books of reference, every one must now possess a work of reference covering the whole field of his own special studies with sufficient fullness. This Encyclopædia will cover the field of Religion and Ethics, the most widely interesting and the most important of all departments of thought.

1. The articles are written by those who have made a special study of their subject, and are recognized as most competent to write upon it. Attention is given to grace of style, so that the articles may be read with pleasure as well as relied upon for accuracy and insight.

2. The articles are full enough to give the reader a good working acquaintance with their subject; and to each article is added a select bibliography for the use of those who wish to pursue the subject further.

3. The range of the Encyclopædia is well defined. Religion and Ethics can no longer be studied separately with any profit. They are accordingly dealt with together; but each topic, whether religious or ethical, or both, will be found under its own appropriate title. The Encyclopædia will contain an account of all beliefs and customs which belong to Religion or Ethics throughout the world. It will also contain articles on the religions themselves, or on the nations professing them. And when a belief or custom belongs to more religions than one, or is found in more than one place, it will often be described in a series of articles, each article being written by a scholar of the particular religion or country.

4. Much attention is given to social topics which have an ethical or religious aspect.

5. The Encyclopædia includes some account of such persons and places as are important in the history of Religion and Ethics.

In issuing the second volume of the Encyclopædia of Religion and Ethics, the Editor desires to acknowledge with thankfulness the generous reception that has been given to the first volume.

The difficulties of the task have been recognized, but it has been acknowledged, and that most handsomely in the reviews of greatest weight, that these difficulties have been successfully overcome, and that (in the words of the Harvard Review) 'the Encyclopædia will be indispensable to the student of any part of its wide field.'

AUTHORS OF ARTICLES IN THIS VOLUME

ABRAHAMS (ISRAEL), M.A. (Lond. and Camb.).
Reader in Talmudic and Rabbinic Literature in the University of Cambridge; formerly Senior Tutor in the Jews' College, London; editor of *The Jewish Quarterly Review*.
Blasphemy (Jewish), Body (Hebrew).

Axe.

ROYCE (JOSIAH), Ph.D., LL.D.
Professor of the History of Philosophy in Harvard University; Gifford Lecturer at the University of Aberdeen, 1898–1900.
Axiom.

SANDAY (WILLIAM), D.D., Hon. D.D. (Edin., Durham, and Göttingen), Hon. LL.D. (Dublin), Hon. Litt.D. (Camb.).
Lady Margaret Professor and Canon of Christ Church, Oxford; Chaplain in Ordinary to H.M. the King; Fellow of the British Academy.
Bible.

SAYCE (ARCHIBALD HENRY), Hon. D.Litt. (Oxon.), LL.D. (Dublin), Hon. D.D. (Edin. and Aberd.).
Fellow of Queen's College and Professor of Assyriology in the University of Oxford; President of the Society of Biblical Archæology.
Bull (Semitic).

SCHILLER (FERDINAND CANNING SCOTT), M.A., D.Sc. (Oxon.).
Fellow and Senior Tutor of Corpus Christi College, Oxford; author of *Studies in Humanism* (1907), *Plato or Protagoras* (1908).
Automatism.

SCHRADER (Dr. OTTO).
Ordentlicher Professor für vergleichende Sprachforschung an der Universität zu Breslau; author of *Prehistoric Antiquities of the Aryan Peoples*.
Aryan Religion, Blood-Feud (Aryan, Slavonic).

SCOTT (DAVID RUSSELL), M.A. (Edin.), B.A. (Oxon.).
Congregational Minister at Montrose; late Pusey and Ellerton Scholar in the University of Oxford, and Assistant Lecturer in New Testament Greek at Mansfield College.
Boldness.

SHAW (CHARLES GRAY), Ph.D.
Professor of Philosophy in the University of New York; author of *Christianity and Modern Culture*, *The Precinct of Religion*.
Being.

SHOWERMAN (GRANT), Ph.D.
Professor of Latin in the University of Wisconsin; Fellow in the American School of Classical Studies at Rome, 1898–1900; Acting Secretary of the Wisconsin Branch of the Archæological Institute of America.
Attis.

SIEG (EMIL), Dr.Phil.
Ordentlicher Professor des Sanskrit und der vergleichenden indogermanischen Sprachwissenschaft in Kiel.
Bhrigu.

SIMPSON (JAMES YOUNG), M.A., D.Sc., F.R.S.E.
Professor of Natural Science in New College, Edinburgh.
Biology.

SMITH (GEORGE ARMITAGE), M.A., D.Lit.
Principal of Birkbeck College, London; formerly Dean of the Faculty of Economics in the University of London.
Barter.

SMITH (VINCENT ARTHUR), M.A.
Of the Indian Civil Service (retired); author of *Asoka* in 'Rulers of India,' *Early History of India*.
Asoka, Benares.

SÖDERBLOM (NATHAN), D.D. (Paris and Geneva).
Élève diplômé de l'École des Hautes Études; Professor of the University of Upsala; Member of the Chapter of Upsala; Prebendary of Holy Trinity in Upsala.
Asceticism (Persian).

SPENCE (LEWIS).
London; author of *Mythologies of Ancient Mexico and Peru*, *The Popol Vuh*.
Brazil.

STARBUCK (EDWIN DILLER), Ph.D.
Professor of Philosophy in the State University of Iowa; author of *The Psychology of Religion*.
Backsliding.

STEWART (HUGH FRASER), B.D.
Fellow, Dean, and Lecturer, St. John's College, Cambridge.
Baptism by Blood.

STONE (DARWELL), M.A.
Pusey Librarian, Oxford; author of *A History of the Doctrine of the Holy Eucharist*.
Berengar.

SUFFRIN (A. E.), M.A. (Oxon.).
Vicar of Waterlooville, Hants.
Asceticism (Jewish).

SUTHERLAND (Major W. D.).
Akola, Berar.
Birth (Hindu, popular).

TEMPLETON (THOMAS), M.A. (Edin.).
Minister of Panmure Street Congregational Church, Dundee.
Boys' Brigades.

THOMAS (NORTHCOTE WHITRIDGE).
Élève diplômé de l'École pratique des Hautes Études; Corresponding Member of the Société d'Anthropologie de Paris; Member of Council of the Folklore Society; author of *Thought Transference, Kinship Organization and Group Marriage in Australia.*
Australia.

THOMSON (J. ARTHUR), M.A.
Regius Professor of Natural History in the University of Aberdeen; author of *The Study of Animal Life, The Science of Life, Outlines of Zoology, Heredity, The Bible of Nature.*
Atavism, Biogenesis.

THURSTON (HERBERT), B.A., S.J.
Joint-Editor of the Westminster Library for Priests and Students; author of the *Life of St. Hugh of Lincoln, The Holy Year of Jubilee, The Stations of the Cross.*
Bulls and Briefs.

TOD (DAVID MACRAE), M.A., B.D. (Edin.).
Minister of St. James' Presbyterian Church, Huddersfield; formerly Cunningham Fellow, New College, Edinburgh.
Avarice.

UPTON (CHARLES BARNES), B.A., B.Sc. (Lond.).
Emeritus Professor of Philosophy in Manchester College, Oxford; author of Hibbert Lectures on *The Bases of Religious Belief,* and of the philosophical portion of *Life and Letters of James Martineau.*
Atheism and Anti-theistic Theories.

WADDELL (L. AUSTINE), C.B., C.I.E., LL.D., F.L.S., F.R.A.I., Lt.-Colonel, I.M.S.
Professor of Tibetan in University College, London; author of *The Buddhism of Tibet, Lhasa and its Mysteries.*
Atisa, Bhutan (Buddhism in).

WALSHE (W. GILBERT), M.A.
Secretary of the Christian Literature Society for China.
Birth (Chinese).

WARFIELD (BENJAMIN BRECKINRIDGE), D.D., LL.D.
Professor of Didactic and Polemic Theology in the Theological Seminary of the Presbyterian Church in the U.S.A. at Princeton, New Jersey.
Augustine.

WEBSTER (WENTWORTH), M.A.
Late of Sare, par St. Jean de Luz, Basses-Pyrénées.
Basques.

WESTERMARCK (EDWARD ALEXANDER), Ph.D.
Martin White Professor of Sociology in the University of London; Professor of Moral Philosophy at the University of Helsingfors, Finland; author of *The History of Human Marriage, The Origin and Development of the Moral Ideas.*
Asylums.

WHITEHEAD (BENJAMIN), B.A.
Barrister-at-law; author of *Church Law.*
Brawling.

WILSON (GEORGE R.), M.D., M.R.C.P. (Edin.).
Late Medical Superintendent of Allanton House; author of *Drunkenness, Vice, and Insanity.*
Athletics.

WOOD (HERBERT G.), M.A.
Fellow, and Lecturer in History, of Jesus College, Cambridge.
Baptism (Later Christian).

WOODHOUSE (WILLIAM J.), M.A.
Professor of Greek in the University of Sydney, New South Wales.
Atimia.

WORKMAN (HERBERT B.), M.A., D.Lit.
Principal of Westminster Training College; Member of the Board of Studies in the Faculty of Theology, London University; author of *The Dawn of the Reformation, The Letters of John Hus, Persecution in the Early Church.*
Bernard of Clairvaux.

ZIMMERN (HEINRICH), Ph.D.
Professor of Oriental Languages in the University of Leipzig; author of *Grammatik der Semitischen Sprachen*; joint-editor of *Die Keilinschriften und das Alte Testament,* and of *Hebräisches und Aramäisches Wörterbuch über das Alte Testament.*
Babylonians and Assyrians.

ZÖCKLER (OTTO), Ph.D., Th.D.
Late Professor of Church History and Apologetics in the University of Greifswald; author of *Kritische Geschichte der Askese.*
Asceticism (Christian).

CROSS-REFERENCES

In addition to the cross-references throughout the volume, the following list of minor references may be useful:

Topic.	Probable Title of Article.
Artemis	Greek Religion.

Book of Common Prayer	Prayer (Chr.).
Book of Covenants	Mormonism.
Book of the Dead	Egyptian Religion.
Botocudos	Brazil.
Bo-tree	Trees.
Boy-Bishop	Abbot of Unreason.
Brahma Sampradayis	Madhavacharis
Broad Church	Church of England.
Buceros	Animals.
Buchanites	Sects (Chr.).
Buffalo	Animals.

SCHEME OF TRANSLITERATION

I. HEBREW

CONSONANTS

'	א	l	ל
b, bh	ב	m	מ
g, gh	ג	n	נ
d, dh	ד	s	ס
h	ה	'	ע
v, w	ו	p, ph	פ
z	ז	ṣ	צ
ḥ or ch	ח	q or ḳ	ק
ṭ	ט	r	ר
y or j	י	ś, sh	שׂ שׁ
k, kh	כ	t, th	ת

VOWELS

Short.		Long and Diphthongal.		Sh^{e}vas.		
a	◌ַ	ā	◌ָ	ă	◌ֲ	Composite sh^{e}vas.
e	◌ֶ	ē, ê	◌ֵ, ◌ֵי	ĕ	◌ֱ	
i	◌ִ	ī	◌ִ, ◌ִי	ŏ	◌ֳ	
o	◌ָ	ō, ô	◌ֹ, וֹ	^{e}	◌ְ	(simple sh^{e}va).
u	◌ֻ	û	◌ֻ, וּ			

II. ARABIC

CONSONANTS

'	أ	ḍ	ض
b	ب	ṭ	ط
t	ت	ẓ	ظ
th	ث	'	ع
j	ج	gh	غ
ḥ	ح	f	ف
ḫ	خ	q	ق
d	د	k	ك
dh	ذ	l	ل
r	ر	m	م
z	ز	n	ن
s	س	h	ه
sh	ش	v, w	و
ṣ	ص	y	ي

II. ARABIC—*continued*

VOWELS

Short.		Long.		Diphthong.	
a	َ	ā	ـَا	ai	ـَى
i	ِ	ī	ـِى	au	ـَو
u	ُ	ū	ـُو		

III. PERSIAN AND HINDUSTANI[1]

The following in addition to the Arabic transliteration above

p	پ	z̤	ذ
ṭ	ٹ	ṛ	ڑ
s̤	ث	zh	ژ
ch	چ	ẓ	ض
ḍ	ڈ	g	گ

[1] The diacritical marks in this scheme are sometimes omitted in transliteration when absolute accuracy is not required, the pronunciation of s̤ being the same as that of s, while z, z̤, ẓ, are all pronounced alike.

IV. SANSKRIT

CONSONANTS

Gutturals—k, kh; g, gh; ṅ (=ng in finger).
Palatals—ch (=ch in church), chh; j, jh; ñ (=n in onion).
Cerebrals—ṭ, ṭh; ḍ, ḍh; ṇ (a sound peculiar to India).
Dentals—t, th; d, dh; n (=n in not).
Labials—p, ph; b, bh; m.
Semi-vowels—y; r; l; v.
Sibilants—ś or sh; ṣ or sh; s.
Aspirate—h.

anunāsika (ँ); anusvāra, ṁ; visarga, ḥ; avagraha (').

VOWELS

Simple.	Diphthongal.
a ā or â	e āi
i ī or î	o āu
u ū or û	
ṛ ṝ	
ḷ	

LISTS OF ABBREVIATIONS

I. General

A.H. = Anno Hijrae (A.D. 622).
Ak. = Akkadian.
Alex. = Alexandrian.
Amer. = American.
Apoc. = Apocalypse, Apocalyptic.
Apocr. = Apocrypha.
Aq. = Aquila.
Arab. = Arabic.
Aram. = Aramaic.
Arm. = Armenian.
Ary. = Aryan.
As. = Asiatic.
Assyr. = Assyrian.
AT = Altes Testament.
AV = Authorized Version.
AVm = Authorized Version margin.
A.Y. = Anno Yazdigird (A.D. 639).
Bab. = Babylonian.
c. = *circa*, about.
Can. = Canaanite.
cf. = compare.
ct. = contrast.
D = Deuteronomist.
E = Elohist.
edd. = editions or editors.
Egyp. = Egyptian.
Eng. = English.
Eth. = Ethiopic.
EV = English Version.
f. = and following verse or page: as Ac $10^{34f.}$
ff. = and following verses or pages: as Mt $11^{28ff.}$
Fr. = French.
Germ. = German.
Gr. = Greek.
H = Law of Holiness.
Heb. = Hebrew.
Hel. = Hellenistic.
Hex. = Hexateuch.
Himy. = Himyaritic.
Ir. = Irish.
Iran. = Iranian.
Isr. = Israelite.
J = Jahwist.
J" = Jehovah.
Jerus. = Jerusalem.
Jos. = Josephus.
LXX = Septuagint.
Min. = Minæan.
MSS = Manuscripts.
MT = Massoretic Text.
n. = note.
NT = New Testament.
Onk. = Onkelos.
OT = Old Testament.
P = Priestly Narrative.
Pal. = Palestine, Palestinian.
Pent. = Pentateuch.
Pers. = Persian.
Phil. = Philistine.
Phœn. = Phœnician.
Pr. Bk. = Prayer Book.
R = Redactor.
Rom. = Roman.
RV = Revised Version.
RVm = Revised Version margin.
Sab. = Sabæan.
Sam. = Samaritan.
Sem. = Semitic.
Sept. = Septuagint.
Sin. = Sinaitic.
Skr. = Sanskrit.
Symm. = Symmachus.
Syr. = Syriac.
t. (following a number) = times.
Talm. = Talmud.
Targ. = Targum.
Theod. = Theodotion.
TR = Textus Receptus.
tr. = translated or translation.
VSS = Versions.
Vulg. = Vulgate.
WH = Westcott and Hort's text.

II. Books of the Bible

Old Testament.

Gn = Genesis.
Ex = Exodus.
Lv = Leviticus.
Nu = Numbers.
Dt = Deuteronomy.
Jos = Joshua.
Jg = Judges.
Ru = Ruth.
1 S, 2 S = 1 and 2 Samuel.
1 K, 2 K = 1 and 2 Kings.
1 Ch, 2 Ch = 1 and 2 Chronicles.
Ezr = Ezra.
Neh = Nehemiah.
Est = Esther.
Job.
Ps = Psalms.
Pr = Proverbs.
Ec = Ecclesiastes.
Ca = Canticles.
Is = Isaiah.
Jer = Jeremiah.
La = Lamentations.
Ezk = Ezekiel.
Dn = Daniel.
Hos = Hosea.
Jl = Joel.
Am = Amos.
Ob = Obadiah.
Jon = Jonah.
Mic = Micah.
Nah = Nahum.
Hab = Habakkuk.
Zeph = Zephaniah.
Hag = Haggai.
Zec = Zechariah.
Mal = Malachi.

Apocrypha.

1 Es, 2 Es = 1 and 2 Esdras.
To = Tobit.
Jth = Judith.
Ad. Est = Additions to Esther.
Wis = Wisdom.
Sir = Sirach or Ecclesiasticus.
Bar = Baruch.
Three = Song of the Three Children.
Sus = Susanna.
Bel = Bel and the Dragon.
Pr. Man = Prayer of Manasses.
1 Mac, 2 Mac = 1 and 2 Maccabees.

New Testament.

Mt = Matthew.
Mk = Mark.
Lk = Luke.
Jn = John.
Ac = Acts.
Ro = Romans.
1 Co, 2 Co = 1 and 2 Corinthians.
Gal = Galatians.
Eph = Ephesians.
Ph = Philippians.
Col = Colossians.
1 Th, 2 Th = 1 and 2 Thessalonians.
1 Ti, 2 Ti = 1 and 2 Timothy.
Tit = Titus.
Philem = Philemon.
He = Hebrews.
Ja = James.
1 P, 2 P = 1 and 2 Peter.
1 Jn, 2 Jn, 3 Jn = 1, 2, and 3 John.
Jude.
Rev = Revelation.

III. For the Literature

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

Baethgen = *Beiträge zur sem. Religionsgesch.*, 1888.
Baldwin = *Dict. of Philosophy and Psychology*, 3 vols. 1901–1905.
Barth = *Nominalbildung in den sem. Sprachen*, 2 vols. 1889, 1891 (2nd ed. 1894).
Benzinger = *Heb. Archäologie*, 1894.
Brockelmann = *Gesch. d. arab. Litteratur*, 2 vols. 1899–1902.
Bruns-Sachau = *Syr.-Röm. Rechtsbuch aus dem fünften Jahrhundert*, 1880.
Budge = *Gods of the Egyptians*, 2 vols. 1903.
De la Saussaye = *Lehrbuch der Religionsgesch.*^{3}, 1905.
Deussen = *Die Philos. d. Upanishads*, 1899 [Eng. tr., Edin. 1906].
Doughty = *Arabia Deserta*, 2 vols. 1888.
Grimm = *Deutsche Mythologie*^{4}, 3 vols. 1875–1878, Eng. tr. *Teutonic Mythology*, 4 vols. 1882–1888.
Hamburger = *Realencyclopädie für Bibel u. Talmud*, i. 1870 (^{2}1892), ii. 1883, suppl. 1886, 1891 f., 1897.
Holder = *Altceltischer Sprachschatz*, 1891 ff.
Holtzmann-Zöpffel = *Lexicon f. Theol. u. Kirchenwesen*^{2}, 1895.
Howitt = *Native Tribes of S. E. Australia*, 1904.
Jastrow = *Die Religion Bab. u. Assyriens*, 2 vols. 1905–.
Jubainville = *Cours de Litt. Celtique*, i.–xii., 1883 ff.
Lagrange = *Études sur les religions Sémitiques*^{2}, 1904.
Lane = *An Arabic English Dictionary*, 1863 ff.
Lang = *Myth, Ritual and Religion*^{2}, 2 vols. 1899.
Lepsius = *Denkmäler aus Ægypten u. Æthiopien*, 1849–1860.
Lichtenberger = *Encyc. des sciences religieuses*, 1876.
Lidzbarski = *Handbuch der nordsem. Epigraphik et Ephemeris*, 1898.
McCurdy = *History, Prophecy, and the Monuments*, 2 vols. 1894–1896.
Muir = *Sanskrit Texts*, 1858–1872.
Muss-Arnolt = *A Concise Dict. of the Assyrian Language*, 1894 ff.
Nowack = *Lehrbuch d. Heb. Archäologie*, 2 vols. 1894.
Pauly-Wissowa = *Realencyc. der classischen Altertumswissenschaft*, 1894.
Perrot-Chipiez = *Hist. de l'Art dans l'Antiquité*, 1881 ff.
Preller = *Römische Mythologie*, 1858.
Réville = *Religion des peuples non-civilisés*, 1883.
Riehm = *Handwörterbuch d. bibl. Altertums*^{2}, 1893–1894.
Robinson = *Biblical Researches in Palestine*^{2}, 1856.
Roscher = *Lex. d. Gr. u. Röm. Mythologie*, 1884.
Schenkel = *Bibel-Lexicon*, 5 vols. 1869–1875.
Schürer = *GJV*^{3}, 3 vols. 1898–1901 [*HJP*, 5 vols. 1890 ff.].
Schwally = *Leben nach dem Tode*, 1892.
Siegfried-Stade = *Heb. Wörterbuch zum AT*, 1893.
Smend = *Lehrbuch der alttest. Religionsgesch.*^{2}, 1899.
Smith (G. A.) = *Historical Geography of the Holy Land*^{4}, 1896.
Smith (W. R.) = *Religion of the Semites*^{2}, 1894.
Spencer (H.) = *Principles of Sociology*^{3}, 1885–1896.
Spencer-Gillen^{a} = *Native Tribes of Central Australia*, 1899.
Spencer-Gillen^{b} = *Northern Tribes of Central Australia*, 1904.
Swete = *The OT in Greek*, 3 vols. 1893 ff.
Tylor (E. B.) = *Primitive Culture*^{3}, 1891 [^{4}1903].
Ueberweg = *Hist. of Philosophy*, Eng. tr., 2 vols. 1872–1874.
Weber = *Jüdische Theologie auf Grund des Talmud u. verwandten Schriften*^{2}, 1897.
Wiedemann = *Die Religion der alten Ægypter*, 1890 [Eng. tr., revised, 'Religion of the Egyptians,' 1897].
Wilkinson = *Manners and Customs of the Ancient Egyptians*, 3 vols. 1878.
Zunz = *Die gottesdienstlichen Vorträge der Juden*^{2}, 1892.

2. Periodicals, Dictionaries, Encyclopædias, and other standard works frequently cited.

AA = Archiv für Anthropologie.
AAOJ = American Antiquarian and Oriental Journal.

ENCYCLOPÆDIA

OF

RELIGION AND ETHICS

ARTHUR, ARTHURIAN CYCLE.—The Arthurian cycle is a body of legend that has grown up around the name of the British hero, Arthur. There appears to be no reason for doubting that Arthur was one of the leaders of the Britons against the English in the 6th cent. A.D., but nothing further concerning him can be stated with certainty. Among the Britons themselves legends appear to have readily attached themselves to his name, as they did to the names of other British heroes, while to the original Arthurian legend itself legends of other heroes became appended, so that in the Middle Ages the Arthurian cycle of romance had attained an extraordinary development. In France, especially, the cycle was the successor in popularity to that of Charlemagne, and, like other legends, either in France or in Britain, it was combined with certain legendary narratives of the Church to form the story of the finding of the Holy Grail, the Cup from which Christ drank at the Last Supper.

The name Arthur is Brythonic (the Celtic tongue of the Britons), a language which came later to be differentiated into Welsh, Breton, and Cornish. Though Brythonic in form, the name Arthur is probably borrowed from Latin, like many other Brythonic names, such as Urien (Urbigena), Owein (Eugenius), Geraint (Gerontius), Padarn (Paternus), Emrys (Ambrosius), Custennin (Constantinus), Rhufawn (Romanus), Anarawd (Honoratus), Rhystud (Restitutus).* The Latin original of Arthur is Artorius, a name found in Greek letters in Clement of Alexandria, and at Khamisa in an inscription dedicated to the goddess Noreia by G. Artorius Tertullus. Another form of it is probably Artūrius, found in Juvenal (*Sat.* iii. 29). The later Latinised form Arturus or Arthurus and the Irish Artur are based on the British form, and of this the French form Artus and the Italian Artù are also corruptions. In Wales the name Arthur does not appear to have been common, but there is an example of it in the *Book of Llan Dâv* (Oxf. 1893, pp. 77 and 183) and also in one of the pedigrees, as that of Arthur, father of Noe or Nouy (also written Nougoy), a member of the royal line of Dyfed (Demetia). In the Oseney Charter of 1129 the name Gaufridus Arturus (probably Geoffrey of Monmouth) occurs as that of one of the witnesses. The fact that the name Arthur is a genuine phonetic derivative of a real, though rare, Latin name is strong evidence of its authenticity, and the probability is that it was preserved, like other Welsh names of the Saxon period, in some genealogy or rudimentary chronicle, such as the nucleus of Nennius, which Prof. Zimmer (in his *Nennius Vindicatus*) thinks was composed at Dumbarton or Carlisle.

Attempts have been made from the evidence of Arthurian place names to determine the region of Britain with which Arthur was most closely associated; but, in spite of the researches of Mr. Stuart-Glennie (author of *Arthurian Localities*) and others, it cannot be said that these attempts have been successful, inasmuch as the later popularity of Arthur led to the naming of many places after him. The oldest indications make it probable that, like other prominent post-Roman Britons, he came from the zone of the North. Certain ruling families of Wales, such as those of Coel, Cunedda Wledig, and Cynfarch, maintained even into mediæval times the tradition (supported by Nennius) that they were settlers in Wales from the North, and styled themselves in their pedigrees 'The Men of the North' (for the northern associations of the Arthurian and kindred legends see the writer's articles in the *Celtic Review* for Oct. 1907 and Jan. 1908 on 'Wales and the Ancient Britons of the North'). The northern zones in question appear to be two: (1) that of Caer Alclud (Dumbarton), and (2) that of Dineiddin (Edinburgh). In an early stratum of Arthurian legend Arthur seems to be closely associated with Caw o Brydyn (Caw of Pictland), the father of Gildas and Aneirin (a Welsh poet), and of many of the saints of Anglesey. In the 12th cent. *Life of Gildas*, Arthur is represented as making war against Hueil, king of Scotland, one of the sons of this Caw. How early the name of Arthur came to be associated with the local legends of Wales it is hard to say, but it is significant that the name of one of Arthur's closest companions, from the very first appearance of the legend in the Welsh literature, is that of Cai (the Sir Kay of the Romances), whose name is found in that of Caer Gai, near Bala in North Wales, a place also known as Caer Gynyr, after the name of Cai's father Cynyr. An old Welsh poem which survives in the *Red Book of Hergest* mentions a *Ffynnon Vedwyr* ('the Spring of Bedivere'), but its locality is unknown. Through its entry into local legend in Wales and in other parts of the Brythonic world, the name of Arthur became attached to the characteristic stories of Celtic folklore, of which numerous examples are given by Professor Sir John Rhys in his *Celtic Folklore, Welsh and Manx* (1901), notably to those of the Other World, a type in which the folklore of Celtic countries abounds. It is not necessary to suppose that the names which that

* In this art. the spelling of Celtic names follows that now generally adopted by Celtic scholars, except in a few cases, where the actual spelling of the mediæval documents has been retained.

of Arthur may have supplanted in such stories bore any resemblance to it in sound or derivation.

In dealing with the Arthurian cycle, it will be convenient to give its place, first, in the tradition found in Cymric literature; secondly, in the Chronicles; and, thirdly, in the Romances.

1. Arthur in Cymric tradition.—The chief MSS in which fragments of this tradition are to be found are: (1) *The Black Book of Carmarthen* (verse, 12th cent.), (2) *The Book of Aneirin* (verse, 13th cent.), (3) *The Book of Taliessin* (verse, early 14th cent.), (4) *The White Book of Rhydderch* (prose, 14th cent.), and (5) *The Red Book of Hergest* (prose and verse, late 14th and 15th cents.). *The Triads of Arthur and his Men*, which are found in a Hengwrt MS of the 13th cent., are also important, as showing with what other legendary cycles that of Arthur was then, and probably earlier, associated in Wales. A considerable amount of the matter contained in the MSS, especially in the case of the oldest poetry, is older than the period of the MSS themselves. The Cymric tradition has many affinities with that of Geoffrey of Monmouth, but it has many features which are quite independent of Geoffrey, and which show that, while Geoffrey in some points borrowed from it, he either neglected or was ignorant of certain other important portions of it.

Of those above named, the MS which gives the clearest indication of containing pre-Norman matter is the *Book of Aneirin* (now in the Cardiff Free Library), since in one of its poems the scribe, in the course of copying a poem called *Gorchan Maelderw*, departed from his usual practice of changing the orthography into that of his own time, and copied that of his archetype practically unmodified, thus showing that this archetype was written in a style of spelling in many points identical with that of the pre-Norman glosses of Wales. In this clearly pre-Norman poem the name of Arthur occurs in the words 'bei ef arthur' ('even if he were Arthur'). The poem in question is practically identical in many of its lines with the *Gododin*, which forms the main portion of the MS, and thus suggests that the name of Arthur was held in high respect in the zone of poetry to which the *Gododin* belongs. This zone is essentially one composed in praise of the family of Cynfarch, to which Cynon ab Clydno Eiddin, the chief hero of the *Gododin*, belonged, and also Urien Rheged, whose son Owein is the original of Chrétien de Troyes's *Yvain*. With this family was associated the poet Llywarch Hen, and Elphin, the friend of Taliessin, and other heroes, whose names with brief records of their memory are given in the *Gododin* in connexion with the battle of Cattraeth (one of the famous battles of Welsh bardic tradition), in which they were said to have taken part. From all indications, the historical stock-in-trade of the Welsh bards seems to have contained short lists of famous battles, such as Cattraeth, Gwenystrad, Argoed Llwyfain, Badon, and Camlan. The two last were among the chief battles of the Arthurian tradition. In Welsh, as in other legend, the prominent heroes of one period tended to sink into the background of action in that of a later date, or else to survive as vaguely imposing figures, present, as it were, behind the scenes. Cynon ab Clydno Eiddin, Caw of Pictland, and Brychan Brycheiniog are names of this type in Welsh mediæval literature, while in the Cymric Arthurian tradition Arthur's warriors undoubtedly play a much more active part in the story than he does himself. This fact has often been wrongly interpreted as implying that the legend of Arthur himself was not in any way developed in Wales (a view which, in face of the significant allusions to Arthur in Welsh literature, is quite untenable), while the truth seems to be that it was so long established in Wales that to it were attached other legends, whose heroes came to loom more largely in action than Arthur, their sovereign chief. In the stock-in-trade of the bards and story-tellers of Wales, from whom the remnants of old Welsh poetry and narrative have come down, Arthur appears to have held distinctly a place of honour, and the various portions in which this stock-in-trade of legend reveals itself bear witness to the same tale. This stock-in-trade, though the stories composing it were heterogeneous in origin and in local association, yet preserved a certain unity from its professional character, and portions of it can easily be detected in various parts of old Welsh literature. In the *Triads*, in the account of Arthur's Court found in *Kulhwch and Olwen*, in the *Book of Aneirin*, in a group of Arthurian poems in the *Black Book of Carmarthen*, in the *Stanzas of the Graves*, in the poetry of the *Book of Taliessin*, in the Llywarch Hen poems of the *Black Book of Carmarthen* and the *Red Book of Hergest*, certain associated groups of names come to view which show clearly the body of legend to which they belong. It is significant that in all these legendary clusters the name of Arthur appears. It is true that he is not once mentioned in the *Four Branches of the Mabinogi*, in the *Dream of Maxen*, or in *Lludd and Llevelys*; but the reason is that, in the *Mabinogion* in their present re-cast form, a certain chronological arrangement is implied which would make any reference to Arthur anachronistic in a story that was meant to be pre-Saxon. In the *Book of Taliessin* and in the lists of Arthur's men in *Kulhwch and Olwen*—the least altered of the *Mabinogion* stories—no such regard for chronology is shown, and in the latter Arthur is said to have been related to the 'Men of Caer Dathyl' on his mother's side. It is significant that, even in Chrétien and the later romances, many of the names of those who are associated with Arthur are those of well-known heroes of the Cymric tradition. If this tradition was carried into Cornwall or Brittany, the extreme scantiness of the heroic literature of these provinces in mediæval times makes it exceedingly difficult to judge of the extent of the transference, and it may well be that it was only fractional in character, though Arthur himself may have attained a high degree of legendary popularity, as Alanus ab Insulis suggests when he says in the second half of the 12th cent. that in Brittany any one who should deny Arthur's return would arouse the deep hatred of his hearers.

In the *Stanzas of the Graves* (given in the *Black Book of Carmarthen*), a series of verses kindred to the elegies of Llywarch Hen, the various heroes of the Cymric cycle are commemorated, and among them in one stanza are named March (the King Mark of the Tristan legend), Gwythur (the rival of the fairy king Gwyn, son of Nudd), Gugaun of the Red Sword, and Arthur. Each of the first three heroes is said to have a grave, but the grave of Arthur is said to be 'anoeth bid' ('the object for which the world searches'). The word 'anoeth' meant 'difficult,' as it still does in the Dimetian dialect of Welsh, and was used for the object of a difficult search, as in the Arthurian story of *Kulhwch and Olwen*. In the *Black Book of Carmarthen*, where these stanzas occur, there are other poems that contain direct or indirect allusions to Arthur. For example, in an elegy upon Geraint, son of Erbin (the Erec of Chrétien de Troyes), Arthur, for whom Geraint is said to have fought at the battle of Llongborth, is called 'the emperor, the ruler of the toil.' The significance of an allusion such as this, as indicating the place of Arthur in Welsh story, is clear. The site of Llongborth is unknown, but the men of Geraint are

said to have come from the region of Dyfneint (the Dumnonii). Poem xxxi. in the same MS is clearly Arthurian; but it is important to observe that it is one of a group in which the story of Arthur is associated with a cluster of names from the bardic tradition. Poem xxx., for example, though it does not name Arthur, yet mentions his horse Cavall, the Cabal of Nennius, the mark of whose hoof, according to that chronicler, was left on a mountain near Builth when Arthur was hunting the Porcus Troit (y Twrch Trwyth). In *Kulhwch and Olwen*, Cavall is erroneously given as the name of Arthur's dog. In the same poem, too, is mentioned Owein Reged, the Yvain of Chrétien. In the obviously Arthurian poem (No. xxxi.) there is a picture of Arthur and his men that is entirely distinct from those of Geoffrey and the Romances, and much more akin to that of the story of *Kulhwch and Olwen*. Arthur and his men arrive at a fortress (for what purpose is not stated, but it may have been for the rescue of one of their lost companions). Among his men are Cei Wyn (Kei the Blessed); Bedwyr (Bedivere); Mabon, son of Modron (an old deity, Mapŏnos, son of Matrŏna); Mabon, son of Mellt (Lightning); Manawyddan, son of Llyr (Manannan mac Lir of Irish legend, a hero of the *Four Branches*); Llacheu, Arthur's son (who is unknown to Geoffrey); and others. Some of the topographical allusions, such as those to Traetheu Trywruid (probably the Solway Firth) and Mynydd Eiddin (the mountain of Edinburgh, possibly Arthur's Seat), are to the North. As in *Kulhwch and Olwen*, expeditions to the wild country of the North, *gwrthtir uffern* ('the wild land of Hades'), as it is called, appear to have been a favourite theme of the Welsh Cymric Arthurian tradition; and for the men of North Wales, North Britain appears to have been the natural way of getting into the Other World by land, while the men of South Wales may have had their corresponding entrance into it in Cornwall. The poem in question, too, like the story of *Kulhwch and Olwen* and portions of the lives of the Welsh saints, describes Arthur and his men as being in conflict with certain pests, both animal and human, and, among the latter, with certain militant hags or witches (Welsh, *gwiddonod*). Even in the Welsh story of Peredur (the Percival of the Romances) there is an account of a conflict with the Witches of Gloucester (*Gwidonot Caerloyw*). One of the monsters mentioned in poem xxxi. is the 'Paluc cat' (*Cath Paluc*), also mentioned in one of the *Triads*. Poem xxxiii., though not referring to any exploits of Arthur, mentions his son Llacheu, 'the marvellous in song,' in words put into the mouth of a speaker who refers to certain other of the stock characters of the Welsh bardic tradition, such as Gwyn, son of Nudd; Creurdilad, daughter of Lludd (the Cordelia of Geoffrey); Guendoleu, son of Keidaw (the Gwenddoleu of the Myrddin legend); Bran, son of Iwerydd (the latter possibly his mother's name); and Gwyddneu Garanhir (a prominent character in a legend of inundation). With this poem is closely linked poem xxxv., which mentions Taliessin, while it also alludes to two of the chief characters of Math ab Mathonwy (Lleu and Gwydion), whose names and legends were associated with the places Nant Lleu (now Nantlle), Din Lleu (now Dinlle), and Bryn Gwydion in Carnarvonshire, and Moel Gwydion near Trawsfynydd in Merionethshire.

From this stock of narrative certain historical names other than that of Arthur, such as that of Maelgwn Gwynedd (the Maglocŭnos of Gildas), were far from being excluded, and that of Maelgwn occurs in this poem. As suggestive of the association of the Arthurian legend with Monmouthshire as well as with the North Wales zones in question, it may be mentioned that the *Liber Landavensis* (early 12th cent.) alludes to two streams whose names are identical with those of Arthur's sons (Llecheu or Llacheu and Amhir) in the forms Lechou and Amir. How persistent was the Welsh Arthurian tradition which mentioned Llacheu may be seen from the fact that he is given as a son of Arthur even in the late Powys story of *The Dream of Rhonabwy*, found in the Red Book text of the *Mabinogion*.

Again, the evidence from the *Book of Taliessin* points in the same direction. In this curious book there are scraps of Welsh legend interspersed with ideas derived from the current cosmology of the Middle Ages. In one passage, *Annwfn* (the Celtic 'Other World') is definitely located beneath the earth. Other poems imply that it contains a cluster of island fortresses, accessible from the sea. With the latter conception the Cymric Arthurian tradition has been linked in one of these poems, and the place of fortresses in this tradition is worthy of notice. No effort was apparently made to reconcile this belief in *Annwfn* with Christian teaching. It was simply conceived as a kind of counterpart of this world; for example, in the story of Pwyll, prince of Dyfed, it is a land divided into kingdoms. The view of it, reflected in *Kulhwch and Olwen*, as being accessible by land through Scotland, appears to be associated with the idea, found in the Welsh poetry of the 12th and 13th cents., that the ghosts of the dead wandered in *Coed Celyddon* ('the Caledonian forest'); and this was pictured as the scene also of the wanderings, accompanied by ghosts, of Merlinus Silvestris.

In one of the poems of the *Book of Taliessin*, Arthur and his men are represented as making expeditions to the island fortresses of *Annwfn* in Arthur's ship *Prydwen*. These expeditions were for various purposes, such as the releasing of one of his men, Gweir, from prison, and the carrying away of the cauldron of the Head of Hades (*pen Annwfn*): the latter would not boil the food of a coward, and was heated by a fire kindled by the breath of nine maidens. As further evidence of the Arthurian legend in Monmouthshire in at least the 12th cent., it may be stated that one of the place names mentioned in one of the boundaries (*Lib. Land.*, Oxf. ed. p. 207) is *Mesur Pritguenn* ('the Measure of Prydwen'). The poem has an obscure allusion which connects the story of Arthur with that of Pwyll and Pryderi, just as the *Black Book of Carmarthen* poem associated Arthur with Pryderi's friend Manawyddan. One of the island fortresses referred to in this poem, Caer Vandwy, is mentioned also in the *Black Book of Carmarthen*, while another bears the remarkable name Caer Wydyr ('the Fortress of Glass'). Of Arthur the first line of this poem says: 'Who has extended his rule beyond the bounds of the Universe?' That Arthur's name was proverbial within the zone of this poetry is shown by a passing allusion to 'the valour of Arthur' in poem xlviii. of the same MS.

This undoubted feature of the connexion of Arthur and his men with the Other World in the Welsh tradition suggests that the name of Arthur's wife, Gwenhwyfar ('the White Spectre'), is part of the same circle of ideas, and that the introduction of this conception made possible a number of congenial plots, such as the loss and rescue of one of Arthur's warriors, the loves of Arthur's warriors with ladies from *Annwfn*, the introduction into literature of the dwarfs with whom *Annwfn* was peopled, the machinery of magic and the supernatural, with which Celtic folklore especially associated the fairies, the possibility of being rendered invisible (another fairy privilege), and other commonplaces of Celtic legend, such as are found in Welsh and Irish story as well as in the living folklore not only of Celtic but of other imaginative countries.

As illustrating the place of the idea of imprisonment and release in the Welsh Arthurian tradition, it may be stated that one of the *Triads* contains a supplementary statement referring to a fabulous imprisonment of Arthur himself. The triad reads: 'The three noble prisoners of the Isle of Britain, Llyr of imperfect speech, who was with Euroswydd in prison, and the second, Mabon, son of Modron, and the third, Gweir, son of Gweiryoed, and one who was nobler than all three was for three nights in the prison of Oeth and Anoeth, and was for three nights in prison with Gwenn Benn Dragon, and was for three nights in the prison of magic (or fairyland) under the slab of Echymeint, and that noble prisoner was Arthur, and the same youth released him from those three prisons, and that youth was Goreu, son of Custennin (Constantine), his cousin.'

This story certainly appears to reflect a phase of Arthurian legend coloured by the characteristic ideas of Celtic folklore. These ideas show

themselves, too, in the Welsh Arthurian story of *Kulhwch and Olwen*, where Arthur and his warriors are represented as hunting the Twrch Trwyth (the Orc or Torc Tréith of Irish legend), a fabulous boar, to which there are obscure references in Old Welsh poetry and in Nennius. Though this story refers to Arthur's expedition to *Annwfn* and to other pieces of legend connected with that sphere, yet, like the *Four Branches of the Mabinogi*, it is characterized by the minute localization of its topography, an indication of the close relation of the Arthurian legend to certain Welsh districts. In *Kulhwch and Olwen* the narrative bears signs of having been connected originally with the North, but in its present form it is chiefly connected with Pembrokeshire, Carmarthenshire, Cardiganshire, and Breconshire. It is pre-eminently a story that has grown by accretion. The Court of Arthur, as is usual in the Welsh tradition, is located at Gelliwig in Cornwall (Cernyw). It is possible, however, that Cernyw is a later substitute for some Welsh locality. There is in the peninsula of Lleyn in Carnarvonshire a mansion called Gelliwig, but the writer has been unable to discover how old the name is.

It is, perhaps, not irrelevant to mention that in this peninsula there are certain names which provide links with the Welsh Arthurian legend, such as Bodarnabwy (for Bod Gwernabwy), Dyntra (for Rhedyntre), Coetan Arthur ('Arthur's Quoit'), a fine cromlech near Sarn Feillteyrn, and Ffynnon Wenhwyfar ('Guinevere's Well'). In the same district, too, is Castellmarch ('Mark's Castle'); nor is the zone of Nant Gwrtheyrn ('Vortigern's valley'), Dinas Emrys ('the fortress of Ambrosius'), and Abererch, where Rhydderch Hael was said to have been buried, far off.

Of the Welsh tradition there are certain indications, too, in the historical poets of Wales which suggest that it differed in some forms of it from Geoffrey's version. For example, in elegies and eulogies men are compared in compliment to Medrod (Modred). Meilir, for instance, says of Gruffydd ab Cynan, who died in 1137, that he 'thrusted in the fore-front of battle like Medrod'; and Gwalchmai, Meilir's son, in praising Madog ab Maredudd, prince of Powys, says that he had the strength of Arthur and the gentleness of Medrod. Gwynfardd Brycheiniog, too, calls the Lord Rhys of South Wales the twin-brother of Medrod, prophesied by Myrddin (Merlin). One triad (Foerster, *Myv. Arch.*[2] p. 393a), which shows, it is true, signs of later modification, states that there were in Arthur's Court three royal knights, Nasiens, king of Denmark; Medrod, son of Llew, son of Cynfarch; and Hywel, son of Emyr Llydaw. They were, the triad says, men of such gentle, kindly, and fair words, that any one would be sorry to refuse them any request. Where the feud between Arthur and Medrod is mentioned, it is represented sometimes in a different light from the account of Geoffrey; nor is the sympathy of the tradition always with Arthur. For example, a blow given by Arthur to Medrod is called 'an evil blow,' like that given by Matholwch to Branwen.

In a triad referring to the three costly campaigns of the Isle of Britain, Medrod is said to have gone to Gelliwig in Cornwall, to have left in the Court no food or drink unconsumed, and to have dragged Gwenhwyfar from her queenly throne. Arthur in revenge is said to have gone to the Court of Medrod, and to have similarly consumed all the food and drink, and, further, to have left neither man nor beast alive in the Hundred. The story of the battle of Camlan, too, appears to have been differently treated in different forms of the Welsh tradition. One form ascribes it to a blow given by Gwenhwyfar to Gwenhwyfach—a blow which is called in a triad one of the evil blows of the Isle of Britain. Another triad speaks of this as one of the vain battles of the Isle of Britain, and attributes it to the rivalry of Gwenhwyfar and Gwenhwyfach. According to the story of *Kulhwch and Olwen*, Gwenhwyfach was Gwenhwyfar's sister. In the story of *The Dream of Rhonabwy*, the battle of Camlan is said to have been caused by the mischief wrought by Idawc Cord Prydein in the negotiations between Arthur and his nephew Medrod. The fact that one of the triads says that there were three Gwenhwyfars suggests that there were in Wales not one but several Arthurian traditions. Though the Welsh 14th-cent. poet Dafydd ab Gwilym mentions Melwas (as in the *Life of Gildas*) apparently as the abductor of Gwenhwyfar, it cannot be stated with certainty that he was so known to the Welsh tradition. The name Melwas, however, was not unknown to S.E. Wales, as we see from references to persons of that name (written Melguas) in the *Liber Landavensis*.

Possibly, in one form of the Welsh tradition Arthur and Medrod fought on the same side at Camlan, for one of the triads says that one of the evil counsels of the Isle of Britain was Arthur's decision to divide his men three times with Medrod at Camlan. It is not impossible that this was the view of the writer of the *Annales Cambriæ* (under the year 537), who gives Camlan as the battle in which Arthur and Medrod fell together (*corruere*).

As illustrating further the Welsh tradition, it may be stated that Cynddelw Brydydd Mawr, a leading poet of the 12th cent., locates Arthur's Court at Celliwig, and that he has allusions to Gwalchmai, Dullus, son of Eurei, Cai and his father Cynyr, Myrddin, Elifer, Llacheu, the bards of Manddwy, Gwyndoleu, the family of Cynvarch, the Twrch Trwyd, and the battles of Baddon and Camlan. Another poet, Bleddyn Fardd, refers to Arthur as the slayer of a certain Erthyst, and to the valour of Gwalhaved as proverbial. All these allusions, though only of a passing character, suggest undoubted acquaintance with the legend, and the independence of the Welsh tradition from Geoffrey.

2. Arthur in the Chronicles.—Under this head reference may be made first to the lives of certain Welsh saints, and then to the *Chronicles* proper. The *Life of St. Gildas*, written in 1160, according to one of the most distinguished of Arthurian scholars, M. Ferdinand Lot, represents Arthur as being in conflict with Hueil, king of Scotland, the son of Caw of Pictland, and brother of Gildas. The association of Arthur with the family of Caw suggests a stratum of legend of an early type, not unrepresented in the story of *Kulhwch and Olwen*. The same *Life* also represents Melwas, a petty king of Somerset, as having carried Gwenhwyfar away from Arthur. In the *Life of St. Cadoc*, Arthur and his companions, Cai and Bedwir, are represented as haunting the borders of Breconshire and Monmouthshire.

In this connexion it may be mentioned that the highest point of the Breconshire beacons was called in the time of Giraldus Cambrensis (12th cent.), 'Arthur's Throne.' The association of Arthur in Nennius with Builth, in the same county, has already been mentioned, and there are similar associations in the story of *Kulhwch and Olwen*. Again, in the *Life of St. Carannog* (the saint of Llangrannog in Cardiganshire), there is a reference to Arthur as hunting a very powerful, huge, and terrible serpent, which had laid waste twelve parts of the land of Carrum—a description of Arthur's activities which is in thorough keeping with the Welsh tradition.

The *Life of St. Illtud* speaks of Arthur as the saint's cousin, to whom Illtud becomes a soldier, but the site of Arthur's Court is not mentioned. Further, in the *Life of St. Padarn* there is a curious story told of Arthur, who is called a *tyrannus*, in which, owing to his cupidity, he is cursed by the saint and swallowed in the earth up to his chin. This story is probably connected with the place name Llys Arthur ('Arthur's Court'), in the parish of Llanbadarnfawr in North Cardiganshire. In the *Chronicles* proper Arthur first comes to view by name in Nennius (a composite work completed before the 9th cent.), the nucleus of which was a *Chronicle of North Britain*, written probably at Dumbarton or Carlisle. Gildas, though he does not name Arthur, mentions a battle of Badon (fought, according to the *Annales Cambriæ*, in 516), which Nennius gives by name as one of the battles of Arthur. This battle is frequently mentioned by Welsh poets as Gweith Fadon ('the action of Badon'). In Nennius, Arthur is called *Dux bellorum* in the account of his battles, and *miles* elsewhere. The names are given of twelve of his battles, one of which was fought in 'the wood of Celidon' (Caledonia). Some of the other battles were also probably in the North. In the Chronicle called *Annales Cambriæ*, there is a reference under A.D. 516 to Arthur's leadership of the Britons at the battle of Badon by carrying the cross on his shoulders for three nights. In Nennius's account of

one of the battles, it is said that Arthur bore the image of the Virgin on his shoulders. Geoffrey of Monmouth says that Arthur fastened on his shoulders his shield Pridwen (in the Welsh tradition Pridwen was his ship), on which was the image of the Virgin Mary. Possibly the discrepancy between Geoffrey's account and the others is due to the resemblance between the old Welsh pre-Norman for 'shoulder' (*iscuid*) and 'shield' (*iscuit*). The Cambridge MS of the 13th cent. explains this passage of Nennius by saying that Arthur went to Jerusalem, and made a cross of the size of the true cross. These passages are interesting as demonstrating the Welsh tendency, shown in the case of Bran, son of Llyr, and Lles ap Coel, to make Arthur into a Christian hero—a tendency which reached its full development in the story of the Grail. Another Chronicle of the same type as the *Annales Cambriæ*, the *Chronicle of St. Michael's Mount*, composed by a Breton possibly in the 11th cent., says, under the year 421: 'St. Gildas was born. In these days was Artus (Arthur) king of the Britons, brave and witty' (*fortis et facetus*).

That there was a flourishing Arthurian legend in Brittany in the second half of the 12th cent. is suggested by the statement of Alanus ab Insulis already quoted, and that in the 12th cent. the Arthurian legend flourished in Britain also is attested by William of Malmesbury (born about 1095), who says of 'the warlike Arthur': 'This is Arthur of whom the idle tales of the Britons rave wildly even to-day—a man certainly worthy of celebration, not in the foolish dreams of deceitful fables, but in truthful histories; since for a long time he sustained the declining fortunes of his native land and incited the uncrushed courage of his people to war.' It is not improbable that there was at this time a flourishing Arthurian tradition in Glastonbury itself, in which place this historian was specially interested, and it is not out of place to mention that Glastonbury owned land in the beginning of the 12th cent. in the neighbourhood of Caerleon (see Adam de Domerham, *Charters of Glastonbury Abbey*). The popular view of Arthur may be reflected in Henry of Huntingdon's designation of him as 'leader of the soldiers and kings of Britain.' It was Geoffrey of Monmouth, however, who, in his *Historia Regum Britanniæ*, expanded and dignified the meagre annals of the Britons as given in Nennius by incorporating in them a number of stories (largely ætiological), together with matter based on the Welsh genealogies and on floating local legend, and by making the story of Arthur, as an Imperial figure, the culmination of these legends for the glory of Britain and his native county of Monmouth, wherein Caerleon, the seat in Geoffrey of Arthur's Court, was situated.

In this narrative Arthur is represented as the son of Utherpendragon and Igerna (in Welsh *Eigr*). He becomes king at the age of fifteen, and his subsequent career is a succession of conquests, which culminate in an attempt to conquer Rome itself. In the very zenith of his power, and when within reach of the Imperial dignity, he is recalled to Britain owing to the usurpation of his throne by Modred (the Welsh *Medrod*), his nephew, and the latter's marriage to Ganhumara (Gwenhwyfar). In a great battle in Cornwall, Modred is killed, and Arthur is mortally wounded and carried to the Isle of Avallon (Glastonbury) to be healed. The note of tragedy in the story of Arthur is in keeping with other stories in Welsh literature, such as those of Pryderi, Bran, and Llew Llaw Gyffes in the *Four Branches of the Mabinogi*.

Geoffrey's form of the Arthurian legend (apart from his own pseudo-historical amplifications) was probably derived from the South Wales border and South-West Britain. It is needless to say that it is largely coloured by the ideas of the 12th cent., and traces of the spirit of chivalry and knight-errantry are already present. This book became exceedingly popular, and Henry of Huntingdon (some time after 1139) made an abridgment of it in his letter to Warinus. Benedict of Gloucester, too, gave a sketch of the Arthurian period in his *Life of St. Dubricius*. Afterwards came Thomas de Loches (about 1147) with a similar narrative in his *Gesta Comitum Andegavensium*. The chief successors of Geoffrey, however, were Geoffrey Gaimar (probably a little before 1150), whose *History of the Britons* unfortunately has been lost, Wace (in poetry), the author of the Anglo-Norman *Brut*, and Layamon, the author of a *Brut* in English verse. Wace's *Brut* is in the main a free paraphrase of Geoffrey's *History*, but in style it is often more romantic. His descriptions of love, for example, are not unlike those given by the Arthurian poet Chrétien de Troyes. Wace shows more of the spirit of chivalry than Geoffrey, and he appears to know many more stories about Arthur than he narrates. It is he who first introduced into literature the story of Arthur's Round Table, about which, he says, the Britons tell many a fable. Layamon came from Arley Regis in North Worcestershire, on the banks of the Severn, and may have been familiar with living Arthurian tradition. His narrative is based on that of Wace, which he treats even more freely than Wace treats that of Geoffrey. It may be noted that Layamon goes further than Geoffrey or Wace in naming the exact place of Arthur's final defeat, which he locates at Camelford in Cornwall, doubtless having in mind the Welsh *Camlan*. Of Latin metrical versions of Geoffrey, the chief were the *Gesta Regum Britanniæ* and the *Epitome Historiæ Britannicæ*. In spite of its popularity, Geoffrey's *History* was not allowed to escape criticism; it was violently denounced by William of Newburgh, and also by Giraldus Cambrensis, who accepts, however, important sections of the Arthurian story. A similar attitude was adopted in the middle of the 14th cent. by Ralph Higden. The longest account of the supposed discovery of Arthur's tomb at Glastonbury is given by Giraldus Cambrensis in his *de Principis instructione* (written about 1194). Of the later writers who followed Geoffrey, the most important is Holinshed (1577), from whose work the substance of Geoffrey became known to Shakespeare and other English poets.

3. The Arthurian cycle in the Romances.—The chief development of the Arthurian cycle combined with other cycles, both British and foreign, is found in the *Romances*, and the centre of this type of literary development was France. This development was undoubtedly stimulated largely by Geoffrey's *History* and the paraphrases of his successors, but the romances contain features of the Arthurian legend which are clearly independent of the *Chronicles*. In France, the chief poetic exponents of the Arthurian legend were Marie de France, Chrétien de Troyes, and Robert de Borron. In Chrétien de Troyes, especially, there are so many proper names—as Uriiens (Urien), Yvain (Ywein), Erec (Gereint), Keus (Kei), Bedivere (Bedwyr), Gauvain (Gwalchmai), Ider fil Nut (Edern, son of Nudd), Brons (Bran), Carados Briébras (Caradog Freichfras), Ganievre (Gwenhwyfar), Tristans (Trystan), Melianz (Melwas), Maheloas (Maelwas), Bilis (Beli), Brangiens (Branwen), not to speak of others which are less obvious,—which are so clearly identical with well-known names of the Welsh tradition, that the existence of some relation to this tradition, whether direct or indirect, is obvious. Though the legend of Arthur himself flourished in Brittany, it is very doubtful whether the heterogeneous yet professedly connected mass of legends which the above names imply existed in Brittany, as it undoubtedly did in Wales. In spite of the opinion of Prof. Zimmer, it is perhaps simplest to accept the view that the Arthurian and other legends of the Welsh

tradition made their way into French literature through the contact of the Normans in the 11th cent. with the men of Brecconshire, Glamorgan, and Monmouth. These districts were rapidly Normanized, and intermarriages of Normans and Welshwomen were frequent. This zone, too, was in close touch with Glastonbury and with other important monasteries, and monasteries such as this and Fécamp played no small part in the dissemination and development of the Arthurian and other legends. As for the lays of Marie de France, on the other hand, certain terms, such as 'Laustic' (=*l'eostik*, 'the nightingale'), as Prof. Zimmer points out, suggest Brittany as the source of their Arthurian matter. The degree of Chrétien's indebtedness not only for some of his proper names, but also for his materials, to Celtic sources has been a subject of great controversy, Prof. Foerster, the chief editor of his works, going so far as to deny that Chrétien derived any of his materials from such sources. But it is hardly conceivable that he should have borrowed from these sources only a bare list of personal names without a scrap of the legends connected with them. The task of discovering definite Celtic matter in his writings is, however, far from easy, owing to the elaborate transformation which such matter would have undergone when adapted to the courtly love-poetry of Chrétien and to his romantic conceptions generally. Still, it should be borne in mind that Welsh literature itself, as we see from the *Four Branches of the Mabinogi*, had already been developing on lines which reflected some of the conceptions of the feudal period, and which further showed skill in the delineation of female character, especially under conditions of unjust suffering.

The problem of Chrétien's origins has been further complicated by the existence in Welsh of three Arthurian romances corresponding to three by Chrétien, namely, *The Lady of the Fountain* (to *Yvain*), *Peredur* (to the *Conte del Graal*), and *Geraint and Enid* (to *Erec et Enide*). Count Hersart de Villemarqué thought that these were Chrétien's originals; but this is certainly not the case, as the traces of foreign influence on them show. At the same time, the Welsh tales, though in their present form based either on Chrétien himself (as Foerster thinks) or on his originals, have, in several points of topography and narrative, been shaped into conformity with a living Welsh Arthurian legend in a manner which adds considerably to their value and interest. The search for Celtic materials in Chrétien has been carried out with great diligence by Sir John Rhys, Mr. Alfred Nutt, M. Loth, Miss J. L. Weston, and a distinguished medievalist, M. Ferdinand Lot. The task of reducing the narratives of Chrétien to their simplest elements, and comparing them with the narrative types of Welsh and Irish legend is one of great delicacy and difficulty, and some Celtic scholars, in their zeal for instituting such comparisons, have attempted to prove too much, without making sufficient allowance for the various literary influences to which Chrétien was accessible, or for his own imaginative power. The most fruitful line of investigation is the study of that Welsh group of legends from which Chrétien undoubtedly derived many of his proper names, and the classification of them into narrative types. Especially promising are the narratives that imply the wandering and return of Arthur's warriors, and in some cases their rescue from prison by him and his men. Narratives of the relations, pacific and hostile, between Arthur and his men and the fairy dwellers in *Annwfn* are a promising field of investigation, but Sun-myth theories of the Arthurian legend are now entirely abandoned.

Chrétien de Troyes was imitated in Germany by Hartmann von Aue, who wrote his *Erec* before 1197 and his *Iwein* before 1204; and also by Wolfram von Eschenbach, who composed his *Parzival* between 1205 and 1215. The latter mentions, in addition to Chrétien, a certain Kiot as his authority. The chief romantic accretions to the Arthurian cycle were the sagas of *Merlin*, the *Holy Grail*, *Tristan and Iseult*, and *Lancelot and Galahad*. The story of *Merlin* occurs in two forms, the ordinary *Merlin* and the *Suite de Merlin* (see MERLIN). The story of Tristan and Iseult is one of the most beautiful and tragic in the whole of literature, and, except perhaps as an element in the Welsh bardic tradition, was originally quite distinct from the Arthurian legend. The story of Lancelot is of uncertain origin, and that of Galahad, apart from the mere name (the Gwalchaved of the Welsh tradition), has no evident counterpart in Celtic legend. The story of Tristan was turned into German verse by Gottfried von Strassburg about 1210, who left it unfinished. But it was continued by Ulrich von Türheim (about 1236) and Heinrich von Freiberg (about 1270). In England the great collection of Arthurian romances was that of Sir Thomas Malory, printed by Caxton.

Within the limits of this article it is impossible to deal with all the problems which the various interrelations of these romances have raised, especially in the story of the Holy Grail. This story is essentially one where the legend of Arthur has been brought into connexion with the legends of the Church, notably such as were read from the Apocryphal Gospels at Easter. The stories of Helen, the mother of Constantine, and of Charlemagne had been similarly enlisted. One of the most distinguished authorities on the Grail legends, Mr. Alfred Nutt, conveniently divides them into two types, which he calls the 'Quest' and the 'Early History' versions respectively. These he enumerates as follows: Class I. (*a*) *Conte del Graal*, by Chrétien de Troyes; (*b*) *Conte del Graal*, by the continuators of Chrétien—Gautier, Manessier, and Gerbert; (*c*) the *Parzival* of Wolfram von Eschenbach; (*d*) *Peredur the son of Evrawc*, the Welsh version of Perceval; (*e*) *Sir Percyvelle*, an English metrical romance found in the Thornton MS, written shortly before the middle of the 15th century. Class II. (*a*) Robert de Borron, *Joseph of Arimathea*, and *Merlin*; (*b*) *The Grand St. Graal*; (*c*) *Quête del St. Graal*; (*d*) *The Didot Perceval*; (*e*) *Perceval le Gallois*, translated into English by Dr. Sebastian Evans under the title *The High History of the Holy Graal*. There is a Welsh mediæval translation of the story of the Holy Grail entitled *Y Seint Greal* which has been published with an English translation in the Hengwrt MSS. In modern times the Arthurian legend is most familiar through Tennyson's *Idylls of the King* and through Wagner's *Parsifal* and *Tristan*. Even into Dutch, Flemish, and Scandinavian literature portions of the Arthurian cycle penetrated.

ARVAL BROTHERS.—The study of the Arval Brothers is peculiarly valuable to the historian of religion, because it gives a unique insight into the details of the activity of a Roman priesthood. It also illustrates in a pre-eminent degree the accidental character of our knowledge of ancient Roman religion. Further, it emphasizes the activity of Augustus as a restorer of forms of ancient religion. And, lastly, it affords us additional proof of the supreme value of inscriptions.

In the matter of the appointment of priesthoods the Romans were extremely conservative. During the whole period of the Republic only two new priesthoods were formed—the *Duoviri* (later *Decemviri*, later *Quindecimviri, sacris faciundis*), in charge of the cults introduced by the Sibylline books; and the *Tresviri* (later *Septemviri*) *epulones*, merely assistants to the *pontifices* in arranging the banquets. On the contrary, many of the older priesthoods declined, and were, if not entirely forgotten, so neglected that they are very seldom mentioned in the literature. Thus during the Republic we hear of a certain priesthood, the *Sodales Titii*, only incidentally (Varro, *Lingua Latina*, v. 85); and even the Augustan reform and the Emperor's personal association with the priesthood (*Monumentum Ancyranum*, i. 46) result merely in our possessing eight or nine inscriptions in which individuals are referred to as *Sodales Titienses*.

Except that the etymology of the words *Fratres Arvales* is easier to understand than that of *Sodales Titii*, we should know scarcely more concerning them than concerning the *Sodales Titii*, were it not for the remarkable discovery of inscriptions. It will be well, however, to examine first what we know of the Fratres Arvales apart from these inscriptions.

1. **Literary sources.**—The one and only reference to the Fratres Arvales in the literature of the Republic is in Varro's *Lingua Latina* (v. 85), and reads as follows: 'They are called Fratres Arvales who make public sacrifices to the end that the fields (*arva*) may bear (*ferant*) crops. They are called Fratres Arvales from *ferre* and *arva*. Some people derive the name (*fratres*) from *fratria*; *fratria* is a Greek word designating a section of the people, as it is even now used at Naples.' In other words, Varro's interest is merely etymological, and his whole manner of treating the subject shows that the priesthood, though possibly still in existence, was practically unknown.

Borghesi, *Œuvres*, i. 376, thinks that the crown of corn-ears seen on the coins of D. Postumius Albinus Bruti f. and of L. Musidius Longus (Babelon, ii. 241 ff., and 385) relates to the Arval Brothers; but this is by no means certain (cf. Wissowa in Pauly-Wissowa, *s.v.* 'Arvales,' ii. 1463).

Had not Augustus included the priesthood of the Arvals among his religious reforms, this might well have been our only reference to them. As it is, however, apart from the inscriptions, of which we shall speak in a moment, and which are themselves due to Augustus's influence, we have such a revival of interest that a faint reflexion of it is seen even in the literature.

A famous jurist of Tiberius's reign, Massurius Sabinus, seems to have dealt with the problem of the origin and the number of the Arvals. We read in Gellius (vii. 7. 8): 'But Massurius Sabinus in the first book of his *Memorialia* tells us on the authority of certain historians, that Acca Larentia was Romulus's nurse. This woman, he says, lost one of her twelve sons by death. In his stead Romulus became a son to her, and called himself and her other sons the Arval Brothers. From this time the college of the Arval Brothers was twelve in number. The insignia of this priesthood were the crown of corn-ears and the white fillets.'

A similar story is told in Pliny, *HN* xviii. 6, and again in Fulgentius, *Sermones Antiqui*, p. 114 (ed. Helm). This absurd theory of Massurius Sabinus was in some unaccountable way taken as genuine legendary tradition by Em. Hoffmann, *Die Arvalbrüder*, Breslau, 1858 (original and more condensed form in the *Verhandlungen der Breslauer Philol. Versammlung*, 1857, 67 ff.). A similar idea governs E. Baehrens in his article in the *Jahrb. für Philologie*, cxxxi. (1885) 785 ff. Wissowa (in Pauly-Wissowa, ii. 1464) has pointed out that this legend of Romulus and the Arvals arose at the beginning of the Empire, when the Emperor, as a new Romulus, himself belonged to the priesthood.

One additional piece of information is given by Festus (ed. Müller, p. 5): '*Ambarvales hostiae* are sacrificial animals (*hostiae*) which were wont to be sacrificed on behalf of the fields by the twelve (*duodecim*, so Augustinus; *duobus*, MSS) brothers.' These are evidently the Arvals (cf. Macrobius, *Sat. Conv.* iii. 5. 7).

With such a scanty beginning it might well seem foolish to expect that the discoveries of modern times would put us in the position of knowing more about the Arvals than about any other Roman priesthood. Yet such is the case, and it is entirely owing to the discovery of inscriptions.

2. **Inscriptions.**—These discoveries began in 1570 (on the date cf. especially Aldus Manutius in *Cod. Vatican.* 5237, f. 158). In that year, while workmen were digging in a field five miles outside the Porta Portese on the Via Campana, near the Papal villa La Magliana, in the region which then as now was known as *Affoga l'asino* ('Drown the donkey'), more precisely, in a vineyard then called Vigna Galletti (later Vigna Ceccarelli, now Vigna Vignoli), the remains of a building were discovered. In the apse of this building were found nine (according to other authorities seven) statues of Emperors who had been members of the Arval priesthood. In each case the base with the inscription was preserved.

Flaminio Vacca (*Memorie*, ed. Nibby, *Roma Antica*, iv., No. 98; ed. Schreiber, *Berichte Sächs. Gesell. d. Wiss.* 1881, p. 82, No. 99) says: 'A good two miles outside the above-mentioned gate (Porta Portese), in a place which is called "Drown the donkey," towards the Tiber, in a thicket, were found in the time of Gregory XIII. (1572–1576; 1570 seems correct) many consuls in marble, and each one had his pedestal with an inscription; and also columns of fair marble, thirty palms in length. The columns were sawn up and used for the Cappella Gregoriana at St. Peter's. The consuls were scattered throughout Rome. They were, however, of only fairly good workmanship.' Baldassare Peruzzi's son, Silvestro or Sallustio, made a sketch giving the ground-plan of this building, and an attempted restoration. These are preserved in Florence (*Disegni di Architettura*, No. 664), and are reproduced by Huelsen, *Eph. Epigr.* viii. Tab. ii.

The statues have entirely disappeared, and all the inscriptions except one (*CIL* vi. 1012: to Marcus Aurelius, preserved in the Vatican, Giardino della Pigna; cf. Amelung, *Sculpturen des vatikanischen Museums*, Part i., Taf. 89), but six others have been preserved in copies (*CIL* vi. 968, 1021, 1053, 1093). The seven Emperors are: Hadrian, Antoninus Pius, Marcus Aurelius, Lucius Verus, Septimus Severus, Caracalla, and Gordian.

At the same time were found fragments of inscriptions containing the minutes of the meetings of the priesthood (first published by Fulvius Ursinus, *Notæ ad M. Catonem*, etc., Rome, 1587). Somewhat more than a century later, in 1699, a second great find of two large inscriptions was made on the same spot. Then came a constant series of finds, which have continued down to the present time. The most curious feature of these discoveries is their wide distribution. Fragments have been found on the Esquiline, on the Aventine, in excavating for the foundations of the choir of St. Peter's, at St. Paolo fuori le Mura, at St. Lorenzo, near the Lateran, and in the catacombs of Calixtus. The finds accumulated, so that in 1795 G. Marini was able to collect and publish 47 pieces (*Gli atti e monumenti dei Fratelli Arvali*, Rome, 1795). Further progress was made in 1858, when de Rossi proved the real site of the grove (*Annali dell' Instituto*, 1858, p. 54 ff.). The delay in ascertaining accurately the location of the grove was due to an error of Filippo della Torre (*Monumenta veteris Antii*, pp. 94, 384), who asserted that the stones found in 1699 had been discovered at the fourth milestone of the Via Ostiensis instead of Campana or Portuensis. In this he had been followed by Marini. This discovery was followed in 1866 by another important find in the grove itself. From 1867 until 1871 excavations were conducted by the German Archæological Institute.

The results of these excavations were summed up in Henzen's book *Acta Fratrum Arvalium quæ supersunt* (Berlin, 1874), with an admirable commentary. Henzen had written previous to this a preliminary report, *Scavi nel bosco sacro dei Fratelli Arvali* (Rome, 1868). The first definitive publication occurred in *CIL* vi. (city of Rome) Part i., 1876, and again in Part iv., 1902. The originals have been collected as far as possible and arranged by D. Vaglieri, and are exhibited in the small rooms off the cloister of the Museo Nazionale della Terme in Rome.

The body of inscriptions thus obtained presents a record, naturally with many breaks, of the minutes of the Arval Brothers' meetings from the first year of Tiberius's reign down into the reign of Gordian (A.D. 241). As regards the original situation and disposition of these marble tablets, Lanciani (in Henzen's *Relazione*, p. 105 ff., Tab. iv. and v.) thought they were placed on the outside of a round temple, that of the Dea Dia. But this is impossible, since the *acta* themselves indicate that the tablets were inside the temple, for they were engraved *in situ*, which necessitated the introduction of iron (the graving tool) into the grove—an offence against the deity for which a special expiatory ceremony had to be performed. The full formula for this begins: 'On account of the iron which had been brought into the temple for the sake of engraving,' etc. Further, a careful examination of the fragments has shown that they were not attached to a curved surface, either inside or outside of a building. The conclusion from these investigations (cf. Huelsen, *Eph. Epigr.* viii. 316–350, and Bormann, *Arch. Epigr. Mitt.* xvii. 1894) is that the tablets were attached to the flat walls on the inside of a building.

3. **History of the cult.**—With the knowledge gained from these inscriptions, supplemented by that gained from the literature and from the general history of religion, let us attempt to sketch the history of the priesthood.

Though the legend of the foundation of the priesthood by Romulus is of late date, the priesthood itself belongs to the very earliest period. Proofs of this are found at several points. First, the prohibition of iron in the grove and in the temple indicates that the worship preceded the discovery and use of iron. We may compare with this the custom referred to in Macrobius (*Sat. Conv.* v. 19. 13): 'The Etruscans used a bronze plough when they founded cities . . . among the Sabines the priests' hair was cut with a bronze shears' (cf. also Servius, *Aen.* i. 448; Ovid, *Fasti*, vi. 230; Lydus, *de Mensibus*, i. 31). Similarly no iron was used in the construction of the Pons Sublicius (Plin. *HN* xxxvi. 15. 100; Dion. Hal. iii. 45). Finally, we may compare the express permission to use iron in making repairs in the temple of Juppiter Liber at Furfo (*CIL* i. 603 = ix. 3513). A second proof of the age of the worship may be found in the adoration of the *ollæ*, very primitive earthenware vessels, preceding the discovery of the potter's wheel. Remains of these *ollæ* were discovered in the sacred grove (cf. de Rossi, *Giornale Arcadico*, lviii., 1868, p. 136, Tab. iv.). A third proof of age is the sacred song which they sang, the words of which have been preserved to us in the minutes of the year 218 (*CIL* vi. 28 = vi. 2104 = Buecheler, *Carmina Epigraphica*, No. 1 = Schneider, *Exempla*, No. 392, where other literature may be found). This chant was probably not understood by the people of the Augustan age.

The fact that the great festival of the Arvals, their celebration in May in honour of the Dea Dia, is missing in the list of old festivals in the so-called calendar of Numa is no proof against its very great age. It was a movable feast, and hence could not be engraved on a permanent stone calendar. We cannot tell the exact nature of the Arvals' worship in this early period. In Augustus's restoration certain of the older features were retained, but it is difficult to distinguish exactly what is old and what is new in his scheme. Hence it is better to leave the discussion of details until the Augustan age. In general, however, we can think of the Arvals during the Kingdom and the early centuries of the Republic as performing their sacrifices to Mars and the Dea Dia, one of those numerous agricultural ceremonials of which the ritual of early Rome was so full. As we have seen above, the history of the priesthood during the Republic is absolutely unknown to us, but we are probably justified in supposing that it continued down through the period of the Second Punic War. At the close of that war, in the religious reaction which set in during the last two centuries of the Republic, this priesthood very probably declined along with the rest.

Our first definite reference to the new life into which the Arvals entered with the coming of the Empire is found in the *Monumentum Ancyranum* (iv. 7), where Augustus, in recounting the priesthoods to which he belongs, mentions that of the Fratres Arvales. This record, written at the close of Augustus's life, is therefore contemporaneous with what has hitherto been supposed to be the earliest datable fragment of the Arval inscriptions, that from A.D. 14, the year which saw Augustus's reign end and that of Tiberius begin. On the other hand, together with the Arval inscriptions were found fragments of a list of consuls (*Fasti Consulares*, cf. *CIL* i.^{2} 70 ff.). The fragments cover the years B.C. 2 to A.D. 37. It has been supposed, accordingly, that the restoration of the Arval priesthood must have been undertaken by Augustus in or before the year B.C. 2, and probably not earlier than B.C. 12, when on the death of Lepidus he became Pontifex Maximus. This office would unquestionably be the best strategic point for a revision of the priesthoods. But it has been shown (by Hula in *Arch. Epigr. Mitt.* xv., 1892, p. 23 ff.; for counter-arguments, which, however,

are not convincing, cf. Mommsen, *Eph. Epigr.* viii. 303 ff.) that one fragment at least (*CIL* vi. 32338) dates from the year B.C. 20. Accordingly, Augustus's reforms must have occurred before he became Pontifex Maximus. We have, however, other indications of Augustus's interest in religious restoration at the very beginning of his reign, notably the *augurium salutis* of B.C. 29 (aptly compared by Wissowa in Pauly-Wissowa, ii. 1468; cf. Dio Cassius, li. 20 and Suet. *Octav.* 31), and the rebuilding of temples in B.C. 28 (proofs for this date especially Dio Cass. liii. 2, and Hor. *Carm.* iii. 6, collected by Mommsen, *Res Gestæ*[2], p. 86).

The college as re-organized seems to have contained twelve members. Probably this was also the ancient number. That it was the number as restored by Augustus is clear not only from the legendary account of its foundation given by Massurius Sabinus (which on this point agrees with the facts), but also from the negative testimony of the inscriptions themselves, where, when the names of those present at each ceremonial are given, the number twelve is never exceeded. The fact that on the only occasion when as high a number as twelve is reached (at a session in the year 57, *CIL* vi. 2039, 1 ff.) the name of the Emperor Nero is not mentioned, although he was certainly a member of the college, is no argument in favour of the number being greater than twelve, because the Emperor and the members of the Imperial household would be *supra numerum*.

The members were elected by co-optation, that is, the college filled its own vacancies. Originally this co-optation was entirely untrammelled, the Emperor possessing merely his own vote, which he, like any other member, might send in writing in case he was not able to be present in person. But by degrees the influence of the Emperor began to prevail, until, from the time of Caligula onwards, the election was usually reduced to a mere formality, which is best described in the words of the minutes of the year 120 (*CIL* vi. 2080, 22 ff.):

'Under the same consuls on the seventh day before the Ides of February, in the vestibule of the temple of Concordia, when prayers had been said by C. Vitorius Hosidius Geta, the magister, they filled the place of Q. Bittius Proculus, and in accordance with a letter of the Emperor Hadrian Augustus (here follow the Emperor's other titles) elected Publius Manlius Carbo and invited him to the sacrifices. And the letter was opened, which was sealed with a seal representing the Emperor, and in the letter was written "The Emperor Trajan Hadrian Augustus to the Arval Brothers, his colleagues, greeting. In the place of Q. Bittius Proculus, for my part I vote as our colleague the name of Publius Manlius Carbo." There were present, etc. . . .'

Partaking, as such priesthoods did, of the nature of an exclusive social club, the membership was naturally restricted to men of high rank and great wealth (though not, as Marini thought, entirely confined to patricians; cf. Mommsen, *Röm. Forsch.* i. 79).

The college possessed two officers, a *magister* and a *flamen*, who were elected annually out of the members of the college on the second day of the great May festival (see below). These officers served one full year, one Arval year, which began and ended at the Saturnalia (December 17). The year received its name from that of the magister, though, fortunately for us, always subordinate to the names of the regular consuls of the year which always precede it. In case either the magister or the flamen was prevented from attending a meeting, he appointed a substitute (*promagister* or *proflamen*), who, however, served only for that occasion, and as the personal substitute of the man in question. A regular vacancy was filled by a new election.

Connected with the college and present at the May festival were four boys, the sons of senators (in many cases the senators in question were the Arval Brothers themselves). These boys, whose father and mother must both be living (hence called *patrimi, matrimi*), took part as assistants in certain of the ceremonies.

They were regularly employed along with the *servi publici* to carry the libations to the altar on the first day of the great May festival. They were present also at the banquet in the afternoon of the first day, seated in chairs, while the Arval Brothers reclined on dining couches. At the supper in Rome in the evening they waited at table. They did not officiate at the sacrifices of expiation, where only the *servi publici* assisted the magister and the *calator*. The attempt has been made to separate them from the *camilli*, with whom we are elsewhere familiar (cf. Henzen, *Acta*, p. vii, and Wissowa in Pauly-Wissowa, ii. 1471); but this is probably wrong (cf. Wissowa, *Röm. Relig.* 426, Anm. 2). Their sitting with the Arvals at meat is probably a reminiscence of the old custom that young boys should accompany their elders to dinner (cf. Tac. *Ann.* xiii. 16; Suet. *Claud.* 32).

Apart from their own elective officers and these lads of noble families, the Arvals were assisted in their work by a number of slaves and freedmen. Some of these, the regular *servi publici*, were assigned to them by the Emperor. Besides these, each brother had his own servant (*calator*), whom he chose from among his own freedmen. Each *calator* had to pay an initiation fee into the treasury of the college (this is proved by the interesting case decided by the Brothers on May 29, A.D. 120; cf. *CIL* vi. 2080, l. 45 ff.). There is also one mention of a sacristan (*æditws*; *CIL* vi. 2068, ii. 27), who was probably a private slave owned by the college as a whole.

A list of the Arval Brothers, so far as they are known, is found in Gatti's article 'Arvales' in de Ruggiero's *Dizionario Epigrafico*, i. 683 ff.

4. Activity of the Arvals.—We have seen above that it is not possible for us to ascertain whether, at the close of the Republic, the priesthood of the Arvals had entirely ceased or whether it was still in existence, though neglected and forgotten. In any case, however, Augustus's re-organization of it, like all his work, was an attempt to restore the old forms of Roman religion in their purity and simplicity, though it was at the same time inevitable that he should consciously or unconsciously adapt them to the new conditions inherent in the Empire. His successors were less interested in the old ritual, and more concerned with the adaptation of the priesthood to the purposes of the moment. All these new adaptations, including the beginnings made by Augustus, were attempts to connect the priesthood of the Arvals with what was becoming more and more the one universal religion of the Empire, namely, Emperor-worship. Thus the greater number of the ceremonies performed by the Arvals were in the interest of the Emperor and of the Imperial household.

The cult acts of the Arvals fall therefore into two categories: (1) those acts which go back to the old forms of the religion of the Kingdom and of the early Republic, and (2) those acts which are connected with the Emperor.

(1) Let us discuss, first, those acts which go back to the old cult. We have seen above, in our discussion of the early history of the cult, that it was originally one of the many agricultural worships characteristic of early Rome. We have left until now the discussion of details.

So much did the Emperor and his household monopolize the attention of the Arval Brothers, that during the early part of the Empire, when the minutes are in general more concise, we have relatively few references to any of the really ancient ceremonies. As the minutes become more diffuse, however, the descriptions of the older rites are more detailed, until eventually under Elagabalus we have a full account of at least the May festival. Thanks to the conservative tendency of ritual performance, we are justified in considering that what we know of the ceremonies as conducted in the year 218 corresponds almost exactly with the ceremony as restored by Augustus. In

describing these ceremonies, therefore, we are at liberty to use them as though they were contemporaneous inscriptions covering more than two centuries.

The ancient ceremonies of which we find traces in the acts of the Arvals may be roughly divided into two classes: (*a*) those which relate to the great festival in May, and (*b*) certain *piacula*, or propitiatory ceremonies, carried out under special circumstances.

(*a*) *The Festival in May.*—As has been said above, the May festival belonged to the category of movable feasts, the so-called *Feriæ Indictivæ*. The days on which it was to be celebrated had to be formally announced at the beginning of the year. This process was known as the *Indictio*. It must in the nature of things go back to the earliest days of the priesthood, and may well have been mentioned in all the minutes from the time of Augustus. The first *indictio* actually preserved is of the year A.D. 21 (*CIL* vi. 32340). As an illustration of the process may be quoted the *acta* of the year 105 (*CIL* vi. 2075, i. line 11):

'Under the same consuls on the seventh day before the Ides of January, in the vestibule of the temple of Concord, the Arval Brothers set the date for the festival of the Dea Dia. And Marcus Valerius Trebicius Decianus, the magister, having washed his hands, and having covered his face, standing in the open air and facing the east, together with his colleagues set the date for the festival of the Dea Dia, thus for this year: So may it be good, favourable, happy, and fortunate for the Emperor, Cæsar Nerva Trajan Augustus Germanicus Dacicus, and for his whole household, for the Roman people, for the Quirites, and for the Arval Brothers, the festival of the Dea Dia shall take place this year on the sixteenth day before the Kalends of June (May 17) at home, and on the fourteenth day before the Kalends of June (May 19) in the grove and at home, and on the thirteenth day before the Kalends of June (May 20) at home. There were present,' etc. (the list of names follows).

Though the festival was indicted every year, there arose by degrees a certain regularity in the dates chosen. For the earlier period before Vespasian more or less irregularity prevails, but from Vespasian onward, with the exception of the year 90, the dates chosen are the 17th, 19th, and 20th of May (in the years of the city which were even in number according to Varro's reckoning), and the 27th, 29th, and 30th of May (in the years of the city which were uneven in number according to Varro's reckoning).

The festival itself accordingly occupied three days, but extended over a period of four days, because the first and second day were separated by an interval of a day, the familiar *dies postriduanus*. Of these three days the second was the most important. On it, in the morning, the ceremonies were held in the grove, whereas on the entire first and third days the celebration was held in Rome.

Regarding the localities in which these ceremonies took place, the following seems to have been the state of affairs:—In Rome itself the Arvals had no official meeting-place of their own. In the minutes of the earlier years we find them meeting in the year 14 in the Regia, in 38 in the temple of Juppiter Stator, in 59 in the Pantheon, in 63 in the temple of Concord, and from 69 onwards regularly in the temple of Concord, though naturally, when ceremonies were held in honour of the various deified Emperors, they met in the temple of the particular Emperor. In the grove itself there seem to have been at least four structures. First, there was the temple of the Dea Dia, which was on or near the top of the hill. No traces of this temple are left, nor do any of the Renaissance sketches seem to represent it. Probably in this temple the marble tablets containing the *acta* were exposed. As we have seen above, the temple was not round. Second, at the foot of the hill was a building referred to as the Tetrastylum. As its name implies, it was rectangular, and it is therefore probably identical with the building discovered in 1570, of which we have the sketch by Silvio Peruzzi (see above, p. 7[b]). Third, also at the foot of the hill was a building referred to as the Cæsareum. Probably this is the round building, represented in a sketch by Ligorio (in the Turin codex), the remains of which are still to be seen on the spot (cf. Altmann, *Italische Rundbauten*, p. 63 ff.). Lastly, there was the circus, of which we have no traces.

The fullest account of the festival is found in the *acta* of the year 218 (Elagabalus, *CIL* vi. 2104). It reads as follows (filling out the *lacunæ*, a process which can be accomplished with a high degree of certainty on account of the various other descriptions in other years of the minutes):

'Under the same consuls on the sixth day before the Kalends of June (May 27), on the Palatine in the temple of the Divi, Alfenius Avitianus, the vice-magister, officiating, the Arval Brothers made sacrifice at dawn with incense and wine, and took into their hands the dried grain-stalks and the fresh grain-stalks, and also the bread crowned with laurel, and they anointed the Dea Dia with oil, and the Arval Brothers put on the toga prætexta and sat in chairs, and thereafter they laid aside the toga prætexta. There were present the following (a list of names follows). Thereupon after midday, having bathed, they sat in their chairs, and then, when they had washed their hands, they put on the white garments for supper and reclined on dining couches and banqueted. Then boys clad in the toga prætexta, the father and mother of each of whom were living, sons of senators, four in number, sat in the chairs and banqueted. And after the banquet (*i.e.* the first course) the Arval Brothers reclined on couches ornamented with fluted valences, and made sacrifice with incense and wine; and the sacrifice was carried to the altar by the boys in the prætexta, the sons of senators, and by the slaves of the State; and the priests received the perfumes and garlands, and they consecrated the perfumes and wrapped them in the napkins (to take home). Likewise the second course, the dessert, was served, and *sportulæ* were given both to the priests of the Emperor and to the other priests whose names are written above. Then, having distributed the roses, they gave the usual salutations of farewell.'

Thereupon follows immediately the account of the second day:—'Likewise on the fourth day before the Kalends of June (May 29), in the grove of the Dea Dia, Alfenius Avitianus, the vice-magister, sacrificed at the altar two young sows, an offering of expiation for the cutting of the grove and the work thus done, and then he sacrificed a heifer in honour of the Dea Dia, and going to the Tetrastylum he sat in his chair. Then returning to the altar, he offered the *exta* of the young sows, and then in the circus, in a silver brazier ornamented with a piece of turf, he offered the *exta* of the heifer, and then he returned to the Tetrastylum and entered in the book (that he had performed the sacrifice), and thereupon he took off his prætexta and returned to his tent. Moreover, in the afternoon the Arval Brothers put the prætexta on again, and assembled in the Tetrastylum and sat on the benches and entered in the official records that they had come together and performed the sacrifice, and they feasted upon the young sows which had been sacrificed for expiation, and afterwards consumed the blood. Then wearing the prætexta, with covered heads and crowned with ears of wheat, they went up into the grove, and Alfenius Avitianus, the vice-magister, officiating, they sacrificed a fattened lamb, and examined the victim to see the success of the sacrifice; and when the sacrifice had been completed, they all made offering of incense and wine. Then they went back into the temple, and at the table made sacrifice to the wine-jars, and in front of the temple on the turf the vice-magister and the flamen made sacrifice. Then going out again to the altar, they all made an offering of money. Thereupon the flamen and the vice-magister, carrying silver cups with bowls filled with wine, and also incense boxes, made sacrifice before the door with incense and wine, and the priests took their stand before the door, and two (of their number), together with the slaves of the State, went to fetch the grain, and they gave it with the right hand and received it with the left hand, and they passed it thus one to another, and finally gave it back to the slaves. Then they entered into the temple and prayed to the wine-jars, and when the doors had been opened they threw the jars down the hill. Then they sat on the marble benches, and bread crowned with laurel was distributed by the slaves. Then they all took *lumemulia* (?) with radishes, and anointed the statues of the goddesses, and all (except the priests) went out of doors and the temple was shut. Then the priests shut up in the temple, girding up their togas, took the song-books, and marking the time, danced the three step, singing thus: "Enos Lases iuvate, enos Lases iuvate, enos Lases iuvate! neve luerve Marmar sins incurrere in pleores, neve luerve Marmar sins incurrere in pleores, neve luerve Marmar sins incurrere in pleores! satur fu, fere Mars! limen sali, sta berber! satur fu, fere Mars! limen sali, sta berber! satur fu, fere Mars! limen sali, sta berber! semunis alternei advocapit conctos, semunis alternei advocapit conctos, semunis alternei advocapit conctos! enos Marmor iuvato, enos Marmor iuvato, enos Marmor iuvato! Triumpe, triumpe, triumpe, triumpe, triumpe!" And after the three step, at a given signal, the slaves entered and took the song-books. And they stood before the door of the temple of the Dea Dia, and with their servants carrying the wreaths intended for each of them, they laid hold of the altar; and the images of the goddesses were crowned, and they elected Publius Ælius Secundinus as magister to serve from the next Saturnalia (for one year to the Saturnalia following), and they named Marcus Flavius Alpinus a flamen . . . and then they wished the customary good wishes, and went down out of the grove; and, taking off their prætextas, they put on white dining garments and banqueted in the Tetrastylum. And the platters with the Campanian earthenware and the wine-jugs of each of the priests were carried into the Tetrastylum like a solemn circus procession. And after the banquet each of those present received the *sportula* (100 *denarii*) and the roses. Then Lucius Alfenius Avitianus, the vice-magister, put on a tunic with a broad border and the purple mantle, and upon his head a wreath of roses, and he took his place above the Carceres and

gave the signal to the four-horse chariots and to the two-horse chariots, and to the vaulters . . . and when the circus performance was finished, they returned to Rome into the house of the magister, and put on white dining garments, and, reclining upon couches with fluted valences, they made sacrifice with incense and wine; and there ministered unto them the sons of senators, the boys above mentioned, whose fathers and mothers were still alive. And when the sacrifice was finished, they received perfumes and wreaths, and again they consecrated perfumes and wrapped them in napkins, and each one received a *sportula* (100 *denarii*). Then they divided the second course, the dessert, and then they took the roses and wished the customary good wishes.'

Lastly comes the account of the third day:—'On the third day before the Kalends of June (May 30), in the house of the magister, the Arval Brothers assembled to complete the sacrifice to the Dea Dia. At the supper there were present (a list of names follows), and reclining upon couches with fluted valences they made sacrifice with wine and incense, and there ministered to them those same sons of senators above mentioned, those boys whose fathers and mothers were still alive; and these boys, aided by the servants and the slaves of the State, carried the sacrificial grain-stalks to the altar. Then, lighting the lamps, they took the Tuscan wine-jars and sent them home by their private servants. Then they divided the second course, the dessert, and received wreaths and perfumes and *sportulæ* (each 100 *denarii*). In this year they feasted for a hundred *denarii* each day on the sixth, the fourth, and the third day before the Kalends of June, and there feasted also the boys, the sons of senators, four in number, and they (too) received each day a *sportula*. And they wished the customary good wishes.'

In spite of the detailed character of our information, the question still remains open as to the real meaning of these ceremonies. The one thing which binds the three days together is the presence of the grain-stalks, which the Brothers handled at dawn on the first day, which were passed from hand to hand at the solemn sacrifice of the second day, and appear again and are solemnly carried to the altar on the third day. The presence of these grain-stalks, the very name itself (*Arval* = 'land-brother'), the crowns of ears of wheat, their religious year from Saturnalia ('seed-festival') to Saturnalia, and the time of the festival in May at the close of the long series of agricultural festivals—all proclaim the character of their worship as intimately connected with agriculture.

Riddles in abundance remain, however. One is the identity of the chief goddess, the Dea Dia. This is, of course, not a proper name, but is merely one of those adjectival descriptions so common in early times (cf. Bona Dea, Di Manes, Dea Tacita), which were employed because of the reverent fear of mentioning the real name (that this fear was especially felt regarding agricultural deities is clear from Pliny, *HN* xviii. 8, and Macrob. *Sat. Conv.* i. 16. 8). This goddess can scarcely be other than Tellus or the old Italic Ceres. Another difficulty is the relation of this May festival to the Ambarvalia. This has been the subject of a long discussion (full literature on both sides is given by Wissowa in Pauly-Wissowa, ii. 1478 ff.). The truth seems to be that the Arval festival, while not identical with the Ambarvalia as a whole, was closely connected with it. That this connexion was very clear in the minds of later Roman writers is evident from Festus, p. 5 (quoted above, p. 7[b]).

(*b*) *Expiatory ceremonies.*—Apart from this great annual festival in May, the only traces of ancient ritual which remain are those of certain expiatory ceremonies (*piacula*). Two of these ceremonies—that connected with bringing instruments of iron into the grove, and that connected with taking them out again—have already been referred to. Other ceremonies are connected with the trees in the grove. We have a series of minor expiatory acts on account of broken branches or trees destroyed by old age or snow-storms. There are also certain major expiatory acts on account of more serious portents—for example, the growing of a fig tree on the roof of the temple, or a tree in the grove being struck by lightning. An event of the latter character occurred in the year B.C. 224, and on that occasion temporary altars were erected and many victims were sacrificed to various deities: to Dea Dia, to Janus, to Juppiter, to Mars, to the Juno of the Dea Dia, to the Virgines Divæ, to the Famulæ Divæ, to the Lares, to the mother of the Lares, to Fons, to Flora, to Summanus, to Mother Vesta, to the Vesta of the gods and goddesses, to Adolenda and Coinquenda, to the Genius of the emperor, and to the XX Divi.

(2) The other and more frequently recurring function of the Arvals was their activity in connexion with the Imperial household. They made sacrifices on birthdays, anniversaries of consecrations, on the occasion of accession to the throne, and on the giving of the title of *pater patriæ* or of the office of *pontifex maximus*, etc. Extraordinary sacrifices were made also on special occasions in the life of the Emperor—for example, when conspiracy was overthrown, when great military victories were won, when an Emperor was saved from shipwreck, etc. Another feature of their work was the making of regular annual vows (*vota*) on behalf of the safety of the Emperor and of the members of the Imperial household.

We have seen that the inscriptions begin with Augustus and continue down into the reign of Gordian. During this time the priesthood was in the main prosperous. There is, however, a slight indication that even before the close of this period the tide of prosperity had turned. It lies in the fact that the latest datable inscription (that of the year 241) gives the *sportula* as twenty-five *denarii* instead of the one hundred *denarii* always mentioned previously. The financial support of the State was therefore being reduced. We may suppose that this reduction was at least continued, if not increased, during the subsequent reign of Philip, who showed decided tendencies towards Christianity (de Rossi, *Ann. d. Inst.* 1858, 72 ff.). Under Gratian (382, cf. *Cod. Theod.* xvi. 10. 20) the Arvals' wealth went into the public treasury, but the geographical location of the temple and the grove outside the city of Rome, and possibly also the connexion with a circus for public amusement, would tend to preserve it (*Cod. Theod.* xvi. 10. 3). In any case it was preserved as a matter of fact. The proofs for this are sufficient, though in the main negative. Before the time of Constantine the catacombs of St. Generosa were built in the immediate neighbourhood of the Arval grove, but no materials from the grove were used (cf. de Rossi, *Roma Sotterranea*, iii. 689 ff.). The same respect for the grove was shown when Pope Damasus (366–384) built the oratory of the Martyrs Simplicius Faustinus and Viatrix. The first desecration of the marble plates occurred in the building of a Christian cemetery in the 5th or 6th century (Henzen, *Acta*, p. xxv).

LITERATURE.—The best general discussion: G. Wissowa, s.v. 'Arvales' in Pauly-Wissowa, ii. (Stuttgart, 1896) 1463–1486. The inscriptions themselves are available in *CIL* vi. parts 1 and 4. With these inscriptions may profitably be read Henzen's splendid Commentary, *Acta Fratrum Arvalium quæ supersunt*, Berlin, 1874; and Huelsen's Commentary in *Ephemeris Epigraphica*, viii. G. Gatti's article 'Arvales' in de Ruggiero's *Dizionario Epigrafico*, i. 682–710, may also be compared.

III. Fate.
   1. The conception of fate.
   2. The divining of the future.

Conclusion.

INTRODUCTION.—*History*.—When A. Kuhn in the year 1845 published his famous treatise *Zur ältesten Gesch. der indogerm. Völker*, by which he gave the first impulse towards an Aryan* (Indo-Germanic) archæology, he held out at the close of it the prospect of further investigations:

'There is still abundance of material available for comparison, for there is *the whole province of religion*, which promises abundant results, and gives at the same time, from the intellectual side, the necessary complement of the picture we have sketched. If we have had occasion more than once in these pages to reach conclusions by means of the language of the Vedas, this will happen still more frequently when we are considering the myths and religion of these writings in relation to those of other races.'

A. Kuhn's scientific work during the remainder of his life was almost exclusively devoted to proving the truth of these words. Along with him we find Max Müller, with the same goal in view, and setting out from the same starting-point, the Rigveda, on which he was one of the best authorities.

These two scholars may be called the real founders of a comparative Aryan mythology, in which the notion of 'Aryan religion' had for a long time been taking shape. The common point of view which they hold lies in the conviction, already aroused by the brothers Grimm, that mythology as well as language is rooted deep in the heart of the people, and that it is not the creation of the higher ranks, such as the priestly or the poetic order—a theory which Fr. Creuzer had tried to prove at the beginning of the century in his *Symbolik*. Its explanation is to be sought exclusively in nature and its phenomena, especially in the idea of a struggle, such as the spectacle of a thunderstorm or the alternation of day and night presents to us. This naturalistic view of mythology is exhibited most clearly in the poems of the Rigveda—from which we can easily understand how the myths of the allied peoples were formed, and by means of which we are enabled to discover old Aryan myth-cycles. This A. Kuhn has attempted to do in his articles on 'Gandharven und Kentauren' (Kuhn's *Ztschr.* i.), ''Ἐρινύς, Saraṇyû'' (*ib.*), 'Manus, Μίνως, Mannus' (*ib.* iv.), ''Ἑρμῆς, Saramâ, Sâramêya, Wuotan' (*ZDA* vi.), and especially in his great work *Über die Herabkunft des Feuers und des Göttertranks* (Berlin, 1859). Max Müller—whose *Contributions to the Science of Comparative Mythology* (collected in 2 vols., 1897), *Lectures on the Science of Language* (1861–64), along with the 'Essays,' *Chips from a German Workshop* (1867–75), *Origin and Growth of Religion* (1878), *Biographies of Words* (1888), etc., are well known throughout the whole learned world—went even further than A. Kuhn in the naturalistic explanation of mythical names. As specially characteristic of the views of both scholars, the fact may be mentioned that they were not content with discovering old Aryan myths, but tried also to deduce their origin from the character of human speech, its capacity for poetic interpretation, its polyonymy and homonymy, etc. Such is, in a very condensed form, the conception of mythology and religion held by Kuhn and Müller, for the full characterization of which we should have to note also the meagre attention given in the works of both scholars to the important sphere of religious ceremonies or worship. This conception continued to be the prevailing one down to the eighties of last century, although from an early period currents were perceptible which, issuing from various departments of science, seemed to threaten the foundations of the Kuhn-Müller theory.

While this theory, in its re-construction of the Aryan religion, started mainly from the oldest literary remains of the Aryan races, first of all the Veda, and then the Avesta, Homer, and the Edda, on the other hand, the science which has become known under the title of 'Folklore,' and which has as its aim the collecting of the legends, fairy-tales, customs, and habits still prevalent among the people, directed attention to the forms of the so-called lower mythology, and sought to prove that the very oldest material is to be found in analogies, such as those of the Greek Dryads with the German moss- and wood-maidens, of the Cyclops and centaurs with the wild men, etc. It was held to be demonstrable that many exalted divine and heroic figures originated in these circles. The most successful representative of this view was W. Mannhardt, in his two chief works, *Der Baumkultus der Germanen und ihrer Nachbarstämme* (Berlin, 1875, 2nd ed. 1904) and *Antike Wald- und Feldkulte, aus nordeuropäischer Überlieferung erläutert* (Berlin, 1877, 2nd ed. 1905). Then, in addition to this, the study of ethnology, and in its train the *universal comparative history of religion*, pointed to a series of apparently primitive universal religious ideas among mankind, of which at least traces were found also among the Aryan races, and which did not seem to fit well into the system conceived by Kuhn and Müller. The *ancestor theory* especially, according to which all religions spring from the worship of the dead, was placed in the foreground from the anthropological side, and was applied to the Aryan races by J. Lippert in *Die Religionen der europäischen Kulturvölker, der Litauer, Slaven, Germanen, Griechen und Römer in ihrem geschichtlichen Ursprung* (Berlin, 1881); and in England, by H. Spencer, *Principles of Sociology* (1876–96), followed by Grant Allen, *Evolution of the Idea of God* (1897). Similarly Elard Hugo Meyer, in his *Indogermanische Mythen* (Berlin, 1883, 1887), distinguished three chief periods in the formation of myths: belief in souls, in spirits, and in gods, the first of which he designated pre-Aryan, the second Aryan, and the third post-Aryan.

Moreover, even the opinion that the poems of the Rigveda (from which, as we saw, the adherents of the Kuhn-Müller theory started, especially with regard to their interpretation of myths) introduce us directly to the domain of naïve nature-poetry began to waver, and there were many acute interpreters who claimed to discover, in the very

* The terms 'Aryan' and 'the Aryans' are used in this article for that group of languages and peoples which is generally called, among students of philology, 'Indo-Germanic.' The term 'Teutonic' is used as a general term, including all branches of the Germanic race; cf. art. TEUTONS.

oldest parts of the Veda, traces of decay and of priestly refinement. This objection to the Kuhn-Müller explanation of myths has been urged with special force by O. Gruppe in his book, *Die griech. Kulte und Mythen in ihren Beziehungen zu den orient. Religionen*, i. (Leipzig, 1887); and in England by A. Lang, *Custom and Myth* (1884), *Myth, Ritual, and Religion* (1899), and *Modern Mythology* (1897). Gruppe points out that a great many of the mythical figures of the Rigveda are explicable not by natural phenomena and occurrences, but by certain priestly manipulations of the cultus. He himself believes the Aryans of primitive times to have been completely devoid of religion, and ascribes the uniformity of their myths and worship, almost in the same way as Creuzer, to the enormous number of religious forms that they borrowed from Western Asia and Egypt and transferred to Greece, India, and Middle and North Europe.

Finally, at the end of the seventies, Comparative Philology, whose daughter the comparative mythology of the Aryan people might well be claimed to be, had also entered upon a new phase of its development, inasmuch as from that time onwards the demand for a *regular* system in the correspondence of sounds as the result of etymological comparisons of words and forms was more emphatically insisted on. Naturally, this claim was made also in the sphere of the identifications proposed by students of the history of religions; and it became evident that the great majority of these identifications, and among them many which had hitherto been regarded as the most reliable supports of mythico-historical hypotheses, were phonetically untenable: *e.g.* Skr. *gandharvá* = Gr. *κένταυρος* ('Gandharven und Kentauren'); Skr. *marútas*, 'the Maruts' = Lat. Mars; Skr. *Váruṇa* = Gr. *Οὐρανός*; Skr. *Mánu* = Gr. *Μίνως*; and many others (see A. A. Macdonell, 'Vedic Mythology' in Bühler's *Grundriss der Indo-Arischen Philologie und Alterthumskunde*, 1897).

Under these circumstances, it is not to be wondered at that doubt of the correctness of the Kuhn-Müller interpretation of mythology increased from year to year, and that finally people actually arrived at such a degree of scepticism as to affirm that it was impossible to ascertain with certainty anything whatever about the oldest religious ideas and customs of the Aryans (cf. *e.g.* E. Zupitza, in the *Ztschr. des Vereins für Volkskunde*, 1901, p. 343 ff.). It is only quite lately (cf. *e.g.* M. Winternitz, in a series of admirable articles on 'Was wissen wir von den Indogermanen?' in *Beilage zur Münchner AZ*, 1903, Oct. and Nov.) that people are beginning again to ask if it is necessary and just to pronounce the life-work of such distinguished investigators as A. Kuhn and Max Müller absolutely null and void, and are attempting to rescue at least some of their results. All this enables us to see how hard it is at the present moment to give a summary of our knowledge of the Aryan religion; and before we even begin this difficult undertaking it will be necessary, first of all, to touch on the most important points regarding the method which we are to follow in the subsequent discussion.

Method.—In a thoughtful address, entitled *Die Aufgabe der theologischen Fakultäten und die allgemeine Religionsgeschichte* (Berlin, 1901), A. Harnack says:

'In the first place, it needs but little consideration to recognize that the study of each single religion ought by no means to be separated from the study of the *history* of the people concerned. . . . To try to study the religion alone is a more childish undertaking than to examine only the roots or the blossom instead of the whole plant.'

On account of this indissoluble connexion between the history, or, more accurately, the *history of the culture*, of a race and its religion, which will often meet us in the following discussion, it goes without saying that the materials which furnish us with a knowledge of the culture of the primitive Aryans are in reality the same as those which make possible for us an acquaintance with their *religion*. As the present writer has recently treated the former in detail in the preface to his *Reallex. der indogerm. Altertumskunde* (Strassburg, 1901) and in the 3rd ed. of his work *Sprachvergleichung und Urgeschichte* (I. Teil: 'Geschichte und Methode der linguistisch-historischen Forschung,' Jena, 1906), it only remains for him to characterise it shortly here in its special application to the history of religion.

The materials which are at our disposal for the investigation of pre-historic periods of culture are derived partly from *language*, partly from *things*. With regard to the former, we must first of all, with very strict regard to phonetic laws, compare the pre-historic equivalents discovered in the history of religion. For example, there exists beyond all doubt an equivalence of this kind in the group of words: Skr. *devá* = Lat. *deus*, Lith. *diẽvas*, Ir. *dia*, Old Norse *tívar*, 'God'; and Max Müller is certainly right when, at different times, he has reckoned the establishment of an etymology of this kind among the most important achievements in the mental history of mankind. In this search for the primitive vocabulary, we must, of course, exclude equivalents that are confined to particular languages of the Aryan group, which, we know, were united to each other more closely than to the other languages. This holds, *e.g.*, of a very considerable number of Indo-Iranian word-correspondences like Skr. *sóma* = Avesta *haoma* for the soma plant, which played so important a rôle in the cultus of both peoples; Skr. *mitrá* = Avesta *mithra* for the sun-god Mitra; Skr. *hótar* = Avesta *zaotar* for a certain class of priests, etc. We cannot utilize equivalents like these for determining the character of the Aryan religion; on the contrary, they simply demonstrate that the Indians completed the development of their religious history along with the Iranians, or perhaps only with the Eastern branch of them, the consideration of which falls outside the scope of this article (cf., on this point, Spiegel, *Die arische Periode*, Leipzig, 1887; and numerous sections in Oldenberg's book, *Die Religion des Veda*, Berlin, 1894). *Negative conclusions* from the vocabulary of primitive times, *i.e.* conclusions from the non-existence of an expression for a certain idea to the non-existence of that idea itself, are, on the whole, dangerous, as all negative deductions are. But it is otherwise when primitively related expressions are wanting for a *whole class of ideas*. When, *e.g.*, all attempts have failed to prove that real god-names existed in the earliest times, or when there is no etymological agreement to be found between two languages for the idea of the temple, these facts will require due consideration in deciding the question whether there really were god-names and temples in the primitive Aryan period.

But it would be a great mistake to suppose that the only way in which philology can be of service to the history of religion is by placing at its disposal the primitive etymological equivalents in the sphere of religion. Harnack (*op. cit.*) is right in saying that the history of religion is reflected in the history of language, and that only he who knows the latter is in a position to seek to decipher the former. In fact, the whole formation of religious ideas can be understood only with the help of philology. Whence came the god-names of the separate Aryan races, if, as we have just seen, they cannot be recognized in the vocabulary of the primitive language? What religious thought called them

into being in each separate case; and how did this, their fundamental idea, afterwards grow deeper and wider? But even if it must, unfortunately, be admitted that our knowledge in this department is still very limited, the fact that at present we know nothing certain about the etymological explanation of many, indeed of most, Aryan god-names (an Indian *Varuṇa* and *Mitra*, a Greek *Ares* and *Poseidon*, a Roman *Mars* and *Liber*, the Teutonic *Tanfana* and *Nerthus*, a Lithuanian *Occopirnus* and *Autrimpus*, etc.) does not justify the conclusion that this must remain so in the future. In this connexion, H. Usener's *Götternamen, Versuch einer Lehre von der religiösen Begriffsbildung* (Bonn, 1896), a book which to some extent forms the basis of the present article, shows a marked advance, although the present writer recognizes this advance more in the fundamental idea of the work than in its details, which are often linguistically assailable. Moreover, what we really lack most, in the sphere of Aryan archæology as in others, is a collection of linguistic material. Once we have before us, collected and sifted, the terminology of sacrifice and prayer, of priests and temples, of lots and consulting of oracles, of legal and moral ideas from all the Aryan languages, various stages of historical development emerge of their own accord, and each new etymological discovery implies a new discovery in the history of religion.

We have so far been treating of expressions which either belong to the common pre-historic vocabulary or are autochthonous in the separate languages. Now we have to refer to another important source for the understanding of religious history. This is the *foreign word*, or borrowing. Thus the Gr. Κάδμος taken from Heb. *qedem*, 'the East,' the Lat. *Apollo* and *Proserpina* from Gr. Ἀπόλλων and Περσεφόνη, and the Russ. *bogŭ*, 'God,' from Avesta *baγa*, show the directions from which new religious thoughts and suggestions came to the separate Aryan races.

Now, even although the aid which is given to religious history by philology is great and many-sided, yet it is a great mistake to believe, as was formerly done, that the religion of the primitive Aryans, like their culture generally, could be deduced simply from etymological comparisons. It is true that the above-mentioned equation, Skr. *devá* = Lat. *deus*, shows us clearly that there were divine beings even in primitive times; but we cannot expect from philology any information regarding the intrinsic value, or import and scope, of this term. In this, as in all other questions, therefore, the comparison of *things* and the investigation of *things* must accompany the comparison of *words*.

This brings us, in the first place, to *Pre-history* or *Pre-historic Archæology*, a science which, in general, is based in no small degree on certain religious conceptions and customs of prehistoric man. For we owe the majority of pre-historic relics, as is well known, to the ancient wide-spread practice of the worship of the dead; and the questions, how and where the dead were buried, what was placed beside them in the way of food and drink, what weapons and implements were laid in the grave or on the funeral pyre, and why the corpse was buried in this or that position, turned in this or that direction, are naturally connected most closely with problems of the history of religion. But discoveries of another kind—such as sacrifice-stones, idols, amulets, bronze kettles, bronze chariots, no doubt serving a religious purpose (one was found near Trundholm as recently as 1902; cf. S. Müller, *Urgeschichte Europas*, Strassburg, 1904, p. 116), and many others—possess great significance in religious history, even if at first they raise more problems than they enable us to solve.

But the chief task in this field of investigation must always be *the comparison of the religions historically attested in the various Aryan races*, and the attempt to select from the crowd of their heterogeneous phenomena what is common and original. And there can be no doubt concerning the path to be pursued, provided that the analogy emphasized above between the history of Aryan culture in general and the history of Aryan religion in particular is correct.

It is the great merit of V. Hehn to have shown, especially in his book *Kulturpflanzen und Haustiere in ihrem Übergang aus Asien nach Europa*[7] (ed. O. Schrader, Berlin, 1902), that the conditions of civilization in primitive Aryan times have persisted, often with great faithfulness, among the N. European races, particularly the Lithuanians and the Slavs, among whom they not infrequently show themselves at the present day. It is from the study of these races that the higher forms of life, as they are presented to us in Indian, Greek, and Roman antiquity, have for the first time been fully understood. There was really nothing further needed than the transference of this simple thought to the history of religion. In very much the same way, men like W. R. Smith (*Religion of the Semites*[2], 1894 [Germ. tr. Freiburg, 1899]) and S. I. Curtiss (*Primitive Semitic Religion To-day*, 1902 [Germ. ed. Leipzig, 1904]) have recently attempted to deduce the oldest Semitic religious conditions, not so much from Babylonian, Phœnician, and Hebrew antiquity as from their *modern* remains, especially among Arab tribes. Similarly our task is to look at the higher forms of religion of the Indians, Greeks, and Romans from the standpoint of the lower stages of N. European paganism, and to find the latter again in the former. Unfortunately, this methodical plan is more easily stated than carried out. The reason for this is that our knowledge of N. European religions is, in many ways, still shadowy and incomplete; for—and this more nearly concerns the *Teutons*—it cannot be doubted that the work of J. Grimm (*Deutsche Mythologie*[4], 1875-78), however worthy of admiration it is even yet, suffers from two defects which have not been removed even by later investigation. The first of these is that the religious-historical information with regard to the Continental Teutons is too much amalgamated with what we know about the *Northern* mythology, which requires special critical examination. The second defect is that the whole re-construction of the old Teutonic faith in the hands of Grimm and his followers is dominated by the same spirit of over-estimation of its contents as Tacitus exhibits in his *Germania*. Our knowledge of Slavonic paganism is still more uncertain. In G. Krek's *Einleit. in die slav. Literaturgeschichte*[2] (Graz, 1887), we find, indeed, a comparatively matter-of-fact presentation of ancient Slavonic religion (pp. 377-439); but the incisive criticism by A. Brückner (*Archiv für slav. Philol.* xiv. 161 ff.) has shown how careful an investigation we still need of the sources, which are far too full of the most incredible misunderstandings and faulty emendations (examples of these in *Archiv*, iv. 423 or xiv. 164), before we can obtain from them any grains of real gold. In particular, we know absolutely nothing about common Slavonic god-names, for even the agreement of *Zuarasici* (certified by Thietmar, vi. 7) with the Russ. *Svarog* does not prove any such thing with certainty (cf. Jagić, *Archiv*, iv. 412 ff.). This is perhaps due to the simple reason that, as yet, there were no Slavonic god-names at all. If the historical information about Slavonic paganism is thus of a doubtful nature, we are compensated for it in some measure by the fact that on Slavonic soil many

heathen manners and customs, even under the gloss of Christianity, make themselves widely felt even at the present time. We possess excellent data about these; and we hope, especially with regard to the cult of the dead, to obtain new and valuable information by means of them.

It fortunately happens, too, that we are very well supplied with information about the primitive paganism of the Baltic brother-races of the Slavs, the Prussians, Lithuanians, and Letts. Among these peoples, originally at least equally far removed from the influences of both Roman and Byzantine culture, a particularly primitive religious system survived down to the 15th and 16th cents., and even longer; so that we see the remarkable spectacle of adherents of the Lutheran doctrine like Jan Malecki (Meletius, Menecius) about 1550, or Matthæus Prætorius (born about 1635) being able to report in detail regarding the paganism existing in their communities. F. Solmsen has enumerated and briefly explained these sources of the Prusso-Lithuanian religion, in Usener's *Götternamen* (p. 79 ff.) We shall return to some of them in the course of this article. In general, however, we may express the hope that the Lithuanian religion will render services to the history of Aryan religion similar to those rendered by the Arabs to Semitic study.

Idea of God.—If we undertake to examine and arrange, in accordance with the method described above, the stock of religious ideas and customs prevalent among the primitive Aryan races, what could be a better starting-point than that conception to the evolution of which all those efforts are in the last resort directed—the conception of 'God'? We shall make the three words Gr. *θεός*, Lat. *deus*, and the common Teutonic O.H.G. *got* the pivot of this preliminary investigation.

For a long time the Greek word was erroneously connected with the Lat. *deus*. Nowadays this theory may be regarded as finally abandoned. On the other hand, nearly all later etymologists agree* that the Gr. *θεός* is derived from **θϜεσ-ο-ς* (cf. *θέσφατος* 'spoken by God') and belongs to the following word-group: Lith. *dvesiù, dvė̃sti* 'to breathe,' *dvãsė* 'breath,' 'spirit,' *dùsas* 'vapour,' Old Slav. *duchŭ* 'breath,' 'spirit,' *duša* 'soul,' M.H.G. *getwâs* 'ghost,' Old Gall. *dusii* 'nightmare' (cf. Augustine, *de Civ. Dei*, xv. 23: 'Quosdam dæmones, quos *Dusios* Galli nuncupant, hanc assidue immunditiam et tentare et efficere plures talesque asseverant'; Isid. *Or.* 8, 11, 103: 'Sæpe improbi existunt etiam mulieribus, et earum peragunt concubitum, quos dæmones Galli *dusios* nuncupant, quia assidue hanc peragunt immunditiam'), Lat. *Fērālia* (**dhvēsâlia*) 'a festival in honour of the dead' (also probably *fēriæ* from **dhvēsiæ*, and *festus*). As the development of the meaning of the Gr. *θεός* we get therefore 'breath,' 'soul,' 'soul of the dead,' '*god*.'

A *second* series of words presents a quite analogous appearance. Jordanis (ch. 13) remarks of the Goths: 'Jam proceres suos, quorum quasi fortuna vincebant, non puros homines sed semideos, id est, *anses* vocaverunt.' Now the word *anses* which is here made use of, and which in the passage quoted denotes the souls of ancestors worshipped as gods, rose on the one hand to be the title of the highest old Norse gods, the Æsen (Old Nor. *æsir*), and on the other hand exists still in Anglo-Saxon (*ēse*) in the sense of lower spiritual beings, the elves: *ēsa gescot* is like *ylfa gescot* = N.H.G. *Hexenschuss*, lit. *witches' shot*, *i.e.* lumbago. It is not improbable that there is, further, a connexion between the same word and Skr. *ásu* 'the breath of life in men and animals,' *anima* (cf., in phonetic connexion, Skr. *así* = Lat. *ensis* 'sword'), and once more with Skr. *ásura*, Avesta *ahura* (Ahura-mazda) = 'god,' 'lord.'

* Bechtel forms an exception to this, in Bezzenberger's *Beiträge*, xxx. 267 ff. [*N.B.*—A star *before* a word (as in the next line) signifies that the form does not occur but is inferred.]

The facts referred to find their explanation in a series of other related phenomena. As is the case among other races, the *soul* is thought of in the Aryan languages as breath, wind, vapour or smoke. A primitive Aryan expression for this survives in the equation Skr. *ātmán* = O.H.G. *âtum* 'breath,' 'soul' (Ir. *athach* 'breath'), while the closely related equation of Skr. *mánas* = Gr. *μένος* (cf. also Lat. *Minerva* from **Menesova*) seems to mean not so much the physical substratum of the soul as its spiritual power (cf. Gr. *μέμονα*, 'I strive'). The heart of man appears to be regarded as the real seat of the soul, a fact which seems to follow, on the one hand, from the Gr. *κῆρες*, primitive spiritual beings (cf. below, pp. 27, 52), and their identity with *κῆρ* 'heart,' and, on the other hand, from the circumstance that the Indian *mánas* also has its abode in the heart, as a being the size of the thumb (cf. Oldenberg, *Die Religion des Veda*, p. 526). The heart is also viewed as the starting-point of numerous spiritual functions and emotions: Lat. *vēcors* 'mad,' *recordari* 'to remember,' Old Slav. *srŭditi sę* 'to be angry,' Bulg. *srŭčeliv* 'courageous' (Lat. *cor*, Old Slav. *srŭdĭce* 'heart'), etc. From the separate languages we may mention further, for the notion of the soul: Lat. *animus* 'soul,' *anima* 'breath': Gr. *ἄνεμος* 'wind' (Skr. *ániti* 'he breathes'); Gr. *ψυχή*: *ψύχω* 'breathe'; Gr. *θυμός* (*Il.* vii. 131 identical with *ψυχή*): Skr. *dhūmá*, Lat. *fūmus* 'smoke,' etc. This breath or smoke soul, then, is enclosed in the body of man, which, however, it leaves on the advent of death, also temporarily in the phenomena of sleep and dreams, in order to lead an independent existence. From the spiritual beings formed in this way there have now sprung a large host of spirits conceived as partly harmful and partly helpful, for which there exist in the Aryan languages a vast number of cognate expressions.

Some of these are: Skr. *drúh*, Avesta *druj* = Old Nor. *draugr*, Old Saxon *gidrog*, O.H.G. *gitroc* (cf. also A.S. *dreág* 'larva mortui,' and perhaps Old Nor. *dvergr*, M.H.G. *twerc* 'dwarf') 'goblin,' 'ghost': Skr. *druh* 'to injure'; Skr. *ṛbhú*, Vedic expression for three clever elfish beings (Kuhn's *Ztschr.* iv. 102 ff.) = Old Nor. *álfr*, A.S. *ælf*, M.H.G. *alp*, 'fairy,' 'ghostly being,' 'demon,' 'nightmare' (cf. W. Grimm, *Kleinere Schriften*, i. 405 ff., and also Schrader, *Reallexicon*, art. 'Zwerge und Riesen'); common Teutonic M.H.G. *mar* m.f., Old Nor. *mara*, A.S. *mare*, *mære*, O.H.G. *mara* f. 'demon' (*mare* in 'nightmare') = Old Sl. *mora* 'witch,' 'demon,' 'goblin,' Ir. *mor-(r)ígain*, Gl. *lamia* 'goblin-queen'; Old Nor. *valr*, A.S. *wæl* 'the dead' (esp. on the battlefield) = Lith. *wēlės* 'ghostly forms of dead people, ghostly beings in general'; Goth. *hugs* 'νοῦς,' Old Nor. *hugr* 'soul' (*mannahugir* 'human souls which appear in many forms') perhaps = Lith. *kaũkas* 'dwarf-spirit,' 'hobgoblin,' etc.

To this class of beings, which will engage our attention, in the discussion of the conception of fate (below, p. 52a), belong originally the two series of words which were discussed above, namely, Gr. *θεός* and Goth. *anses*; but these words took on a higher meaning under the influence of the worship devoted to the souls of the dead, and ultimately became associated with those divine beings for whom the Lat. *deus* is the characteristic term.

The word *deus*, as we have shown above, corresponds to the Skr. *devá*, Ir. *dia*, Lith. *dë̃was*, Old Nor. *tívar*, and along with these goes back to an Aryan root **deivo-s*, which, in consequence of its close connexion with Aryan **dyêu-s* = Skr. *dyāús* 'sky,' Gr. *Ζεύς*, Lat. *Juppiter*, must have had some such meaning as 'the heavenly.' Now, since the Aryan **dyêus*, as the use not only of the Indian *dyāús*, but also of the Gr. *Ζεύς* and Lat. *Juppiter* proves, originally denoted merely the visible sky worshipped as a god, **deivos* derived in primitive times* from **dyêus*, must have signified

* A later formation from Skr. *dyāús*, *divás* = Gr. *Ζεύς*, *ΔιϜ-ός* is Skr. *divyá* = Gr. *δῖος* from **διϜ-jo-ς* 'heavenly.'

originally only the powers of nature visible in the sky, *e.g.* sun, moon, dawn, thunder, winds, etc. In them, therefore, we must see the 'heavenly ones.' The common Teutonic root Goth. *guþ*, Old Nor. *goð*, A.S. *god*, O.H.G. *got*, seems to the present writer to be largely characteristic of the oldest conception of the divine element thought of as active in these 'heavenly ones.' The most significant thing about it is that it leads back to a *neuter conception*, to an original **ghutóm* which (cf. on this point Osthoff in Bezzenberger's *Beiträge z. Kunde d. idg. Spr.* xxiv. 177), as is shown by the comparison with Skr. *hávate* 'he calls' (*hutá* 'called'), Avesta *zavaiti* 'he curses,' Lith. *žavėti* 'to charm,' most probably denoted originally 'the divine element called forth by a charm from the deified phenomenon.' We shall return to this later. But meanwhile the discussion of the Gr. *θεός* and the Lat. *deus* has led us to the necessity of dividing the material at our disposal into *two* parts, which we may distinguish as worship of the dead and worship of the 'heavenly ones.' In a *third* division we shall discuss what, indeed, in many ways comes into contact with the worship of the dead and the 'heavenly ones,' but yet is on the whole independent of it, viz. the prevailing ideas of Fate and the means of their investigation.

I. *THE WORSHIP OF THE DEAD.*—As far back as we can trace the Aryan races by means of tradition or excavations, they honoured their dead by a long series of customs which shed a surprising light on the ideas of man concerning a life after death. We shall get the best view of these by treating of (1) the different forms of disposal of the dead which we encounter among the Aryan races, especially burial and cremation; (2) the attentions paid to the dead at the time of the disposal of the corpse, especially the gifts to the dead; (3) the attentions paid to them after the funeral rites (ancestor-worship). Then we must speak (4) about the beliefs in fixed common abodes of the dead (realms of the dead)—beliefs which, in the course of time, made their appearance in several parts of the Aryan world.

1. Burial and burning of the corpse.—The fact that in all countries occupied by Aryans these two forms of disposing of the dead are found contending for the mastery, even in very primitive times, suggests to us the question, To which of the two are we to assign the greater antiquity? If we turn for an answer first to *Asia*, we find that cremation may be regarded as the regular means of disposing of the body among the *Indians* even in Vedic times, and is the only one mentioned in the ritual texts; but alongside of it there are also evidences of the burial of the unburned body. Thus in the *Rigveda* (X. xv. 14) the pious ancestors who dwell in the joy of Heaven are divided into 'those who have been burned by fire and those who have not been burned by fire'; and so too in the *Atharvaveda* (XVIII. ii. 34) buried bodies and cremated ones are distinguished among the 'fathers,' whom Agni is to bring forward. A glance at the *Iranian* brother-race of the Indians shows us that in these latter quotations we have before us the traces of an earlier state of affairs. Among the kings of the Scythians, who ethnographically seem to represent a part of the primitive Iranian race, left behind or scattered westwards, and who remained in more primitive conditions of culture, Herodotus (iv. 71 f.), who describes their obsequies in great detail, presupposes burial as the only form; and the bodies of the ancient Persian kings also were entombed unburned, as their graves show. Herodotus (i. 140) states the same thing of the Persians in general, while he gives in addition an account of a protective envelopment of the body in wax (κατακηρώσαντες δὴ ὦν τὸν νέκυν Πέρσαι γῇ κρύπτουσι). When, on the other hand, cremation is proved by the Avesta as existing among non-Zoroastrian tribes, or when the followers of Zarathushtra, as well as the Persian Magi, previous to burying their dead, exposed them to be devoured by dogs, birds and beasts of prey, we must in both cases undoubtedly detect the introduction of foreign customs, the last-mentioned of which seems to have originated among the wild mountain tribes of the Oreitæ in Baluchistan (cf. Diodorus Siculus, xvii. 105: τῶν γὰρ τελευτησάντων παρ' αὐτοῖς τὰ σώματα φέρουσιν οἱ συγγενεῖς γυμνοί, λόγχας ἔχοντες. εἰς δὲ τοὺς ἐπὶ τῆς χώρας δρυμοὺς θέντες τὸ σῶμα, τὸν μὲν περικείμενον τῷ νεκρῷ κόσμον περιαιροῦνται, τὸ δὲ σῶμα τοῦ τετελευτηκότος καταλείπουσι βορὰν τοῖς θηρίοις).

Similar conditions confront us among the *European* Aryans, especially among the *Greeks*. In the shaft-graves, and in the bee-hive and chamber tombs of the Mycenæan period, the dead were entombed unburned in a partly mummified state (cf. Tsountas-Manatt, *The Mycenæan Age*, chs. v. vi.). And even if, in the face of these discoveries, we must take account of the possibility of a non-Grecian population in Mycenæan Greece, the case is different with the great Athenian cemetery which has been open to view in the N.W. of the town since the year 1891 (cf. A. Brückner and E. Pernice, 'Ein attischer Friedhof' in *Mitteil. d. kais. deutschen archaeol. Instituts*, Athen. Abt. xviii.). Among the nineteen 'dipylon-graves' (graves of the geometric period) in this burying-place, only one contained an urn with burnt bones, 'and this state of affairs agrees with the assurances of Greek local antiquaries, who claim to have seen no προιστορικὸς τάφος with a burnt body.' So, when burying and burning are met with in the Greece of history alongside of each other, there can be no doubt that the former custom must be regarded as the more primitive, and that the Homeric world with its practice of body-burning represents an innovation contrary to the primitive Greek custom of burial which is preserved in the mother-country.

The *Roman* tradition corresponds to the conditions actually found among the Greeks. According to Pliny, burial preceded cremation in Rome also (cf. *Hist. Nat.* vii. 187):

'Ipsum cremare apud Romanos non fuit veteris instituti; terra condebantur . . . et tamen multæ familiæ priscos servavere ritus, sicut in Cornelia nemo ante Sullam dictatorem traditur crematus.'

An old royal enactment referring to the so-called 'Cæsarian operation' (cf. M. Voigt, 'Über die leges regiæ' in *ASG*, vii.: 'negat lex regia mulierem, quæ prægnans mortua sit, *humari*, antequam partus ei excidatur') appears to be acquainted with burial only, but the legislation of the Twelve Tables already sanctions both methods of disposal of the dead.

Cf. Tab. x. (ed. Schoell) 1: 'hominem mortuum in urbe *ne sepelito neve urito*'; 8, 9: 'neve aurum addito cui auro dentes iuncti escunt, aut im cum *illo sepeliet uretve*, se fraude esto.'

The excavations also indicate that burial was succeeded by cremation on ancient Latin soil. The lowest layer of the burying-ground laid bare near the Porta Esquilina contains rock-hewn burial chambers with unburned bodies; while in the second layer of soil in this cemetery, as well as in the necropolis of Alba Longa and among the most recent excavations of Professor Boni in the Forum Romanum, urns of ashes have been brought to light which point, no doubt, to a higher antiquity for cremation in Rome than might be expected from the historical tradition quoted. We have to rely solely on excavations with regard to the northern part of Italy. Here, in the famous burying-places belonging to the older Iron Age, of Bologna, Villanova, and Marzobotto, the graves of bodies buried and burned almost contemporaneously lie close together. The latter class are assigned by Mon-

telius (*La Civilisation primitive en Italie depuis l'introduction des métaux*, Stockholm, 1895) to the Umbrians, *i.e.* to the near relatives of the Latins, and the former to the non-Aryan Etruscans. But the observations of the present writer, on the spot and in the Museum of Bologna, failed to convince him of the possibility of carrying through this ethnographic division.

When we pass to the East and North of our territory, we find both methods of disposing of the dead mentioned by Herodotus (v. 8) among the *Thracians*: *ταφαὶ δὲ τοῖσι εὐδαίμοσι αὐτῶν* [the present reference is thus only to the rich] *εἰσὶ αἵδε· τρεῖς μὲν ἡμέρας προτιθέασι τὸν νεκρὸν, καὶ παντοῖα σφάξαντες ἱρήια εὐωχέονται, προκλαύσαντες πρῶτον· ἔπειτα δὲ θάπτουσι κατακαύσαντες ἢ ἄλλως γῇ κρύψαντες.** The same thing holds of the pagan *Prussians* and *Lithuanians*, regarding whom a treaty with the Teutonic Order in the year 1249 (cf. Dreger, *Cod. Pomeran. diplom.* No. 191) certifies the following: 'promiserunt quod ipsi et heredes eorum in mortuis *comburendis vel subterrandis* . . . vel etiam in aliis quibuscunque ritus gentilium de cetero non servabunt.' Elaborate descriptions of the disposal of the bodies of people of rank by cremation among the races mentioned are given us by different authorities, such as Peter of Dusburg or the canon Stryikowski; while others like the clerical Jan Malecki (Meletius, Menecius), who will often be referred to, in their accounts of the ancient Prussian funeral customs, start with burial as a self-evident institution. The older information among the Slavonic races is somewhat more uniform, and is in favour of cremation. It is certified by Boniface (Jaffé, *Monumenta Moguntina*, p. 172) as existing among the *Winedi*; by Thietmar of Merseburg (*Chron.* viii. 2) among the Poles, and by the Arabs Ibn Dûstah, Ibn Foszlan, Mas'ûdi, etc., among the Eastern and the Danube Slavs. Alongside of this, however, Ibn Dûstah tells of a custom according to which, if a man of noble rank died, a grave was made for him in the form of a large house, in which he was laid unburned. But, as the followers of this custom are expressly called Rhos (Russians), not Slavonians, it is natural to conjecture that, as we must understand by the Rhos the Norse conquerors of Russia, we have here to do with a Scandinavian custom; for we read of stately rooms in Norway belonging to the oldest Iron Age—rooms hewn in wood, in which some corpses lay on stuffed cushions, and some sat on chairs (cf. O. Montelius, *Die Kultur Schwedens*[2], p. 193). It may also be considered a foreign custom when, in the account given by Ibn Foszlan of the interment of a Russian merchant (see below, p. 30), the corpse was put in a ship and burned along with it, in exactly the same way as was customary in Northern Scandinavia. On the other hand, the simultaneous existence of different burial customs among the old Slavonic races—cremation among the Radimičes, Sěverjanes, and Krivičes, burial among the Poljanes and Drevljanes—may be inferred from the information of the old Russian *Chronicle* of Nestor, and Christianity at its introduction seems to have found both methods of disposing of the bodies followed to practically the same extent (cf. Kotljarevskij, 'On the Burial Customs of the Pagan Slavs,' in *Trans. of the Department for the Russian Lang. and Lit. of the St. Petersburg Acad.* [Russ.] xlix. p. 240 ff.).

The *Teutons* and *Celts* still remain to be considered. Among these the Roman authors are acquainted with cremation only.

Cf., for the Teutons, Tacitus, *Germ.* 27: 'funerum nulla ambitio: id solum observatur, ut corpora clarorum virorum certis lignis crementur, struem rogi nec vestibus nec odoribus cumulant: sua cuique arma, quorundam igni et equus adicitur, sepulcrum caespes erigit.' As late as the year 785 (*MGH* iii. 49) Charlemagne decreed against the Saxons: 'si quis corpus defuncti hominis secundum ritum Paganorum flamma consumi fecerit, et ossa eius ad cinerem redegerit, capite punietur'; and again, 'iubemus ut corpora Christianorum Saxonum ad cimeteria ecclesiae deferantur et non ad tumulos Paganorum.' The native testimonies to cremations on a large scale are too well known from the *Beowulf* and the songs of the Edda to require to be detailed here. With reference to the Gauls, Cæsar states (*de Bell. Gall.* vi. 19): 'funera sunt pro cultu Gallorum magnifica et sumptuosa; omniaque quae vivis cordi fuisse arbitrantur, in ignem inferunt, etiam animalia, ac paulo supra hanc memoriam servi et clientes, quos ab iis dilectos esse constabat, iustis funeribus confectis una cremabantur.' The same thing appears from Pomponius Mela (iii. 2, 3) and from Diodorus Siculus (v. 28).

The question simply is, *At what time* did the Teutons and Celts begin to cremate their dead? The final answer to this can be given only by prehistoric archæology, for want of older written evidences. This shows that in the lands occupied by the Celts and Teutons during the Neolithic Age, the corpses were interred unburned in dolmens, upright graves, and stone chests, and that it was only after the use of bronze had become more firmly established in Europe that cremation gradually came in. It further encourages more and more the opinion (cf. Montelius, *AA* xvii. 151 ff.) that the change of custom went on in the countries mentioned, without any real change in the population, so that in this way we should have to conclude that, for both Celts and Teutons, burial and not cremation was the oldest method of disposing of the dead, although history gives evidence only of the latter. It is worthy of notice that in Sweden and Norway burial once more appears decisively during the younger Iron Age alongside of cremation, and we may doubt whether the former mode of disposing of the dead was at any time quite extinct.

No one who considers the facts and conditions here described (cf. for details J. Grimm, 'Über das Verbrennen der Leichen' in *Kleinere Schriften*, ii. 211, and Ridgeway, *The Early Age of Greece*, i. ch. vii. 'Inhumation, Cremation, and the Soul') will doubt that, so far as the Aryan races are concerned, there is a not inconsiderable probability for the priority of burial over cremation. This view is confirmed by a *consideration of the language*.

If it really happened, as J. Grimm (*op. cit.*) assumed, that cremation existed before burial, we should naturally expect this fact to be indicated somehow in the Aryan funeral terminology; that, *e.g.*, expressions for 'to dispose of the dead' should exhibit an original sense = 'to burn.' But this is not at all the case; and even the Gr. *θάπτω*, which means in historical usage 'to bury' and 'to burn,' can by no means, in spite of J. Grimm's contention, be connected with Skr. *tap*, Lat. *tepeo*, Gr. *τέφρα*, 'ashes,' but must very likely be connected with O.H.G. *tunc*, 'pit,' or with Armen. *damban* 'grave.' On the other hand, there is a wide-spread prehistoric designation of burial in the series: Old Pr. *kopts*, *enkopts*, 'to bury,' Lith. *kãpas*, 'cairn,' Lett. *kapu mâte*, 'grave-goddess,' Gr. *κάπετος*, 'grave,' 'pit,' Lat. *capulus*, 'coffin': Lith. *kapóti*, Old Slav. *kopati*, 'to hew,' and the same change of meaning recurs in the equally primitive equation: O.H.G. *grab* = Old Slav. *grobŭ*, 'grave,' 'coffin' (Goth. *graban*, 'to dig'). There is a pre-historic designation of the grave also in the probable equation, Lat. *orcus* (**urcus*), 'under world' = Goth. *aúrahi*, 'sepulchral cave' (cf. Bezzenberger, *Beiträge*, xxv. 166); while the Lat. *sepelio*, the oldest meaning of which was undoubtedly 'to bury,' as follows from the passages of the Twelve Tables quoted above, through its connexion with the Skr. *sapary*, 'to serve,' 'do homage,' 'honour,' plainly expresses the ancient *ritual significance* of this mode of disposal of the dead (cf. also W. Schulze, in Kuhn's *Zeitschr.* xli. 335).

* Cf. also Kretschmer, *Einleit. in die Gesch. der griech. Sprache*, p. 178.

We are thus justified in assuming that the Aryans, alike in the land of their origin and after their arrival in what afterwards became their home, interred their dead unburned in carefully prepared graves. The thought that prompted this kind of burial must have been simply the desire to protect the body of the deceased, whether with the pious intention of warding off enemies and wild animals from it, or because, believing that the soul of the dead hovers around the corpse and is bound to its existence, they thought to secure the interests of the deceased by procuring for him the longest possible existence, and at the same time to serve the interests of the survivors—for they were afraid of ghosts—by confining the spirits of the dead rigidly to the grave. Or it may be that all these reasons worked together.

This intention of guarding the body of the dead person is exhibited on the grandest scale in those colossal tombs, known as dolmens, vaults, cairns, etc., which are scattered over Europe in the North, West, and South, and which also recur in North Africa, Palestine, and India; but the questions to which these buildings give rise from the side of the history of culture and ethnography (cf. S. Müller, *Nord. Altertumskunde*, i. 68; Hoernes, *Urgesch. der bildenden Kunst*, p. 241; Zinck, *Det nordevrop. dysseterritor. stengrave og dyssernes udbredelse i Europa*; M. Much, *Heimat der Indogermanen*, Abschnitt v., 'Die grossen Steingräber') are as yet so far from being settled that we cannot enter upon them here. At bottom, however, the same endeavour to protect and preserve the human corpse is expressed in the later but still pagan invention of the coffin. It is unknown during the whole of the Stone Age, and in Greece also during the Mycenæan period of the Bronze Age. In Sparta, as late as the time of Lycurgus, the dead were, without any such covering, laid upon palm branches and leaves of the olive tree. Afterwards, as in the old Athenian cemetery (cf. above, p. 16), the bodies were enclosed in large vessels (πίθοι), and then the clay and wooden coffin and the stone sarcophagus gradually found their way into the South, borrowed perhaps from foreign countries. In the forest land of N. Europe there appeared for the first time, in the earlier Bronze Age, the so-called 'tree of the dead,' *i.e.* a hollowed-out trunk, especially of the oak, which was used for the protection of the body. Any one who desires to convince himself of the preserving power of this manner of interment has only to examine, in the Copenhagen National Museum, the tree-coffins with their contents taken from the Danish cairns. In Ancient Russia, and in dialects even at the present day, the coffin bears the very name *klada*, *koloda*, *i.e.* 'tree-trunk' (cf. N. Germ. *Dodenstock*). The Slavonians, even at the beginning of last century, felled a hollow tree for the purposes of burial, shaped it, and pushed the dead body inside. The sectaries of the province of Czernigovski are still said invariably to manufacture their coffins out of a complete tree-trunk. Moreover, corpses have been found in Russia which were enveloped only in bark (cf. Kotljarevskij, *op. cit.* p. 222 f.). This northern 'tree of the dead,' whose wide-spread use is a proof of the fact that the burial of the dead had never quite been given up, was afterwards superseded by the Christian coffin *constructed* from boards, which spread over Europe along with the diffusion of the new beliefs.

Eloquent witness is borne to this by numerous names of the coffin in the Teutonic languages—names which were borrowed from the Latin (O.H.G. *saruh*, *sarh*, from **sarcus*=*sarcophagus*, A.S. *cest*, *cist*, 'coffin,' *cistian*, 'to coffin,' Old Nor. *lík-kista* from Lat. *cista*, M.H.G. *arke* from Lat. *arca*, O.H.G. *sarh-scrîni* from Lat. *scrinium*).

Thus all along, from the earliest to the most recent times, we see connected with the disposal of the dead by burial the endeavour to protect and preserve the corpse.

Now, in the most direct opposition to this series of ideas connected with the burial of the dead, is the custom of *cremation*, which, as we have seen, emerges in pre-historic times among all the Aryan races, and subsists, alongside of burial, down even to the introduction of Christianity. While those who bury a body aim at *protecting* it by durable grave-constructions or by coffining, we now find men resorting to fire as the most drastic means of *destroying* it. It is in reality a revolution which can be explained only by a complete change in the ideas about life after death, and which in recent years several famous scholars have made the subject of research. The first place here is due to Erwin Rohde and his book *Psyche*[2] (i. 27 ff.). According to his view, cremation is meant to effect the speedy and complete separation of the soul from the body, and this from an affectionate as well as a selfish motive. As long as the body lasts, the soul is bound to it; it enjoys no rest itself and allows none to the survivors, whom it terrifies by manifold appearances.

'Nothing can destroy the visible counterpart of the soul more quickly than fire; if a fire is kindled, and the most precious belongings of the dead man are consumed in it, no bond can detain the soul any longer in this world. Thus, by burning the body, they serve the interests of the dead, who no longer roam about restlessly, and still more those of the living, whom the souls banished to the depths of the earth can never meet again.

In essential agreement with Rohde, but independently of him, S. Müller, in his *Nord. Altertumskunde* (i. 363 ff.), is convinced that the true purpose of cremation is the release of the soul in order that it may find peace in the other life, while R. Much, in a comprehensive discussion of Müller's book (*Anzeiger für deutsches Altertum*, xlviii. 315 ff.), lays greater emphasis on the release of the survivors of the dead person from the fear of him than on the release of his soul.

'The thought of the dead person, if it was a case of burial, would involve the idea of the preserved but disfigured body, decomposed or already changed to a skeleton. . . . But if the dead person had been burned, what was left of him afforded no new food for the imagination. . . . The part which the dead under such circumstances played in the dreams, hallucinations, and imaginations of the survivors was undoubtedly a smaller and also a more friendly one; in other words, his soul entered more easily into the peace of a home of souls, or else followed its destined way at liberty within living and active nature.'

In confirmation of his view, Much appeals to the custom, which long persisted, of burning what were supposed to be vampires, witches, sorcerers, and the like, for no other reason than to prevent their return.

In opposition to the opinion (which, by the way, is generally prevalent) of these three scholars, that the 'dogma' of cremation spread into Europe and Asia by passing from race to race, W. Ridgeway, in his work mentioned above, *The Early Age of Greece*, defends the view that cremation was brought by the *conquering expeditions* of a N. European Celtic race to Italy and Greece as well as to Iran and India. He holds that, at the same time and in the same way as the custom of burning the body, the belief had spread that an entrance into a world of the blest was secured only by those who were burned by fire, but that cremation itself is rooted, in the last resort, in the conviction that it is only by fire that man can be freed from the pollution which death brings with it.

Setting aside this attempt of Ridgeway (which appears to have little foundation) to explain the spread of cremation among the Aryan races by migration of races instead of by 'waves of culture,' the present writer believes that in the discussions of all four scholars important points of view have been suggested for the under-

standing of the question with which we are here engaged, although naturally it will never be possible to get beyond more or less credible conjectures on the subject. There is no doubt that the thought which in stages of primitive culture is expressed most frequently and plainly, as we shall see in the section on 'Realms of the Dead' (p. 29), is that cremation opens for the dead person the entrance into a paradise beyond. But it cannot yet be decided whether cremation first originated from an Aryan race and spread 'wave-like' in different directions, or took rise outside the circle of Aryan linguistic and racial kinship—perhaps among the primitive Sumerian population of Babylon, where, in the year 1887, huge burying-grounds of burned bodies were brought to light in the two ruined sites of Surghul and El Hibba (cf. R. Koldewey, in *ZA* ii. 403 ff.).

2. Attentions paid to the dead at the time of the disposal of the corpse, especially the gifts to the dead.—Whether, in primitive times, the body of the dead was buried or burned, the disposal of it must have been accompanied even then by a long series of solemn customs, which can still be ascertained by a careful comparison of the burial-rites handed down from the separate Aryan races. Unfortunately, such a comparison has not as yet been undertaken, and cannot be attempted in an exhaustive way here. To show, however, how far-reaching the analogies in this connexion are, two at least of the chief Aryan races, namely, the *Greeks* and the *Lithuanian Slavs* will be compared.

For the former we shall start from the description of the Greek burial-customs in Rohde's *Psyche*² (denoted by R.), i. 218 ff.; for the latter we shall take special account of the above-mentioned (p. 17ᵃ) work of Kotljarevskij (=K.); cf. also Joannes Menecius (=M.), 'de Sacrificiis et Idolatria veterum Borussorum, Livonum, aliarumque vicinarum gentium' (*Scriptores Rerum Livonicarum*, ii. 389 ff.); and P. V. Šejn (=Š.¹), 'Materials for a Knowledge of the Life and Language of the Russian Population of the North-West' (White Russia), i. 2, 2nd pt.: 'Burial and Memorial Customs, Wailings over the Corpse, and Lamentations for the Dead,' in *Trans. of the Department for the Russian Lang. and Lit. of the St. Petersburg Acad.* [Russ.] 51, No. 3, St. Petersburg, 1890, and the same author's work (=Š.²), *The Great Russian in his Songs, Usages, Customs, Superstitions, Tales, Legends*, etc. [Russ.], St. Petersburg, 1898, 1900, 2nd pt. p. 777 ff. Thereafter the important subject of gifts to the dead will be discussed with regard to all the Aryan races.

(*a*) Ancient Greek and Litu-Slavic burial-customs.—(α) *The lying in state of the corpse* (πρόθεσις).—'After the eyes and the mouth have been closed by the hand of the nearest relative, the corpse is washed and anointed by the women of the family, clothed in clean garments, and laid on the bed in the house for solemn lying in state' (R.).

'In funeribus hic servatur ritus a rusticanis. Defunctorum cadavera vestibus et calceis induuntur, et erecta locantur super sellam, cui assidentes illorum propinqui perpotant ac helluantur' (M. p. 391). 'On the appearance of the master of the house, the wife, and the persons intimately connected with the dead man, the lying in state takes place in the "corner" (*kutŭ*), which in this case does not mean the corner under the sacred images, but the bench opposite the entrance door.* Among other wishes connected with a "decent" death, as, *e.g.*, that in the hour of death all the relatives may be present, that the son may close the eyes, the daughter sing the song of woe, etc., the White Russian peasant wishes to lie on his own "bench" after his death; he has not died "decently" if he has lain in the "corner" in a stranger's house.' 'They clothe every corpse in a clean white garment, prepared in the house, and in new bast shoes, which are replaced by boots only in wealthy families.' 'It is the bounden duty of the dead man's nearest relatives to close his eyes, and in doing so they are required to avoid most strictly any possible injury to his body; and they make haste to wash the body, before it has grown cold.' 'They clothe the dead man in a complete summer dress, *i.e.* in a summer tunic and girdle over the under-garment, and they usually put a hat on his head' (Š.¹ pp. 512, 518).

* Cf. also Š.¹ p. 531: 'They lay the dead body on a long broad bench, or on a frame specially prepared for it in the middle of the room, with the head towards the sacred images (*krasny ugolŭ*)'; and Š.¹ p. 551: 'They lay the dead body in the middle of the room, with the feet towards the door.' So in Homer (*Il.* xix. 212) the dead person rests ἀνὰ πρόθυρον τετραμμένος.

A difference from the Greek custom is shown in the fact that among the Slavs the washing of the dead body, which, moreover, is regarded as a religious ceremony accompanied by prayers, is not usually performed by relatives, but by strangers; in the case of men it is done by men, in the case of women by women, or sometimes in the case of both by old women.

(β) *The lamentation for the dead* (θρῆνος).—'The lamentation for the dead took place over the corpse lying on its bier, and the purpose of the lying in state was to give opportunity for this' (R.). The spontaneous passionateness of this lamentation in the earliest times is attested not only in the description of Homer,* but also by the endeavours of the lawgivers, especially Solon (Plutarch, *Solon*, 21), which were directed towards putting a check upon it. Solon will have only the women nearest of kin (cf. below, 3 *e*) to take part in the lamentation; all violent outbursts of grief, scratching of the cheeks, and beating of the breast and the head are forbidden, as well as the singing of set forms (θρηνεῖν πεποιημένα). Homer (*Il.* xxiv. 707 ff.) gives a graphic account of what once prevailed: Priam carries the body of Hector to Troy. The whole town is assembled before the gates; with weeping and lamentations the people surround Priam's chariot; wife and mother tear their hair at the sight of their beloved dead one. Priam now exhorts them: 'Give me place for the mules to pass through; hereafter ye shall have your fill of wailing when I have brought him unto his home.' There the body of Hector is laid on a splendid couch, professional singers strike up a melancholy air, accompanied by the woeful cries of the women; then Andromache, Hecuba, and Helen step forward to the dead body to utter those mourning songs which are doubtless meant by the θρηνεῖν πεποιημένα of Solon's edict.

We meet with all these customs in everyday use in the Litu-Slavic world, sometimes even at the very threshold of the present day. From the laying of the dead body on the 'bench,' from the very moment of death, indeed, the lamentations of female relatives or neighbours continue through all the phases of the burial—often it is impossible to say whether more as a conventional necessity or as an expression of deep anguish. Moreover, they are repeated at the anniversary festivals of the dead, which will be spoken of below. The Arab Ibn Dûstah (K. p. 217) was acquainted with the fierceness of these outbursts of grief when he relates that the women lacerated† their hands and faces with knives when a member of the family died. And Šejn states of the White Russians of the present day (Š.¹ p. 535):

'The room of the peasant's house, in which the dead body lies, re-echoes with the weeping and mourning of relatives, neighbours, and acquaintances. In such a case the women naturally distinguish themselves by special ecstasies of feeling, their wailing and moaning and their despair at times reaching such a pitch that, on looking at them, one involuntarily begins to be apprehensive not only for the health, but even for the life of some of them.' Again, referring to the *Great Russians*, he says

* Cf. *e.g. Il.* xviii. 22 ff. (the son of Nestor announces the death of Patroclus to Achilles):

ὣς φάτο, τὸν (Achilles) δ' ἄχεος νεφέλη ἐκάλυψε μέλαινα.
ἀμφοτέρῃσι δὲ χερσὶν ἑλὼν κόνιν αἰθαλόεσσαν
χεύατο κὰκ κεφαλῆς, χαρίεν δ' ᾔσχυνε πρόσωπον·
νεκταρέῳ δὲ χιτῶνι μέλαιν' ἀμφίζανε τέφρη.
αὐτὸς δ' ἐν κονίῃσι μέγας μεγαλωστὶ τανυσθεὶς
κεῖτο, φίλῃσι δὲ χερσὶ κόμην ᾔσχυνε δαΐζων.

† Cf. *Il.* xix. 282 ff.:

Βρισηῒς δ' ἄρ' ἔπειτ', ἰκέλη χρυσέῃ Ἀφροδίτῃ,
ὡς ἴδε Πάτροκλον δεδαϊγμένον ὀξέϊ χαλκῷ,
ἀμφ' αὐτῷ χυμένη λίγ' ἐκώκυε, χερσὶ δ' ἄμυσσεν
στήθεά τ' ἠδ' ἁπαλὴν δειρὴν ἰδὲ καλὰ πρόσωπα.

(Š.[2] p. 779): 'When the women strike up their mourning songs at the graves, the weeping widow often swoons in consequence of her great grief, i.e. she falls on the grave of her husband, and lies there perfectly motionless. Then the women who are present shake her and bring her to her senses; and she falls down on the grave again, and continues her song of lamentation. Swoons like these occur several times in succession. Often they are only pretended, as it does honour to the bereaved one, and they praise her for "knowing how to weep."'

It is worthy of note that these Russian lamentations often assume an epic, and even a dramatic, character—*epic* in so far as occasionally a complete sketch of the life of the deceased is given in them (cf. Š.[1] p. 546), *dramatic* in so far as the mourners are in the habit of turning to the dead person with questions as if he were alive.

Cf. Menecius, *op. cit.* p. 391: 'Epota cerevisia (see above) fit lamentatio funebris, quæ in lingua Rutenica sic sonat: . . . id est, hei mihi quare mortuus es? Num tibi deerat esca aut potus? Hoc modo lamentantes enumerant ordine omnia externa illius bona, cuius mortem deplorant; nempe, uxorem, liberos, oves, boves, equos, anseres, gallinas, etc. Ad quæ singula respondentes occinunt hanc næniam: cur ergo mortuus es qui hæc habebas?' and Š.[1] p. 520: 'Those who visit the dead man take pains to express their genuine grief, and in doing so they recall different circumstances in their lives which have such and such a connexion with his life. The women express this in a mournful, tearful song, but the men in a long address, during which the speaker often turns to the dead man with questions, just as if he were still alive, and several times during the course of the speech he repeats that the dead man, although no longer alive, can nevertheless hear and understand quite well, only he is unable to express his thoughts and feelings.'

These speeches of the men are not really dirges, since only the women can take part in funeral dirges. Copious collections of these dirges, arranged according to the relationship of the mourner (widow, mother, sister, daughter, daughter-in-law, etc.), are to be found in both of Šejn's works. While on the whole marked by great monotony, these songs not infrequently exhibit in details genuine poetic feeling, and quite recall the mourning songs which the Trojan women poured forth over the body of Hector.

Thus a White Russian widow laments (Š.[1] p. 638): 'O, my brave partner, how am I to live now with my dear little children? Who will be their supporter and father? Whence can warm winds blow down upon them? No warm winds will blow upon them,' etc. Cf. Andromache's words at the bier of her husband (*Il.* xxiv. 725 ff.): 'Husband, thou art gone young from life, and leavest me a widow in thy halls. And the child is yet but a little one, the child of ill-fated parents, thee and me; nor methinks shall he grow up to manhood,' etc.

In Russia there are also paid female mourners, who often achieve great fame by their art (cf. Melnikow, *In the Forests*, ii. 307, Russ. ed.).

(γ) *The funeral procession* (ἐκφορά).—'The lying in state seems to have lasted, as a rule, only one day. Early on the morning of the third day after death, the body was carried out of the house along with the couch on which it had lain. . . . The solemn and magnificent forms which this part of the cult of the dead assumed, in the time of the ancient aristocracy, may be seen from the portrayal (if it corresponds at all to the reality) of a funeral procession on one of the very ancient "dipylon-vases." Here the body lies on an elevated bier in a carriage drawn by two horses; there are men with swords at the side, and a whole crowd of women following, wailing and beating their heads' (R.).

'Cum ad sepulturam effertur cadaver, plerique in equis funus prosequuntur, et currum obequitant, quo cadaver vehitur; eductisque gladiis verberant auras, vociferantes: . . . id est, aufugite vos dæmones' (M. p. 391). 'They always drive the dead body to the cemetery, and that on sledges even in summer; it is not customary to carry the dead body with the hands'* (Š.[2] p. 778). 'In old Russian the phrase "to sit on the sledge" means the same as "to approach the grave" (cf. Anučin, 'Sledge, Boat, and Horse as Requisites of Burial Ritual' (Russ.) in the *Moskauer Drevnosti*, xvi.). 'It is also worthy of notice that, as a rule, they yoke the dead man's favourite horse to his carriage.' 'In my parish they convey the dead to the cemetery in no other way than on a waggon drawn by a pair of oxen.' 'The burial takes place on the third day after the death of the invalid, and often on the second' (Š.[2] pp. 522, 541, 530).

The obsequies themselves naturally took a different form according as it was burial or cremation that was practised; both methods, as we have seen, can be proved to have existed in pre-Christian times, both on Litu-Slavic and on Greek soil. Winternitz, in his articles, 'Was wissen wir von den Indogermanen?' (*Beilage zur Münchner AZ*, 1903, No. 258, p. 293), thinks it is possible to recognize a primitive Aryan custom, connected with burial as well as cremation, in the frequently recurring practice of the mourners walking three times round the grave or the funeral pyre; but the present writer has not as yet been able to trace such a habit on strictly Slavonic soil. The most important part, however, of the obsequies proper was undoubtedly the *depositing of the funeral gifts* on the grave or on the funeral pyre of the deceased—a point which will be treated in greater detail below. We shall therefore pass on to the fourth and last chief act of the ancient Greek burial ceremonial on the one hand, and the Litu-Slavic on the other, viz. the funeral feast.

(δ) *The funeral feast* (περίδειπνον).—'Having returned from the disposal of the body, the members of the family undergo a religious purification, and then, crowned with wreaths, attend the funeral feast. This was also a part of the cult of souls. The soul of the dead man was believed to be present, as their host; it was dread of the invisible companion that gave rise to the custom of alluding to him only eulogistically during the feast. The funeral feast was a repast for the living relatives, given at the house of the dead person' (R.).

'All the rest of the company return (after the burial) to the peasant's house, with the priest at their head, in order to "celebrate the funeral feast" (*praviti stolŭ*; cf. Homeric τάφον δαινύναι). By this is meant a commemoration meal for the dead person, which lasts from two to four hours.' 'After they have buried the corpse, the priest goes home, but often they invite him to the house of the dead person. All the others who attended the burial immediately betake themselves to the house of the deceased "to the feast of cakes" (*na kločki*). After they have washed their hands, they pray here first of all to God, sometimes inaudibly, sometimes, if there is a reader among them, aloud; then they sit down to table. The reader and those who dug the grave sit in the places of honour. The men sit at one table a little higher ("in the corner," *na kutě*), the women at another' (Š.[1] pp. 513, 554). 'But each one, before eating [at the funeral feast], must wash himself. This must have been a very ancient custom, and it has not been given up yet among the Nadravians; for, when the people come from the burial, a tub of water is placed before the door, as those who attended the funeral must wash* themselves, even although none of them touched either the earth or the corpse' (cf. Matthæus Prætorius, *Deliciæ Prussicæ oder Preussische Schaubühne*, ed. W. Pierson, Berlin, 1871, p. 99). 'To this day I cherish the greatest respect for this burial feast (*žalobny stolŭ*), at which rude speaking, slander, dispute, disagreement, strife, wanton jests, and everything else that usually accompanies gatherings of peasants, had no place. The large gathering spoke with restraint, not raising their voices, and the conversation, whether of individuals or of the whole company, confined itself to the deceased, his actions, and the most trivial details of his life. They recalled the talk and instructions of the dead man, especially those in which the goodness of his heart shone forth' (Š.[1] p. 514).

We shall learn more about the funeral feasts of the Greeks and the Litu-Slavs when we come to speak of their 'commemoration feasts for the dead' (3 *d*); the latter cannot always be sharply separated from the former.

(*b*) THE GIFTS TO THE DEAD.—The remote antiquity of the Lithuanian, White Russian, and Great Russian ideas and usages connected with the disposal of the dead is shown not least in the custom, which even yet is in part wide-spread, of laying in the grave along with the dead person the favourite objects of his past life. The following is a selection from the great mass of testimonies:

'Post lamentationem dantur cadaveri munuscula, nempe mulieri fila cum acu: viro linteolum, idque eius collo implicatur. . . . Qui funus mortuis faciunt, nummos proiciunt in sepulcrum tanquam viatico mortuum prosequentes. Collocant quoque panem, et lagenam cerevisiæ plenam ad caput cadaveris in sepulcrum illati, ne anima vel sitiat vel esuriat' (M. *l.c.*). 'I

* The custom is different on the other side of the Volga, among the Raskolnikans (cf. Melnikow, *In the Forests*, ii. 309, Russ. ed.).

* The Scythians also, as Herodotus (iv. 73 ff.) describes in detail, had to purify themselves after the burial, which they did by means of a vapour-bath from hemp-seed.

was assured that they put into the pockets of the linen shirt (*nasovǔ*), which is put on the dead man, pipe and tobacco-pouch, flint and steel if he smoked during his life, and a snuff-box if he snuffed. To the man's girdle above the shirt they hung a small bag containing smooth copper buttons, as well as a small knife in a leather sheath—articles with which the peasant never parts during his daily life. In the case of both men and women they placed in the front folds of the linen shirt a clean linen handkerchief (*nosoviĉka*), so that the dead person might, if necessary, wipe his eyes, his nose, and his mouth.' 'I have heard it frequently asserted that on opening a burial-mound the grave-diggers sometimes used to find a bottle of spirits which had been previously laid in the dead man's coffin. The men, so far from despising such a find, consumed it on the spot with great pleasure.' 'They place a towel in the dead man's hand, and some coppers in his pocket, with which he buys a place for himself "in yonder world."' 'After the burial-service they lower the deceased into the grave, along with objects which were specially treasured by him and were specially dear to him during his lifetime. If, *e.g.*, he was by trade a shoemaker, they invariably placed beside him an unfinished bast shoe (*sŭ piĉkowŭ i spicami*, implements of his trade?); if he was a carpenter, or some other tradesman, they gave him an axe, a chisel, a plane, a file, etc. Besides these things they put into every dead man's grave bread, salt, eggs for an omelet, nuts, beer and spirits in a bottle, and also a short pipe with tobacco and tinder-box, or a snuff-box with snuff' (S.[1] pp. 512, 517, 531, 534).

Similar customs may still be shown to exist among the Teutonic races of the present day, although they have to a large extent disappeared (cf. E. Mogk, 'Mythologie' in Paul's *Grundriss d. germ. Phil.*[2] iii. 252).

The result of these investigations is that even to-day, under the complete domination of Christianity, we find the remains of a custom which can be traced back, by means of excavations and traditions, to the epoch when people generally began to bestow care upon the disposal of the dead, viz. the Neolithic Age; and this custom consisted in giving to the dead man gifts of meat and drink, weapons, household furniture of all kinds, ornaments, domestic animals, and even servants and wives. In fact, in the time of the Vikings, they even deposited the dead man's ship along with him at the burial mound, as the well-known discoveries of Tune and Gokstad show. And among those Aryan races which, at the time of the oldest historical tradition, seem to be no longer acquainted with the custom of gifts to the dead, unmistakable traces point to its existence at an earlier date. For instance, gifts to the dead appear to be unknown to *Vedic* antiquity, but such facts as the following must be taken into account. According to a famous hymn of the Rigveda (x. 18), they give the dead warrior on the funeral-pyre his bow, and then take it out of his hands again; or they make the wife lie on the funeral-pyre beside her husband, and afterwards command her to 'rise once more to the world of the living.' This shows that here also it used to be the custom for weapons and wife to be burnt along with the dead man (cf. Oldenberg, *Die Religion des Veda*, p. 575). The same holds good of the Homeric Greeks. With them also the ashes of the dead were interred generally without gifts to the dead; but the funeral ceremony which Achilles prepared for his friend Patroclus (*Il.* xxiii. 164 ff.), and the funeral-pyre on which he placed pitchers with honey and oil, and at which he slaughtered sheep, oxen, horses, dogs, and twelve noble Trojans, show that there reached even into the Homeric epoch the memory of a time when people honoured the dead with sacrifices and gifts.

The method in which these gifts were offered to the dead man varied. Where the rite of *burial* was prevalent, they were lowered with the corpse into the grave; where *cremation* was customary, they were either placed beside the ashes of the dead man or burned with him on the funeral-pyre—which seems to be the later custom. But it is difficult to carry through a sharp distinction as to the character of the gifts according as it was a case of burial or of cremation. It is true that S. Müller, in his *Nordische Altertumskunde*, has ventured to suggest, for the geographically limited district of this northern world, a complete history of the development of gifts to the dead in harmony with the development he assumes to have taken place in the ideas of the people of this region concerning a future life. Thus (according to S. Müller), at an earlier period of the Neolithic Age it was believed that the dead person really continued to live in the seclusion of the tomb, and so he was provided in great abundance with weapons and implements, with vessels containing meat and drink, with amber beads, etc. Then came the close of the Stone Age and the earliest Bronze Age, in which 'the earlier belief in the continuance of the life of the soul appears to have been given up without having anything to put in its place.' The consequence was that importance was no longer attached to the proper equipment of the dead, which 'was confined to a fixed collection of *weapons* and *ornaments*—one might say, to the things belonging to the daily outfit.' But what was the use of these then? And does it not seem a simpler assumption that in graves like these we have to do with those of warriors, who had no need of implements? Finally, we are told, cremation came in, which completely freed the soul from the body and carried it off to airy regions. From that time, according to S. Müller, the graves contain only 'petty wares, such as objects for the toilet, smaller pieces of furniture, or simple articles of dress.' But what would the soul, released from the body, want, *e.g.*, with a razor? Thus, however interesting it is to hear the opinions of an investigator of the standing of S. Müller, it is, nevertheless, very doubtful whether his views can be maintained even so far as the northern part, and especially the rest, of Europe is concerned. What meaning are we to put, *e.g.*, on the fact that, in the famous cemetery of Hallstatt, 525 graves of skeletons lie alongside of and among 455 graves of ashes, and that both kinds of graves exhibit essentially the same kinds of gifts deposited: weapons, utensils, ornaments, clay vessels, etc.? Or how are we to judge the fact that the Russian peasant of to-day who puts a handkerchief in the dead man's coffin (see above) gives as his reason the grossly material notion (which, according to S. Müller, really occurs only in the earliest Neolithic periods) that he does it in order that the dead man may be able to blow his nose?

The fundamental idea of all these gifts to the dead, from the most primitive times down to the present day, must always have been simply the wish to give the dead man something with him that might be useful or agreeable to him after death. In this connexion it must be emphatically observed that, *in depositing these things, the mourners were actuated not so much by definite conceptions of the future life, as by a custom inherited from their fathers.* This much we may say, that at different places and at different times the fundamental idea underwent a process of sublimation, in so far as the gifts to the dead, once seriously meant, showed a tendency to change into symbols of love and remembrance. We can recognize this very beautifully in the graves of the Athenian burying-ground already mentioned (cf. p. 16[b]), which was in use from pre-historic times down to the 4th cent. B.C. In the graves of the 'dipylon epoch,' which, as we have seen, contain skeletons almost exclusively, the abundant gifts (weapons, pottery of all kinds, pots with meat and drink, and bones from bull-offerings) deposited in the graves were doubtless meant seriously, and intended for the actual use of the dead man. It is quite different with the later graves—cremation as well as burial graves—between which no distinction can be made here in this

respect. The men generally get nothing more than a few worthless vessels. But beside the women are laid their ornaments, beside the children their toys (cf. Brückner-Pernice, *op. cit.* p. 189 f.).

We have said that we must regard as the fundamental idea of all gifts to the dead the wish of the surviving relatives to provide for the dead man in a future life, whatever they might imagine it to be. We cannot here enter fully into the much-disputed question as to whether this wish was called forth by fear of or love for the dead man. It may be that there was a time when fear of the soul of the dead, and the intention of keeping it securely in the grave by means of these gifts, were the only ideas in view. On the other hand, we must imagine the family ties so well knit, even in the times of the early Aryans, that they cannot be thought of as lacking a feeling of love (however rude the manner of expressing it), which was naturally extended also to the dead. So we can only say that a feeling of *timid* reverence for the dead, of fear mingled with love, was the foundation of the Aryan worship of the dead; and this notion is reflected in numerous testimonies (see below).

On the other hand, we must notice briefly another motive frequently supposed to underlie these gifts to the dead, viz. the assumption that men did not venture to deprive the dead of the property belonging to them in the eyes of God and of justice. It is all the more necessary to examine this view, because it best explains a number of facts which it is otherwise impossible or hard to understand. Thus, in the first place, the idea was widely current in Teutonic law of 'the portion of the dead,' *i.e.* 'a share which belongs by right to the dead for his own legacy,' and which H. Brunner (*Z. der Savigny-Stiftung für Rechtsgesch.* xix. Germanistische Abt. p. 107 ff.) has shown 'originally consisted of the movables which were burned or buried with the dead man.' If, therefore, the oldest usage affecting the rights of souls was that the dead should receive his entire possessions, the further inference is drawn (cf. Rohde, *Psyche*[2], i. 30 f. footnote 3) that in later times the idea must naturally have arisen of commuting this right by means of a small symbolical gift. Thus is to be explained the coin, the *obolus*, which in classical antiquity was squeezed between the teeth of the dead man, and which we have also frequently met with among the Litu-Slavic races as a gift to the dead. In the former instance it appears as 'Charon's penny,' *i.e.* as payment for the ferryman of the dead, in the latter (cf. above, p. 21[a]) it is transformed into money to buy a place in the next world. Generally, at the transference of an inheritance, many customs appear which indicate the notion that goods and chattels, from the point of view of God and justice, must follow the owner to the grave. In White Russia (S.[1] p. 522) when the coffin has been lifted to the waggon drawn by a horse, the relatives take leave of the dead man by kissing his forehead, but the new head of the house kisses the hoofs of the funeral horse, as well as those of the other horses, and sometimes those of all the cattle.

'The dead man,' writes Kotljarevskij (*op. cit.* p. 211), 'could take all his belongings with him into the grave; so among the inhabitants of Masovia, the new head of the house, as soon as the old one dies, goes to the house, to the buildings connected with the house, to the trees, and to the domestic animals, and tells them of the death of their former master, and of the entrance into power of the new one, with the words: "Your former master is dead; I am now your new lord."' The same thing is stated by Carl Cappeller, *Kaip senóji Lëtuvininkai gyveno, Aufzeichnungen aus dem Kreise Stallupönen*, Heidelberg, 1904, p. 86: 'Thus it was a pagan custom,' the account concludes.

Similar customs are also reported from Germany. In Michelbach, near Marburg, when the head of the house dies, the new master goes to the cattle in the stable and to the bee-houses, and announces the 'Läd' and his taking over of the charge with the words: 'The master is dead; I am the master' (in letters of R. Heldmann). Hessler (*Hessische Landes- und Volkskunde*, ii. [Marburg, 1904] p. 152) tells of a similar undertaking of command on the part of the mistress.

Nevertheless, the present writer does not believe that the custom of gifts to the dead is made altogether clear by the series of ideas described above, however old they may be. In order to show this, he will in closing this section refer to one more point from which it will appear that on Aryan soil, even in pre-historic times, people had not only thought about providing the dead man with such things as had been, or might have been, his property during his life—his axe, his sword, his apparel, etc.—but made provision beyond this for his well-being in the world to come. For our purpose, we may start from the custom, already touched on above, of giving the dead man his wife, or, if he had several wives, one of them, as a companion in the grave or on the funeral-pyre.

According to the evidence in Europe collected by V. Hehn (*Kulturpflanzen und Haustiere*[7], p. 585) and H. Zimmer (*Altindisches Leben*, p. 329), the same thing is clearly demonstrable among Scythians, Thracians, Lithuanians, Slavs, and Teutons, and undoubtedly goes back to primitive Aryan times. For India, it cannot be proved from Vedic antiquity. Nevertheless, Indologists do not doubt that, when the burning of widows makes its appearance, from about the 5th cent. B.C., we have to do not with an innovation, but with the revival of a very old custom preserved locally even in Vedic times (cf. R. Garbe, *Beiträge zur indischen Kulturgeschichte*, Berlin, 1903, p. 141 ff., 'Witwenverbrennung'; Risley, *Report Census of India*, 1901).

All these testimonies are concerned with provision for the *married* dead. What happened in the case of the single man? The present writer has tried to answer this question in a little monograph on *Totenhochzeit* (Jena, 1904). In this he starts from the custom, attested in Attica, of placing on the grave of those who died unmarried a λουτροφόρος, *i.e.* a certain kind of water-pitcher, which at the same time played an important part in marriage-ceremonies, as the water intended for the bridal bath of the young couple was brought in it. It is only by comparing the Greek customs with those of other Aryan peoples that we can discover the meaning of this custom. We then find that the placing of the bridal λουτροφόρος on the grave of unmarried people represents the symbolical preservation of a custom which is still very wide-spread among the Slavonic races, in terms of which a ceremonial imitation-marriage was celebrated at the graves of unmarried men and maidens, during which a bride or a bridegroom was there and then assigned to the dead person.* The third and last stage of the custom under discussion is presented to us in the accounts of the Arabs regarding the oldest Slavonic and Russian conditions of life. According to them, not only, as has been mentioned, was the wife of the dead *married man* given to him as a companion in death, but the *single man* too was, after his death, married *in regular fashion* to a young girl, who also was therefore doomed to die (cf. Mas'ūdī, *Les Prairies d'or*, ed. Barbier de Meynard, Paris, 1861–1865, ii. p. 9, n. 7). One of these 'death-weddings' is described in detail by the Arab Ibn Foslan (text and translation ed. by C. E. Frähn, St. Petersburg, 1823). But it follows from isolated traces that the custom of the wife dying along with her husband was prevalent also in Greece in prehistoric times (cf. Pausanias, ii. 21. 7), and in the story of the Trojan maiden Polyxene, sacrificed at the grave of Achilles, there exists also on classical soil a case of the barbarian custom of 'death-

* Remains of this custom are found also in Germany; for in Hesse the coffins of single men who have died must be accompanied by 'wreathed girls,' who must wear mourning for four weeks, etc. (cf. Hessler, *op. cit.*).

marriage.' If these statements (for a fuller account of which reference may be made to the booklet mentioned above) are right,* we are undoubtedly concerned with a case in which the funeral gifts cannot signify making the dead take with him property possessed before, but were clearly due to a concern on the part of the survivors for the fortunes of the deceased in the next world. This concern was based on the conviction, firmly rooted in primitive Aryan times, that marriage is an absolute necessity and bachelorhood a pitiable condition (cf. the present author's book, *Die Schwiegermutter und der Hagestolz*, Brunswick, 1904, p. 26 ff.).†

3. **Attentions paid to the dead after the funeral rites (Ancestor-worship).**—After the dead body had been consigned to the grave or the funeral-pyre, in the way described above, the person remained in connexion with his relatives by means of a rigidly appointed service of the dead. Survivals of this service are to be met with more or less distinctly among all Aryan races. They can, however, now be studied in detail and as a whole only in two branches of the Aryan linguistic group, widely separated from each other in time and place, the Indians and the Litu-Slavs. With regard to the latter we must refer to the works of Šejn and Kotljarevskij, already quoted (pp. 17[a], 19). So far as the Indians are concerned, their ancestors were worshipped by two kinds of religious ceremonies, the *Piṇḍapitṛyajña* and the *Śrāddha*. The first of these is a sacrifice in which balls of rice (*piṇḍa*) are offered only to 'the fathers' on the afternoon of the day on which the new moon sacrifice takes place. The *Śrāddha*, however, *i.e.* 'that which is offered from a sense of trust (*śraddhā*, viz. in the Brāhmans),' is a celebration in which the ancestors are honoured with water, cakes, ointment, clothes, and again with water,—but in addition, in order to please one or more of the departed, the worshipper provides food for Brāhmans. For the former ceremony compare O. Donner, *Das Piṇḍapitṛyajña oder Manenopfer mit Klössen*, Berlin, 1870, and, for the latter, especially W. Caland, *Über Totenverehrung bei einigen der indogermanischen Völker*, Amsterdam, 1888, and *Altindischer Ahnencult*, Leyden, 1893 (cf. also the same author's 'Die altindischen Todten- und Bestattungsgebräuche' in *Verhandelingen der Koninklijke Akademie van Wettenschappen*, Amsterdam, 1896). Although the fundamental features of this old Indian ancestor-worship must be regarded as belonging to the Vedic period, still one cannot fail to recognize that its forms in most of the sources show that the ruling priesthood exerted a strong influence on them, and to a large extent transformed them. Fortunately, too, in India itself there is no lack of statements, as, *e.g.*, in the *Gṛhyasutra* of Gobhila, pointing to an essentially lower stage of ancestor-worship, features of which recur with surprising exactness in the Litu-Slavic ceremonial. We can almost say that the veil which Christianity has drawn across this ancient layer of religious worship is more transparent than the one which Brāhmanism has spread over it. In any case, it will be advisable in the re-construction of the old Aryan cult of the dead, to which we now pass, to take as our starting-point the Litu-Slavic and not the Indian conditions. Here we shall deal with (*a*) the designation and the manner of conceiving of the worshipped ancestors, (*b*) the times, (*c*) the places, (*d*) the ritual of the worship of the dead, (*e*) the general significance, for the history of culture, of the worship of the dead in early times.

(*a*) DESIGNATION AND MANNER OF CONCEIVING OF THE WORSHIPPED ANCESTORS (ADMISSION INTO THEIR NUMBER).—The White Russian peasants designate those to whom worship of the dead is offered as *dzjady* (Russ. *dêdŭ*), 'grandfather,' while the Great Russians use the term *roditeli*, lit. 'parents.' Both expressions, but especially the Russian *roditeli*, *roditeli*, have now assumed such a general meaning that they can be applied to any deceased person, even to children of both sexes (cf. Š.[1] p. 594, footnote 1). The Gr. *γονεῖς* and the Lat. *parentes* (cf. *parentalia*, *parentatio*) correspond to the Great Russian expression, while the technical designation of the worshipped ancestors in Sanskrit, *pitáras*, literally means 'fathers.' A still further stage in the upward direction than the White Russian *dzjady* is represented by the Gr. *τριτοπάτορες*, 'great-grandfathers.' These are the ancestors to whom the inhabitants of Attica, at the celebration of a marriage, pray for the blessing of children (cf. E. Rohde, *Psyche*[2], i. 247). Thus we get the designations 'fathers' ('parents'), 'grandfathers' and 'great-grandfathers,' and it is not a matter of chance that in the Indian ritual the offering of cakes and water is dedicated to these three:

'To three (ancestors) is the water offered, to three is the *piṇḍa* given, the fourth (viz. the descendant) offers it (viz. *piṇḍa*) to the three; the fifth has nothing to do with it' (Manu, ix. 186). In the same way this 'threefold circle of fathers' is embraced by the Gr. *γονεῖς* and the Lat. *parentes*; cf. Isaeus, viii. 32: *γονεῖς εἰσὶ μήτηρ καὶ πατὴρ καὶ πάππος καὶ τήθη καὶ τούτων μήτηρ καὶ πατήρ· ἐκεῖνοι γὰρ ἀρχὴ τοῦ γένους εἰσίν*; and Festus, p. 221: *parens vulgo pater et mater appellatur; sed iuris prudentes avos et proavos, avias et proavias parentum nomine appellari dicunt* (cf. A. Kaegi, *Die Neunzahl bei den Ostariern*, p. 6).

These ancestors are everywhere considered as real and powerful beings, watching especially over the welfare of the family, as may be seen from the designations applied to them, such as *θεοὶ πατρῷοι*, *Di parentes*, *Divi manes*, White Russ. *svjaty dzjady*, 'the sacred grandfathers,' etc., as well as from the wording of the prayers which are addressed to them. The following, *e.g.*, is a very characteristic report with regard to White Russia (Š.[1] p. 593):

'On every possible occasion the peasant expresses his worshipful remembrance of his "grandfathers." He does so in his daily prayer, in conversation in the family and in company, as well as on the different festive occasions. There are, too, weighty considerations which compel him to regard this as his duty. He is persuaded that all good fortune in the farm and in life was produced by the continuous exertions of his ancestors, and is sustained by means of their blessings and their prayers to the Supreme Being (the latter is a modern idea). It was they who laid out the present settlement and erected the buildings which until now have remained intact. There the grandfather dug a canal, there he broke up the land and made the fields arable. The grandson splits wood with the grandfather's axe, the granddaughter reaps with her grandmother's sickle. In the dowry of the daughter there are the "sarafan," the necklace, and even the wooden shoes of the grandmother; the spirited black horse is descended from the grandfather's mare. In a word, just as these individual objects speak of the ancestors, so the whole construction of life, which has changed little since their time, calls them daily and even hourly to remembrance.'

It is to them, therefore, that the peasant turns in all the necessities of daily life. Thus the following is a prayer used in India at the *Piṇḍapitṛyajña*:

'Honour, Pitaras, for your comfort, honour for your living sap, honour for your living power, honour for your gentleness, honour for your life, honour for your vigour, *Svadhā* to you, honour to you, Pitaras, honour; this (viz. water) is yours, Pitaras, this is our and your life-bringing element; may we who are here be quickened.' Thereupon the husband gives

* Several objections to these views raised by Paul Stengel in the *Wochenschrift für klass. Phil.*, 1906, No. 18, and by F. Kauffmann in the *Zeitschrift für deutsche Philologie*, 1907, vol. i., have been answered by the present writer in his *Sprachvergleichung und Urgeschichte*[3], i. (Jena, 1906), p. 290, note 1, and ii. (Jena, 1907), p. 335, note 3, p. 532.

† For examples of marriage of the living to the dead in modern India, see Nelson, *Manual of the Madura District*, ii. 40; Logan, *Manual of the Malabar District*, i. 128; Francis, *Report on Census of Madras*, 1901, i. 56. It was noticed also among the Tatars by Marco Polo (1st ed. i. 234, ed. Yule), who gives other examples; see also J. J. M. de Groot, *Religious System of China*, ii. 802 f.

the *piṇḍa*, which lies in the middle, to his wife to eat, with the words: 'Give me a male child, ye Pitaras,' while the wife replies, 'Insert fruit in me, ye Pitaras, a lotus-wreathed boy, that he may be uninjured.'

In accordance with this signification of the help of the ancestors in producing children, we can understand why the Attic maiden, before her departure from her parents' home on the occasion of her marriage, was bound to offer a sacrifice to the souls of her ancestors (cf. E. Samter, *Familienfeste der Griechen und Römer*, Berlin, 1901, p. 96).

Frequently these spirits of ancestors are designated as the 'good' and 'helpful,' especially in the Lat. *mânes*: Old Lat. *mânus*, 'good.' This may, however, have been intended more in a euphemistic sense, in the same way as, *e.g.*, the avenging goddesses are called the 'Eumenides,' in order that they might be good and gracious; for, in general, the souls of ancestors are regarded as very stern and easily roused to anger.

The inhabitants of White Russia are filled with dread (S.[1] p. 588) 'lest at the commemoration festival any mistake should be made. Then, to speak in the language of the peasants, the feast would be no feast. It would mean that they did not respect the memory of the person in whose honour the feast was instituted. As a punishment for disrespect to the dead there would follow at once family discord, death of cattle, failure of crops; in short, mountains and hills would fall upon the living.'

Woe betide those who do not really slaughter the cattle they have appointed for the commemoration feast, or who do not first taste the food which is served. In all these ways can the wrath of the worshipped ancestors be only too easily roused. The same ideas are to be found in India: 'Do us no harm, ye fathers, if in accordance with the way of mankind we have committed any fault against you' (*Rigveda*, X. xv. 6); and in the *Śrâddha*, too, the offerer, immediately after the offering of the cakes, pronounces the words: 'May the fathers not be hard' (see further in Caland, *Ahnencult*, p. 176 ff.). It was exactly the same thing that was meant in Greece by the saying, that the ἥρωες ('the spirits of the dead') were δυσόργητοι ('prone to anger') and χαλεποὶ τοῖς ἐμπελάζουσι (cf. E. Rohde, *Psyche*², i. 246). In Italy, however, according to Festus (p. 237), they hung up to the Lares* at the *Compitalia* dolls resembling human beings, *ut vivis parcant, pilis et simulacris contenti*.

The dead man does not, immediately after his death and without more ado, join the number of these ancestors who are worshipped with such anxious dread; on the contrary, fixed ceremonies are necessary to elevate him to the rank of the ancestors who are worshipped as divine.

In White Russia (S.[1] p. 584), after the mourners have returned from the burying-ground, 'one of the old women takes a piece of bread, turns towards the door, and, fixing a copper coin on it, speaks the following words, *with which she introduces the dead man into the general list of her departed relatives*: "Grandfathers and grandmothers, fathers and mothers, uncles and aunts, take our dead father to yourselves, live there with him in friendship, do not quarrel, etc."' In addition to that, it is a wide-spread idea that for 40 days after his death the deceased has no rest in his grave, but 'visits his own house as well as those of strangers, and is able to inflict all kinds of damage on those among the living with whom he stood in hostile relations during his life; and, in fact, he can do this all the more easily as the latter are deprived of the power to take vengeance on their adversary, since he, owing to his immateriality, is invisible or comes forward in the form of different animals—which gives him ample scope to inflict all sorts of injury on his enemies' (S.[1] p. 519). 'The peasants also believe that for six weeks the soul of the dead, every 24 hours and generally by night, flies into the peasant's hut and drinks water from a vessel, which is set out for the purpose and filled to overflowing' (S.[1] p. 559).

A corresponding idea is prevalent in India, namely, that the soul of the deceased does not enter at once into the world of the Pitaras, but rather wanders to and fro as a 'spirit' or 'ghost' (Skr. *preta*, lit. 'the departed'). The spirits have also the inclination to return to the dwellings of the relatives, where in the same way 'food with a jug of water' must be given to them. In order to deliver the departed from this condition and to adopt them among the Pitaras, definite ceremonies were necessary, the most important of which was the *Sapiṇḍîkaraṇa* ('Sapiṇḍa-making'), which took place usually on the day after the first anniversary of the death, but often earlier (for particulars, see Caland, *Totenverehrung*, p. 22 ff., and Oldenberg, *Die Religion des Veda*, p. 554 f.). See ANCESTOR-WORSHIP (Indian).

We shall have to speak afterwards (3*c* and 4) of the places where the spirits of the ancestors in the earliest times were supposed to live, and of the later transformation of the views on this subject. We have still to mention here that these spirits of ancestors show a tendency in different territories, usually in connexion with the cult of the hearth-fire, which came more and more to the front (cf. below, II. 1), to develop into tutelary house deities, localized in the home.

The same is true of the Gr. ἀγαθὸς δαίμων (Rohde², i. 255), of the Lat. *di penates* ('those within,' cf. *penitus*, *penetrare*), and *lar familiaris*, of the Germ. 'kobold' (**kuba-walda*, 'the one who rules the house'; cf. Old Nor. *kofi*, 'hut,' A.S. *cofa*, 'room,' M.H.G. *kobe*, 'shed, hovel' = Gr. γύπη, 'underground dwelling'; A.S. *cofgodu*, *cofgodas*, '*penates*, *lares*'), of Russ. *domovój* ('the one in the house'); and of many similar names.

In this connexion the worship of the *house-snake*, found among several of the Aryan peoples, can be explained. Nothing is more frequent in Greece than to imagine the soul of the deceased in the form of a snake (cf. Rohde, *Psyche*², i. *passim*, and artt. on SOUL and SPIRIT), which seemed especially suitable for this on account of its winding motions, partly on the surface of the earth and partly underneath it. Based upon this idea, a strongly marked domestic snake-worship has been developed among the Lithuanians, regarding which Menecius (see above) gives the most detailed account:

'Praeterea Lituani et Samagitae in domibus sub fornace, vel in angulo vaporarii, ubi mensa stat, serpentes fovent, quos numinis instar colentes, certo anni tempore precibus sacrificuli evocant ad mensam. Hi vero exeuntes, per mundum linteolum conscendunt, et supra mensam assident: ubi postquam singula fercula delibarunt, rursus discedunt, seque abdunt in cavernis. Serpentibus digressis, homines laeti fercula illa praegustata comedunt ac sperant illo anno omnia prospere sibi eventura. Quodsi ad preces sacrificuli non exierant serpentes, aut fercula super mensam posita non delibaverint, tum credunt se anno illo subituros magnam calamitatem.' Cf. also Lasicius, *de Diis Samagitarum*, p. 51: 'Nutriunt etiam quasi deos penates nigri coloris, obesos et quadrupedes quosdam serpentes, Giuoitos (Lith. *gywátě*, "serpent") vocatos;' and Æneas Silvius in Usener-Solmsen, *Götternamen*, p. 91: 'Serpentes colebant; paterfamilias suum quisque in angulo domus serpentem habuit, cui cibum dedit et sacrificium fecit in foeno iacenti.'

At the same stage as the Lithuanian snake-worship stands among the ancient Romans (cf. Wissowa, *Religion und Kultus*, p. 155), the worship of the house-snake, which is consecrated to the genius of the house, and which by its sudden appearance foretells the coming destiny of the house. This genius itself, lit. 'the generator' (*gigno*), can originally have been none other than the ancestral head of the family, who then came to be regarded as its tutelary spirit, under whose protection stands, as we might naturally expect from these family gods, especially the *lectus genialis*, the marriage-bed, the place of the generation of children. As the *paterfamilias* in Rome was considered the representative of the whole family and possessor of the family estate, it was natural that this genius should become spiritual-

* *Lăses* (nom. sing. *lăs*, gen. *lăsis*) are undoubtedly, from the first, spirits of the dead, as is proved by the certain etymological connexion of the word with *larva* from *lăsua*, and with the festival of the dead, *Lărentalia*. The change from *ă* to *ā* must be considered exactly the same as in *ăcer* : *ācuo*, *ambāges* : *ăgo*, *fāma* : *făteri*, *stāre* : *stătus*, etc. Wissowa, in Roscher's *Ausf. Lexicon der griech. und röm. Mythologie*, art. 'Lares' (cf. also *Religion und Kultus der Römer*, p. 148 ff., and *ARW* vii. 51), fails to recognise this connexion, and consequently comes to a false conception of the Lares as 'spirits of the fields.' The correct view is given by Samter, *Familienfeste*, p. 115; cf. also Walde, *Lat. etymol. Wörterbuch*, artt. 'Lar' and 'Larva.'

ised into the tutelary spirit of the master of the house.*

(*b*) THE TIMES OF THE WORSHIP OF THE DEAD.—Apart from the funeral feast already mentioned (p. 20[b]), which followed immediately after the disposal of the corpse, the feasts in commemoration of the dead in White Russia may be divided into two main classes, *special* and *general*:

'The former are celebrated in the circle of the family and near relatives, for each individual who has died in the course of the year, and they take place at stated intervals, though not on the same days or in the same months, but on the 3rd, 6th, 9th, 20th, and 40th days, reckoning from the day of the burial, during a period of six months, and periodically thereafter in the course of the year till the date of the death (*godovščina*, "anniversary"). These commemoration feasts take place without the co-operation or blessing of the Church. They are a relic of primitive, pre-Christian customs. The second class, or the general commemoration festivals, are held by all on the same days, which have been fixed from the remotest times by the Orthodox Church, and are never engaged in without her consecration. They are held from four to six times in the year, and for all relatives at one and the same time, no matter whether they have been dead for a longer or a shorter period. In the whole of Russia these commemoration festivals are held on Saturdays, and called in White Russia *dzjady* [the same name as that of the worshipped ancestors themselves], in Great Russia "parents' Saturdays" (*roditel'skija subboty*). But the *radunica* is for the most part celebrated on the Tuesday of the week following the first Sunday after Easter, and this feast is not everywhere called *dzjady*. . . . These commemoration feasts admit of being classified, according to the seasons of the year, into those of spring, summer, autumn, and winter' (S.[1] p. 582 f.).

These Christian institutions correspond to the old Lithuanian heathen conditions. Menecius has the special commemoration festivals in view when he writes: 'Cæterum cognati celebrant convivia die a funere tertio, sexto, nono et quadragessimo.' A general feast to the dead is described by Laskovskij in Lasicius, *de Diis Samagitarum*, p. 50:

'Iisdem feriis (the beginning of November, at the festival of the flax-god Waizganthos) mortuos e tumulis ad balneum et epulas invitant: totidemque sedilia, mantilia, indusia, quot invitati fuerint, in tugurio eam ad rem præparato ponunt; mensam cibo, potu onerant. Dehinc in sua mapalia reversi triduum compotant; quo exacto, illa omnia in sepulchris, potu perfusis relinquunt; tandem etiam manibus valedicunt.'

Another general celebration of this kind is mentioned in Lasicius, p. 51: 'Skierstuvves festum est farciminum, ad quod deum Ezagulis ita vocant: Veni cum mortuis farcimina nobiscum manducaturus.' Cf. also p. 48: 'Vielona Deus animarum, cui tum oblatio offertur, cum mortui pascuntur; dari autem illi solent frixæ placentulæ, quatuor locis sibi oppositis paullulum discissæ. Eæ sikies Vielonis pemixlos ("wafers of which V. is very fond") nominantur.'

From the starting-point supplied by these data let us examine the times appointed for the worship of the dead among the other Aryan races. Among them all, *special* and *general* festivals in honour of the dead are frequently mentioned. With regard to the former, the Greeks in the south of Europe present us with exact parallels. In their case we meet with the τρίτα καὶ ἔνατα (the latter recurs also in the Roman *novendial*), *i.e.* meals which were offered to the dead at the grave on the third and ninth days after interment. In Athens we have likewise the τριακάδες (which was also at times repeated), a commemoration meal on the thirtieth day, a date which appears again among the Lithuanians, at least in so far as the widow must mourn for thirty days at the grave of her husband.

(Menecius: 'Uxor vero tam oriente quam occidente sole super extincti coniugis sepulcrum sedens vel iacens lamentatur diebus triginta').

Then both in Greece and Rome, in addition to the *parentalia* on the day of the death or the burial (White Russ. *godovščina*), an innovation appears in appointing the birthday of the deceased (γενέσια) as a regular commemoration festival in his honour.

Among the *general* festivals in honour of the dead, the most important, so far as Greece is concerned, is the close of the Anthesteria festival in the spring, while in Rome we have the nine *dies parentales* from the 13th to the 21st of February, the last of which is called Feralia, on the 23rd of December the great State festival of the Larentalia, and on the 9th, 11th, and 13th of May the Lemuria, all three named directly from the spirits of the dead (Feralia from **dhvēsālia*, cf. above, p. 15; Larentalia: *lār laris*, cf. above, p. 24, footnote; and Lemuria: *lemures*, 'larvæ'). A later general festival in honour of the dead, though not a public State feast, was the *Rosalia*, festival of roses, which in Christian times acquired a significance far beyond the land of its origin, and among the great majority of Slavs has led to their designation of the Whitsuntide festival (*rusalija*, Lat. *pascha rosata*). See Warde Fowler, *Roman Festivals*, London, 1899.

With regard to the ancient Teutons we have not much reliable information. It seems that they held commemoration festivals for the dead on the 3rd, 7th, and 30th days, and on the anniversary of the death. It is also not improbable that at Yuletide a general feast for the dead took place (cf. R. Kögel, *Gesch. der deutschen Liter.*, i. 1, 55, and E. Mogk, in Paul's *Grundriss der germanischen Philologie*[2], iii. 391).

Lastly, regarding the Indian times for the worship of the dead, we are supplied with the same detailed information as we have about those of the Litu-Slavs. The time of the uncleanness of the relatives after a death lasts from three to ten days. During this period libations of water with grains of sesame must be offered to the departed either daily or on the 3rd, 5th, 7th, and 9th days. Then on the 11th day the first sacrifice (*śrāddha*, see above, p. 23[a]) is offered to the dead, and thereafter every month (thus every 30 days) on the day of the death and on the anniversary of the death itself sacrifices are offered to the ancestors (though the conditions are more complicated than they appear from this short summary). There were also in India real All Souls' feasts, among which the *Aṣṭaka*-festival may be specially mentioned (cf., for details, below, II. 4 *d*).

If we glance at the details before us, we see what a significant part *odd* numbers play in the fixing of these dates for the festivals in honour of the dead; and, in fact, it is frankly avowed in India that the odd numbers are sacred to the worshipped ancestors. The same thought, however, permeates the White Russian ritual, in consequence of which, *e.g.*, the number of foods offered at the commemoration festivals must invariably be odd (cf. Caland, *Totenverehrung*, p. 23, and Šejn[1], pp. 590, 611, etc.). Then among these odd numbers, the number *nine* comes very prominently to the front, which seems to represent the three days' period between death and interment (funeral feast) taken three times. Perhaps the 10 days' period of uncleanness or of mourning of the Indians may be conceived of as a nine decadally rounded off. The number 30, which also occurs frequently, would then be a triad of such decadally rounded nines (cf. A. Kaegi, 'Die Neunzahl bei den Ostariern' in the *Philologische Abhandlungen für H. Schweizer-Sidler*). It is, moreover, worthy of note that the farther back we go and the more primitive the state of culture, the greater is the number of these memorial feasts. A White Russian peasant can thus, according to the details given above, make the number of special and general festivals for the dead mount up to several dozens in the year.

* Cf. for a full account of snake-worship, F. S. Krauss, *Sreća, Glück und Schicksal im Volksglauben der Südslaven*, Vienna, 1886. It is especially interesting, in connexion with the Roman beliefs, that among the Wends in the Spreewald two snakes were worshipped in each house, one of which was called *góspodaŕ*, 'lord of the house,' the other *góspoza*, 'lady of the house.' Each dies at the same time as the master of the house, or the mistress, as the case may be.

(*c*) THE PLACES OF THE WORSHIP OF THE DEAD.—The nearest and, so to speak, most natural place for the friends to serve up the dead man's feast for him, and to eat and drink together with him, is the neighbourhood of the grave where the body has been laid. This is still the custom in great parts of Russia.

'After the close of the banquet (in the house) they all repair to the burying-ground, taking with them vodka, "bliny," and barley. There each family prays at the graves of their relatives for the peace of their souls. Then they eat and drink, pouring out a little vodka on the grave and throwing some morsels from each dish on it' (S.[1] p. 605). At the spring-*dzjady*, 'after the public worship of the church, they invite the priest, in whose company men and women betake themselves to the churchyard, partaking together of brandy and food on the way. After they have reached their destination they all seat themselves on the burial mound of those of the departed who during the year have completed the laborious days of their life's journey. Here they repeat fixed prayers for the blessed peace of their souls, as "Anĕlŭ Paniski" ("Angel of the Lord"), then they begin to weep and lament, and end with a small debauch in honour of the dead. . . . The first mouthfuls of each dish are in every case laid on the grave for the soul of the dead. After the glasses of brandy have gone round the circle several times, the mournful mood of the assembly gradually changes into a joyous one. While some of those present sob aloud, others laugh and joke. Some bow their heads over the grave of their beloved dead, and sing in a sustained tone melancholy laments. . . . In order to calm their sorrow, those taking part in the celebration have frequent recourse to their comforter—the brandy. Ultimately these memorial feasts end in the laments turning imperceptibly into songs of joy' (S.[1] p. 616 f.).

The doings at the Greek *τρίτα καὶ ἔνατα*, which were likewise celebrated at the grave (see above, p. 25[a]), and at the Roman *solemnia mortis* (cf. Marquardt, *Römische Staatsverwaltung*, iii. 298 ff.), which were accompanied by feasts at the grave, as well as at those old German *oblationes*, 'quæ in quibusdam locis ad sepulcra mortuorum fiunt,' against which Burchard of Worms, as late as A.D. 1000, protested, were no doubt *mutatis mutandis* identical with those just described. It is not improbable that the funeral banquet also (see above, p. 20[b]) took place originally not in the house of the deceased, but at the grave itself.

Thus Jordanis relates the following with regard to the funeral obsequies of Attila (ch. 49): 'Postquam talibus lamentis est defletus, *stravam* (probably a Slavic word, which signifies in Russian, Polish, and Bohemian "food," "meal," and in Old Bohemian also means "funeral banquet"; cf. Miklosich, *Etymol. Wörterbuch der slav. Sprachen*, Vienna, 1886, *s.v.* "Strava") *super tumulum eius*, quam appellant ipsi, ingenti commissatione concelebrant'; and the Greek expression *περίδειπνον*, 'funeral banquet,' could be most easily explained if the *δεῖπνον* took place, as among the White Russians, *round about the burial mound* of the deceased. The old Russian expression for the commemoration festival was *trizna*, which has not yet been etymologically explained.

Further, the *trench*, in which the meals are frequently offered to the dead, may be regarded as a symbolical indication of the grave. This is what we have in ancient India, according to the description of Gobhila: 'Then three trenches are dug out, one span long, four fingerbreadths wide, and the same depth. Thereupon *darbha* grass is scattered on them.' On this *darbha* grass, then, with many varied ceremonial actions, the cakes are laid down for the three ancestors, father, grandfather, and great-grandfather (cf. Oldenberg, *Die Religion des Veda*, p. 549 f.). The same significance belonged in Rome to the *mundus*, a trench situated at the centre of the town, and opened on certain days for the purpose of receiving sacrifices for the dead. This trench played the same rôle in the worship of the *inferi* as the altar played in the cult of the *superi*. Such a *mundus* was probably also the 'grave' of the Larenta, in which at the Larentalia a sacrifice to the dead was offered (cf. Wissowa, *Religion und Kultus der Römer*, p. 187 ff.; Samter, *Familienfeste*, p. 12 f.). Ulysses, too, as is well known, when in the lower world, offers his libations in a trench.

A third place at which the dead were often honoured with food, drink, and all kinds of festive celebrations was the *cross-road*. Among the Slavs, Cosmas of Prague bears witness that, about the year 1092, Prince Brĕtislav II. issued the following prohibition:

'Item sepulturas, quæ fiebant in silvis et in campis, atque cenas (or scenas? cf. Kotljarevskij, *op. cit.* p. 102 ff.), quas ex gentili ritu faciebant in *biviis* et in *triviis*, quasi ob animarum pausationem, item et iocos profanos, quos super mortuos suos inanes cientes manes ac induti faciem larvis bachando exercebant.'

A feast similar to that here described was the Roman Compitalia, which was held once a year with debauchery and merry-making (*ludi*) in honour of the Lares at the cross-roads (more fully explained in Wissowa, *op. cit.* p. 148 f.); but in Greece also it was customary to throw down at the same places offerings to the souls and to Hecate, their mistress (cf. Samter, *op. cit.* p. 120). In India, in the same way, the belief is widely held, and of extreme antiquity, that cross-roads and dwelling-places of spirits are identical (cf. Oldenberg, *op. cit.* pp. 268[1], 562[6]; and Crooke, *Popular Religion and Folklore of N. India*, London, 1896, i. 77 f., 165, 290). The reason for this idea has been sought in the fact, which has been expressly attested at least in the case of India (cf. Oldenberg, p. 562[6]), that the crossing of great main roads was a favourite place for burying the dead. In this way the worship of the dead at the grave, at the trench, and at the cross-roads really amounts to the same thing. In opposition to this, however, we have the remembrance of the dead, with gifts of food and drink, in the *dwellings* of the surviving relatives, which will be dealt with in the next section.

(*d*) THE RITUAL OF THE WORSHIP OF THE DEAD.—It will here be advisable to pass over a considerable number of individual peculiarities, and to confine ourselves to the most important features.

(*a*) *The summoning and dismissing of the ancestors.*—It is a prevailing custom to call solemnly on the ancestors at the beginning of the commemoration feast, and to dismiss them as solemnly at its close. We are again informed most accurately with regard to White Russia:

'All seat themselves at the table, which is set with articles of food, among which beer and spirits are to be found, and the one who reads the prayer utters the following words:

"Ye sacred grandfathers, we call you,
Ye sacred grandfathers, come to us!
Here is all that God has given.
. . . .
Ye sacred grandfathers, we implore you,
Come, fly to us!"

At the end of the meal they rise from the table and disperse, after having taken leave of the heavenly inhabitants in the following way:

"Ye sacred grandfathers! ye have flown hither,
Ye have eaten and drunk,
Now fly away home again!
Tell us, do you wish anything more?
But better is it, that ye fly heavenwards.
Akyšŭ, akyšŭ!"

(a sound which they make to scare away hens and crows).' Cf. S.[1] p. 596 ff.

The summoning as well as the dismissing of the ancestors is accompanied by extraordinary customs. For the purposes of the former they place a cooked pig's, sheep's, or fowl's head on the table.

'After the master of the house has got the guests seated at the commemoration table, he takes in the one hand a candle rolled up in a pancake, in the other a loaf of bread, and carries these three times round the animal's head which has been placed on the table, calling aloud by name not only all his dead relatives and acquaintances, but also all who have ever lived on the piece of ground belonging to him as master of the house, and invites them with the words, "Come to this banquet"' (S.[1] p. 602 f.).

At the end of the feast the ancestors are scared away.

'The master or the mistress of the house removes the table away from the seats, and sprinkles the whole floor of the room to the door with water, saying at the same time, "If you have not eaten or drunk enough, go to the priest's court." With these words the souls of the dead are turned out' (S.[1] p. 614).

A custom very like this is described by Menecius, who is also acquainted with the solemn invitation to the dead ('ad quæ convivia animam defuncti invitant precantes ante ianuam') among the pagan Lithuanians:

'Peracto prandio sacrificulus surgit de mensa, ac scopis domum purgat: animasque mortuorum cum pulvere eicit, tanquam pulices, atque his precatur verbis, ut e domo recedant; edistis ac bibistis animae dilectae, ite foras, ite foras.'

The same invitation and leave-taking of ancestors are attested with regard to the Indian *Piṇḍapitṛyajña*:

'After depositing the *piṇḍa*, he (the offerer) utters the words, "Ye Pitaras, may this be savoury to your taste, may each one enjoy his share." Afterwards he dismisses the Pitaras with the words: "Depart, ye lovely Pitaras, to your old mysterious ways, give us riches and good fortune, grant us abundant possession in men"' (cf. Caland, *Totenverehrung*, p. 5 f.).

In Italy and Greece, on the other hand, there are to be found survivals only of the final *expulsion* of the souls. In the latter there existed the saying, which is at once proved to have been very ancient by the use of the word κῆρες for ψυχαί (cf. above, p. 15): Θύραζε, κῆρες, οὐκ ἔτ' Ἀνθεστήρια—'Away, ye souls, the feast of the dead is over' (see J. E. Harrison, *Proleg. to the Study of Greek Religion*, Cambridge, 1903, pp. 35, 165, 632). In Italy, at the Lemuria, the spirits of the fathers were driven away with the words, 'Manes exite paterni' (cf. Rohde, *Psyche*[2], i. 239[1]).

(β) *The feeding of the summoned ancestors.*—Concerning the *forms* in which the 'grandfathers' were entertained by the White Russian peasants, we are also provided with full information from Šejn's materials:

'At the table, which is laid with Lenten food, all the guests sit down along with the family of the deceased. Before the meal the *kanunŭ* (from Gr. κανών, the real food of the dead) is given out, from which each of the guests takes four spoonfuls: one of these he pours out on the table beside him, the other three he sups, in accordance with the demand of custom to eat them all and leave nothing behind. The guests must leave over a part of each dish (of which there are not few) to appease the deceased, that he may not rob his relatives of their earthly goods' (Š.[1] p. 585).

'The supper begins with porridge, the first spoonful of which each member of the family lays on the table, directly on the table cloth, and these remain the whole night on the table, along with all the other eatables which have been left over from the supper. This is done, the peasants say, on account of the fact that the deceased comes during the night and devours all that is left there' (Š.[1] p. 593).

'The master of the house commences the feast. He takes a spoon with *kanunŭ* and a small piece of bread and pours it out on the table, and then he eats three spoonfuls from this dish. This is repeated in turn by all the members of the family who are present. Then the *kanunŭ* is removed from the table. From the other courses each guest takes as much as he pleases, provided that he first of all sets aside a small piece of each dish for the table—for "the grandfathers." From these little bits a considerable heap of all kinds of mishmash is, by the end of the supper, formed on the table' (Š.[1] p. 612).

'If at the time of the banquet any part of the food falls on the seat or on the floor, they dare not lift it up. "That," they say, "some one will eat"' (Š.[1] p. 611). Cf. also Menecius: 'Si quid forte decidat in terram de mensa, id non tollunt, sed desertis, ut ipsi loquuntur, animis, quae nullos habent vel cognatos vel amicos vivos, a quibus excipiantur convivio, relinquunt manducandum.' 'After they have prayed at the grave, they all separate and go to their homes, where they seat themselves once more at the table, on which the wives place pancakes and mead. They throw morsels of the pancakes into the mead. Each member of the family (with the exception of the children) must invariably sup three spoonfuls of this dish. Some of this mixture they leave intentionally in a soup-bowl for the "grandfathers." After the pancakes they eat the other prepared courses. When they have supped and prayed to God, they lie down to sleep, placing the remains of the mixture on the window sills. The remains of the other foods they divide out into small dishes, which in the same way are placed here and there beside the window. Bread and spoons are left on the table the whole night. The doors in the peasant's room are not locked during this night, but are left a little ajar, so that the dead may come in' (Š.[1] p. 606).

From these statements three points are clear: (1) Food and drink are shaken out on the table for the 'grandfathers' during the meal itself; (2) That which falls under the table belongs to the dead who have no family or friends; (3) The remains of the food and drink are placed after the meal in vessels, which are set near the windows or on the tables to be partaken of by the 'grandfathers.'

All this can be proved in classical tradition, although only in fragments. Certainly the barbarian custom of preparing the meal for the dead on the table itself (as at the grave) has fallen into abeyance. Among the Greeks, points (1) and (2) are combined into one, in such a way that they believe that whatever falls under the table during the meal belongs to the dead in general.

Cf. Laert. Diog. viii. 34: Ἀριστοφάνης τῶν ἡρώων φησὶν εἶναι τὰ πίπτοντα λέγων ἐν τοῖς Ἥρωσι μηδὲ γεύεσθ' ἅττ' ἂν ἐντὸς τῆς τραπέζης καταπέσῃ, and Athenaeus x. 427 e: τοῖς τετελευτηκόσι τῶν φίλων ἀπένεμον τὰ πίπτοντα τῆς τροφῆς ἀπὸ τῶν τραπεζῶν (cf. also Samter, *Familienfeste der Griechen und Römer*, p. 109).

The third point finds its analogy again among the Greeks, in the fact that on the last day of the Anthesteria festival it was customary to place cooked fruits and seeds for the dead in pots—χύτραι, after which the day was named (cf. Rohde, *Psyche*[2], i. 238).

(γ) *The food of the dead.*—Like all the details of the ritual connected with the dead, the kinds of food and even the courses which must be placed before the dead are fixed in detail. With regard to the first of these, the cakes (cf. above, Lith. *sikies Vielonia pemiéłos*, 'the wafers which Vielona likes'; and also White Russ. *klěcki*, the latter taken over from German through Polish) play an important part among the Lithuanians.

'The courses at the commemoration meal were as a rule as follows: *kutija* (wheat or barley grains) prepared with ordinary or lenten butter, if honey could not be got, *klěcki*, "cakes" (in most cases made of barley with a piece of lard in the inside), pancakes, and porridge' (Š.[1] p. 514). 'All the others who attend the funeral at once betake themselves to the house of the deceased *na klěcki*, "to eat cakes"' (Š.[1] p. 554). 'At this meal *galušk i* or *klěcki* must without fail be among the dishes. There are even proverbial expressions referring to them to be found among the population of this place, such as "he was *na klěckach*" (he was at a funeral- or commemoration-feast); or if a person is dangerously ill and there is no hope of his recovery, they say: *na klěcki jewes! i.e.*, "he will very soon have to enjoy cakes"' (cf. Š.[1] p. 576).

It is hardly necessary to emphasize how closely this corresponds to the Indian *piṇḍa*, which is so characteristic of the Indian worship of the dead, that *sapiṇḍa*, 'cake companion,' has come to be the technical expression for the circle of relatives whose duty it is to offer to the three ancestors (father, grandfather, and great-grandfather).

The question, what dishes were in the earliest times served up to the dead, would require a special inquiry, which would also have a general interest for the history of culture by helping to determine the most primitive food of the living. In the meantime we can refer only to two undoubtedly very ancient foods of the dead, viz. *honey* and *beans*.

The former is the most important ingredient of the White Russian *kanunŭ* (see above): 'This is usually cooked with bruised grains of peeled barley or wheat, which are afterwards stirred in *sytá*, "honey-water"' (Š.[1] p. 555). Thus it happens that the *kanunŭ* (a Gr. foreign word, as we saw) is called by its vernacular name *sytá* (p. 613), and on comparing this with the Skr. *sutá*, 'soma-juice, soma-offering' (*lit.* 'pressed,' root *su*), we may venture to recognize in it a word derived from the primitive Aryan vocabulary, just as in the more frequent expression for honey and mead, Skr. *madhu*, Gr. μέθυ, O.H.G. *mëto*, O. Slav. *medŭ*, etc. The Indian food for the dead, which was offered at the *śrâddhas*, rice-soup and honey, corresponds exactly to the White Russian *kanunŭ*.

'Thus speak the Pitaras: "May the person be born in our family who will offer to us on the 13th day rice-soup mixed with honey and *ghî*!"' 'Tormented with hunger and making known their own sins, they demand rice-soup mixed with honey from their sons and grandsons' (cf. Caland, *Totenverehrung*, p. 44 f.).

But in the Greek and Roman cult of the dead also, honey is a favourite food devoted to the powers of the under world (cf., for details on this, Samter, *op. cit.* p. 84 ff., and Marquardt, *Staatsverwaltung*, iii. 299).

With regard to the *beans*, we may refer to an exhaustive article by L. von Schröder, 'Das Bohnenverbot bei Pythagoras und im Veda,' in *WZKM*, xv.

187 ff., in which convincing proof is brought forward that the above-mentioned pod, whose Aryan name appears in the Lat. *faba* = O. Slav. *bobŭ*, Alb. *baϑę*, was used even in primitive Aryan times as an offering to the departed souls (see J. G. Frazer, *Pausanias*, iv. 240 f.).

It is also to be noticed that in the Polish-Russian province of Pintschov (cf. Kotljarevskij, *op. cit.* p. 255) the combination of these two foods of the dead, honey and beans, is attested: 'The foods at the commemoration feasts consist of beans and peas which are cooked in honey-water.'

(δ) *The frame of mind of the worshippers (joy and grief).*—According to Menecius, the funeral and commemoration meals were celebrated among the ancient Lithuanians in perfect silence: 'in his conviviis quibus mortuo parentant, tacite assident mensæ tanquam muti'; and also in India we are told: 'As long as the Brāhmans eat in silence, so long do the manes enjoy the meal' (cf. Winternitz, 'Was wissen wir von den Indogermanen?' in *Beilage zur Münchner AZ*, 1903, No. 259, p. 300). On the other hand, it is doubtful whether the Lat. *silicernium* denotes the 'meal taken in silence' or the 'meal of the silent ones' (*i.e.* the dead) (cf. Osthoff, *Etymologische Parerga*, Leipzig, 1901, 66 ff.).

In any case the meal, or at least the chief part of it, was passed in a restrained and anxious mood, as is most vividly described by Šejn ([1] p. 596 ff.) with regard to the White Russians:

'One can perceive that some anxiety fills the hearts of the whole assembly. The aged, who already stand, so to speak, with one foot in the grave, are at this time sadder and more thoughtful than the others. Not infrequently, when they have just raised the glass of spirits to their lips, they stop suddenly and do not drink, but listen to some unexpected noise, the moaning of the wind, or the rustling of a neighbouring tree which is casting off its last leaves. If the gate creaks, or the door moves, or the door-latch gets unfastened, or a half-broken pane in the window rattles—whatever the cause may be—if, attracted by the light, a belated moth or some similar insect should approach, all these things are regarded as undoubted signs of the visit of their dead grandfathers. Conversation comes to a standstill and consists only of single remarks, either concerning the certain presence of the dead and their share in the entertainment, or about their former life,' etc.

It is this frame of mind—this firm conviction that the deceased person is present at the meal—that led to the custom among the White Russians (cf. above, p. 20^b), as well as in Greek and Roman antiquity, of remembering the dead at the meal only in a friendly way: *εἰώθεσαν οἱ παλαιοὶ ἐν τοῖς περιδείπνοις τὸν τετελευτηκότα ἐπαινεῖν καὶ εἰ φαῦλος ἦν* (cf. Rohde, *Psyche*[2], i. 232, footnote 1).

If thus the first and fundamental sentiment of the funeral and commemoration feasts is naturally a sad one, it is, nevertheless, quite as characteristic of these celebrations to show a tendency, before they are finished, to pass over to the opposite extreme—joy and mirth. The reason of this is, of course, to be sought, in the first place, in the fact that the mourners in an excessive degree turn for comfort to spirituous liquors, which very soon take effect, while, in the second place, the conviction is widely prevalent that too many tears and too passionate grief disturb the peace of the dead in the grave (cf. for details, Winternitz, *op. cit.*). In any case, it is a fact that, among all the Aryan peoples, the festivals in honour of the dead are wont to be brought to a close by games and dancing, trials of strength, masquerades, and music (cf. Winternitz, *op. cit.*). All these elements of rejoicing are contained in the following description from White Russia (Š.[1] p. 588):

'After the close of the entertainment, the mistress of the house produces a sieve with cabbage-heads and places it on the table. Every one has cabbage-stocks in his pockets. The person standing at the head of the table now takes a head of cabbage and pitches it at the master of the house, whereupon all begin to fight with cabbage-heads and cabbage-stocks. When these are exhausted they begin to throw at one another whatever comes to their hands. . . . It seldom happens that commemoration festivals pass without brawls. The ceremony of throwing or beating with cabbage-heads is accompanied by songs, masquerades, music, and dancing (after grief and anxiety come joy and consolation). That is how the White Russian commemoration festivals (*chautury*) are celebrated.'

For the student of comparative culture, however, this rustic play with cabbage-heads is fundamentally the same as the *spectaculum admirandum* which took place at the funeral of Attila, or the games at the pyre of Patroclus.

(ε) *The feeding of beggars.*—In conclusion, we may mention the wide-spread custom, in the White Russian service of the dead, of showing kindness to *beggars* on this occasion.

'Without them no single funeral or commemoration festival takes place. They take the place of the priest on this occasion. Their songs, prayers, and religious poems are regarded as a sufficient equivalent, and one very advantageous to their pockets.' 'The beggars, knowing that at burials they are treated to food and drink, and receive bountiful gifts, stream together to them in crowds from all directions' (Š.[1] pp. 507, 527).

The reason for this is perhaps to be found in the fact that beggars, *i.e.* cripples, the blind, the lame, and especially the weak-minded and idiots, being exceptions to the normal course of nature, have in the thought of primitive man something supernatural, and thus 'sacred,' about them, on account of which they can be regarded as representatives of the summoned souls of the dead ancestors. It may also be owing to this idea that on Slavonic soil (cf. A. Brückner, 'Polnisch-lateinische Predigten des XV Jahrhunderts,' *Archiv für slav. Phil.* xiv. 183 ff.) the spirits of the dead are often thought of as *ubožę* (O. Slav. *ubožije*), *i.e.* 'poor little men' ('dæmonibus sacrificia offerunt, quæ dicuntur *vbosthye*, remantes seu derelinquentes eis residuitates ciborum quinta feria post cenam'). We are therefore inclined to believe that in this feeding of beggars at the White Russian festivals a primitive custom is preserved which in India, as we have already seen, the clergy had turned to their own account, by actually making it a rule that the pious should feed and clothe whole bands of Brāhmans at the *śrāddhas*. The service which is rendered to the Brāhmans is really rendered to the ancestors.

(ϛ) THE GENERAL SIGNIFICANCE, FOR THE HISTORY OF CULTURE, OF THE WORSHIP OF THE DEAD IN PRIMITIVE TIMES.—It is not asserting too much to say that the entire social organization of primitive times rests in the last resort on *ancestor-worship*. Its practice falls, in the first place, on the sons, and then on the more distant relatives of the deceased. In this connexion we find, among some of the individual peoples, definite circles of relatives: among the Indians the *sapiṇḍa*, or 'cake-companions'; among the Greeks, the *ἀγχιστεῖς*, or 'nearest'; among the Romans, the *propinqui sobrino tenus*, 'the relatives as far as the *sobrinus*'; and it is not improbable that even in primitive times there existed a notion of such a close kinship, the members of which were, in the first instance, under an obligation to present the sacrifice of the dead to their common ancestors. In his *Reallex. der indogerm. Altertumskunde* (see art. 'Erbschaft') the present writer has sought to prove that these 'next of kin' in primitive times were covered by the conception of the Indian *sapiṇḍa*-relationship, and included those persons who had in common father, grandfather, and great-grandfather, or one of these ancestors, while in the case of the Gr. *ἀγχιστεῖς* and the Lat. *propinqui sobrino tenus* the purely *agnate* relatives mentioned above were, in the performance of the duties of mourning, early joined by *cognati* and even *affines*. But in any case they must have been originally the same persons to whom belonged, besides the offering of the sacrifice to the dead, the right of *inheritance* and the obligation of *blood revenge*. Thus worship of the dead and inheritance appear everywhere in

closest connexion with each other. In India, such expressions as 'to be one's heir' and 'to give the funeral feast to somebody' (Skr. *dâyâdá*, 'sharer,' 'heir,' and *sapiṇḍa*, 'sharer in the sacrificial cake') are often synonymous. The same holds in Greece, where, as late as his own time, the orator Isæus (vi. 51) could say: 'Which of the two alternatives is law, that the son of this woman, or this son of the sister of Philoctemon, whom he has adopted, *εἶναι κληρονόμον καὶ ἐπὶ τὰ μνήματα ἰέναι χεόμενον καὶ ἐναγιοῦντα?*' In Rome the principle of the jus pontificum is accepted, *nulla hereditas sine sacris*, but among the old Teutons also the idea must have prevailed that worship of the dead and inheritance were identical conceptions.

Linguistic proofs of this are supplied by the Old Norse expressions: *erfa*, (1) 'to honour with a funeral feast,' (2) 'to inherit'; *erfð*, 'inheritance'; *erfða-öldr*, 'a funeral feast'; *erfi*, 'a wake,' 'funeral feast'; *erfingi*, *erfi-vörðr* (A.S. *yrfeweard*), 'an heir'; *erfi-öl*, 'a wake,' 'funeral feast.'

This alliance of worship and property was, at the same time, the real defensive and offensive alliance of primitive times, inasmuch as on it, in the first resort, the duty of *blood revenge* (cf. Schrader, *Reallex.*, art. 'Blutrache') for a murdered or wounded companion devolved; and since in those ancient times, in which as yet there was no State, but only families, clans, and tribes, it was simply this institution of *blood revenge* that afforded mankind that protection which in historical times the laws and institutions of the State guarantee, the extraordinary significance of ancestor-worship and the circle of relations based upon it again becomes, from this point of view, quite apparent.

But whether it was a question of offering the *sacrifice to the dead*, the entrance of the *heir* into possession, or the performance of the duties of *blood revenge*, it was always on the sons, in the first instance, that the man based his hope. This explains the ardent desire for sons which appears undisguised in the prayers to the gods, and especially to those ancestor-spirits who had charge of the welfare of the family (cf. O. Schrader, *Reallex.*, art. 'Kinderreichtum'). There was no special desire for daughters, who were unfitted to offer sacrifice to the dead, and were employed only in the lamentation services (see above, p. 19 f.). But sons who are to be fitted to perform these religious and social duties cannot even in primitive times be begotten of any woman indiscriminately; they must, on the contrary, be born of a wife who has been solemnly brought into the husband's house in compliance with the sacred customs (cf. *Reallex.*, art. 'Heirat'). It follows further from this, that in primitive times marriage was regarded as an unavoidable necessity, and bachelorhood as an almost unthinkable self-contradiction. So intense was this feeling, that, as we have already seen, the unmarried dead man was even after his death married to a wife for the life to come, with the observance of the full marriage ritual (cf. on this O. Schrader, *Die Schwiegermutter und der Hagestolz*, Brunswick, 1904, and *Totenhochzeit*, Jena, 1904).

4. The realms of the dead.—As the primitive Aryans lived together in families and clans (cf. *Reallex.*, artt. 'Familie' and 'Sippe'), we may assume that they buried their dead in families and clans. In Rome each *gens* had the use of a common *sepulcrum*, and also in Greece the individual groups of related *οἶκοι* were bound together by common places of interment (*κοινὸν μνῆμα*) (cf. Marquardt, *Privatleben der Römer*, 1879–82, p. 353; and Rohde, *Psyche*[2], i. 229, note 3). In the North, expressions like O. Nor. *ætthaugar*, 'hill of the tribe' (*ætt*, 'family,' 'tribe') and Russ. dial. *roditelĭskoje mě̌sto*, 'cemetery,' properly 'place of the ancestors' (on Russ. *roditeli*, 'ancestors,' see above, p. 23), point to the same custom, which is also confirmed by many facts of early historical research (cf. *Reallex.*, art. 'Friedhof,' and M. Much, *Mitteilungen der anthrop. Gesell. in Wien*, xxxvi. 90).

Public roads and paths were places at which these tribal graves were by preference wont to be laid out, perhaps because they were in this way most visible to the eye, or perhaps because in ancient times roads and paths were regarded at the same time as boundary lines between the separate districts, which were in this way both made obvious and protected by the sacred remains of the ancestors. The custom is especially well attested in Rome and Greece (cf. Marquardt, p. 351, and I. Müller, *Die griechischen Privataltertümer*[2], 1893, p. 221) as well as in India (cf. p. 26); but according to Nestor's *Chronicle* (ed. Miklosich, p. 7) the old Slavonic Radimičes, Vjatiči, and Sěverjanes laid the ashes of their dead in a small vessel and placed this *na stolpě* ('upon a pillar') beside the roads (cf. Kotljarevskij, *op. cit.* p. 123, who also refers to the fact that the Czech *hranice* has, in addition to the meaning 'boundary,' the significations of 'burial-mound' and 'funeral-pyre').

At these tribal cemeteries, situated at the sides of roads and paths, the souls of the dead were supposed in primitive times to dwell in the depth of the earth and in the neighbourhood of their graves. But as in the course of historical development (cf. *Reallex.*, artt. 'Stamm' and 'Staat') the families and clans of primitive times gradually increased to larger political unities, ruled over by kings, the idea became more and more natural of localizing the deceased in real realms of the dead, situated usually at a great distance, either in the heavens or on the earth, and governed by powerful rulers. Then, as the distinction between good and evil was more clearly recognized and, owing to the authority of influential priestly castes, obtained a religious significance (cf. on this below, II. 5), it became usual to distinguish in these newly created realms of the dead places of enjoyment for the 'good' and places of punishment for the 'wicked.'

Among the Aryans the following are the most important of these realms of the dead. The Indians, leaving the older primitive ideas (above, p. 23) out of account, thought of the kingdom of the blessed as in the heavens under the sovereignty of the first human pair, Yama and Yamī, whose names recur in an almost identical form in the Iranian Yima, proving this twin pair to be a common Indo-Iranian idea. It is a contested question whether, along with this heaven, there was also in Vedic times the conception of a 'hell' (cf. Oldenberg, *Die Religion des Veda*, p. 530 ff.; Macdonell, *Vedic Mythology*, p. 169 f.). Among the Greeks, there stands as the central point of their belief in immortality the dark, because underground, world of *Ἅιδης*. Its entrance is reached by a long voyage over the ocean to the land of the Cimmerians, and the grove of Persephone (details in Rohde[2], i. 53 ff.). Deep down beneath it lies *Τάρταρος* (*Il.* viii. 13), a place of punishment for the wicked (*Od.* xi. 576). For a few elect *Ἠλύσιον* (*Od.* iv. 561 ff.) is appointed—a plain at the Western border of the world, where everlasting spring reigns. The only thing the Romans had to place over against these poetical pictures, which at a later date passed also into Italy, was their Orcus, which is lacking in every characteristic trait.

'The Romans did not possess a conception of the continuance of life and of retribution after death, or of the form of existence in the realm of the shades which was invested with any lively imagination' (Wissowa, *Religion und Kultus der Römer*, p. 192).

If we turn northwards, we find, in the first place, among the Γέται ἀθανατίζοντες, 'the *Getes* who regard themselves as immortal' (Herod. iv. 93),

a kingdom of the dead belonging to the god Ζάλμοξις or Γεβελέϊζις, to whom it was customary to send a messenger every five years, by throwing a man upwards and then receiving him on lances and so piercing him to death. We have already (above, p. 25ᵃ) made the acquaintance of the Lithuanian god of the dead *Vielona*, beside whom there existed a Lettic *Wella mâte*. In all the Teutonic languages there is, as an ancient designation of the realm of the dead, the common expression Goth. *halja*, Old Nor. *hel*, A.S. *hell*, O.H.G. *hella*, which only in the Old Norse (*Hel*) developed into a name for the goddess of the dead. The idea of *Valhöll* is also confined to the north. Among the common people it was in all probability only a name for a home of the dead, but by means of the poetry of the Scalds it became a paradise of warriors under the rule of Odin. In Anglo-Saxon we find for Paradise the unusual expression *neorxna-wong*. It remains for us to mention the expression *raj* (Lith. *rojus*, Lett. *raja*) common to all Slavonic languages, which even in pagan times must have denoted some paradise-like dwelling of the dead. But it is impossible to prove the existence of a pagan word, such as Old Slav. *pĭklŭ*, for the idea of 'hell.'

If we glance over these expressions for realms of the dead and their rulers, we see that they are formations of the separate languages, and etymologically tolerably clear. The Gr. Ἅιδης must be derived from an original *ἀ-Fιδᾱ, 'place of invisibility' (Lat. *videre*, Gr. Fιδεῖν), and then, by being made masculine (cf. νεανίας, 'young man': *νεανία, 'youth'), came to denote the ruler of the under world. The case is similar with the Goth. *halja*, etc. (=Lat. *celare*), 'place of concealment,' originally, in all probability, simply the grave (cf. A.S. *byrgan*, 'to bury,' *byrgels*, O.L.G. *burgisli*, 'tomb'); as also the Lat. *orcus* (cf. above, p. 17ᵇ) should most likely be compared with the Goth. *aúrahi*, 'sepulchral cave.' A.S. *neorxna-wong* has lately been interpreted by A. Leitzmann (*Beiträge z. Gesch. d. deutschen Sprache u. Lit.* xxxii. 1) as 'meadow of the powers of the under world' (**neorxna*, **nerþ-iska*, *Nerthus*, 'terra mater,' Gr. νέρτεροι, 'the powers of the under world'; otherwise F. Kluge, *Zeitschr. für deutsche Wortforschung*, viii. 144; Uhlenbeck, *Beiträge*, xxxii. 1). Perhaps we may also venture an explanation of the Getic god of the dead, Γεβελέϊζις. There was an Old Slavic root *gyb*, *gib*, 'ἀπόλλυμαι' (Old Russ., *e.g.*, *gybelĭ*; Russ. *gibelĭ*, 'destruction,' 'loss'). Thus the language would point to a meaning for Γεβελέϊζις such as δαίμων τῶν ἀπολλυμένων (Herodot. iv. 94: *οὔτε ἀποθνήσκειν ἑωυτοὺς νομίζουσι, ἰέναι τε τὸν ἀπολλύμενον παρὰ Ζάλμοξιν δαίμονα. οἱ δὲ αὐτῶν τὸν αὐτὸν τοῦτον νομίζουσι Γεβελέϊζιν*). However, the group Lith. *Vielona* (**Vēlõnis*), Old Nor. *Valhǫll*, and Gr. Ἠλύσιον (*Fηλύσιον) may possibly rest on a prehistoric connexion. The first part of both of the first two words is undoubtedly the Lith. *wėlės*, 'spirits of the dead,' Old Nor. *valr*, A.S. *wæl*, 'the dead on the battlefield,' O.H.G. *wal*, *wuol*, 'strages,' 'clades,' so that *Vielona* is the '*deus animarum*,' as is also explained in the Lithuanian tradition, while *Valhǫll* signifies 'the hall of the dead.' As regards the Gr. Ἠλύσιον (πεδίον), it is usually derived—even by E. Rohde (*Psyche*², i. 76, footnote 1)—from ἔλευσις, ἐλεύσομαι, etc., and interpreted as 'the land of the departed.' But in this etymology the fact is overlooked that the root ἐλευθ in Greek signifies 'to arrive' rather than 'to depart'; and as a 'land of those who have arrived' obviously gives no satisfactory explanation of Ἠλύσιον, the connexion of the Greek word with the Lith. *wėlės*, 'spirits of the dead,' suggested by A. N. Veselovskij (*Trans. of the Department for the Russ. Lang. and Lit. of the St. Petersburg Acad.* [Russ.], xlvi. p. 287 ff.), seems worthy of consideration. But, of course, we have before us in the case of *Vielona*, *Valhǫll*, and Ἠλύσιον, independent formations of the individual languages, so that all that follows from the series quoted is, in the end, no more than the existence of an Aryan root **vel-*, **vol-*, **vēl-* in the sense of 'souls of the departed.' Thus there is a total want of points of connexion to justify the assumption that even in the primitive Aryan times realms of the dead, like those mentioned above, were believed to exist. All the linguistic comparisons from which people were wont at an earlier date to draw conclusions as to the existence of such primitive ideas—as, *e.g.*, Gr. Κέρβερος=Skr. *śarvara*, *śabala* (a name of an Indian dog of the dead); Gr. Τάρταρος=Skr. *talâtala* (at a later date the name of a definite hell); Gr. Ἑρμείας (as leader of the dead)=Skr. *sârameya* (used of the dogs in the Indian world of the dead); Gr. Μίνως (as ruler of the dead)=Skr. *mánu*, and other similar comparisons—belong to the realm of beliefs that have long ago been given up by modern philology, as has been shown above (p. 13). Even the alleged agreements as to the matter in this sphere—as, *e.g.*, that a certain resemblance is to be found between the Gr. Κέρβερος and the two 'four-eyed and spotted dogs of Yama who guard the path'—do not turn out to be capable of convincing proof (cf. O. Gruppe, *Die griechischen Kulte und Mythen*, i. 113; E. Rohde, *Psyche*², i. 304, footnote 2; Oldenberg, *Die Religion des Veda*, p. 538).

Thus we believe that the idea of actual realms of the dead, situated at a great distance from the graves of the deceased, belongs to the individual development of the separate Aryan races, although this development may have taken place in prehistoric epochs. In the same way, it seems to us that it was also in the separate development of the individual peoples that the custom originated of burning the corpse and sending away the soul (which was thought of as 'smoke') to a distant land by means of the smoke of the funeral-pyre—a custom which, as we have shown above, stands in intimate connexion with this idea of a distant realm of the dead. If the first practice of cremation arose from still more primitive ideas—as, *e.g.*, from the wish to free the living from the pollution which was threatened by the dead, or to keep back, by means of fire, evil spirits from the body of the beloved dead—still it cannot be disputed that the conception of the flame as a female guide of the soul into a distant realm of the dead was one which, in the course of time, rose more and more clearly into prominence. This is most unmistakably the case in India, where, in an extremely realistic manner, the assurance is added, in the way of comfort, that at the cremation the male organ does not burn, and that there are many women-folk in the heavenly world (Oldenberg, *op. cit.*, pp. 544, 536). In Homer the only way to Hades is over the funeral-pyre, but the elect are 'translated' into Elysium, even when still alive. Among the Gauls (Diodorus Siculus, v. 28) it was usual at a cremation to lay letters on the funeral-pyre, addressed to the departed relatives. These were supposed to be carried along with the soul of the cremated dead into the realm of the shades. But a Russian expresses himself most unreservedly as to the real purpose of cremation in the case of the funeral of a Russian merchant described by Ibn Fosslan (see above, pp. 17, 22):

'Ye Arabs are indeed a stupid people: ye take him who is the best beloved and most highly honoured of men and cast him into the earth, where the creeping beasts and worms feed on him. We, on the other hand, burn him in an instant, so that he goes directly, without delay, into Paradise.'

The oldest abode, therefore, in which the spirits of the ancestors dwell is the earth, the same earth

to whose bosom the farmer commits the seed; and accordingly we are not surprised if the gods of the earth who gradually emerge among the different peoples rule over the souls of the dead that are laid in the earth as well as over the seed which springs up *out of* the earth. This is true, in the first place, of the Mother Earth herself, of the Greek Γαῖα (Rohde, i. 208), and of the Latin *Tellus* (Wissowa, *Archiv für Religionswissenschaft*, vii. 47), while among the Lithuanians *Żemyna* (cf. Lett. *Semmes mâte*, Lith. *žėmė* 'earth,' Thrac. Σεμέλη 'earth-goddess') is on the one hand a goddess of blessing for field and house, and on the other hand sacrifices are offered to her at the festival of the dead. In this connexion the attempt has been made by the writer of the present article (*Reallex.* p. 870) to interpret the Greek *Persephoneia* as the 'killing of the seed,'* and the Latin *Feronia* as the 'bringing of the seed.'

II. *WORSHIP OF THE SKY AND OTHER NATURAL PHENOMENA—'THE HEAVENLY ONES.'—Introduction.*—If we have so far succeeded in presenting the fundamental features of the Aryan worship of the dead, sometimes even to very trifling details in its development, we have owed this above all else to the Litu-Slavic tradition, by means of which we were enabled fully to understand the conditions prevalent among other Aryan races, which were both incompletely attested and (as *e.g.* among the Indians) transformed by priestly refinements. It is natural, therefore, to ask whether it will not be possible in the same way to understand the fundamental character of the Aryan religion as a whole. For this task it will unfortunately be necessary, owing to the facts noticed above (p. 14), to leave almost entirely out of account in the meantime the history of the religion of the pagan Slavs, and to confine ourselves to a consideration of the conditions prevalent among the *Lithuanian Prussians*, regarding which, fortunately, we have much fuller information. We may begin the subject with some general descriptions, supplied by trustworthy authorities, of the pagan beliefs about God obtaining among these peoples. First of all we may mention Peter of Dusburg, the editor of the first *Prussian Chronicle* (1326).

'Prutheni noticiam dei non habuerunt. Quia simplices fuerunt, eum ratione comprehendere non potuerunt, et quia literas non habuerunt, immo in scripturis ipsum speculari non poterant. . . . Et quia sic deum non cognoverunt, ideo contigit, quod errando omnem creaturam pro deo coluerunt, scilicet solem, lunam et stellas, tonitrua, volatilia, quadrupedia etiam, usque ad bufonem. Habuerunt etiam lucos, campos et aquas sacras, sic quod secare aut agros colere vel piscari ausi non fuerant in eisdem' (*Scriptores rerum Prussicarum*, i. 53).

We may compare with Peter of Dusburg's statement the following passage from the *Chron. ord. Theut.* of Blumenau (*Scriptores rerum Prussicarum*, i. 53, note 1):

'Horum (the Prussians) ritus sicut a Christiana religione alienus, ita ab omni humanitate remotus fuit. Ipsi namque prisco gentilitatis errore imbuti omnem ornatum cæli atque terræ adorantes nonnullas silvas adeo sacras esse arbitrabantur ut nec ligna incidere nec vetustate quidem delectas arbores inibi abducere permittebant.'

Later but still more characteristic testimonies regarding the Litu-Prussian conditions are supplied by the report of a Jesuit missionary who at the beginning of the 17th cent. travelled all through Polish Livonia:

'Hi varios deos habent, alium cœli, alium terræ, quibus alii subsunt, ut dii piscium, agrorum, frumentorum, hortorum, pecorum, equorum, vaccarum ac singularium necessitatum proprios' (cf. Usener, *Götternamen*, p. 109). Cf. *Helmoldi Chronica Slavorum*, i. p. 163, ed. Pertz: 'Inter multiformia deorum numina, quibus arva silvas tristitias atque voluptates attribuunt, non diffitentur unum in cœlis ceteris imperitantem.'

* Φερσεφόνη, etc.; φῆρον· ἡ τῶν ἀρχαίων θεῶν τροφή, Hes.; φηρίς· ἡ τροφὴ θεῶν, Arcadius, and φόνος (cf. also Hoops, *Waldbäume und Kulturpflanzen*, Strassburg, 1905, p. 360); *Fĕronia*, *Fērōnia*, *Fērōnia*, acc. to W. Mannhardt, *Wald- und Feldkulte*, Berlin, 1875–7, ii. 328: *far* (= φῆρον, *bhere-), 'spelt'; for another view of *Feronia* cf. W. Schulze, *Eigennamen*, Berlin, 1904, p. 165.

With these general characteristics of the Litu-Prussian religion the gods and god-names of the Lithuanians and Prussians themselves correspond well. We have information about these from men like Jan Menecius (Meletius, Malecki, see above, pp. 17, 19), Math. Stryikowski (*Kronika Polska, Litewska, Pruska, Moskowiewska, Tatarska*, Rgbg. bei Osterberg, 1582), Jakob Laskowski (in Lasicius,* *de Diis Samagitarum*, Basel, 1615), Matthæus Prætorius (*Deliciæ Prussicæ oder Preussische Schaubühne*, completed about 1698, edited, with verbatim extracts from the MS, by William Pierson, Berlin, 1871).

If we attempt to emphasize what is really characteristic in these Prusso-Lithuanian conceptions of the gods, it is evidently to be found in the fact that, for all phenomena of nature and life, for all undertakings and conditions of mankind, in fact even for every section or act of these which was at all prominent, individual gods (*Sondergötter*, 'special gods,' as H. Usener has aptly named them) were created, who, at least as a general rule, may be said to remain within the limits of the conception to which they owe their origin.

If, in order to demonstrate this by an example, we single out a particular province of culture, as, *e.g.*, cattle-breeding, which evidently occupied a prominent place in the life of the Litu-Prussians, we have, to begin with, a god who looks after cattle in general (*Sutvaras*), then a goddess who looks after their propagation (*Gotha*), a god who attends to the feeding (*Szericzius*), another taking care of the pasture lands (*Ganŷklos dėvas*). In addition to these, there are 'special gods' concerned with the oxen (*Baubis*), the horses (*Ratainicza*), the sheep (*Eratinis*), the swine (*Krukis* and *Kremata*), the poultry (*Swieczpunscsyunnis dėvos*), the bees (*Bicziu birbullis, Austheia, Prokorimos*), the calves (*Karvaitis*), the young pigs (*Priparszas*), and there is even a divinity that reveals itself in one of the most horrible plagues of the farmer, the fly pest (*Musiû birbiks*). We should meet with the same phenomenon if we examined closely the realms of nature or other spheres of civilization, agriculture, the home, family life, etc.

Long ago it was observed that this fundamental feature of the Litu-Prussian conception of the gods recurs on Aryan soil with amazing accuracy in the *Old Roman* religion. This comes before our notice most obviously in the list of gods which appears in the so-called *Indigitamenta*, *i.e.* priestly collections of forms of prayer to be used on the most varied occasions, which are known to us in the main from the attacks of the Church Fathers on the *Antiquitates rerum divinarum* of Varro, who drew his materials from these *Indigitamenta*. Now, although the fixing of these names of gods in definite classes (*di nuptiales, di agrestes*, etc.)† may have been already undertaken by the Pontifices, or for the first time by Varro, and although many of these names of deities may at first have been placed in that particular class owing to the interpretation of Varro, which was doubtless often wrong, still it is quite certain that in these *Indigitamenta*, and therefore in the Roman cult, there must have been a great number of individual gods exactly resembling in their nature the Litu-Prussian deities:

'Sed et alii sunt præterea (*i.e.* besides the great gods of the cult, whose names also stand in the *Indigitamenta*) dei complures hominum vitam pro sua quisque portione adminiculantes, quos volentem cognoscere indigitamentorum libri satis edocebunt' (Censorinus).

* Cf. *Joh. Lasicii Poloni de Diis Samagitarum libellus*, ed. by W. Mannhardt, with additions by A. Bielenstein, Riga, 1868; 'Die Baltica des Libellus Lasicki: Untersuchungen zur litauischen Mythologie,' by Theodor R. von Grienberger in *Archiv für slavische Philologie*, xviii. 1 ff., and A. Brückner, 'Litauische Götternamen,' *ib.* xxii. 560 ff. The last-mentioned scholar raises doubts as to the trustworthiness of Laskowski, the main source of Lasicki. He holds, among other things, that the Lithuanian deities Gabie, Polengabia, and Matergabia mentioned by Laskowski to Lasicki are simply mutilations of the Christian saint Agatha, the patroness of fire (*Polengabia*, 'the Agatha of the hearth'; cf. Lith. *pelénė*, 'fire-place,' *Matergabia*, 'Mother Agatha'). All this may be quite right in itself, but we are not justified on that account in doubting the good faith of Laskowski. What must be regarded as primitive among the Lithuanians, as we shall see more fully below, is the attempt and the ability to form separate gods, but not all the separate names and forms of these gods themselves. Why should not a Christian saint in earlier times have strayed into their midst? However, in the following discussion names of gods mentioned *only* by Laskowski-Lasicius will be noted as such.

† Cf. Wissowa, 'Echte und falsche "Sondergötter" in der römischen Religion' in *Ges. Abh. zur römischen Religions- und Staatsgeschichte*, Munich, 1904, p. 304 ff.

The important thing, however, is that these great gods of the cult themselves, as we know them particularly from the fixed or movable festivals which were devoted to them, are essentially, even in the earliest historical times, or at least in the earliest period we can read with certainty, nothing else than 'special gods.' If we take, *e.g.*, the sphere of agriculture, which lay at the foundations of old Roman culture, sowing is represented by *Saturnus*, harvest by *Consus* and *Ops*, growth by *Ceres*, blossom by *Flora*, fruit by *Pomona*, failure of crops by *Robigus*—all of them deities who, according to the information supplied by the stone-calendar, had special feasts, or special priests and feasts, at their disposal (cf. Wissowa, *Religion und Kultus*, p. 21). If we may judge from pictures in the circus, there were worshipped along with Consus, the god of harvest, the three goddesses *Seia*, *Segetia*, and *Tutilina*, who had power over the seeds beneath and above the ground (Wissowa, *op. cit.* p. 195).

In addition to these, there are the twelve gods who were invoked by the flamen at the *sacrum Cereale*: *Vervactor* (for the fallow ploughing), *Redarator* (for the second ploughing), *Imporcitor* (for the drawing of the furrow), *Insitor* (for the sowing), *Obarator* (for the grubbing), *Occator* (for the harrowing), *Sarritor* (for the hoeing), *Subruncinator* (for the weeding), *Messor* (for the mowing), *Convector* (for the gathering), *Conditor* (for the storing), and *Promitor* (for the delivery of the grain), while from the report of Varro could be added a god of manuring (*Sterculinus*), and several more (cf. especially Peter, 'Indigitamenta' in Roscher).

A remarkable fact regarding these old Roman names of gods is that sometimes there seem to appear in them chronologically different strata of one and the same idea. Thus *Insitor* (and at the same time *Sator*) is at the *sacrum Cereale* the 'sower'; *Conditor* is the 'storer.' The same meaning is in all probability in the names of the old gods of the cult *Saturnus* (Sæturnus) and *Consus*, which are probably connected etymologically with *serere* and *condere* (Wissowa, pp. 169, 166). In the same way, *Janus* (Wissowa, p. 96) originally was simply the god of the doors (*ianua*), just as in the Lithuanian religion there was a god of the well, *Szullinnis* (Lith. *szulinỹs*, 'the well'), or a god of the bath-broom, *Szlotrazys* (Lith. *szlútražis*, 'broom-stump'). After higher ideas, such as the concept of the deity as a god of the beginning (entrance), were blended with the idea of Janus, a renewal of this idea took place. This renewal we find in the gods of the *Indigitamenta*: *Forulus*, 'god of the doors,' and *Cardea*, 'goddess of the hinges.'

If in the preceding account we have placed the Litu-Prussian and the old Roman gods on the same stage of development in the history of religion, we do not mean to say that the figures which belong to these two groups represent common pre-historic formations, even in cases where these figures exactly correspond to each other in their nature, as is the case, *e.g.*, with the Lith. *Gabjaujis*, 'god of the barns' = Lat. *Consus*; Lith. *Tartois kibirksztū*, 'god of fire' = Lat. *Stata mater* (Wissowa, p. 185); Lith. *Perdoytus*, 'god of merchants' = Lat. *Mercurius*; Lith. *Pizius* (Lasicius), 'god of sexual intercourse' = Lat. *Mutunus Tutunus* (Wissowa, p. 195), etc. What can be proved to be pre-historic is rather the mere capacity and the tendency to form into a divinity every conception in nature or in culture which was of significance for primitive man, and to maintain the gods who were thus created for a longer or shorter period in their original sphere.

The greater part of H. Usener's standard work (*Götternamen*) is devoted to proving that the same tendency was operative in the formation of the Greek gods, that here too the great personal gods were evolved from special gods resembling those of the Romans and Lithuanians. This book also shows (cf. p. 116 ff.) how, even under the rule of the Christian Church, the same primitive and deeply-rooted longing for separate gods lived on in the worship of the *saints*, who, just like the gods of the *Indigitamenta*, could be rightly designated as 'dei hominum vitam *pro sua quisque portione* adminiculantes.' But how do matters stand in this connexion with the religion of the ancient Teutons? 'It is impossible,' says F. Kauffmann in his *Deutsche Mythologie*[2] (Stuttgart, 1893), p. 40, Eng. tr. *Northern Mythology*, London, 1903, p. 31, 'to prove in the oldest Teutonic religion the existence of more than three male divinities; and a triad of gods is usually ascribed to the Teutons by the historiographers of later times. The names given are Mercury, Juppiter, and Mars, names which really denote the Teutonic gods Wodan, Donar, and Ziu. With them is associated a goddess originally the great all-mother Earth, the beloved of the gods, and as such called by the name of Freia.' Certainly, if this statement is correct, and it expresses the opinion current among the German mythologists, there would hardly be room for 'special gods' in the religion of the ancient Teutons. But how then is it to be explained that even Procopius found among the Herulians a πολὺς θεῶν ὅμιλος; and when Jordanis (ch. xi.) relates of the Goth Dicenus: 'elegit ex eis tunc nobilissimos prudentioresque viros, quos theologiam instruens *numina quædam et sacella venerari iussit*,' what else can be meant than that that ruler was the first to choose some few State-gods out of the crowd of existing deities? Or is it possible to regard the numerous gods, and especially goddesses, which the Roman inscriptions exhibit—a Thingsus, Requalivahanus, Halamardus, Magusanus, Saxanus, etc., or a Tanfana, Nerthus, Baduhenna, Nehalennia, Hludana, Garmangabis, Haiva, Vagdavercustis, Harimella, etc.—as all being different forms of the names and ideas of those chief gods or goddesses? When only the Roman gods Juppiter, Mars, Mercury, and Hercules appear as Roman equivalents of the Teutonic world of gods, is it not natural to suppose the reason of this to lie in the fact that the people who first brought news about the Teutonic gods to Rome were soldiers and merchants? The former of these classes—in addition to *Juppiter Optimus Maximus*, who was worshipped by all in common—honoured especially the god Mars, the latter Mercury and Hercules (as the guardian of measure and weight; cf. Wissowa, p. 227, 231), and accordingly these classes sought with special fondness their favourite guardian gods on the barbarian Olympus—and found them too. But none of these questions can be disposed of briefly, and accordingly we cannot settle them here. In any case, however, no substantial objection from the standpoint of Teutonic religion* can be raised against the view that the craving, which is strikingly prominent in the Litu-Prussian and ancient Roman religion, for an endless variety of 'special gods' representing all sides of the life of nature and culture is to be regarded as a primitive Aryan characteristic. What confronts us here, however, as the oldest of the old is in reality nothing else than the phenomenon which anthropologists have called 'animism,' *i.e.* 'the investing with life and the deifying of the inanimate.' The extraordinary world-wide importance of this mode of thought for religious life has long been recognized (cf. especially Tylor, *Primitive Culture*[3], London, 1891). In close connexion with this animism we see fur-

* The same is true of the old Indian religion. Here, from primitive Indo-Iranian times onwards, the ever-growing tendency to form gods was kept in check by influential priests and priestly classes, who everywhere exercised the strongest influence on the development of great personal gods (cf. below, 4 *b*).

ther how, in the Aryan religions as well as everywhere else, traces of a pronounced 'fetishism' remain. It cannot be doubted that the Aryans, like other races, once worshipped and prayed to trees and stumps, stones and animals, not only as symbols of divinity, but as real embodiments of a divine *anima*. In the meantime it may be advisable to leave the proofs of this to be discussed in those sections which deal with the outward appearance and the oldest dwelling-place of the deity (below, 3 and 4*c*).

In this way it may be said that in the Aryan world animism and fetishism form the first and the oldest stage in the evolution of the history of religion. They are also to be traced in historical times, and are still to be detected at the present day. But it is likewise certain that even in primitive Aryan times the beginnings of a higher form of religion made their appearance.

For although the countless numbers of 'special gods' presupposed as original are not at first to be regarded as differing qualitatively among themselves, still it is natural to suppose that, just as the individual objects and conceptions which excited religious emotions were of different significance for mankind, so also the significance of the deities arising out of them would from the beginning be different, or would soon become so. And, in fact, we see how at a time when the Aryan peoples were still together, or were for the most part very close to each other, a class of beings became separated from the motley crowd of divinities, and appeared distinct from the other 'special gods.' These were designated by the list of primitive Aryan words already known to us: Skr. *devá*, Lat. *deus*, Lith. *dëwas*, Ir. *día*, Old Nor. *tívar*, nom. pl. *i.e.* the 'heavenly ones.'

These 'heavenly ones' will accordingly have to occupy the chief place in the following discussion, which will consist of five sections: (1) evidences of the significance of the 'heavenly ones' in the old Aryan religion, (2) their names, (3) their forms of manifestation, and the interpretation of them in riddle and myth, (4) their worship, and (5) their relation to the morality of mankind.

1. Evidences of the significance of the 'heavenly ones' in the old Aryan religion.—It is emphasized in the most unmistakable fashion, by unbiased authorities, with regard to the most diverse sections of the old Aryan racial territory, that the worship of the *sky* and the powers of nature connected with it formed the real kernel of the primitive Aryan religions.

This we have already seen in the reports regarding the Prussian Lithuanians* quoted above (pro deo coluerunt, scilicet solem, lunam et stellas, tonitrua—omnem ornatum cœli atque terræ adorantes—varios deos habent, alium cœli, alium terræ, *quibus alii subsunt*).

This is still more clearly proved by Herodotus (i. 131) with regard to the Persians: *ἀγάλματα μὲν καὶ νηοὺς καὶ βωμοὺς οὐκ ἐν νόμῳ ποιευμένους ἱδρύεσθαι, ἀλλὰ καὶ τοῖς ποιεῦσι μωρίην ἐπιφέρουσι, ὡς μὲν ἐμοὶ δοκέει, ὅτι οὐκ ἀνθρωποφυέας ἐνόμισαν τοὺς θεοὺς κατάπερ οἱ Ἕλληνες εἶναι. οἱ δὲ νομίζουσι Διὶ μὲν ἐπὶ τὰ ὑψηλότατα τῶν οὐρέων ἀναβαίνοντες θυσίας ἔρδειν, τὸν κύκλον πάντα τοῦ οὐρανοῦ Δία καλέοντες· θύουσι δὲ ἡλίῳ τε καὶ σελήνῃ καὶ γῇ καὶ πυρὶ καὶ ὕδατι καὶ ἀνέμοισι· τούτοισι μὲν δὴ μούνοισι θύουσι ἀρχῆθεν*, and the Scythians (iv. 59): *θεοὺς μὲν μούνους τούσδε ἱλάσκονται, Ἱστίην μὲν μάλιστα, ἐπὶ δὲ Δία τε καὶ Γῆν νομίζοντες τὴν Γῆν τοῦ Διὸς εἶναι γυναῖκα.* Cæsar reports regarding the Teutons: 'Germani multum ab hac (Gallorum) consuetudine differunt, nam neque druides habent, qui rebus divinis præsint, neque sacrificiis student, deorum numero eos solos ducunt, quos cernunt et quorum aperte opibus iuvantur: *Solem et Vulcanum et Lunam*, reliquos ne fama quidem acceperunt' (*de Bell. Gall.* vi. 21).

At the head of this worship stands the sky itself: Skr. *Dyâús*=Gr. *Ζεύς*, Lat. *Diespiter*, *Juppiter* (*Jû-piter*=*Ζεῦ πάτερ*, an ancient vocative), Old Nor. *Týr*, O.H.G. *Ziu*.* The fundamental meaning of the term 'sky' is most clearly preserved in the Vedic *Dyâús*, while the Gr. *Ζεύς* and Lat. *Juppiter* on the one hand, and the Old Norse *Týr* and O.H.G. *Ziu* on the other, have developed into gods, conceived of as purely personal, the classical words denoting the greatest god of the sky, and the Teutonic the greatest god of war. The root from which the whole class of words is derived is Skr. *div* 'to radiate,' so that Aryan **dyêus* (=Lat. *dies*, 'day') indicated in the first place the sky as the bearer of the light of day, and thus one of the first of the more elevated religious ideas of the Aryans was connected with the light of day.

The most violent natural phenomenon seen in the sky is the thunderstorm. From what has just been said regarding the fundamental signification of the Aryan **dyêus*, as well as from what has been indicated above regarding the fundamental feature of the Aryan religions—the formation of 'special gods'—it follows that the primitive condition of things has been preserved by those Aryan languages which have formed special deities for the phenomenon of the thunderstorm and its accompanying manifestation, the thundercrash, which agitates most powerfully the feelings of mankind. This is the case particularly over the whole of Northern Europe. Thus the universal Teutonic name of the thunder-god, O.H.G. *Donar*, O.L.G. *Thunar*, O. Nor. *Thórr*, is nothing else than the term for thunder (Skr. *stanáyati*, 'it thunders,' Lat. *tonat*, *tonitrus*, A.S. *þunian*, *þunor*, O.H.G. *donar*). The common Celtic expression for this natural power **torannos* (Irish *torann*, Welsh *tarann*, Cornish *taran*, 'thunder') is derived by metathesis from the same root. These Celtic forms led to the god (or goddess?) *Taranis* attested by Lucan (*Phars.* i. 445) and to forms which are found on inscriptions, such as *Ταρανόου* (Dat.), *Taranucus*, *Taranucnus*. Along with these we have a form exactly corresponding to the Teutonic *Donar*, viz. *Tanaros* (cf. R. Much, 'Der germanische Himmelsgott' in *Festschrift für Heinzel*, p. 227). The names of the Lithuanian god of thunder, *Perkúnas* (according to Menecius '*deus tonitruum ac tempestatum*'), and of the Slavonic *Perun*, who was especially worshipped in Kiev, are obviously related to each other, but the exact nature of this relationship has not yet been determined. Both of them are used in their own languages as appellative terms for 'thunderstorm,' 'thundercrash.' The first of these two names has been connected (cf. H. Hirt, *Indog. Forsch.* i. p. 479) with the Old Norse *Fjörgyn*, the name of the mother of Thor, and with *Parjánya*, the rain- and thunder-god of the Vedas. All these words have again been connected with the Lat. *quercus*, O.H.G. *forha* 'oak,' 'fir' (**perku*), so that the meaning 'he of the oak' would result for *Perkúnas* (cf. in Menecius: *Putscœtus*, 'deus qui sacros lucos tuetur,' Lith. *Puszaitis* [from *puszìs*, 'pine tree'], 'he of the pine tree'; cf. J. G. Frazer, *Early History of the Kingship*, 210). But the Skr. *Parjánya* must for phonetic reasons be excluded from this series (Skr. *j* is not=Lith. *k*), and after all it may be better (especially in consideration of the clear and evident changes of meaning which occur in the Celtic *Taranis* and the Teutonic *Donar*), in the case of *Perkúnas* and *Perun* to start from their appellative signification.† Just as in the North of Europe, so also in

* Cf., in addition, Erasmus Stella, 'de Borussiæ Antiquitatibus' ii., in Grynæus, *Novus Orbis*, Basel, 1537, p. 582: 'Solem et Lunam deos omnium primos crediderunt, tonitrua fulgetrasque ex consensu gentium adorabant, tempestates advertendas citandasque precationibus dixerunt.'

* Bremer (*Indogerm. Forschungen*, iii. 301) has lately, on insufficient grounds, the present writer thinks, separated the Teutonic words from **dyêus*=*Ζεύς* and connected them with **deivos*=*deus*.

† E. Lidén (*Armenische Studien*, Göteborg, 1906, p. 88) has recently discussed all these words. With us he derives the Slav. *perunŭ* and Lith. *perkúnas* from the appellative signification 'thunder,' and places both words beside Old Slav. *perą*, *pirati* and Armen. *hark-anem*, aor. *hari* (cf. also Armen. *oret*

the Vedas, *Dyâúṣ*, the god of heaven, and *Indra*, the god of the thunderstorm (along with *Parjánya*) are carefully kept separate. In contrast to that, the Greek Zeus is god of the clear sky and thunder-god at the same time:

Ζεὺς δ' ἔλαχ' οὐρανὸν εὐρὺν ἐν αἰθέρι καὶ νεφέλῃσι (*Il.* xv. 192).

In fact, titles of the god referring to the latter quality, such as *νεφεληγερέτα, τερπικέραυνος, στεροπηγερέτα, κελαινεφής, ἐρίγδουπος, ἐριβρεμέτης, ἀστεροπητής, ἀργικέραυνος*, etc., exist in large numbers. On the other hand, the epithet of Zeus, the old neuter plural *εὐρύοπα*, 'wide-eye' (cf. above, *τὸν κύκλον πάντα τοῦ οὐρανοῦ Δία καλέοντες*), which is by far the most ancient of his titles, and takes us back to a long-forgotten epoch of the language, points to the god as the bearer of the light of day (cf. J. Schmidt, *Pluralbildungen der indoger. Neutra*, Weimar, 1889, p. 400). The same thing is to be found in the case of the Latin Juppiter as in the case of the Greek Zeus. In both instances, therefore, secondary developments and approximations are evidently present.

Further, the sun and the moon are unanimously mentioned, in the reports given above, as objects of worship among the tribes on the shores of the Baltic, the Persians, and the Teutons.

The Aryan names of these are:

The Sun: Skr. *súvar* (*sū́rya* and *svàr*, Av. *hvar*), Gr. *ἀβέλιος* (Cret. Hes.), *ἠέλιος, ἥλιος*, Lat. *sol*, Goth. *sauil*, neut. (beside *sunnô*, fem.), Welsh *heul*, Old Pruss. *saule*, Lith. *sáulė*.

The Dawn: Skr. *ushás* and *usrā́*, Av. *ušah*, Gr. *ἠώς*, Æol. *αὔως*, Lat. *aurora*, Lith. *auszrà*.

The Moon: Skr. *mās*, Av. *māh*, Gr. *μήνη*, Goth. *mēna*, Lith. *mënů* (in addition O. Lat. *losna*, Lat. *lūna*, Armen. *lusin*; cf. Old Pruss. *lauxnos*, 'constellations').

All these and the related phenomena of the sky connected with light—*Saulělė* 'the sun,' *Mënů* or *Mënesělis* 'the moon,' *Auszrinė* 'the morning star,' *Wakarinė* (also called *Żevoruna*) 'the evening star,' the stars (Lith. *Żwaigżdě*) as a whole, over which *Suaixtix* rules, *Auszrà* 'the dawn' (cf., in Lasicius, 'Ausca [for *Auszrà*] dea est radiorum solis [vel occumbentis vel] supra horizontem ascendentis'), etc.—play, as will be seen further on, an exceptionally important part in the Prusso-Lithuanian religion and mythology. But even in the case of the neighbouring Teutons evidences of the prevalence of the worship of the sun and moon are by no means confined to the report of Cæsar quoted above. Thus Tacitus (*Ann.* xiii. 55) mentions a Teuton of the name of Boiocalus, of whom he says: 'Solem deinde suspiciens et cetera sidera vocans, quasi coram interrogabat,' and even as late as the 7th cent. the saintly Eligius preaches among the Franks: 'Nullus dominos solem et lunam vocet neque per eos iuret.' A deified sun is mentioned in the O.N. *Sól* and in the second Merseburg magic formula: *Sinthgunt Sunna era suister*. The history of the Teutonic names of the days of the week points to the same fact. If the analogy of the days of *Ziu, Wodan, Donar*, and *Freia* (A.S. *tīwesdæg, wōdnesdæg, þunresdæg, frigedæg*) in itself as well as O.H.G. *sunnûntag* and *mânatag* (=Lat. *dies Solis* and *dies Lunæ*, where Sol and Luna were regarded as highly sacred divinities, at least by the Romans, who brought these days of the week to Germany) makes probable the existence of Teutonic gods and goddesses, in the same way the hypothesis of the worship of a heathen goddess *Sunna* is strengthened by the general West Teutonic formation A.S. *sunnanǣfen*=O.H.G. *sunnûn-âband*. For as this combination, whose original meaning (as in A.S.) was 'evening before Sunday,' must without doubt have been formed in pagan times, the conclusion may in all probability be drawn that there was a feast in honour of a heathen goddess *Sunna*, the eve of which was called *sunnûn-âband* (but cf. R. Much, in *Mitteilungen der anthrop. Gesellschaft in Wien*, xxxviii. p. 16). The name of *the dawn*, too, developed on Teutonic soil into an important goddess *Ostara* (to be found in the O.H.G. *Ostarûn, Ostarmânod*), A.S. *Eostre* (*Eastormonaþ*, cf. Bede, *de Temporum ratione*, c. 13)=Skr. *usrā́*, Lith. *auszrà*, only with the difference that here the original goddess of the morning has become a goddess of Spring (but cf. A.S. *éarendel*, 'morning-star,' 'morning-dawn'). The reason of this change is to be found in the fact that in pre-historic times special worship was paid to the goddess of the dawn at the beginning of the year (the spring), as is made probable by the ritual of the Indian *Ushas* (cf. Hillebrandt, *Vedische Mythologie*, Bonn, 1891–1902, ii. 26 ff. and L. v. Schröder, 'Lihgo' in the *Mitteilungen der anthrop. Gesell. in Wien*, xxxii.). On Italian soil the Sabine *ausel*, 'sol' (Varro, *de Ling. Lat.* v. 68 acc. to emendation), must be mentioned as derived from the root **aus-* which has just been referred to, whose priests were called *Auselii* (*Aurelia familia*; cf. also the form found on Etruscan mirrors, *Usil Sol et Eos*). With regard to the divinities *Sol* and *Luna* themselves, it is doubtful whether or not they belonged to the oldest components of the pantheon (cf. Wissowa, *op. cit.* p. 261). Tradition decides in favour of the former view, although there are no traces of their worship either in the calendar of feasts or in the priestly regulations. But the same is also the case with other Roman divinities, *e.g. Minerva*, whose name (**Menes-ova*) is derived from a root (Gr. *μένος*, **μενεσ-ος*) which is entirely extinct in the Italian languages, and therefore must be very old. *Mēna* in the *Indigitamenta* is the special goddess of menstruation. In Greece the related divinities are Ἥλιος and Ἠώς, Μήνη and Σελήνη, although they continue for the most part to play a rôle in the mythology subordinate to that of the chief gods. Finally, the Rigveda also knows a sun-god (*Sū́rya*) and a moon-god (*Mā́s*), who, however, in the same way withdraw into the background before other gods who are probably not creations of the Indian soil, as *e.g. Mitra* (Avestan and Old Pers. *Miθra*, New Pers. *mihr*, 'the sun'), *Varuna*, and the *Ādityas*, or they have been repressed by these (cf. Oldenberg, *Die Religion des Veda*, pp. 185 ff., 194). The position of the female personification of the sun *Sū́ryā* is more important, owing to her relation to the *Aśvins* and her marriage with *Soma*, the moon-god of a later date, which we shall discuss further on. The same is true of the *Ushas*, so often celebrated in song (cf. above). For a Μήν (moon-god?) of Asia Minor, see Kretschmer, *Einleitung*, p. 197 ff.

Along with sun and moon, we find in Herodotus and Cæsar fire (Skr. *agni*=Lat. *ignis*, Lith. *ugnis*, Old Slav. *ognĭ*) mentioned as an object of worship. According to primitive ideas it is born in heaven (cf. A. Kuhn, *Herabkunft des Feuers*, Berlin, 1859), and is carried to earth in the lightning-flash, which is accordingly called 'fire' in the most ancient times (cf. Schrader, *Reallexicon*, art. 'Feuer'). On Prusso-Lithuanian soil it was the object of a sumptuous worship. Here Jerome of Prague found 'gentem quæ sacrum colebat ignem eumque perpetuum appellabat; sacerdotes templi materiam ne deficeret ministrabant.' The people called it *Ugnis szwentà*, 'holy fire,' or *szwentà ponyke*, 'holy mistress.' On leaving the house of her parents (Prætorius, p. 82), the young wife said, 'Thou holy fire, who will guard thee?' There was also a goddess of the hearth, *Aspelenie*, 'the one behind the hearth' (Lith. *pelënė*), etc. We thus find in

'thunder'), both of which mean 'to beat.' He also seeks to connect with this the Skr. *parjánya*. If this is correct, then, there would lie in the Skr. *parjánya*, Slav. *perunŭ*, Lith. *perkúnas*, a primitive Aryan word for thunder with the fundamental significance of 'the beating one.'

the North the same perennial fire, fed by priests, as recurs in the South in the cult of the Roman *Vesta*, Greek ἑστία, Arcadian Ϝιστία, 'hearth,' 'hearth-fire.' There is absolutely no reason for deriving this Roman cult of Vesta from Greece, as Kretschmer has lately attempted to do in his *Einleitung* (p. 162 ff.). On the contrary, everything we know of this cult and its usages, as, *e.g.*, its place in the oldest calendars of feasts, the existence of appointed priestesses, the re-kindling of the extinguished flame by means of the rubbing together of pieces of wood, the carrying of the fire in a brazen instead of an iron sieve, the beating to death of the unchaste Vestal, the circular form of the temple of Vesta, etc. (cf. Schrader, *Reallexicon*, art. 'Herd'; Frazer, *Early History of the Kingship*, 209 f.; and Wissowa, *op. cit.*, p. 141 ff.), points to the remotest antiquity. If we add to this the fact that, according to Herodotus (iv. 59), among the Scythians Ἱστίη (Scyth. Ταβιτί, *i.e.* 'the warming one,' or 'heat'; Avesta *tap*, Skr. *tápati*, *tápáyati*, *taptá*; New Pers. *tâbad*, *tafsad*; Lat. *tepesco*) was a most sacred, in fact the most highly honoured, goddess, it is beyond doubt that the worship of the single hearth-fire, as well as of the common perennial fire, belongs to the most ancient religious ideas and cults of the Aryans. The most exalted, however, of all the divinities which spring from the element of fire is the Vedic *Agni* (Lith. *ugnìs*), the wise and great priest of mankind. The Greek Ἥφαιστος (probably derived from the kindling of the flame, cf. ἅφαι, 'kindling'), and the Latin *Volcanus*, in pre-historic times apparently the god of the fearful and devastating might of fire (from **volkâ*, 'fire' = Skr. *ulkâ*, 'firebrand'; cf. Kretschmer, p. 133), are more narrowly confined to their original sphere than the Vedic *Agni*. The beginning of a formation of a Teutonic god of fire may probably be found in the figure of the Old Norse *Völundr*, whose name, however, has not yet been sufficiently explained.

As the last of the great powers of the sky and of nature we have to mention *wind* and *water*. The former appears as a god in the Litu-Prussian *Wĕjo-patis*,* 'lord of the wind' (also *Wejpons* and *Wejdiewe*) from the Lith. *wĕjis*, *wĕjas*, 'wind.' The last of these words corresponds to the Vedic *Vâyu*, 'wind,' and 'god of the wind,' and to the Greek Αἴολος (*Ϝη-ιο-λο-ς). The name *Vâta*, which is found in the Vedas together with *Vâyu* and also means 'wind,' 'wind-god,' is generally compared with the Teutonic *Wôdan-Óðinn*; but the etymological connexion in this view is not free from difficulty. The worship of *water*, too, in the form of springs and rivers, is reported from all Aryan lands (for the Persians, see Herodotus i. 138: σέβονται ποταμοὺς μάλιστα; for the Germans, Agathias 28, 4: Ἱλάσκονται καὶ ῥεῖθρα ποταμῶν . . . καὶ τούτοις ὥσπερ ὅσια δρῶντες). The same is true of the Greeks (cf. Preller, *Griech. Myth.* iv.[4], 146 ff.), among whom the rivers were called διοτρεφεῖς and διιπετεῖς, 'fed from heaven' and 'heaven-born.' Gods having their name from the watery element are the Latin *Neptūnus* (Umbr. *nepitu* '*inundatio*,' according to Bücheler, *Lex. Italicum*, Bonn, 1881, xvii., Av. *napta*, 'moist,' Νάπας, a Persian spring, Νάπαρις, a Scythian river); the Greek Νηρεύς: ναρός, 'flowing,' 'moist'; the Indian *Apsaras*: *ap*- 'water' (*apâm nápât*, 'the water-child'), etc.

These powers of nature which we have now enumerated, *i.e.* the sky (**dyêus*), together with the phenomena appearing in it or coming from it,

* The Lithuanian names of gods ending in *-patis* (cf. also *Dimstipatis*: *dimstis*, 'house,' 'court,' *Laukpatis* 'lord of the fields,' *Raugupatis*, 'lord of the leaven') are regarded by the author of the present article, in opposition to Usener-Solmsen, p. 115, as very old, seeing that the Lith. *patis*, 'husband,' has preserved the old meaning 'lord,' 'master,' only in one case besides these names of gods, viz., in the old compound word *wëszpatis*, 'God,' lit. 'lord of the tribe.'

'the heavenly ones' (**deivôs*), must accordingly be designated as the *real kernel of the old Aryan religions*. The way in which around this original kernel new layers of divine beings were ever added among the separate peoples will be indicated, at least in broad outline, at the close of the next section, although, strictly speaking, it does not belong to this discussion.

2. The oldest names of the 'heavenly ones.'—Aryan archæology, in the course of its historical development, has been gradually coming to the conclusion that, in the vocabulary of the original Aryan language, real names of gods cannot be proved. The only thing that can be proved, as follows clearly from the indications given above, is that there were appellative but perfectly transparent designations of the sky and the natural phenomena proceeding from it. The fact that they were worshipped in primeval times follows from their being all united in the word **deivos*, and from the numerous historical divinities which have grown out of them. The reason for this phenomenon lies in the simple fact that in primitive Aryan times there were as yet no real gods in the later sense of the term, viz., no personal gods whose names could have been inherited. In *dyâus*—*Ζεύς*—*Juppiter*—*Ziu*, in *agni*—*ignis*—*ugnis*—*ogni*, in *donar*—*toranu*, etc., people worshipped in primitive times the mysterious power, the part of the infinite, the divine *anima*, which manifested itself to mankind in the phenomena of the sky, of fire, thunder, etc., but not as yet a god who was regarded as a person or who exerted influence outside of his own sphere. They were 'special gods' set, so to say, on a high pedestal of worship. That this was the oldest belief of the Aryans regarding their gods has already been clearly emphasized by the present writer in his book, *Sprachvergleichung und Urgeschichte*[2], p. 600 (1890). It is the merit of H. Usener, in his frequently mentioned book *Götternamen* (p. 277), to have recognized that such a worship of gods is *actually* borne witness to in extensive parts of Europe.

Thus Herodotus reports (ii. 52) of the Pelasgi, 'the ancients,' a name which, as the present writer believes, included all that was known or supposed to be known regarding the pre-historic inhabitants of Greece: ἔθυον δὲ πάντα πρότερον οἱ Πελασγοὶ θεοῖσι ἐπευχόμενοι ὡς ἐγὼ ἐν Δωδώνῃ (the oldest place of worship in Greece) οἶδα ἀκούσας, ἐπωνυμίην δὲ οὐδ᾽ οὔνομα ἐποιεῦντο οὐδενὶ αὐτῶν· οὐ γὰρ ἀκηκόεσάν κω.

Thus they possessed gods and worshipped them, but as yet had given them no epithets and no names. The ancients, too, had obviously meant the same thing when they designated certain peoples as ἄθεοι, 'without gods.'

Theophrastus knew such a people in the Thracian Thöi of Mt. Athos, and in the same sense Strabo, iii. p. 164, reports: ἔνιοι δὲ τοὺς Καλλαϊκοὺς ἀθέους φασί, τοὺς δὲ Κελτίβηρας καὶ τοὺς προσβόρρους τῶν ὁμόρων αὐτοῖς ἀνωνύμῳ τινὶ θεῷ [θύειν] ταῖς πανσελήνοις νύκτωρ πρὸ τῶν πυλῶν, πανοικίους τε χορεύειν καὶ παννυχίζειν.

The gods of the Aryans were also 'nameless.' They sacrificed to the sky, the sun, the moon, the dawn, fire, wind, and water; but the names indicating these powers still coincided perfectly with the respective designations. A Greek who had listened to their worship would, under the impression of the lively figures in his Olympus, have called them also ἄθεοι.

The further development in the formation of gods among the Aryans was now mainly directed towards the *creation of personal gods* and *true proper names* for them. This process was called forth almost spontaneously in the course of the history of culture. History produces personalities, and, as happens on the earth, separate individuals come to the front as kings or nobles and grasp power and riches for themselves, in the same way an attempt was made to invest some of the gods with an individual and personal character. All the 'special

gods' had the capacity of annexing the sphere of activity of others. In the case of some deities the powers of various other gods were united. Then we have the additional fact that hundreds of new aspects and tasks of material culture, as of law and custom, require a new heavenly lord and protector, while the significance of the natural powers begins to pale, the more mankind gets raised above them.

In addition to this, there is no Aryan territory where *influences from without* have not made themselves felt. As far as India is concerned, Oldenberg (*Die Religion des Veda*, p. 194) is convinced that the great figures connected with light, which are sharply distinguished from the rest of the Vedic pantheon, *Mitra*, *Varuṇa*, and the *Ādityas* (according to him, sun, moon, and planets), had been borrowed, as early as the Indo-Iranian period, from the Semites or the Sumerians, or that they had received their astronomical character from them. Herodotus himself relates, in the passage referred to above, that the Pelasgi received the names of their originally nameless gods from the Egyptians, and that they afterwards handed on these names to the Hellenes. In any case there cannot be the slightest doubt that the personal characterization of the Greek deities followed the Oriental pattern to a large extent. The Persians, too, according to Herodotus (i. 131), had learned from the Assyrians and the Arabs to sacrifice to a personal deity, Οὐρανίη, along with their old nameless gods. Nor can we fail to recognize how the colourless forms of the old Roman gods were, during the course of Hellenic influence, clothed with Greek flesh and blood. The relation of the ancient Teutons to the Romans must be regarded in the same way. If we take the deities mentioned by Cæsar (obviously only as instances), sun, moon, and fire, and add to these the thunder (*Donar*), the sky (*Ziu*), and the wind (*Wodan* [?]), these being then regarded in their originally purely appellative meaning, we can find absolutely nothing in this list of old Teutonic gods which is in the least striking or unusual. Tacitus, 150 years later, mentions (*Germania*, ch. 9) as Teutonic gods Hercules, Mars, and Mercury; and these possess, at least according to his report, personal characteristics. But these 150 years were at the same time an epoch of intimate contact between Teutonic barbarism and Græco-Roman culture; and its definitely stamped divine figures, in the form which would be mediated to the north by traders and soldiers, must have tended to re-mould the conceptions of the special gods of the Teutonic nature-worship. If then, in addition to all this, we call up before our minds how the ever-increasing influence exerted by the priestly castes (cf. below, 4 *b*) and the beginnings of poetry and plastic art vied with each other in selecting individual deities from the ὅμιλος τῶν θεῶν, and in working up and embellishing the forms of their favourites, we shall have pretty well exhausted the conditions which brought about the gradual development of personal gods.

But however clear this development seems to be when we consider it in broad outline, it is nevertheless extremely difficult to fix beyond question the actual process of growth of the separate gods. For, at the point where the written records among the various Aryan tribes begin, these gods stand for the most part completed and finished before us, and in order to determine the point of departure in their development we are thus *almost exclusively dependent on the interpretation of their names*. It must, however, be said that the etymological explanation of the Aryan names of the gods unfortunately forms one of the most obscure chapters of comparative philology, and the only great step of progress that has been made here lies in the recognition of the fact that we know only a very little for certain. But even if we were successful in fixing the origin of a name of a god, and with it the first sphere of his activity, the 'cell of his nature,' still only more or less credible conjectures would be possible as to the lengthy and intricate pathway which led from this point to the personality of the god that we find in history. The phenomena of the sky, of which we have spoken above, are the most natural sources for personal gods. As soon as Ζεύς (**dyêus*) began on Grecian soil to denote not only the brilliant sky of day, but also the cloud-girt sky of the thunderstorm, with reference to the divine *anima* which was thought of as in both, from that moment the point of commencement was given for the formation of a personal god, which now led in continuous development, through the assumption of ever new elements in the life of nature and of man, to the immortal figure of the father of gods and men which we find in Homer. But it is worthy of note that in the Epic the number of epithets describing the relations of the god to the order of the world and of mankind (*e.g.* μητίετα, ξένιος in the *Iliad*) is extremely small compared with the crowd of attributes referring to natural phenomena (cf. above, p. 34). Corresponding to this, *Agni* in India is originally nothing else than the divine *anima* of fire. But it enters into the realm of personal gods as soon as man requires it, not only to give light and warmth or to dispel evil spirits by its heat, but also, as is already done in the Rigveda, to supply the blessing of children and to promote domestic prosperity.

The Greek Zeus and the Indian Agni are thus real 'heavenly ones,' true *dii*. Then there are joined to these, from the most varied spheres of nature and culture, countless other special gods, who raise themselves in ways similar to these to the position and dignity of personal deities. We shall illustrate this by a few examples from the history of the Greek, Roman, and Teutonic religions.

From the first of these let us take the figures of *Apollo* and *Hermes*. Among the very numerous interpretations that have been proposed for these divine names there are two which, without forcing, satisfy all the demands of phonetics and the science of word-formation; both of them originate from Carl Robert, the editor of Preller's *Mythologie*. According to them, Ἀπόλλων, Ἀπέλλων (ἀπέλλα, 'fold') is 'he of the fold' (cf. *e.g.* κίβδων, 'miner': κίβδη, 'dross'; Ἀγάθων: ἀγαθός; Φίλων: φίλος, K. Brugmann, *Grundriss der vergl. Gram.* ii.[2] 1, Strassburg, 1906, 300); and Ἑρμείας, Ἑρμῆς (ἕρμα, ἕρμακες, 'stone,' 'stone-heaps'), is 'he of the stone-heap.'

Divine names which designate the god appellatively as standing in a characteristic relation to a definite conception are exceedingly numerous in all Aryan languages, as is seen. *e.g.*, in Lith. *Medeinis*, 'he of the wood' (Lith. *mẽdis*); *Puszaitis*, 'he of the pine tree' (Lith. *puszìs*); *Ėratìnis*, 'he that belongs to the lambs' (Lith. *ė̃ras*); Lat. *Silvanus*, *Pomona*, *Mellona*, *Bubona*, *Minerva* from **Menesova* ('she who has to do with the **menos* = Gr. μένος'), Old Gall. *Braciaca* (*braces*), 'he of the malt'; Phryg. *Sabazios* = Dionysus (Illyr. *sabaia*, 'beer'), 'he of the beer' (cf. Schrader, *Reallexicon*, p. 89); and in numerous other instances. In the Teutonic languages the numerous formations in *-ana*—*Tanfana*, *Hludana*, *Saxanus*, *Magusanus*, etc.—may belong to this class. Ἀπέλλων is accordingly, in the first instance, a 'special god' of the cattle-pen,* then a god of cattle-rearing in general, in which character, as is well known, he already appears in Homer (*Il.* ii. 766, xxi. 448 ff.), and which is clearly referred to in the ancient epithets Λύκιος, 'he who frightens away the wolves from the folds,' Καρνεῖος: κάρνος, 'flock' (cf. Lith. *Ėratìnis*), and Νόμιος: νόμος, 'pasture' (cf. Lith. *Ganỹklos dẽwas*: *ganyklà*, 'pasture'), which had all, without doubt, originally designated independent gods. The figure of Hermes, however, takes us back to the primitive epoch of an ancient stone-worship (cf. below, 4 *c*). As late as the year 1588 the Jesuit Rostowski was able to report the following from Lithuania (cf. A. Brückner, *Archiv für slav. Phil.* ix. 33): 'Antiquæ colonis superstitiones . . . alibi Akmo (Lith. *aszmů*, 'stone'), saxum grandius'; and further: 'Saxa pro diis culta (quæ illi lingua

* The Lithuanian god *Sutvaras* (cf. above, p. 31), 'the god of cattle,' would exactly correspond, if it is correct to connect his name with the Lith. *tworà*, 'fence.'

patria Atmeschenes Viete, adiectorum scilicet loca (really adiciendi locus; Lett. *atmeschanas wieta*), in quæ ciborum analecta pro libamine coniectabant; quibus cæsorum animantium cruorem aspergebant quæque contingere ipsis fas esset victimariis), sex inquam eiusmodi aræ circum oppida, in primis Rositenum, Duneburgum, Bussonum, eversæ coetusque sacrificantium dissipati.' Prætorius too relates (p. 21): 'There was, several years ago, a somewhat higher stone not far from Gumbinnen or Blaserheim, in a pine grove, which was regarded as sacred, and on which the surrounding people offered money, clothes, and the like.' Similar phenomena occur in Greece. Even in the *Odyssey*, xvi. 471, we find the place name Ἕρμαιος λόφος:

τὸ γὰρ ἴδον ὀφθαλμοῖσιν,
ἤδη ὑπὲρ πόλιος, ὅθι θ' Ἕρμαιος λόφος ἐστιν,

and the scholiast remarks on this passage: 'The heap of stones on the roadside is called ἑρμαῖον. Hermes first cleared the roads, and where he had cleared them he set a stone for a mark on the roadside. Ἕρμαιος λόφος, however, is the same as finger-post, for the Roman milestones were called Ἕρμαιοι λόφοι. Hence it is the custom of people to erect cairns of stones in honour of Hermes, because he is the guide and protector of travellers, and to throw ever more stones on these cairns, which they call Ἕρμαιοι λόφοι.' Cf. also ἑρμακες λίθους σεσωρευμένους εἰς τιμὴν τοῦ Ἑρμοῦ (Schol. *Nik. Ther.* 150). Eatables, too, such as dried figs, etc., were laid down on these cairns of Hermes (ἕρμαιον), professedly for the passing travellers, but in reality as a sacrifice to the god. In both racial territories we therefore find divinely worshipped stones or cairns, which were added to by the passers-by. The divine *anima*, which exercised sway in them, was called among the Greeks, 'he of the cairn of stones,' Ἑρμείας.

How these primitive gods, 'he of the cattle-pen' and 'he of the cairn of stones,' gradually grew into the powerful and many-sided personalities of the Greek Olympus will never, as has been mentioned above, be completely ascertained in detail. Before all else his early combination with Φοῖβος, 'the shining one,' a sun-deity, may have been of significance for Apollo. The sun-god Phœbus opened the ἀπέλλαι, 'the cattle-pens,' in the morning and drove the cattle to the pasture. Hermes was raised from insignificance by the circumstance that these cairns of stones were more and more transformed into 'direction posts,' and the god with artistically formed head and extended penis became the protector of the ever growing traffic, and the messenger of gods and men. In any case, at the end of their development both of them attained to the same elevation as Zeus, and were regarded as his sons.

On Roman soil let us recall once more the figure of *Janus*, which is remarkable in many ways. As *Terminus* was the 'god of the boundary stone,' *Fons* the 'god of the spring,' *Vesta* the 'goddess of the hearth,' and Lith. *Szullinnis* (*szulinýs*) the 'god of the well,' in the same way the Latin *Janus* was originally nothing else than the 'god of the doors' (so also Kretschmer, *op. cit.* p. 161), however difficult it may be for the modern mind to conceive what religious emotion could be aroused by looking at doors and gates. Probably it was the thought of the two-sidedness of the door, the fact that it looked inwards and outwards at the same time (*Janus Geminus*, *Janus bifrons*), and that it both shut and opened (*Clusius*, *Patulcius* in the *Carmen Saliorum*), that gave occasion to the first conception of the god. But even in Rome of the earliest date the god had his own priest (*Rex sacrorum*) and his own festival (*Agonalia*), and higher thoughts, chiefly the idea that he was the beginning of everything—especially of the year (Januarius)—must have become connected with his worship and have made him into the *divom deus* or the *principium deorum* (cf. Wissowa, p. 91 ff.). In the same way as a material and originally highly prosaic conception was here elevated to the rank of the *dii*, we find in Rome a great fondness, corresponding to the abstract-thinking spirit of the Romans, for raising even abstract ideas into deities.

This is seen, *e.g.*, in *Ceres* (**Keres*, 'growth': *cresco* (cf. Osthoff, *Parerga*, i. 1), *Venus** (**venos* = Skr. *vánas* 'desire,' 'pleasantness'), *Séia* ('sowing' = Lith. *sėjà*, 'seed-time'), *Robigus* ('failure of crops'), etc.

* In Oscan and Pælignian the goddess *Herentas* corresponds to her. The name is connected with Osc.-Umbr. *her-*, *heri-* βούλεσθαι, Goth. *gairnjan*, 'to desire,' etc., and accordingly means 'desire.'

In the same way among the Teutons all sorts of 'special gods' were added from all sides to the ancient *tívar* = *dii* (*Sol*, *Luna*, *Volcanus*, *Donar*, *Ziu*, *Wôdan*). As examples we may take the gods *Saxnôt* and *Requalivahanus*, which can be interpreted with comparative certainty. When bronze swords were introduced from the south-east into Europe, and thereby a new and formidable weapon was put into men's hands, they could not help seeing in this the activity of a god. As a matter of fact, evidences of such a *sword-cult* can be produced from extensive parts of Europe, from the Scythians, Alans, Quads, and other peoples (cf. J. Grimm, *Deutsche Mythologie*[4], i. 185). This god who was present in the sword was called by the Saxons *Saxnôt*, *i.e.* 'sword-bearer,' 'companion of the sword,' and we can easily understand how he could, among a warlike people, acquire so great importance that in the baptismal vow he was placed on an equal footing with *Thunar* and *Wôdan* (Braune, *Althochdeutsches Lesebuch*[3], Halle, 1888, p. 159). We have seen above how a Celtic tribe, which had remained behind, worshipped a 'nameless god' by dancing in families before the gates on the nights of the full moon (above, p. 35b). May we not presuppose a similar custom among the neighbouring Teutons as well, and is it not likely that the god, when any one wished to indicate him in any way, was called 'he of the darkness' (Goth. *riqis* = Gr. ἔρεβος)—an interpretation of the *Requalivahanus* mentioned by the Romans, which the Germanists, by way of exception, unanimously accept? Besides, he was undoubtedly an important deity at the time when, according to a Roman inscription, Qu. Aprianus offered sacrifices and made vows to him on the banks of the Rhine.

3. The forms of manifestation of the 'heavenly ones,' and their interpretation in riddle and myth.—It is a characteristic quality of most primitive religions that in them the distinction between man and animal is entirely disregarded. 'The sense of an absolute psychical distinction between man and beast, so prevalent in the civilized world, is hardly to be found among the lower races. Men, to whom the cries of beasts and birds seem like human language, and their actions guided as it were by human thought, logically enough allow the existence of souls to beasts, birds, and reptiles, as to men. The lower psychology cannot but recognize in beasts the very characteristics which it attributes to the human soul, namely, the phenomena of life and death, will and judgment, and the phantom seen in vision or in dream' (Tylor, *Primitive Culture*[3], i. 469). There may also have been such an epoch in the Aryan religions, in which it seemed quite natural to think of the flame racing over the fields as a horse, or the thunder in the storm-cloud as a bellowing steer, and numerous direct and indirect evidences point to a time in which the gods were actually conceived of as animals, or at least as beings partaking partly of human partly of merely animal qualities. Even as late as the Vedas (cf. Oldenberg, *op. cit.* p. 68 ff.) the lower deities at least are by preference thought of as being in the form of animals. But the higher gods also are repeatedly characterized as the children of animals, *e.g.* the *Aśvins* as children of the mare. The different animals, too, which were sacred to the gods, such as the eagle of Indra, or the animals under whose figure and name the gods were honoured, the horse of Agni, the steer of Indra, etc., are unmistakable signs of these once prevalent ideas. The oldest condition of affairs in Greece is summarized by E. Meyer (*Geschichte des Altertums*, ii. 98) in the following way: 'The view is almost still more wide-spread that the gods reveal themselves in the form of animals.' All through Greece a wolf-god was worshipped, which

in the Peloponnesus has become Zeus, while the wolf is otherwise regarded as a manifestation of Apollo (but cf. above, p. 36). Artemis, in Attica and Arcadia, where she was honoured as the mother of the tribe, is regarded as a she-bear; in other cases she was thought of as a hind (cf. Farnell, *Cults of the Greek States*, ii. 435). In Argos, Hera βοῶπις was worshipped as a cow that was fertilized by Zeus in the form of a bull. In the countless rough figures of stone and clay, in human and animal form, which are found in all the layers of the Trojan and Ægean civilization, we may in all probability recognize the representations of the gods belonging to this epoch of Greece; not a few of them may have been house fetishes. In Italy, too, sacred animals (woodpecker, wolf, and ploughing ox) were assigned to different gods, particularly Mars. But the fact that the gods were here, too, conceived of as animals is very strongly supported by the tradition that there was carried in front of the divisions of the army, marching into the field, not only the eagle, as at a later date, but other figures of animals as well, wolves, minotaurs, horses, and boars (Pliny, *Hist. Nat.* x. 16: 'Romanis eam aquilam legionibus C. Marius in secundo consulatu suo proprie dicavit. Erat et antea prima cum quattuor aliis: *lupi, minotauri, equi aprique* singulos ordines anteibant'). It is the same custom to which Tacitus bears witness among the Teutons (*Germania*, ch. 7): 'Effigiesque et signa quædam detracta lucis in prœlium ferunt,' since it cannot be doubted that, among the *effigies*, the sacred animals of the gods, the snake and wolf of Wodan, the bear and he-goat of Donar, the ram of Ziu, and the boar (cf. A.S. *eoforcumbol*, 'sign of the boar') of Freyr are to be understood (cf. Tacitus, *Hist.* iv. 22: 'inde depromptæ silvis lucisque *ferarum imagines*'). Thus the oldest banners are seen to be animal fetishes, under whose visible protection the army marched into battle.

Along with the conception of the gods as animals, there is to be found, from the very beginning, the conception of them as existing in human form. In course of time this latter idea came more and more into prominence. It may seem that this is a contradiction of our earlier assertions, according to which the appearance of personal gods among the Aryan peoples is comparatively late. This is, however, not the case. We must not consider personification and the formation of personal gods as identical, no matter how much the latter presupposes the former. The characteristic mark of a *personal god* is that he is regarded as exercising influence outside of the sphere to which he owes his conceptual origin and his name. *Personification*, however, means, at first, simply the substitution of a human figure for the divine *anima* present in the phenomenon. This need for personification is all the greater the lower down we go in the stages of civilization. If the White Russian peasant be asked even to-day about his *Perunŭ*, whose fundamental appellative meaning is still quite clear to him (cf. above, p. 33), he says: 'He is a tall, broad-shouldered fellow, with black hair, black eyes, and a yellow beard. In his right hand he has a bow, in the left a quiver with arrows. He drives on the heavens in a chariot and discharges fiery arrows' (cf. Dahl, *Erklärendes Wörterbuch der lebenden grossrussischen Sprache*[2], St. Petersburg, 1880–82, iii. 104). Even quite impersonal conceptions of Greek and Roman civilization are, on their passing over into the Slavonic world, taken possession of by this primitive passion for personification. Thus the Lat. *calendae* (καλάνδαι), 'New Year,' has led on Russian soil to a divine being, personifying the whole time between Christmas and Epiphany. In the neighbourhood of Moscow, even at the present day it is customary on Christmas eve to lead a maiden called *Koljada*, dressed in white, through the streets, and to sing, 'On Christmas eve was Koljada born, beyond the rapid river,' etc. In the same song, in close connexion with the worship of this Koljada, a pagan sacrifice of a kid is mentioned (cf. Glasunov, *Russian Folksongs* [Russ.], St. Petersburg, 1894, p. 1). We may also call to mind the supernatural *rusalki*, from Lat. *rosalia* (ῥουσάλια), 'festival of roses,' already mentioned above (p. 25).

Thus we may assume that there was, even in primitive times, an active tendency to conceive the divine in human form; and if Indra in the Rigveda and Thor in Northern mythology are described as giants with tawny or red beards, there is nothing against discovering there a primitive Aryan idea common to the Indians and the Teutons. This tendency, too, suggests an explanation of the fact that in certain branches of the Indo-Germanic language the attribute 'father' must have been, even in pre-historic times, added to the primitive Aryan **dyēus*, 'sky' (Skr. *Dyāuš pitā*, Gr. Ζεὺς πατήρ; cf. also in Hesych. Δειπάτυρος· θεὸς παρὰ Τυμφαίοις, Lat. *Juppiter*), as there were also a Scythian Ζεὺς Παπαῖος and a Bithynian Ζεὺς Πάπας, Παππῷος (Kretschmer, *op. cit.* p. 241 f.). It is doubtful, however, whether the word 'father' indicates a position of honour of **dyēus* compared to the other 'heavenly ones,' as seems more likely to the present writer, or expresses the relation of the god to the community worshipping him, as is the case in Italy, where *pater* (or *mater*) is applied to almost all the gods (or goddesses) of the oldest group.

A further consequence of this personification of the deity is to be found in the circumstance that the god was supplied with a wife, whose designation was most simply and originally obtained by forming the feminine of the male deity (Skr. *Agnâyî*: *Agni*; Gr. ΔιFώνη: Ζεύς, Διός; Lat. *Juno*, **Jovino*: *Juppiter, Jovis*). The idea, too, that the heaven and the earth constitute a pair united in marriage is very old. In the Rigveda the 'mother,' *Pṛthivî* (=A.S. *folde*, 'earth'), appears along with the 'father,' *Dyāus*. The report of Herodotus regarding the Scythians (νομίζοντες τὴν Γῆν τοῦ Διὸς εἶναι γυναῖκα) has already been mentioned. Among the Thracians the lordly Διώνυσος (probably a Thracian word) is sprung from the marriage of the god of heaven with the earth-goddess Σεμέλη (cf. the Lithuanian *Zémyna*: Lith. *žémė*, Old Slav. *zemlja*, 'earth'). Deeply rooted in the mind of the Russian peasantry is the belief in the love of Jarilo, the god of light, to the *mati syra zemlja*, 'the cold Mother Earth,' just as we find in an Anglo-Saxon rural verse: '*Hal wes þû, folde, fira moder, beo þu growende on godes fæþme*,' 'Hail to thee, O Earth, Mother of men! Be thou fruitful in God's embrace.'* It is doubtful, however, if the ἱερὸς γάμος of Zeus with Ἥρη, who can scarcely be shown to be a goddess of the earth, is related to the same circle of ideas (cf. Kretschmer, *Einleitung*, p. 90 f.; on the other side, Frazer, *GB*[2] i. 228, and Farnell, *Cults of the Gr. States*, i. 180 ff.). Finally, we have to mention that the distinction of grammatical gender, which was already perfected in the primitive language, formed the basis on which, on the one hand, male (*e.g.* *Dyāus* and *Agni*) and, on the other hand, female deities (*e.g.* *Ushas*, *Eostra*) could be developed. In short, in many places there are to be found, even in primitive times, the first beginnings of the formation of those divine families whose real evolution belongs entirely to the province of the respective separate peoples.

The conception of the oldest gods now as animals, now as men, which we have so far discussed, is,

* We may look upon the rôle played by *Tellus* at Roman marriages as a reminiscence of the same ideas. Cf. Servius, iv. 166: 'Quidam sane etiam Tellurem præesse nuptiis tradunt; nam et in auspiciis nuptiarum invocatur; cui etiam virgines, vel cum ire ad domum mariti cœperint, vel iam ibi positæ, diversis nominibus vel ritu sacrificant.'

however, in reality only the outcome of a general longing, immanent in mankind, to know and understand the world, a longing which in primitive stages of culture expresses itself in two other phenomena as well—in *riddle* and in *myth*. In discussing these we may commence, as we have done so frequently, with the Litu-Slavic conditions, where both ideas appear with special purity and originality. It is difficult to overestimate the significance of the riddle in the literature of the Slavonic peoples (cf. Krek, *Einleitung in die slavische Literaturgesch.*[2], p. 810 ff.; and, for the value of riddles in the interpretation of myths, Max Müller, *Contributions to the Science of Mythology*, 1897, i. 80 ff., and art. RIDDLE). They are in the real sense of the word *Welträtsel* ('riddles of the universe'), for their subject is, if not exclusively, at least in great measure, the universe, with its thousand-and-one phenomena, their meaning and illustration.

'Peas are scattered on a hundred paths; no one will gather them up—*ni sert, ni serias, ni brânaja dêvica*' (*the stars*). 'The black cow has gored all men to death; the white cow has brought them to life again' (*day and night*). 'Without hands, without feet, he creeps on the mountains' (*the wind*). 'In Spring he makes glad; in Summer, cool; in Autumn, satisfied; in Winter, warm' (*the tree*). 'There stands an oak. On the oak there are 12 nests; in each nest there are 4 blue-bonnets; each blue-bonnet has 14 eggs—7 white and 7 black' (*the year, the month, weeks, days and nights*).

It is the same fundamental trait as appears in these few Russian examples (cf. Sadovnikow, *The Riddles of the Russian People* [Russ.], Petersburg, 1875), viz. the tendency to explain the great cosmic processes, the course of the sun, the division of the year, etc., that comes most clearly to the front in the riddle-making of related peoples.

Thus in ancient India (cf. Haug, 'Vedische Rätselfragen und Rätselsprüche,' in *Sitzungsberichte der Münchner Ak. d. W.*, phil.-hist. Kl. 1875, p. 457 ff.) the priests even in Vedic times, on occasions of great sacrificial gatherings, proposed for each other and for the offerer riddles of the following kind. The Hotar asks, *e.g.*, 'Who travels alone?' 'Who will be born again?' 'What is the preventive against snow?' 'What is the great scattering?' and the Adhvaryu answers: 'The sun travels alone,' 'The moon will be born again,' 'Fire is the preventive against snow,' 'The earth is the great scattering.' Quite similar series of riddles occur on Teutonic soil (cf. Wilmanns' *ZDA* xx. 252) in the Edda and the poem of Traugemund ('What is whiter than snow? What is fleeter than the roe? What is higher than the mountain? What is darker than the night?'). In Greece one need only refer to the very ancient riddle of the fire that swallows up the father and mother, occurring in the *Marriage of Keyx*, ascribed to Hesiod. It makes quite a Vedic impression, seeing that it is a prevalent idea in the Rigveda that Agni, the son of the two pieces of wood by the rubbing of which he is produced, swallows up his father and mother at once after his birth.

The *myth* is devoted to the satisfaction of the same primitive longing as the riddle. It is quite incorrect (cf. above, p. 12) to suppose that it is the exclusive possession of higher social classes or the product of priestly acuteness, however much these may have influenced its forms as presented to us in history. In its origin it is undoubtedly nothing else than the naïve and popular expression of the wish to understand and comprehend the universe, as can with especial clearness be recognized on Aryan soil in the rich but simple and transparent mythical formations of the Lithuanian and Lettic peoples. These, in any case, prove that, even at the most primitive stage of religious ideas, a myth can be developed to explain processes of nature puzzling to the people. In the first place, this formation of myths is concerned with the phenomena of the sun, moon, and stars (cf. Mannhardt, 'Die lettischen Sonnenmythen' in *ZE* vii. 73, 209, 281, and Usener-Solmsen, *Götternamen*, p. 85 ff.).

Teljawelik is the smith that forged the sun. The people worship the sun and an iron hammer of special size. Once upon a time the sun was invisible for several months, because a very mighty king had closed him up in a strong tower. Then the figures of the Zodiac brought him help with the iron hammer. The tired and dusty sun is placed in a bath by the mother of Perkúnas, and then is dismissed on the following day washed and shining. Sun and moon are described in various *Daina* as husband and wife, and, indeed, as unfaithful in that relation. The moon separates herself from the sun, falls in love with the morning star (*Auszrine*), and is cut in two by the sword of Perkúnas. The stars are considered as daughters of the sun, and so on.

Such stories as these regarding the heavenly beings, their deeds, and their relations to one another, were without doubt related even in primitive Aryan times; and it is to-day, in spite of all opposing scepticism, the right and the task of comparative mythology to discover cycles of myths which go back to such pre-historic interpretations of nature, as has been done by A. Kuhn and Max Müller. Three of these cycles of myths seem to the present writer to have been fixed beyond question.* These refer (1) to the relation of sun, moon, morning and evening stars, (2) to the origin of the thunderstorm, and (3) to the source of fire. It must suffice at this point to characterise them in the briefest possible way.

(1) Sun and moon have concluded a marriage with each other, as is related in the Lithuanian and Lettic poems, and more fully in a celebrated hymn of the Rigveda (x. 85). The morning and evening stars stand to these two heavenly bodies in a relation described in different ways. In a Lithuanian poem, as we saw above, the moon separates itself from the sun in order to run after the morning star. In the Lettic poems the most usual conception is that the 'sons of the god' (*dêwa deli*, *dêwo sunelei*), among whom the two stars already mentioned are undoubtedly to be understood, are described as suitors for the favour of 'the daughter of the sun,' *i.e.* most likely the sun itself, just as in India the two *Aśvins*, 'the lords of the horses' (cf. Skr. *aśva*, 'horse'), are regarded as the lovers of *Sûryâ* or *Sûryasya Duhitâ*, 'the daughter of the sun.' A pre-ethnic connexion of the Indian *Aśvins* with the Lettic 'sons of the god' seems, therefore, beyond the range of doubt (the view of Oldenberg, *Die Religion des Veda*, p. 212), particularly when we remember that in the Lettic poems the morning and evening stars are also called the 'ponies' of the moon and the 'sons of the god' are thought of as riders on grey horses. Further, the equestrian Greek Διόσκουροι (Castor and Pollux), the brothers of Helena (Ἑλένη : εἵλη, *svelâ, 'heat of the sun') correspond to the Lettic *dêwa deli*, 'sons of the god.' Finally, the Lettic 'sons of the god' are very often described as servants and workmen of the sun and the moon. Seeing now that we know from Lasicius, *de Diis Samagitarum*, p. 47, about a Lithuanian god *Algis*, '*angelus summorum deorum*,' whose name (cf. Lith. *algà*, 'reward') literally means 'hired labourer,' and this Lith. *Algis* is etymologically the same as the name of the Teutonic deity *Alcis* who corresponded to Castor and Pollux (Tacitus, *Germania*, ch. 43: Apud Nahanarvalos antiquæ religionis lucus ostenditur; præsidet sacerdos muliebri ornatu, sed deos interpretatione Romana Castorem Polluce̅mque memorant; ea vis numini, nomen *Alcis* [*Alhi, dual ?]; nulla simulacra, nullum peregrinæ superstitionis vestigium; ut fratres tamen, ut iuvenes venerantur)—since this is so, it is impossible to deny that these forms also belong to the cycle of the Lettic 'sons of the god,' the Indian *Aśvins*, and the Greek Dioscuri.†

(2) The second cycle of primitive Aryan myths referred to above, dealing with the explanation of the thunder and the thunder-shower, is presented in two different settings. According to the one, a heavenly being slays the dragon concealed in the cloud, whose water now flows over the earth (fight of *Indra* with *Vṛtra*, of *Tištrya* with *Apaoša* in the Avesta, of Donar with the wolf Fenris, of Apollo with the Python); according to the other, a god delivers from a monster the cows of the clouds, who are imprisoned in a mountain gorge (*Indra* and *Viśvarûpa*, Herakles and Geryones, Hercules and Cacus).

(3) Lastly, the myths dealing with the origin of fire are connected with the custom, preserved among the Indians, Greeks, Romans, Slavs, and Teutons, and partially among the Lithuanians (cf. Usener, *op. cit.* p. 87), of obtaining fire for sacred purposes by taking a stick of hard wood (oak), boring it into a plank or board of softer wood (lime tree), and turning it round and round till fire is produced by the friction. In this way, which may be compared with animal generation, fire is also produced in the cloud, whence it is brought to earth by a bird or a daring human being (Prometheus). A similar origin is enjoyed by the earthly fire-drink, the honey-mead (Skr. *mádhu* = Gr. μέθυ, etc.) which, when drunk by mortals, bestows upon

* In this connexion the present writer agrees with Winternitz, 'Was wissen wir von den Indogermanen?' (*Beilage zur Münchner AZ*, 1903, No. 258, p. 292). Only in one point does Winternitz seem to make a mistake, viz. in deducing from these myths the existence of personal gods, a view which rests on the confusion emphasized above (p. 38a) between personified natural phenomena and natural phenomena that have become personal gods.

† A. Brückner (*Archiv für slavische Philologie*, xxiii.) is wrong in finding in the author's contention that Lith. *Algis* = Ger. *Alcis* (*Reallexicon*, p. 673), a contradiction of his opinion, of which Brückner himself approves, that as yet there were no Aryan names for the gods; for these names represent, not an Aryan god-name, but an Aryan appellative ('hired labourer') preserved by chance in the myth.

them immortality (Skr. *amṛta*, 'immortality,' 'draught of immortality' = Gr. ἀμβροσία, lit. 'immortality') as it is possessed by the heavenly beings (A. Kuhn, *Die Herabkunft des Feuers und des Göttertranks*, Berlin, 1859). The thought that the universe is a well-ordered whole, resting on fixed laws, is a long way in advance of these explanations, and where this thought meets us in earlier epochs, as in the Indo-Iranian conception of Skr. *ṛtá* = Av. *aša*, it points to foreign non-Aryan influences (cf. Oldenberg, *Die Religion des Veda*, pp. 49, 195).

4. **The worship.**—In the foregoing sections we have dealt with the ideas of the Aryans regarding their gods and with their beliefs. We now go on to the consideration of the services which they devoted to them, *i.e.* their worship. This point, which has often been neglected by investigators, is also of the greatest importance for the development of the gods, for naturally it must have been along with and by means of the form of worship assigned to them that the fluid and indefinite figures came to assume more fixed and individual forms. We shall in this discussion have to deal with four phenomena connected with worship which we find in historic times: (*a*) sacrifice and prayer, (*b*) the priests, (*c*) the temples, (*d*) the feasts. We shall have to ask whether and how far these institutions go back into the primitive history of the Aryan peoples.

(*a*) SACRIFICE AND PRAYER.—There was among the Aryans, just as among all other peoples, a more ancient way of bringing the supernatural within reach of the natural than sacrifice and prayer, namely, *magic*. Its forms appear so closely connected, even in historic times, with those of the cult, that it is often difficult, if not impossible, to draw a sharp line of distinction between the two conceptions. We may say, however, that magic is present in all those cases in which man imagines that he is able, by word or by deed, to make a spirit *directly* and immediately serviceable to himself. On the other hand, we can speak of an act of worship only where, by a sacrifice or a prayer, the otherwise free will of a deity is supposed to be more indirectly influenced and made favourable to mortal man. It thus depends on the *way of influencing* the deity, not on the intention connected with it, which is in both cases the same. He who lights a fire early in the morning in order thereby to facilitate the rising of the sun, or he who banishes with a text a demon of sickness into a stone or a plant, performs a *magical* act. He, however, who appeals to the heavenly powers by means of sacrifices and prayers in order that they may cause the sun to shine or make him well, engages in an *act of worship*.

Magic may be practised either by *an action* or by *words*, as can be clearly gathered from its terminology. The following series of terms is characteristic of the former method: Skr. *kṛtyā́* 'action,' 'bewitching,' 'magic,' 'witch,' Lith. *keras* 'magic,' *kerĕti* 'to bewitch some one by the eye, etc.,' Old Slav. *čarŭ* 'magic'; Skr. *kṛṇóti* from *kar* 'he makes,' from which also Skr. *kárman* 'the sacrifice' is derived. In both cases, *i.e.* in magic and in sacrifice, a 'doing' κατ' ἐξοχήν, a ceremonial action is intended.

In by far the greatest number of cases, however, 'to charm' is the same as to 'speak' or 'sing,' as is seen in the Greek ἐπῳδός 'magician,' 'charmer,' ἐπῳδή 'magic formula': ἐπᾴδω 'I sing to it'; O.H.G. *galstar* 'magic song,' *galâri*, *galstarâri*, 'magician': *galan*, *bigalan*; Old Slav. *bajati* 'fabulari,' 'incantare,' 'mederi,' Serv. *bajati* 'to charm,' Old Slav. *balija* 'magician': Gr. φημί, Lat. *fâri*; Lith. *wardyti* 'to conjure,' 'charm'; *wardas* 'name,' and in many other examples (cf. Osthoff, 'Allerhand Zauber etymologisch beleuchtet,' in Bezzenberger's *Beiträge zur Kunde der indogerm. Sprachen*, xxiv. 109; and Schrader, *Reallexicon*, art. 'Zauber und Aberglaube'). Here also we have to do with a 'speaking' κατ' ἐξοχήν, a ceremonial, rhythmical speaking, in which *a priori* a definite magic power is latent.

Such magic acts or words occur frequently on the soil of the separate Aryan peoples, along with and mixed up with actions of worship in the proper sense of the term. In India he who wishes to possess deadly weapons sacrifices iron nails (cf. Oldenberg, *op. cit.* p. 369); in Greece he who wishes to conjure up an actual thunderstorm produces by the rolling of a waggon a noise similar to thunder (cf. O. Gruppe, *Griech. Mythol.* i. p. 820). Burchard of Worms tells of a custom prevalent in Germany (cf. J. Grimm, *Deutsche Mythol.*[3] i. 560), according to which he who wishes rain causes a naked girl to be led to the river and there sprinkled with water. In Lithuania, if the people wish rainy weather, they turn towards the sun and sprinkle themselves with water at the time of the morning prayer (cf. Prætorius, p. 33), etc. We may call special attention to another rain-charm of this kind, which by comparison with the Indian and the Greek usage is seen to be primitive. In Greece the phrase Ζεὺς ὕει is used for 'it rains,' which, when traced back to an older stage of the language, can only mean 'The father (heaven) presses grapes' (Skr. *sunómi* 'I press,' *sóma* 'the pressed,' 'the soma drink'). It is also customary to charm the rain by an offering of honey, where the rain which drops on the trees and branches is likened to honey. Exactly corresponding to these ideas we find in India the belief that by letting the soma, which itself is called a son of the rain-god Parjanya, drip through the strainer, rain is enticed to fall. Thus the very fact that the man 'presses' the juice on the earth, incites or rather compels the god in heaven to 'press,' *i.e.* to cause the rain to fall (cf. Windisch, *Festgruss an Roth*, p. 140; Oldenberg, *op. cit.* p. 459; O. Gruppe, *op. cit.* p. 819). The *magic formula* plays a still more important part in the religious conceptions of the ancient Aryans, and at the lower stage everything is secured by its means, for which at a higher stage man turns to the gods with prayers and sacrifices. By its means wounds and sicknesses are healed, by its means women in labour are delivered of the fruit of their body (cf. *Reallexicon*, artt. 'Arzt' and 'Hebamme'), by its means the heavenly powers are enticed to partake of the food offered to them (see below, p. 41), by its means a man curses himself in case of perjury (see below, II. 5), by its means the darkness of the future is penetrated (cf. below, III. 1), and so on.

But it cannot be doubted that from the wilderness of these primeval beliefs, which from the standpoint of a higher conception are called 'superstition,' *superstitio* (survival [?]), but which were originally 'faith' itself, a higher form of divine worship was developed among the Aryans even in pre-historic times, in which real, if exceedingly primitive, sacrificial rites were employed.

The history of the language points at once to this, for the expressions for 'sacrifice,' 'to sacrifice,' 'sacrificial animal,' in the separate Aryan languages, extend for the greater part beyond the realm of magic, and belong to a higher class of words, whose fundamental meaning we are wont to express in our language by the term 'holy.'

Cf. Gr. ἅγος 'worship,' 'sacrifice' = Skr. *yájas* 'worship': Skr. *yaj*, Av. *yaz* 'to sacrifice,' 'to worship by sacrifice' (ἅζομαι 'to worship with religious fear'); Goth. *hunsl*, Old Nor., A.S. *húsl* 'sacrifice' = Lith. *szwentas*, Old Slav. *svętŭ*, Av. *spenta* 'holy'; Volsc. *esaristrom*, Umb. *esunu* 'sacrifice' = Gr. ἱερός 'holy'; Lat. *victima* 'sacrificial victim' = Goth. *weihs* 'holy,' *weiha* 'priest,' *weihan* 'to sanctify'; O.H.G. *zëbar*, A.S. *tífr*, Old Nor. *tafn* 'sacrificial victim' = Lat. *dapes* 'sacrificial meal,' etc.

We have the additional fact that, among all the Aryan peoples, Slavs and Lithuanians as well as Greeks and Indians, the existence of real sacrificial rites can be proved. It will be our task in the following section to give an account of these.

Among the Indians, Greeks, and Romans of historical times, when sacrifices were offered to the immortals, fire had to be kindled on the altar in order that the gifts might by its means reach the gods. Thus 'to sacrifice' in Greek (θύω, θυσία,

etc.; Lat. *fūmus* 'smoke') implies 'to cause to go up in smoke.' Quite another picture is offered, however, by the other Aryan peoples. To begin with, Herodotus (i. 132) tells of a much more simple and primitive kind of sacrifice in the case of the Persians, who, as we saw above, preserved with great faithfulness the original ideas with regard to the gods:

θυσίη δὲ τοῖσι Πέρσῃσι περὶ τοὺς εἰρημένους θεοὺς (sun, moon, sky, earth, fire, wind, water) ἥδε κατέστηκε. οὔτε βωμοὺς ποιεῦνται οὔτε πῦρ ἀνακαίουσι μέλλοντες θύειν. οὐ σπονδῇ χρέωνται, οὐκὶ αὐλῷ, οὐ στέμμασι, οὐκὶ οὐλῇσι. τῶν δὲ ὡς ἑκάστῳ θύειν θέλει, ἐς χῶρον καθαρὸν ἀγαγὼν τὸ κτῆνος καλέει τὸν θεὸν ἐστεφανωμένος τὸν τιήρην μυρσίνῃ μάλιστα . . . ἐπεὰν δὲ διαμιστύλας κατὰ μέρεα τὸ ἱρήιον ἑψήσῃ τὰ κρέα, ὑποπάσας ποίην ὡς ἁπαλωτάτην, μάλιστα δὲ τὸ τρίφυλλον, ἐπὶ ταύτης ἔθηκε ὦν πάντα τὰ κρέα. διαθέντος δὲ αὐτοῦ μάγος ἀνὴρ παρεστεὼς ἐπαείδει θεογονίην, οἵην δὴ ἐκεῖνοι λέγουσι εἶναι τὴν ἐπαοιδήν. ἄνευ γὰρ δὴ μάγου οὔ σφι νόμος ἐστὶ θυσίας ποιέεσθαι. ἐπισχὼν δὲ ὀλίγον χρόνον ἀποφέρεται ὁ θύσας τὰ κρέα καὶ χρᾶται ὅ τι μιν ὁ λόγος αἱρέει.

Thus this old Persian sacrificial custom did not know the use of fire in bearing the food to the gods. The flesh was laid on a specially prepared sacrificial litter, on which the gods were supposed to descend (Skr. *barhis*, Av. *baresman* 'sacrificial litter' = Old Pruss. *balsinis* 'cushion,' *pobalso* 'pillow,' Serv. *blazina* 'cushion,' Old Nor. *bolstr*, O. H. G. *bolstar* 'pillow'), and the god was allured, by means of an exorcism, to partake of the food. Herodotus (iv. 60) tells of a similar practice prevalent among the Scythians. The sacrificer threw the animal to the ground by means of a noose, and strangled it after calling on the god, οὔτε πῦρ ἀνακαύσας οὔτε καταρξάμενος οὔτ' ἐπισπείσας. The flesh of the strangled animal was boiled, just as was customary among the Persians. In this connexion the two Litu-Prussian sacrifices, which are described in Lasicius' book, *de Diis Samagitarum* (pp. 49 and 54), are of great interest. Both are harvest-offerings. At the first (related by A. Guagnini from the *Kronika Polska*, etc., of Math. Stryikowski, mentioned above), which took place at the end of October, the sacrificial animals were battered to death with cudgels by the priests and other worshippers, who all the time called on the god Zemiennik. Before the worshippers sat down to the feast, portions of each kind of food were thrown into every corner of the house with the words: '*Accipe o Zemiennik grato animo sacrificium atque lætus comede.*' The second (related by Menecius) was the sacrifice of a goat. The faithful were assembled in a barn. A he-goat was led in. The sacrificing priest, or 'wurschaite,' laid both hands on it, and called on all the gods in succession. Then, while a hymn was being sung, the goat was raised into the air and held there till the song was finished. Thereupon the priest slew the animal, sprinkled the blood, which had been caught in a dish, round about, and gave the flesh to the women to boil. Here, again, there is no trace of a burning of the victim. Finally, in the case of the Teutons also, regarding whose sacrificial customs we have, unfortunately, very scanty information, sacrificial fire seems to all appearance to have been unknown. The bodies of the victims or their heads (cf. Tacitus, *Ann.* i. 61) were in this case hung on sacred trees, a custom which, according to the report of the Arab Ibn Dūstah, prevailed among the heathen Russians of northern origin:

'The soothsayer takes the man or the animal, puts a noose round the neck, hangs the victim up on a tree, waits till it expires, and then says: "This is a sacrifice for the god"' (cf. Thomsen, *Der Ursprung des russischen Staates*, Gotha, 1879, p. 27).

The flesh of the victim is boiled here too, as is seen from the Goth. *sauþs*, 'sacrifice,' O.H.G. *siodan*, 'to boil.'

Moreover, as there is in the Veda no lack of evidence that 'in the sacrificial fire an innovation of an advanced sacrificial technique' was present (cf. Oldenberg, *Religion des Veda*, p. 343 ff.), we have good reasons for assuming that the thought that the gifts assigned to the god could be borne to him by means of the flame or the smoke was one which was as yet foreign to primitive Aryan times. In the earliest times the gifts were, on the contrary, spread out on the place of sacrifice itself, raised into the air or hung on trees, and the god *must come himself and partake of them on the spot.*

The worshipper refreshes his gods with the *food* and *drink* of which he himself partakes, in order thereby to make them strong and willing to carry out his ends. That this was the original sacrificial idea of the Aryan peoples follows most distinctly from the complete correspondence between ancient Aryan sacrifice and ancient Aryan food. The further back we penetrate into the past of the Aryan peoples, the more do we find that cattle-rearing predominated over agriculture, and that in consequence flesh foods and animal products outweighed vegetable foods (cf. Schrader, *Reallexicon*, artt. 'Ackerbau,' 'Viehzucht,' and 'Nahrung'). The same thing is true of the sacrifices. In the reports quoted above we find only animal sacrifices referred to. In the same way Tacitus (*Germania*, ch. ix.) mentions only *concessa animalia*. In reference to the Slavs, cf. Procopius, *de Bell. Got.* iii. 14: θεὸν μὲν γὰρ ἕνα τὸν τῆς ἀστραπῆς δημιουργὸν (*Perunŭ*) ἁπάντων κύριον μόνον αὐτὸν νομίζουσι εἶναι, καὶ θύουσι αὐτῷ βόας τε καὶ ἱερεῖα ἅπαντα, and also Helmold, *Chron. Slav.* i. 52: 'Conveniuntque viri et mulieres cum parvulis, *mactantque diis suis hostias de bobus et ovibus.*' Among the Lithuanians, as late as the beginning of the 16th cent., sacrifices of oxen and swine were offered. The very early acquaintance of the Aryan peoples with animal sacrifice is significantly witnessed to by the existence in their primitive vocabulary of exact designations of the outer and inner parts of the animal carcass, which could be obtained only in the course of sacrificial rites (cf. Schrader, *Reallexicon*, art. 'Körperteile').

In the earliest times it was customary to sacrifice and eat, or eat and sacrifice, the flesh of the ox, the sheep, the goat, and, in Europe, the pig, *i.e.* the most ancient domestic animals of the Aryans. The sacrifice of the horse seems to have occupied a special place. As the horse did not belong to the oldest stock of Aryan domestic animals (cf. Schrader, *Reallexicon*, art. 'Pferd'), perhaps other sacrificial ideas may have been influential in introducing this sacrifice, such as the wish to incorporate the qualities of the animal in the worshipper, or to render a special service to the god who was thought of in the form of a horse (cf. J. v. Negelein, *Das Pferd im arischen Altertum*, Königsberg, 1903). Fowl, game, and fish were excluded from the stated sacrifices, because they did not originally serve as food (cf. Schrader, *Reallexicon*, artt. 'Viehzucht,' 'Jagd,' and 'Fisch, Fischfang'). In the oldest times, too, the use of salt was avoided, again for the simple reason that for purely animal food it was unnecessary (cf. *Reallexicon*, art. 'Salz').

The sacrificial drink of primitive times was mead, the place of which was gradually taken in the north by beer, and in the south by wine. The customs connected with these drink-offerings in barbaric conditions, such as we must presuppose for primitive times, are again vividly portrayed by Menecius (Lasicius, c. 53) with regard to Lithuania:

'Die Georgii sacrificium faciunt *Pergrubrio*, qui florum, plantarum omniumque germinum deus creditur. Sacrificulus enim, quem Vurschaiten appellant, tenet dextra obbam cervisiæ plenam invocatoque demonii nomine decantat illius laudes. Tu, inquit, abigis hiemem, tu reducis amœnitatem veris, per te nemora et silvæ florent. Hac cantilena finita dentibus apprehendens obbam, ebibit cervisiam nulla adhibita manu ipsamque obbam ita mordicus epotam retro supra caput iacit. Quæ cum e terra sublata, iterum impleta est; omnes quotquot adsunt, ex ea bibunt ordine atque in laudem Pergrubrii hymnum canunt. Postea epulantur tota die et choreas ducunt.'

If, then, 'to sacrifice' means simply to refresh the gods with earthly food and drink, and if, as we have seen, these gifts were originally offered to the heavenly beings to be partaken of by the summoned recipients on the place of sacrifice without the use of fire, we cannot fail to see how closely this sacrificial rite resembles the entertaining of the dead described above, when food and drink were shaken or poured out into furrows or trenches (see above, p. 26). The explanation is thus by no means far-fetched that the feeding of the beings which were thought to be in the natural phenomena, the thunder, the storm, the fire, etc., is to be understood as a kind of deduction or transference from the cult of the dead, where the offering of food and drink is intelligible without any difficulty from the prevailing ideas regarding the further existence of the soul after death. In that case we should conceive of the course of development in the following way. There was a time when only the dead were supplied with food and drink, and when man sought to obtain influence over the powers of nature only by means of magic, as described above. But the more the thought of personification gained precedence over magic, the more did people begin to transfer the sacrificial customs usual in the service of the dead to the worship of the heavenly powers, and then the further change arose naturally from this state of affairs, viz. that the sacrificial gifts were spread *on* the ground instead of being buried *in* it.

Returning to the sacrifice itself, we reach one form of it which has not yet been considered—a form which with its gloomy aspect persists from primitive into historic times, viz. *human sacrifice* (cf., for the Greeks and Romans, E. V. Lasaulx, *Das Sühnopfer*, Würzburg, 1841; for the Celts, Teutons, Slavs, Lithuanians, J. Grimm, *Deutsche Mythologie*[3], i. 38, V. Hehn, *Kulturpflanzen*[7], p. 531, Golther, *Germanische Mythologie*, p. 516, Müllenhoff, *Deutsche Altertumskunde*, iv. 214 ff.; for the Indians, A. Weber, *Indische Streifen*, i. 54–89, and Oldenberg, *op. cit.* p. 363). This human sacrifice is to be found in various forms. Thus in the north of Europe we have the *sacrifice of victory*, *i.e.* the previously promised slaughter of prisoners at the altars of the gods. In the south and among the Gauls we have the *sacrifice of expiation*, *i.e.* the giving up of a human life for other lives that are forfeited or in danger. We find everywhere the *building sacrifice*, *i.e.* the conviction that the durability of a new building could be purchased only by a human life (cf. Liebrecht, *Zur Volkskunde*, p. 284 ff. 'Die vergrabenen Menschen,' also *Germ.* xxxv. 211). It is difficult to discover the really fundamental idea in this sacrifice. To carry out the idea of the meat-offering, we might start with the supposition that cannibalism was once wide-spread among Aryan peoples, which undoubtedly is very fully attested for numerous non-Aryan peoples of Europe (cf. R. Andree, *Die Anthropophagie*, Leipzig, 1887, p. 2). In milder times a change in this sacrificial idea had taken place, in the sense that a human being was regarded as the best sacrifice that could be brought to the gods (cf. Procopius, *de Bell. Got.* ii. 15: *τῶν δὲ ἱερείων σφίσι τὸ κάλλιστον ἄνθρωπός ἐστιν, ὅνπερ ἂν δοριάλωτον ποιήσαιντο πρῶτον*). Or we could think of a transference from the worship of the dead, in which, as we saw above (p. 21), it was usual to give men to the dead as servants and companions in death. From this, too (cf. below, II. 5), the *penal-sacrifice* (execution), which has not been mentioned above, may have taken its rise. Ideas connected with magic may also have been operative in the *building sacrifice*, as, *e.g.*, the wish to transfer human potencies into the building. Whatever the real explanation may have been, we must in any case regard human sacrifice as a primitive institution in the history of Aryan religion, and not a comparatively late innovation originating from the East, as is done by O. Gruppe (*Jahresbericht über die Fortschritte der klassischen Altertumsw.* lxxxv. 10).

We have already become acquainted with the incantation or magic formula which entices the gods to the feast, and seen it to be a necessary accompaniment of sacrifice. This is perhaps the oldest form of prayer. In any case the different terms for prayer point to a close connexion with sacrifice (cf. Gr. *εὔχομαι*=Lat. *voveo*; Gr. *λιτή*, *λίσσομαι*=Lat. *litare*; Lith. *maldà* 'prayer'=Goth. *blôtan* 'to sacrifice,' from **mlâd* [the last according to R. Much]). 'To pray' is to request a benefit while promising or offering a sacrifice: *do ut des*. The idea of *thanks* appears in the Aryan languages at a late date compared with the idea of petition (cf. *Reallexicon*, pp. 598, 605), and thank-offerings are almost entirely unknown both in the Vedic worship and in the Homeric poems. Those divinities, however, who were called up by means of those ancient incantations and prayers must at a very primitive stage of development have been designated simply as 'the called.' This we learned above (p. 16) to have been the real signification of the Teutonic 'God,' which then, as is easily enough understood, passed over into the masculine gender under the influence of expressions which were more personally conceived.

(*b*) THE PRIESTS.—If the practice of magic and the incantation preceded sacrifice and prayer, the magician must have been the forerunner of the priest. This development is clearly presented to us in the history of the language. The most important designation of the priest in the language of ancient India is *brahmán* (masc.), while *bráhman* (neut.) means 'devotion.' The opinion used to be generally held that the fundamental signification of this class of words was to be found in the sphere of religion (according to Böhtlingk-Roth, *Sanskrit-Wörterbuch*, v. 135, 'the devotion which appears as intensity and depth of feeling, and aspires towards the gods'), but in recent times it has become more and more recognized that *bráhman* originally means 'the incantation,' and *brahmán* in consequence 'he who knows incantations' (cf. M. Haug, 'Über die ursprüngliche Bedeutung des Wortes brahma,' in *Sitzungsb. d. kgl. bayer. Ak. d. W. zu München*, 1868, ii. p. 80 ff.; R. Pischel, *GGA*, 1894, p. 420; H. Osthoff, in Bezzenberger's *Beiträge*, xxiv. 113 ff.). Now, in the view of the present writer and of the majority of investigators, the Lat. *flâmen*, whose formation (cf. *carmen*, *agmen*) points with certainty to an originally neuter idea (priesthood), corresponds exactly to the Skr. *bráhma*, so that for this word also there follows a similar evolution of meanings, 'incantation,' 'community of those who know incantations,' 'individuals acquainted with incantations' (=priests).*

It is accordingly not to be wondered at that from the Aryan root *vid—void—*'to know,' frequent designations of the magician and the priest are derived, since both are regarded as the 'knowers' (viz. of all kinds of magic) *κατ' ἐξοχήν*. Here must be mentioned, on the one hand, the O.H.G. *wizzago*, A.S. *witega* 'prophet,' O.N. *vitki* 'magician,' *vitka* 'witchery,' O.H.G. *wizzôn* 'prophecy,' and Old Russian *vědunŭ* 'magician,' *vědĭ* 'witchcraft,' *vědĭma* 'witch,' *vědĭstvo* 'witchery'; but, on the other hand, there is also to be placed alongside of these the designation of the ancient Gallic priestly caste of druids, Ir. *drúi*,

* Even those scholars who do not believe in the etymological relationship of *bráhman* and *flâmen* (cf. *e.g.* Walde, *Lat. etymol. Wörterbuch*) admit the two facts which are of importance for the history of religion, viz. (1) that *bráhman* originally signified 'magic formula,' and (2) that *flâmen* was originally a neuter conception.

which, being derived from *dru-vids (according to Thurneysen, in Holder, *Altkeltischer Sprachschatz*), means exactly 'the very knowing ones.' But the personalities which in this connexion are most important for the history of Aryan religion are those that are frequently mentioned in the Litu-Prussian sources, and designated with all kinds of variations of their name* as *waidewut*, *waidelotte*, *waideler*, *waidler* (Old Pruss. *waist* 'to know,' *waidimai* 'we know,' *waidleimai* 'we perform pagan religious rites').

They were also named *žynys*: Lith. *žinóti* 'to know' (*žýnauti* 'to charm'), or the *moninink*s: Lith. *moniu* 'I understand,' or the *maldininks*: Lith. *maldà*, 'prayer' (cf. especially Matth. Prætorius, *Deliciæ Prussicæ oder Preussische Schaubühne*, p. 41 ff.). These 'waidlers' may be described both as magicians and as priests. They were servants of the chief-priest, who was called in Old Prussian *kriwe*, of whom we shall speak further below. The separate gods seem each to have had special 'waidlers': *naruttes* (cf. Gr. Νηρεύς above, p. 35) was the name given to the waidler of the water-god; *swweronei* (Old Pruss. *swirins*, Lith. *žvieris* 'wild animal') were 'the waidlers who worshipped and protected the sacred animals in the woods, especially elks, owls,' etc.; and *medziorei* (Old Pruss. *median* 'forest,' Lith. *mĕdis* 'tree') were 'the servants of the sacred woods.' Every imaginable charm to divine the future (cf. below, III. 2) was in their hands. Now they are for the most part beggars and shepherds, although 'there are still well-to-do farmers who practise these arts of the waidler.' Prætorius (p. 48) mentions a fact regarding these waidlers which is especially important for the history of the priesthood:

'An old peasant of Strigkeim said to me that, many hundred years before, one of his race had been a chief-priest here in Prussia. He was called *Kryws Krywaitó*, and was believed to possess all the gifts which we find singly among the waidlers now called *Maldininks* (see above). *The gifts of the waidler are, they say, hereditary; if the gift ceases in one family, it becomes extinct.*'

This *hereditary transmission*, in certain families or clans, of the existing magic formulas, sacrifices, and prayers, which we have here attested, may be regarded by us *as a common feature of the gradually evolving priesthood among the Aryan peoples.*

Sacred clans like the *Vasiṣṭhas*, the *Viśvamitras*, the *Bharadvājas*, and others are well known to us from the Rigveda as the forerunners of the later priestly castes, and there is no lack of traces that these priestly families, who, according to the tradition, represent essentially the same cult, had in earlier times possessed *special cults* and *special rites* (cf. Oldenberg, *Die Religion des Veda*, p. 373). In Greece, too, we find numerous sacred clans with special cults, the Εὐμολπίδαι, the Ἐτεοβουτάδαι, the Ἡσυχίδαι, the Κινυράδαι, Κροντίδαι, Κυννίδαι, Ποιμενίδαι, etc. The priesthood was a joint-possession in these families, and descended from the father to the son and grandson (cf. P. Stengel, *Die griechischen Kultusaltertümer*). By the institution of a sanctuary (which does not occur in Vedic India) such a priesthood becomes *local*, and in this way forms the ἱερόν, to which in Homer the existence of the ἱερεύς is united. Most nearly akin to the Homeric priest was the Norwegian 'gode' (Old Nor. *goði*, Goth. *gudja* 'priest'; cf. Goth. *Guþ*, 'God,' and see above, pp. 16, 42). They could break up the temple belonging to them and migrate elsewhere. Among them, too, the priestly office was inherited through several generations (cf. Golther, *Germanische Mythologie*, p. 615; and J. Grimm, *Deutsche Mythologie*[3], i. 83). Finally, in *Rome* also there are indications of a condition in which not State colleges but particular families attended to the performance of special cults. This comes out most unambiguously in the case of the *fratres arvales* (see art. ARVAL BROTHERS), for at the time when this designation was coined *frater* can have indicated nothing else than the actual degree of relationship. The legend, too, explanatory of the name, reports that Acca Larentia, the wife of Faustulus, had twelve sons, along with whom she sacrificed once every year for the fruitfulness of the fields. We have, therefore, a real brotherhood (Gr. φράτρη, Slav. *bratstvo*; cf. *Reallexicon*, art. 'Sippe') before us. Their peculiar hereditary magic poem was that song, luckily still extant, which was united to a dance, and by the combined invocation of the spirits of the dead (*Enos lases iuvate*) and a real god (*Enos Marmor iuvato*) bears the stamp of remote antiquity. The designation, too, of the Luperci, the priests of Faunus, as *Quinctiales* and *Fabiani* points to their tribal origin (cf. Wissowa, *Religion und Kultus der Römer*, p. 340, note 3, p. 411). The Salii, or 'leapers,' were without doubt a sacred family of this kind. Their magical secret was the leaping procession which accompanied their obscure songs, for both dance and solemn procession (O.H.G. *pigang*—even in modern German we have the phrase 'ein Fest begehen') belong to the oldest form of divine worship among the Aryan peoples (cf. *Reallexicon*, art. 'Tanz').

* It may be conjectured that the form *waidewut*, **waidwut* = Gr. εἰδώς *ϜειδϜως, ϜειδϜότος, 'the knowing one,' is the original one.

On the ground of the facts which have been mentioned, we may assume that the 'learned in magic formulas,' whose existence in primitive times is attested by the equation, Skr. *bráhman* = Lat. *flāmen*, were primarily to be found in special families which were hereditarily distinguished by the gift of witchcraft. Further, seeing that it follows from the oldest sacrificial customs described above (p. 41) that at their celebration, in the majority of cases, persons designated as magicians, priests, or soothsayers assisted, we may consider it not unlikely that even in primitive times members of such sacred families were called upon by other families, and in particular by the head of the clan, to assist at sacrifices for the clan. In the case of sacrifices of the most ancient worship, we must sharply distinguish between the offerings dedicated to the souls of ancestors and those on behalf of the 'heavenly ones.' The former could, of course, be offered only by relatives (cf. above, p. 28 f.); in the case of the latter there was nothing against the assistance of a stranger who was particularly well acquainted with the incantations that would entice the gods. Here we have one of the deepest roots of the Aryan priesthood.

In the later history of the priesthood we shall call attention to only one more point, viz. the ever increasing closeness of the *union of law and religion* (cf. below, II. 5). This lent to the priestly dignity, here to a greater and there to a less extent, a new, and in part extraordinary, significance; and it may well be said that this is what really made the magician a priest. The more clearly the thought came to consciousness that the gods were the protectors of the moral and social principles attained in the long struggle of civilization, the greater must the influence of the authentic interpreters of the divine will have become.

In *India*, even before Vedic times, the hereditary dignity of the Brahmans had been developed from those families of primitive times that were expert in magic. From their midst there arose the domestic priest (*purohita*), who was indispensable to the king for preparing sacrifices, for 'the gods do not eat the food of a king who has no purohita' (*Aitareya Brāhmaṇa*, viii. 24). Under their supervision, too, the royal *administration of justice* was carried on, and in their conception of *dharma*, 'the

fixed' (=Lat. *firmus*) law, custom, and religion lie together as yet undifferentiated. In *Rome*, in like manner, the *Pontifices*, 'the bridge-builders' (also without doubt originally a sacred family like the *fratres arvales*, perhaps endowed with a special magic charm for providing bridges and roads), were at the same time the guardians both of the *ius civile* and of the *ius sacrum* (*pontifex* according to Bezzenberger, in Kuhn's *Zeitschr.* xlii., from Umbr. *punti*, 'piatio, lustratio' from **k̂vento*=Av. *spenta*, Old Slav. *svętŭ*, Lith. *szweñtas* 'sacred'). The former of these had, after a long process of evolution and not without leaving clear traces of its original condition (cf. Wissowa, *op. cit.* p. 324 ff.), separated itself from the latter. In *Gaul* also we find the administration of justice entirely in the hands of the Druids, who, however, in the time of Cæsar were not a real caste, or no longer a caste, but increased their numbers by securing and training novices:

'Fere de omnibus controversiis publicis privatisque constituunt, et si quod est admissum facinus, si cædes facta, si de hereditate, de finibus controversia est, idem decernunt, præmia pœnasque constituunt; si qui aut privatus aut populus eorum decreto non stetit, sacrificiis interdicunt. Hæc pœna apud eos est gravissima' (vi. 13).

In conscious contrast to these conditions, Cæsar (vi. 21) relates of the *Teutons*: 'Neque druides habent, qui rebus divinis præsint, neque sacrificiis student.' 'They have no Druids to preside over divine worship, nor do they lay any special stress on sacrifice' (cf. 'agriculturæ non student,' vi. 22, which cannot mean 'they do *not* engage in agriculture,' seeing that Cæsar himself attests that it was practised in a primitive form). The conclusion is that a distinctly marked priestly office which would attract the attention of a foreigner cannot at that time have been present among the Teutons. This, of course, does not exclude the existence of separate families expert in magic, as, according to our assumption above, was the case in primitive times. On the other hand, we find in the report of Tacitus a strong and influential priesthood already existing, particularly developed on the legal side (cf. also O.H.G. Old Sax. Fries. *êwart* and *êsago* 'priest,' lit. 'keeper or guardian of the law' and 'proclaimer of laws').

The priest is the man who calls for silence in the popular assembly (Tac. *Germ.*, ch. 11: 'silentium per sacerdotes, quibus tum et coercendi ius est, imperatur'); and while even Cæsar, vi. 23, reports: 'Cum bellum civitas aut illatum defendit aut infert, magistratus, qui ei bello præsint, ut vitæ necisque habeant potestatem deliguntur,' so that thus all power of punishment might be assigned to the *civil* authorities, we are told in Tacitus, ch. 7: 'Ceterum neque animadvertere neque vincire, ne verberare quidem *nisi sacerdotibus* permissum, non quasi in pœnam nec ducis iussu, sed velut deo imperante, quem adesse bellantibus credunt.' In addition, the priest carries the war standards out of the sacred groves (ch. 7), interprets the lot on public occasions, and accompanies, together with the king or prince, the sacred car in which horses are yoked (ch. 10). The priest of Nerthus (ch. 40) and the priest in the grove of Alcis among the Nahanarvali (ch. 43) seem to have presided at local sanctuaries.

The same extreme expansion of priestly power as is found in the west among the Druids of Gaul is to be met with again in the extreme east of Europe among the ancient Prussians.

Even Peter of Dusburg (*Script. rerum Pruss.* i. 53) was able to report: 'Fuit autem in medio nationis huius perversæ, scilicet in Nadrowia, locus quidam dictus Romow, trahens nomen suum a Roma (!), in quo habitabat quidam dictus *Criwe* [perhaps Lith. *keras* 'magic,' *kerěti* 'to charm'; a connexion with Lith. *kriwas* 'crooked,' from which we have *kriwûlė* 'the sign of the dignity of the Criwe,' seems semasiologically impossible], quem colebant pro papa, quia sicut dominus papa regit universalem ecclesiam fidelium, ita ad istius nutum seu mandatum non solum gentes prædictæ sed et Lethowini et aliæ nationes Lyvoniæ terræ regebantur. Tantæ fuit auctoritatis, quod non solum ipse vel aliquis de sanguine suo, verum etiam nuntius cum baculo suo vel alio signo noto transiens terminos infidelium prædictorum a regibus [by these are meant the small heads of clans who were to be found even in primitive Aryan times, cf. *Reallexicon*, art. 'König'] et nobilibus et communi populo in magna reverentia haberetur. *Fovebat etiam prout in lege veteri jugem ignem*' (cf. also the passage quoted above, p. 34, from Jerome of Prague, and the more detailed information given by Matth. Prætorius, *op. cit.* p. 38 ff.).

What we have here, then, is another of those families expert in magic (according to Prætorius, *op. cit.* p. 40, the blood relations of the Criwe were called *Krywaiten*), whose special service was devoted to a perennial fire, and whose chief on account of this cult—according to Jerome, magic oracles were practised by means of fire in the case of sickness—had attained to the position of influence described above.

(*c*) THE TEMPLES.—In primitive religions all over the world it is a recognized phenomenon that all objects which rise above the surface of the ground, in particular, *stones*, *stumps*, and *trees*, are regarded as possessing a divine *anima*, and are made the objects of a fetish worship (cf. E. B. Tylor, ii. 161 ff., 215 ff.). Among the Aryan peoples also this low stage of religious life can be proved. The most important testimonies for it will be brought together, without as yet asking the question whether the objects of worship of which they treat were really conceived of everywhere as real *incorporations* of the deity, or only as *representations* of it.

(*a*) *Stone-worship.*—With regard to ancient Greece in general, we have the following report of Pausanias, vii. 22. 4:

ἑστήκασι δὲ ἐγγύτατα τοῦ ἀγάλματος τετράγωνοι λίθοι τριάκοντα μάλιστα τὸν ἀριθμόν· τούτους σέβουσιν οἱ Φαρεῖς (Pharæ, a town of Achaia), *ἑκάστῳ θεοῦ τινος ὄνομα ἐπιλέγοντες, τὰ δὲ ἔτι παλαιότερα καὶ τοῖσι πᾶσι Ἕλλησι τιμὰς θεῶν ἀντὶ ἀγαλμάτων ἀργοὶ λίθοι.*

The same author mentions, in detail, unhewn stones in place of the figure of the god in the fane of Herakles at Hyettus, and in that of Eros at Thespiæ; but with regard to the cult of the Graces at Orchomenos, it is said (ix. 38. 1): *τὰς μὲν δὴ πέτρας σέβουσί τε μάλιστα καὶ τῷ Ἐτεοκλεῖ αὐτὰς πεσεῖν ἐκ τοῦ οὐρανοῦ φασίν.* Thus the worship of rough stones was not confined to the oldest periods of Greek history, but continued through the whole time of paganism. For Socrates, in Xenophon's *Memorabilia*, knows:

τοὺς μὲν οὐθ' ἱερὸν οὔτε βωμὸν οὔτε ἄλλο τῶν θείων οὐδὲν τιμᾶν, τοὺς δὲ καὶ λίθους καὶ ξύλα τὰ τυχόντα καὶ θηρία σέβεσθαι (i.e. they were atheists and fetish-worshippers). Cf., further, Overbeck, 'Das Kultusobjekt bei den Griechen in seinen ältesten Gestaltungen' in *Berichte d. kgl. sächs. Ges. d. Wissenschaften zu Leipzig*, phil.-hist. Kl., 1864, ii. p. 121 ff.; and also the account above, p. 37, of the oldest cult of Hermes.

On *Italian* soil, perhaps the cult of Juppiter Feretrius or Lapis may be mentioned in this connexion. He was worshipped, in a chapel founded for him by Romulus, under the symbol of a firestone (*silex*), although in this case other explanations are still possible. In *Germany*, Burchard of Worms demands: '*Lapides* quoque quos in ruinosis locis et silvestribus, dæmonum ludificationibus decepti, venerantur, ubi et vota vovent et deferunt, funditus effodiantur, atque in tali loco proiciantur, ubi nunquam a cultoribus suis venerari possint,' and among the *Lithuanians*, as we have already seen above, the Jesuit Rostowski found the worship of a massive stone Akmo (Lith. *akmũ* 'stone') as late as the 18th century.

(*β*) *Worship of stumps.*—More frequently than unhewn stones, however, we find in ancient *Greece* shapeless piles, boards, lumps of wood, and posts (*ξύλον οὐκ εἰργασμένον, ἄγαλμα ξύλινον ἄμορφον, πρέμνον αὐτοφυές, δόρυ, σανίς*) mentioned as objects of worship. The testimonies for this also have been fully gathered by Overbeck* (*op. cit.*). The *Italian* history of religion offers as proof of the primitive worship of stumps the Lat. *delubrum*, 'sanctuary,' lit. *delubrum lignum*, 'a piece of wood freed from the bark' (*liber*, **luber*, Russ. *lubŭ*). Regarding it, Festus (ed. O. Müller, p. 73) reports: 'delubrum dicebant fustem delibratum, hoc est decorticatum,

* The author has been unable to examine the work of M. W. de Visser, *Die nicht menschengestalt. Götter der Griechen* (Leyden, 1903).

quem venerabantur pro deo' (cf. also Bötticher, *Baumkultus der Hellenen*, and Overbeck, p. 149. Wissowa [*op. cit.* p. 400], on the other hand, gives another etymology, which was also wide-spread in antiquity, viz. *delubrum*, from *deluere* 'to wash away'; hence, 'place of washing away'). Among the *Teutons* also the Old Saxon 'Irmensul' was simply an upright tree-stump, regarding which we have in *Transl. S. Alexandri* (Pertz, *Mon. Germ.* ii. 676) the following account: 'Frondosis arboribus fontibusque venerationem exhibebant: *truncumque quoque ligni non parvæ magnitudinis* in altum erectum sub divo colebant, patria eum lingua *Irminsul* appellantes, quod Latine dicitur universalis columna' (cf. also W. Mannhardt, *Wald- und Feldkulte*, i. 304). The Scandinavian-Russian 'Waragers' are described by the Arab Ibn Foszlan (ed. Frähn). He tells how the people offered their reverence and sacrifices before a huge upright block of wood, which in this case had something resembling a human face. In the *Slavonic* languages the most frequent expressions for idols or idol-temples go back almost entirely to fundamental meanings, such as 'stump,' 'post,' 'picture,' 'statue' (cf. Miklosich, 'Die christliche Terminologie der slav. Sprachen,' *Denkschrift der Wiener Ak. d. W.* xxiv. 36 ff.). Is it not also possible that the Russian expressions for 'magician' and 'to charm,' *koldúnŭ*, *koldovátĭ*, are connected with Russ. *kolóda*, 'tree-stump'?* With regard to *India*, it is natural to mention in this connexion the so-called 'sacrificial post' (*yū́pa*) to which the sacrificial animal was bound, but which was also made an object of worship, seeing that it was addressed as 'Lord of the wood' (*vánaspati*), smeared with oil, and bound with plaited bands of grass (cf. Oldenberg, *Die Religion des Veda*, p. 256). It is also worthy of note that the conception *post* or *stake* (cf. Skr. *sthū́ṇā*, Avesta *stūna* =Gr. στήλη, O.H.G. *stollo* from **st(h)el-nā*, and Skr. *sváru*, 'sacrificial post'=A.S. *swér*, 'stake') can be proved by means of two equivalents to be Aryan.

(γ) *Tree-worship.*—Of the exceedingly numerous evidences of tree-worship prevalent among the European branches of the Aryan race, only a few characteristic examples can be brought forward here. Further details will appear later in our investigation. In *Greece* we must, in the first place, mention the cult of Ζεὺς φηγωναῖος in the storm-moved Dodona, from whose sacred oak (ἐκ δρυὸς ὑψικόμοιο) the voice of the god rang forth proclaiming oracles, and who was served by a special priestly caste, the Σελλοί (=Lat. *Salii*), who slept on the ground with unwashed feet (*Il.* xvi. 234 ff.). In Mycenæan Greece also the worship of trees and stone-pillars was wide-spread (cf., regarding it, A. J. Evans, 'Mycenean Tree and Pillar Cult,' *JHS* xxi. 99 ff.), without making it necessary to think of influences from Oriental religions. The Phrygians, too, who migrated from Europe to Asia, worshipped a Βαγαῖος (probably = φηγωναῖος, cf. Kretschmer, p. 198). In Rome there stood on the Capitoline an oak sacred to the herdsmen.

Cf. Livy, i. 10: 'Spolia ducis hostium cæsi suspensa . . . ferculo gerens (Romulus) in Capitolium ascendit, ibique ea cum ad *quercum pastoribus sacram* deposuisset, simul cum dono designavit Jovis fines . . . hæc templi est origo, quod primum omnium Romæ sacratum est.' In addition, Festus (ed. O. Müller, p. 87) states: 'Fagutal sacellum Jovis, in quo fuit fagus arbor, quæ Jovis sacra habebatur.'

We know also of numerous sacred groves in Greece as well as in Italy. In the latter country it was 'the deities of ancient origin,' such as *Robigus*, *Anna Perenna*, *Camenæ*, etc., that were worshipped in them (cf. Wissowa, *op. cit.* p. 401). The traces of tree-worship continue even more significantly in the richly wooded northern parts of the continent from the Amber coast to the Atlantic Ocean. With regard to the Lithuanians, we may refer to a few sentences of the report which a monk Jerome, who in the years 1409–1418 was active as a missionary in Lower Lithuania, sent to the papal secretary, Æneas Sylvius Piccolomini, and which is to be found in the work of the latter, entitled *Europa* (*S. Æneæ Sylvii Europa*), c. xxvi.:

'Postremo alios populos adiit (Jerome), qui silvas dæmonibus consecratas venerabantur et inter alias unam cultu digniorem putavere. . . . Ventum erat ad medium nemoris, ubi quercum vetustissimam et ante omnes arbores religione sacram et quam potissime sedem esse putabant percutere aliquamdiu nullus præsumpsit. . . . Erant in ea regione plures silvæ pari religione sacræ. Ad quas dum Hieronymus amputandas pergit, mulierum ingens numerus plorans atque eiulans Vitoldum (a Lithuanian duke) adit, sacrum lucum succisum queritur et domum dei ademptam in qua divinam opem petere consuessent; inde pluvias, inde soles obtinuisse; nescire iam quo in loco deum quærant, cui domicilium abstulerint. Esse aliquos minores lucos, in queis dii coli soleant, eos quoque delere Hieronymum velle.'

An altogether special worship was assigned to the sacred oak of Perkúnas, in whose rustling the worshipper believed himself to hear, as at Dodona, the voice of the god announcing the future (cf. below, III. 2). Other sacred trees were the birch (*biržùlis*), the hazel (*lazdona*), the cherry tree (*kirnis*), the maple (*klewèlis*), and the mountain ash (*szermukszmis*). An especial reverence was assigned to trees that had grown together, *rumbuta*, *romove*, from which the centre of the Criwe mentioned above had its name. Undoubtedly the Teutons of the first Christian centuries stood at this stage of development, in spite of the idealistic interpretation which Tacitus (*Germania*, ch. 9) gives to their tree-cult:

'Ceterum nec cohibere parietibus deos, neque in ullam humani oris speciem adsimulare ex magnitudine cælestium arbitrantur: lucos ac nemora consecrant, deorumque nominibus adpellant secretum illud, quod sola reverentia vident.'

Of particular sacred trees, oaks before all others are mentioned, one of which Boniface felled near Geismar. The worship of a pear tree in Auxerre in heathen times is also well attested (J. Grimm, *Deutsche Mythol.*[4] i. 6 f.), although this report leads us to *Celtic* territory; for here, too, the tree-cult was fully developed. There was nothing more sacred to the Druid than the oak and the mistletoe that grew on it (Pliny, *HN* xvi. 249), and we hear of sacred groves in Gaul as well as in Britain (cf. on them H. Munro Chadwick, 'The Oak and the Thunder-god,' *JAI* xxx. 22 ff.).

In glancing over the evidences of Aryan stone-, stump- and tree-worship collected here, we could make no greater mistake than to suppose that the religious ideas which find expression in this worship are all to be placed at the same historical stage. It cannot be doubted that in many, in fact even in the majority of cases, the object of worship is merely the symbol under which a deity was worshipped that existed outside of the object, and was only occasionally present in it. But, on the other hand, it cannot be denied that the traces are clearly to be perceived of a time when people actually worshipped, as is the case among the rudest savages, the very stone, post, or tree, as a god, since they looked on it as the body of a divine *anima*. This becomes very evident in the remains of the Greek stone-cult and in the Lithuanian tree-worship. When Theophrastus (*Charact.* c. 17), in his day, tells us of people who, when passing stones smeared with oil at the crossways, did not fail to pour oil on them out of their oil-phials, to fall on their knees, and to present the most solemn salutations, this proceeding is to be judged in the same way as when 'in the Society Islands, rude logs or fragments of basalt

* At the present day this primitive stump-worship is perhaps to be seen on Teutonic and Slavonic soil in the remarkable 'Yule or Christmas log,' regarding which see R. Meringer, *Indogermanische Forschungen*, xvi. 151 ff., xviii. 277, xix. 444. Cf. here also on Lat. *delubrum*.

columns, clothed in native cloth and anointed with oil, received adoration and sacrifice as divinely powerful by virtue of the "Atua" or deity which had filled them' (Tylor, ii. 162).

In Lithuania the oak was, it is true, sacred to Perkúnas; but evidently, like the other sacred trees mentioned above, it enjoyed independent worship, as follows from the report of Rostowski: 'Arbores item evulsæ stirpitus, tum quercus, quibus mares tum tiliæ quibus feminæ pullastra pro frugibus et incolumitate rei domesticæ quasi diis faciebant' (Brückner, *Archiv für slav. Phil.* ix. 85), and other reports, according to which sick persons, observing remarkable customs, clamber up into the boughs of a sacred oak. 'Thereafter they bind each his offering on the branch of the tree, and seriously believe that they will be healed thereby. Often it happens that such a branch is quite full of garters, Lithuanian women's veils, girdles, knives, and such-like articles, which are tied to it from top to bottom. Several sacrifice money also, which they lay upon the ground before the tree' (cf. Usener-Solmsen, *Götternamen*, p. 87).

Accordingly, we may (like Frazer, *GB*[2]) conceive of the process of evolution of these ideas in the following way. There was among the Aryan peoples a distant period in which stones, stumps, and trees were worshipped as actual fetishes. When within the limits of this racial division—and certainly as early as primitive Aryan times (a point where the present writer differs from Frazer)—the cult of the 'heavenly ones' came more and more to the front, connexions began to be thought of between these 'heavenly ones' and the objects of worship just mentioned, especially with the sacred tree and its shoot, the stump or post, which were now regarded only as symbols and occasional dwelling-places of the 'heavenly ones.' Along with these ideas the old conceptions continued to operate further among the lower classes.

This connexion is most clearly exemplified in the relationship of the *thunder-god* to the *oak.* Zeus and the oak of Dodona, Juppiter Feretrius and the oak worshipped by the herdsmen on the Capitoline, Perkúnas and *Auźúlas* ('oak'), we have already noted; but we are also told of the Celts by Maximus Tyrius: Κελτοὶ σέβουσι Δία, ἄγαλμα δὲ Διὸς Κελτικὸν ὑψηλὴ δρῦς. Nothing can be more easily understood than this connexion, when we call to mind how the lightning flashes of the thunder-god come down with an especial fondness on the king of the forest; and it is difficult to conceive why H. Munro Chadwick, in his otherwise excellent essay, 'The Oak and the Thunder-god,' mentioned above, deduces such a far-fetched reason for this phenomenon as a supposed dwelling of primitive man below the oak. But the other gods are also preferably thought of as dwelling in trees and forests. In Greece we have, besides a Ζεὺς ἔνδενδρος, a Διόνυσος ἔνδενδρος, an Ἑλένη δενδρῖτις, an Ἄρτεμις κεδρεᾶτις, etc. Among the Teutons were found, as well as a *silva Herculis* (=Donar) *sacra* (*Ann.* ii. 12), a *castum nemus* of Nerthus (*Germania*, c. 40), and a *lucus Baduhennæ* (*Ann.* iv. 73). Among the Lithuanians, as we have seen above, the rain- and sun-gods were worshipped in sacred groves.

In this assimilation of the cult of the 'heavenly ones' and a primitive stone-, stump- and tree-fetishism we have secured, once for all, the foundation for the explanation of the two most outstanding objects of heathen worship in historical times—the *temple* and the *image.* The tree or grove in which the deity is worshipped develops into the stone temple; the stone or wooden stump, which serves as a symbol of the deity, assumes human features and becomes the image of the god.

This process can be very well followed in the Greek word for 'temple,' Lesb. ναῦος, Dor. νᾱός, Ion. νηός, Att. νεώς (*ναϝο-), which originally indicated not the *whole* temple, but only the inmost room, where the figure of the god stood (τὸ ἄδυτον, σηκός). This primitive Greek *nāvo- is, in the conviction of the present writer, identical with the root found beside it, *nāwo-, *nāu (Skr. nāva, nāvā́, nāú = Gr. ναῦς), 'ship,' 'tree,' so that both words come together in the meaning 'tree-trunk' (cf. *e.g.* Skr. *dāru* 'wood' and 'boat,' Old Saxon *stamm*, 'tree-trunk' and 'ship,' and many other similar changes of meaning).

This probable combination is, the present writer thinks, raised to a certainty when we consider that in Greece, in the most ancient times, the figures of the gods were actually placed *in, below,* or *on* trees (πρέμνῳ ἐνὶ πτελέης, φηγοῦ ὑπὸ πρέμνῳ, ἐν κέδρῳ μεγάλῃ); and the name of Juppiter of Dodona in the primitive cult, Ζεὺς Νάϊος (*nāvio-s*), finds its natural interpretation if we conceive him as 'the one in the tree-trunk.'* The ἀργὸς λίθος and the ξόανον οὐκ εἰργασμένον gradually change into the βρέτας (= Skr. *mūrta* 'figure'?), the image or figure of the god. It is not far-fetched to find in the images of Hermes, in which only the face and the extended penis of the god are represented, a stage on this path of development.

The words of J. Grimm (*Deutsche Mythol.*[4] i. 59) are true of the Teutons. 'Temple is also at the same time wood. What we think of as a walled and built house, dissolves, the farther back we go, into the conception of a sacred place which has not been touched by human hand, but is hedged in and made peaceful by trees that have grown up of their own accord.' The conceptions *grove* and *temple* accordingly run to a large extent together in the Teutonic languages.

This is true of the series Goth. *alhs*, A.S. *ealh*, Old Saxon *alah* 'temple,' which corresponds to the Old Lith. *elkas* 'grove,' Lett. *elks* 'idol,' perhaps also to the Gr. ἄλσος (*alkjos?) 'grove,' 'sacred grove,' which, however, is compared by others with Old Slav. *lěsŭ* 'forest.' The same also holds of O.H.G. *haruc*, A.S. *hearh, hearg* (O.H.G. *harugári* 'priest'), which are explained in glosses by *lucus, nemus*, and also by *sacellum, simulacrum, fanum*, as well as of the A.S. *bearu*, 'grove' (O.H.G. *parawári* 'priest'), which belongs to the common Slavonic root *borŭ*, 'pine,' 'pine-forest' (cf. *Zutibure*, i.e. *svenŭ borŭ* 'sacred pine forest' in the lands of Merseburg according to Thietmar: *lucus Z. dictus ab accolis ut Deus ab omnibus honoratus*). To this class of expressions are added—for the later temples built of wood or stone, whose first traces are to be found probably in the *templum* of the *Tanfana*, which, according to Tacitus (*Ann.* i. 51), was level with the ground—new designations borrowed from the human dwelling-house, such as O.H.G. *hof, halla, sal, pëtapûr, pëtahûs, plôzhûs, plôstarhûs*, Goth. *gudhûs*, etc. Figures of the gods, too, which are designated as ξόανα, 'carved works,' but regarding whose more definite nature we unfortunately can discover nothing, are repeatedly mentioned from the 4th century (cf. Golther, *Germ. Myth.* p. 604).

At the same time in which we have among the Teutons *only* sacred trees and groves as places for the worship of the gods, the common Celtic name for 'sanctuary,' *nemeton* (δρυνέμετον, *Medionemeton, Tasinimeton, Vernemeton*: Skr. *námas* 'worship') without doubt indicates the stone temple built by human hands. Here too, however, the original meaning is seen from the Old Saxon *Indiculus superstitionum*, in which mention is made 'de sacris silvarum, quæ nimidas (=Gall. *nemeton*) vocant.' On the other hand, the neighbours of the Teutons on the North-East, the Prussians and the Lithuanians, may be regarded as having continued in their templeless condition up to the date of their conversion to Christianity. At the same time we hear incidentally of idols, which they carved for themselves. Thus a heathen fisher (cf. Prætorius, *op. cit.* p. 27) had made a wind-god (*Wéjopatis*) out of bark, which had two faces on the head, one in front and one behind, both of them with gaping mouths. The same state of affairs is found among the *Eastern* Slavs, and Miklosich (*Die Christliche Terminologie*, p. 67) rightly remarks that there is no ground whatever for the assumption that the first preachers of Christianity found here buildings devoted to religious service (for Russian idols, cf. above, p. 45). The *Western* Slavs, on the other hand, were acquainted with

* The usual explanation of the Greek νεώς, 'temple,' derives this word from ναίω, 'I dwell,' and means the same as 'dwelling-place.' Against this view the chief objection is that designations of the temple according to the analogy of the human dwelling-place are all of a late date, and Gr. νεώς in the sense 'human dwelling-place' never occurs. Meringer (*Indogermanische Forschungen*, xviii. 277) now agrees with the explanation given by the present writer.

real temples, with statues of the gods, and with idols, *e.g.* the three-headed Triglav ('Three-heads'), as we learn from the descriptions of Thietmar of Merseburg (*Monum. Germ.* v. 812) and Otto of Bamberg (*M. G. Script.*, ed. Pertz, ii. 32). Here too, however, we see how deeply the ancient tree-worship was rooted in the affections of the people from the fact, related by Otto of Bamberg, that they calmly allowed four temples to be torn down, and even helped in the work, but raised objections when an attack was made on the large wide-spreading oak standing near, 'quam plebs simplex numinis alicuius inhabitatione sacram æstimans magna veneratione colebat.'

But the places of old Aryan worship are not yet exhausted in the foregoing discussion. While in the case of tree-worship it is to a certain extent supposed that the 'heavenly ones' descend from their airy abodes to the earth, an attempt was made by mankind in another direction to raise themselves to heaven. The *Persians*, we saw above (p. 33), climbed to the top of the highest mountain when they wished to offer a sacrifice to Heaven. The same was the case in Greece. Pausanias mentions the tops of mountains as the seats of famous cults in many localities. Especially sacred, however, was the territory of the Lycæan Zeus on the highest peak of Arcadia, where tree-cult and highplace-cult were combined. In *Italy*, too, the worship of the god of the sky was particularly connected with the high places; and with regard to most Roman hills the existence of ancient cults of Juppiter can be proved (Wissowa, p. 102). Of the Teutons, Agathias, 28. 4, reports: *Ιλάσκονται καὶ . . . λόφους καὶ φάραγγας, καὶ τούτοις ὥσπερ ὅσια δρῶντες.*

(*d*) THE FEASTS.—In the equation, Gr. *ἑορτή*, Ion. *ὁρτή* 'feast' = Skr. *vratá* 'decree,' 'divine service' (cf. *e.g.* *mahâvrata*, like M.H.G. *hôchzît*, lit. 'great feast'), there is to be found an originally related designation for the conception 'feast,' whose fundamental meaning was something like 'appointed time.' It is rather difficult to decide what these *certi dies* may have been among the Aryans, and without doubt a considerable time will have to pass before the comparative heortology of the Aryan peoples, the problems of which have hardly been taken in hand yet, will be in a position to give a decisive answer to this question. We saw above (I. 3 *b*) that the life of the Aryans even in primitive times was interwoven with a considerable number of special and general feasts for the dead; and in particular, in the wintry half of the year, the observance of a great festival of the dead, agreeing in many details, can be proved among almost all the Aryan peoples. Thus in India the third of the three annual festivals, which took place in the colder season of the year, was connected with a great sacrifice for the dead. Among the Lithuanians we discovered a general feast for the dead in the beginning of November. In Rome the *Larentalia* were held on the 23rd of December, the *Ferâlia* in February. Among the Teutons the dead seem to have been remembered with many varied customs at 'Yuletide' (cf. E. Mogk in Paul's *Grundriss*[2], iii. 391), a name which itself may be connected with the darkness of the realms of the dead, seeing that 'Yule' (A.S. *géol*, *geohhol*) probably goes back to a primitive Teutonic word **jeqa* or **jeqha* = Gr. **ζέφος* in *ζέφυρος*, *ζόφος*, 'west,' 'darkness,' 'under world.' Most remarkable in this connexion, too, is a wide-spread Slavonic name for the Christmas festival (Russ. *koročunŭ* 'Christ-evening,' Bulg. *kračun*, etc. 'Christmas'), which in White Russian signifies 'unexpected premature death in early years,' and 'an evil spirit that shortens life.' In regard to this development in meaning, Miklosich (*Etymol. Wörterbuch der slav. Sprachen*, p. 130) correctly remarks, 'perhaps *Kračun* was a feast of the dead.'*

The significance of these feasts of the dead, which in White Russia serve even to-day among the people as the basis for the reckoning of dates, is especially made manifest on Italian soil, as can be seen even in the language. Here it is impossible to separate the Lat. *fēria*, *fēsia* 'feast,' 'festival,' from the above-mentioned *fērâlia* from **dhvēs-âlia*, 'feast of the dead,' so that *fēsia* from **dhvēsia*, at first 'feast of the dead,' had come to mean 'feast' in general; and correspondingly *festus* from **dhvestus* and *fesnus* (in Umb. and Osc. *fesna*, sc. *domus*, 'temple') from **dhves-nus*, at first denoted 'applied to souls,' then 'sacred,' 'holy.'

But were there even in primitive times regular festivals in honour of the 'heavenly ones,' and is there a possibility of extracting a common primitive kernel from the endless mass of names and dates referring to the worship of the gods among the separate peoples? It has long been customary to find this in the festivals of the so-called four points of the year; and in particular the winter and the summer solstice were regarded as the most ancient feast dates of the Aryan peoples. We shall do well briefly to call to mind what we know regarding the oldest divisions of time among the Aryans, in order to make a judgment on these views possible. The *moon* was the oldest measurer of time for the Aryan peoples. According to its course natural months were distinguished. A division of the yearly course of the sun into these had not yet taken place, for which reason there were no names for the separate months in the vocabulary of the primitive Aryan language. Of course, some have sought to find a pre-historic attempt to equalize the moon-year with the sun-year in the apparent coincidence of our 'twelfth,' the time from Dec. 25 to Jan. 6, with the twelve sacred nights of the Brâhmaṇa-literature (354 days of the moon-year + 12 days = 366 of the civil sun-year) (cf. regarding it especially A. Weber, *Indische Streifen*, xvii. 224, and *SBAW*, phil.-hist. Kl. 1898, xxxvii. 2 ff.). The present writer, however, believes that it has been made very probable by A. Tille (*Yule and Christmas, their place in the Germanic Year*, London, 1899) that these twelfths, famed in legend among the Teutonic peoples, do not go back to the remotest heathendom, but are only a copy of the Christian Dodecameron, the sacred time between Christmas and Epiphany, the new and the old day for calling to mind the Divinity of Christ. Along with these purely unattached lunar months a distinction of seasons of the year was made in primitive times, originally only winter (Skr. *hēmantá* = Gr. *χειμών*, Lat. *hiems*, etc.) and summer (Avesta *ham* = O.H.G. *sumar*, etc.), then besides these, at an early date, a short transition period of spring (Skr. *vasantá* = Gr. *ἔαρ*, Lat. *ver*, etc.). Their combination was called a 'past' (**vetos* : Skr. *vatsara*, Gr. *ἔτος*, Lat. *vetus*, etc.); but in reckoning it was customary to calculate according to single periods of the year, especially according to winters. The Aryan year was thus a purely natural year (cf. *Reallexicon*, artt. 'Jahr,' 'Jahreszeiten,' and 'Zeitteilung'). All more exact methods of dividing the time, based on a knowledge of the course of the sun, were derived by the Indians as well as by the Aryan peoples of Europe from *Babylon*. Here, too, the distinction between the four points of the year must have arisen at a very early date, and in a long migratory progress have passed over to the Greeks (cf. Herodotus, ii. 109) and Romans, and from them to the north

* A Russian name for the whole period of Christmas is *budesŭ*, lit. 'magic,' which shows with what sort of heathen ideas this time of the year was associated.

of Europe. The designations of the equinoxes in the Teutonic languages (O.H.G. *ëbennacht*, A.S. *efennight*, Old Nor. *jafndœgri*) are undoubtedly only translations of the Lat. *æquinoctium* (Gr. ἰσημερίαι); and for the idea of the solstice separate expressions have been formed among the different Teutonic peoples (O.H.G. *sunwende*, *sungiht*, *sunstede*, *sommertag*, A.S. *sunnstede*, Old Nor. *sól-hvarf*) which proclaim their dependence on the Lat. *solstitium* by the fact that they, like it, are used only for the *summer solstice*; but for the *winter solstice* (Lat. *brūma*, i.e. *brevissima*; perhaps its festival was *Angerona*, cf. Wissowa, *op. cit.* p. 194) *absolutely no old Teutonic expressions are to be found*. Finally, it is impossible to understand what significance the fixing of the longest or the shortest day could have had, presupposing that it was at all possible in primitive conditions of culture*; for Procopius (*de Bell. Got.* ii. 15) relates of the inhabitants of Thule that, after they had been 35 days without the light of the sun, they sent messengers to the highest peaks of the mountains to spy out if the sun would not soon return, and then, when they had announced its speedy return, they celebrated the greatest of their festivals. Such a narrative is easily enough understood of the most northerly stretches, but would be utterly unintelligible among men who had the sun always before their eyes (cf. A. Tille, *Yule and Christmas*, 'Solstices and Equinoxes').

But although these solstice festivals, as such, among the Aryan peoples, seem to be by no means very primitive, it cannot be said that the manifest agreement of the customs and usages relating to them rests entirely on later transference and migration. If we turn our attention to the rites connected with the summer solstice or St. John's day (St. Ivan's day among the Slavs), we see that a characteristic feature of them is the intimate connexion in which the two elements of *fire* and *water* occur. It is everywhere customary to kindle bonfires, to dance round them, or to leap over them, generally in pairs. Almost everywhere we find water in some form or other along with the fire. It may be that the festive company bathe either before or after the kindling of the fire, it may be that fire-wheels are cast into the stream and there extinguished, or it may be in some other way.† In this connexion it seems most easy to understand an old Indian solstice custom which took place at the *Mahâvrata* festival, *i.e.* (according to Hillebrandt, *Romanische Forschungen*, v. 299) at the festival of the summer solstice (at a later date Mahâvrata is the winter solstice). Accompanied by the beating of drums, women carrying jars filled with water march in procession three times round a fire from right to left and then again from left to right, singing a song, which closes with the refrain, 'That is mead.' After going round the fire for the last time, they pour the water into the fire and thus extinguish it.

This remarkable combination of the two elements so highly honoured by the Aryans, fire and water, is entirely inexplicable when we start from an original solstice festival. On the other hand, it can be very easily interpreted if, in the usage of the Mahâvrata festival, which, moreover, was held in honour not of a sun-god but of Indra, the giver of refreshing rain, we see with Hillebrandt (*op. cit.*) and Oldenberg (*Die Religion des Veda*, pp. 448, 507) an ancient *rain-charm*, *i.e.* a magical device for procuring rain (cf. above, p. 40). Then the conjecture is inevitable, that in the rites described as existing mainly among Indians, Slavs, and Teutons, we have to recognize the vestiges of an ancient Aryan festival dedicated to fire and water, and held in summer, in which, by means of extinguishing the fire on the earth, the worshipper sought to cause the heavens to send down streams of fertilizing moisture on the meadows and fields. We have the additional fact that among all the Aryan peoples inhabiting Middle Europe the time near the Feast of St. John constitutes a kind of dividing period in the rainfall, *i.e.* the rain that fell *before* St. John's Day was believed to be especially valuable, and was prayed for from heaven by priest and congregation, while, on the other hand, the rain that fell *after* St. John's Day was useless, and even brought harm. Regarding St. John's Day itself, different opinions prevail. The peasants of the Russian province of Archangel say, 'The rain on St. John's Day is better than a mountain of gold'; other peoples hold an exactly opposite view (cf., for details on the subject, Alexis Yermoloff, *Der landwirtschaftliche Volkskalender*, Leipzig, 1905, p. 296 ff.). Thus from this side also we seem to obtain confirmation of our conjecture that in the customs described above we have traces of a midsummer feast which was celebrated without special regard to the longest day. Among other things, it may have belonged to the solemn rites of such a festival to seek, for the last time in the summer, to obtain moisture for the meadows and fields by means of a rain-charm. This view, which we have adopted with regard to the original significance of fire and water, does not in any way militate against the idea expressed by Mannhardt (*Der Baumkultus*, pp. 497, 516, 521). He regards the midsummer fires as sun-charms, since fire is supposed to represent the light and heat of the summer sun, to which the growing vegetation must be exposed.

Remains of a second Aryan festival, *a spring-feast*, are perhaps to be found in the worship of the Teutonic *Ostara* and the Indian *Ushas*, which had its special place in the ritual at the beginning of the year at the *Prâtaranuvâka* of the *Agniṣṭoma* sacrifice, which was observed with great solemnity in spring (cf. Hillebrandt, *Vedische Mythologie*, ii. 26 ff.). It seems that this festival is chiefly in view in the idea, proved to be Aryan by L. v. Schröder ('Lihgo, Refrain der lettischen Sonnwendlieder,' in the *Mitteil. d. anthrop. Gesell. in Wien*, xxxii.), that the sun at its rising, particularly on certain days, dances, jumps, shakes itself, and plays.

From such indications as these we must seek further information concerning the times of the old Aryan festivals. Since the moon, as we have already noticed, was the measurer of time in primitive times, the Aryan *certi dies* must have been connected with the chief phases of the moon, new moon and full moon. In fact, in India the sacrifices of the new and the full moon belong to the regular and most ancient offerings to the gods (cf. Oldenberg, *op. cit.* p. 441 ff., and A. Hillebrandt, *Das altindische Neu- und Vollmondsopfer*, Jena,

* Even in civilized Greece it seems to have been difficult. Cf. Eustath. on *Od.* xv. 402: *ἕτεροι δέ φασι σπήλαιον εἶναι ἐκεῖ, δι' οὗ τὰς τοῦ ἡλίου ὡς εἰκὸς ἐσημειοῦντο τροπάς, δι' ὃ καὶ ἡλίου διὰ τοῦτο σπήλαιον ἔλεγον, καὶ τοῦτο δηλοῦσθαι ἐν τῷ ὅθι τροπαὶ ἡλίου.* Cf. also Lebègue, *Recherches sur Délos*, Paris, 1876, p. 876: 'Le matin vers le moi d'avril un rayon de soleil glissant contre la montagne pénètre dans la caverne et la remplit un instant tout entière,' etc. (Communication of O. Weniger in Weimar).

† Cf. the following description from the south of Russia in Glasunov, *Russian Folksongs* (Russ.), St. Petersburg, 1894. p. 81: 'In particular, young men and women bathe themselves, then they put on wreaths of field-maple with fragrant herbs, gird themselves with artemisia, and gather before sunset on an elevated place, always overlooking a river. They set up two figures: one a human-like image, the other a piece of wood covered with female attire, ribbons, and garlands. The wood is generally maple. Then they kindle heaps of straw, walk in a circle round it, sing songs and, taking the figures in their hands, spring in pairs (every lad with his lass) through the fire. When they have all sprung through, then they throw the figures, of which the male is called *Kupalo* (*kupála* "St. John's day," cf. *kupati* "to bathe"), the female *Marena* ("madder"), into the water. Afterwards they also throw their wreaths into the stream.'

1880). But in Greece also the feast-days were connected with definite phases of the moon, particularly the full moon (cf. A. Mommsen, *Heortologie*, p. 2); and among the Teutons the 'certi dies, cum aut inchoatur luna aut impletur' (Tac. *Germania*, ch. 11), on which the popular assemblies took place, and which were regarded as the 'agendis rebus auspicatissimum initium,' were certainly identical with the 'certi dies' (ch. 9) on which the people, *e.g.*, 'Mercurio humanis quoque hostiis litare fas habent.' In Rome all the Ides (*idus* = Ir. *ésca* 'luna') were regarded as feast-days.

Religious ceremonies must in primitive times have accompanied the ordinary family feasts as well. These come most directly to the front in the Aryan *marriage ceremonial*, in which again fire and water enjoy common worship. In India the bridegroom, after taking the bride by the hand, leads her three times round the fire on the hearth, on which a sacrifice of roasted corn is offered. Previously a new jug filled with water is placed on the floor, and it must remain on the right side of the bridal pair as they march round the fire. But liberal use is also made at other times of water, which is solemnly brought from the spring. The bride is bathed in it, or the young pair are sprinkled with it. In Rome, marriage is even designated a union 'aqua et igni.'

Romulus married the captured Sabine women, κατὰ τοὺς πατρίους ἑκάστης ἐθισμοὺς ἐπὶ κοινωνίᾳ πυρὸς καὶ ὕδατος ἐγγυῶν τοὺς γάμους (Dion. ii. 30), and Varro (Serv. *ad Æn.* iv. 167) reports: '*Aqua et igni* mariti uxores accipiebant. Unde hodieque et faces praelucent et aqua petita de puro fonte per felicissimum puerum aliquem aut puellam interest nuptiis, de qua nubentibus solebant pedes lavari.'

Here, too, a solemn procession round the altar from left to right took place, at which a boy carried the marriage-torch and the marriage-water, drawn from a pure spring; then in the house of the bride's father a *far*-loaf (hence *confarreatio*) was sacrificed in the fire (on the Greek λουτροφόρος, cf. above, p. 22). The same customs which we find in the east and south of the Aryan world exist also in the north of Europe.

Thus Menecius reports of the Lithuanians: 'Cum nuptiae celebrantur, sponsa *ter ducitur circa focum*, deinde ibidem in sella collocatur, super quam sedenti *pedes lavantur aqua* qua lectus nuptialis, tota supellex domestica et invitati ad nuptias hospites consperguntur.'

Also among the Slavs, just as on St. Ivan's day, baths and dancing through or over a fire belong to the fixed marriage rites, and finally, in ancient Germany the bride was led three times round the hearth in the house of the bridegroom after she had stepped over a vessel of water (cf. the proofs of this fact in *Reallexicon*, art. 'Heirat,' p. 356 ff.). Perhaps in this case the union of fire and water (heat and moisture) may be regarded as the symbol under which husband and wife were united to each other for the purpose of producing a numerous progeny.

For further details regarding the common religious customs connected with the naming of the child, the first cutting of his hair, the feast of puberty, etc., see Winternitz, 'Was wissen wir von den Indogermanen?' (*Beilage zur Münchner AZ*, 1903, No. 258, p. 293), and E. Samter, *Familienfeste der Griechen und Römer*, Berlin, 1901.

ς. **The relation of the 'heavenly ones' to the morality of mankind.**—In all the higher stages of heathen religion we find the gods represented as the guardians of all written and unwritten law, and as the strict avengers of all human transgressions of the same. Here we shall seek to discuss the question how far back in the history of the Aryan peoples this conception goes. It is obvious that legal or moral ordinances could be thought of as under the protection of some higher being only after these ordinances had been evolved and come to consciousness in the human society itself. Accordingly, it will be necessary in entering upon this discussion to direct our attention to the law and custom of primitive Aryan times as they are shown to us by the science of Aryan antiquities. What we at the present day designate as 'punishment' and 'crime' resolve themselves, the further back we go into the past of the Aryan peoples, in a great number of cases into the conceptions of 'fine' and 'act liable to a fine.' The Lat. *pœna* is the judicial penalty prescribed as a corrective provision against the transgression of the law, but the Gr. ποινή, from which *pœna* is borrowed, is, as we shall see below, the old Aryan expression for 'fine.' In the same way the Lat. *condemnare* is used of every legal condemnation, but the root-word *damnum* originally signifies nothing else than 'that which is given (as a fine)' (**da-mno-m : dare*). The German word *Schuld*, which in all the Teutonic languages in which it occurs designates the guilt of the accused in a law-court as well as guilt before the gods, as is evident from its being derived from Goth. *skal*, *skulun*, *skula*, *skulds*, meant nothing else than *Du sollst*, sc. *bezahlen* ('Thou shalt pay'). The Lat. *flāgitium*, 'crime,' 'infamous deed,' which is derived from **flagto*, (cf. *flagito*, 'I demand') probably = Ir. *dliged* (**dligeto-*), 'duty,' 'law,' 'right,' Ir. *dligim*, 'I have a claim to something,' Welsh *dleu*, etc., 'to be guilty,' Bret. *dle*, Goth. *dulgs*, Old Slav. *dlŭgŭ*, 'guilt,' undoubtedly goes back in the same way to a fundamental meaning 'liability,' *i.e.* to a fine, and so on. The reason of this phenomenon lies in the fact that in primitive Aryan times a great number of actions which we regard as crimes at the present day, and which are punishable by the State—murder and manslaughter, theft and robbery, rape and adultery, etc.—were not punished in any way by the community, *i.e.* in primitive relations, *by the tribe and its chief* (Skr. *rāj* = Lat. *rex*, Ir. *rí*), but the avenging of them was left to the self-help of the individual families which were united in the tribe. The exercise of this self-help took the form of *blood-revenge* (cf. above, p. 28), which even in the earliest times could be expiated by a fine of cattle. The Aryan expression for blood-revenge itself and its compensation by means of the money payment is contained in the equivalents: Avesta *kaēnā* = Gr. ποινή: Skr. *chi*, Gr. τίνομαι = 'to punish,' 'to avenge,' 'to submit to pay a fine.' When at a later date the power of the State to inflict punishment deprived the families of the self-help and the exacting of the fine, the latter idea was changed into the conception of the penalty imposed by the State, and the action which incurred payment of a fine became a crime against the laws of the State (cf. *Reallexicon*, artt. 'Blutrache,' 'Strafe,' and 'Verbrechen').

Now such actions as were to be followed by blood-revenge or to be expiated by a fine were not in primitive times regarded as transgressions of the decrees of any supernatural beings whatsoever. This is seen to be the case from the fact that, in the earliest historical times, *e.g.* in the ethics of the Homeric poets, those very crimes which according to our ideas are most heinous, murder and robbery, were neither regarded as defiling mankind nor condemned by the moral consciousness of the people. For what other explanation can be given of the fact that Theoclymenus (*Od.* xv. 256 ff.), who had slain a man in Argos and had taken flight, was received by Telemachus without any purification being regarded as necessary, as was usual at a later date; or that Ulysses himself (*Od.* xiii. 256 ff.) was not afraid of the abhorrence of his listener, when, although in an imaginary story, he represented himself as a man who treacherously lay in ambush and killed a fellow-countryman in Crete? Just as little did Telemachus (*Od.* iii. 70 ff.) take

offence when he was asked on his arrival if he was perhaps a robber who was roving over the sea and at hazard of his own life bringing woe on alien men (cf., further, in *Reallexicon*, artt. 'Mord' and 'Raub'). Thus, it seems that actions such as those mentioned above had nothing in them offensive to the conscience of the people if they were carried out openly or with violence. On the other hand, theft and adultery may have been regarded at an earlier date as morally reprehensible merely on account of their secrecy—a view which finds expression in the fact that, so far as we can see, the killing of the adulterer or the thief, caught in the act, did not as a rule call forth the blood-revenge of his family, *i.e.* to use the form of expression of a later date, remained unpunished (cf. *Reallexicon*, artt. 'Diebstahl' and 'Ehebruch').

Under the circumstances described above, it may seem remarkable that in the vocabulary of the original language there was nevertheless *one* expression for the notion of sin and crime, in which the idea of a shortcoming before gods and men seems to have been operative from the beginning: Skr. *á'gas* = Gr. *ἄγος* (*anâgas* = *ἀναγής*, *i.e.* 'without *á'gas*'—*ἄγος*). But we shall see that the circumstances connected with this expression are very peculiar. If we examine the oldest use of the Greek word (with regard to that of the Indian one, we can unfortunately deduce very little), we find that it is used by the tragedians (cf. *Reallexicon*, p. 905) with reference to *four* different actions, namely, high treason, regicide, parricide, and carelessness with regard to the duty of interment of a relative. An *ἄγος*, then, which is best translated by 'abomination,' was committed on the one hand by the man who was guilty of a hostile act against the tribe and against its chief, the king, and on the other hand by the man who violated the duties resting upon him in virtue of his family or tribal connexion. Here, too, there can be no doubt as to who the deities were that were insulted thereby. In Æschylus (*Septem contra Thebas*, 1017) we are told of Polynices: *ἄγος δὲ καὶ θανὼν κεκτήσεται | θεῶν πατρῴων οὓς ἀτιμάσας ὅδε | στράτευμ' ἐπακτὸν ἐμβαλὼν ᾕρει πόλιν*, *i.e.* he who led the army against the city was in life an abomination to the *θεοὶ πατρῷοι*, and—as unburied—would be the same in death. But these *θεοὶ πατρῷοι* (cf. the discussion of the name in Caland, *Totenverehrung*, p. 69 f.) were—at least originally—*not* the 'heavenly ones' or the gods related to them, therefore not Zeus, Apollo, Athene, etc., but rather the *souls of the ancestors honoured as divine*, the heroes of the tribe or the family, to whom on the mainland of Greece even in later times a rich worship was assigned (cf. E. Rohde, *Psyche*[2], i. 167 ff.). We saw (above, p. 28) that the foundation pillars of the social organization in primitive Aryan times rested on *ancestor-worship*, and it is an almost obvious conclusion that the souls of the worshipped ancestors were thought of as watching with jealous exactness over the keeping of the old institutions in the family and in the tribe (cf. above, p. 23). All those actions which merited praise rather than blame, when committed against one who did not belong to the clan, were regarded when perpetrated against a member of the family as *ἄγος*, which challenged the vengeance of the spirits of the progenitors who presided over the family. The old Roman conditions speak very plainly in this connexion: 'In regis Romuli et Tatii legibus hæc est: "si parentem puer verberit, ast olle plorassit parens, puer divis parentum sacer estod" id est clamarit. adicitur: "si nurus [sc. verberit parentem], sacra divis parentum estod" in Servi Tulli' (acc. to Th. Mommsen in C. G. Bruns, *Fontes iuris Romani antiqui*[6], Freiburg, 1893, p. 8). Thus, then, if a son beats his father or a daughter-in-law her father-in-law, they are said to be doomed to the *divis parentum*, the *θεοῖς πατρῴοις*, the souls of the ancestors, *i.e.* to death. How much more must this have been the case with the *paricida*, the 'kin-murderer' (**pâro-* from **pâso-* = Gr. *πηός*), *i.e.* the man who had killed a member of the clan; and Brunnenmeister (*Das Tötungsverbrechen im altrömischen Recht* p. 171) has undoubtedly good ground for describing the *deo* (or better still the *divis parentum*) *necari* as the legal consequence of the *paricidium*. These conditions doubtless also gave rise to the Latin expression *supplicium*, 'capital punishment,' really, however, the 'appeasing' (*sub-placare*), sc. *divorum parentum*. As the spirits of the ancestors had power over the family, so in the same way would they also have controlled the tribe even in primitive times, and their wrath would have been aroused by everything which was directed against the tribe and its leader, the king. Punishment by death, then, by means of stoning, the only punishment of primitive times (cf. above, p. 42), which was decreed and immediately executed by the popular assembly, which represented the tribe, can best be conceived of as a *supplicium*, *i.e.* an act of expiation of the spirits who rule over the tribe (cf. *Reallexicon*, artt. 'Opfer,' 'Verbrechen,' 'Strafe,' and 'Volksversammlung').

It is therefore evident that the oldest combination of law, custom, and religion is to be found in the *worship of the dead*, who from the remotest antiquity were looked upon as the guardians of the order prevailing in the family and the tribe (Skr. *svadhā́* 'propriety,' 'customary condition' = Gr. *ἔθος*, 'habit,' 'custom,' 'usage,' *ἦθος*, 'use and wont,' 'habitual stopping-place,' and (perhaps) Goth. *sidus*, O. H. G. *situ*, 'custom'). The 'heavenly ones' have originally nothing whatever to do with this conception; they are entirely beyond the realm of good or ill ('jenseits von Gut und Böse'). For if what is stated in detail above is correct, that the deities designated by the equivalents Skr. *devá*, Lat. *deus*, etc., were nothing else than 'special gods' of the sky and the natural phenomena connected with it, who exerted an influence only within the spheres to which they owed their conceptual origin, it is obvious that mankind could have recourse to them only in matters which lay within these special spheres. In this way a man may have sacrificed to the thunder that it might spare his own head and strike the head of the enemy, or he may have prayed to the fire to light up and to scare away the night-monsters and destroy the fields of the enemy, but nothing more. It is no accident that, even in the hymns of the Rigveda, the gods are much more frequently represented as strong, large, and powerful than as endowed with any moral qualities (cf. Oldenberg, *Die Religion des Veda*, p. 284). But the more the 'heavenly ones' and the gods connected with them developed into distinctive and many-sided *personalities*, the more were they also invested with a moral life, seeing that, on the one hand, with the evolution of the family and the tribe into the city and the State, they took over the rôle of guardian from the souls of the ancestors, and, on the other hand, appeared as the bearers and protectors of *new* moral ideas, which were gradually coming to the front in human society. Thus the past belongs to the spirits of the ancestors, and the future to the 'heavenly ones.' It will be of advantage to seek to apprehend this important process of evolution in the history of *two* moral duties which received comparatively late recognition—the duty of truth and the duty of hospitality.

(1) *Truth.*—The Aryan name for this idea is contained in the two originally connected equivalents, Skr. *satyá* = Goth. *sunjis*, and Lat. *vērus* = O. H. G. *wār*, Old Ir. *fīr*, both roots signifying the 'actually existing' (*satyá*: *sán*, 'existing,' Lat. *verus* from **ves-ro-s*: Goth. *visan*, 'to be,' 'to exist'). The oath serves the purpose of strengthening this 'actually existing'; and

the farther back we go in point of time, the more important is the part played by the oath; just as, even at the present day, the uneducated more frequently than the educated regard it as necessary to strengthen their words by means of an oath. The existence of the oath in primitive Aryan times is placed beyond the reach of doubt by the series of words: Skr. *am*, Gr. ὄμνυμι, Ital. *omn* (cf. Aufrecht, *Rhein. Museum*, xl. 160, and Bücheler, *Lex Ital.* p. 18; cf. also the words, Old Slav. *rota* 'oath,' = Armen. *erdnum* 'swear,' and Irish *óeth* = Goth. *aiþs*). The most ancient oath on Aryan soil (cf. *Reallexicon*, art. 'Eid') was simply a *curse*, which a man declared against himself in case of false swearing (thus Skr. *śapátha*, 'curse,' 'oath', Old Slav. *kleti sę*, lit. 'to curse oneself' = 'to swear,' Germ. *schwören*). In swearing, a man touched himself or some other object (thus Ir. *tong*, 'swear,' = Lat. *tango*, 'I touch,' and Old Slav. *prisega*, 'oath,' lit. 'touching'), with the idea that the object touched would bring destruction or be exposed to destruction if he swore falsely. In contrast to this, the oaths of the Greeks and Romans manifest, even in the oldest historical times, a more elevated character; for among both these peoples, leaving out of account a few survivals of the oldest state of affairs, the gods, and in particular Zeus-Juppiter, were invoked both in order to be present as witnesses of the curse pronounced, and to carry it out in the case of perjury. Thus we are brought from the realm of magic to the sway of religion; the 'heavenly ones'—particularly Zeus, the god of the bright, all-seeing sky of day—have become the bearers and the guardians of the concept of truth.

(2) *Hospitality.*—The primitive Aryans, like all other primitive races, regarded the stranger as a man without rights, who could be killed or robbed with impunity. In apparently irreconcilable contradiction to this idea, which in its last ramifications was finally vanquished only by the new conception of life brought in by Christianity, there stands the custom of *hospitality*, which can be proved to have existed among all the Aryan peoples, even among Teutons, Slavs, and Lithuanians, as early as the beginning of historical tradition (cf. *Reallexicon*, art. 'Gastfreundschaft'); and the present writer, in opposition to his previous opinion, thinks it may be regarded as belonging to the primitive Aryans. How is it possible to regard a person as an outlaw, and yet at the same time give him a cordial reception at one's own fireside? In answer to this question, R. v. Ihering, in an essay, 'Die Gastfreundschaft im Altertum' (*Deutsche Rundschau*, 1886–87, vol. iii. April–June, 1887), and the present writer in his book, *Handelsgeschichte und Warenkunde*, i., Jena, 1886, p. 4 ff., have simultaneously, and independently of each other, pointed to the *exchange of gifts*, which is everywhere inseparably connected with the custom of hospitality, and expressed the view that in it is to be found the origin of hospitality, without which, in these primitive conditions, commercial intercourse would have been impossible. This opinion is everywhere confirmed by the facts of ethnology, which show that among many uncivilized peoples trade is nothing else than an exchange of gifts, and a hospitable reception is extended to the trader in spite of the bloodthirsty hatred of strangers. 'The Angami-Nagas, in the mountainous regions of Assam, are divided into numerous communities, who live in constant feud; they are zealous head-hunters. But, none the less, the Angami trader of any village whatsoever finds in every other at least *one* house where he receives food and shelter, and is in safety from sudden murderous desires' (Ratzel, *Völkerkunde*[2], i. 570 ff.). G. Klemm (*Kulturgeschichte*, iv. 310) also reports as follows of the South Sea Islanders: 'As we saw above, besides the salutation a special gift is also essential to the sign of hospitality. This gift is regarded, when it is received, as being, in a kind of way, a continuation and a confirmation of the salutation. It consists of fruits, mats, and such-like articles, and forms to some extent the foundation of intercourse on the basis of barter and trade.' Similar conditions may also be assumed for primitive Aryan times, in which the existence of a primitive trade by barter can be etymologically demonstrated (cf. *Reallexicon*, art. 'Handel'); and in the series of words, Lat. *hostis*, Goth. *gasts*, Old Slav. *gostĭ*, this twofold conception of enemy and guest lies clearly before us (cf. Winternitz, *op. cit.* p. 330). But, in order to become a 'guest,' the stranger must be formally received into a native family group. He thereby becomes himself a relative, as is expressed, *e.g.*, in the Lith. *swēczias*, 'guest,' from *svetjas = Gr. ἔτης from *svetâ, 'relative'; the father of the family, on the other hand, into which he enters, becomes the *hospes*, *i.e.* **hosti-pets* 'lord and protector of the stranger,' and thereby at the same time takes over the responsibility for the personal safety of the stranger. This relation is still clearly described in the Anglo-Saxon legislation (cf. Roeder, 'Die Familie bei d. Angelsachsen,' *Studien zur eng. Philol.* iv. 83, note 1); and that is what is meant when Mauricius, *Strateg.* xi. 5, reports of the Slavs: εἰσὶ δὲ τοῖς ἐπιξενουμένοις αὐτοῖς ἤπιοι, καὶ φιλοφρονούμενοι αὐτοὺς διασώζουσιν ἐκ τόπου εἰς τόπον, οὗ ἂν δέωνται, ὡς εἴγε δι' ἀμέλειαν τοῦ ὑποδεχομένου συμβῇ τὸν ξένον βλαβῆναι, πόλεμον κινεῖ κατ' αὐτὸν ὁ τοῦτον παραθέμενος, σέβας ἡγούμενος τὴν τοῦ ξένου ἐκδίκησιν, *i.e.* he feels himself bound to take blood-revenge, just as if he were a relative. Thus the 'guest,' by means of the protection of a family and the θεοὶ πατρῷοι which guard it, is rendered inviolable. Now, the more the intercourse between tribes is extended, and the more they all learn to look up to Zeus, the great father of gods and men, the more does he also take over the task of protecting the stranger who is already, in a certain sense, sacred, and so Ζεὺς ξένιος takes his rise. That this is a comparatively late process is expressed by this very epithet, which appears very seldom in the Homeric language, in comparison with the countless number of attributes referring to the physical or natural powers of the god (cf. above, p. 34).

Not only did the 'heavenly ones' become the guardians of moral ordinances which were present in human society from the earliest times or had arisen at a later date, but there were evolved from their cult moral ideas previously unknown. This side of the relation between the gods and morality can be illustrated from the history of the idea of chastity.

That there was anything of the nature of this idea in primitive Aryan times must, in view of ascertained facts, be regarded as well-nigh impossible. Unlimited sexual intercourse with concubines and slaves besides his wife was allowed to the husband. The wife was, it is true, bound to conjugal faithfulness on pain of death; but the circumstance that the husband, in case of his own sexual impotence, could hand her over to a 'helper in generation' or could place her at the disposal of an honoured guest, shows that less value was laid on her sexual chastity than on the unlimited possession of her, which could occasionally be surrendered. As far as the condition *before* marriage was concerned, it is to be feared that Herodotus with his description of the Thracians: τὰς δὲ παρθένους οὐ φυλάσσουσι, ἀλλ' ἐῶσι οἷσι αὐταὶ βούλονται ἀνδράσι μίσγεσθαι (v. 6) comes nearer the true state of affairs in antiquity than Tacitus with his well-known glorification of ancient Teutonic chastity (cf. *Reallexicon*, artt. 'Ehebruch,' 'Keuschheit,' 'Zeugungshelfer,' 'Gastfreundschaft'). In addition, what a mass of indecent customs, or which at least seem to us indecent, are to be found in primitive times! In Rome a god *Mutunus Tutunus* (cf. above, p. 32) was worshipped, whose name was derived from the male and female sexual organs (*mutto* and *titus*). The newly married bride was placed on his *fascinum*. The amulet was called *muttonium* (from *mutto*). The Lithuanian youth sacrificed to a god *Pizius* (from Lith. *pisti*, 'coire') when they brought the bride to the bridegroom. Even the 'chaste' Teutons too, according to the report of Adam of Bremen, worshipped at their marriage festivals their god *Fricco* under the symbol of an immense *priapus*.

If, in contrast to this undisguised and brutally emphasized idea of sex, we examine the terminology of the conception 'chaste' in the separate Aryan languages, viz. Gr. ἁγνός (cf. ἅγιος 'holy,' ἅζομαι 'I fear'), Lat. *castus* (cf. *castum*, 'the sacred festive season of a deity, during which much restraint was enjoined,' *castimonia*, 'bodily purity which is demanded for religious ceremonies, the restraint from sensual enjoyments'), Goth. *swikns* (ἁγνός, ὅσιος, ἀθῷος), O. H. G. *chûski*, *scûski* (perhaps *sciuhen* 'to fear'), we find as a result that this conception in all probability has *its root in sacred soil*. In the worship of the 'heavenly ones,' the idea must first have occurred that it was fitting at definite periods, in order to draw near to the gods 'in purity,' to abstain from cohabitation* and other pleasures of the senses. An interesting pamphlet in this connexion is Eugen Fehrle, *Die kultische Keuschheit im Altertum*, i., Naumburg, 1908. It is, however, not unlikely that the whole teaching on religious purity, of which sexual purity forms only a single branch, is not native to Aryan soil (cf. *Reallexicon*, art. 'Reinheit und Unreinheit').

The connexion of the 'heavenly ones' with law and morality, thus briefly described, was, as we saw above, considerably promoted by the priests and priestly bodies that were always coming more clearly to the front among the individual peoples. For they believed that in representing all the rules of law and morality prevalent on earth as the outcome of heavenly ordinances, and themselves as the appointed interpreters of the same, they were most effectively serving the interests of the 'heavenly ones,' of mankind, and of themselves.

If in this way we are correct in our contention that in primitive Aryan times the bond of connexion between the 'heavenly ones' and the morality of mankind was very weak, we must not omit, at the close of our discussion of this topic, to call attention to the theory recently propounded by Leopold v. Schröder (cf. *Verhandlungen des II. internationalen Kongresses für allgemeine Religionsgeschichte in Basel*, 1905, p. 89). He holds that, like other primitive peoples, the primitive Aryans not only cherished animism and ancestor-worship, but already possessed the belief in one supreme benign being. This

* This does not exclude the possibility that certain rules of continence, as, *e.g.*, the demand occurring among the Indians and Teutons to preserve continence some time after marriage, had as their object the turning aside of magic influences, such as the entrance of evil spirits into the body of the woman at the consummation of the nuptials (cf. Oldenberg, *Die Religion des Veda*, p. 271, and L. v. Schröder, *Die Hochzeitsbräuche der Esten*, etc., Berlin, 1888, p. 193).

being came in the course of pre-historic times to be combined with the primitive god of the sky, Dyaus, Ζεύς, etc. (cf. above, p. 33). We shall wait with interest to see what grounds L. v. Schröder is able to bring forward in support of this contention, which, to us at least, seems very daring.

III. *FATE.*—More even than by questions concerning the origin and relation of life and death, or by reflexion on the nature and descent of the heavenly gods, has the mind of man from remotest antiquity been exercised by the gloomy power which mysteriously surrounds him from the cradle to the grave, and which we call 'fate.' The souls of ancestors or the spirits that reveal themselves in the powers of nature can be reconciled and made serviceable to man. But inaccessible and incomprehensible seems to be that unknown power which appears ever to lavish its smiles on one and to bear an everlasting grudge against another, and which without distinction overwhelms with weal or woe 'now the curly-headed boy in the innocence of youth, now the grey-haired sinner in the guilt of old age.' Only rarely, and at certain late stages of its development, do we find in paganism the thought in which the Christian finds peace of soul—the thought, namely, that in reality God and fate are one and the same. Before that, however, mankind had proposed other solutions of the dark problem. What are these? Again the Christian, in his confidence in the unity of God and fate, and in the certainty that all that befalls him, as being sent from God, must be for his best here and hereafter, declines the attempt to probe the unsearchable will of God by human means. On the other hand, there runs through the whole of heathenism an irrepressible longing, appearing in a more intense degree the further back we go in point of time, to penetrate with inquisitive and premature vision into the dark land of the future, to tear the covering from the veiled picture. In what ways was this attempted?

Thus there are *two* questions which we have here to consider in reference to primitive Aryan times: 'What idea did they entertain of fate?' and 'How did they seek to divine the future?'

1. The conception of fate.—In this discussion we shall start from a famous passage in the *Iliad* (xxii. 208 ff.). Achilles has pursued Hector three times round the walls of Troy:

ἀλλ' ὅτε δὴ τὸ τέταρτον ἐπὶ κρουνοὺς ἀφίκοντο,
καὶ τότε δὴ χρύσεια πατὴρ ἐτίταινε τάλαντα,
ἐν δ' ἐτίθει δύο κῆρε τανηλεγέος θανάτοιο,
τὴν μὲν Ἀχιλλῆος, τὴν δ' Ἕκτορος ἱπποδάμοιο,
ἕλκε δὲ μέσσα λαβών· ῥέπε δ' Ἕκτορος αἴσιμον ἦμαρ.

The expressions that are of interest to us here are, first of all, the *κῆρε*, which are laid by Zeus on the balance of fate, and, secondly, the *αἶσα* involved in the *αἴσιμον ἦμαρ*. A synonym of *αἶσα* is *μοῖρα*, which is not mentioned here, but which is identical with it, representing the power that moves the balance of fate. As far as the word *κήρ* is concerned, we have seen its exact meaning at an earlier stage (cf. above, pp. 15, 27), where we were speaking of the driving away of the spirits designated as *κῆρες* on the occasion of the Anthesteria festival in Athens. *κήρ* is, accordingly, the soul, or better, *a* soul of man, for Tylor (i. 427 f.) has shown us that belief in the existence of several souls in the human body is widely prevalent. The soul designated by the term *κήρ* is specially regarded as the bearer of the fate of death to men, whether that death be peaceful or fraught with violence (cf. *Il.* ix. 411). Every man is invested at birth with such a *κήρ*, in consequence of which there are *μυρίαι κῆρες* (*Il.* xii. 326 f.). But every people as well, in so far as it is thought of as an individual, *e.g.* the Trojans or the Achæans (*Il.* viii. 69 ff.), possesses such a *κήρ*; and the word is finally used, and that, too, very frequently, as a personification of the goddess of death, Κήρ, the daughter of the night, whose brethren are Μόρος, Θάνατος, Ὕπνος, and the φῦλον Ὀνείρων, 'the people of dreams' (cf. Hesiod, *Theog.* 211 ff.). A series of ideas from the north of Europe comes more or less near to this Old Greek conception of *κήρ*. In the first place, the Old Norse figures of *fylgja* must be mentioned. Their identity with the human soul follows at once from the circumstance that the expression is interchangeable with the above-mentioned Old Norse *hugr*, 'soul' (cf. p. 15, and also W. Henzen, *Über die Träume in der altnordischen Sagalitteratur*, Leipzig, 1890, p. 36). They are called 'followers,' because the soul, like the *ψυχή* in Greece, follows the man as his second 'self,' his *εἴδωλον*. They often appear to the dreamer as animals (birds, horses, fishes, wolves, lions, white bears, boars, hares, oxen, goats); and if they appear, they announce certain ruin. As there was a *κήρ* of the Trojans and the Achæans, so among the old Norsemen there was a *kyn-* or *ættarfylgja*, i.e. a *fylgja* of the tribe; and, as was the case with the *κῆρες* (cf. *Il.* ix. 411), a man could have several *fylgja*. On the other hand, the latter word has a wider signification in so far as it designates the guardian spirit of the man generally. The latter is also the meaning of the Old Norse *hamingja*, 'the many-formed' (Old Nor. *hamr*, 'form'), in like manner a designation of the human soul taken from its capacity of transforming itself, for the *hamingja* appear frequently as animals or as women. Especially characteristic is their hereditary transmission in the family, passing over from father to son, and so on. They appear first as giant women, offspring of the Norns, who are the *hamingja* of the world (cf. Vigfusson, *Icelandic-Eng. Dictionary*, Oxf., 1874–76, p. 236). Finally, we may mention the characteristic features of the southern Slavonic *vjedogonya*, who are conceived of partly as spirits of the house and partly as guardian spirits dwelling in each man. Probably their name (Slovenian *vjetrogonja*) is connected with Old Slav. *vĕtrŭ*, 'wind,' in which case the wind-like nature of the soul would be indicated (cf. F. S. Krauss, *Sreća, Glück und Schicksal im Volksglauben der Südslaven*, Vienna, 1886, p. 19 ff.).

We have thus made acquaintance with a series of souls of fate and souls of fortune, a knowledge of which will assist us in the following consideration of *αἶσα* and *μοῖρα*.

Both of these words signify not only etymologically (*αἶσα* from **aiqia*: Lat. *æquus*; *μοῖρα*: *μέρος*, *μείρομαι*, *εἵμαρται*), but also in actual usage, nothing more in the first instance than 'share' without any reference to fate, and then the share assigned by fate to every individual man at his birth (*ὅτε μιν τέκε μήτηρ*) (*Il.* xx. 128; *Od.* vii. 198). Thus they correspond exactly to the Slavonic expressions, Russ. *časti*, 'part,' 'lot,' 'fate,' *sčastie*, 'fortune,' *nesčastie*, 'misfortune' (**čensti*: Gr. *σχίζω*, Lat. *scindo*, lit. 'the part split off,' 'the share'), and *dolja*, 'part,' 'portion,' *nedolja*, 'misfortune' (Old Slav. *dola*, *dělŭ*, 'part,' Goth. *dails*).

This 'share' is, according to the popular Slavonic idea, innate, and it is natural to make the mother responsible for it if one is dissatisfied with his 'share' (cf. A. N. Veselovskij, 'Fate in the popular thought of the Slavs,' in *Trans. of the Imperial Academy of Science in St. Petersburg* [Russ.], xlvi. 173 ff.). There is thus a slight distinction between *μοῖρα* (*αἶσα*) and *dolja* (*časti*), in that the former is received *at* birth, the latter *by* birth. The latter idea, however, is proved to be the more ancient from the circumstance that among many Aryan peoples, in connexion with the assignation of fate to the separate individuals, there are deities who

are designated as 'mothers' or 'child-bearers.' On Slavonic soil this is true of the Old Slav. *roždanicy* (*roditi*, *raždati* 'parere,' *roždenije*, 'generatio,' *roždenica*, 'nativitas,' 'obstetrix, 'matrix,'' mater,' 'generatio'), deities to whom, just as to the Perun and the Rodŭ, *i.e.* the personifications of the clan, sacrificial offerings of bread, cheese, and honey were offered. At the present day among the Bulgarians of the Rhodope mountains the woman in child-bed is called *roždenica*, but among the Slovenians and the Horvatians the women of fate are called *rodjenice* or *rojenice* (cf. Krauss, *op. cit.* p. 118 f.). Among the Greeks, the Εἰλείθυιαι, the goddesses of travail, are to be mentioned in this connexion. They occur in intimate alliance with the Μοῖραι (cf. Preller, *Griechische Mythologie*[4], i. 512). Among the Romans, we must note the *Parcæ*, whose name (*Par-ca: pario*, cf. similar formations in Brugmann, *Grundriss*[2], ii. 1, p. 476 f.) stamps them as 'child-bearers' (so also Wissowa, p. 213). Would it not be possible also to find in this way a better explanation of the puzzling Celto-Teutonic cult of the 'mothers' (*matronæ*, *matres*, *matræ*) than has as yet been suggested? Thus the mothers originally bring forth his fate to man, or, having become goddesses of fate or even fate itself (Old Slav. *roždenica*,* 'εἱμαρμένη,' cf. also *Archiv f. slav. Phil.* xiv. 137 ff.), they 'impart' it to him at birth, for which reason they are not infrequently called 'imparters.' Such designations are the Bulgarian *urisnicy* (from Gr. ὁρίζειν), the North Russian *udělnicy* (from *uděljati*, 'to impart'), which—an important fact for the subsequent consideration—have developed into spiteful spirits of nightmare, who torment women in labour, drag the children prematurely out of the womb, cause convulsions, etc. The Gr. Νεμέσεις (from νέμομαι 'impart') have also, in all probability, a similar origin, although at an early date they, along with the Erinyes, came to be known as avenging and punishing goddesses of fate. What these women of fate allotted to the newborn child in the decisive hour is designated not only as the 'share' (cf. above, p. 52), but also in three other ways: (1) as that which is 'spoken' by them (Lat. *fātum*† [from *fāri*], Russ. etc. *rokŭ*: O. Slav. *reką*, 'I say'); (2) as that which is 'spun' by them (Old Nor. *urþr*, A. S. *wyrd*, O. H. G. *wurt*; cf. O. H. G. *wirt*, *wirtel*, 'spindle'); for next to bearing children it is fitting for the Aryan woman and the women of fate (cf. Gr. κλῶθες) to engage in spinning (cf. on this Veselovskij, *op. cit.* p. 210; otherwise R. Much, *Mitteilungen der anthrop. Gesellschaft in Wien*, xxxviii. p. 16); and (3) as that which is 'decreed' by them (Old Nor. *ørlǫg*, A. S. *orlæg*, O. H. G. *urlag*, Russ. *sudiba*, 'judgment').

We have up to this point become acquainted with the women of fate as 'mothers' and as 'imparters.' This, however, does not by any means exhaust the enormously rich terminology belonging to them in the Aryan languages. In the Scandinavian North they are also called *nornir* and *díser*. The etymology of the former expression has not yet been explained. The latter, however (cf. Goth. *filu-deisei* 'cleverness'), is equivalent to 'wise women,' undoubtedly in the same sense as French *sage-femme*, since their help is called for by those in labour (cf. 'The Song of Sigrdrifa,' 9). Thus here, too, the women of fate stand in the most intimate relation to the birth of man. From the Slavonic region we may also mention the Bulgarian *narąčnici* and the Servian *sudnice*, *sugjenice*, both so called from the *rokŭ* and *sudŭ* = *sudiba* (see above) which they announce. From Lithuania the *laumė* (of unknown derivation) must also be mentioned. The most important phenomenon for us, however, is to be found in the fact that in many regions the conceptions of division, fate, fortune, etc., at first abstract, show a strong tendency to become transformed into beings regarded as persons. This is true in particular in Polish and Little Russian of the *dolja* mentioned above, in Servian of the *sreća* (cf. Krauss, *op. cit.*), a word which literally means 'coming-together,' 'meeting' (*sŭ* + √*rět*). In Latin, from the *fātum*, as we saw above, the 'word spoken' (by the Parcæ), we have evolved, particularly on Celtic soil, the demons of fate designated by the name *fati* and *fata*, the latter of which became Old French *feie*, M. H. G. *feie*, German *Fee* ('fairy'). The same process went on also with regard to the Greek αἶσα and μοῖρα 'portion of fate,' to the consideration of which we now return. It is well enough known how both have evolved into personal powers of fate, Aisa being thought of only in the singular, Moira being also used in the plural (cf. Preller, *Griech. Myth.*[4] i. 530). The Moiræ, as is well known, play a specially important part in the life of the common people of Greece even at the present day, and it is not unlikely that primitive features of ancient Greek life are here preserved (cf. B. Schmidt, *Das Volksleben der Neugriechen*, i. 210 ff.). Besides the form μοῖρα, there is also a masculine form μόρος, Μόρος 'fate,' especially 'misfortune,' to be mentioned. Now all these forms lead back to an Aryan **moro—*moria* (perhaps on account of εἵμαρται, εἱμαρμένη there was a form in the primitive language equivalent to this, viz. **smoro—*smoria*), which corresponds phonetically to the primitive Teutonic names of the demons of the nightmare, O. H. G. *mar*, *mara*, Old Nor. *mara*, A. S. *mære* (= **moria*, μοῖρα); the terms most nearly connected with these in the North of Europe we have already discovered (p. 15, above). Since then, on the one hand, we have just seen, in the Russian *udělnicy*, spirits of fate becoming spirits of the nightmare, and, on the other hand, Laistner (*Rätsel der Sphinx*, ii. 342 ff.) has shown in detail how many spirits of fate and fortune have their origin in demons of dreams and nightmares—which is easily understood from the close connexion between the spirits of the departed and those of fate on the one hand, and the phenomena of the departed soul and those of dreams (nightmares) on the other—we need not hesitate to assume in the Gr. μοῖρα (= A. S. *mære*) the existence of a group of primitive Aryan words bearing the meaning of the share allotted to man by fate, which was either innate or bestowed at birth. From this group beings were evolved who in Greece became spirits of fate, while in Teutonic countries they were rather spirits of oppression, although, even in the latter case, their connexion with fate could not be concealed.

The details given above prove that *the faith of the Aryan peoples was permeated by a deeply fatalistic trend of thought.* The fate of each individual is born with him, transmitted by his mother, or is bestowed upon him at the hour of birth by spirits who at first have nothing to do with the heavenly gods, but much with the realm of departed souls. It was only gradually that the more advanced idea came to the front which united fate to the immortal gods; and where this idea appears, it is still in conflict with the older conceptions. This is the case in Homer. Now Zeus is subject to Moira, and again he takes her place as

* The report of Procopius (*de Bell. Goth.* iii. 14), that the Slavs did not know the εἱμαρμένη, must, with Veselovskij (*op. cit.* p. 174), be understood to mean that *at that time* they had still no abstract *Fatum*, but knew only beings or deities of fate.

† According to Wissowa (p. 213), Lat. *fātum* was only a 'translation and interpretation' of the Greek αἶσα, which, however, cannot be correct, seeing that *fātum* means 'that which is spoken' and αἶσα 'share,' as we saw above. *Fātum*, like *Parcæ*, must have been a living religious conception among the people.

he 'spins out' to men their fortune (*Od.* iv. 208). That this latter idea could only at a later date have been transferred to Zeus, follows at once from the metaphor of 'spinning' (above, p. 53). This figure is exceedingly far removed from the activity of the highest god of the heavens, and it finds a satisfactory explanation only in the primitive cycle of ideas regarding mothers and women of fate. Thus we may hold that the belief which finds expression in the oracular responses, in Herodotus, and—at least very often—in the tragedians, the belief, namely, in a supreme law of the universe, the Moira, which rules over gods and men and from which none can escape, represents the ancient condition of popular thought from which the Homeric world had begun to raise itself, just as it did in other religious matters, *e.g.* burning of corpses instead of burial, disappearance of gifts to the dead and of a real ancestor-worship, realms of the dead, Hades and Elysium, etc. (cf. above, I. 4). In this way it was possible for demons of fate to become immortal gods. An instance of this evolution is afforded by the Greek δαίμων. The word, probably connected with δαίομαι 'I divide,' signifies the 'divider,'* and as it is used by the oldest tragedians (*e.g.* Æschylus, *Persæ*, 620) to indicate the soul or the shade of some dead person, and by Hesiod (cf. Rohde, *Psyche*², i. 146) in the sense of glorified human souls, we see that δαίμων is originally one of the many spiritual beings that determine the fate of individual human beings *in bonam* and especially *in malam partem*. These ideas prevail also in Homer; but in addition δαίμων is a common name of the immortal gods, because, according to the belief which gradually came into favour, they were responsible for the decrees of fate. This fatalistic trait of the Aryan religions has in Europe been most faithfully preserved by the Slavs (cf. Krauss, *op. cit.* p. 89 ff. 'Gott und das Schicksal'). Nor is this merely a matter of accident. Of all the Aryans, the Slavs are the race that remained nearest the original home, and are thus the last to enter into history. Nothing, however, frees the soul so certainly from the dull depression of fatalistic ideas as the great deeds of historical life.

2. The divining of the future.—A primitive Aryan expression for this important idea is to be found in the series of terms: Lith. *saitas*, 'interpretation of signs,' *seitones*, 'interpreters of signs,' Old Nor. *seiþr*, 'a particular kind of magic for investigating the future,' Middle Welsh *hut*, New Welsh *hûd*, 'præstigiæ,' Old Corn. *hudol*, gloss. *magus* = Gr. οἶτος (Ionic for *αἶτος), 'fate' or 'misfortune.' A complete account of all the means used by the Aryan peoples to divine the future cannot be given here; still, we shall prove that among the Lithuanians and Prussians, from whom we have so often started in this discussion, the great majority of all kinds of divination practised among all the separate Aryan peoples is also to be found. The Baltic tribes, of whom Peter of Dusburg reported: 'Prutheni raro aliquod factum notabile inchoabant, nisi prius missa sorte secundum ritum ipsorum a diis suis, utrum bene vel male debeat eis succedere, sciscitentur' (*Script. rer. Pruss.* i. 54), come once more (cf. above, p. 31 f.) nearest to the Romans, of whom Cicero reports in almost identical terms: 'Nihil fere quondam maioris rei nisi auspicato ne privatim quidem gerebatur' (*de Div.* i. 28). For the most detailed account of this topic we are indebted to the repeatedly mentioned work of Matthæus Prætorius, *Deliciæ Prussicæ, oder Preussische Schaubühne* (ed. by W. Pierson, Berlin, 1871), in which the 'waidlers' (cf., p. 43, above) of the ancient Prussians, experienced in divination, are enumerated, and upon which we shall base the following discussion.

* This explanation seems more likely than the one previously given by the author in his *Reallexicon*, p. 29 f.

(*a*) *The flight and the cries of birds.*—'*Lekkutones* (cf. Lith. *lekiù* 'I fly') were the persons who observed the cries and the flight of birds and predicted future events from them, also called *Paukstutiei* (cf. Lith. *paûksztis*, 'bird'). Eagles, ravens, hawks were regarded by them as birds of strife; the kite as well as swallows, owls, and bees brought harm and fire. On the other hand, storks, herons, woodpeckers, nightingales, and pigeons were omens of good fortune' (Prætorius, p. 43). 'A *lekkutons*, or bird-diviner, when he is to prophesy, dresses in white, takes a sacred *krywule*, *i.e.* a crooked staff, in his hand, goes to a *pillukstis*, *i.e.* a mound of earth, prays with his face to the east, and waits till a bird comes' (Prætorius, p. 48). It is in accordance with this custom that in almost all the Aryan languages the words for 'bird' mean at the same time bird-omen and omen generally; cf. Skr. *śákuna* (*śâkuna* 'the science of interpreting the flight of birds'), Gr. οἰωνός and ὄρνις, Lat. *auspicium* from **avi-spicium*, and probably also *augur* from **avi-gur* (the second part of the word is still obscure), O. H. G. *fogalôn* 'auspicari'; *fogal*, *fogalrarta* 'auspicium,' 'augurium' lit. 'bird's-cry' (Goth. *razda*, 'cry'), Old Slav. *kobĭ*, 'augurium'; Czech *koba*, 'raven' (for a more detailed list see *Reallexicon*, artt. 'Orakel' and 'Rechts und links'). We see how closely the Litu-Prussian *lekkutons*, even in details, corresponds to the Roman *augur*, who in the same way, armed with a crooked staff (*lituus*), mounted the citadel, and, generally with his face turned to the east, observed the sky. It is noteworthy that the dove, among the Prussians, was a bird of good omen, although it generally announced death and misfortune.

(*b*) *The appearance of the sky and natural phenomena.*—'*Swaigsdunĭnis* (cf. Lith. *žwaigżdě*, 'star') was a star-gazer' (Prætorius, p. 42). '*Orones* (cf. Lith. *óras*, 'air,' 'weather') observed the sky and predicted its changes' (Prætorius, p. 43). '*Wejones* (cf. Lith. *wėjas* 'wind') watch the winds, change the weather, and are still to be met with in Nadravia' (Prætorius, p. 44). '*Wanduolutti*, *item Udones* (cf. Lith. *wandů*, Skr. *udán*, 'water') are water-diviners, who divine from the foam, waves, etc. Of these there are different classes' (Prætorius. p. 45). It is enough to refer to the *de cælo servare* of the Roman magistracy, the *cælestia auguria*, as well as the report of Plutarch (*Cæsar*, c. 19) regarding the Teutonic sacred women: αἱ ποταμῶν δίναις προσβλέπουσαι καὶ ῥευμάτων ἑλιγμοῖς καὶ ψόφοις τεκμαιρόμεναι προεθέσπιζον.

(*c*) *Sacrifice, entrails, and blood.*—'*Widdurones* (cf. Lith. *widuriai*, 'entrails') were soothsayers who could predict the future from the entrails of the animal sacrificed to the gods. At the present time several of the inhabitants of Nadravia, on examining the spleen, liver, etc., of a pig, are able to say what kind of a winter it will be, what kind of a crop, whether the early or the late seed will thrive. *Kraujuttei* (cf. Lith *kraũjas*, 'blood'), who could predict good or evil fortune from the blood of men and cattle, from the way it flowed, from its colour and changes, and who prophesied also from the menstrual blood of women, were the *medici* of the ancient Prussians. At the present date, in Nadravia we find *kraujutten* who let blood from the veins, suck it by means of a small horn, and tell from the taste whether the person will remain in good health or not. Before they suck, they murmur a few words indistinctly' (Prætorius, p. 43 f.).

In the south, the Greek ἱεροσκοπεία and the Roman *haruspices* correspond to these. It is generally believed that in these phenomena we have to deal with an oracular custom which was introduced at a comparatively late date from foreign sources (into Italy from Etruria), but it is not in accordance with this view that the Latin word *haruspex* with *hariolus*, *fariolus*, has been formed from a primitive root no longer extant in any Italian language (**haru-* 'entrails,' Old Nor. *gorn*, pl. *garnar* 'bowel,' 'bowels,' 'entrails,' Skr. *hirấ*, 'bowel'). It is also worthy of mention that in the Prussian reports the *liver* is emphasized as especially significant for oracular purposes, while in Greece it is regarded particularly as the seat of soothsaying (cf. K. F. Hermann, *Lehrbuch der gottesdienstlichen Altertümer der Griechen*², p. 242). In the same way among all Aryan tribes the blood of men and animals was regarded as a means of foretelling the future. Who does not remember the white-haired priestesses of the Cimri, who, according to Strabo (vii. p. 294), prophesied over a kettle of the blood of slaughtered prisoners of war? Cf. also Old Nor. *hlaut* 'sacrificial blood' = Goth. *hlauts* 'lot.'

(*d*) *Ominous meetings.*—'*Sweruttei* (cf. Lith. *žwėris*, 'game') prophesy from game. If a hare, wolf, ass, toad, lizard, or locust appears, it signifies misfortune' (Prætorius, p. 48). Cf. also the Galician-Volhynian chronicle of the Hipatios manuscript (A. Brückner, *Archiv für slav. Phil.* ix. 3): 'Still his conversion (*i.e.* of Mendowej) was not genuine; he was wont to sacrifice secretly to his gods, to *Nĕnadĕj*, *Teljawel*, *Diwerix*, and the hare-god *Mĕjdĕjn*; if when he rode out in the fields a hare rose, he would not enter into the thicket or dare to break off a twig, and he sacrificed to his gods, burned the corpses of the dead, and openly practised his paganism.' 'To meet a snake is still a good omen to the old Prussians and the Lithuanians' (Prætorius, p. 37). As far as the other Aryan peoples are concerned, it must suffice to call attention to the monograph of P. Schwarz, *Mensch und Tier im Aberglauben*, Celle, 1888. But we must specially bear in mind in Roman territory the information contained in Festus (ed. Müller, p. 244) on 'Pedestria': 'a vulpe, lupo, serpente,* equo, ceterisque animantibus quadrupedibus fiunt

* Also by Joh. Lasicius (*de Diis Samagitarum*, p. 51: 'nutriunt etiam quasi deos penates nigri coloris obesos et quadrupedes

(auspicia),' and p. 260 on 'Quinque': 'signa quæ augures observant ex quadrupedibus.'

(*e*) *The rustling of the oak.*—'Præexcellentes arbores, ut robora, quercus, deos inhabitare dixerunt, ex quibus sciscitantibus responsa reddi audiebantur, ob id nec huiuscemodi arbores cædebant, sed religiose ut numinum deos colebant' (Erasmus Stella, 'de Borussiæ Antiquitatibus,' ii., in Grynæus, *Novus Orbis*, Basel, 1537, p. 581). Cf. *Od.* xiv. 327 f.:

τὸν δ' ἐς Δωδώνην φάτο βήμεναι, ὄφρα θεοῖο
ἐκ δρυὸς ὑψικόμοιο Διὸς βουλὴν ἐπακούσῃ,

and Æschylus, *Prom.* 830 ff.:

ἀμφὶ Δωδώνην, ἵνα
μαντεῖα θᾶκός τ' ἐστὶ Θεσπρωτοῦ Διός,
τέρας τ' ἄπιστον, αἱ προσήγοροι δρύες.

(*f*) *Fire and smoke.*—'*Swakones*, those who observe the signs of a burning light and its smoke, from *swake*, "a burning light," are called *Dumones*, from *dumai*, "smoke"' (Prætorius, p. 43). 'Illi (the fire-priests, cf. above, p. 44) noctu ad ignem accedebant, mane vero consulentibus responsa dantes umbram ægroti (the question is about predicting the future in the case of illness) apud ignem sacrum se vidisse aiebant, quæ cum se calefaceret, signa vel mortis vel vitæ ostentasset: victurum ægrotum faciem ostensa igni, contra si dorsum ostentasset moriturum portendit' (Jerome of Prague). Cf. the Greek μαντικὴ ἐξ ἱερῶν or ἐμπύρων (K. F. Hermann, *op. cit.* p. 241). Thus, *e.g.*, Prometheus boasts in Æschylus, *Prom.* 498: καὶ φλογωπὰ σήματα ἐξωμμάτωσα, πρόσθεν ὄντ' ἐπάργεμα. But here we have to deal with prophetic utterances from the *sacrificial fire*, a custom which, as we saw above (p. 41) was unknown to the Prussians and Lithuanians.

(*g*) *Dreams.*—'*Sapnonei*, *i.e.* dreamers, from *sapnas* (*sāpnas*), "a dream": interpreters of dreams are to be found especially among the women' (Prætorius, p. 47). Cf. Gr. ὀνειροπόλος, 'interpreter of dreams' (see K. F. Hermann, *op. cit.* p. 239).

(*h*) *Prophetic utterances at marriages.*—'*Swalgones* are bride-examiners, 'waidlers,' who attend at the betrothal and prophesy. They also arrange the *swalgus* (Lith. *žvalgai*, 'bride-inspection'), *i.e.* the betrothals. *Swalgauti* signifies literally 'to behold.' They interpret from all kinds of things, *e.g.* from the pouring, as either the bridegroom or the bride pours beer into the other's eyes. Such customs are still to be found' (Prætorius, p. 46). Cf. Servius, i. 346: 'secundum Romanos locutus est, qui nihil nisi captatis faciebant auguriis et præcipue nuptias'; iv. 45: 'nuptiis enim captatis fiebant auguriis . . .'; iv. 166: '. . . ideoque auspices deliguntur ad nuptias.'

But, with all these the number of the Prussian 'waidlers' engaged in separate branches of divination is far from being exhausted. There was also a *Waszkonis* (*wāszkas*, 'wax'), *i.e.* a diviner who studied wax moulds; further, there were *Swinawatzei* (*swinas* 'lead'), or lead-moulders; *Puttones* (*putà*, 'foam'), 'those who observed signs in the foam of the beer'; *Seitones* (see above, p. 54), who prophesied life or death from charms bound round the necks of men or animals; *Sietones* (*sëtas*, 'sieve'), 'those who acquired information from the turning of a sieve'; *Stiklorei* (*stiklas*, 'glass'), *Zerkoluttei* (*zerkolas*, 'mirror'), and *Zolininkai* (*žolė*, 'plant'), who predicted the future from glass, mirrors, plants, etc. It would not be difficult to find parallels to these kinds of divination among the other Aryan peoples. On the other hand, there were several kinds of oracles attested among other peoples which have not yet been discovered in the Prusso-Lithuanian sources. Such are the *tree-oracle*, or oracle of the tree-lots (cf. *Reallexicon*, art. 'Los'), which is found among Scythians, Teutons, and Celts, and also in indistinct traces among the Greeks and Romans; the significance of monsters as foretelling misfortune (cf. *Reallexicon*, art. 'Orakel'); the *horse-oracle*, found among Iranians and Western Slavs (cf. V. Hehn, *Kulturpflanzen*, p. 44); and also the peculiarly Roman '*signa ex tripudiis*.' Still, the horse was also looked on as sacred among the Lithuanians (Peter of Dusburg: 'aliqui equos nigros, quidam albos vel alterius coloris propter deos suos non audebant aliqualiter equitare'); and also hens, which were regarded as inviolable, were attended to in the houses, and their chickens under certain circumstances were understood to foretell misfortune (Lasicius, p. 48: 'nato cuiusvis generis vel cocco vel debili pullo actutum sedes mutantur').

The facts respecting divination here set forth can be regarded only as characterizing, and can in no way be supposed to exhaust, the enormous number of customs of this class. And they will arouse deeper interest if we can only succeed in discovering the *motives* by which this proceeding, viz. divining the future, which seems so absurd to us, is to be explained. Ihering (*Vorgeschichte der Indoeuropäer*, Leipzig, 1894, p. 441 ff.) is, so far as the present writer is aware, the only one who, although confining himself to the practice of taking the auspices among the Romans, has dealt with this fundamental and central question in detail. He begins with the undoubtedly correct idea that the supposition that auspices of this kind revealed the will of the heavenly gods is secondary and transmitted, and that every attempt to connect divination with higher religious ideas is quite valueless. He himself, accordingly, seeks to deduce the origin of oracular divination from purely practical grounds. Thus, according to his opinion, the oracle from birds (*signa ex avibus*) takes its rise from the observation of the birds of passage which showed the Aryans in their migrations the passes of the mountains, the courses of the streams, and the islands in the ocean which invited them to rest. The inspection of the entrails (*signa ex extis*) is explained from an examination which was made of animals of an unknown region to see if their entrails were healthy, and consequently whether the fodder of the land was satisfactory, etc. Thus we should obtain the remarkable result that this divination becomes the more sensible the further back we go in primitive times. No one will hesitate to conclude that the solution proposed by Ihering cannot be the correct one, no matter how difficult it may be to show it to be impossible in detail. No one, however, who considers with unprejudiced mind the material presented will fail to observe that the whole conception of divination does not rest on a basis of rational consideration, but has its roots in the childlike, dream-encircled, and imaginative mental condition of primitive man. Τὸ γὰρ εἰωθὸς οὐ τέρας, says Theophrastus (*de Plantis*, v. 3); and in this short sentence we have the key, or at least one key, to the understanding of oracular divination. For primitive man only the smallest part of his inner and outer life is εἰωθός. Everywhere wonders and signs terrify him. The phantoms of his dreams, and especially those of the horrible nightmare * which, in the rooms of primitive times, filled with noxious charcoal fumes, must have been very frequent (cf. Höfler, *Centralblatt für Anthropologie*, vi. 1), are realities to him. In the plants and animals, in the stones and stars, there live, as in men's own bodies, souls to which, as we saw above, fate is united. Can we be surprised, then, that in the world of dreams, in the rustling of the trees, and in the flight of birds, the shadows of the future were supposed to hover mysteriously round the life of man? This anxious, timid, and nervous condition of primitive mental life called to its aid the art of priestly diviners, who—deceived deceivers—were always devising new means of obtaining some mysterious message with regard to the future. Their profession, however, always rests in the end on one fundamental thought, namely, on making the probability or improbability of a future event dependent on the incidence of another occurrence which was independent of human volition, such as the approach of a four-footed animal or a bird, a flash of lightning, hearing the sound of animals or the human voice. All this had, originally, nothing to do with the heavenly gods, and it is only at the close of a long process of evolution that we find the Roman *auspices* announcing the will of Juppiter or Pythia, and prophesying in the name of Apollo.

CONCLUSION.—It has been our aim—and nothing else was possible—to present, in this discussion regarding the religion of the Aryans, not the opinions and the usages of a perfectly definite and distinct period of antiquity, but rather a *series of developments* in the history of religion taking place on the soil of primitive Aryan peoples. These developments depend on more or less deeply-rooted pre-historic connexions,

quosdam serpentes') snakes are considered as quadrupeds. This settles the doubt expressed by R. v. Ihering (*Vorgeschichte der Indoeuropäer*, p. 444 f.) with regard to the passage of Festus quoted above.

* Cf. L. Laistner, *Das Rätsel der Sphinx, Grundzüge einer Mythengeschichte*, Berlin, 1889, and H. Roscher, 'Ephialtes, eine pathologisch-mythologische Abhandlung über die Alpträume und Alpdämonen des klassischen Altertums,' *Abh. d. kgl. sächsischen Ges. d. W.*, phil.-hist. Kl. xx., 1900.

and lead to more or less distant epochs of primitive antiquity. Thus there have appeared different strata, lower and higher, overlapping each other in the historic development of the religion.

If at times we have assumed that these higher and lower strata of religion were to be found side by side at the same time and among the same people, such a supposition will not astonish any one who remembers that even among our own countrymen the purest religion and the darkest superstition are to be found existing side by side.

This series of developments has been obtained by a comparison of words and customs confined to the Aryan languages and peoples. Our intention has been to give the features of a comparative history of Aryan religions, not a comparative history of religions generally. At the same time, we by no means wish to underestimate the advantages of the latter discipline. On the contrary, we are indebted to it for a series of general stages in the evolution of the religious consciousness, which are also of great importance in the special history of Aryan religion. But at the same time it cannot be denied that a real history of religion can be written only on a historically coherent foundation, such as is offered by the Semitic and Aryan races, and only in the closest connexion with the history of language and culture, which can as yet be sufficiently examined only in the case of the two races mentioned. Even with this limitation, it must be confessed that comparative investigations such as ours, which are compelled to deal not only with the facts themselves but also with conclusions drawn from them, cannot possess the same degree of certainty as is to be found in the discussions of those who are content to supply a description of the historically attested religion of a single Aryan or Semitic people, the Indians or the Romans, the Hebrews or the Babylonians. It must, none the less, be emphasized that he who undertakes to give such a special description without reference to the comparative religion of related peoples deliberately closes his eyes to the light which, in judicious research, is cast by pre-historic upon historic times.

O. SCHRADER.

ĀRYA SAMĀJ.—1. Founder.—Swāmī Dayānand Sarasvatī was born in the year 1824 in a village belonging to the Rājā of Morvī in Kāthiāwār, India. During his lifetime he refused to make known either his own name or his birthplace, lest his relatives should hinder him in his work or after his demise try to provide a successor as head of the sect. After his death, however, in 1883, it came out that his real name was *Mūl Śaṅkar*, son of Ambā Śaṅkar. His father was a well-to-do man, by occupation a banker, by descent a Brāhman, and in religion a stern and puritanical worshipper of Śiva. The life of Mūl Śaṅkar, *alias* Swāmī Dayānand Sarasvatī, falls into three nearly equal portions, namely, his life at home (1824–1845), his wanderings and studies (1845–1863), and his public ministry (1863–1883). For an account of the first two periods of the life of Swāmī Dayānand we are indebted to his *Autobiography*, which was dictated by him to the editor of the *Theosophist*, and published in English in that magazine.

There are three moments of religious interest in the home-life of the founder of the Ārya Samāj: first, his revolt from idolatry at the age of fourteen, on the night of his initiation into the mysteries of the Śaiva cult, when he saw mice running over the image of Śiva and defiling it; second, his resolve to abandon the world and seek salvation, the fruit of his profound grief on account of the death of his sister; and third, his flight from home at the age of twenty-one, in order to avoid the entanglement of marriage, into which his parents were determined he should enter. The history of the first twenty-one years of the life of the future Swāmī is thus summed up—(1) in the negative determination to eschew idolatry, (2) in the positive determination to seek salvation, and (3) in the further resolve to allow no such entanglement as marriage to interfere with his supreme purpose. There is no reason for questioning the essential truthfulness of the account of these early experiences. The sincerity of his revolt from idolatry, however it came about, is proved by the magnificent courage and vigour with which he afterwards attacked it in its chief centres, such as Hardwār and Benares. And the reality of his abandonment of the ties of home and kindred is proved by the fact that after his escape from his relatives he never again looked upon their faces.

After his flight from home he spent about eighteen years as a *Sannyāsi*, or religious mendicant, wandering from place to place and learning from a great variety of teachers. He first came under Vedāntic influences, and for a time was convinced of the identity of the individual soul and the Supreme Soul. He was initiated into the *Brahmāchārya* order and given a new name, *Śuddha Chaitanya*. Later, he was initiated into the fourth order of *Sannyāsis*, and was given the name by which he always has been known, namely, Dayānand Sarasvatī. He retained little or nothing, however, that came to him from his Vedāntic teachers except this name, for he soon deserted the standpoint of the *Vedānta* for that of the *Yoga*. The crowning religious influence on the life of Dayānand Sarasvatī was exerted by the blind Vedic scholar, Swāmī Virajānand of Mathurā, an enemy of modern Sanskrit literature, who, as a condition of teaching him, demanded that he should throw away all his modern Sanskrit books. This condition being fulfilled, the blind Swāmī taught Dayānand the Vedas, and dismissed him with the words: 'I want thee to go forth into the world and spread enlightenment among mankind.' Thus ends the second period in the life of Swāmī Dayānand Sarasvatī (1845–1863).

His religious development may be briefly summed up. It was a movement from Paurānic Hinduism through philosophical Hinduism to Vedic Hinduism. He successively deserted Śaivism and Vedāntism, but clung to the end to the *Sāṅkhya-Yoga* as the philosophical point of view from which, in his opinion, the Vedas ought to be interpreted. The last twenty years of the life of Swāmī Dayānand Sarasvatī is the period of his public ministry (1863–1883). It is a history of preaching tours throughout the length and breadth of India, from Bombay and Poona on the South to Calcutta and Lahore on the North; of public discussions with pandits, maulvies, and missionaries; and of literary work. After his first preaching tour of four years, he went into retreat on the banks of the Ganges 'for further contemplation and perfection of character.' Happily, we have a picture, from the pen of a European, of Swāmī Dayānand as he appeared in 1868, during this time of partial retreat:

'In the afternoon I visited a fakeer down on the sand, by the water's edge, of whose learning and sanctity I had heard in the crowds of the bazaar. I found him sitting in a little straw booth; and a splendid looking fellow he was, with his herculean frame and massive limbs, fine oval cranium, and really benevolent face. He was sitting almost entirely naked, and entered at once into pleasant conversation. I found him to belong to a class of mendicants who profess to have entirely abandoned the world, and are living in complete contemplation of the Deity. The conversation revealed in him a fine mind, and well

versed in the ancient lore of the Hindus. He talked only Sanskrit, and our conversation was conducted through an interpreter' (T. J. Scott, *Missionary Life among the Villages of India*, p. 162).

After about two and a half years, Swāmī Dayānand emerged from his 'retreat' and plunged at once into public discussion and controversy. In the great centres of idolatry his usual theme was, 'Is there idolatry in the Vedas?' Against this practice he thundered with all the force of his strong will, impressive personality, and unusual eloquence, and, according to his biographers, uniformly carried the day.

It was at Bombay, on the 10th of April 1875, that Swāmī Dayānand founded the Ārya Samāj. He visited Delhi in 1877 at the time of the grand *Darbar*, where he met certain gentlemen from the Panjāb, who invited him to visit their province. This was the occasion of his first visit to the Panjāb, the scene of the future triumphs of his Society. From 1878 to 1881 there was the curious episode of a partnership between the Ārya Samāj and the Theosophical Society. Both parties were disappointed, for a split soon took place on the question of the personality of God. For the history of this strange union, see, as representing the Ārya point of view, the various biographies of Swāmī Dayānand; and for the point of view of the Theosophical Society, Col. Olcott's chapter on 'Swāmī Dayānand' in *Old Diary Leaves*.

Swāmī Dayānand came into contact with many different leaders of religious thought in India, *e.g.* Dabendra Nath Tagore and Keshab Chandra Sen of the Brahmo Samāj, Madame Blavatsky and Col. Olcott of the Theosophical Society, Bholānāth Sārābhāi of the Prārthnā Samāj, Sir Saiyid Ahmad of Reformed Islām, and Dr. T. J. Scott and Rev. J. Gray representing Christianity. There is evidence that Swāmī Dayānand made overtures to the leaders of both the Prārthnā Samāj (see Krishnarāo Bholānāth, *Life of Bholānāth Sārābhāi*, p. 7 f.) and the Brahmo Samāj, with a view to organic union, the amalgamated body to be called 'The Ārya Samāj.' But no union with any other organization was even temporarily effected except with the Theosophical Society.

In 1882–1883 the Swāmī visited Rājputāna, and while there became the friend and counsellor of princes. According to his biographers, he acted the part of a modern John the Baptist in rebuking the Mahārājā of Jodhpur for being under the influence of a courtesan. A few days later the Swāmī fell ill. Some think that a slow poison had been given him in his food. At any rate, the illness was fatal. He died at Ajmēr on the 30th of October, 1883, in the fifty-ninth year of his age.

Swāmī Dayānand was, from all accounts, a man of splendid physique, impressive personality, and great strength of will. T. J. Scott speaks of his 'magnificent presence' and 'imperious zeal,' and tells how 'he would crush an ordinary opponent with a sledge-hammer style.' The epithet *mahāmūrkh* ('great fool') was often on his lips when debating with the defenders of idolatry. Olcott speaks of him as 'tall, dignified in carriage, and gracious in manner,' and gives a general estimate of him in these words: 'The Swāmī was undoubtedly a great man, a learned Sanskrit Pandit, with immense pluck, force of will, and self-reliance—a leader of men' (*Old Diary Leaves*, p. 406).

2. Doctrine. — The official creed of the Ārya Samāj is in the form of a Decalogue, and it reads as follows :—

i. God is the primary cause of all true knowledge, and of everything known by its name.

ii. God is All-Truth, All-Knowledge, All-Beatitude, Incorporeal, Almighty, Just, Merciful, Unbegotten, Infinite, Unchangeable, without a beginning, Incomparable, the Support and the Lord of All, All-pervading, Omniscient, Imperishable, Immortal, Exempt from fear, Eternal, Holy, and the Cause of the Universe. *To Him alone worship is due.*

iii. The Vedas are the books of true knowledge, and it is the paramount duty of every Ārya to read or hear them read, to teach and preach them to others.

iv. One should always be ready to accept truth and renounce untruth.

v. All actions ought to be done conformably to virtue, *i.e.* after a thorough consideration of right or wrong.

vi. The primary object of the Samāj is to do good to the world by improving the physical, spiritual, and social condition of mankind.

vii. All ought to be treated with love, justice, and due regard to their merits.

viii. Ignorance ought to be dispelled and knowledge diffused.

ix. No one ought to be contented with his own good alone, but every one ought to regard his prosperity as included in that of others.

x. In matters which affect the general social well-being of the whole society, one ought to discard all differences and not allow one's individuality to interfere, but in strictly personal matters every one may act with freedom (*Handbook of the Ārya Samāj*, 1906).

It will be noticed that of the 'Ten Principles' given above, the first three, which deal with the existence and nature of God and with the doctrine of Vedic Scripture, are theologically the most important. The last seven are ethical principles. The Creed of the Ārya Samāj, it will be observed, is a *short* Creed. It is published with considerable variations in the phraseology, there being no insistence upon the same form of words.

In the *Handbook of the Ārya Samāj* we are told that 'the theology of the Ārya Samāj may be summed up in one word, viz. *the Vedas*' (p. 21). Combining principles i. and iii. of the Creed, namely, 'God is the primary cause of all true knowledge,' and 'The Vedas are the books of true knowledge,' we have the doctrine of the *Divine Origin of the Vedas*, which will now be considered.

In approaching this doctrine, let us first notice the problem of the regeneration of India, religious, political, and scientific, as it presented itself to the mind of the founder of the Ārya Samāj. He found himself confronted by a variety of faiths both indigenous and foreign. Of religions of foreign origin there were Islām, introduced in the 10th cent., and Christianity, a comparatively recent importation from the West. The indigenous religion of India, namely, Hinduism, presented itself as a vast congeries of faiths, ranging all the way from the strict *advaita* doctrine of Saṅkarāchārya to the crudest and grossest superstitions embodied in the Tantras, the whole being held together in a kind of external unity by the vast hierarchical organization of caste. Such was the religious environment of Swāmī Dayānand. There was also a political environment furnished by the vast and impressive administration of the British Government in India, and a scientific environment consisting of the spectacle on all sides of railways, canals, telegraph wires, steam-engines, etc. Thus, as Swāmī Dayānand wandered up and down over India, he studied not only the past but also the present, not only the thought of India as embodied in *Veda* and *Upaniṣad*, *Sūtra* and *Epic*, but also the thought of Europe as embodied especially in the inventions of modern science, everywhere manifest in India.

The problem which confronted him was how to reform Indian religion, how to effect a synthesis of the old and the new, of the East and the West, in such a way as to guarantee the intellectual and spiritual supremacy of the Indian people, do full justice to the attainments of other nations, and provide a universalistic programme of religion. The solution of this problem was found by Swāmī Dayānand in the doctrine of the Vedas as the revealed Word of God.

There are many points of contact between Dayānand Sarasvatī and Martin Luther. As Luther the German monk was a child of the European

Renaissance, so Dayānand the Gujrātī monk was a child of the Indian Renaissance. Both alike felt the tug of the 'Zeitgeist'. Both in their different ways became exponents of the new spirit. Luther attacked indulgences, while Dayānand attacked idolatry. Luther appealed from the Roman Church and the authority of tradition to the Scriptures of the Old and New Testaments. Swāmī Dayānand appealed from the Brāhmanical church and the authority of *smṛti* to the earliest and most sacred of Indian Scriptures. The watchword of Luther was 'Back to the Bible'; the watchword of Dayānand was 'Back to the Vedas.'

Swāmī Dayānand's theory of the Vedas may be outlined as follows:—The word *Veda* means 'knowledge.' It is God's knowledge, and therefore pure and perfect. This transcendent and heavenly knowledge embraces the fundamental principles of all the sciences. These principles God revealed in two ways: (1) in the form of the four Vedas, which were taught to four *Ṛṣis*, Agni, Vāyu, Sūraj, and Aṅgira, at the beginning of Creation over one hundred billion years ago; and (2) in the form of the world of nature, which was created according to the principles laid down in the Vedas, somewhat as the Tabernacle is said to have been built according to the pattern shown in the mount (Ex 25[40]). Mark the doctrine of correspondence involved. The book of Vedic Scripture agrees with the book of nature, so that the latter confirms the truth of the former. As Swāmī Dayānand says: 'I regard the Vedas as self-evident truth, admitting of no doubt and depending on the authority of no other book, *being represented in nature, the Kingdom of God*' (*Handbook of the Ārya Samāj*, p. 35).

Note the ambiguity in the meaning assigned to the word *Veda*. It is (1) God's knowledge, the content of the Divine Omniscience, *which is one thing*; and (2) it is the collection of Aryan literature known as the 'Four Vedas,' which is *quite a different thing*. One may believe in the Veda in the first sense, without accepting it in the second sense. The Vedas, then, being regarded as 'the Scripture of true knowledge,' the perfect counterpart of God's knowledge so far as 'basic principles' are concerned, and the 'pattern' according to which Creation proceeded, it follows that the fundamental principle of Vedic exegesis will be the interpretation of the Vedas in such a way as to find in them the results of scientific investigation. As E. D. Maclagan remarks: 'The bases of the Aryan faith are the revelation of God in the Vedas and the revelation of God in nature, and the first practical element in this belief is the interpretation of the Vedas in conformity with the proved results of natural science' (*Census of India*, 1891, xix. 175). In other words, there is involved the assumption that the Vedas as 'the books of true knowledge' must contain 'the basic principles of all the sciences,' and accordingly that every scientific discovery and invention of modern times must be found expressed, germinally at least, in the Vedas. The science of the West, then, is but the realization of the scientific programme anticipated by the seers of the East, over one hundred billion years ago. To the ancient East belonged the faculty of *seeing*: to the modern West belongs the faculty of *doing*. The programme comes from the East; the realization, from the West. In this way Swāmī Dayānand sought to render to the East the things which belong to the East, and to the West the things which belong to the West. Thus the West, in realizing the principles laid down in the Vedas, is unconsciously following the Vedic religion.

The principle that all the sciences have their revealed source in the Vedas is enlarged by the further principle that all religions have their original and inspired source in the same early literature. The doctrine of the Vedas as a primitive revelation given once for all to mankind, and so 'the fountain-head of religion,' reminds one of the similar doctrine of 'primitive revelation' held by some Christians. Diversities in religion are explained as due to the influence of different environments, in the one theory, upon the primitive Biblical revelation, in the other theory, upon the primitive Vedic revelation.

The Ārya doctrine of Vedic Scripture may now be summed up: (1) The Vedas are a revelation from God, as is proved by their correspondence with nature. (2) They are the sole revelation from God, since no other books show this correspondence. (3) They are accordingly the fountain-head of the science and the religion of all mankind. Such is the doctrinal basis of the two great duties of the Ārya Samāj, namely, (*a*) to recall India to the forsaken Vedic paths, and (*b*) to preach the Vedic gospel throughout the whole world.

It is evident from all this that Pandit Dayānand Sarasvatī was a man of large views. He was a dreamer of splendid dreams. He had a vision of India purged of her superstitions, filled with the fruits of science, worshipping one God, fitted for self-rule, and honoured as the primeval source of the world's science and religion.

All will admit that the vision of a regenerated India as seen by the prophet and founder of the Ārya Samāj is a splendid and inspiring one. But what about the means to be employed for the realization of this vision? As above stated, it is a return to the Vedas, but, be it noted, to the Vedas as interpreted, not by the traditional scholarship of Indian orthodoxy or by the critical scholarship of the West, but by the scholarship of the Ārya Samāj alone. The Scripture basis of the Ārya Samāj then, while formally the Vedas, is in reality a certain interpretation of the Vedas, which is not recognized as legitimate by a single Sanskrit scholar, either Indian or European, outside of the Ārya Samāj. This interpretation must be characterized as highly subjective and fanciful, different meanings being applied to the same word according to the caprice of the interpreter. One can readily imagine what kind of interpretation is involved in the attempt to find in the Vedas the programme of modern scientific inventions. Thus Swāmī Dayānand's interpretation of the Vedas is marked by (1) great emphasis on the etymology and neglect of actual Vedic usage, and (2) assumption of irregularity in the Vedic moods, tenses, persons, and cases. For the proof of these statements it is sufficient to consult Swāmī Dayānand's *Commentary on the Rig Veda*. The pamphlets on Pandit Dayānand's interpretation of the Vedas, written by T. Williams of Rewāri (1893–1894), and a pamphlet entitled *The Dayānandī Interpretation of the word Deva in the Rig Veda* (1897) may also be consulted. In this connexion the opinion of Max Müller is worth quoting: '*By the most incredible interpretations* Swāmī Dayānand succeeded in persuading himself and others that everything worth knowing, even the most recent inventions of modern Science, were alluded to in the Vedas. Steam-engines, railways, and steam-boats, all were shown to have been known, at least in their germs, to the poets of the Vedas; for Veda, he argued, means knowledge, and how could anything have been hid from that?' (Max Müller, *Biographical Essays*, ii. 170). In a word, the Vedic interpretation of Swāmī Dayānand is interpretation in the interests of a theory—the theory, namely, that the Vedas teach a pure and exalted monotheism, and contain 'the basic principles of all the sciences.' It is as if one should attempt to

find a pure monotheism and a complete programme of scientific inventions in Homer's *Iliad* or Virgil's *Æneid*. Every historical allusion in the Vedas is carefully explained away, on the ground that 'the Vedas, being divine revelation, expound the laws of existence in its various departments, which precludes the mention of persons and places' (*Ārya Patrikā*, Lahore, Oct. 19, 1901). Thus *a priorism* reigns supreme. Induction has no place. Enough has been said to show that the doctrines of the Ārya Samāj are based not on the Vedas themselves but upon an *uncritical* and *unscientific* interpretation thereof.

On the other hand, it is only fair to say that Swāmī Dayānand has shown a sound instinct in rejecting the manifold absurdities found in *smṛti*, or tradition, and in seeking a basis in the early literature for a purer and more rational faith. That in his ignorance of historical and critical methods he set up a method of interpreting the Vedas which must constantly remain the target of the critical spirit, may in charity be regarded as his misfortune rather than his fault. Nor is this all that can be said. For, as in the case of those who are determined to regard Śrī Kṛṣṇa as an incarnation of deity, it is healthier and more ethical to allegorize his adventures with the *Gopis* than to take them literally, although by so doing a sin is committed against the critical conscience; even so we may say that for those who are bound to regard the Vedas as the Eternal Word of God, it is better that they should, by peculiar tricks of interpretation, read into the text a fairly consistent theism, than on the basis of a rigidly scientific interpretation find therein only a vague Henotheism or Pantheism. So much for the Ārya doctrine of the Vedas, which from its importance has been treated at length. The other doctrines of the Ārya Samāj may be dismissed with a word.

The *theology* of the Ārya Samāj is the religious philosophy of the *Sāṅkhya-Yoga*. The fundamental principle of the *Sāṅkhya* is the dualism of *prakṛti* and *puruṣa*, 'matter' and 'soul.' The *Yoga*, or theistic *Sāṅkhya*, takes one of the innumerable souls recognized by the non-theistic *Sāṅkhya* and makes it the Supreme Soul. The result is a kind of trinity consisting of God, soul (or souls), and matter, each category of being having independent self-existence. God is eternal; so also is each soul; so also is matter. Pandit Ralla Rām refers to this as 'the universal trinity recognized by science and religion alike,' and as 'the most important of the doctrines of the Ārya Samāj' (*Ārya Patrikā*, Dec. 14, 1901).

As regards the *soteriology* of the Ārya Samāj, the great means of salvation is the effort of the individual, and for this a sufficient sphere is allowed through the doctrine of Transmigration, or repeated births. Salvation is conceived as virtually an eternal process. There is no remission of sins. *Karma* is inexorable. As regards the freedom of the will, the Ārya Samāj holds that 'we are not free to will an act, if we were created by some one else. . . . In order to be free, we must be believed to be eternally acting as we thought best, or as our previous *karmas* determined the course for us, receiving, according to God's eternal laws, the fruits of our good or bad deeds, and shaping in accordance therewith, and with our own hands, as it were, our future destiny' (*Ārya Patrikā*, Dec. 14, 1901).

It is evident from all this that the God of the Ārya Samāj is conceived as a great Cosmic Executive, whose business it is to preside over the inexorable processes of transmigration and *karma*. He is, as it were, a constitutional monarch, whose power is limited and defined by the eternal existence of two other 'estates,' namely, *soul* and *matter*. Thus 'absolutism is denied even to God.'

In the Ārya system of theology there is an attempt to settle the age-long conflict between science and religion. The doctrine of correspondence between the book of Vedic Revelation and the book of Nature is used for this purpose. Miracle is rejected.

Ethically, there is one doctrine of the Ārya Samāj which is most objectionable. This is the doctrine of *Niyoga*, which may be described as a virtual recognition of the principle of free love, sanctified by a temporary arrangement. Thus, in the English translation of the *Satyārth Prakāś* (ch. iv. p. 150), we read: 'A man may also contract *Niyoga* with eleven women (one after the other), just as a woman may enter into the relation of *Niyoga* with eleven men (one after the other).' Swāmī Dayānand's doctrine of *Niyoga* has been correctly summarized as follows by Lālā Ruchi Rām in the *Niyoga Doctrine of the Ārya Samāj* (p. 34):

'The Ārya Samāj allows even married men and married women to enter into the *Niyoga* connexion with one another or with widows and widowers under the following distinctly specified circumstances:

(1) When the husband or wife is incapable of producing issue through disease, etc.

(2) When the husband has been absent from home longer than a given period of time, for the sake of religion, for the acquisition of knowledge, or for earning a livelihood.

(3) When he or she is troublesome or in the habit of saying unkind words.

(4) When the wife is sterile, that is, if she has not been able to produce issue within eight years after the marriage.

(5) When the children born of her do not live long.

(6) If she begets girls only.

(7) If the wife be pregnant or constantly sick, or if the husband be always in bad health, and the other party be in the prime of youth and unable to control his or her passions.'

The motives which underlie this concession are twofold: (1) the duty of perpetuating the male line of a family, and (2) the desirability of legitimizing an errant passion and so 'preventing adultery and illicit intimacies.' '*Niyoga* is solemnized publicly even as marriage is' (*Satyārth Prakāś*, p. 147), and thus differs from prostitution. It is evident from all this that Swāmī Dayānand, like Plato, held strange views as to the proper relations between the sexes. In this respect both alike seem to have been theorizers. The members of the Ārya Samāj have not been courageous in practising *Niyoga* in the manner prescribed. Says the editor of the *Ārya Patrikā* (Sept. 27, 1902): 'We have to confess with regret that even the Āryas have not been able to set a single example of *the higher kind of Niyoga*.'

Before leaving the doctrines of the Ārya Samāj, it is proper to sum up the things also which are commendable in the doctrines and practices of this Society. Briefly stated, they are: (1) *negatively*, the rejection of pantheism and of some of the doctrines included therein, such as illusion and absorption, the casting over of the Paurānic superstitions together with idolatry, and a more or less vigorous fight against certain hurtful social customs such as caste, child-marriage, and intemperance; and (2) *positively*, the promulgation of a fairly consistent theism, the doctrine of the eternal identity of the soul, belief in prayer and in the need of the social worship of God, and a certain enthusiasm for education and for social and political reform.

3. The Society.—The organization which Swāmī Dayānand founded for the purpose of realizing his doctrine, propagating his faith, and regenerating India and the world, is known as the Ārya Samāj. *Samāj* means 'society' or 'assembly,' and *Ārya* is an ancient Indian epithet meaning 'noble.' *Ārya Samāj*, then, means 'society of the noble.' The name 'Ārya' is a patriotic and religious name, freighted with memories of ancient India, and

applied to the members of the three 'twice-born' castes. As such it was fitted to awaken patriotic sentiments. It is a social and political more than a religious name. In this respect it differs from the names of the other theistic and reforming movements of modern India, as, *e.g.*, the *Brahmo Samāj*, or 'Society of *Brahma* (God),' and the *Prārthnā Samāj*, or 'Society of Prayer.'

Some account will now be given of the history, organization, government, worship, methods of work, statistics, and future prospects of the Ārya Samāj.

(1) *History.*—The chief event of the period reaching from the death of Swāmī Dayānand (1883) to the present time is the division of the Ārya Samāj into two sections. The ostensible grounds of this split are twofold: (*a*) differences of practice in regard to the use of flesh for food, and (*b*) differences in theory concerning the proper policy to be pursued in higher education. From the point of view of the first difference, the two sections are called respectively the 'meat-eating' party and the 'vegetarian' party; and from the point of view of the second, the 'College' party and the '*Mahātmā*,' or old-fashioned party. Both differences run back into a still more fundamental difference of opinion, namely, concerning the degree of authority to be ascribed to the teachings of Swāmī Dayānand. In this matter, the position of the College party, as the party of light and culture, is liberal, while the attitude of the *Mahātmā* party is conservative. The educational work of each section is carried on in harmony with its special theory. The 'Cultured' party has a College at Lahore, the *Dayānand Anglo-Vedic College*, which it administers on modern lines and with a considerable degree of efficiency. The *Mahātmā* party, on the other hand, has an institution at Hardwār known as the *Gurukula*, in which ancient ideals of education receive the emphasis.

(2) *Organization and government.*—The organization of the Ārya Samāj provides for the local Samāj or congregation, the provincial assembly, and a general assembly for all India. The conditions of membership in a local Samāj are (*a*) implicit faith in the Ārya 'Decalogue,' or Ten Principles; and (*b*) belief in the canons of Vedic interpretation laid down by Swāmī Dayānand. The minimum age for membership is eighteen. There is no special ceremony of initiation for members of the 'twice-born' castes, but outsiders, such as Christians and Muhammadans, must undergo a ceremony of purification. The members of a local Samāj are of two kinds, probationers, or non-voting, and approved, or voting, members. The period of probation is one year. Sympathizers are also mentioned as a separate class. The officers of a local Samāj consist of a President, Vice-President, Secretary, Treasurer, and Librarian, elected by the voting members. The officers, it will be observed, are those of an ordinary secular association. The provincial assembly is a representative body composed of delegates appointed by the local congregations. Each affiliated Samāj has the right to send one delegate for every twenty members. Thus the form of government of the Ārya Samāj is clearly representative.

(3) *Worship.*—The weekly religious service of the Ārya Samāj is held on Sunday morning, since the Government offices are closed on that day. It is a long service, lasting three or four hours. Directly in front of the speaker's platform in the place of worship is the Vedic Fire Altar, which occupies the same relative position as the Communion Table in many Christian churches. Religious worship begins with the burning of incense (the *homa*, 'sacrifice'), accompanied by the chanting of Vedic verses. This is followed by prayers, exposition of the writings of Swāmī Dayānand, hymns, sermon, and lecture, the whole ending with the recitation of the Creed. With the exception of the use of incense, the constituents of worship are those of an ordinary Protestant service. The service is Puritan in its simplicity. There is no official priesthood. Members who are qualified take their turn in conducting public worship. The prayers are mostly extempore, and the sermon is long. For a very graphic account of the devotional services of the Ārya Samāj, see J. C. Oman, *Cults, Customs, and Superstitions of India*, pp. 152–166.

(4) *Methods of work.*—In its methods of work the Ārya Samāj follows in general the methods current among the various Missionary Societies working in India. It uses preaching, education, tract distribution, newspapers, etc. There are two classes of preachers, honorary and paid. The honorary preachers are local, the paid are itinerant. The first class consists of men in regular employment as clerks, pleaders, teachers, physicians, and other business men, mostly English-educated, and many of them College-bred. The paid preachers, on the other hand, give all their time to the work of preaching, and are, as a rule, educated only in the vernacular. The 'Cultured' party, it is interesting to observe, emphasizes *education*, while the *Mahātmā* party emphasizes *preaching*. Each section of the Ārya Samāj maintains a number of high-schools and orphanages, and also several newspapers and reviews.

(5) *Statistics and future prospects.*—According to the *Imperial Gazetteer of India* (1907), i. 474, the Ārya Samāj in 1901 had 'over 92,000 professed adherents.' It 'showed an increase of 131 per cent. in the decade preceding the last census' (*ib.*). The Ārya Samāj probably has by this time a membership of considerably over 100,000. The largest number of members is found in the Panjāb and the United Provinces, nearly 98 per cent., according to the census of 1901. Thus the Ārya Samāj is essentially a North India religious movement. There are a few branches in Burma and in British East Africa, the fruit of work among Indians who have emigrated to those regions. Lahore is the religious centre and capital of the Ārya Samāj, although Ajmēr, as the scene of the death of Swāmī Dayānand and the seat of the Vedic press, is a close rival.

As regards the future of the Ārya Samāj, it is difficult to play the prophet. It is undoubtedly the most popular among the indigenous reforming movements in North India to-day. In the matter of female education, temperance, and other reforms, it is in the line of progress. It also ministers to the patriotic spirit through its claim that the Vedas are the original source of all the religion and science of the world. It contains many earnest and good men who sincerely desire the welfare of their country. By its emphasis on education and social reform it is playing no unimportant part in the regeneration of India. It keeps in close touch with orthodox Hinduism through the fact that comparatively few members of the Ārya Samāj have broken caste. Will it ultimately be reabsorbed into the abyss of Hinduism, as some think probable, or will it advance to a still more rational and enlightened position?

LITERATURE.—I. *BIOGRAPHICAL.*—'The Autobiography of Dayānand Sarasvatī Swāmī' in the *Theosophist*, Oct. and Dec. 1879 and Nov. 1880; Max Müller, 'Dayānand Sarasvatī,' in *Biographical Essays*, 1884; J. C. Oman, *Cults, Customs, and Superstitions of India*, 1908, ch. vii. 'The Ārya Samāj and its Founder'; Pandit Lekh Rām and Lālā Ātmā Rām, *Maharşi Swāmī Dayānand Sarasvatī Jī Mahārāj kā Jīvan Charitra*, 1897 (the standard biography of the Swāmī); Bāwā Arjan Singh, *Dayānand Sarasvatī, Founder of the Ārya Samāj*, 1901; Bāwā Chhajju Singh, *The Life and Teachings of Swāmī Dayānand Sarasvatī*, 1903.

II. *Doctrinal.*—*Rigvedabhāṣya* (*i.e.* the Rigveda translated into Hindi and explained); *Rigvedādibhāṣya Bhūmikā* (introduction in Hindi to the above-mentioned *Commentary on the Vedas*); *Satyārth Prakāś*, 'Light of Truth,' Eng. tr., Chiranjiva Bharadwāja, 1906. The three works just mentioned are all from the pen of Swāmi Dayānand Sarasvati, and constitute the authoritative literature of the Ārya Samāj.

III. *Critical.*—Pandit Kharak Singh and H. Martyn Clark, *The Principles and Teaching of the Ārya Samāj*, 1887; Henry Forman, *The Ārya Samāj, its Teachings, and an Estimate of it*, 1890; Lālā Ruchi Rām Sahni, *The Niyoga Doctrine of the Ārya Samāj*, Lahore, 1897; Pandit S. ASAṄGA.—The sources of our knowledge about Asaṅga's life are the records left by Paramārtha (6th cent.), Yuan Chwang [Hiuen Tsiang] (7th cent.), I-Tsing (do.), and Tāranātha (16th cent.). From these we can gather the following data. He was born of the Kāuśika family in Puruṣapura in the north of India. He was the eldest of three brothers, of whom the youngest, known as Vasubandhu (*q.v.*), was intimately associated with him in religious and literary activities. The school in which Asaṅga was ordained as a monk was the Mahīśāsaka, a branch of the most ancient form of Buddhism; but he was afterwards (we do not know how or when) converted to a more idealistic phase of Buddhist philosophy, which is now known as Asaṅga's idealism. Still we see that his idealism is much influenced by his former faith.

According to Yuan Chwang, Ayodhyā (the modern Oudh) was the chief scene of his activity. Here it was that he taught publicly and wrote books, etc.; and here probably in Ayodhyā, on the bank of the Sarayū, he converted his brother Vasubandhu to the idealistic Mahāyāna, though, according to Paramārtha, this took place in Puruṣapura, their native town. In any case it is clear that both Asaṅga and his brother were closely connected with the court of Ayodhyā, and that they were contemporaries of King Bālāditya and his father Vikramāditya. If we identify this Vikramāditya with Chandragupta II. of the Gupta dynasty, his date can be fixed in the first half of the 5th cent. A.D.; if with Skandagupta, in the second half. This is confirmed from another source. Yuan Chwang tells us that his master Śīlabhadra was 107 years old when he saw him in 633 A.D. Śīlabhadra's master, Dharmapāla, was a great systematizer of Asaṅga's teaching, but he was not his immediate disciple. Thus we have sufficient grounds for fixing Asaṅga's date in the 5th cent. of our era.

Many writings (*śāstras*) ascribed to Asaṅga are enumerated by Yuan Chwang. They are all handed down to us in Chinese translations. Although not one of the originals has yet been discovered, and there can, therefore, be no question of any strict criticism, nevertheless the authenticity of their tradition is assured by the fact that most of them were brought to China by Yuan Chwang himself, who was the greatest apostle of Asaṅga's philosophy in the East. The most important are the following:—

(1) Yogāchārya-bhūmi (Nanjio, No. 1170). This contains descriptions of the practice of Yoga, and of the stages one successively attains through it. The work is ascribed to the revelation of Maitreya. (2) Mahāyāna-samparigraha (Nanjio, No. 1247), a condensed treatise on the whole system of Asaṅga's psychology. (3) Prakaraṇa-āryavāchā (Nanjio, Nos. 1177 and 1202), an exposition of the moral and practical aspects of the system.

We learn from these sources that Asaṅga's system, in contrast to the Mādhyamika of Nāgārjuna, is decidedly realistic. Though it bears the name of Vijñāti-mātratā, *i.e.* idealism, and though Buddhist enlightenment consists, according to Asaṅga, in release from attachment to the objective world, his philosophy postulates the reality of each man's personality and also of the external world. In this respect his system is very near to the Sāṅkhya.

Asaṅga terms mind the *ālaya*, *i.e.* abode or *nidus* where all things, both subjective and objective, are latent, and whence they are projected and manifested. This *nidus* produces from and by itself intelligence or will (*manas*, otherwise *kliṣṭa-manas*), reason (*buddhi*, or *manas*), and five senses (*vijñānāni*) in succession. It is, therefore, called the eighth (*aṣṭama*), just like the Sāṅkhyan *puruṣa*. Each of the sense-organs projects or manifests its own objects, both fine and gross, by virtue of the seed (*bīja*) stored up in the *ālaya*; and the world thus manifested or objectified reacts upon the eighth (the *ālaya*) through the seven subordinate mind-organs, by 'perfuming' them. The *nidus*, or source of the world, the *ālaya*, acts, in this way, as that which *takes on* the impressions received from the objective world, *i.e.* as the *ādhāna*. Illusion in human life thus consists in regarding the objectification of one's own mind as a world independent of that mind which is really its source. To get rid of this fundamental illusion, we must study the true nature of our mind and its objectifications. Right knowledge of its true nature, the *dharma-lakṣaṇa*, leads us to the full development of the 'seeds of enlightenment,' and, as a consequence, to the absorption of the whole world into one's own self. Following, therefore, on right knowledge, this absorption, first of thought and then of objective phenomena into the inner self, *i.e.* the *yoga-āchāra*, is the necessary step to the attainment of Buddhahood (see BODHISATTVA).

Asaṅga teaches seventeen grades (*bhūmi*) of this attainment, and also the three personalities or bodies (*trikāya*, see ADIBUDDHA, i. 97b, and *JRAS*, 1906, p. 943 ff.) of the Buddha (see TRIADS [Bud.]); but neither of these doctrines was originated by him. The characteristic feature of his system is the elaborate and scholastic systematization of a theory of mind and of the seeds contained in it. On this account the Buddhist sect founded upon his system is called the *Dharma-lakṣaṇa*, *i.e.* the wisdom which shows us the true nature of all phenomena. It is, therefore, a philosophy rather than a religion; and such religious traits as may be found in it are but loosely connected with the system.

In Asaṅga's Buddhism, faith in Gautama Buddha had declined, being gradually superseded by the worship of Maitreya, the future Buddha. This worship maintained its ground for a long time in India and the East, but it was at last overwhelmed by another feature of popular Buddhism, the worship of Amitāyus (*q.v.*), lord of the Sukhāvatī in the West. In this way Asaṅga's Buddhism lost its hold on India and China, and is now preserved simply as a branch of learning among the Japanese Buddhists.

ASCENSION.—See ASSUMPTION AND ASCENSION.

ASCETICISM.

I. INTRODUCTORY DISCUSSION AND DEFINITION.—'Asceticism' is derived from the Gr. word ἄσκησις = 'training.' The 'athlete' was one trained, and one might be an 'athlete' in virtue (πάσης ἀρετῆς ἀθλητής, Diod. *Excerp.* 551). So very early the ascetic became the spiritual athlete of Church History. Two quite different conceptions mingle in the history of asceticism. One of these preserves the original meaning of discipline of the body for some ultimate purpose, as when William James urges sacrifice to God and duty as a means of training the will (*Psychology*, vol. ii. p. 322, cf. also pp. 579–592). The other conception distrusts the body altogether. Asceticism has then as its function not the training but the destroying of the body or the negation of its importance.

1. Pathological elements in asceticism.—From the beginning we have to bear in mind that in the history of asceticism we are often dealing with phenomena distinctly *pathological*. The fact that this has only recently been fully recognized makes a critical investigation of all the phenomena exceedingly desirable. Whether we deal with the 'flagellantes' or with instances of *perversio vitæ sexualis*, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-abnegation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religion has often been pointed out and variously explained (Neumann, *Lehrbuch der Psychiatrie*, p. 80; Krafft-Ebing, *Psychopathia Sexualis*, pp. 9–11); and in diseased conditions insane impulses to inflict pain and to suffer pain mark the mind controlled either by religious or by sexual emotions. It is not now difficult for the modern psychiatrist to recognize in the standard saints' stories of the Middle Ages many impulses familiar to him from his experience in the Insane Hospital, but which were, of course, at that time regarded only as evidence of piety and distinguished fellowship with God (Friedreich, *Gerichtliche Psychologie*, p. 389). Perversions of the natural impulses to protect the body from pain and destruction may range from slight and occasional contradictions to the madness of suicide. Thus no history of asceticism is complete that does not take into account the epidemics of hysteria in which all kinds of excesses against the body are committed. These outbreaks are common in Persia as well as in India, and marked the north of Italy from the 10th cent. until the 13th. At every step of a rational inquiry into asceticism in its most pronounced phases we must ask ourselves, How far are we dealing with distinctly morbid and neuropathic phenomena?

LITERATURE.—Maudsley, *Pathology of the Mind*, London, 1879; Krafft-Ebing, *Psychopathia Sexualis*, Stuttgart, 1887, *Lehrbuch der Psychiatrie*, 1879; Friedreich, *Diagnostik der psys. Krankheiten*[3], Würzburg, 1832, and *System der gerichtl. Psychologie*, Regensburg, 1842; Cramer, *Gerichtl. Psychiatrie*[4], 1908; H. Neumann, *Lehrbuch der Psychiatrie*, Erlangen, 1859.

2. Survival forms in seeming asceticism.—We must also deal with *survival forms* which are falsely classed as ascetic. Customs are classed as ascetic even by so critical an historian as Zöckler (*Askese und Mönchtum*[2], 1897) which may more correctly be connected with the survival of older moralities. Thus the Essenes saw the hope of Israel in desert life and in return to a semi-nomad communism. How far this was ascetic, however, it is impossible to say. To be ascetic this type of communism must be shown to be connected either (*a*) with a disciplinary process for the attainment of righteousness, or (*b*) with a complete negation of the body by its mortification. Even granting that the Essenes were ascetics (cf., however, art. 'Essenes' in Hastings' *DB*, in which this is not emphasized), all their peculiarities are not to be connected with their asceticism. Professional men in our age wear black coats, not from motives of asceticism, but as survivals of past fashions. The robes of the monks, the communism of various sects, the treating of vegetable diet as superior to meat diet, may all be connected with ascetic modes of life, but they may also be mere survivals of past customs, or a recrudescence of old ideals. In new social and economic situations past moralities see much to blame, and can find hope only in reverting to the outward simpler life of the past and its forms. Such reversion is, however, only in a secondary sense ascetic. It is, nevertheless, true that the ascetic finds a ready discipline in such reversions; and cave-dwellings, communism, vegetarianism, primitive dress, etc., all play their part in the history of asceticism, but must be always examined carefully when they occur, for they may appear, where no ascetic motive proper can be shown, simply as survivals.

LITERATURE.—Ritschl, *Entstehung d. altkatholischen Kirche*, Bonn, 1857, pp. 179–203, for discussion of Essenes as ascetics; see also *Naturforscherversammlung*, viii. 184, Hamburg, 1893; Bousset, *Rel. des Judentums*[2], Berlin, 1906, pp. 484–496; Lucius, *Der Essenismus in seinem Verhältniss zum Judentum*, Strassburg, 1881; Schürer, *HJP* II. ii. 188 ff.; art. 'Essenes' in Hastings' *DB* by Conybeare, in *DCG* by C. A. Scott, in *EBi* by Jülicher, in *PRE*[3] by Uhlhorn; *JQR* vii. 558, viii. 155.

3. Symbolic forms mistaken for asceticism.—Some customs are not ascetic, but are *symbolic forms*. Primarily asceticism consists in the contradiction of natural desires under the mandate of some higher, or supposed higher, ideal set by the will before the life. Such contradiction involves pain and discomfort for the person, that the body may be disciplined into subjection or removed as a hindrance to the soul's development. Soon, however, such contradictions are symbolized, and the symbols become conventional, the original significance being sometimes lost. Thus the tonsure, shaving the head, peculiar clothing, taking the last place in the procession, etc., may become mere symbols of what was once the expression of an attempt at self-mortification. Here again the student must be careful to mark customs that have become binding through usage or enactment, and that may seem ascetic, as the wearing of phylacteries, or broadened borders to garments (Mt 23[5]), but which in truth may have an entirely different motive, this motive being either sanitary or æsthetic, or based on racial distinction, on misinterpreted phrases from religious authority, or the like. Sometimes a symbol with such past significance becomes a sign of self-mortification. The wearing of sandals had no ascetic significance as it arose in a hot country, but, transferred to the north of Europe, it became a familiar symbol of self-denial among the monastic orders.

4. **Disciplinary asceticism.**—Every system of morals enforces the discipline of the will, and all systems of developed casuistry suggest methods of such discipline (cf. Paulsen, *System d. Ethik*[5], vol. ii. pp. 10–29, ed. 1900; and the 'Spiritual Exercises' of the Roman Communion). In this definition might be included, therefore, all exercises undertaken as training of the moral life, and carried through not for the sake of the exercise but for the effect produced upon the person using it. Thus also spiritual exercises may have a mingled motive, on the one side the pleasure of actual participation, and on the other obedience to the impulse to overcome habitual sloth by doing what is at the moment unpleasant or even painful. So fundamental has regularity been to life's development (cf. Wundt's *Ethik*, ed. 1886, p. 120), that religion has ever insisted upon recurrent periods of religious exercise in festivals, Sundays, hours of sacrifice and prayer, etc. And the ethical value of enforced regularity has been so apparent that in all developed religious systems disciplinary asceticism has had a more or less pronounced place. In evangelical Protestantism, tithes, church-going, grace before meat, family devotions are felt to have this disciplinary value, apart from the spiritual mood of the moment, and sometimes in spite of felt unreality on the devotional side. The substitution of the rational and significant for the arbitrary and mysterious in religious acts has gone far in Protestantism, but perhaps at some loss to the disciplinary effectiveness of these acts. In the Roman Communion, the division of the year, the month, and even the day, is minutely undertaken; and, viewed as a means of ascetic discipline of the life, such divisions have untold influence. Asceticism in this sense has the commendation of all great Protestant writers (cf. Luther's Sermon 'Von den guten Werken,' 1520). Acts that have no value *per se* may become disciplinary measures of great usefulness as means to gain self-control, regularity of life, proper self-appreciation, etc. It may be necessary for the moral man to exercise himself spiritually, as a man of thought trains his thinking capacity and subjects it to severe tests, or as the physical athlete engages in increasingly severe bodily exercise for the development of his muscle. The NT writers, and especially St. Paul, abound in directions along this line (Ro 8^{1-14}, 1 Co 9^{24-27}, Ja 3^{1-12}). The temptation to attribute to such exercises a special merit *per se*, and to harden them into a legal bondage, is so great that it has made Protestantism fearful in developing the ascetic life, perhaps even along legitimate lines. In the study of asceticism, however, the student must carefully keep present to his mind this legitimate element amid the legalistic and dualistic distortions.

LITERATURE.—Paulsen, *System d. Ethik*[5], Berlin, 1900, ii. 10–29; Wundt, *Ethik*, Stuttgart, 1886, p. 120; Black, *Culture and Restraint*, London, 1901, p. 187; Harnack, *What is Christianity?* Eng. tr. 1904, p. 81.

5. **Dualistic asceticism.**—The popular conceptions of asceticism have grown up in connexion with the experience of it linked with a distinct attitude towards life. In this thought the material body is inherently evil, and the spiritual element is alone good. (For the history of this, see the §§ 'Indian Asceticism' and 'Greek Asceticism,' p. 65). The object of ascetic exercise is not the *training* of the body, but its ultimate *extinction*, that the soul may be free (cf. Plato's *Timæus*, 69–71). This is a metaphysical dualism which separates soul and body, God and the world, material and spiritual, into sharply contrasted realities, and life is looked at more or less as the struggle for supremacy and the ultimate victory of spirit by the extinction of the material and lower elements. There are all degrees of this metaphysical dualism, from the sharp emphasis upon the negative work of destroying the body, that the soul may be free from its desires and itself cease (cf. Max Müller on 'Nirvâna' in *Chips from a German Workshop*, vol. i. pp. 276–287), to the positive emphasis upon union with God on the part of the soul by abstraction, contemplation, and faith, as in modern Pietism (cf. A. Ritschl's *Geschichte des Pietismus*, vol. i. pp. 1–60). In all shades of this thinking, asceticism plays its part. World-flight in various degrees becomes the standard of holiness. It may be only abstention from certain forms of amusement, or it may be the life of Trappist silence, but what determines the conduct is not loving expediency within the realms of a Christian freedom (Gal 5[1]), using the world but not abusing it (cf. Augustine, *de vera Religione*, §§ 21 and 36), but world-flight, as from that which is inherently antagonistic to spiritual perfection (cf. A. Ritschl, *Die christliche Vollkommenheit*, 1902). This dualistic asceticism always results in establishing a double standard of holiness. The exigencies of social organization enable only a few actually to realize world-flight to any extent; for the average man some symbolic or sacramental substitute must be found. Hence the whole doctrine of merit grows up with dualistic asceticism, as thus enabling a chosen few to flee from the world and impart of their holiness to less fortunate or less gifted followers. In the history of asceticism, upon which we now enter, we shall find many elements mingling, and it is often impossible and always difficult exactly to determine with which special conception we have to do.

LITERATURE.—Max Müller, *Chips from a German Workshop*, i. 276–287; Ritschl, *Gesch. der Pietismus*, 1886, i. 1–60, and *Die christliche Vollkommenheit*, 1902.

II. *HISTORY OF ASCETICISM.*—1. **Ancient ascetic customs.**—Almost all primitive life is marked by certain trials of courage to which the boy reaching manhood must submit. The customs sometimes assume a time of preparation, and priestly or religious direction was only a natural development (cf. Tylor, ii. 362–442; Waitz, *Anthropologie der Naturvölker*, 1871). So also marriage has its rites, some of which have, no doubt, a sanitary origin, some are memories of past culture, while all of them may become in course of time ascetic, in the sense that they are regarded as a necessary training for the communal life. Thus circumcision became a religious rite, and in a sense may even be regarded as ascetic (cf. Wellhausen, *Prolegomena zur Gesch. Isr.* 1883, p. 360). But in a strict sense, as a discipline for the *spiritual* life, it cannot be classed as ascetic. And the classes of customs gathered by Zöckler (*Askese und Mönchtum*[2], 1897, pp. 78–97) are almost without exception symbolic substitutes for outgrown customs, or they have social and legal significance apart from any true ascetic motive. Training for war and preparation for life's simpler duties produced customs which later on became the forms of ascetic practice; but in general it may be said that any developed asceticism belongs only to a high and elaborate economic stage. Asceticism proper belongs to an age of reflexion. Men in the process of moralization, looking out on life, revert to simple habits in the hope of restoring a morality that seems to them endangered. Thus the *forms* of asceticism have their history in customs that were in no sense ascetic. We have here to do with that variation of purpose of which Wundt rightly makes so much (*Ethik*, pp. 97–105, ed. 1886). A famine was viewed by primitive man as a direct infliction of the demons. To ward it off, self-inflicted periods of hunger, *i.e.* fasting, were the natural remedy. The punishment was thus anticipated and the demons were conciliated. There was no ascetic

motive until spiritual man sought in this form of religious custom a means for self-discipline. To the semi-nomad Amos the luxury of a commercial capital was immoral, and his only hope was a return to the nomad morality and semi-nomad customs and habits. The artificial music, ivory beds, etc. (Am 6^{4-6}), were hateful to him because connected with the luxury of a commercial development whose moral strains his people were standing but badly. The motive in his denunciation was, however, not ascetic, but patriotic and primitive. A tribe sees itself threatened with extinction, and to appease the wrath of gods or demons offers one of its members in human sacrifice (Iphigenia, Curtius, etc.). Later a *surrogatum* was found in animal sacrifice, or the devotion of that which was most precious to the worshipper (the Judæan-Prophetic story of Abraham, Gn 22^{1-19}). So at last the painful parting with possessions becomes by a process of reflexion a means of spiritual discipline in vows of poverty. At the same time the ascetic motive must be sought in the latest development. Hence the student must watch with care the uncritical collections of evidence for asceticism in primitive history. It is, to say the least, doubtful if, outside of the highest civilization, asceticism in the strict sense of either discipline or negation of the bodily desires can be shown anywhere (cf., however, Zöckler, *op. cit.*).

LITERATURE.—Waitz, *Anthrop. der Naturvölker*, 1871; Wellhausen, *Proleg. zur Gesch. Isr.* 1883, p. 360; Zöckler, *Askese und Mönchtum*², 1897, pp. 78–97; Wundt, *Ethik*, 1886, pp. 97–105.

2. **Persian and Indian asceticism.**—Geographical and racial factors in the development have exposed the populations of Persia, India, and Egypt to a long succession of oppressive tyrannies by physically superior, but often mentally and spiritually inferior, races (Mongol, Muhammadan, English). The Orient has hence become the breeding-ground for religions of despondency or even despair (cf. Schopenhauer, *Die Welt als Wille und Vorstellung*³, ii. 701–708). Although in the Avesta fasting and mortification are forbidden (Spiegel, *Avesta*, ii. lviii.; cf. especially *Vendidād*, iv. 47–49), and a great many of the alleged evidences for a primitive asceticism in Persia will not stand a critical investigation, yet Mani and the very prohibitions of asceticism are evidences that in Persia as well as in India and Egypt spiritual suffering gave rise to a pantheistic world-view, with despair and asceticism as characteristic features. The forms of this asceticism are those of world-flight, the hermit life, the mortification of the body by unnatural inhibitions of all its desires. The most imperative of these was the sexual impulse, and hence, as it was also linked with the continuance of a hated existence, the mortification of this impulse became primary. As Indian religion became fully self-conscious in Buddhism and Jainism, it deliberately opposed the ascetic to the legal, and the life of contemplation to rituals and sacrifice, and democracy to caste-aristocracy (cf. Max Müller, *Chips from a German Workship*, vol. i. art. 'Buddhism'). The asceticism of Brāhmanism aimed at absorption into God. It was a training for spiritual vision. The asceticism of Brāhmanism, as awakened to full self-consciousness in the Buddhist reformation, was a negation of all life, the denial of the will to live (cf. Max Müller, *op. cit.*, art. 'Nirvāṇa'). This is the logical outcome of dualistic asceticisms, the perfection of world-flight. Even the monastic system is a compromise; and although it sprang up in India in response to the imperative social instinct, the hermit and the faqīr are the real types (cf. Rhys Davids, *Buddhism*, London, 1878). The relatively mild asceticism of Buddhism seems due rather to the good sense of Gautama Buddha than to the logic of his teaching, and the result has been that ever increasing sects have pushed the logic of asceticism to its limits.

LITERATURE.—Besides works quoted, cf. Kuenen, *Hibbert Lectures*, 'National and Universal Religions,' London, 1882; Monier Williams, *Buddhism in its connection with Brahmanism and Hinduism*, London, 1889; Silbernagl, *Der Buddhismus nach seiner Entstehung, Fortbildung und Verbreitung*, Munich, 1891; H. Oldenberg, *Buddha*, Eng. tr. 1882, p. 61; T. E. Slater, *The Higher Hinduism in relation to Christianity*, 1903, p. 253. See also special artt. ('Hindu' and 'Persian') below.

3. **Greek asceticism.**—The æsthetic inhibitions prevented in Greece the disagreeable and morbid developments of asceticism found in India. Moreover, the evolution period was shorter. Yet the waning freedom of Greece and the high intelligence of her population began even in Plato's day to produce a despondent and ascetic as well as a pantheistic type of religious thought. It is immaterial whether this arose on the soil of Greece independently of the Orient (so Zeller, *Philosophie d. Griechen*³, iii. pp. 70, 420 ff.; but cf. Röth, *Geschichte uns. abendländischen Philosophie*, 2 vols.), or was an introduction from without. It rapidly developed from the teachings of Plato (cf. *Philebus*, 41; *Phædo*, 66–67, 82–83; *Apology*, 40), whose dialogues contain all the germs of the future Neo-Platonic development (consult treatment by Zeller, Weber, and Ueberweg-Heinze in their Histories of Philosophy). The cosmological speculations had their real religious interest in the assertion of the increasing badness of the phenomenal world as it fell below the spiritual reality. Nor is it essential whether the final belief was in a permanent separation of the two elements or an ultimate extinction of the lower element; the groundwork of an ascetic development is the hopeless surrender of the phenomenal as the sphere only of evil. The character of Greek asceticism was again controlled by the philosophic interest. The elimination of the phenomenal was by contemplation rather than by mortification. The way of salvation was escape from the body by pure thought. Even for Aristotle the higher life is open only to the man of pure speculative activity. In Neo-Platonism the Oriental mysticism was united definitely with Greek metaphysics (cf. Ueberweg, i. § 64, pp. 312–359). The Hellenistic-Judaic and the Neo-Pythagorean schools found their final expression along ascetic and mystical lines in Plotinus and Porphyry. God and the world were definitely separated. God as pure being was abstracted from all phenomenal manifestation. Salvation was in the beatific vision. Asceticism was the way of freedom from the fleshly. Between God and man angels and spirits became mediators, and revelation was in philosophy and ecstasy. Thus the waning faith of a homeless Greek culture found refuge, just where India found it, in ascetic despondency and theosophic speculation.

LITERATURE.—Besides the philosophical handbooks of Ueberweg-Heinze, Windelband, Weber, and Zeller, cf. E. W. Möller, *Geschichte der Kosmologie in der griechischen Kirche bis auf Origenes*, Halle, 1860; Leopold Schmidt, *Die Ethik der alten Griechen*, 2 vols., Berlin, 1882; Röth, *Geschichte uns. abendlandischen Philosophie*², Mannheim, 1862; J. Adam, *The Religious Teachers of Greece*, 1908, p. 375; Rohde, *Psyche*², Tübingen, 1898. See also separate art. ('Greek') below.

4. **Asceticism and Judaism.**—(*a*) *Canonical Judaism.*—All early religions resort to various forms of self-inflicted privation or suffering to appease the assumed wrath of gods or demons. Famine is anticipated by fasting (cf. above), and wounding the body becomes a *surrogatum* for the punishment the offended powers would otherwise inflict with more fatal results. The motive in these cases is, however, not strictly speaking ascetic. The spiritual life is not being trained, nor is the body being destroyed as a thing evil in itself. Distinguishing, as we must in the interests of clear thinking, asceticism proper from such survivals of ancient thought, Judaism is seen to be a distinctly

non-ascetic religion. The fasts and the days of humiliation ('afflict your souls'), as in Lv 23[26-32], are no more ascetic in the strict sense than a day of prayer in a Protestant community. Some of the directions about the relations of sex may seem at first sight ascetic (Ex 19[15], Lv 15[16-18] etc.), but a close examination shows that the motive was not ascetic, but had to do with the conception of a physical uncleanness (perhaps sanitary in origin) before Jahweh. This magical conception of impurity led to washings, lustrations, certain sexual inhibitions, but we find no trace of asceticism proper in the gradual evolution of the Jewish ritual. The dualistic asceticism of the Orient seems to leave no trace upon the canonical books. The fundamental conception of God, indeed, excludes it. Nor does it obtrude itself even as a foreign element, as it does in Muhammadanism. In spite of national disaster, the eschatological hopes of the Jews (cf. Bousset, *Die Religion des Judentums*[2], Berl. 1906, pp. 245–346) continually counterbalanced any beginnings of despair, such as we may notice in Job, Ecclesiastes, and Lamentations. For spiritual discipline the Jew turned to the study of the Torah (Ps 119), or submitted with great ease to the burden of a legal system. In all ages, however, the mystic world-view that lends itself to asceticism is sooner or later at war with any developed legalism, and likewise a developed legalism works inevitably against the mystic-ascetic type of religious thought. The evidences cited by Zöckler for an undeveloped asceticism (*Askese und Mönchtum*[2], pp. 113–120) will not bear critical examination. The Nazirite vows have no real marks of strict asceticism (cf. art. 'Nazirite' in Hastings' *DB*). They were vows of special consecration to Jahweh for a longer or shorter period, and represent survivals of primitive Semitic religious customs; but spiritual or ethical *training* was wholly lacking (cf. the story of Samson), and they had no marks of any desire to destroy the body. The abstinence from wine is a survival of nomad morality protesting against the agricultural stage (Hermann Schultz, *Alttest. Theologie*[5], 1896, § 111). The priestly regulation of the Nazirite vow has so destroyed its primitive character, that we must completely re-construct it in the light of the stories of Samson and Samuel and the allusions to the Rechabites (cf. art. 'Rechabites' in Hastings' *DB*). Jahweh as the storm-god of the desert had those who even in the midst of an agricultural economic stage were His earnest champions and the maintainers of more primitive types of conduct. Thus the forms were given in which asceticism might begin to develop, as perhaps in John the Baptist, although even here again we deal with other spiritual phenomena (cf. next col.); and only when the influence of the Orient and Greece can be historically traced in Judaism do we find undoubted evidences of the ascetic ideal. The story of Jephthah's daughter has no real bearing on the question (cf. Hastings' *DB*, art. 'Jephthah,' and the Comm. of Budde and Moore, *ICC*). The fasts, feasts, and ceremonial regulations of Jewish religion proceeded upon a supposition which excludes Oriental asceticism, for the nation is holy to Jahweh, and the body can and must be kept ceremonially holy. This is binding on all; but priests and Nazirites, who come into closest contact with Jahweh, must be especially holy, *i.e.* ritually clean. The religions of the Orient centre in the negation of the body; Judaism insists upon its physical and ceremonial cleanness. This gives an entirely different character to the thought of the relation of the physical to the spiritual. So that we may put even more strongly than Zöckler his closing words: 'Only the closing period of the pre-Christian Jewish history gives us real historical parallels and anticipations of monasticism,' and add that only in this period does ascetic practice proper have any place at all.

LITERATURE.—Out of a vast literature may be mentioned especially: H. Schultz, *Alttest. Theol.*[5] 1896 (Eng. tr. by Paterson, Edin. 1892); Bousset, *Die Religion des Judentums*[2], Berlin, 1906; Schürer, *Gesch. des jüd. Volkes*[3], Leipz. 1898–1902; Weber, *Jüd. Theol.*[2] 1897; H. P. Smith, *OT History*, Edin. 1903. See also separate art. ('Jewish') below.

(*b*) *Hellenistic Judaism.*—The distinction between fasts that have as their object the training of the spiritual life and those intended to propitiate an offended God must be constantly borne in mind. The first type is ascetic, the second has no necessary ascetic motive underlying it. The national fasts of Judaism, connected also as they generally were with times of special rejoicing, were intended to ward off the displeasure of the worshipped God. The non-ethical quality of these very fasts led to their entire rejection by the ethical prophets (Hos 6[6], Am 5[25]). As custom hardened into a formulated legalism, neither world-flight nor spiritual discipline can be recognized as a formative motive. The mingling, however, of Oriental and Greek elements with Judaism began early (cf. Schürer, *Gesch. des jüd. Volkes*[3], i. 187–190, ii. 21–67). The influence was probably wide-spread, but it reached its climax in the work of Philo at Alexandria. Here we find all the familiar marks of the Neo-Platonic teaching of a later day (Grätz, *Gesch. der Juden*, iii. [1856] 298, Eng. tr. ii. [1891] 211; Schultz, *Die jüd. Religionsphil. bis zur Zerstörung Jerusalems*, 1864; Lucius, *Der Essenismus in seinem Verhältniss zum Judentum*, Strassburg, 1881). God is not dragged down by the material; the highest life is that of contemplation; and abstraction from the body is the essential thing in religion. Holiness is also a negative thing. The dualism between God and nature is spanned by the Logos. The dualism between the flesh and the spirit is resolved in the contemplative life, where the spirit frees itself from the flesh and rises to the vision of God. The Essenes (cf. art. by Conybeare in Hastings' *DB*) are, as we have seen, doubtfully to be considered as an ascetic development. The communism in the simple agricultural communism that marked all Israelitish life in early times. The marriage customs are hidden in evidently inaccurate estimates of them, and the asceticism reported by Philo may well be imported from his preconceptions into their practice. It is difficult to believe that a sect that in so many ways suggests a recurrence to primitive type should become a medium for carrying a Greek culture (cf., however, Zöckler, *Askese und Mönchtum*[2], pp. 125–127). The reports of Philo and Josephus are always open to suspicion when they see in Jewish customs bonds between the Greek world-view and Judaism. The food and clothing of John the Baptist (Mt 3[1-17], Mk 1[4-8]) no more have asceticism as their motive than the poke bonnets and grey colour of the Quaker costume; both were inspired by the desire to revert to a primitive simplicity. John the Baptist is the reversion to the semi-nomad prophetic type. He proclaims no asceticism, but faithfulness to everyday duty (Lk 3[7-14]). Only when Plotinus and Porphyry and Iamblichus leave the assumptions of the OT, and by symbolic interpretation read Greek and Oriental thought into Judaism, do we get a system of contemplative asceticism well developed. This asceticism is not a Jewish product and has left little trace upon Jewish life, but it has profoundly influenced the Christian development.*

* Muhammadanism has borrowed from old Christian sources an asceticism which, however, often resembles far more the nomadic excesses of the wilderness than either spiritual discipline or world-flight. Indeed, this latter is wholly strange to the Qur'ān, although in Persia it may be noted (cf. sep. art. 'Muslim' below).

LITERATURE.—Schürer, *op. cit.*; Bousset, *Die Rel. des Judentums*[2], Berlin, 1906; H. P. Smith, *The Bible and Islam*, Lond. 1897.

5. **The Christian Church and Asceticism.**—(*a*) *The Early Church and Asceticism.*—Very early in its history the transformation of Christianity from a life to a philosophy of life began (cf. Wernle, *Anfänge unserer Rel.*[2], Tüb. 1904, 322–346). The marks of this change are already upon several of the NT books, notably the Ep. to the Heb., where the influence of Philo and Alexandrian Judaism is marked (cf. Siegfried, *Philo von Alex.*, Jena, 1875, p. 321 ff.; Pfleiderer, *Das Urchristentum*, Berl. 1887, p. 629 ff.; McGiffert, *Apost. Age*, Edin. 1897, pp. 477–482). Thus the Judaism with which the Christian Church found herself dealing was often not that of the OT, but a Hellenistic Judaism whose thought was based no longer on the ethical monotheism of 8th cent. prophecy, but on Greek dualism (cf. Harnack, *Lehrbuch der Dogmengeschichte* [ed. 1883], vol. i. § 7, pp. 93–101). This distorted the whole conception of the relation of the body to the purpose of the Kingdom; but the distortion was not realized because the faith in a catastrophic introduction of a new age seemed in itself to minimize the importance of the existing world. Upon this distortion grew up the conception of world-flight, and asceticism of the purest Oriental character was linked with the life of the Church. The exact history of the rise of monastic asceticism is obscured by the controversy over the genuine character of the alleged work of Philo, *de Vita Contemplativa*. This document has been pronounced by P. E. Lucius (*Die Therapeuten*, Strassburg, 1879) and others to be a forgery, while it has been defended by Conybeare (*Philo: about the Contemplative Life*, Oxf. 1895) and P. Wendland (*Die Therapeuten und die philonische Schrift vom beschaulichen Leben*, Leipz. 1896). It is certainly impossible to use it with confidence as a source for studying the history of monasticism. The so-called Therapeutæ, described as a Jewish monastic order, probably never existed, but the invention reflects the ideals of the highest holiness of certain circles profoundly influenced by Hellenized Christianity. As might be expected, it was in the Oriental Churches that the most negative type of asceticism flourished. Egypt became the home of men and women fleeing from the world to find in ascetic solitude the holiness they longed for (cf. the interesting pen picture in Anatole France, *Thaïs*[3], 1891). The attitude of St. Paul to marriage had nothing fundamentally ascetic in the Oriental sense. Abstinence was a matter of expediency, for the stress was great and the time was short (1 Co 7^{1-40}), and marriage brought cares which hindered the Christian in his main business of proclaiming the coming of Christ. At the same time, the vileness and licence of the period made continency, even to the denial of marriage, a very distinguishing mark of superior enthusiasm. In opposition to Marcion, however, Tertullian protests (*adv. Marcion.* i. 20), and he was not the only one to do so, against the rising tide of ascetic denial of marriage, urging that Christian liberty must be preserved (Clem. Alex. *Strom.* ii. 23, iii. 12; Euseb. *HE* iv. 29). Moreover, self-denial gave a stamp of sincerity to much religious life whose basis was really not Christian at all, as in Manichæism, and this religious life compelled the Christian communities to rival its earnestness by denials as dramatic; so that Tertullian, who himself distinctly repudiates asceticism in principle (*Apology*, 42), is nevertheless proud of the self-denials he is able to set over against the claims of the ascetic Marcionites (*op. cit.*). Thus, in Egypt and Africa world-flight and ascetic fasting and an un-Christian and un-Pauline celibacy came more and more to mark the ecclesiastical development. It culminated in the world-flight of Paul of Thebes, whose retreat to the desert was, however, only the logic of the transposition of Christian values effected by Cyprian and Origen. Manichæism and Gnosticism had really conquered, and, opposed with true instinct by the Church, had yet forced upon the Church the dualistic Oriental conception of life (cf. Hatch, *Organisation of the Early Chr. Churches*, Lond. 1881, Lect. vi. pp. 152–164, for a slight modification of this view). And logic went to the fullest extent in the hermit seclusion and the absolute isolation of the individual, as in the case of Antony and Simeon Stylites. The grouping of the priests of the worship of Serapis is sometimes regarded (but see O. Zöckler's art. below, p. 75ᵃ) as the model for what now sprang up as a modification of this hermit isolation. The monastery was at first a mere group of hermits gathered about some conspicuous example, or banded together for mutual protection. To such groups Pachomius (285–345) gave a set of rules (F. E. König, 'Die Regel des heiligen Pachomius' in *SK*, 1878; Grützmacher, *Pachomius und das älteste Klosterleben*, Freib. i. B. 1896), and monastic asceticism was formally foisted upon the early Catholic Church. Then, as persecution began to lessen, and martyrdom became rarer and rarer, the enthusiasm that found vent in this last evidence of zeal and sincerity began to express itself in ascetic practices. The spiritual athlete proved his constancy by self-inflicted deprivations.

LITERATURE.—See ASCETICISM (Christian).

(*b*) *The Oriental and Greek Communions and Asceticism.*—In general it may be said that the negative, contemplative, mystic type of asceticism had its largest development in the Oriental Greek Church. From the time of Pachomius and Antony the contemplative withdrawal from life into the desert was indeed bound up with extraordinary limitations of diet, etc., but the life of contemplation was the end sought by these fastings. The bodily exercises remain in the late conception of Greek asceticism a means to the contemplative self-abstraction. This is seen clearly in the rules of Pachomius and their subsequent development (cf. Zöckler, *Askese und Mönchtum*[2], pp. 201–233). The influence of Origen and of the Neo-Platonic conceptions on the Oriental Church, as it ceased to be intellectually quick, was to emphasize dogma and details of ritual on the basis of an extreme literalism in the use of Scripture (cf. K. Müller, *Kirchengeschichte*, i. 209). The ritual development was excessive, and the monastery reflected the most primitive type, an aggregate of hermit cells. It was only when, in 988, the Russian organization and education called out the best that was in the monastic development that it exhibited any signs of life and growth. Cyril and Methodius, the two monks from Constantinople who gave Russia to the Greek Church, represented the spirit of missionary service (cf. J. M. Neale, *History of the Holy Eastern Church*, 1873). Yet asceticism in the true sense of the term was overlaid by formalism and ritual. The negative conception of holiness was even forgotten amidst the mass of superstitious externalism. The monastery as seen at Mount Athos or Mount Lebanon (cf. articles *ad hoc* in Brockhaus, *Konversationslexikon*) reflects the older type of com-

The prohibition of wine is not ascetic, but a return to primitive morality on national and economic grounds. Nor is the fasting of Muhammadanism in the strict sense ascetic any more than the regular hours of prayer can be so called. Pilgrimages, however (cf. art. 'Mecca' in *EBr*[9]), and various wild dances, do partake of the mystic negative view of holiness which sees in abstraction from the body the possibility of the Divine vision. But, on the whole, asceticism is as foreign to the real spirit of Muhammadanism as it is to the Jewish religious development.

munal life; but the asceticism, save in the absolute banishment of women from all participation in the life, is not extreme. Nor has asceticism proper experienced any new development in the Russian branch of the Greek Church. Sects have arisen with extreme and fanatical views based upon a bald literalism, as the sect of the *Skoptzy*, who interpret Mt 19^{12} literally, and of whom 176 were in the years 1839–71 sent to Siberia for obedience to this supposed command (cf. Loofs, *Symbolik*, i. 181 [1902]). Yet in such cases the pathological and the superstitious overshadow the ascetic motives; and, indeed, of genuine ascetic development in the various branches of the Orthodox Greek Church there is almost no trace since the 17th century.

LITERATURE.—J. M. Neale, *History of the Holy Eastern Church*, 5 vols., London, 1850–73; I. Silbernagl, *Verfassung und gegenwärtiger Bestand sämmtlicher Kirchen des Orients*, Landshut, 1865; W. Gass, *Symbolik der griech. Kirche*, Berlin, 1872; Stanley, *Hist. of the East. Church*, new ed., London, 1884.

(c) *The Roman Church and Asceticism.*—The primary interest of the Christian Church as an Imperial organization was neither in dogma nor in the negative conception of holiness fundamental in ascetic monasticism (cf. A. Harnack, *Das Mönchtum, seine Ideale und seine Geschichte*[5], 1901, p. 30 f.). Her interest was in the re-organization of the Empire in the service of an Imperial ecclesiasticism. At the same time, in the creeds and literature which the Western Church took over for her Imperial purpose, there were both dogmatic elements which she had to formulate and defend and ascetic ideals which she had to use and regulate. Under the leadership of Rome, asceticism became a handmaid of inestimable value. It was the great monk-pope Gregory VII. who forced on the whole of the clergy the ascetic celibate as an ideal (Synods of Erfurt and Passau, 1074), and in him were united the two contradictory ideals, the ruling of the world by an institution whose ideal was world-flight. The missionary activity of the monastery in Northern Europe had changed its character, and while bringing a mass of evils connected with the holding of property (cf. K. Müller, *Kirchengeschichte*, i. 353–358 [Freib. i. B. 1892]), it was at the same time the bearer of order and culture, and even of literature, to the relatively barbarous North. It had, however, of necessity drifted away from the ideals of Oriental asceticism. To the task of re-introducing those ideals the reform movements of the period from Otto I. (936–973) to Gregory VII. (1073–1085) were directed. The monastery of the Western Church was up to this period largely dependent on the great land-holders, and vows were not made for life. Only in the 7th century was the retirement from a cloister visited by penalty, and only under the vigorous reforms of Bernard of Cluny and the Abbot Hugo were the monasteries compelled to conform to the ascetic ideals of the past (cf. K. Müller, *op. cit.* i. 317 f., and 431–435). The new reformed monastic orders looked with suspicion on the agricultural and literary work which marked the less ascetic monastic institutions, and exalted more and more the life of contemplation and ascetic negation (cf. H. Reuter, *Gesch. der relig. Aufklär.* II. vi. 24–28, Berlin, 1877). From this period onwards extreme forms of ascetic life—scourging, wearing of chains and haircloth garments, no longer as survivals of primitive life, but planned to inflict pain and discomfort—as well as extreme seclusion, became the accepted means for the attainment of perfection; and the ideal of perfection was world-flight and the negation of desire. At the same time, the linking of these ideals with Churchly ambitions gave peculiar form to the ascetic conception. Everywhere the monastic reform set before itself the same ends:

'The revival of monastic institutions, the recovery of lost lands, and the acquirement of new possessions, the establishment of old ecclesiastical laws, the acquirement of a better class of novitiate, introduction of stricter discipline and cultivation of piety, as described in the older stories of monastery life, and especially in the writings of Gregory the Great (590–604), penance and self-inflicted pain of all kinds, contemplation in solitude, humility to the point of self-renunciation, constant employment of confession and the sacrament, homage of the saints and relics, pilgrimages, search for the miraculous, pessimistic judgment of the world, longings for death, and generally an abnormal raising of the emotional life, increased sensitiveness, and, above all, a high estimate of the "grace of tears"' (K. Müller, *Kirchengesch.* pp. 385–386).

Each new attempt at monastic reform of necessity but revived this negative idea of holiness, and hence it is no accident that the circumstances which originally produced the pessimistic world-flight religious type in the Orient should generally mark its revival in the Western Church. The times of revived asceticism are periods of national disorder and social disruption. Gentle and thoughtful souls found world-flight the only seeming refuge amidst the wrecks of all that makes life really attractive, and in the extreme symbolic self-renunciation of self-torture the only hope for the devoted lives of those who saw the evil. It is impossible for any religious development to be wholly without the note of service and self-sacrifice for others, yet this sinks more and more into the background the more self-consistent the pursuit of the ascetic ideal becomes. To save one's own soul by retirement from the dangers of life is the chief goal, and the selfishness of this goal is only partly hidden by the fact that service on behalf of others may become a means to this end. Even the asceticism that marked the great monastic revival under St. Francis of Assisi (1182–1226) made the great services rendered by the order often a source of real corruption (cf. *Life of St. Francis*, by Thomas de Celano, 1229, by Bonaventura, 1261, and recently by Hase, 1856, and Sabatier [Eng. tr.], 1894). The complete impossibility of making the negative monastic asceticism a universal demand upon all Christians, while still maintaining Imperial world ambitions, has always led in the Western Church to compromises with the 'lay' world. Hence each revival of the extreme emphasis has also led to 'lay-brotherhoods,' to modified vows for those who cannot altogether flee the world, and to an extension of ascetic symbolism. This ascetic symbolism plays, therefore, a larger and larger part in penance, fasts, prayers, vigils, etc., in which the element of pain and bodily deprivation is reduced to a minimum, and the ascetic element is represented by symbols, 'half-fasts,' fish and eggs instead of meat, beads told, and masses said by proxy, etc. Against these compromises protests were constantly being raised by those who seriously held the monastic ascetic type of Christian ideal (Bernard of Cluny); but more and more as the Imperial organizing force of a centralized Vatican made its way, these compromises received the sanction of the Church. From the time of the Reformation onwards the Roman Church has been on the defensive, and the militant character of her great organizing force, inherited from Rome, has driven the negative and ascetic conception of holiness into a secondary place. In the Jesuit development, asceticism has a distinctly different place from that occupied in the older orders. It is a training for service under the ecclesiastical Imperialism of Rome (cf. Döllinger and Reusch, *Geschichte der Moralstreitigkeiten in der römisch-katholischen Kirche* [1889], particularly the 'Einleitung'). The goal the Jesuit order set before itself was world-conquest rather than world-flight, and thus again is clearly seen the old struggle between two distinct ideals of holiness, while both are maintained within the great historic communion of the Roman Church. The

triumphs of the Jesuit policies since the great Jansenist controversy have therefore steadily relegated asceticism to a secondary and disciplinary place, and its recent history shows no new development within the Roman communion, while it still maintains its place as one of historic legitimacy.

LITERATURE.—Out of a vast literature may be specially mentioned: Zöckler, *Askese und Mönchtum*[2], Frankf. a. M. 1897; Lea, *Hist. of the Inquisition of the Middle Ages*, 3 vols., Lond. 1888; Jessopp, *Coming of the Friars*[3], Lond. 1906; Montalembert, *Monks of the West from St. Benedict to St. Bernard*, 7 vols., Edin. 1861–1879; Taylor, *Classical Heritage of the Middle Ages*, Lond. 1901; Harnack, *Das Mönchtum* [Eng. tr. *Monasticism*, Lond. 1881]; and the Standard Histories of the Church in the Middle Ages, *e.g.* those of Neander, K. Müller, etc.; also Gothein, *Ignatius von Loyola und die Gegenreformation*, Halle, 1895; Ranke, *Die römischen Päpste*, Leipz. 1878; Reuter, *Gesch. der religiösen Aufklärung*, Berlin, 1877.

(*d*) *Protestantism and Asceticism.*—In a true Protestantism there is no room for Oriental asceticism based upon world-flight (cf. Luther, *Von der Freiheit eines Christenmenschen*, 1520). The only place asceticism can properly have is as a training for the life of service, and it is only a matter of loving expediency whether the Protestant shall prepare himself for service by fasting, deprivation and negation of legitimate desires, or by the simple and faithful discharge of daily duty. In the Matthew tradition (Mt 6[16]) Jesus certainly anticipated fasting; but in actual fact His disciples did not emphasize it during His lifetime (Mt 9[14]), as is seen also in the Mark tradition (Mk 2[18], Lk 5[33ff.]); and St. Paul's doctrine of Christian freedom (Gal 5[1] and argument of whole letter), permitting, indeed, any act that may prove for spiritual edification, excludes any emphasis upon such practice as necessary. Hence the Reformers admit fasts. 'Fasten und leiblich sich bereiten ist eine feine gute Zucht,' says Luther in his Smaller Catechism, and he urged it as a pious and useful exercise; as did also Calvin, with, however, the old primitive motive appearing, for the Church was to fast 'to appease the wrath of God' (cf. Zöckler, *op. cit.* p. 565). All the ascetic practices have dropped away, or been actually condemned by both Lutheran and Reformed Churches (Augsburg Confess., Art. 27; 1 Helvet. Confess., Art. 23). In the form of world-flight Protestantism has overcome asceticism. Only in the forms of a legalism can we trace remains of the Catholic conception of a negative holiness (cf. A. Ritschl, *Gesch. d. Pietismus*, i. 36–80, Bonn, 1880), and even the legalism that forbids dancing, theatre-going, wine-drinking, and card-playing does so now on the basis of the expediency of the Christian life, or on the ground of inherent immorality in the practices, thus removing the discussion of them from the sphere of asceticism. It is therefore a source of confusion to confound these two separate motives. With Protestantism, therefore, Oriental asceticism may be said to have been theoretically overcome.

LITERATURE.—The best histories are those of Zöckler, *Askese und Mönchtum*[2], Frankf. a. M. 1897, a new edition of his *Kritische Geschichte der Askese*, 1863; and J. Mayer, *Die christliche Askese, ihr Wesen und ihre historische Entfaltung*, Freiburg i. B. 1894; see also article 'Askese' in *PRE*[3]. Interesting material may be found in Palladius, *Historia Lausiaca* (*PL*, vol. xxxiv.), and in Rufinus, *Historia Monachorum* (*PL*, vol. xxi.). There is curious material in Stadler and Heim, *Vollständiges Heiligen-Lexicon*, 1858. For the history of Monasticism consult the catalogue given in *Dictionnaire des Ordres Religieux*, 4 vols., Paris, 1860; and Montalembert, *Moines d'Occident*, 7 vols., 1860–1877 (in part translated). For accounts of Buddhism see Hardy, *Eastern Monachism*, 1850, *Manual of Budhism*[2], 1880, and *Legends and Theories of the Buddhists*, 1866. For the attitude of the Reformation see Luther, *An den christlichen Adel deutscher Nation*, 1520, and *de Libertate Christiana*; Melanchthon, *Loci Communes*, particularly 'de crucis afflictionibus,' 1521; Calvin, *Institutes*, iii. 6–10, iv. 12 ff.; also Luthardt, *Die Ethik Luthers in ihren Grundzügen*[2], 1875; P. Lobstein, *Die Ethik Calvins*, 1877. For the best expositions in the Ethical handbooks of the Protestant attitude, consult H. Schultz, *Grundriss der evangelischen Ethik*, 1891, p. 40 ff.; and Newman Smith, *Christian Ethics*, 1891. A very full bibliography is also given by Zöckler, *op. cit.* pp. 21–29. See also art. AUSTERITIES.

T. C. HALL.

ASCETICISM (Buddhist). — Judged by its literature, India has revealed to us human intelligence at its widest, intensest range of reaction to sensuous and emotional stimuli. European writers have described the mild, passive, dreamy, quiescent Hindu. But they have ignored the fact that these qualities were the natural antithesis to, and rebound from, the preponderant disposition. That appears to have been of a nervous, eager, high-strung, emotional character, passionate and pleasure-seeking, keenly susceptible, exuberant in expression, impulsive and strenuous in effort to satisfy desire. The notes of the *vīṇā* (a kind of lute), the singing of the *Karavika* bird from the Himālayas, are described as rendering languid and maddened those that heard it, no magic agency being imputed (*Saṁyutta*, iv. 197; *Sumaṅgala*, *ap. Dīgha*, xiv. 35). Where the heart's desire is cut off, the subject promptly lies down to die (*Majjhima*, ii. 57; Com. on *Therīgāthā*, p. 221). The ordinary man is described as indulging in extravagant expression and depression at a transition from happiness to grief (*SBE* xi. 102, 127; *Majjh.* i. 238, 239). Where sense and emotion sway so forcibly, we should expect to find a corresponding excess in attempts to cope with that exuberance. Nowhere, indeed, has asceticism been so highly elaborated as in India. Nowhere have sense impressions and sense gratification been suppressed more nearly to the utmost limits consistent with life. Nowhere has the art of pain been more studied. Every act and posture of common life was engrossed by the self-persecuting zeal of the ascetic. And the lay world that maintained him in the intervals of his weird warfare expected of him a rigid persistence in his efforts, in exchange for its alms, as much as the votaries expected it from each other, if the reputation for sincerity and sanctity of each was not to be lost (*Vinaya Texts*, iii. p. 66 ff., i. pp. 90, 93).

The English reader of translations from Pāli and Sanskrit will find the word 'ascetic' used to denote any person who from religious motives has 'renounced the world' (cf. *e.g. Dialogues of the Buddha*, i. 213, n. 2; *The Jātaka*, vi., Cambridge, 1907, Index, *s.v.* 'Ascetic'). This is due to the English poverty for such terms as *religieux* and its synonyms. It does *not*, however, follow that, beyond renouncing home, property, and marriage, the so-called 'ascetic' is to be understood as engaged in systematic penance or self-mortification.

Ascetic practices were spoken of collectively as *tapas* (Pāli *tapo*), *i.e.* 'burning,' 'glow.' Parallel with, but usually independent of, sacrificial rites, they constituted, no less than the latter, a systematic line of action pursued to gain a distinctive end. That end, when Buddhism arose, was chiefly the guarantee of re-birth under relatively happier conditions than the present life could afford.

For instance, in the parable of the log drifting down the Ganges, the Buddha, discussing the chances of its arriving in due course at the open sea, and enumerating the various obstacles, said that it might be seized by human or by non-human agencies. By this he illustrated the fate of a religious brother, drawn back again into the world, or captured by longings after some abode of the gods and conforming to some discipline (*brahmachariya*) with the notion: 'By this rule, or ritual, or askēsis (*tapena*), or discipline I shall become a god, or god-like being' (*Saṁy.* iv. 179 ff., but cf. also *Majjh.* ii. p. 36, l. 2).

Of the more usual object of *tapas*, according to the Vedas—the attainment of magical powers—but slight traces remain. The Buddha, for instance, tells, as an ancient legend, of the failure of certain *Ṛṣis* to blast by curses a seer who exclaimed that their *tapas* was proved futile and their discipline fruitless (*Majjhima*, ii. 155).

The way in which *tapas* was held to guarantee the end sought after was not, as in sacrificial rites, by the propitiation of a god or gods, but by satisfying, as a system of acts and abstinences, the law of *karma* conceived as impersonal, eternal, moral energy. Painful experience and the absence of pleasant experience were to work as a set-off, in the balance of fate, against the weight of pleasant

self-indulgences in the past, and of possible pleasant experience in the near future, respectively.

'There are, brethren,' the Buddha's discourse runs, 'certain recluses (Achelakas, Ājīvikas, Niganthas, etc.) who thus preach and believe: Whatsoever an individual experiences, whether it be happy, or painful, or neutral feeling, all has been caused by previous actions. And thus, from the cancelling of old actions by *tapas*, and by abstaining from doing new actions, there is no influx into future life; by this non-influx *karma* is destroyed, and so ill is destroyed, and so feeling is destroyed, and so all pain will become worn away. This, brethren, is what the Niganthas (Jains) say. . . . Is it true, I asked them, that you believe and declare this? . . . They replied . . . Our leader, Nātaputta, is all-wise . . . out of the depths of his knowledge he tells us: Ye have done evil in the past. This ye do wear away by this hard and painful course of action. And the discipline that here and now, by thought, word, and deed, is wrought, is a minus quantity of bad *karma* in future life . . . thus all *karma* will eventually be worn away, and all pain. To this we assent' (*Majjhima*, ii. 214 ff.; cf. i. 238).

The recorded interviews between the Buddhists and the Brahmans yield no such efforts to master and forestall destiny. But one young Brahman names *tapas* as one of five conditions declared by the priestly class to be requisite for the achievement of 'merit' (*Majjhima*, ii. 199). And current verses commending *tapas* are here and there gathered into the Buddhist canonical anthologies (*Saṁyutta*, i. 38, 43, 172=*Sutta Nipāta*, verse 77; *Aṅguttara*, iii. 346).

Now Buddhism was frankly eudæmonistic in its ethics. It hastened to reduce the evil of the world to its ultimate term—*dukkha*, 'pain,' 'sorrow,' 'misery,' 'ill.' It spoke of *nirvāṇa* as absolute happiness. Its cardinal tenets were to be an organon for the extirpation of ill. Affectionate and moral conduct, 'noble' (Aryan) views, are commended as securing *phāsuvihāra*, that is, easeful, serene living (*Aṅguttara*, iii. 132). Consequently it could not well sanction any deliberate infliction of pain, or *dis-ease*, as such, on one's self or on others. One of those categories into which the canonical books delight to divide humanity classes men as self-tormentors, or self-burners (*attantapo*), tormentors of others, tormentors of both self and others, tormentors neither of self nor of others (*Majjhima*, i. 341, 411, ii. 159; *Aṅguttara*, ii. 205; *Puggala*, 55). Under the first head come the votaries of *tapas*; under the second, butchers, fowlers, hunters, fishermen, thieves, executioners, gaolers, and all doers of acts of cruelty; under the third, great functionaries who, when holding sacrificial ceremonies, perform rites involving some personal discomfort, and also have herds of animals slaughtered, and keep their slaves in fear of punishment. Under the fourth head come those who have left the world and the home for the career of a recluse. These are, or should be, filled with charity and compassion for all living beings; they own no property in animals or in personal service. They harm no one, molest no one, and have thrown off the cares and ties that torment the world. And, as it were in antithesis to the word 'burning,' they are said to have 'become cool' (*sītibhūto*).

The latter term, *sītibhūto*, would seem to imply renunciation of *tapas*, as well as of those professions and practices through which a man would become, as it were, a cause of burning or torment to others. He has, of course, still to cultivate, even if he be a *bhikkhu* frequenting forest seclusion (*Majjhima*, i. 469), the virtue of *hiri-ottappa*, conscientiousness and fear of blame. These will often entail, ere he graduates in saintliness, states of mind called 'burning-producing' (*tapanīyā dhammā*), to wit, 'I have left undone those things that I ought to have done, and I have done those things that I ought not to have done' (*Aṅguttara*, i. 49; *Dhamma-saṅgaṇi*, §§ 38, 1300, 1323). Nor was he to be 'cool' in pressing forward to complete emancipation and self-conquest; but, on the contrary, abundance of 'ardour' (*ātāpī*) was expected of him. Only the *arahat* is described as wholly *sītibhūto*, as one resting on a summit, or by clear waters beyond the jungle (see art. ARHAT).

Buddhism, again, claimed at its very inception, in the Buddha's first sermon, to be a Middle Path, opposed equally to the extremes of sensuous and worldly indulgence on the one hand, and of self-mortification on the other. Both are denounced as ignoble (un-Aryan) and unprofitable, the latter, also, as *dukkha* (*SBE* xi. 146, *Majjh.* iii. 230). Contrasted in another passage, in a jungle simile, as the thick-set path and the fired-out path, they are opposed to the middle course of the brother who (in the practice of the 'Four Inceptions of Mindfulness') 'ardently' surveys body, impressions, thoughts, and feelings, that he may subdue all grief arising from coveting the things of the world (*Aṅguttara*, i. 295).

The Buddha's twofold objection to the practice of asceticism is really one: *dukkha* is evil and must be removed. Excess is *dukkha*. *Tapas* is a form of excess, and multiplies *dukkha*. It does not even lead through suffering to any gain; it is unprofitable. This futility of *tapas*, and not any shrinking from pain, was the moral of his own strenuous essay in austerities. This he is said, in the canonical books, to have related to a rāja's son, who maintained that happiness was to be won only through suffering (*Majjhima*, ii. 93); also to a young Brahman, who questioned him on the originality of the system he put forward (*Majjhima*, ii. 212); and again to a young Jain, who doubted whether the Buddha's disciples studied bodily as well as mental control (*Majjhima*, i. 237). When almost worn out by his austerities, he came, he said, to the conclusion: 'Not by this bitter course of painful hardship shall I arrive at that separate and supreme vision of all-sufficing, noble (Aryan) knowledge, passing human ken. Might there not be another path to Enlightenment?' Whereupon he once more took reasonable care of the body, (whereby his fellow-ascetics, who had expected great results, lost faith in him), and chose, for the meditations that brought the light, a spot where the natural environment was of a kind to soothe and brace the spirit.

A little poem in the *Saṁyutta Nikāya* (i. 103) represents him, at this stage, as happy in the release from all self-mortification and from faith therein. Before his complete enlightenment he sat by the river Nerañjarā, at the foot of the Goatherd's Banyan tree, musing: 'Oh! but I am freed from all that difficult toil! Oh! but well freed am I from that useless course of difficult toil! Wholly steadfast and mindful now draw I near to *bodhi* (enlightenment).' Māra, the evil one, tried to shake his serenity: '*Tapas* and sacrifice hast thou abandoned, whereby the Brahman youths are purified? The impure may deem himself pure, when he hath missed the path of purity.' And Gautama replies: 'I who have discerned the uselessness of [my] *tapas* and of all *tapas* whatsoever—bearing along with it, as it does, all that is useless, even as punting-pole and steering-pole may bring along a water-snake—I, practising the path to *bodhi*—moral conduct, meditation and insight—have won the Purity supreme.'

The foregoing allusions define the attitude of Buddhism to asceticism when the term applies to a course of painful penance, privation, injury, toil, or tedium inflicted upon the person. But in the sense of the Greek *askēsis*, or way of life, in which some channels of activity are barred and others developed by special training, Buddhism was thoroughly ascetic. 'The Greek has his asceticism, but it is no mortification of the senses. It is just the power to refuse a lesser good for the sake of the greater. Such asceticism, an alert and constant effort after betterness, is a tonic, a strengthening of fibre, an added increment to life.' Dr. Jane Harrison's words (*Albany Review*, Jan. 1908) apply no less to the Buddhist. Of the lay-disciple a less high standard of training was expected. His whole duty may be said to be laid down in the *Sigālovāda Suttanta* of the *Dīgha*. But any deeply serious movement must always concentrate its energies and its care at first on a nucleus of whole-hearted devotees, who alone will tide it over initial difficulties, and propagate it. These can no more live like the rest of the world than an army when mobilized can afford to do. With the end it had in view, the Buddhist *askēsis* is in some respects in affinity with the Christian, in some, again, with the Greek. For the earnest student (*sekha*) the body was something to be analytically studied and kept in cleanliness and good health. Clothing for it, regular and frequent baths, massage, shelter, regular food, rest, and medicines were prescribed. But it remained, religiously considered, a foul thing (*pūtikāyo*); and the senses

were so many opportunities and channels of malefic impressions and impulses. Susceptibility to beauty of person required to be corrected by the contemplation or imagination of bodily transience, decay, and putrescence. The bodily culture of the Order amounted very much to what would now be called 'the simple life.' Needs (which would else provoke pain) were to be satisfied without arousing new and unnecessary wants. The recurring explanation of 'moderation in diet' is typical:—

'When any one takes food with reflexion and judgment, not for purposes of sport, excess, personal charm and attraction, but so as to suffice for the sustenance and preservation of the body, for allaying hunger and *for aiding the practice of the religious life*; and thinking, "While I shall subdue that which I have been feeling, and shall cause no new feeling to arise, and maintenance shall be mine, blamelessness also and comfort"—this content, temperance, judgment in diet, is what is called "moderation in diet"' (*Dhamma-sangaṇi*, 1348).

Compared with the ascetic excesses, as well as with the imaginative and speculative obsessions, of the age, the Buddhist standpoint was markedly hygienic. As the Buddha is recorded to have said (*Majjhima*, i. 509), to consider that health means merely that nothing ails the body is to lack all noble (Aryan) vision. On the other hand, a healthy and efficient condition of body was not only indispensable to a healthy and efficient condition of mind, but was an integral part of sound training (*Majjhima*, i. 239, 473 ff., 425; *Dhamma-sangaṇi*, §§ 40–51). There does not appear, in the canonical books, any glorification of the intellectual or spiritual at the expense of the corporeal. The constituents of individuality were ranked on a level, as being each and all impermanent, channels of suffering, and void of Ātman. But then this body-and-mind individuality, 'poor thing' though it might be, was potentially the vehicle of *nirvāṇa*, of *arahat*-ship. And hence the training of it was of the first importance—training by no means of a negative, paralyzing character. The pupil of a great Brahman ascetic school is asked by the Buddha whether, and how, Pārāsariya teaches the cultivation of the bodily faculties. The answer is, 'Yes; with the eye he sees no object, with the ear he hears no sound.' 'On that system,' is the rejoinder, 'the blind and the deaf have their senses best cultivated.' And 'the supreme faculty-culture (*indriya-bhāvanā*) of the noble (Aryan) discipline' is then described (*Majjhima*, iii. 298 ff.). The training, moreover, is often represented as gradual, just the 'bit placed in the colt's mouth' to begin with (*Majjhima*, iii. 2): 'Come thou, brother, keep the *sīla* and the precepts and acquire the range of moral conduct, . . . see that the gates of sense are well guarded, that no influx of impressions bear thee off thy feet, be moderate in diet, keep vigils, be mindful and heedful, cultivate self-collectedness in solitude, purging the heart of the five hindrances and practising the meditation raptures'—these are given as seven successive grades. But in proportion to the distance from graduation, that is, from 'emancipation,' was the training to be strict and unintermittent. Certain brethren, who asserted that a number of daily meals kept them in better health than the one midday meal of the Master, were gently reminded that they were too far from 'attaining' to emancipation to let themselves go (*Majjhima*, i. 473 ff.). To one who had attained, such questions sank into insignificance. 'You say,' the Buddha asks an appreciative friar, 'that my disciples hold me in reverence. Why do they?' 'For five qualities: your frugal diet, contentment with whatever raiment, food, and lodging you have, and your love of solitude.' 'That can hardly be,' is the answer, 'for while some of my disciples in one or other of these things practise austerities, I some days make a fuller meal, or wear lay robes, or accept invitations to dine, or dwell indoors, or among my fellows.' And he goes on to reveal the deeper basis of their trust in him (*Majjh.* ii. 5 ff.).

It was not to be expected that the Buddha's followers, even when they were advanced in training, would all appreciate the *quasi*-Pauline 'liberty' of his own high standpoint. In Dr. Neumann's words, 'ascetic simplicity is a characteristic of humanity and ineradicable' (*Lieder der Mönche und Nonnen* [Berlin, 1899], p. viii). The austerities alluded to in the Order became elaborated into a scheme of thirteen extra vows or burdens (*dhutaṅga*), more discussed, perhaps, than carried out (*SBE* xxxvi. 267–269). But they were at variance with the spirit of early Buddhism, which, in reducing life to a healthful simplicity for those who had set their faces toward the Highest, sought, in its own metaphor, to give them the liberty of the bird, which in flying 'bears with it but the power to fly' (*Dīgha*, i. 71).

C. A. F. RHYS DAVIDS.

ASCETICISM (Celtic).—1. It has been suggested (Fisher and Baring-Gould, *Lives of the British Saints*) that the monastic system of Ireland and Wales was a continuation of pre-Christian ascetic practices; but this statement is unsupported by evidence. Herodian (A.D. 197) mentions the hardiness and scantiness of clothing of the Britanni; but this had no ascetic significance. On the other hand, Strabo (vi. 196) states that the Celts were pleasure-loving (ἡδονικοί), and Diodorus (xxvi. 3) says of the Galatæ that they were fond of wine. At the same time, it has to be admitted that our information as to the Celts in antiquity is very meagre, and especially insufficient for the relatively barren Celtic lands where Christian cœnobitism and asceticism afterwards flourished.

2. The Christian asceticism of Celtic countries in the 5th and 6th cents. undoubtedly owes its origin to transmission from Egypt through Massilia (Marseilles), a port which under the Empire had a vigorous Egyptian trade. Massilia and Lérins (Lerina) in the South and Tours further North became active centres for the dissemination of the cœnobitic ideal in Gaul and beyond. In the Life of the Scottish St. Ninian it is said that the saint had met St. Martin of Tours, and held him in such respect that, when he heard of his death, he dedicated to him the church called *Candida Casa* at Whithorn, which he was then building. With the monastic system of Southern Gaul, John Cassian was closely associated, and it has been held by Professor H. Williams (in *Trans. Cymmr. Soc.* 1893–4) that the monastic system of Britain and Ireland was more akin to that of Southern than that of Northern Gaul. In the latter district monasticism made marked progress after the death of St. Martin of Tours (A.D. 400), and it may even have spread from this source to Britain, as is suggested by the story of St. Ninian; but the main impetus to the growth of the monastic movement in these islands undoubtedly came through the anti-Pelagian mission of Lupus and Germanus (429). At Lérins a church and cloister were built by Honoratus, and it was here that Lupus, bishop of Troyes, became a monk after giving up his see and his family life. There was probably some rivalry between the Northern and the Southern monastic systems of Gaul, for Sulpicius Severus (*Life of St. Martin*, cxvii.) says that the institutions of St. Martin were

in some respects on a higher plane than the Egyptian institutions of John Cassian, the founder of the monastery of Marseilles. That there were links between Lérins and Britain is suggested by the fact (attested by Sidonius Apollinaris) that Riocatus, whose name is undoubtedly Celtic, visited that monastery twice in A.D. 450. The probability is that both of the Gaulish movements made contributions to British and Irish monasticism.

3. Celtic asceticism, however, in spite of its relation to the general movement in Christendom, had certain well-marked features of its own, which were mainly conditioned by the tribal organization in which it took root (Willis-Bund, *Celtic Church in Wales*; Fisher and Baring-Gould, *op. cit.*). The heads of the cœnobitic communities of Celtic countries were members of ruling tribal families, and the headship of these communities and participation in their property and privileges continued (in some cases even to the 12th cent.) to be limited to those who, by means of their valid pedigrees, could show kinship with the founder. The formation of cœnobitic communities in Wales and Ireland was probably directed not only by religious but also by economic considerations, owing to the pressure of population and the insufficiency of cultivable soil. The monasteries were largely centres of co-operative industrial activity in agriculture and other arts, while the pursuit of learning and other amenities of civilized life were thus rendered possible. Lay interests probably had a larger place in the life of these communities than the later Lives of Celtic saints, written under Benedictine influences, might lead us to suppose, and it was natural enough accordingly that these communities, as such, should take no account of clerical orders (Willis-Bund, *op. cit.*).

Prof. Hugh Williams (*loc. cit.*) gives the following as the four stages of development of monasticism in Wales, and the development in Ireland was in the main parallel: (1) *A life of seclusion*, self-denial, prayer, and meditation (and it may be added, industry, to a large extent manual), in a common life of obedience to a superior, the abbot. There were similar institutions for women, and a Celtic monastery was sometimes double. The life of this stage appears to have been modelled on the teaching of Cassian in his *de Institutis Cœnobiorum* and *Conlationes Patrum*. (2) A stage when the monastery was pre-eminently a *school*, as exemplified in the case of the Welsh saint Illtud. When children were sent to a monastery of this kind, they were regarded as the foster-children of the Church, and a fee had to be paid not only for their fosterage but at their removal. (3) That of the *Eremites*, or *Anchorites*. In Egypt this stage came first, but in Celtic countries it grew out of cœnobitism. In 595, when Columbanus wrote to Gregory the Great, this movement was at its height in Ireland, and was also characteristic of Gaul and Britain. It was doubtless largely due to economic pressure upon the monasteries. The settlements of those who left the monasteries were often named after the saint who was head of the monastic community that they left. In all Celtic countries the hermits of this stage showed a marked predilection for islands, at first in lakes and streams, then in the sea. (4) The stage of *monastic pilgrims* or *missionaries*. These combined the work of itinerant preaching with that of tilling the soil in the districts where for the time being they settled. Among the fruits of these missions were the monasteries established by Welsh and Irish saints in Brittany, and notably the following important communities: (*a*) that of Iona, founded by St. Columba in 563; (*b*) those of Anegray, Luxeuil, and Fontaine in the Vosges, founded by St. Columbanus in the end of the 6th cent.; (*c*) that of Bobbio in Italy, founded by the same saint in the beginning of the 7th cent.; (*d*) that of St. Gall, founded by a disciple of St. Columbanus. Other Irish monasteries on the Continent were Lagny, Péronne, Fosse-la-Ville (near Liège), Lure, Beaulieu (in Argonne), Würzburg, and Säckingen. These and other Celtic monasteries were important centres of learning in the Dark Ages, and the Irish monks especially were distinguished for their skill in copying and illuminating MSS (cf. *ERE* i. 843, 860).

4. The regulation of life in the monastic communities gave rise to the formation of Penitentials and Rules. Some of the former, as, for instance, that of Gildas (see Hugh Williams, *Gildas*), show that drunkenness and worse vices had to be kept in check, and the Lives of the saints themselves sometimes give similar indications. The rule of Columbanus was in some respects severer even than that of St. Benedict (Warren, *Liturgy and Ritual of the Celtic Church*). So far as the celibacy of the clergy, however, was concerned, it is probable, as Warren points out, that a married priesthood was not unknown in certain places and at certain times. St. Patrick appears to have been the son of a deacon and grandson of a priest, and one Irish canon speaks of a cleric and his wife ('uxor ejus'). Gildas in his *Increpatio in sacerdotes* seems to imply a married priesthood. The efforts to promote clerical celibacy in Wales in the 10th cent. met with considerable opposition, which continued into the two following centuries. Gildas (*Epist.* xxii. 21) speaks with approval of the celibate life, and quotes Elijah, Elisha, and Jeremiah as examples of it ('Virgo Elias, Eliseus virgo, virgines multi filii prophetarum'); in *de Excid.* 80 he says, 'Hieremias quoque virgo prophetaque'; but this was probably in opposition to the current ecclesiastical practice of Wales in his time.

The lives of the Celtic saints sometimes describe their ascetic practices in terms not unlike those of Indian *yogis* or *faqirs*, and it has been suggested that the principle underlying this self-torture was analogous to the Celtic legal remedy of 'fasting against a person,' a practice whereby the person 'fasting against' another, to whom he had preferred a request, could bring his blood upon the other person's head, if the fasting led to the faster's death through persistence in refusing the request (Fisher and Baring-Gould, *British Saints*, Introduction).

Some of the austerities recorded of Irish saints are as follows:—St. Finnchua is said to have spent seven years suspended by iron shackles under his armpits, 'so that he might get a place in heaven,' in lieu of one which he had given away. Both he and St. Ite are said to have caused their bodies to be eaten into by chafers or stag-beetles. St. Findian is said to have worn a girdle of iron that cut to the bone. Of St. Ciaran we are told that he mixed his bread with sand, and of him and St. Columba that they slept on the ground with a stone for a bolster. Of St. Mochua it is said that he lived as an *inclusus* in a prison of stone, and that he had only a little aperture left for letting food down to him. Of the Welsh saint Brynach we are told that he lessened his need for the luxury of clothing by dipping his body daily in the coldest water, and St. Cadoc is also said to have been wasted with fastings. Further, of the Irish saint Kevin it is said that he remained for seven years in a standing posture without sleep, with his arm held up in the same position, and that a blackbird laid and hatched her eggs in his palm. Some of these tales are obviously exaggerations, but doubtless the Celtic monks underwent not a few austerities both necessary and voluntary. An ascetic attitude towards women appears to be reflected in some ritual observances of the Celtic Church, as for instance in the rule (embodied in the *Penitential* of Cumminius) that women were to be veiled at the reception of the Eucharist. In the *Leabhar Breac*, too (f. 248, col. i.), there is mentioned an Irish church where women were prohibited from going near the altar or taking the chalice into their hands. The Irish *Liber Hymnorum*, in its praise of the celibate lives of St. Patrick and St. Brigit, shows that the ascetic ideal had an honoured place in Celtic monasticism; and St. Patrick says of himself in his *Confessio* that he prayed as many as a hundred prayers a day, and the same number at night. Neither snow, frost, nor rain could prevent him from going before daylight to his wonted place of prayer. In spite of its tribal and other features, it cannot be doubted that Celtic asceticism was essentially part of the same movement as that which showed itself in

Christendom generally, and was governed in the main by similar ideals.

5. One of the best known names connected with Celtic asceticism is that of the Culdees (Ir. *Céli Dé*, 'the companions of God'). This term was sometimes Latinized into *Colidei* ('God-worshippers'). It is probable, according to the view taken by Reeves and Zimmer, that this term, as used from the 9th to the 12th cent., did not denote the regular successors of the Irish monasticism of the 6th, 7th, or 8th cents., but the followers of a new movement, which dated from the 8th century. Zimmer suggests that it was probably due to the influence of monks who had returned to Ireland after living at Metz under the rule of Chrodegang (A.D. 749). It was not in Ireland, however, but in North Britain that the Culdee movement attained its most important development.

Many of the terms of Celtic monastic nomenclature were derived from Latin, but a few were of native origin. The following are the chief terms of Irish: *abb* ('the abbot'); *secnabb* (i.e. *secundus abbas*. 'the prior'); *fer léginn* ('the lector'); *mac léginn* ('the lector's pupil'); *coimétuide* ('the warden'); *manach* ('a monk'); *mac cléirech* ('a young monk'); *banairchinnech* ('the prioress'); *caillech* ('a nun'); *mac-caillech* ('a young nun'); *berrad manaig* ('the tonsure,' in Celtic countries over the front of the head from ear to ear); *cathair*, *congbail* or *mainister* ('a monastery'); *anchara* ('an anchorite'); *anmchara* ('a soul-friend,' 'confessor'); *cilic* ('cilicium'); *clausul* ('clausula'); *cripta* (Lat. *crypta*); *disert* (Lat. *desertum*, 'an anchorite's cell'). In Welsh the following are some of the terms employed: *abad* ('an abbot'); *mynach* ('a monk'); *abades* ('an abbess'); *mynaches*, *lleian* ('a nun'); *mynachlog* ('monachi locus'); *mynachdy* ('a monastery'); *cwfaint* ('a convent'); *didryfwr* (lit. 'a homeless man,' 'a hermit'); *anor* ('an anchorite'); *meudwy* (lit. 'a servant of God,' 'a hermit'); *cufygl* ('cubiculum,' 'a hermit's cell'). The Breton and Cornish terms are practically identical with those of Welsh. The place name Dyserth in Flintshire is probably identical in meaning with the Irish *disert*. The derivative of *cella* was in Irish *cille*, in Welsh *cell*. *Cil* in Welsh place names means 'a retreat,' and *llan*, 'an enclosure,' a term applied to the precincts of a monastic settlement. Generally it is followed by the name of a saint, but sometimes by some other word, such as a river name: *e.g.* Llanelwy, Llandaf, Llangefni, Llanarth, Llanllyfni. The Welsh term *Plwyf*, Breton *Plou* (from Latin *plebes*), which now means 'a parish,' meant in mediæval Welsh 'a congregation.'

6. The general fusion of Celtic Christianity with that of Rome led to the assimilation of the monastic institutions also, and the foundation of new monasteries and nunneries by the leading orders of the Continent. In Wales some of the mediæval abbeys, such as Neath, Margam, Strata Florida, Strata Marcella, Aberconwy, and Valle Crucis, aided and patronized Welsh literature; but from the 14th cent. onwards Welsh poetry, largely under the influence of the love-poet Dafydd ab Gwilym, shows an anti-ascetic tendency. Unlike Ireland and Brittany, Wales has become thoroughly Protestant in spirit, and not only Protestant but Nonconformist. So far as the Nonconformity of Wales may be said to have an ascetic bias, it is in the direction of temperance and total abstinence from the consumption of alcohol; and this tendency has left its trace in legislation in the 'Welsh Sunday Closing Act.' The Calvinistic Methodist Church, especially, views the sale and use of alcohol by its officers and members with marked disfavour; and its regulations are strongly hostile to all forms of card-playing, dancing, and the drama, but the spirit of Welsh Nonconformity in general is practically identical in these matters with that of this denomination.

E. ANWYL.

ASCETICISM (Christian).—

I. *INTRODUCTION: ASCETICISM IN ITS RELATION TO BIBLICAL REVELATION.*—The word 'asceticism' (Gr. ἄσκησις, from ἀσκεῖν = 'to exercise *or* practise'), when used in the sphere of religion and ethics, denotes self-preparation for a virtuous course of conduct, the zealous practice of acts of devotion and morality. This practice of virtue in the narrower and stricter sense, or what may be called moral gymnastic, may consist in exercises of an inward kind (prayer offered in the heart, examination of conscience, and the like), or in acts of self-discipline passing over into the outward life (self-mortification by fasting, voluntary poverty, sexual continence, etc.). Both forms of asceticism, that pertaining to the spiritual sphere and that of a physical and external character, were already known to classical antiquity, especially in the traditional teaching of its philosophers from Pythagoras and Socrates downwards (cf. ἄσκησις in Plato, for instance *Rep.* vii. 536; and in Aristotle, for instance *Eth. Nicom.* ix. 9; as well as the mention of πολλαὶ καὶ παντοδαπαὶ ἀσκήσεις ὁσιότητος in Isocrates, p. 226 C, etc.). A specially high value was set upon the ascetic habit of life in the schools of the Stoics (cf. especially Epictetus, Περὶ ἀσκήσεως, Diss. II. xiii. 6), the Cynics (cf. κυνικὴ ἄσκησις in Jos. *Ant.* VI. xiii. 6), and the later Platonists beginning with Plutarch (cf. the latter's *Moral.* p. 668 E). Owing to the great and wide-spread influence of these schools during the Roman Imperial period, 'philosophy' and 'asceticism' (τὸ ἀσκητικόν, Epictetus, Diss. II. xii. 6) were employed almost as synonymous terms. Abundant evidence of the essential identity of the connotation of the terms 'ascetic' and 'philosopher' is furnished especially by the writings of Philo Judæus, as well as by those of numerous Christian Fathers from the time of Justin Martyr and Clement of Alexandria onwards. When Philo hails the Jewish religion, and the Fathers hail Christianity, as the true philosophy, both have in view a certain ascetic element in their respective religions. The moral strictness and earnest demand for virtue found in both, when looked at from the view-point of asceticism, formed the connecting link which rendered possible such a combination of the Jewish or Christian ideal of life with the 'wisdom' of the Græco-Roman philosophers.

As a matter of fact, there does appear to be inherent in both the OT and the NT stages of revelation an element of asceticism. This consists in the urgent demand for an earnest combating of sin and a complete resignation to the holy will of God. In its ritual legislation the Old Testament also prescribes fasting—sometimes strictly obligatory and universal (especially on the Great Day of Atonement, Lv 16^{29} 23^{27}), at other times optional and limited by temporary or personal conditions (*e.g.* Jl 1^{14} 2^{12}, Jer 36^{9}, 1 S 7^{6}, 2 S $12^{16ff.}$, Ezr 8^{23});

in particular, it imposes upon the priestly order certain temporary forms of abstinence; and is acquainted with a form of vow in virtue of which certain persons abstain all their lives from the use of wine (Nu $6^{2ff.}$, Jg 13^{4}, 1 S $1^{10ff.}$, Jer 35). And the New Testament religion not only takes cognizance of these and similar ordinances of the Old Covenant, but even itself leaves scope for a corresponding ascetic course of conduct. While not prescribing fasting as a matter of obligation, the NT clearly assumes that this practice will occasionally be followed by members of the Christian community (Mt 6^{16} 9^{15}, Ac 13^{2} 14^{23}, 2 Co 11^{27} etc.); it exhibits a similar attitude in the matter of sexual continence (Mt 19^{12}, 1 Co 7^{26}), or of the renunciation of earthly possessions (Mt 19^{21}, Ac 2^{44} 4^{32} 5^{4}), or of temporary submission to a vow (Ac $21^{24ff.}$), and the like. In short, acts of ascetic discipline and training in virtue are contemplated in the NT as allowable, nay, even as necessary, according to time and circumstances, in the sphere of Christianity. In the interests of the kingdom of Christ, the Apostle Paul submits himself to fastings, watchings, cold, nakedness, etc. (2 Co 6^{5} $11^{26f.}$); and 'bruises' and 'subdues' his body after the manner of athletes (1 Co 9^{27}). And he looks for similar action on the part of other seriously-minded followers of Christ (Gal 5^{24}, Ro 13^{14}, Col 3^{5}).

In view of the above and many other Biblical expressions, it cannot surely be maintained that ascetic practices are *excluded* by the religion of revelation. But, on the other hand, they cannot be regarded as a *primarily* important or *fundamentally* significant element of that religion. That they play only a secondary or accessory rôle in the sphere of revealed truth is plain even at the OT stage of religion, both from the relatively small number and the moderate strictness of the commands regarding fasting and other forms of abstinence, and from the sharp polemic of the Law and the Prophets against the excessive bodily and external mortification which prevailed widely in the religions of Israel's heathen neighbours (cf. the prohibitions of self-mutilation in Lv 19 and Dt 23, and Elijah's attitude towards the frantic wounding of themselves by the priests of Baal, 1 K $18^{28ff.}$). There is also proof of this in the absence of all trace of a partiality or a preference for the unmarried life in the social and ethical practice of life in Israel. To marry and to have children remain national fundamental virtues in Israel through all periods of its history; even as late as the Roman era, the Pharisees, who were pre-eminently the party of strict law, and who showed in many other points a disposition towards rigorous legalism in the matter of ascetic practice, maintained a decidedly unfavourable attitude towards celibacy. The opposite attitude of the Essenes cannot count for much, in view of the notoriously small number of this party and the extent to which they were probably influenced by foreign customs, particularly, it may be assumed, by the example of the Pythagoreans; and even in this sect there was a minority which (according to Jos. *BJ* II. viii. 13) did not renounce marriage.

That Christ and the primitive Christians deviated in any of the points here mentioned from the traditions that prevailed among the Covenant People of the OT is a theory that could be maintained only by a NT exegesis controlled by ascetic prejudices. Neither as regards the individual nor as regards society do the ethical teachings and prescriptions of the NT go further than *permit*. It is intended not as a rigorous statute, but as a command of love, when the Lord calls His disciples (Mt 10^{38} 16^{24}, Jn $13^{12ff.}$) to follow after Him in the way of the cross and of humility; and the Apostles adopted precisely the same free and mild attitude towards the problems of controlling the appetites and mortifying the flesh. In regard to these problems, St. Paul appears in some measure to have made stricter demands (cf. the above-cited passages in 1 and 2 Cor. as well as the Epistle to the Galatians, etc.) than even the stern legalist St. James; but an injustice is done him when the attempt is made to read into his Epistles anything like a commendation of monastic withdrawal from the world or of fanatical maintenance of virginity. He was and continues to be the preacher of true evangelical freedom, even in all those instances where he deals with questions of individual or of social asceticism (cf. 1 Co 6^{12} $9^{4ff.}$ 10^{23}, Gal 5^{1}, Ro $14^{2ff.}$); in the demands he makes for cross-bearing he nowhere goes beyond the standard set up by Jesus Himself. He who would 'walk by the Spirit' (cf. Gal $5^{16ff.}$) must, indeed, turn away from all works of the flesh; but there is no hint in this of an *ἀφειδία σώματος* or false angel-like spirituality (Col $2^{16ff.}$), no 'hating of one's own flesh' in the sense of Neo-Platonic or Oriental dualistic teachings (Eph $5^{29f.}$), no one-sided bodily exercise and mortification; for far higher than such *σωματικὴ γυμνασία* stands in his estimation the *γυμνάζειν ἑαυτὸν πρὸς εὐσέβειαν* (1 Ti $4^{7f.}$). Even in the solitary passage in which he uses the word *ἀσκεῖν* of religious and moral conduct (in his speech before Felix at Cæsarea, Ac 24^{16} *ἀσκῶ ἀπρόσκοπον συνείδησιν ἔχειν πρὸς τὸν θεόν, κ.τ.λ.*), the practice of virtue he has in view is that which he champions everywhere else, a practice marked by the characteristic freedom of the Gospel, and as far removed from Pharisaic narrow-mindedness and legal bondage as it is from unnatural self-torture after the fashion of Indian *faqirs* or heathen Syrian priests of Asia Minor.

II. *THE ATTITUDE OF THE EARLY CHRISTIAN CHURCH TO ASCETICISM.*—In spite of the condition of things described above, which forbids us to regard asceticism as an element of the religious and moral life belonging exclusively to the essence of Christianity, or prescribed in its original body of doctrine as necessary to salvation, the ascetic principle early made way for itself in the development of the Christian Church. Nay, in the course of this development, asceticism soared to heights and produced phenomena in the life of the Church which for greatness and far-reaching influence on the whole cultured life of humanity fall in no way behind what the history of non-Christian religions has to show of an analogous kind. Christian asceticism is one of the phenomena produced by the union of pre-Christian factors of civilization with the spirit of Christianity, phenomena which —like Christian art, poetry, jurisprudence, etc.—have everywhere made contributions of inestimable value and of abiding significance for the furtherance and elevation of the mental life of mankind. And the source from which the Christian spirit derived this element of culture—so far as it did not lie in the religious and cultured life of the OT—can have been none other than that from which formative influences and impulses mainly flowed in the departments of art, poetry, politics, and law. The beginnings of asceticism in the Christian Church, especially as organized in the form of communities—monasticism—constitute another chapter in the history of that process which is usually spoken of as the 'Hellenizing of Christianity.' No other place can be assigned to them than within the sphere of this process, which embraces the history of the Church from the 2nd to the 5th century. For the stage upon which the phenomena of a fully developed and socially organized Christian asceticism first make their appearance is found in those lands which constituted the world of Græco-Roman civilization; and the religious and philosophical traditions of this same cultured

world form the point to which the asceticism of the Church, with its ideals and efforts, primarily and mainly attaches itself.

Per se another supposition might appear possible, namely, that a fruitful influence upon the ascetic and monastic tendencies of the ancient Eastern Church proceeded from a religious civilization which in the matter of asceticism was so richly developed as that of *India* (with ascetic systems like Jainism and Buddhism, which date back to a time considerably earlier than the Christian era). Or an attempt might be made to trace the earliest ascetic and monastic movements in Christianity to kindred phenomena in the religions of *Babylonia* (and Syrophœnicia) or of *Egypt*. But when the various pre-Christian religious civilizations are pitted against one another and their share in the result before us examined, none can dispute the palm with *Greece*. India is far too distant, and was always much too widely separated from the mental life of the peoples of Western Asia, to be seriously taken into account. Towards the religious usages of Babylonia and Syria, which might certainly be considered with a view to the solution of the problem, the people of God in OT times—and primitive Christianity in like manner—consistently assumed an attitude only of disapproval and sharp opposition (cf. the remark already made on 1 K 18[28]). Again, the analogies with early Christian asceticism, which have been sought in the religious system of the Egyptians, prove, upon closer critical examination, to be merely apparent. This remark applies especially to those alleged ascetics or priestly monks of the temple of Serapis whom H. Weingarten (art. 'Mönchtum' in *PRE*[2], 1882; and previously in *Der Ursprung des Mönchtums im nachkonstantin. Zeitalter*, Gotha, 1877) sought to represent as the real models and teachers of the earliest Christian monks—a false theory which has been completely shattered by more recent investigation (see E. Preuschen's monograph, *Mönchtum und Serapiskult*, Darmstadt, 1899 [2nd ed. 1903], in which the existence of Serapis priests of a monkish type is disproved, and therewith the utter impossibility of Weingarten's hypothesis demonstrated). Thus we must abide by the view that the beginnings of early Christian asceticism and monasticism go back to essentially Greek influences, or, to put it more exactly, to the influence of the late Greek and Judæo-Hellenic schools of philosophy, to which we have already referred in this connexion. The religions of the Ancient East can at most be credited with only an indirect share (the result of the syncretism of the Alexandrian epoch) in the formative process we are considering. [Cf., on the one side, Edwin Hatch, *Influence of Gr. Ideas and Usages upon the Chr. Church* (Germ. tr., Preuschen, *Griechentum und Christentum*, Freib. i. B. 1892, p. 101 ff.), and A. Harnack, *Das Mönchtum, seine Ideale und seine Geschichte*[4], Giessen, 1895, esp. p. 18 ff.; and, on the other side, the literature (No. II.) cited at the end of the present article, dealing with the history of asceticism prior to and outside Christianity.]

Long before the rise of monastic organizations, by which asceticism was elevated to the rank of the ideal of life for the social ethics of Christianity, many forms of ascetic practice and endeavour had made their appearance within the sphere of individual ethics. Some of these had their model in Jewish customs. This was the case in particular with the habit of fasting twice a week and observing fixed daily hours of prayer. For both of these practices, the so-called 'station' fasts on Wednesday and Friday, and the habit of praying at least three times a day (the germ from which the later conventual institution of 'hours' developed), there is evidence in writings as early as the 2nd cent. (*Didache*, VIII. i. 3; Hermas, *Sim.* v. 1, 3; Aristides, *Apol.* 15; Tertull. *de Jejun.* i. 10, *de Orat.* i. 19; Clem. Alex., etc.). And at the root of both there is not only the Pharisaic Jewish model, but also an underlying allusion, dating probably even from Apostolic times, to the principal features of the Passion of our Lord. The phenomena of pre-monastic early Christian asceticism may be assumed to have found their models and motives mainly in pagan Hellenism. So with the custom (to be attributed to the influence of Montanism) of partial fasting for several weeks before Easter (the *Xerophagy*, or Fast of the Passion); the disposition (attributable to the same source) to increase the severity of Church discipline and to place additional obstacles in the way of contracting a second marriage (cf. especially Tertull. *de Pœnit.*, *de Pudic.*, *ad Uxor.*, *de Monogam.*, etc.); as well as the high or exaggerated value (to be explained partly from Montanist and partly from Gnostic influences) set upon voluntary virginity (παρθενία, ἐγκράτεια) as an ideal.

We see the *coryphæi* of all the leading schools of theology, Greeks and Latins, Alexandrians and non-Alexandrians (cf., in regard to these last, not only the already oft-cited Tertullian, but also especially Cyprian, *de Hab. Virg.* and *de Orat. Domin.*; Lactantius, *Inst. Div.* vi. 23; and Methodius, *Conviv.* vii. 3, viii. 1), participating in the endeavour to commend such ascetic practices. The ascetic element was most prominent, to be sure, in the theology of that school which, as the founder of an ecclesiastically orthodox gnosis in opposition to that of the heretical Gnostics, ventured to draw most boldly and most deeply from the treasury of the traditions of Greek philosophy—the *Alexandrian*, which far surpassed all other theological schools of the early Church in the matter of establishing and developing Christian asceticism. Even Clement, although he defends the right to hold earthly possessions (*Quis div. salv.*), and upholds the sanctity of the married condition (*Pæd.* ii. 10; *Strom.* ii. 23, iii. 12), gives expression to very rigorous views regarding the Christian attitude to fine clothes and various worldly pleasures and enjoyments (*Pæd.* ii. 1 ff., iii. 2 f., 7 f.), and even pleads at times in favour of an almost Stoically conceived ideal of apathy (*Strom.* iv. 22, cf. iii. 7 and vii. 12). Origen, even after he had learned to repent of the hyper-ascetic excesses of his youth, in particular his self-emasculation (Euseb. *HE* vi. 8), still remained an enthusiastic panegyrist of all forms of world-renunciation and mortifying of the flesh. He went still further in the matter of fasting and other forms of abstinence (see *Hom. in* Lv [10. 11], *Exhort. ad Martyr.* etc.), and especially in recommending virginity (on this last point, besides passages like *c. Cels.* i. 26, vii. 48, viii. 55, see especially his Com. on Ro 12[1], where he commends three kinds of 'living, holy, God-pleasing sacrifice,' namely a martyr death, voluntary celibacy, and abstinence from sexual intercourse on the part of married persons; similarly *Hom.* 23 *in Num.*).

It is not surprising that, when an advance took place from the practice of asceticism by individuals to its practice by bodies of people, the earliest signs of the movement took place where this Christian-Gnostic theology made its influence first and most powerfully felt. Egypt, the home of the Alexandrian theology, became also the mother-land of early Christian *monasticism*, or, to designate it more exactly and correctly, *cœnobitism* (for μοναχός or μονάζων is properly 'a hermit,' 'one living alone'; it is the living together in κοινόβια that stamps the ascetics as monks in the modern sense of the word). It was in those circles in Egypt in which theology and church stood in the closest connexion with Origen that the impulse towards more intimate

association, with a view to a common ascetic life, appears to have set in earliest. The adherents of the Origenist Hierakas, whom Epiphanius in No. 67 of his Catalogue of Heretics describes as a sect under the name Ἱερακῖται, may in many respects be regarded as one of the earliest societies of ascetics. But in their case, as previously in that of the Encratite party of Tatian, the element of theoretical traditional teaching or mystico-Gnostic speculation probably predominated to such an extent that the name 'school' or 'sect' fits them better than such designations as 'Mönchverein' or 'Klosterbrüderschaft' (cf. art. 'Hierakas' in *PRE*[3] viii. 38 f. by A. Harnack, who does not take sufficient account of the peculiarity which distinguishes them from the cœnobite societies of the following period). Like these Hierakites, who may have belonged entirely to the 3rd cent., the 'solitaries' (μοναχοί, also μονότροποι, μονήρεις), described by Eusebius in two passages of his Commentary on the Psalms (on Pss 67 and 83), were also still without the closer social organization. The latter may yet have been wanting also to those 'bond brothers' or 'sons of the bond' (Syr. *b'nai k'yâmâ*), of whom mention is made by a Syrian contemporary of Eusebius, namely, Aphraates of Edessa, in Nos. 6 and 18 of his *Homilies*. To the category of ascetics who received their impulse from the Alexandrian theology we must assign also those representatives of the ascetic habit of life who belong to the first decades of the 4th cent., and whose dwelling-places should probably be sought in Palestine and Syria rather than in Egypt. What here again forbids our identifying them with monks proper or cœnobites is the lack of more definite information as to principles of organization or rules that may have belonged to them.

This characteristic of being bound together by a fixed principle or rule of life is not wanting, however, in those societies of Middle Egypt which from the early part of the 4th cent. began to make their appearance in the Eastern Church, and as the founders of which St. Antony and St. Pachomins have gained superlative fame. The former (born 251, died 356) lived for some decades (from about 270) as a hermit in the mountain wastes of northern Middle Egypt, on the right bank of the Nile, opposite Arsinoë and Heracleopolis. Then, shortly after the year 300, a number of bodies of associates in his ascetic mode of life, who had taken up their abode in the same region, were trained by him to work and to practise devotional exercises in common, and thus—though for a time without written rules—a kind of monastic life was established. The sites of two of the κοινόβια, or colonies of monks, established and directed by St. Anthony down to his death (*i.e.* for a full half century) can be fixed with tolerable certainty: Pispir, or the 'outer mount of Antonius,' lying close to the right bank of the Nile, and the 'inner mount of Antonius,' lying farther to the east, near the Red Sea. While this older patriarch of Egyptian monasticism still refrained from committing his rules to writing, his younger contemporary Pachomius (born *c.* 290, died 345 or 346) provided the hosts of ascetics who gathered round him in southern Middle Egypt, between Akhmîm [Panopolis] and Denderah, with a rule of life which regulated in detail their devotional exercises and their work. This body of rules was, no doubt, reduced to writing by himself or by some of his immediate associates. By the authors of the earliest accounts of his life and work it was regarded as a product of Divine inspiration, having, it was alleged, been given to him, written on a tablet of brass, by an angel while he sojourned in a cave. Its prescriptions regulate in the most minute detail not only the daily round of work and prayer, but also everything relating to the food, the clothes, the sleep, and the dwellings of the monks. They comprise much that is original and characteristic of the national Egyptian monastic usage, but also some things which the later tradition did not accept at all (so, especially, the division of the inmates of each establishment into 24 τάγματα classified according to age), or accepted only with considerable modifications (for instance, the prescription of 3 × 12 daily acts of prayer).

Partly independent of the models offered by the creations of these two great monastic fathers, and partly with more or less close attachment to them, there arose even during their lifetime various large and afterwards influential settlements of associated bands of ascetics. Thus we find (1) in Lower Egypt, the monasteries, or, to be more correct, the hermit-villages of the Nitrian mountain, founded somewhere about the year 320 by Amun or Ammonius, as well as those of the desert of Skete to the north of this hill country, founded about 330 by Macarius 'the Great' or 'the Egyptian' (died 390); (2) the South Palestinian hermitages and monasteries of St. Hilarion, a pupil of St. Anthony (*c.* 320–360); (3) the N. Syrian and Mesopotamian monasteries called into being about 325 in Nisibis and its environs by the Egyptian Awgîn (a monkish saint who received his training at Tabennisi, the principal monastery of Pachomius); (4) the monastic societies established about 330 still farther north, in Armenia, Pontus, and Cappadocia, by Eustathius of Sebaste. Only a little later are the phenomena which mark the laying of the foundation of a joint practice of asceticism in the West, especially the essentially monastic activity of St. Martin (*c.* 370–400) in Western Gaul. Regarding the majority of these fathers of the monastic system we have more or less detailed and in the main reliable historical information. In his *Historia Lausiaca* (written in the beginning of the 5th cent.), Palladius has collected sketches of the lives of some 70 notable ascetics and founders of monasteries. These sketches, while not devoid of certain features of embellishment, are never pure fictions, but rather embody reports by eye- and ear-witnesses of the persons and events in question. The same remark applies to the historical value of the still older *Historia Monachorum* by Rufinus, and to Athanasius's *Vita Antonii*. Here, again, this last-named biography of the most famous of all the Oriental fathers of monasticism has handed down to us information which, while it is enriched with not a few legendary additions, represents in the main the authentic testimony of contemporaries. [Against the attacks of modern hyper-critics (esp. the above-named Weingarten) on these and other sources for the history of asceticism and monasticism during the era of Constantine and the following period, see, in general, the discussions by C. Butler and the author of the present article in the works cited below (esp. Zöckler, *Askese und Mönchtum*, pp. 188 ff., 200 ff., 212 ff.)].

III. *Development of Asceticism in the Middle Ages.* — The Church of the Middle Ages added scarcely anything that was essentially new to the forms of ascetic effort and action that had become usual in the Early Church period; but in the matter of establishing fixed rules and systematizing these forms it went far beyond what had been done by the Ancient Church. The development in question was accomplished in the course of the following four periods:

1. *The transition period from the Early Church to the Middle Ages proper* (*c.* 360–800).—During this period the labours of a number of *monastic legislators* in East and West gave permanent form

and binding force to the traditions of the era of Constantine with reference to the living together of ascetics in monastic establishments. Basil the Great of Cæsarea (died 379) drew up a set of rules, which proved of fundamental importance and attained to permanent influence, for the monastic system of the Eastern Roman Empire and partly also of Lower Italy and Sicily. Suppression of the hermit or anchorite form of monastic life (which was still frequently preferred by the earliest Oriental ascetics) by cœnobite arrangements, transfer of monastic settlements from remote deserts to the neighbourhood of cities, rejection of hyper-ascetic excesses (*e.g.* in such matters as fasting and the number of daily times of prayer, which were restricted to seven or eight), and generally an increasing mildness of disposition, directed to the discouraging of excessive ascetic enthusiasm—such are, upon the whole, the characteristic features of this organization which derived its origin and its name from Basil. In the Latin edition of the Rules of Basil, which Rufinus prepared to serve as a constitution for the lower Italian and Sicilian branches of this monastic family, provision is made even for the establishment of double religious houses, *i.e.* the erection close to one another of monasteries under an abbot and of nunneries under a 'mother.' The foundation of these double houses indicates a shrinking from the vehemence of the older sexual asceticism. A similar custom prevailed frequently in the West, even independently of the influence of Basil and Rufinus. Such houses were founded, for instance, in Spain by Fructuosus (died 670); in the British Isles we have examples in the Iro-Scottish religious houses founded by St. Patrick and St. Columba; and still later in the orders of Robert of Arbrissel (died 1117), Gilbert of Sempringham (died 1189), and Birgitta of Sweden (died 1373); cf. Zöckler, *l.c.* pp. 290, 379 ff., 419 ff., 541 f. More or less important developments continued to be undergone by Basil's monastic legislation in the Byzantine East till towards the middle of the 11th century. These concerned especially such matters as the placing of the religious houses under the bishop's superintendence, increased severity of discipline within convents, an organic union whereby anchorites (κελλιῶται, 'inmates of cells') lived with cœnobites within the same cloistral district, and the distinguishing of the monks' right of penitential discipline from the pastoral charge exercised by the secular clergy. Most effective for this development were the ecclesiastical prescriptions of Justinian's civil code; the canons of certain synods of the 7th and 8th cents., especially the Trullan Council, ii. 692; the influence of the patriarch Germanus of Constantinople (died 703), of the abbot Theodorus Studita (died 826), of Athanasius of Trapezus (*c.* 960 ff.) who founded the oldest principal religious house of the monastic republic on Mt. Athos, and of the Constantinopolitan monastic prefect, Simeon the younger (*c.* 1040; cf. Zöckler, *l.c.* p. 290 ff.; and, in regard to the last named, K. Holl, *Enthusiasmus und Bussgewalt beim griechischen Mönchtum*, Leipzig, 1898).

Turning to the monastic system and asceticism of the West, we discover the most influential legislator and most famous founder of orders in the person of Benedict the Great of Nursia (died 543), the founder of Monte Casino. A number of his predecessors in the West (in particular Joh. Cassianus [died 435] and Cæsarius of Arles [died 542], the former the composer of rules for monks, the latter the author of a system for nuns) had sought to adapt the ascetic traditions of the East as represented by Egypt and Syria to the needs of the inmates of Western religious houses. In relation to these attempts it is to be noted that the course followed by the *Regula Benedicti*, which became the fundamental code of the greatest of all the orders of monks, is partly to summarize and partly to condense and simplify previous results. The *Regula* in its present form is divided into 73 chapters, and though perhaps not free from some later additions, may be regarded, certainly up to ch. 66, as genuine. It exhibits no small degree of legislative wisdom in its enactments, which are marked on the one hand by strictness and on the other by humanity and mildness. It wears the aspect of strictness in its insistence upon the maintenance of the *votum stabilitatis*, and in its measures for ensuring a strict *clausura* in opposition to all undutifulness and disposition on the part of the monks to wander about without restraint; so also in its demand that there shall be no holding of private property by any inmate of a religious house; in short, in its enforcing of the three fundamental monastic duties: *castitas, obedientia, paupertas*. But, on the other hand, it evinces relative mildness in its dietary prescriptions (the eating of flesh food being prohibited, but a moderate quantity of wine allowed), its regulation of dress, its enjoining of silence (*taciturnitas*) at fixed times, and its directions as to devotions, eight daily 'hours' being indeed prescribed, but excessive length being avoided by reducing the number of Psalms to be sung in each 'hour' to three. The *Regula* of the patriarch of Monte Casino knows as yet nothing of the more violent methods of penance and discipline, such as self-flagellation, wearing the hair shirt, temporary *inclusio*, or confinement of monks in their cells, etc. It was reserved for later epochs in the Middle Ages to give birth increasingly to such aggravations of ascetic practice until an unnatural degree was reached.

2. *The period from the beginning of the 9th till towards the end of the 11th century* (from Charlemagne to Hildebrand).—This period is characterized, on the one hand, by the beginnings of that rigorous reaction, within the bosom of the Benedictine order of monks, against the frequent laxity or disuse of monastic discipline, such a reaction as is exhibited in the reforms of the younger Benedict (of Aniane, died 821) and the 'congregation' of Cluny (especially from the time of its second abbot, Odo [died 942]); and, on the other hand, by the constant effort of the Church, through the instrumentality of penance, to carry over ascetic principles and habits of life to the lay world. Amongst the literature serving this purpose (the *Libri Pœnitentiales*), one of the earliest and most prominent places should be assigned to the works of Columbanus of Luxeuil (died 615), who composed not only a book of penance for laymen, but a rule for religious houses (*regula cœnobialis*) which contained a severe penal code. In this class of literature we find prescribed not only a number of the ordinary forms of penance for sins that have been confessed (money fines, almsgiving, pilgrimages to distant shrines, intensified fastings, etc.), but with special frequency also the penalty of flagellation. In connexion with the rigorous movement emanating from Cluny, there were many monasteries in which, from the commencement of the 11th cent., this flagellation was practised in a specially severe form, and with all sorts of refinements added to intensify it. Thus arose the practice of self-flagellation, first introduced in certain religious houses of Central Italy (Clusium, Pomposia, perhaps also at Camaldoli near Arezzo, the original seat of the Camaldulensian 'congregation' founded by Romuald [died 1027]), and reduced to a fine art in Peter Damiani's establishment, Fonte Avellana, by Dominicus, surnamed

Loricatus (*c.* 1050), who added to the self-inflicted flagellation yet other methods of mortifying the flesh, notably the performance of numerous genuflexions (*metanœœ*) during the singing of Psalms in Divine worship, and so became a much admired hero of the self-torturing hyper-ascetic discipline (see the literature cited below).

A more harmless form of the joint practice of asceticism, likewise developed first in the religious houses that were influenced by the reforming movement of Cluny, and showing itself almost simultaneously in Central Italy and in South Germany, consisted in the institution of lay-brothers or 'outside brothers' (*fratres exteriores* or *conversi* or even *barbati*). These were a kind of half-monks, who, because they were subject to only part of Benedict's *Regula* and were not bound to wear the monastic habit, did much to diffuse the spirit of monastic piety even in lay circles, and at the same time to extend the political influence of the monastery. Starting from Gualbert's 'congregation' of Vallombrosa near Florence (*c.* 1038), and from Hirschau, the monastery of abbot William the Holy (died 1091), this institution of lay-brothers gradually established itself in other 'congregations' as well. It became the model for those brotherhoods of Penitents or Tertiaries which were afterwards (from the end of the 13th cent.) affiliated with the mendicant orders of St. Dominic and St. Francis, and from whose activity results of great significance followed.

3. *The period of the Crusades and of the last two centuries of the Middle Ages* (*c.* 1100–1517).—The characteristics of this period are an ever-growing effort on the part of the religious orders to extend their manner of cultivating piety to the Church as a whole, and an increasing tendency to multiply ascetic practices and forms. Even during the 12th cent. the monasticizing of the secular clergy by the imposition of celibacy—a movement which had the fashion set to it in Rome from the time of Gregory VII.—had been accomplished in almost all the countries of the West, both the great rival 'congregations' of the Benedictine order, that of Cluny and that of the Cistercians, lending their services to the Curia for this end. Still greater results were reached by the above-mentioned mendicant orders, which from the 13th cent. began to take up the work of both these bodies and in general of the older religious orders. Partly through the stringency with which they enforced the rule of poverty, partly through the institution of Tertiaries above referred to, and, in addition to all this, owing to their preaching in the language of the people, and to the self-sacrificing character of their pastoral activity, especially in times of severe national calamities, they gained for themselves a degree of popularity which threw all their predecessors into the shade. Many phenomena of asceticism as well as hyper-asceticism still prevailed side by side with the influences emanating from these regularly constituted chief representatives of monastic piety. Such, for instance, was the practice, much resorted to by both sexes, of *inclusio*, or allowing themselves to be shut up in narrow cells, caves, or huts, sometimes in remote districts, sometimes in the vicinity of much frequented churches or religious houses. So with pilgrimages to places of devotion and miracle-working shrines, the latter increasing in number towards the end of the Middle Ages. To the same category belong the processions of flagellants, which after the year 1349 repeatedly poured over great tracts of country, and whose practices about the beginning of the 15th cent. were brought to the highest degree of perfection under the guidance of the Spanish Dominican saint Vincentius Ferrer (1401–1417). Another phenomenon was the appearance in particular localities of groups of people who were seized with a sudden religious (or semi-religious) mania, *e.g.* the 'dancers' of the Lower Rhine and Holland (1374) and Strassburg (1418). Finally must be mentioned the numerous instances, amounting almost to a general epidemic of asceticism, in which, from the time of the 'stigmatization' miracle connected with St. Francis (1224), visible copies of the wounds of Christ were, it was alleged, miraculously produced on persons of both sexes, sometimes within the pale of the two rival orders of St. Francis and St. Dominic, sometimes outside it.

The above and kindred phenomena betray a religious degeneration, hand in hand with which went numerous symptoms of moral decay, particularly in the discipline of most of the religious orders, old and new alike. An attempt was made to counteract this degeneration by the mystical and inward tendency which marked some ascetic groups, esp. the 'Brothers of the Common Life' (*q.v.*), who spread from the Netherlands over North and Central Germany; but this effort to lead men to spiritual religious exercises and to a spiritual following of Christ failed to make any deep and lasting impression upon any large number of people.

IV. *ASCETICISM IN MODERN TIMES.*—The Reformation of the sixteenth century led to a return, on the part of all that portion of Western Christendom which adhered to it, to that limited measure of ascetic practice and aim which was the norm for primitive Christianity, with its freedom from the Law. In other words, an attitude of disapproval was adopted not only towards the hyper-asceticism of the Middle Ages, but also towards those intensifications of the ascetic-monastic principle which had made their appearance in the Early Church. On the other hand, in both the Churches of Catholic tradition, the Roman and the Greek, this critical attitude, derived from the Protestant doctrine of justification, towards the development of previous centuries was condemned as unbridled antinomianism. Hence the attempt was made to conserve not only the ascetic but partly also the hyper-ascetic acquisitions of the Church's past. Accordingly a wide severance between the principal Churches in the matter of their ascetic practice now set in.

1. *The Græco-Russian Church.*—This Church, which had been more or less untouched by the exaggerations of asceticism that had shown themselves during the mediæval development of the Western Church, continues to abide in all essentials by the forms and conditions with which the period of primitive Christianity had ended. Hence for it an enduring validity belongs to Canon 13 of the Second Trullan Council, which frees the priests and the lower clergy in general from the obligation to celibacy; as well as to the 12th Canon of the same Council, which strictly binds the higher grades of the hierarchy, from bishops upwards, to an unmarried life. Accordingly, the higher church offices can, as a rule, be held only by men chosen from the ranks of the monastic clergy—a principle far-reaching in its bearing upon the whole ecclesiastical and civil life, and serving to erect a great wall of partition against Western Catholicism.

2. *The Roman Catholic Church.*—Along with the celibacy of the clergy, this Church retains almost all the other intensifications of the ascetic principle which the mediæval development added to the Early Church traditions. Nay, in the interests of its contra-reforming aims it has in not a few points gone beyond the Middle Ages. New forms of ascetic discipline and self-torture could indeed

no longer be invented, but all that was possible was done in order to give more effective form and more refined manner to the creations of earlier days. This will be seen if, for instance, Loyola's *Exercitia spiritualia* be compared with their embryonic types in the monastic mysticism of the Brothers of the Common Life, or if the Jesuitical school comedies and the performance of oratorios in the order of Neri be compared with the crudities of the clerical plays of the closing pre-Reformation period. Of the unnatural extravagances of the later mediæval asceticism, some, such as flagellantism, *inclusio*, the wearing of the penitential shirt, etc., were, if not wholly suppressed, at least somewhat mitigated and more discreetly ordered. The tendency to multiply the forms of joint practice of asceticism was still maintained. And especially in the frequent formation of new religious brotherhoods and sisterhoods outside the orders proper the more recent Catholicism exhibits an inventive genius and a productive power which have been able to defy all counter-forces, including even the revolutionary storm at the transition from the 18th to the 19th cent., and which at the beginning of the present century continue to exhibit the same capacity as during the first decades of the counter-Reformation. The Society of Jesus forms the chief centre. Within its bosom is constantly produced that inexhaustible supply of ascetic vital energy which is diffused in all directions with triumphant effect. The uniqueness of this most important and original of all Catholic orders consists neither in unexampled severity of self-mortification nor in unusual zeal in performing deeds of loving self-sacrifice, nor yet in a superlative degree of scientific industry. In none of these points, least of all in the last-named, is the order of Loyola content to hold a secondary place; but it seeks its chief glory in an intensifying of the monastic virtue of obedience, whereby it far surpasses all that has been achieved in this matter by earlier ascetic societies. The secret of its greatness lies in the blindly obedient devotion on the part both of its individual members and of its superiors to the command of the Pope, and all with a view to extirpating Protestant heresy. To the vow of obedience it has imparted, especially by that sacrifice of intellect to which it trains its pupils, a military precision which secures for it an incomparable superiority over all the other militant orders of the Papal Church. And, owing to this essentially military character and organization, while it has not indeed reached its goal in the extirpation of Protestantism, it has gained other successes of the utmost importance. Instead of the Churches of Protestantism, it has completely conquered its own Church, and secured for itself within it a position of influence which, to all appearance, is destined to continue for decades if not for centuries.

3. *The Protestant Churches.*—These reject, as their reforming instruments and Confessions declare with practical unanimity (cf. *Conf. Aug.* artt. 26, 27; *XXXIX Artt.*, xxxii., xxxiv.; *Conf. Helvet.* ii. 18, 24, 29; *Scotch Conf.* i. 14, 15, and ii.), the Roman demand for the celibacy of the clergy, just as they oppose the claiming of special merit for ascetic displays of virtue. A certain number of wonted ascetic observances, especially in the matter of keeping weekly and yearly fasts, passed over into the practice of Lutherans, Anglicans, and some of the other Reformed Churches in the times immediately following the Reformation, but have survived in only a very limited measure down to the present day. A return to the principles and practices of strict asceticism in the matter both of fasting and of abstinence from worldly pleasures and enjoyments, evincing in general a tendency to withdrawal from the world, was aimed at and in some measure achieved by the Continental Pietism of the 17th and 18th cents., as well as in England and her colonies by Methodism and some of the Methodist and Baptist sects (especially the Tunkers [from c. 1724] and the Shakers [from 1774], both of which favoured the principles of celibacy and complete community of property). But even these attempts led for the most part to no permanent results. The Pietistic bodies in Germany, in so far as they survived the Spener-Francke and Zinzendorf times, introduced important modifications in their opposition to a more secular form of Christianity. A more enduring character belongs to the ascetic efforts of many branches of British and American Methodism. Particularly in the sphere of the crusade against alcohol not a little success has already been achieved, whose salutary influence extends to the life of other denominations as well, and from which still more may be looked for in the future. A similar remark applies to the work of the Salvation Army. Its 'Self-Denial Efforts,' *i.e.* abstinence from a number of the pleasures of life with a view to being able to give all the more for the benefit of others, may be classed with those forms of ascetic action whose survival and wider diffusion within the pale of Protestant Christianity are in general to be wished and prayed for. Similar in character and aim are the 'Weeks of Self-Denial' that have recently become common among the Presbyterians of North America, of which an account is given by R. E. Thompson, the historian of that denomination, in *American Church History* series, vi. 189.

O. ZÖCKLER.

ASCETICISM (Greek).—We find asceticism even in ancient Greek life, and there, in fact, its unseen beginnings go back to the 7th cent. B.C. Sundry anticipations of the practice are traceable in various religious cults, as, *e.g.*, the rigorous fasting enjoined by the Eleusinian Mysteries, the fast-day in the sacred calendar of the Attic *Thesmophoria*, the fasting preparatory to incubation in the chthonian cults, etc.* But none of these ever got beyond the embryonic stage, as they did not emanate from any systematic religious conception of the world. Ascetic movements of real significance make their first appearance among the ecstatic seers and purifiers of the 7th and 6th centuries B.C. Thus Abaris, whom Pindar (frag. 270 B) names as a contemporary of Crœsus, is said to have carried the golden arrow of Apollo over the whole earth without taking food.† In Strabo, vii. 301, he appears as the pattern *εὐκολίας καὶ λιτότητος καὶ δικαιοσύνης*—a description, of course, merely legendary and idealizing. The famous seer and purifier, Epimenides of Crete, is also extolled by ancient authorities for his rigorous fasting and his ascetic mode of life in general.‡ While it may be the case that these reports all proceed from the *Pseudepimenidea* of Onomacritus, we have nevertheless no reason to doubt the ascetic tendencies of the persons named, or of kindred spirits. This is, in fact, confirmed by the account given in Hippocrates, *de Morb. Sacr.* c. 1 (Littré, ii. 354 ff.), of the rules of abstinence prescribed by such purifiers.§ The purpose of these regulations and ceremonies was to purify men from the contaminating touch of demons. And, indeed, the practice of cathartics in general arose mainly from the dread of demonic powers, with their standing menace of pollution. Such ideas had not yet taken shape in the Homeric age.

These germinal notions, however, could not develop into a genuine asceticism until men had become conscious of an opposition between body and soul. No doubt the idea that the soul may pursue an independent existence apart from the body belongs to the remote past, the phenomena of dreams, the trance of 'possession,' as also the frequently abrupt transition from life to death, all having tended to suggest such a thought to primitive man. But the feeling of an *opposition*, the surmise that the soul is in its nature divine, while the body is merely its prison-house, makes its first appearance in Greece as a result of the experiences of men in a state of *ecstasy*, notably in connexion with the Dionysan cult. It was, in fact, the triumphal advance of the Dionysan religion which first gave currency to the conviction that the soul acquires hitherto unsuspected powers once it is free from the trammels of the body—a conviction presently appropriated by the adherents of Orphism. 'Of small account, as contrasted with the soul, ever striving after freedom, must appear the body, as that which obstructs, which fetters, and which must be cast off.' . . . 'It was all but inevitable

* Not only in the Demeter cult, but also in the worship of deities of foreign extraction: Cybele, or, later, Isis, or, finally, Mithras.

‡ Diog. Laert. i. 114 = Diels, *Frag.*[2] ii. 490, l. 16 ff.; Plato, *Laws*, iii. 677 D (reference to Hesiod, *Op.* 40 f.); Plutarch, *Sept. Sap. Convio.* 157 D = Diels, *Frag.*[2] 492, 27 n.; Theophrast. *Hist. Plant.* vii. 12. 1, *Char.* 16 = *Frag.*[2] 493, No. 6.

§ With Hippocrates' sketch cf. the Pythagorean regulations in Diog. Laert. viii. 33.

that one who had become familiar with the idea of the antagonism between body and soul, especially if he moved in the circle of cathartic ideas and practices, should hit upon the thought that the soul itself must be "purified" from the body as a defiling encumbrance (Rohde, *Psyche*[3], ii. 101).'

This feeling of the rigid *opposition between soul and body*, as also of their vital and radical *difference in value*, forms the one main source of asceticism. The other is to be looked for in the nascent *consciousness of sin*, and the consequent *yearning for redemption*, in troubled souls.* Before the age of (let us say) Hesiod, such feelings had no place whatever in Greek life. They sprang from a pessimistic outlook upon earthly existence (cf. art. PESSIMISM), the proximate causes of which probably lay in the social and political conditions as well as in the revolutionary changes of the 7th and 6th centuries B.C. Asceticism was regarded as a means of liberating the soul from the bondage of the flesh and of the world of sense in general (that the body is the prison of the soul was one of the leading ideas of Orphism†): by the practice of asceticism, in fact, the soul, divine in origin, but meanwhile immured in the body by reason of its guilt, might free itself from every corporeal bond, as from the whole 'cycle of becoming,' and, venturing forth upon its flight to the Deity, at length become one therewith.‡ Here we come upon the conjunction of asceticism and mysticism.

1. **Orphism.**—Views of this character make their first appearance in the communities named after the Thracian bard Orpheus, which can be traced to about the middle of the 6th cent. B.C. The Orphic sect, which in the 6th cent. appears to have had its main centre in Athens,—witness the fact that Onomacritus flourished at the Court of the Pisistratidæ,—seems, towards the end of the same century, to have found a particularly congenial soil in lower Italy and Sicily.§ Fresh and surprising evidence of this has been furnished by the gold leaves found in tombs of the 4th and 3rd cents. B.C. at Petilia, near Thurii. An inscription of like import, moreover, dating from the 2nd cent. B.C., has been discovered at Eleutherna in Crete. While Orphism was never assimilated by the civic religion,‖ and while the various Orphic cults from the 4th cent. onwards degenerated more and more into esoteric mysteries and nonconforming communities, they nevertheless continued to exist till the close of the ancient era, and still exercised a profound influence upon Neo-Pythagoreanism and Neo-Platonism, as well as upon early Christian ideas regarding the other world and the experiences of the soul after death. The central feature of the Orphic faith was constituted by the fortunes of the god Dionysus-Zagreus, who as a child was torn in pieces and devoured by the Titans, Athene being able to recover his heart only; this she carried to Zeus, who, having swallowed it, presently, with Semele, begot the 'new Dionysus,' and destroyed the Titans with a thunderbolt. From their ashes afterwards arose the human race, and, accordingly, there are in man two constituent elements—a Dionysan and a Titanic. It is the Dionysan constituent that generates the human soul, and man must free himself as far as possible from the Titanic element in order to return once more to the deity whose essence he likewise shares.

The outstanding feature of early Orphic asceticism was the *prohibition of animal food* (cf. Euripides, *Hippolyt.* 952 = Diels, *Frag.*[2] 471, No. 8).

* *Orphica*, frag. 226.

† Cf. especially Plato, *Cratyl.* 400 C; *Phædo*, 62 B = *Orphica*, frag. 221 (Abel).

‡ Cf. *e.g.* *Orphica*, frag. 226.

§ The earliest specific mention of the sect is in Herod. ii. 81.

‖ E. Maass is of a different opinion.

In Aristophanes, *Frogs*, 1032, Æschylus (who had probably been initiated into the Orphic mysteries) says:

Ὀρφεὺς μὲν γὰρ τελετάς θ' ἡμῖν κατέδειξε φόνων τ' ἀπέχεσθαι.

Cf. Euripides, frag. 475 N[2], v. 16 ff.:

Πάλλευκα δ' ἔχων εἵματα φεύγω
γένεσίν τε βροτῶν καὶ νεκροθήκης
οὐ χριμπτόμενος τήν τ' ἐμψύχων
βρῶσιν ἐδεστῶν πεφύλαγμαι.*

See also Plato, *Laws*, vi. 782 C: οὐδὲ βοὸς ἐτόλμων μὲν γεύεσθαι θύματά τε οὐκ ἦν τοῖς θεοῖς ζῷα, πέλανοι δὲ καὶ μέλιτι καρποὶ δεδευμένοι καὶ τοιαῦτα ἄλλα ἁγνὰ θύματα, σαρκῶν δ' ἀπείχοντο ὡς οὐχ ὅσιον ὂν ἐσθίειν οὐδὲ τοὺς τῶν θεῶν βωμοὺς αἵματι μιαίνειν, ἀλλὰ Ὀρφικοί τινες λεγόμενοι βίοι ἐγίγνοντο ἡμῶν τοῖς τότε, ἀψύχων μὲν ἐχόμενοι πάντων, ἐμψύχων δὲ τοὐναντίον πάντων ἀπεχόμενοι.† The prohibition not only applied to the eating of flesh, but covered all food-stuffs of animal origin, even eggs (frag. 42, Abel); and, amongst vegetables, beans: cf. Diels, *Frag.*[2] 214, 28: φέρεται δὲ καὶ Ὀρφέως τάδε ἔπη, Δειλοί, πανδείλοι, κυάμων ἄπο χεῖρας ἔχεσθαι καὶ Ἴσόν τοι κυάμους τε φαγεῖν κεφαλάς τε τοκήων.

The reason of these prohibitions was that the things referred to were used by the χθόνιοι in their sacrifices to the dead and as food;‡ in the case of eggs, a further consideration was perhaps the fact that these contained the germ of life (cf. frag. 42, Abel).‖ The practice of *fasting* (νηστεία) seems also to have had a place in Orphic asceticism.§

'As a matter of fact, the things and conditions from which they really kept themselves unspotted were those which represented in the symbolism of religion, rather than involved in actual practice, a dependence upon the world of death and impermanence' (Rohde, *op. cit.* ii. 126).

The Orphic asceticism, however, like the Ὀρφικὸς βίος in general, probably had, even in its early stages, an ethical import as well. This is certainly not the opinion of Erwin Rohde, who, speaking of this asceticism, says: 'It does not enjoin the practice of the civic virtues, nor is discipline or transformation of character required by it; the sum-total of its morality is to bend one's course towards the deity, and turn away, not from the moral lapses and aberrations of earthly life, but from earthly existence itself' (*op. cit.* ii. 125, cf. ii. 102). On the other hand, Gomperz writes: 'What distinguishes the Orphic branch of the Greek religion from the other Mysteries is the extraordinary emphasis it laid upon morality, an approximation to which is found only in the Apollinarian cult centralized at Delphi. This deepening of the moral consciousness may well be regarded as the true source of the most important and most characteristic element in the Orphic teachings about the soul' (*Griech. Denker*[2], i. 107, cf. 434).‖ It would certainly seem that the view of Gomperz, as compared with that of Rohde, is so far the right one, though the former has possibly somewhat exaggerated the moral factor.

2. **Pythagoreanism.**—Orphic ideas exercised a vast influence upon the succeeding period. In the first place, cognate views and practices are found among the early Pythagoreans. It is, of course, impossible to determine precisely how far such ideas are traceable to Pythagoras himself, as the oral traditions of the school are all we have to go upon till the time of Philolaus, *i.e.* the middle of the 5th cent. B.C.;¶ but general considerations seem to favour the theory of their being so derived. With regard to Pythagoras, indeed, we are certain of only two of his cardinal tenets, viz. the immortality of the soul, and the transmigration of souls.** But when we bear in mind how intimately these two tenets are connected with asceticism among the adherents of Orphism, with whose Mysteries Pythagoras was undoubtedly acquainted, and when we find unmistakable traces of the ascetic mode of life even among the oldest Pythagoreans, we need hardly hesitate to infer that the founder of the school was himself an ascetic. Even Herodotus (ii. 81) speaks of the prohibition of burying the dead in woollen clothes as being not only an Orphic, but also a Pythagorean, ordinance; while, again, the doctrine of the ἀποχὴ ἐμψύχων was attributed to Pythagoras by the geographer Eudoxus (*c.* 280 B.C.).* The contrary opinion expressed by Aristoxenus† is really meant to apply only to contemporary Pythagorean scholars with whom he was intimate.‡ The interdict against the use of beans seems likewise to belong to the early school.§ It cannot be doubted that the early Pythagoreans were distinguished by their *simple life*.‖ A peculiar feature in their asceticism, from the 4th cent. at least, seems to have been *silence*, originally resorted to, no doubt, as a means of avoiding sacrilegious or ill-omened language in their religious practices; compare what is said by Isocrates (*Busiris*, 28) regarding the Pythagoreans of his own time.¶ It should also be noted that anticipations of *sexual* asceticism, or continence, are apparently found in connexion with the primitive school.**

Meagre as these notices are, they are sufficient to show us that purity (ἁγνεία, ἁγιστεία) in the ceremonial religious sense was the ideal of the 'Italic' philosophers no less than of the Orphic cults. Moreover, when we compare with them the teaching of Pythagoras regarding the immortality and the transmigration of the soul, and that of Philolaus regarding the human body as a house of detention wherein the soul expiates its guilt (frag. 14D), it would appear that early Pythagorean asceticism sprang from the same fundamental causes, and had the same objects in view, as that of Orphism, the influence of which upon the former is unmistakable. Pythagoreanism, further, had also an ethical tendency; thus one of its characteristic virtues was σωφροσύνη, which was supposed to be promoted by asceticism, and which unquestionably had a place in the system before the days of Aristoxenus.††

3. **Empedocles.**—While we may thus deduce from a tradition, fragmentary at best and overgrown with later traditions, the fairly definite fact that among the ancient Pythagoreans asceticism was intimately associated with mystical theories about the soul, the same conjunction of ideas is brought out in strong relief in the case of the last great purifier of ancient Greece, viz. Empedocles of Acragas, who likewise belonged to the West. Further, the moral and religious views of Empedocles resemble those of the Pythagoreans in the circumstance of their having no organic connexion with his philosophical or scientific

* Diels, *op. cit.* 492, 27 n., where for frag. 472 read frag. 475.

†† Cf. especially Diels, *Frag.*[2] 287, 33 ff.; 288, 10 ff.; 289, 46 ff

theories. In his poem called Καθαρμοί, abstinence from animal food, and, in fact, avoidance of blood-shedding in general, are very specially inculcated, and are based upon the theory of transmigration and that of the close affinity of man and animal—a concatenation of thought which we may perhaps suppose, though we cannot prove, to have obtained among the ancient Orphics and Pythagoreans.

So Hippolytus, *Refutationes*, viii. 29, 249 = Diels, *Frag.*[2] i. 206, 29 ff.: *διὰ τὴν τοιαύτην οὖν τοῦ ὀλεθρίου Νείκους διακόσμησιν τοῦδε τοῦ μεμερισμένου κόσμου πάντων ἐμψύχων ὁ Ἐ. τοὺς ἑαυτοῦ μαθητὰς ἀπέχεσθαι παρακαλεῖ· εἶναι γάρ φησι τὰ σώματα τῶν ζῴων τὰ ἐσθιόμενα ψυχῶν κεκολασμένων οἰκητήρια.**

Frag. 140 is also worthy of note, as enunciating the inviolability of the laurel (on this cf. Rohde, ii. 181, 2). In strict consistency, of course, Empedocles ought to have affirmed the inviolable nature of trees in general (as is justly observed by Plutarch, *Quæst. Conviv.* iii. 1, 2, 646 D, in reference to the passage cited), since souls migrate also into trees and plants.† On the other hand, the interdict against beans,‡ which Empedocles has in common with the Orphics and the Pythagoreans, probably sprang from the same motive in his case as in theirs.§

The deeper significance of these ascetic injunctions, to which Empedocles manifestly attaches enormous importance for the soul's welfare, and their close connexion with his mystical standpoint, are fully disclosed in the still extant fragments of his Καθαρμοί. For him, too, the divine nature of the soul is an indefeasible fact,‖ and he likewise accepts the doctrine of the soul's fall from its original divine condition into the corporeal state, in which it must expiate its guilt by a long pilgrimage through the bodies of men, animals, and plants.¶ Empedocles also shares the view that the human body is the disparate integument of the soul (frag. 126). He regards asceticism as one of the most effective means of delivering the soul from the world of sense. 'Who ever exerteth himself with toil, him can we release'; the soul at length returns to its divine habitat, and indeed the wise men who practise such holy living—the asceticism of Empedocles having a strong ethical tendency **—eventually become gods while yet upon the earth (frag. 146), so that the poet even speaks of himself as a god (frag. 112, 4 ff., and frag. 113).

It is certainly the case that Empedocles was strongly influenced by the teachings of Orphism, as has, in fact, been made out, with reference to certain particular points, by Otto Kern.†† While this is so, it would nevertheless be wrong, the present writer thinks, to deny the influence of the ancient Pythagorean Mysteries and asceticism.‡‡

* Cf. the passages given in Diels at frag. 185 (p. 218, 1 ff.), especially Cicero, *de Republ.* iii. 11, 19, and Iamblichus, *Vita Pyth.* 108, and frag. 135 D; further, cf. especially frag. 136 (Empedocles): *οὐ παύσεσθε φόνοιο δυσηχέος; οὐκ ἐσορᾶτε | ἀλλήλους δάπτοντες ἀκηδείῃσι νόοιο*; with this cf. Sextus, *adv. Math.* ix. 127 (from Posidonius) in Diels, *Frag.*[2] i. 218, 19 ff., also frag. 137 D, and passages there; Porphyr. *de Abstin.* ii. 21 = Diels, i. 210, 22 ff., also frag. 139; and Porphyr. ii. 31 = Diels, p. 214, 9 ff.

† Frag. 117. Cf. Zeller[5], i. 808 ff., 824, 837.

‡ Frag. 141. See the relevant passages in Diels, i. 214, 19 ff.; Diog. Laert. viii. 34 = Diels, 279, 31 ff.; Lobeck, *Aglaophamus*, i. 254.

§ Special attention is due to the passage, Hippolytus, *Refutationes*, viii. 29, 249 = Diels, *Frag.* 206, 32 ff., where the injunction *καὶ ἐγκρατεῖς εἶναι . . . τῆς πρὸς γυναῖκα ὁμιλίας, κ.τ.λ.*, is attributed to Empedocles.

‖ Diels, *Frag.* i. 159, 8 f.: *καὶ θείας μὲν οἴεται τὰς ψυχάς, θείους δὲ καὶ τοὺς μετέχοντας αὐτῶν καθαροὺς καθαρῶς.* Cf. *Frag.* i. 178, 1, and note by Rohde, ii. 186, 1.

¶ See especially the magnificent fragment, 115, and the passages cited in connexion therewith by Diels, who also refers to the famous passage in Plato, *Phædrus*, 248 C, as an imitation. Cf. also Diels, i. 219, 17 ff.; frag. 119, and relevant passages in Diels; frag. 121 (Rohde, ii. 178, 1).

** Frag. 112, 9 f.; 144, 145.

†† We do not agree with Kern, however, in regard to every point.

‡‡ Cf. Empedocles, frag. 129, and the passages given there.

To say nothing of the affinity between the views of Empedocles and those of the Pythagoreans,* it is impossible that one who lived at so short a distance from Magna Græcia could remain ignorant of Pythagorean doctrine, or that one of his cast of mind should not be deeply influenced thereby.

4. Plato.—This whole process of development, beginning with the ecstatic seers and purifiers of the 7th cent., may be said in one sense to reach its end, but in another to arrive at its culminating point, in the Platonic philosophy. In Plato, the founder of the idealistic view of the world, philosophical thought and theological thought merge and combine with one another in a wonderful way. The Divine origin of the soul, its pre-existence, its fall into corporeality, its judgment after death, its expiatory wanderings through the bodies of animals or men, according to its character, its final redemption from the cycle of re-births, and its return to God—all these various doctrines, in their main features at least, were borrowed by Plato directly from the 'theologians,' *i.e.*, in a special sense, the Orphics. The manner in which he amalgamates them with the results of his philosophical speculation is, however, all his own.

In the early stages of Plato's thought the two worlds of becoming and being stand in the relation of sheer opposition: here, the world of sense, with its unresting flux of ever-changing phenomena; there, the supersensuous world of eternally self-identical and absolutely unchangeable realities, of the 'Ideas,' of what alone truly exists. The human soul, however, occupies a peculiar position between the two; it is of Divine origin, and while not itself an Idea, it is 'most like' one, and partakes of the Idea of life. In its state of pre-existence in the supramundane sphere it has gazed upon the Ideas, but, having fallen into the state of corporeality, it has forgotten them; and only by its recollection thereof (ἀνάμνησις) can it possibly attain to true knowledge. Such leading principles must of necessity result in a pessimistic attitude to the world and its supposed goods,† that is, in a world-renouncing morality. Withdrawal from the life of the body, which only impedes and constrains the soul; the utmost detachment of the soul from its prison-house in the flesh (the philosophic 'dying' so impressively depicted by Socrates in *Phædo* [especially p. 64 ff.]); disengagement from the world of sense in general, with its phantasmagoria of delusive appearances—these things go to form the end which the friend of wisdom must keep in view.

In the *Theæt.* 176 A we read: *διὸ καὶ πειρᾶσθαι χρὴ ἐνθένδε* (from this world) *ἐκεῖσε* (to the gods) *φεύγειν ὅτι τάχιστα.* Similarly, philosophy becomes *κάθαρσις*; *Phædo*, 67 A: *ἐν ᾧ ἂν ζῶμεν οὕτως ἐγγυτάτω ἐσόμεθα τοῦ εἰδέναι, ἐὰν ὅτι μάλιστα μηδὲν ὁμιλῶμεν τῷ σώματι μηδὲ κοινωνῶμεν, ὅτι μὴ πᾶσα ἀνάγκη, μηδὲ ἀναπιμπλώμεθα τῆς τούτου φύσεως, ἀλλὰ καθαρεύωμεν ἀπ' αὐτοῦ, ἕως ἂν ὁ θεὸς αὐτὸς ἀπολύσῃ ἡμᾶς.*‡ *καὶ οὕτω μὲν καθαροὶ ἀπαλλαττόμενοι τῆς τοῦ σώματος ἀφροσύνης, ὡς τὸ εἰκός, μετὰ τοιούτων τε ἐσόμεθα καὶ γνωσόμεθα δι' ἡμῶν αὐτῶν πᾶν τὸ εἰλικρινές· τοῦτο δ' ἐστὶν ἴσως τὸ ἀληθές· μὴ καθαρῷ γὰρ καθαροῦ ἐφάπτεσθαι μὴ οὐ θεμιτὸν ᾖ κ.τ.λ.*;§ 67 C: *κάθαρσις δὲ εἶναι ἆρα οὐ τοῦτο ξυμβαίνει, ὅπερ πάλαι ἐν τῷ λόγῳ λέγεται, τὸ χωρίζειν ὅτι μάλιστα ἀπὸ τοῦ σώματος τὴν ψυχὴν καὶ ἐθίσαι αὐτὴν καθ' αὑτὴν πανταχόθεν ἐκ τοῦ σώματος συναγείρεσθαί τε καὶ ἀθροίζεσθαι, καὶ οἰκεῖν κατὰ τὸ δυνατὸν καὶ ἐν τῷ νῦν παρόντι καὶ ἐν τῷ ἔπειτα μόνην καθ' αὑτήν, ἐκλυομένην ὥσπερ δεσμῶν ἐκ τοῦ σώματος*;‖

* Cf. also Cicero, *de Republ.* iii. 11, 19; Iamblichus, *Vita Pyth.* 108 = Diels, *Frag.* 218, 5 ff.; Sextus, *adv. Math.* ix. 127, quoted by Diels at frag. 136. The passages Diog. Laert. viii. 53, cf. 51 = Diels, 150, 22 f., cf. 154, 44 ff., refer to the grandfather of Empedocles, who bore the same name, and who, according to the latter passage (Athenæus, i. 5), had been a Pythagorean.

† Cf. *e.g.* *Gorg.* 519 A, *Repub.* vii. 515 D, *Laws*, vii. 808 B; and Rohde, ii. 291.

‡ Both the Orphic and the Platonic teaching make suicide a crime; the period of one's earthly existence is to be determined by the Deity alone.

§ Cf. 82 C ff., *Rep.* vii. 514 ff., *Phædo*, 62 B, 66 B, *Cratyl.* 400 B.

‖ Cf., further, 69 C, *Cratyl.* 403 E; Rohde, ii. 281, 4; 282, 1; 285, 2.

The philosopher also will therefore stand aloof from the enterprises and pursuits of his fellow-citizens, and, as one withdrawn from the community at large, will give himself entirely to the task of becoming holy.

On its positive side, however, this *katharsis* from all that is earthly implies a turning towards God. By renouncing the present world the soul becomes free to follow its true vocation—the knowledge of the ὄντως ὄν, the vision of the Ideas, and especially the Idea of the Good, the highest of them all. But the Ideas constitute the realm of divine realities. Thus the soul which, though of heavenly origin, had been cramped and defiled through its fall, becomes God-like by the possession of that highest *knowledge* which is identical with virtue.

Cf. *Theæt.* 176 B—in connexion with the passages given above: φυγὴ (from the corporeal) δὲ ὁμοίωσις θεῷ κατὰ τὸ δυνατόν· ὁμοίωσις δὲ δίκαιον καὶ ὅσιον μετὰ φρονήσεως γενέσθαι. 176 C: θεὸς οὐδαμῇ οὐδαμῶς ἄδικος, ἀλλ' ὡς οἷόν τε δικαιότατος καὶ οὐκ ἔστιν αὐτῷ ὁμοιότερον οὐδὲν ἢ ὃς ἂν ἡμῶν αὖ γένηται ὅτι δικαιότατος. 'To know God is to become divine' (Rohde). The philosopher, therefore, lives entirely in the ἐποπτείᾳ of the truly existent, this being rendered possible only by complete renunciation of the world.

Such is Plato's standpoint in the *Phædo*, as, indeed, also in the *Theætetus* and the *Gorgias*, a standpoint which, were it consistently applied, would put an end to all life and all progress upon the earth. As has been aptly observed by Eucken, however, 'in this relinquishment of the world we have the real Plato and the consistent Plato, but by no means the complete Plato.' In his later elucidation of the Ideal theory, Plato admits the possibility of mediation between the two worlds. Conceiving now of the Ideas as the final causes of phenomena, he sees the Divine realities looming through the world of sense, and he is thus able to regard the realization of the Ideas in practical life as the true task of mankind. Besides the all-pervading religious factor in Plato's thought, the æsthetic and the social factors are also active. Thus, to quote Eucken again:

'That ascetic tendency [in Plato] underwent considerable modification, and even some reaction, as has been the case with all its adherents who did not forget humanity at large in the individual. But that which upon Indian, and often also upon Christian, soil won at best a grudging recognition, found in Plato a native propensity in its favour; alike as a Greek and as the friend, nay, the discoverer of the Beautiful, he was bound with a thousand ties to the actual world.'

But nevertheless the opposition between the two spheres—between renunciation of the world and its transfiguration, between philosophical and theological thought—was never completely adjusted, and it shows itself unmistakably in Plato himself.

'In Plato's own nature the phlegmatic blood of the thinker co-existed with the lively heart-beat of the artist; there was a cleavage in the inner man; for, while his philosophy allured him into the realm of immaterial forms, yet the whole magic of Hellenic beauty was at work within him' (Windelband, *Gesch. der Philosophie*[8], p. 100).*

And, we may venture to add, he was thrilled with the desire to intervene in the moral, social, and political conditions of the world, with a view to succour, to ameliorate, to reform, as is well shown in the *Republic* and the *Laws*.

Plato was the discoverer of the supersensual world. The kingdom for which his lofty soul yearned was 'not of this world.' He purified the beliefs and ideas of the Orphic cult; he spiritualized and glorified them,† thereby becoming a religious reformer—probably the greatest, after Jesus Christ, our race has known.

5. **Cynicism.**—The asceticism thus far dealt with—*religious* asceticism, as it might be called—rests upon a twofold dualism; body and soul, Earth and the Beyond, being sharply and almost irreconcilably opposed to one another. But while among the earlier adherents of the older Academy, as, *e.g.*, Philippus of Opus, Heraclides Ponticus, probably Xenocrates too, and even in the youthful Aristotle (Rohde, ii. 297), a negative and ascetic attitude towards the world is still discernible (Polemon and Crantor being the first to secede therefrom), an entirely different congeries of ideas had given birth to a kind of asceticism which, in contrast to the religious, may be called the *rationalistic and ethical*, or more precisely the *volitional* asceticism. Its roots are to be found in the Socratic teaching. It is, of course, true that the ascetic aspect of the figure of Socrates portrayed by Xenophon in the *Memorabilia* and the *Symposium* belongs not to the historical but to the Antisthenic Socrates. (Xen. *Symp.* iv. 38 may serve as a striking illustration of this; on the whole question, cf. Joel's great work.) Further, the much-landed temperance of Socrates, as has been appositely observed by Zeller (II. i.[4] 68), has nothing ascetic about it. His temperance, in fact, was not calculated abstinence from enjoyment, but only an expression of spiritual freedom; he would not be dependent upon enjoyment, nor would he sacrifice to it his self-command (Zeller, II. i. 57, 66, 68, 155 ff., 162 ff.).

But, as has been admirably said by Theodor Gomperz (*op. cit.* ii. 113) in reference to the views of life held by Socrates:

'In certain particulars he had certainly abandoned the view of life current amongst his people and his fellow-citizens; thus, in regard to one leading feature of that view, viz. its appreciation of external goods, including life itself, he ranks the health of the soul and inner peace of mind as incomparably higher than all.'

Here we have the germ of the ascetic strain in the *Cynic* ethics. Nevertheless, man's inner happiness, his εὐδαιμονία, was a matter upon which even Antisthenes, the founder of the school, laid the strongest emphasis, and in his view it could be won only by means of ἀρετή, 'moral excellence.' This moral excellence alone, therefore, as was argued by the uncompromising spirit of Antisthenes, is to count as a good; everything else in the world, as making no contribution to man's εὐδαιμονία, is simply indifferent, an ἀδιάφορον. The conviction of the utter worthlessness of earthly goods, moreover, brought the Cynics—even Antisthenes, and still more his pupil Diogenes, and subsequently Crates and others—quite consistently to the standpoint of *world-renunciation*.

Virtue, according to the Cynics, consists in right knowledge (φρόνησις) coupled with moral volition.* Their ethic, as formulated by Antisthenes, was above all a volitional ethic. Moral volition, however, as they held, was steeled by πόνος, by ἄσκησις. The latter word properly means the *exercise* or *practice* which was pre-eminently demanded by the Cynic conception of virtue,† since virtue, in the opinion of Antisthenes, was not simply theoretical knowledge regarding good and evil, but rather practical moral excellence, strength of character asserting itself against all περιστάσεις.‡ By virtue alone, he taught, does man attain to felicity. In what, then, does felicity consist? In that genuine freedom which is based upon independence of all external things—αὐτάρκεια—and in freedom from all desires and affections—ἀπάθεια. In order to

* See specially the *Symposium* and the *Philebus*.

† Cf. Windelband, *Platon*, 141: 'He implements the Orphic doctrine of the destiny of the soul, throughout its entire range, with the principle of moral responsibility and retribution.'

* Diog. Laert. vi. 11 (teaching of Antisthenes): Αὐτάρκη τὴν ἀρετὴν εἶναι πρὸς εὐδαιμονίαν, μηδενὸς προσδεομένην ὅτι μὴ Σωκρατικῆς ἰσχύος. Cf. also the Cynic ἐγκράτεια.

† The word certainly goes back to Antisthenes himself; cf. Xenophon, *Sympos.* viii. 27, *Memorab.* ii. 6. 20, where Socrates speaks of the ἀσκεῖν of ἀρετή. Cf. also *Memorab.* i. 2. 20 and 23, i. 2. 10, where Xenophon has even ἀσκεῖν φρόνησιν, as Isocrates, *Busir.* § 22, has φιλοσοφίας ἄσκησιν; both writers undoubtedly follow the example of Antisthenes. For the latter φρόνησις is inseparably connected with ἀρετή, and his whole philosophy is the practice of virtue based upon intelligence.

‡ On Heracles as an ascetic for the purpose of acquiring virtue, see Dio, *Orat.* lx., especially p. 310; on Diogenes' struggle against πόνοι, see Dio, viii. 12 ff., especially § 15; Marcus Aurelius, ii. 17.

render himself as independent of the external as possible, the Cynic endeavours to reduce his wants to a minimum; and in order to win his inner freedom (*ἀπάθεια*), he exercises himself in combating and overcoming the affections (so Diogenes, cf. Dio, ix. 12), more especially in fighting against *ἡδονή* (Diogenes, as in Dio, viii. 20 ff., ix. 12; cf. Lucian, *Vit. auct.* 8; Teles, frag. v. H).

This world-abjuring tendency in Cynic ethics found its chief expression in a negative attitude towards the family, the State, and the idea of nationality, and towards the great traditions of Greek history, even those of the Persian war; and in the position the Cynics assumed towards Greek religion, art, and science. This is to be explained in part by the fact that Antisthenes was but half Greek by blood, and that Diogenes sprang from the lower classes. Even in their boasted cosmopolitanism the Cynics were in earnest only with the negative constituent, viz. their detachment from State and nationality.

The real asceticism of the Cynics showed itself, above all, in their mode of life, which they reduced to the simplest conceivable form: thus their food consisted chiefly of lupines, dried figs, peeled barley and water; their clothing was practically limited to the *τρίβων*, their feet being *ἀνυπόδητοι*; while their place of abode, *i.e.* their lodging by night, was in the open air or among the pillars of the temple in summer, and in the bathing-houses in winter. By inuring the body to the extreme of rigour, they—more especially Diogenes—sought to strengthen their power of will (Diog. Laert. vi. 23, 34).

The significance attached to asceticism by Diogenes, who had already distinguished two kinds of *ἄσκησις*—one purely physical, the other both physical and psychical (Diog. Laert. vi. 70 f.)—is shown by his apothegm: *Οὐδέν γε τὸ παράπαν ἐν τῷ βίῳ χωρὶς ἀσκήσεως κατορθοῦσθαι, δυνατὴν δὲ ταύτην πᾶν ἐκνικῆσαι.* A significant, and characteristically Hellenic, feature of Cynic ethics, however, was its attitude towards the sexual impulse. To the Cynics this appeared to be no less natural than hunger itself, and therefore likewise to require satisfaction—though in the simplest and least expensive way. Thus Diogenes is in no way scandalized at either masturbation or illicit intercourse (marriage had, of course, no meaning for him); in fact, as the gratification of sexual desire was reckoned *κατὰ φύσιν* by the Cynics, many of them, such as Diogenes and Crates (with Hipparchia), had no scruples about indulging even in the presence of others, thus showing a gross lack of modesty, to say nothing of good taste. Nevertheless, those who indulged beyond the requirements of nature were looked upon as the slaves of pleasure (*ἡδονή*), and this they reckoned the worst of evils.*

Antisthenes did not himself lay so much stress on the external aspects of the Cynic mode of life; what he did was rather, it would seem, to make a virtue of necessity. Very much more did externals weigh with his gifted pupil Diogenes, as also with Crates, his wife Hipparchia, her brother Metrocles, and others.† The asceticism of the Neo-Cynics during the Roman Imperial period will be dealt with in connexion with the later Stoics.

Primitive Cynicism reprobated even innocent enjoyment. Further, from the time of Diogenes at least, the Cynics tended to make too much of the external aspect of their mode of life. But an asceticism which sprang from an ethical standpoint so grossly individualistic could be of no permanent value to human society. Still, in putting to the test of actual practice the dictum that man's true happiness does not depend upon his circumstances, the Cynics made a valuable contribution to human progress; while, from another side, their belief that moral volition is an essential constituent of virtue was pregnant with significance for the future.

6. **Stoicism.**—Of the leading principles of the early Cynic *ἄσκησις** only one was of exceptional importance, viz. the idea that virtue can be acquired only by unremitting practice. In this particular point, which involved an emphasizing of the volitional factor in virtue, the Cynics made an advance upon Socrates; it was, in fact, a thought destined to be fruitful for all time, and in the further development thereof special credit is due to the Stoics. We must not forget, indeed, that the Stoa was preceded by Aristotle, who in his *Ethics* had already distinguished two orders of virtues, viz. the ethical and the dianoetic (*e.g.* *Eth. Nicom.* ii. 1. 1103 A, 14 ff., i. 13. 1102 B, 33 ff.). Ethical virtue (*αὕτη ἐστὶ περὶ πάθη καὶ πράξεις* [*Eth. Nicom.* ii. 6. 1106 B]) *ἐξ ἔθους περιγίγνεται* (ii. 1. 1103 A, 17). Since the irrational impulse, with its resultant desire, is often stronger than the volition which springs from *φρόνησις*, it is only by means of exercise that the individual can acquire that *ἐγκράτεια* which enables him, even in opposition to the stronger desire, to do what he recognizes as right. Now, *ἐγκράτεια* is a sub-species of *σωφροσύνη*, which, again, is one of the 'ethical' virtues. But the idea of a psychological independence of the will—apart from the intellect—was foreign to Aristotle.

It must certainly be admitted that among the early Stoics, so closely related to the Cynics in many other things, the volitional moment in virtue does not stand out very prominently, though this may be due partly, of course, to the fragmentary character of our available sources. Unmistakable traces of the idea, nevertheless, are still extant, and yeoman service has been rendered by Adolf Dyroff in bringing these to light. The personal ideal of the Stoic doctrine of virtue—the wise man—has, of course, no further need of practice; but all the more is practice necessary for the neophytes, the *προκόπτοντες* (cf. Zeno, frag. 234 A). The founder of the school valued practical example more highly than arguments against pleasure (frag. 241); witness also his significant utterance *οὐδενὸς ἡμᾶς οὕτω πένεσθαι ὡς χρόνου. βραχὺς γὰρ ὄντως ὁ βίος, ἡ δὲ τέχνη μακρή, καὶ μᾶλλον ἡ τὰς τῆς ψυχῆς νόσους ἰᾶσθαι δυναμένη* (frag. 323). His successor Cleanthes likewise places moral conduct higher than theory, and that he recognizes the element of volition in virtue is shown by frag. 563. It is accordingly easy to understand why Cleanthes, like Antisthenes before him, regarded the *πόνος* as *ἀγαθόν* (frag. 611), while frag. 129 (Gercke) furnishes special evidence of the fact that Chrysippus, 'the second founder of the Stoa,' appreciated the value of practice and habit in the attainment of virtue. The task of becoming virtuous, or—since only a few finally attain that end—that of coming as near to perfect virtue as possible, belongs

* Antisthenes, frag. xi. 1, Winkelmann, p. 29 (Clemens Alex. *Strom.* ii. 20, p. 485, Potter); Diog. Laert. vi. 3: *μανείην μᾶλλον ἢ ἡσθείην.*

† Cf. *e.g.* Diog. Laert. vi. 23, 34, 48, 70 f. Concerning Crates, see Diog. Laert. vi. 87 (Diels, *Poetae Philosoph. Gr.* 207). Further, Teles, frag., *πόνος αὐταρκείας* and *πόνος πενίας καὶ πλούτου*, 30, 10 ff., 31, 2 ff.; Crates, frag. 4, 7, 12, 18 (Diels). Main sources for ancient Cynicism: Diog. Laert. vi.; Xenophon, *Memorab.* and *Sympos.*; Teles, ed. O. Hense, fr. v.–vii.; also Dio, especially *Orat.* 6, 8, 9, 10.

* No doubt, the doctrine of the absolute worthlessness of earthly goods was taken over by the Stoics, but it was subsequently modified by Zeno in his differentiation of three grades of *ἀδιάφορα*, viz., *προηγμένα*, *μέσα*, and *ἀποπροηγμένα*, whereby at least a certain relative value was assigned to sundry material goods. On the other hand, the *αὐτάρκεια* of the Cynics was spiritualized by the Stoics, who put no special value on the ascetic mode of life. Only in the case of certain adherents of the later Stoa, such as Musonius, and, in some degree, also Epictetus, did a change in this respect take place.

to the will, and cannot be performed without practice (cf. also frag. 214, 278 A). Chrysippus gave full recognition to the value of personal effort in the work of attaining perfection. True insight is shown also by Aristo of Chios in his remark that 'much practice and much fighting' is demanded by the struggle both against pleasure and against the affections (frag. 370 A). It is matter for regret that nothing now remains of the work of Herillus, who, like Dionysius Metathemenus, wrote περὶ ἀσκήσεως (Diog. Laert. vii. 166 f. [Diels, 410 f. A]), especially as he deemed ἐπιστήμη to be the supreme good. A further proof of the fact that the value of 'practice' in the sphere of virtue was ever more and more highly appraised by the Stoics, appears in their doctrine that many (apparent) evils are allotted to man for the purpose of calling his moral energies into exercise, and may therefore be utilized for his welfare in whatsoever degree he may choose. This idea was already mooted by Chrysippus, but it was especially in the later (though probably also in the middle) period of Stoicism that it became fruitful.

The early Stoics undoubtedly felt that the will has an important place in the acquirement of virtue, but they gave the thought neither clear articulation nor adequate recognition. An advance in this respect was made during the middle period. Thus Panætius, whose ethical teaching was unquestionably influenced by Aristotle, draws a distinction between a 'theoretical' and a 'practical' virtue, and holds that the latter, requiring, as it does, a correlative action, is attainable only by practice.* Discipline of the body is also necessary (Cicero, *de Offic.* i. 23, 79). The practical virtue, which concerns the individual, is σωφροσύνη, consisting in the unconstrained submission of the lower faculties to the reason. The most important of the four categories of σωφροσύνη is ἐγκράτεια, the virtue whose significance was first fully realized by Antisthenes, and afterwards very specially by Aristotle. Posidonius likewise distinguishes the two aspects of virtue. Inasmuch as practical virtue consists in the subordination of the irrational to the rational part of the soul, especially in the repression of the bodily impulses and passions, it is to be acquired, Posidonius believes, only by means of practice and habit, which must carry out the process of subjugating impulse begun by education. But this point of view, which at first sight is hardly distinguishable from that of Panætius, or even that of Aristotle, is in the case of Posidonius most intimately related to a mystical Platonic conception of the nature and destiny of the human soul: the soul is a part of the Divine πνεῦμα, and, coming down from the heavenly to the earthly sphere, enters the body which is its prison, and which seduces and defiles it with desires. To preserve this divinely begotten soul, this δαίμων, from earthly guilt and defilement, and by means of a virtuous life to effect its return to its celestial home, the Æther, where alone full knowledge can be its portion—such is the aim of all truly wise and great men. The influence of Plato is here quite unmistakable, though Posidonius was doubtless congenitally inclined to the idealistic point of view.

It was in later Stoicism, however, that the importance of practice in virtue, as in moral life and endeavour generally, first gained full and adequate recognition. Seneca, it is true, emphasizes this particular aspect in an incidental way at best, but this was due not so much to any lack of insight on his part, as to the defects and the weaknesses of his own character. He nevertheless makes many most apposite observations on the point in question.* Moreover, influenced as he was by the strong Platonizing bent of Posidonius, Seneca also manifests an ascetic mystical tendency which in the main takes the form of contempt for the body, the body being regarded as but a fetter upon the Divine soul, which amid her sombre, insecure, changeful, earthly existence longs for her Divine home, where every mystery of heaven and of nature shall be made plain.†

The idea of moral ἄσκησις assumes a new character in the hands of the two representatives of later Stoicism who deal seriously with moral problems and the improvement of their fellow-men, viz. Musonius and Epictetus. Of the dissertation περὶ ἀσκήσεως of Musonius a fairly large fragment has been preserved (frag. vi. H). He follows Panætius in drawing a distinction between theoretical and practical virtue. The practical, which he regards as the more important (p. 23, 14 ff. H), is to be attained only by practice of a twofold kind: one, as applied to body and mind together, the other, as applied to mind alone (p. 25, 4 ff.)—a distinction already made by the Cynic Diogenes. Exercise directed upon both body and mind produces ἀνδρεία and σωφροσύνη, whereas the purely mental exercise consists in those 'thought-actions' (*Denkhandlungen*, as Eucken calls them) which determine both our mental attitude and our conduct (cf. especially p. 25, 4 ff., Hense).

Frag. v., the thesis of which is ὅτι ἰσχυρότερον ἔθος ἢ λόγος, and frag. vii., ὅτι πόνου καταφρονητέον, are also significant passages; cf. also p. 7, 20 ff.; p. 10, 18; p. 11, 17; p. 29, 7 f. The ascetic views of Musonius in regard to sexual relations, as set forth in frag. xii., περὶ ἀφροδισίων, are likewise worthy of note; see, *e.g.*, p. 64, 1 ff.: *μόνα μὲν ἀφροδίσια νομίζειν δίκαια τὰ ἐν γάμῳ καὶ ἐπὶ γενέσει παίδων συντελούμενα, ὅτι καὶ νόμιμά ἐστιν· τὰ δέ γε ἡδονὴν θηρώμενα ψιλὴν ἄδικα καὶ παράνομα, κἂν ἐν γάμῳ ᾖ*. The student is recommended to read the whole fragment.

The moment of ethical ἄσκησις, however, reached its highest development in the Phrygian freedman Epictetus, in whose hands the idea of 'asceticism' became fully spiritualized, representing, in fact, *the unremitting endeavour of the individual soul towards its own moral perfection.* Of a multitude of relevant passages we note only the more important.‡

That which was openly taught and practised by Epictetus was put to the proof in private by Marcus Aurelius, the last Roman who sat upon the throne of the Cæsars.§ Amid the tumult of the world's capital, or by night in his lonely tent at Carnuntum, Aurelius laboured ceaselessly in the depths of his heart towards the purifying and perfecting of his soul. He is never able to satisfy himself, but never falters in his effort to come nearer and nearer to the ideal (pp. 127, 14 ff.; 131, 18 ff.), and throws himself bravely into the conflict between soul and sense (pp. 59, 13 ff.; 91, 9 ff.; 131, 12 ff.; 162, 4 ff.). But apart from other profound differences between Aurelius and Epictetus, though both were Stoics, they were fundamentally unlike in their spiritual outlook. Thus, while Epictetus, alike in thought and action, is wholly concerned with the present world—in the best sense, certainly—the mind of the Emperor tends rather to brood darkly upon the shortness of life and the transitoriness of earthly things (*e.g.* ii. 17, vii. 3). He despises the goods of this world (iv. 48), even fame, and often all but grows weary of life itself (p. 115, 9 ff.). His aphoristic utterances seem to be haunted by the pathos of life and the yearn-

ing for death.* He certainly has no belief in a future life, but his eye turns away from earth and from human effort, and is directed toward the All and the Eternal.† Though he is an adherent of the monistic philosophy characteristic of the Stoa—a philosophy, however, not consistently maintained by Aurelius, any more than by Seneca and Epictetus—yet the fundamental qualities of his great soul have an admixture of the spirit of renunciation and mysticism. Leaving his anthropology out of account, we see this most unmistakably in his conception of the Deity.

7. Neo-Cynicism.—Of an entirely different nature from the view of life entertained by Aurelius, is that of the Neo-Cynics, for whose teachings there was a lively interest, and even a certain sympathy, among the later Stoics, such as Musonius, Seneca, and Epictetus. The representatives of this Neo-Cynic tendency revive the asceticism of Diogenes and Crates, and, while laying the main emphasis upon the actual practice of asceticism, they contribute nothing whatever in the way of fresh thought. For fuller information see art. NEO-CYNICISM.

8. Neo-Pythagoreanism and Neo-Platonism.—The tendency towards renunciation of the world, which forms the basal element in the temperament of Marcus Aurelius, was not due to the spirit of Stoicism, but was rather a product of the time, and, one may well suppose, of his own experiences and fortunes. It was, however, organically related to the philosophy of the Neo-Pythagoreans—that singular group which emerged in the earlier half of the first cent. B.C., perhaps in Alexandria. No doubt the greater part of the literature of this school is pseudepigraphic, and we know by name only a few of its adherents. Apart from P. Nigidius Figulus and Vatinius, contemporaries of Cicero, and Sotion the friend of the Sextians, the most important representatives known to us are Apollonius of Tyana and Moderatus of Gades (1st cent. A.D.), Nicomachus and Numenius (2nd cent. A.D.), and Philostratus (3rd cent. A.D.).

The moral and religious view of life promulgated by the Neo-Pythagoreans is in part traceable to the Mysteries of the ancient school, but in a still greater degree to Platonism, especially to that form of Platonism set forth by Posidonius in his commentary to the *Timæus*. The characteristic of the sect is absolute dualism: God and the world, soul and body. Spirit is the principle of good (the Deity being conceived as pure Spirit, and regarded as utterly transcendent), while the body, like matter in general, is the principle of evil. Between the two stands the Demiurge, or world-former, and the demons, whose kingdom lies in the sphere between the earth and the moon. The soul, which is formed of the Divine essence, is meanwhile confined within the body as in a prison, and her deliverance from the body and its impulses, in order that she may become worthy of communion with the Deity, is the most urgent task of mankind—a task which finds its positive side in a holy and devout life, since the Supreme can be worshipped in a truly spiritual manner only with purity of thought and piety of conduct (cf. the fragment of Apollonius in Eusebius, *Præp. Evang.* iv. 13). Mankind is exposed on all sides, however, to contamination by demons, and the means employed to cleanse from this defilement is asceticism. The most effective forms of asceticism are certain specific ablutions and expiatory ceremonies, abstinence from certain kinds of food, more particularly from flesh and wine (among the later Neo-Pythagoreans), sexual temperance, or even abstinence (as is said to have been counselled by Apollonius), silence on the part of neophytes, etc.

* Pp. 24, 19 ff.; 54, 6 ff.; 62, 5; 91, 19 ff.; 115, 4 ff.
† Pp. 21, 17 ff.; 66, 19 ff.; 155, 3 ff.

But as man is of himself unable to realize this end, and since between him and the supramundane Godhead there yawns a great gulf which requires to be bridged, the Deity reveals His will through the agency of specially gifted individuals, such as Pythagoras formerly, and now Apollonius, as also in the art of divination, in order that man may be helped in his dark endeavour to reach his heavenly home and the deification of his being.

Sources for our knowledge of Neo-Pythagoreanism are the account of Alexander Polyhistor in Diog. Laert. viii. 22 ff., the large fragments of pseudonymous literature written under the name of the old Pythagoreans (particulars in Zeller), the fragments of Numenius, Philostratus's *Vita Apollonii*, and the *Lives* of Pythagoras by Porphyry and Iamblichus.

In Neo-Pythagoreanism the mysteries of the older school are resuscitated in a spiritualized and morally nobler form. The real significance of the later development, however, lies in the fact that, in conjunction with Philo, it prepares the way for the last great system of ancient philosophy, viz. the Neo-Platonism of Plotinus. It was the aim of Plotinus to get beyond the dualism of Neo-Pythagoreanism on both metaphysical and ethical principles. In his nobly planned and profoundly excogitated system the whole world stands forth as an emanation from the Deity, who is supersensual, supramundane, and exalted above oppositions, even that between spirit and body. He is Pure Being, the Absolute, and from Him issues the world in a series of gradations, returning again to Him in a similar way. The principal stages of this emanation are three in number, viz., Spirit, Soul, and Matter. Just as light eventually fatigues the eye, and its radiance is changed to darkness, so does the final irradiation of the ineffable and inscrutable Essence, having traversed the intermediate stages of Spirit and Soul, become Matter (*Enneads*, iv. 3, 9), which, however, never attains the metaphysical independence that belongs to the Absolute. Matter is the μὴ ὄν, and, as the ἀπουσία τοῦ ἀγαθοῦ, the πρῶτον κακόν. Man, too, is an effluence from the Absolute, and in the human soul are distinguished a supersensual or Divine, and a lower or sensual part. Just as pure spirit in its final expression becomes matter, so the human soul with equal necessity is metamorphosed into body. The supersensual part, which was pre-existent (iv. 3. 12, vi. 4. 14) and in union with God, has suffered disaster from having entered the body (iv. 3. 15 ff., v. 1. 1). From the union of soul and body springs all the irrationality and depravity of the soul. Our great task, therefore, is the 'extinction of everything that binds us to sensuous existence,' the complete withdrawal of the soul from the outer world to its own inner life. Hence, virtue is neither more nor less than the work of 'purifying' the supersensual soul from all its relations with the world of sense (especially i. 2. 3, i. 6. 6, v. 3. 9). It accords with all this that Plotinus should set no value upon taking part in earthly affairs, either of a scientific or a politico-ethical nature. This complete detachment of the soul from all ties with the external world, however, appears on the positive side as its surrender to the Supersensual, to the Deity, the yearning for whom becomes ever more intense as the bonds of sense are more and more transcended. So far as union with the Divine is concerned, the external mode of life is of no importance. What counts is, in the opinion of Plotinus, not action, but feeling; and accordingly he attributes no value to asceticism of the common sort, however it may have consorted with his own inclinations (Zeller, iii. 522 f.). Of greater importance is the thinking consideration of life, and, still more, pure intuition; but the full and blessed union is vouchsafed only to

the elect in the form of *ecstasy*, which is not to be won by force, but must be calmly waited for, if haply it may come over us. In the state of ecstasy, however, man not only forgets all his earthly limitations, but loses self-consciousness altogether, and all that remains is the blessed feeling of union with the Divine.

This withdrawal from the world of sense, however, is not without its positive complement. In the beauty of the external world and in all its varied phenomena, Plotinus, like Plato, discerns the shimmering of the eternal ideas. In man sensuous beauty awakes ἔρως, the love of the Good (cf. esp. i. 6) arouses the desire of the supersensual soul for its source. For the Absolute is likewise the absolutely Good.

This sketch lets us see that the ascetic tendency in the life of ancient Greece is of much more importance than is usually supposed. We are now in a position to distinguish two different kinds of asceticism: (1) the Orphic-Pythagorean-Platonic, or the religio-mystical; and (2) the Cynic-Stoic, or ethico-volitional. It is true, indeed, that the ascetic view of life, in the sense which we attach to the term, was always confined to narrow circles in the Greek world; nevertheless, as a consequence of its being embraced, deepened, and spiritualized by two of the greatest thinkers of Greece, Plato and Plotinus, its influence has been enormous. Of no less importance, however, than the asceticism of the religio-mystical type has been what we have called the ethico-volitional, which discovered, and to some extent developed, the significance of the will in morals. Both of these tendencies, which, moreover, were in some degree combined in Posidonius, exercised a profound influence upon early Christian thought.

W. CAPELLE.

ASCETICISM (Hindu).—In India ascetic practices have been very widely prevalent from the earliest times. The mortification of the body, and the self-inflicted penances associated therewith, have been habitually carried to lengths beyond anything familiar to other peoples. Tradition and legend have united to glorify the ascetic, whether human or Divine; religion, as elsewhere, has sanctioned and encouraged his devotion; and the highest rewards of place and power have been within his reach, if only his austerities have taken a form sufficiently protracted and severe. Eastern patience, self-abnegation, and resolution are seen in their strangest guise, in submission to extreme conditions of self-torture and distress. The profession of the ascetic has always been held in the highest esteem, and his claim to support at the public charge by gifts and alms universally allowed. If it is his merit to practise, it is the merit of others to give to him, that his simple wants may never lack supply. And thus on both sides asceticism ministered to spiritual profit, to the actual and personal gain of the ascetic himself, both present and prospective, and to the store of credit which by his generosity the householder trusted to accumulate for himself, so as to win a higher position and birth in the next existence. Part of the secret of the hold which the ascetic ideal has maintained on the Indian mind lies in the fact that, according to the teaching of their sacred books, benefit accrues also to the donor who forwards the holy man on his way with gifts of money or food, or ministers in any way to his personal needs.

The thought that essentially underlies the Indian conception of asceticism, and prompts the adoption of the ascetic life, is the desire to escape from the *saṁsāra*, the never-ending cycle or round of successive existences, in which all created beings are involved, and which brings in its train the suffering and misery to which all such beings are subject. Asceticism offers a means of escape from an otherwise hopeless procession, without beginning and without end. And there is therefore little marvel if to a people whose theory of life was essentially pessimistic present hardship and suffering voluntarily endured were welcome when they brought with them the promise of future deliverance.

1. Meaning and history of the Indian term 'tapas.'—The Hindu and Sanskrit term is *tapas*, from the root *tap*, 'to be hot,' 'to burn' (cf. Lat. *tep*-eo, *tep*-or, Gr. τέφ-ρη, 'ashes' [*Iliad*, xviii. 25, xxiii. 251], Old Germ. *damf*). *Tapas* signifies therefore in the first instance 'warmth,' or 'heat'; then the feelings or sensations, usually painful, experienced in consequence of heat; and thus pain or suffering in general, especially the pain which is voluntary and self-inflicted from a religious motive. The term therefore came to be applied in particular to religious penance, austerity, devotion, and to connote the merit which such devotion was supposed to assure. This was the paramount and ordinary significance of the word. But it was also used, by analogy, for the special duty or 'merit' of each of the four castes of Manu,* or again, in a limited and

* Manu, xi. 235 f.: 'All the bliss of gods and men is declared by the sages to whom the Veda was revealed to have *tapas* for its root, *tapas* for its centre, *tapas* for its end. Knowledge is the *tapas* of a Brāhmaṇa, protection the *tapas* of a Kṣatriya, his daily business the *tapas* of a Vaiśya, service the *tapas* of a Śūdra.'

technical sense, of the special season of the year (the month *Māgha*, Jan.-Feb.) to which the practice of religious austerities was more peculiarly appropriate. Other terms of less frequent occurrence were *tapasyam* and *tapasyā*.

The Greek writers, in their references to ancient India, make frequent mention of philosophers or ascetics, whose characteristic practices repeat themselves in every part of the country at the present day. Strabo, for example (bk. xv. ch. i.), quoting from Megasthenes, describes two sects of the philosophers whom he calls Brāhmans and Garmans,* who abstain from meat and from sexual indulgence, and live in groves without the city.† It is not always easy to determine whether he is referring to Hindu or to Buddhist mendicants; probably there was little difference at that period in the habits or dress of the monks and ascetics of either faith, and to a Greek eye they were indistinguishable. Elsewhere he writes of the Garmans (Sarmans) that the most honourable of them were known as Hylobioi,‡ who lived on wild fruits and leaves, clothed themselves in garments made of bark, and abstained from wine and sexual indulgence.§ Two of the Brāhman *σοφισταί* were seen in Taxila, of whom the elder was clean-shaven, while the other wore his hair long, and both were attended by disciples; they were provided with food without cost, and exhibited their powers of endurance by standing for a whole day on one leg, or lying on the ground exposed to the vicissitudes of the weather.‖ Others were seen standing immovable in one position during the day, naked and exposed to the almost intolerable heat of the sun. The elder of the two ascetics above referred to accompanied Alexander to Persia, and there abandoned his ascetic practices, giving as his reason that he had completed the forty years' term which he had prescribed for himself. Another, who followed in the train of the king, was named Kalanus. He perished by a voluntary death by fire at Pasargadæ, at the age of seventy-three; with reference to this act Megasthenes is quoted to the effect that self-destruction was not a rule with the Indian philosophers, and that those who thus acted were regarded as rash and headstrong (*νεανικοί*, *ib.* xv. 68).

Other philosophers bore the name 'Pramnai' (*Πράμναι*, probably a corruption again of *śramaṇa*, *samana*), and were opposed to the Brāhmans. These the author distinguishes, some as living on the hills or plains, others as frequenting the cities. Others, again, were known as *Γυμνῆται*, and were therefore probably Jains, of the Digambara sect; they lived mostly under the open sky, and practised austerities for thirty-seven years.¶ Reference is made later to the Indian embassy to Augustus, and the Brāhman or perhaps Buddhist ascetic who accompanied it, and burned himself on the funeral pyre at Athens in the presence of the Emperor and the people. His name is said to have been inscribed on his tomb: 'Zarmanochegas, an Indian from Bargosa . . . lies here.'** Elsewhere the name appears as Zarmanus.††

2. 'Tapas' in Indian literature.—(1) *Rigveda*.—In the earliest Sanskrit literature, the Hymns of the *Rigveda*, neither the word *tapas* nor the conception and thought that underlies it is of frequent occurrence. It would not, however, be a legitimate inference from this fact that ascetic habits were unknown to the primitive Aryan communities. Nevertheless, the absence or rarity of reference does suggest that, together with much else which belonged to the lower side of the religious life, the practice of *tapas* also was, in great part at least, adopted from the aboriginal or other tribes among whom the new-comers settled. Theirs was the darker, gloomier view of religion and of life, to which austerity was congenial. To the bright, joyous spirit of the Aryans—the spirit that finds expression in the Hymns—the sad and despairing outlook which is the motive-power and inspiration of ascetic practice was repugnant. To them the gods were open-handed, and did not need to be forced or cajoled by human suffering; and life was not yet clouded by the pessimistic tendencies of a later age. It is noticeable that all the instances quoted from the *Rigveda* of the use of *tapas* in its technical sense are taken from the late tenth book, where the word is found both in the literal meaning of 'warmth,' 'glow' (*e.g.* x. 16. 4), and metaphorically of the glow of feeling, passion (*e.g.* x. 83. 2). *Tapas*, however, is also pain, suffering, voluntarily endured (*ib.* 109. 4, 154. 2, 167. 1). So also the root *tap*, which is met with in the earlier books with the significance of 'burn' (viii. 102. 16), or transitively to 'heat,' 'make hot' (iii. 53. 14, iv. 2. 6), to 'consume by fire,' 'destroy' (iii. 18. 2), assumes in the tenth book the connotation of remorse, the heat or pain which is within, self-originated in the heart (*tatāpa*, impers. x. 34. 11, cf. *ib.* 34. 10, 95. 17). Similarly, also in the same book, we find *tapasvat*, 'practising asceticism' (154. 4); *tapoja*, 'born through penance' (154. 5).*

The purpose and subject-matter of the *Sāmaveda* and *Yajurveda* almost preclude a reference to *tapas*; and the nature of the magical devices and charms, the incantations of the *Atharvaveda*, aims rather at inflicting harm upon another, or securing personal immunity, than at exhibiting endurance or attaining the desired end by actual self-inflicted tortures.†

Of the *Brāhmaṇa* literature the same is true as of the later mantra and ritual writings, that there was little occasion for reference to *tapas*. Such literature is concerned almost entirely with the order and interpretation of the sacrifice, with mythology, cosmology, and so forth. The practice of *tapas*, however, is recognized, and is enjoined, *e.g.* *Śatap. Brāhm.* x. 4. 4. 4: 'let him who knows this by all means practise austerities; for, indeed, when he who knows this practises austerities, . . . every part of him will share in the world of heaven.'‡ The world is conquered by *tapas* (iii. 4. 4. 27; cf. xiii. 7. 1. 1).§

(2) *Upaniṣads*.—In the *Upaniṣads*, on the contrary, the theory and the duty of *tapas* are completely assumed; and even where its efficacy is denied, or only partially and grudgingly conceded, the existence and wide-spread influence of ascetic ideals are taken for granted, though the writers claim that there is a better way by which to reach the supreme goal. In the oldest strata of the *Upaniṣad* literature the ascetic calling is an obligation to be undertaken at a special stage or period of life; and their greatest teacher, Yājñavalkya, proposes thus to abandon home and possessions, and, retiring to the forest, in the practice of austerities to sever actually and ideally every tie that binds to earthly existence. In complete harmony, however, with the spirit of these writings, *tapas* is depreciated in comparison with knowledge as an inferior, secondary way to the highest bliss, to *Brahman*.

* Βραχμᾶνες and Γαρμᾶνες, the latter name probably a textual error for Σαρμᾶνες, the Pāli and Buddhist *samana*, Skr. *śramaṇa*, *śrāmaṇera*, 'hearer,' 'disciple.'

† διατρίβειν . . . ἐν ἄλσει πρὸ τῆς πόλεως, ὑπὸ περιβόλῳ συμμέτρῳ, λιτῶς ζῶντας ἐν στιβάσι καὶ δοραῖς, ἀπεχομένους ἐμψύχων καὶ ἀφροδισίων (Strabo, xv. 59).

‡ ὑλόβιοι, 'dwellers in the forest,' *i.e.* Skr. *vānaprastha*.

§ ζῶντας ἐν ταῖς ὕλαις ἀπὸ φύλλων καὶ καρπῶν ἀγρίων, ἐσθῆτας δὲ ἔχειν ἀπὸ φλοιῶν δενδρίων, ἀφροδισίων χωρὶς καὶ οἴνου (*ib.* xv. 60).

‖ τὸν μὲν πρεσβύτερον ἐξυρημένον, τὸν δὲ νεώτερον κομήτην, ἀμφοτέροις δὲ ἀκολουθεῖν μαθητάς· τὸν μὲν οὖν ἄλλον χρόνον κατ' ἀγορὰν διατρίβειν, τιμωμένους ἀντὶ συμβούλων, ἐξουσίαν ἔχοντας, ὅτι ἂν βούλωνται τῶν ὠνίων φέρεσθαι δωρεάν . . . τοῦ τε μέλιτος πολλοῦ προκειμένου καὶ τοῦ σησάμου μάζας ποιουμένους τρέφεσθαι δωρεάν . . . τὸν μὲν πρεσβύτερον, πεσόντα ὕπτιον, ἀνέχεσθαι τῶν ἡλίων καὶ τῶν ὄμβρων· ἤδη γὰρ ὕειν ἀρχομένου τοῦ ἔαρος. Τὸν δὲ ἑστάναι μονοσκελῆ, ξύλον ἐπηρμένον ἀμφοτέραις ταῖς χερσὶν, ὅσον τρίπηχυ· κάμνοντος δὲ τοῦ σκέλους, ἐπὶ θάτερον μεταφέρειν τὴν βάσιν, καὶ διατελεῖν οὕτως τὴν ἡμέραν ὅλην· φανῆναι δὲ ἐγκρατέστερον μακρῷ τὸν νεώτερον (*ib.* xv. 61).

¶ τοὺς δὲ Γυμνήτας κατὰ τοὔνομα γυμνοὺς διαζῆν, ὑπαιθρίους τὸ πλέον, καρτερίαν ἀσκοῦντας, ἣν ἔφαμεν πρότερον μέχρι ἑπτὰ καὶ τριάκοντα (*ib.* xv. 70).

** Ζαρμανοχηγὰς Ἰνδὸς ἀπὸ Βαργόσης κατὰ τὰ πάτρια Ἰνδῶν ἔθη ἑαυτὸν ἀπαθανατίσας κεῖται. Zarmanochegas is probably the Sanskrit *śramaṇāchārya*, a mendicant teacher, and Bargosa is Bharūch, or Broach, at the mouth of the Narbada river.

†† The passages from the ancient classical authors referring to the Indian ascetics, and especially to the examples quoted of self-immolation, are translated in J. W. M'Crindle, *Invasion of India by Alexander the Great*, 1896, pp. 386–392; and in the same writer's *Ancient India as described in Classical Literature*, 1901, pp. 65 ff., 78 ff., 112, 167 ff., 176, 181 ff., 212 f.

* In one Hymn, x. 83. 2, *tapas* is invoked, together with *manyu*, to protect the worshipper and overthrow his foes.

† A confirmation of the view that the conception of *tapas* was strange to the earliest Aryan thought, and was adopted from without and became familiar only at a later period, is perhaps afforded by *Rigveda*, vii. 59. 8: 'kill him with your hottest bolt,' *tapiṣṭhena hanmanā*, where *Atharvaveda*, vii. 77. 2, and *Taitt. Saṁh.* iv. 3. 13. 3, substitute for the last word *tapasā*, 'with your hottest penance,' an expression quite in harmony with the later thought of the overwhelming magical power of *tapas*.

‡ *SBE* xliii. 362. § *SBE* xxvi. 111.

The representation, however, as might be expected, is not always consistent. In addition to the view most usually adopted, which sees in *tapas* a real, though less commendable and direct, means to the attainment of a knowledge of *Brahman*, the two extremes are met with of those who declare the practice of austerities indispensable to such knowledge, and those who refuse to acknowledge in asceticism any virtue or efficacy whatsoever, and maintain that only in the way of knowledge and by no other means may the final end be reached. Elsewhere asceticism and the study of the *Veda* are placed side by side as the essential conditions of a true insight; and those who in the right spirit with faith practise asceticism in the forest ascend on the way of the gods.

Tapas also is indefinitely associated in the *Upaniṣads* with the third *āśrama* (*q.v.*), and the life of the anchorite in the forest (*vānaprastha*). On him the practice of asceticism is especially obligatory, but even he must add to it faith, or the mere outward observance and self-mortification will be in vain. Only gradually, and not quite clearly or definitely, within the *Upaniṣad* period was a distinction drawn between the third and a fourth higher stage, the essential note of which was not mere bodily self-mortification, but the voluntary and entire surrender of all worldly possessions, and the concentration of thought and affection on the Supreme. This last stage is identified with a real knowledge of *Brahman*. He who 'knows' has passed beyond the (three) *āśramas* (*atyāśramin*, *Śvet.* vi. 21), and *tapas* is no longer in the least degree necessary or profitable to him, for that which the ascetic painfully strives to win he has already attained. Thus the theory of the *āśramas*, and with it the doctrine of *tapas*, takes on in the *Upaniṣad* literature a distinctly ethical colouring. It is only, however, in the later treatises that the separation between the two last stages, the *vānaprastha* and the *sannyāsin*, is completely carried out, and the duties and obligations of each clearly defined.

(3) ***Manu and the Law-Books.***—It is in the *Law-Book of Manu*, ch. vi., that the formal conditions and rules of the ascetic life are set forth; and these are in large part repeated, quoted, or amplified in the later *Dharmasūtras*. How far some of the more strict and exacting of these regulations ever became matters of literal observance, or how far they represented merely abstract or conventional ideals, must, of course, remain uncertain. But, in view of the capacity which Indian ascetics have always exhibited for almost heroic endurance of self-mortification, it would seem by no means impossible, or even improbable, that in some instances at least the utmost extremes of bodily torture were submitted to, and the rules of the books carried out in fullest detail. It will be noticed that Manu confines the rights and privileges of an ascetic life to the twice-born.

'A twice-born Snātaka, who has thus lived according to the law in the order of householders, may . . . go forth from the village into the forest and reside there, duly controlling his senses. Let him offer those five great sacrifices according to the rule, with various kinds of pure food fit for ascetics, or with herbs, roots, and fruit. Let him wear a skin or a tattered garment; let him bathe in the evening or in the morning; and let him always wear (his hair in) braids, the hair on his body, his beard, and his nails (being unclipped). . . . Let him be always industrious in privately reciting the Veda; let him be patient of hardships . . . ever liberal . . . and compassionate towards all living creatures.' *

Then follow directions with regard to the sacrifices the ascetic must offer, and the kind and quantity of food he may eat.

'In summer let him expose himself to the heat of five fires, during the rainy season live under the open sky, and in winter be dressed in wet clothes, gradually increasing his austerities. When he bathes at the three Savanas (sunrise, noon, and sunset) let him offer libations of water to the manes and the gods, and, practising harsher and harsher austerities, let him dry up his bodily frame . . . let him live without a fire, without a house, wholly silent, subsisting on roots and fruit . . . chaste, sleeping on the bare ground, dwelling at the roots of trees.' * 'Having thus passed the third part of life in the forest, he may live as an ascetic during the fourth part of his existence, after abandoning all attachment to worldly objects . . . after offering sacrifices and subduing his senses . . . an ascetic gains bliss after death.' † 'Departing from his house . . . let him wander about absolutely silent, and caring nothing for enjoyments that may be offered. Let him always wander alone without any companion, in order to attain (final liberation) . . . He shall neither possess a fire nor a dwelling, he may go to a village for his food, indifferent to everything, firm of purpose, meditating and concentrating his mind on *Brahman*. A potsherd (for an almsbowl), the roots of trees (for a dwelling), coarse worn-out garments, life in solitude and indifference towards everything, are the marks of one who has attained liberation. Let him not desire to die, let him not desire to live, let him wait for his time, as a servant for the payment of his wages . . . let him patiently bear hard words, let him not insult anybody, let him not become anybody's enemy for the sake of this body . . . entirely abstaining from sensual enjoyments, with himself for his only companion, he shall live in this world, desiring the bliss (of final emancipation)'.‡ 'Carrying an almsbowl, a staff, and a water-pot, let him continually wander about, controlling himself and not hurting any creature. . . . A gourd, a wooden bowl, an earthen dish or one made of split cane, Manu, the son of Svayambhu, has declared to be vessels (suitable) for an ascetic.' §

Rules are then given for begging and the manner of eating, subjects of meditation, etc. The ascetic is to beg only once in the day, and when he goes to any house for that purpose it must be after the ordinary meal of the household has been concluded (cf. *Baudh.* ii. 22; *Vas.* x. 7, 8).

'Three suppressions of the breath even, performed according to the rule, and accompanied with the (recitation of the) *Vyāhṛtis* ‖ and of the syllable "Om," one must know to be the highest austerity for every Brāhmaṇa.' ¶ 'When by the disposition (of his heart) he becomes indifferent to all objects, he obtains eternal happiness both in this world and after death. He who has in this manner gradually given up all attachments, and is freed from all the pairs (of opposites), reposes in *Brahman* alone . . . a twice-born man who becomes an ascetic . . . shakes off sin here below, and reaches the highest *Brahman*.' **

Elsewhere in the *sūtras* of Manu, in the other books, there are incidental references to the ascetics, which lay down further rules for their conduct and life.

Ascetics and students are to receive alms from the Brāhman householder after the performance of the Bali offering (iii. 94; cf. vi. 7; and *Baudh.* ii. 5. 11; *Vas.* xi. 5; *Āpast.* ii. 4. 10, 11).

The purification ordained . . . shall be 'double for students, treble for hermits, but quadruple for ascetics' (v. 137; cf. *Viṣṇu*, ix. 26; *Vas.* vi. 19).

The ascetic is not admissible as a witness in the law-courts (viii. 65; cf. *Baudh.* i. 19. 13; *Viṣṇu*, viii. 2).

For secret converse with female ascetics a small fine is payable (viii. 363; cf. *Viṣṇu*, xxxvi. 7, and the statement [*ib.* xcix. 14] that the deity himself resides 'in the frame of gods, ascetics, and officiating priests').

'An ascetic, a hermit in the forest, and Brāhmaṇas who are students of the Veda shall not be made to pay toll at a ferry' (viii. 407; cf. *Viṣṇu*, v. 132).

'Hermits (*tāpasāḥ*, *i.e.* those who practise *tapas*), ascetics (*yatis*, those whose passions are under control), Brāhmaṇas, the crowds of the Vaimānika deities, the lunar mansions, and the Daityas are the first (*i.e.* lowest) order of existence caused by Goodness' (*sattva*, xii. 48).

Additional details in the *Law-Books* are to the effect that a householder must turn back if he meets an ascetic (*Viṣṇu*, lxiii. 36). 'An apostate from religious mendicity shall become the king's slave' (*ib.* v. 152). Cf. *Gautama*, iii. (*SBE* ii.[2] 192–196); *Baudhāyana*, ii. 11. 14–26, 17. 16, 17, iii. 3; 'eight mouthfuls are the meal of an ascetic, sixteen that of a hermit in the woods, thirty-two that of a householder, and an unlimited (quantity) that of a student' (*Baudh.* ii. 13. 7; cf. *Vas.* vi. 20); 'let him (the hermit) not injure even gadflies or gnats, let him bear cold and perform austerities, let him con-

* Manu, vi. 1–8 (*SBE* xxv. 198 ff.).

* Manu, vi. 23–26; cf. *Viṣṇu*, xcv. 1–4. Chs. xcv.–xcvii. of the *Institutes of Viṣṇu* are devoted to the exposition of the method of life and the duties of the ascetic, and the subjects of his meditation; the whole is closely related to the corresponding passages of Manu.

† Manu, vi. 33, 34. ‡ *Ib.* 41–49. § *Ib.* 52–54.

‖ *i.e.* the three mystic syllables *bhūr*, *bhuvaḥ*, *svar* (cf. ii. 76, 78, 81); the virtue of their recitation, with suppressions of the breath is so great that it frees from the guilt of the murder of a Brāhmaṇa (xi. 249).

¶ Manu, vi. 70. ** *Ib.* 80–85.

stantly reside in the forest, be contented, and delight in (dresses made of) bark and skins (and in carrying) water (in his pot)' (*Baudh.* iii. 3. 19; *Vas.* ix. x. [*SBE* xiv. 45–49]). 'The qualities by which a (true) Brāhmaṇa may be recognized are the concentration of the mind, austerities, the subjugation of the senses, liberality, truthfulness, purity, sacred learning, compassion, worldly learning, intelligence, and faith' (*Vas.* vi. 23); 'he is worthy to receive gifts who . . . reduces himself by austerities' (vi. 30); 'to suppress the breath is the highest austerity' (x. 5; cf. *Āpastamba*, ii. 21. 7-21, 22, 23. 1, 2).

(4) *Bhagavad Gītā.*—The 'Song of the Blessed' represents, as is well known, a syncretism between the two views of an idealistic pantheism and the practical devotion demanded by a theistic creed, salvation by conviction and knowledge alone, or salvation through faith and works. It is a subject of dispute which of these views is the earlier in the poem, and forms the original kernel, and which has been superimposed upon the other.* In either case *tapas*, in the form of renunciation, self-devotion, is the highest form which 'action' can take; and in the thought and teaching of the writer the essence of ascetic practices is not painful mortification of the body, but the abnegation of selfish desires and the sacrifice of selfish inclination and love of ease in the cause of right and devotion to the Supreme God. Passages which enforce renunciation and the duty of earnest and purposeful action belong to the practical theistic strata of the poem. Attempts, however, to reconcile conflicting views, or at least to recognize what is good in both, are not wanting.

'There is a twofold path, that of the Sāṅkhyas by devotion in the shape of knowledge, and that of the Yogins by devotion in the shape of action. A man does not attain freedom from action merely by not engaging in action; nor does he attain perfection by mere renunciation' (*Bhag. Gītā*, iii. 3 f.).

The 'ascetic' is one 'who has no aversion and no desire. . . . Children, not wise men, talk of *sāṅkhya* and *yoga* as distinct. One who pursues either well obtains the fruit of both. . . . He who, casting off attachment, performs actions dedicating them to *Brahman*, is not tainted by sin' (*ib.* v. 3 ff.).

'Some by concentration see the self in the self by the self; others by the *Sāṅkhya-yoga*; and others still by the *Karma-yoga*; others yet, not knowing this, practise concentration after hearing from others. They too, being devoted to hearing (instruction), cross beyond death' (xiii. 24 f.).

'Renunciation is devotion (*yoga*); for no one becomes a devotee (*yogin*) who has not renounced (all) fancies. . . . The devotee whose self is contented with knowledge and experience, who is unmoved, who has restrained his senses, and to whom a sod, a stone, and gold are alike, is said to be devoted. . . . He should restrain his mind, and concentrate it on me, and sit down engaged in devotion, regarding me as his final goal. Thus, constantly devoting his self to abstraction, a devotee whose mind is restrained attains that tranquillity which culminates in final emancipation and assimilation with me. . . . When his mind well-restrained becomes steady upon the self alone, then he, being indifferent to all objects of desire, is said to be devoted. As a light standing in a windless (place) flickers not, that is declared to be the parallel for a devotee, whose mind is restrained, and who devotes himself to abstraction' (vi. 2 ff.).

The indestructible seat . . . 'is entered by ascetics from whom all desires have departed' (viii. 11).

'Whatever you do . . . whatever you eat, whatever sacrifice you make, whatever you give, whatever penance you perform, do that as offered to me' (ix. 27).

'This threefold penance (*i.e.* bodily, vocal, and mental) practised with perfect faith . . . is called good (*sāttvikam*). . . . Whatever oblation is offered, whatever is given, whatever penance is performed, and whatever is done without faith, that . . . is called *asat* (not good), and that is nought both after death and here' (xvii. 7, 28).

'One who is self-restrained, whose understanding is unattached everywhere, from whom affections have departed, obtains the supreme perfection of freedom from action by renunciation' (xviii. 49).

'Those who, restraining the group of the senses . . . meditate on the indescribable, indestructible, unperceived . . . they, intent on the good of all beings, necessarily attain to me. . . . He who is alike to friend and foe, as also in honour and dishonour, who is alike in cold and heat, pleasure and pain, who is free from attachments, to whom praise and blame are alike . . . who is homeless, and of a steady mind and full of devotion, that man is dear to me' (xii. 3 f., 18 f.).

Similar quotations might easily be multiplied. In the *Bhagavad Gītā* the philosophic theory of asceticism, as it presented itself to the Indian mind, appears in its loftiest and purest form. To the earnest-minded *sādhu* this book is his Bible; and the nobility of its thought, and the charity and breadth of its outlook, render it not undeserving of the name.*

(5) *Epic poetry.*—The Epic poems add little to the general conception of *tapas*, although they offer many examples of its practice, and contain narratives more or less marvellous of ascetics who proved in their own experience its virtue and power (see below, p. 91[a]). Rāma in his hermitage on the banks of the Godāvarī is the type of the peaceful, gentle hermit who has renounced the world, and lives retired from its strife and care, 'true to duty, true to virtue.' In the *Mahābhārata* descriptions of the hermit (*vānaprastha*) and of the ascetic (*sannyāsin*) are found, which agree almost verbally with those of Manu (*Mahābh.* xii. 191 f., 243 ff.; cf. above, p. 89). And in the same book, true and false *tapas* are distinguished from one another: 'Fasting though for a fortnight, which ordinary men count for *tapas*, is merely a castigation of the body, and is not regarded as *tapas* by the good; renunciation and humility, these are the noblest *tapas*; he who practises these virtues fasts unceasingly, and his virtue is never found wanting.' 'Study of the Veda and avoiding injury to any living being, men call bodily asceticism; the true spiritual asceticism is control of speech and thought.'†

In the *Purāṇas* and later literature the extravagances of ascetic practice are more prominent than its virtues. The underlying conceptions remain the same; renunciation of worldly possessions and the voluntary endurance of bodily pain are means to an end, viz. deliverance from the *saṁsāra* and the acquisition of supernatural powers. The essential principles, however, are overlaid with a mass of extravagant fancy and repellent detail; and the stories of the lives of the ascetics, and the descriptions of their self-inflicted tortures, present few features of attractiveness or interest.

3. **Asceticism in modern practice.**—The most general term for a Hindu ascetic is *sādhu*, a 'good' or 'pious' man, a saint, or sage, of which the feminine *sādhvī* denotes a woman who has taken ascetic vows. *Sannyāsin*, one who has 'cast off,' *i.e.* home and possessions, is also frequently used of any mendicant, though the title is more properly restricted to a particular sect (see below, p. 93 f.). *Faqīr* is a Muhammadan term, expressive of poverty of spirit, but is sometimes, though incorrectly, applied to a Hindu beggar or ascetic. India has always been the home of asceticism, and from the very earliest times this feature of Indian life has attracted attention. *Sādhus* have formed the shifting itinerant element in a population for the most part stationary and rooted to the soil. In spite also of their general aloofness, by their numbers and by the respect paid to them they have always exercised a considerable influence in the land, and, in the absence of more direct methods of conveying intelligence, have formed a fairly constant though uncertain means of communication between the different parts of the country. Present everywhere, although rarely making a prolonged

* See esp. R. Garbe, *Bhagavad-Gītā*, Leipzig, 1905, Einleitung; *SBE*, vol. viii.², Oxford, 1898, Introduction; and art. BHAGAVAD GĪTĀ.

* Cf. the interesting account which Dr. T. L. Pennell gives of the *sādhu* whom he overtook on the road from Ludhiāna, and who recounted to him his experiences and manner of life: 'When my heart is lonely I read in the *Bhagavad Gītā*, and get consolation, and I like that better than any other book because it makes my heart glad' (*Church Missionary Intelligencer*, 1905, p. 516).

† *Mahābh.* xii. 217, 221; cf. Deussen, *Allg. Gesch. der Philosophie*, i. 3. p. 89 ff.

stay in one place, they brought to the settled inhabitants the consciousness of an outside world, and wrought effectively, though probably unintentionally, against the narrowness of a merely local and parochial spirit. Whether the *sādhus* were more numerous in ancient times than at the present day it is difficult to determine. They occupy a larger place in the ancient than in the modern literature of India; and the same is true also in all probability of the thought of the people. They still form, however, an appreciable though small percentage of the population. At the census of 1901 the total number of beggars and religious mendicants was returned at 4,914,000, or nearly five millions, a decrease of about 6¼ % during the decade preceding. The decrease, however, is attributed to the heavy mortality of the famine years, and not to any lessened attraction in the profession of sādhuism. Probably by far the greater number of these, if not all, were true ascetics, bound by vows to a life of self-renunciation and poverty.

More, also, perhaps than in any other country asceticism in India has been under the definite and strong sanction of religion. That sanction was given to the practice of *tapas* in the first instance by the example of the greatest saints and heroes of old, and of the gods themselves, who are represented as enduring self-inflicted tortures for thousands of years in order to attain supernatural or enhanced power. The *ṛṣis* of old, the demigods of legend and story, the dwellers in heaven as well as on earth, engaged in the practice of *tapas* to secure dominion for themselves, or to confound their foes. The Supreme Being himself endured age-long austerities in order to create. And Śiva, in the character of an austere naked *sannyāsin* practising austerities of almost unimaginable severity for thousands of years, is the type and patron of the ascetic, who by the grace of Śiva and by the virtue of *tapas* hopes to attain all his desires. There was no limit to the power of self-mortification; all things were possible to *tapas*. The classical example and the most convincing to Hindu thought was found in the story of the rivalry and hostile encounters of Vaśiṣṭha and Viśvāmitra. The latter, a Kṣatriya and a most powerful and wealthy king, was overthrown and put to confusion at every point by the might of the Brāhman's incantations and magical devices. Humbled and beyond measure enraged, Viśvāmitra had recourse to *tapas*, and by the most severe and protracted austerities compelled the gods to grant him the birth and rights of a Brāhman, thus placing him on a level with his Brāhman adversary. The story undoubtedly represents the rivalry of the two great orders or castes, the priestly and the warrior; but it also expresses the conception of the omnipotent strength of *tapas*, which could bridge the gulf, and lift the Kṣatriya, inferior though a king, to the level of the proud and domineering Brāhman.*

On the power of *tapas* see also Manu, xi. 239 ff.: 'Whatever is hard to be traversed, whatever is hard to be attained, whatever is hard to be reached, whatever is hard to be performed, all may be accomplished by austerities; for austerity (possesses a power) which it is difficult to surpass. Both those who have committed mortal sin and all other offenders are severally freed from their guilt by means of well-performed austerities. Insects, snakes, moths, bees, birds, and beings bereft of motion reach heaven by the power of austerities. Whatever sin men commit by thoughts, words, or deeds, that they speedily burn away by penance, if they keep penance as their only riches. The gods accept the offerings of that Brāhmaṇa alone who has purified himself by austerities, and grant to him all he desires. . . . The gods, discerning that the holy origin of this whole (world) is from austerity, have thus proclaimed the incomparable power of austerity' (*SBE* xxv. 478 f.); cf. iv. 148, where *tapas* is one of the means for remembering former births, and xii. 83, where *tapas* leads to the attainment of supreme bliss; cf. also *Rigveda*, x. i. 36, where the long-haired ascetic with semi-divine powers is able to move on the path of the Apsarases and Gandharvas (A. A. Macdonell, *Vedic Mythology*, p. 134).

Hindu asceticism represented, further, a revolt from, or at least a protest against, the tyranny of caste. In its origin probably remote from Brāhmanism, and conveying the ordinary idea that bodily pain was profitable for the advancement and purification of the spirit, the ascetic life became, in association with Hinduism and under the prescriptive sanction of Hindu law itself, a refuge from the burden of caste rules and ostracisms. By the ascetic, caste, like every other institution of the mundane life, has been surpassed, and left behind. He is casteless not because he is below but because he is above caste. And this freedom from the bondage and artificial restrictions of a society elaborately fenced off and partitioned by innumerable barriers which the ordinary man might not transgress presented no inconsiderable attraction, and has been one of the secrets of the abiding popularity of the ascetic ideal and manner of life in India. The subdual of the bodily passions by mortification of the flesh, which in other countries was itself the end of asceticism, was in India only the means; the end was primarily and avowedly the attainment of magical powers, but also, perhaps in many instances only half consciously, escape from the burdens of a social life, the petty restraints and prohibitions of which had begun to be a weariness to the spirit. Over this tendency, with that wonderful compliance and dexterity of which it is so great a master, Brāhmanism threw its shield, and legalised what it could not prevent. In the doctrine of the four *āśramas* (*q.v.*) asceticism was made an integral part of the orthodox Hindu life, and it became the duty of every Hindu, as advanced age overtook him, homeless and a wanderer to chasten himself with austerities. Formally this was to be done for the sake of detaching himself from earthly ties, and of realizing union with *Brahman* (see art. YOGA). And a religious motive was thus supplied for that which in itself was a welcome release from responsibility, care, and the minute requirements of an elaborate social code.

In the first instance apparently, the right and privilege of asceticism, according to Hindu custom or law, belonged to Brāhmans alone; it was then extended to all the twice-born, and finally all restrictions were removed, and admission into the ranks of the ascetics was accorded to men of every position and degree.

Cf. Rāmāyaṇa, *Uttara Kāṇḍa*, 74. 9 ff., quoted in Muir, *Orig. Sanskr. Texts*[3], i. 119 f.: 'Formerly in the *kṛta* age Brāhmans alone practised *tapas*; none who was not a Brāhman did so in that enlightened age . . . then came the *tretā* age, . . . in which the Kṣatriyas were born, distinguished still by their former *tapas* . . . Those Brāhmans and Kṣatriyas who lived in the *tretā* practised *tapas*, and the rest of mankind obedience. . . . In the *dvāpara* age *tapas* entered into the Vaiśyas. Thus in the course of three ages it entered into three castes; and in the three ages righteousness (*dharma*) was established in three castes. But the Śūdra does not attain to righteousness through the (three) ages . . . such observance will belong to the future race of Śūdras in the *kali* age, but is unrighteous in the extreme if practised by that caste in the *dvāpara*.' Cf. Manu, i. 86: 'In the *kṛta* age the chief [virtue] is declared to be *tapas*.'

It is evident, however, with what reluctance the privileges and powers of the ascetic life were extended to Śūdras and low-caste men. At the present time there is no distinction or barrier; any one may become an ascetic, and the vows are not necessarily lifelong. Some sects, however, still restrict membership to Brāhmans, or at least to men of the three higher castes.

Moreover, the distinction between the last two *āśramas*, that of the *vānaprastha*, the anchorite in the forest, corresponding to the class of the ὑλόβιοι

* See J. Muir, *Original Sanskrit Texts*[3], i. 388 ff., who quotes the story in a twofold form from the *Mahābhārata* (*Ādiparvan*, 6638 ff.), and from the *Rāmāyaṇa* (*Bālakāṇḍa*, 51–65); cf. the narrative of Nahuṣa, who by *tapas* won for himself the rank of Indra (*Mahābh.*, *Ādip.* 3151; Muir, *op. cit.* p. 307 ff.).

of Megasthenes (see above, p. 88[a]), and that of the true *sannyāsin*, the homeless wanderer, was never very clearly drawn even in theory, and was in practice entirely disregarded. Ascetic habits at least were common to both; and the dweller in the forest-hermitage, no less than the man who had 'cast off' possessions and earthly ties in favour of a vagrant life through the cities and country, endeavoured by means of *tapas* to break the fetters which bound him to an earthly existence, and to secure final rest and bliss.

(1) *Clothing and habits.*—Numerous also as were, and are, the sects of ascetics, varying in the details of costume and habit, they all possess certain broad characteristic features in common, and to the eye of the comparative stranger present a similar and specific appearance by which their profession may be recognized. All *sādhus* carry a begging-bowl, which in its simplest form consists of a hollowed-out coconut or gourd, but is sometimes of brass, figured or otherwise ornamented, and furnished with a lid or handle; a water-pot also, and usually a staff. Theoretically, and as individuals, they are without worldly possessions, but the monasteries in which many of them take up their abode during the rainy season, and for longer or shorter intervals, are often richly endowed. Such monasteries, which are very numerous all over India, owe their existence to the liberality of pious founders, and have at different times been the recipients of gifts of money or land, whereby merit has accrued to the donors, and the religious houses have in many instances become endowed with great revenues. They are not, however, in most cases, places of permanent residence, but their inmates wander through the country as *sādhus*, or ascetics, living on the alms of the people. The robes of the ascetic are ordinarily salmon-coloured, but sometimes other colours are met with, according to the sect or order to which they belong; many also go practically naked. On their bodies they rub ashes—a practice which is supposed to have been originally intended to protect the skin against the insect plagues of India, or as a defence against the hosts of the demons.* The forehead is marked with the *tilaka*, the variously shaped sign or symbol, made with coloured earths, indicating their sect or the god to whose service they have consecrated themselves; and the hair hangs down from the head, long and matted, but in other cases is formed into a rough coil at the top, or is entirely shaved off, the head being left bald. They sleep on the ground, and once or twice in the day go round to collect food and alms, for which they must not ask, but contentedly receive what is given. According to the stated rule, they must not approach a house to beg until the regular meal-time is past; what remains over is the portion of the mendicant.

Other objects usually found in the possession of a *sādhu* are a rosary, the material of which and the number of the beads vary with the different sects. Saivite rosaries are composed of the berries of the *rudrāksha* tree (*Eleocarpus ganitrus*), thirty-two or sixty-four in number; sometimes, however, such ascetics wear strings of human teeth (*dantamālā*) or the skin of a snake round their neck. Vaiṣṇavite ascetics carry a rosary of a hundred and eight beads of *tulasī* wood, the holy basil (*Ocymum sanctum*), or occasionally, though it is said rarely, of the seeds of the sacred lotus. The purpose of the rosary is for use in the recitation of prayers, or to enable the devotee to repeat the name of his god a definite number of times without error.† In all probability the Christian use of the rosary was derived ultimately from India. Many *sādhus* will also be found with fire-tongs, the iron of which is supposed to be a protection against evil spirits, and, as they are inveterate smokers of bhang, with a pestle and mortar, and a pipe, which are brought into constant use. Many of them carry on their person small idols, or sacred objects, or talismans as the *liṅgam* or *śālagrāma*, relics also from the places of pilgrimage they have visited, and seals or certificates issued by the priests in charge. They are supposed to spend their lives in meditation, withdrawn from the thoughts and interests of the world. For a similar reason, because he is believed to be in *samādhi*, 'profound trance,' a state of intimate and untroubled communion with the Divine, the body of a *sannyāsin* is under ordinary circumstances buried, not burned; he is in reality not dead, and may revive at pleasure to a consciousness of external things.

(2) *Mortifications.*—The distresses and self-mortifications to which the Hindu ascetic submits himself would be almost incredible if they were not certified by the accounts of many eye-witnesses from the earliest times to the present day, and by the well-known capacity of the Eastern to endure with stoicism hardship and pain that would be intolerable or fatal to a European. Fully to enumerate and describe the various kinds of self-torture invented and practised by *sādhus* would be impracticable. Among the more usual and prominent which attract attention is the so-called 'arrow' or 'spike-bed' (*śaraśayyā, kaṇṭakaśayyā*), a flat board studded with iron nails or spikes, on which the ascetic sits or lies at full length, and which he is supposed never to leave night or day. The practice is in imitation of the sufferings of Bhīṣma, the leader of the Kurus and chief antagonist of Arjuna in the *Mahābhārata*. His body was pierced in the fight by Arjuna with so many arrows that, falling, it did not touch the ground, and Bhīṣma lay thus supported for forty-eight days and nights before his death, during which time he discoursed on high topics before the assembled armies.* A Brāhman ascetic at Benares is said to have used one of these couches, on which he lay naked, for thirty-five years.† Another common form of self-torture is to raise one or both arms above the head, and to hold them there until stiff and atrophied, when they cannot be drawn down again (*ūrdhvabāhu*). A man who has both arms thus extended is unable even to feed himself, and is dependent in everything on the help of others. As a further penance the hand is sometimes held closed till the nails grow through the palm. The *pañcha-tapāṁsi* penance consists in enduring the heat of four fires lighted around, with the sun overhead as a fifth; sometimes five artificial fires are employed. Difficult and distressing postures of various kinds are frequent modes of self-mortification, which are supposed to distract the thoughts from external objects (see art. YOGA), for example, standing on one foot for protracted periods (*eka-pāda*), measuring the length on the ground (*aṣṭāṅga*), and thus making slow and painful progress from one place of pilgrimage to another, or round a sacred shrine. Most *sādhus* undertake long and toilsome journeys to visit the holy places of their religion, as Badarīnāth in Garhwāl, or the sacred mountain Kailāsa;‡ and on the way, or at the temples themselves, suffer the greatest hardships from want and cold. Many perish by the way from these causes and from the attacks of wild beasts. Other *sādhus* undertake prolonged fastings, or place themselves under vows

‡ See E. S. Oakley, *Holy Himālaya*, Edin. and London, 1905.

of silence for years. Some display their powers by chewing live coals, or their endurance by thrusting knives or skewers into their flesh, treading on beds of glowing ashes, sitting immersed to the neck in water, allowing themselves to be buried alive, or hung with the head downwards (*ūrdhvamukhi*). Tricks of self-hypnotism of a most remarkable character have been without doubt known to and practised by Indian ascetics for centuries.*

(3) *Ascetic sects.*—Hindu *sādhus* are of various types and sects, between which to the unaccustomed eye there appears to be little difference. The greater number are Śaivites, but some belong to Vaiṣṇavite forms of Hinduism. Śiva, the narrative of whose austerities is found chiefly in the *Śiva*, *Skanda*, and *Liṅga Purāṇas*, is the chief patron god of ascetics. In this character he is represented as *digambara*, 'sky-clad,' with hair unkempt and his body smeared with ashes, sometimes sitting under a snake canopy. While practising austerities his home was in the remote fastnesses of the Himālaya range, where accordingly some of the most sacred places of Śaivite pilgrimage are to be found. Most of the great teachers or reformers of Hinduism founded mendicant orders, and established monasteries, which are centres and homes of ascetic life. There are sects that trace their origin to Śaṅkarāchārya, Kabīr, Rāmānuja, Rāmānanda, etc. The number of them is great, and only a few of the more prominent and important can here find mention.†

There are seven chief sects of Śaivite ascetics as follows:—(1) *Daṇḍin*, (2) *Sannyāsin*, (3) *Brahmachārin*, (4) *Paramahaṁsa*, (5) *Liṅgait* or *Liṅgayat*, (6) *Aghorin*, (7) *Yogin*. The first four are mendicant orders founded by Śaṅkarāchārya, the great Brāhman teacher and expositor of the 7th or 8th cent. of our era. The *Liṅgaits*, or *Liṅgayats*, are properly Śāktas, who worship the *liṅgam*, or phallus, and whose founder is said to have been a Brāhman named Basava, or Basappa, of Kalyāna, and to have lived in the Deccan about the beginning of the 12th century. Their itinerant monks (*jaṅgamas*) are to be found all over India (see art. LIṄGAYAT).

The subdivisions of the *Daṇḍins* and *Sannyāsins* appear to be uncertain in their limits,‡ and perhaps some of the sub-orders coincide, and are practically the same. There are said, however, to be ten classes of *Daṇḍins*, whence they are known as *Daśnāmī* ('ten-named') *Daṇḍins*, which derive their titles from ten disciples of Śaṅkara. The general name has been given to them from the *daṇḍa*, or staff, which every *Daṇḍin* carries, and which they are said to worship; the various sub-orders have different kinds of staves. Membership of the sect is confined to Brāhmans, and they are especially numerous in Benares. They wear salmon-coloured clothes, and beg only from the houses of Brāhmans. Initiation into the order is accompanied by a kind of baptism, with fasting; the sacred thread is also taken off at this time and burned, and together with the communication of the sacred *mantram*, and the new name of the sub-order to which the candidate is to belong, there is enforced upon him the observance of chastity and poverty. *Daṇḍins* avoid the use of fire, and bury their dead or cast them into a sacred stream § (see art. DAṆḌIN). Seven classes of *Sannyāsins* are enumerated by Oman, together with three which are said to belong more properly to the *Daṇḍin* orders. The list is as follows:—Giri, Puri, Bhārti, Ban, Auran (Aranya), Parvat, Sagar; Tirath, Ashram, Sarasvatī. Membership of the sect is open to all, without distinction of caste; twice-born men lay aside the thread, and all join at meals. They usually wear a necklace of *rudrāksha* berries, and some, in place of the ordinary salmon-coloured robes, carry the skin of a tiger. In their food, which they accept from any Hindu, they avoid meat and do not drink spirits, but are great smokers of *ganja* (*guñjā*), or hemp. At initiation the *guru* communicates to the novice his new name and the *mantram* of his order, and he is then expected to serve the *guru* for a time, receiving instruction from him. He has to bathe daily, and to perform daily worship with contemplation of the image of Śiva; he must not sleep on a couch or during the day-time, or converse with women, and must always go on foot, etc. At death the body is buried in a sitting posture, facing east or north-east, and no *śrāddha* ceremonies are performed, since he is supposed to have quitted this life when he entered the order* (see art. SANNYĀSIN).

The remaining sects are of less importance. *Brahmachārin*, the name given in the old literature to a student of the Veda during his period of pupilage in the first *āśrama*, has been appropriated to a subordinate class of ascetics, who are said usually to act as servants to *Sannyāsins* or *Paramahaṁsas* (see art. ĀŚRAMA). The *Paramahaṁsas* are the highest order, and have an *Upaniṣad* of their own, the *Paramahaṁsopaniṣad*. They lay claim to greater sanctity, and profess to observe stricter rules of conduct than others. Before admission to the rank of *Paramahaṁsa*, a probation of some years, usually not less than twelve, must be undergone. In token of absolute renunciation of the world, some observe a strict vow of silence, profess to abstain entirely from food, or dispense with all clothing. Some are unquestionably men of sincere piety, and devote themselves to study and good works. The *Paramahaṁsa* believes that he has already attained to union with the Divine, or rather has learned to know himself as identical with *Brahman*—a creed not conducive to humility or modesty. The title is said to be derived from a mythical bird, which possesses the faculty of separating water from milk; hence in a metaphorical sense is able to distinguish falsehood from truth. The word *haṁsa* ordinarily signifies a goose; so that the title was perhaps originally given to members of the sect in derision.†

The *Aghorins* or *Aghorapanthins* are *sādhus* who have acquired a strange and repulsive appetite for the flesh of corpses, and are said to steal dead bodies from the graveyards, and drag them from the rivers for purposes of food. There are probably few, if any, of these ascetics now left in India, but in times past they were more numerous, and their habits have been noted from a very early date. The home of the chief of the sect is said to be at Siddhapur, in North Kanara (see art. AGHORI).

Yogin is a general term for an ascetic who is endeavouring by restraint and discipline of the body to secure the union of the soul with the Supreme (see art. YOGA). Such ascetics are usually mystics and self-hypnotists, who claim to be possessed of miraculous powers, and in some instances undoubtedly perform marvellous feats. As a sect they trace their origin to Gorakhnāth, a

* J. C. Oman, *op. cit.* chs. iii. iv. and vi.; Monier Williams, *Indian Wisdom*[3], p. 104 ff.

† The list and details that follow are derived in the main from J. C. Oman's important work; see also separate articles. There are, of course, in India many men who live ascetic lives, but who are not Hindus, such as the Muhammadan faqirs in the north, and the wandering Jain monks (see artt. MUHAMMADANISM and JAINISM).

† Monier Williams, *op. cit.* p. 87; Max Müller, *Ramakrishna*, London, 1905.

disciple of Mahendranāth, of whom little or nothing is known, even the period at which he lived being uncertain. *Yogins* worship Śiva, especially in the form of Bhairon or Bhairava (*q.v.*), the village god identified with Śiva, whose sacred animal is the dog; and they pay especial veneration to the nāths (*nātha*), or guardian spirits of the Himālayan peaks, and to the eighty-four *Siddhas*, or 'perfect' ones, whose practice of the *yoga* has reached perfection, some of whom are believed to be still living. They disregard caste, wear sacred rosaries of *rudrāksha* berries, and allow themselves the utmost freedom in the matter of food and drink. There are several sub-orders, as Kanphatas, Augars, distinguished by peculiarities of dress or ornamentation.*

The ascetic sects of the Vaiṣṇavites have perhaps hardly so much right to the name of ascetics. They are rather wandering monks, whose abstinence is displayed almost entirely in the matter of food and drink. Some of them practise the rules of *yoga*, and with few exceptions all refrain from partaking of flesh or spirits. Viṣṇu is worshipped by them under the form either of Rāma or of Kṛṣṇa, with whom they usually associate their wives Sītā or Rādhā. The list of the sects is as follows, omitting the adherents of Vallabhāchārya, whose principles are the reverse of ascetic:—

NAME.	REPUTED FOUNDER.
Śrī Vaiṣṇava.	Rāmānuja.
Rāmānandin.	Rāmānanda.
Mādhava.	Mādhavāchārya.
Chaitanyite.	Chaitanya.
Kabīr Panthin.	Kabīr.†

The *Śrī Vaiṣṇavas*, so called because they unite the worship of Śrī or Lakṣmī, the wife of Viṣṇu, with that of Viṣṇu himself, retain the sacred thread, wear reddish-coloured robes, and carry strings of *tulasī* beads or of the seeds of the lotus. In addition to the *tilaka*, or sect-mark, on the forehead, they are often stamped or branded on the body with sacred marks emblematic of the god or his wife. They are found chiefly in the south of India, where the great monasteries of the sect are established.‡

The *Rāmānandins* are followers of Rāmānanda, the disciple of Rāmānuja. His work lay rather in the north of India, and the various types of ascetics who belong to this order are numerous in most of the northern districts of the peninsula. The chief subdivision is that of the *Bairāgins* (*q.v.*) or *Vairāgins*—a title which indicates one who is free from worldly passion or desire, and is often applied generally to any Vaiṣṇavite mendicant or devotee. The *Vairāgins* proper disregard caste distinctions, though they wear the thread, eschew meat and spirits, and worship Hanuman, the monkey-god, as well as Rāma and his brothers, and Sītā, and they go through an elaborate daily routine of bathing, etc., including the practice of *yoga*; frequently also they are branded upon the arm with the sacred symbols of Viṣṇu.§ Other sub-sects of Rāmānandins are Acharins, Khakins, Sannyāsins, the last-named being distinguishable from the Śaivite ascetics of the name by the use of the sacred thread. They wear robes of different colours, and the Khakins at least usually dispense altogether with clothing. All Rāmānandins are pledged to vows of celibacy (see art. RAMANANDA, RĀMĀNANDIN).

The *Mādhavas*, or *Mādhvas*, are almost entirely confined to the south of India. They live celibate lives, and admit all castes to the order. Their one garment is orange-coloured, and on breast and arms they bear the marks of Viṣṇu, and shave the head, in this last respect being distinguished from the true Vairāgins, who leave a small tuft of hair on the crown (see art. MĀDHVAS).

The *Chaitanyites* are in some respects the most liberal in thought, and in mode of life most free and unrestrained of all Vaiṣṇavite ascetics. They admit into the order men and women from all, even the lowest, castes, and with few exceptions do not profess or practise celibacy. The sect is most widely spread in Bengal, of which district the founder was a native. They wear white, or sometimes yellow garments, abstain from meat and spirits, and carry the usual *tulasī* rosary and necklace. There are several subdivisions, the moral reputation of some of which does not stand high (see artt. BENGAL, CHAITANYA).

The *Kabīr Panthins* can hardly be said to affect asceticism in any real sense of the term. They wear no distinctive dress, carry the usual necklace and beads, and on their foreheads the distinctive mark of Viṣṇu. The wandering monks of the order are numerous in northern and central India, and bear a high character for simplicity and purity of life.*

The remaining orders of *sādhus* have originated among the Sikhs. The three most important are known as *Akālin*, *Nirmālin*, and *Udāsin*. There are others less numerous and distinctive. In general the dress of the Sikh *sādhu* is more complete than that of the ascetics of other, or at least of Śaivite orders; and he bears less prominent and obtrusive marks of his ascetic profession. The *Akālins*, or *Nihangs*, are the militant monks of the Sikh faith. They dress in blue garments, and travel over the country fully armed, on horseback or riding on camels, and their requests for alms are said to be preferred with a tone and manner that secures instant compliance (see art. AKĀLIS). The *Nirmālins* are for the most part quiet and inoffensive students of the sacred books, whose only outward marks of their *sādhu* profession are their reddish-yellow garments and long hair (see art. NIRMĀLIN). The *Udāsins* dress in salmon-coloured robes, with a peculiar pointed cap, and a black cord round the neck; and, in addition to the water-pot, usually a gourd, carry a bag over the shoulder, and a small black mat or carpet, which they spread on the ground when they rest. Some Udāsins shave the head, while others allow the hair to grow; all avoid the use of meat or spirits, and do not smoke, and are pledged to poverty and continence† (see art. UDĀSIN).

There have also been at all times a few *sādhvīs*, or female ascetics, in India, who have emulated their more numerous male companions in their devotion and the rigour of their ascetic practices. The publicity, however, which the profession of sādhuism entails is an obstacle to its frequent adoption by Indian women, and any general observance by them of ascetic habits or vows would be opposed to the sentiments and prejudices of the Hindus themselves. *Sādhvīs* are usually widows, who have less to lose in the adoption of a roving life; and in most instances, though not always, are of low caste. It would seem also that generally, although again not without exceptions, the *sādhvī* is moved to enter upon this manner of life by the desire to cast in her lot with father or other male relative or friend; and solitude therefore rarely forms part of the voluntary penance which she undergoes. The case is recorded,

however, of a Hindu widow of good family, who lived as a solitary recluse in an underground cell near Benares for thirty-eight years, devoting herself to study and the practice of *yoga*, reverenced by all the people, and receiving visitors from the great distances to which her fame had spread.*

Asceticism, and the habits and practices associated with it, have been adopted in several instances in India by Christian missionaries, with the purpose and hope of thereby commending their teaching to the people among whom their lives were spent. It is doubtful how far the attempt has ever been really successful. With the spirit that counselled and animated such resolutions, moving men to self-renunciation and the abandonment of all for the sake of duty, and to promote the unselfish end which they had in view, all will feel sympathy. In the regard of every Hindu also the ascetic ideal is a noble one, and the man who endeavours to put it into practice is worthy of all honour. It would seem, however, that the utmost sacrifice which it is in the power of a European, either by constitution or circumstances, to make cannot approach the abnegation or extreme rigour of self-mortification of the ordinary Indian *sādhu*; and therefore to the Indian his mode of living will probably appear to be a pale imitation, not wholly sincere, and immeasurably below the true ideal. It will excite his wonder, but in no degree move him to respect, while the motive that prompts the adoption of such a life will be entirely beyond his comprehension. There have been native Indians also, Christian *sādhus*, who have wandered through the country in ascetic garb, and followed the ascetic rule of preaching and teaching by the way. Their action, so far as it is possible to ascertain, has greatly increased and widened their influence for good, and has appeared entirely commendable to their fellow-countrymen.†

4. Religious and ethical value of 'tapas.'—There is probably no country in which asceticism has been so widely and constantly practised, or in which its ideals have been held in such high regard, as India. The injunctions of their sacred books, and the examples of their sages, have kept before the mind of the people the thought that renunciation of the world, with rejection of its pleasures and pursuits, is the supreme good. And although the motive of the abnegation and bodily self-mortification of the Indian *sādhu* was undoubtedly in the ultimate analysis selfish ‡—he abandoned the world that he might gain something better for himself—yet his life and action were an ever-present reminder to the people that the good of this world is not the good which is most worth having; and his example revived in them the longing, which the pressure of worldly cares and ambitions might well have deadened or crushed, for a higher experience of life than was suggested by the hard material facts of the present. The hand that pointed upwards and onwards might indeed be prompted by no generous or altruistic spirit. Nevertheless it did suggest and invite to upward striving. And there can hardly be any doubt that, in spite of its obvious drawbacks and limitations, sādhuism has been on the whole a good to India, and a force that has made for righteousness in the broadest use of the word.

That ideal commanded the assent and enthusiastic goodwill of the people at large. They were not blind to the defects and dangers of an ascetic life, the opportunities it afforded for imposture, the habits of idleness and the love of ease which it promoted. While, however, they jested at the *sādhu*, they respected his profession and wished themselves to be like him. It was his better qualities that they revered, and the ideal which he represented. His ignorances and littlenesses they tolerated or laughed at, while they allowed his claim to a holiness greater than any to which they, pre-occupied with mundane affairs, could aspire. That there were pretenders and impostors among the ever-moving crowd of ascetics, men to whom godliness was a way of gain, the keen instinct of the people always recognized. These, however, were not true *sādhus*, but were masquerading in a borrowed garb to which they had no right; and their presence hardly lessened the respect in which the profession was held, or weakened the influence which its better members wielded. It was and remained good that an ideal of purity, self-restraint, and indifference to pleasure and wealth should be constantly exhibited in concrete form before the eyes of the people.

On the other hand, the existence of so large a number of able-bodied men, living in idleness, cannot have been other, to our Western modes of thinking at least, than a burden to the commonwealth. No *sādhu* ever did any work. He passed his time in the most complete and absolute idleness, as far as the labour of the hands was concerned; and from a social or communistic point of view, his life was entirely unproductive. It must be remembered, however, that the burden was very widely distributed, from Cape Comorin to the utmost Himālayas; and that in any given case the demand made by the individual *sādhu* upon the people among whom he sojourned was very slight. The burden was probably little felt, much less than would have been the case in the more artificial and closer-knit States of the West. It is true, nevertheless, that, on the premisses of Western logic and argument, the loss of the remunerative labour of so great an army of potential workers cannot have been other than hurtful to the general prosperity of the land.

Sādhuism also, both by its principles and by its practice, struck a heavy blow at the spirit of caste. To the true *sādhu* all things were indifferent, and therefore the distinctions and jealousies of caste were nothing to him. Most of the orders acted up to this belief, although a few refused admission to membership to any but Brāhmans, and declined to receive food from men of a lower caste. Their influence, therefore, on the whole was democratic and levelling; they stood for brotherhood and equality as against caste assumption and pride. And mingling with the people as they did on their incessant journeyings, the conceptions and theories which they thus represented, though they never availed to break the Brāhman yoke, must have struck deep root, and given rise to many searchings of heart.

There is, however, at the present day a new spirit brooding over the land, inimical to sādhuism and the ideals which it represents and fosters. Western activities, and the conceptions of duty and aim which the West has introduced, and which are acting as a strong ferment in the life and society of India, must in the long run be fatal to the ascetic, to the world-renouncing spirit. English education, if there were nothing else, and the strenuous life which it inculcates, will render impossible the meditative existence of the *sādhu*—the man who in the world is not of it. The end is not yet; for perhaps a considerable time to come the professed ascetic in India will perform his pilgrimages by rail, will utilize the electric light and the other appliances and conveniences of

* Oman, *op. cit.* p. 244 ff.

† For a recent example of Indian Christian *sādhus*, see *Harvest Field*, 1906, p. 300 f.

‡ Cf. Deussen, *Philosophy of the Upanishads*, p. 364 f.; the worth of *tapas* to the Indian was primarily its worth to himself; the external results, its worth for others, were of comparatively little account.

civilization, and will remain what he is, unmoved and unchanged. Eventually, however, and inevitably the forces of the new era will be too strong for him. It is hardly possible that the *sādhu* should accommodate himself to an age that prizes merchandise and gold above all. He must vanish before the pressure of modern forces and strange ideas. But with him will go one of the most picturesque if not the most lovable figures that Indian history or life has to show. And it is permissible to doubt whether the new spirit and influence that is driving him from the world's stage will be on the whole more conducive to India's real welfare and happiness than his has been throughout the long centuries.

LITERATURE.—The more important works have been quoted in the course of the article. The most complete description in English of ascetics and their manner of life is to be found in J. C. Oman, *Mystics, Ascetics, and Saints of India*, Lond. 1903, and the same author's *Cults, Customs, and Superstitions of India*[2], Lond. 1908, pt. i. ch. 1, and pt. iii. ch. 4. E. S. Oakley, *Holy Himālaya*, Lond. 1905, describes the sacred places of pilgrimage in Kumāun and Garhwāl; and an interesting description of a visit to the *sādhus* of Rishi Kesh is given by T. L. Pennell in *Church Miss. Intelligencer*, 1905, p. 597 ff. Add F. Max Müller, *Rāmakṛishṇa, His Life and Sayings*, new impression, Lond. 1905; Monier Williams, *Brāhmanism and Hinduism*[4], Lond. 1891, with a portrait and description of a high-caste Brāhman *sannyāsin*, formerly prime minister of Bhaunagar, and a C.S.I.; W. Crooke, *PR*, Lond. 1896; J. Jolly, 'Recht und Sitte' in *GIAP*, Strassburg, 1896, p. 150 f.; P. Deussen, *Philosophy of the Upanishads*, Eng. tr., Edin. 1906, pp. 65 ff., 373 ff., *Allgemeine Geschichte der Philosophie*, i. 3, Leipzig, 1908, and *Das Yogasystem*, p. 543 ff., cf. pp. 94 f., 98 f.; artt. ĀŚRAMA, YOGA.

A. S. GEDEN.

ASCETICISM (Japanese). — The asceticism found in Japan after the introduction of Buddhism is only a foreign importation with which we are not concerned here (see ASCETICISM [Buddhist]). What we must give our attention to is the only original form of Japanese asceticism, that is to say, the asceticism of primitive Shinto as it is met with in the most ancient documents.

A Chinese traveller, describing the Japanese of the early centuries of our era, mentions this interesting custom: 'They appoint a man whom they call an "abstainer." He is not allowed to comb his hair, to wash, to eat flesh, or to approach women. When they are fortunate, they make him presents; but if they are ill or meet with disaster, they set it down to the abstainer's failure to keep his vows, and unite to put him to death' (W. G. Aston, 'Early Japanese History,' in the *TASJ* vol. xvi. pt. 1, p. 55). All the features of this description—carelessness with regard to the cleanliness of the hair and the body, abstinence from certain foods, and continence—correspond exactly with what we know of the usual condition of the 'god-men' who are found among so many primitive peoples, and who, when illness or any other calamity occurs, are held to be responsible, and are deposed, punished, or killed (see J. G. Frazer, *GB*[2], *passim*). Analogous conceptions are also known to exist in China, where the Emperor is held responsible for drought; and in Korea, where, in the event of a bad harvest, the ancient kings were deposed or put to death.

If we turn now to the most ancient Japanese book, the *Kojiki* (A.D. 712), we shall not find this primitive custom mentioned; but we may see there at least an idea of abstinence which appears to be the continuation of it. This idea is expressed by the word *imi*, the root of the verb *imu*, which, in its original meaning, signifies 'to shun.' In one passage the reference is to a sacred weaving-hall (*imi-hataya*), where the Sun-goddess presides at the making of the garments of the gods. Here *imi* has only the secondary sense of 'sacred,' which, however, is closely related to its original meaning. In another passage we have an account of the mythical origin of the *Imibe no obito*, that is to say, the chiefs of the *Imibe* (or *Imbe*), a hereditary corporation of abstaining priests, who claimed descent from the god Futo-dama ('Great Jewel' or, rather, 'Great Gift,' 'Great Offering'). Again, in a third passage, relative to the troubles which followed the death of the first legendary Emperor, Jimmu, we are told that one of his sons, renouncing his claim to the succession, became an 'abstainer' (see *Kojiki*, ed. with notes by Motoöri, 1789–1822, vols. 8, 15, 20; or the Eng. tr. by B. H. Chamberlain, sec. 15, 33, 53, pp. 62, 134, 186 of the re-issue of 1906).

The *Nihongi*, which appeared only eight years later, that is, in A.D. 720, contains passages corresponding to the first two passages of the *Kojiki*; but, under the influence of Chinese ideas, it substitutes for the 'abstainer' of the third passage a single priest 'of the gods of Heaven and Earth' (*Nihongi*, ed. Shukai, vols. 1 and 4, or the Eng. tr. by W. G. Aston, 1896, pp. 41, 42–47, 140).

We shall now examine the documents relating to worship, especially the old rituals in which the *Imibe* appear (*Engishiki*, A.D. 927, ed. Dehabon, vol. 8, *norito* 1, 8, 14), to see more clearly what their 'abstinence' consisted in. The special function of the *Imibe* was to prepare the offerings for the gods, 'avoiding' all impurity in doing so. This is what is given in exact terms in the last lines of the first ritual, relating to the *Toshigohi no matsuri*, or 'Festival for the Harvest,' celebrated at the time of sowing, and also at the end of the fourteenth ritual, recited at the *Ohonihe no matsuri*, or 'Festival of the Great Offering of Food,' which was a festival of first-fruits (*Nihi-name*, 'New-tasting'), more solemn, and celebrated only at the accession of the Emperors. On the other hand, in the eighth ritual, concerning the festival of the *Ohotono Hogahi*, or 'Luck-wishing of the Great Palace,' we are told that it was the *Imibe* who, with a sacred (*imi*) axe, set to work on the wood destined for the construction of this palace, and who, with a sacred (*imi*) mattock, dug out its foundations. On this occasion they also prepared the offerings, brought the Imperial insignia into the great hall, hung up the magic stones in various places (the audience-hall, the Emperor's bathroom and privy), and in conclusion pronounced the ritual. The recitation of the ritual (No. 9) for the *Mikado matsuri*, or 'Festival of the Sublime Gates,' was also entrusted to them. In short, the main idea underlying these various functions is that of material purity, which the *Imibe* had to ensure by avoiding with great care everything that might cause defilement.

Apart from the *Imibe*, abstinence was practised also by certain people and on certain occasions. As a general custom, to prepare himself for a religious festival, the officiating priest had to remain indoors (*i-gomori*), to avoid speaking and making a noise, to eat no food except that cooked on a pure fire (*imu-bi*), in short, to contrive to escape every possible cause of uncleanness. The duration of this abstinence varied, too, with the importance of the festivals: a month for festivals of the first class, three days for festivals of the second class, and one day for festivals of the third class. During the month preceding the *Ohonihe*, the most important festival of ancient Shinto, a lesser abstinence (*ara-imi*) was observed, and during the last three days a greater abstinence (*ma-imi*). The Emperor himself, having to take part personally in the ceremony, had to conform to this rule. When the Emperor Yuriaku desired to see the god of Mount Mimoro without having practised abstinence previous to presenting himself before him, he was confronted by the apparition of a dreadful serpent, which made him rush, terror-stricken, into the interior of his palace for

safety (*Nihongi*, which assigns the event to A.D. 463). Certain categories of priests had to observe special forms of abstinence. Some lower priests, the *Negi* (from *negafu*, 'to pray'), were called *imi-bi* in some old provinces, because of the particular care which they had to take to avoid all uncleanness with respect to fire. Similarly, the priestesses had to be virgins. This rule of continence was limited, however, to the time of their priesthood, and did not prevent their marrying afterwards. The *Saiwō*, a princess of the Imperial blood consecrated to the worship of the Sun-goddess, prepared herself for this office for a long time before. For three years, on the first day of each month, she had to repair to a sacred hall (*imi-dono*), where she worshipped towards the great temple of Ise. This was the 'three years' abstinence' (*mi-tose no mono-imi*). The *Kamu no Ko*, or 'god-children,' young daughters of the nobility attached to the principal temples to perform there the sacred dance (*kagura*), and to cook the food for the offerings, were called also *mono-imi*, that is to say, 'abstainers from things' ('impure' being understood). Lastly, from a passage of the *Hitachi Fudoki* we gather that a domestic *Nihiname* existed apart from the official festival, and that on this occasion abstinence was observed by all the family. But in every case abstinence was associated with the idea of ritual purity. The important thing was to avoid impurities (*tsumi*) of every kind, that is to say, everything that might be displeasing to the gods, *e.g.* uncleanness (to begin with personal cleanliness : no one could take part in a religious ceremony without first having washed and put on clean clothes), crimes condemned from the ritualistic point of view (*e.g.* incest), and lastly, calamities (such as the bite of serpents), because these were then regarded as a Divine punishment for some unknown offence. But, on the other hand, certain things forbidden to the ascetics of the primitive period, such as eating meat, were not considered to be contrary to this Shinto conception of abstinence.

The psychological evolution of Japanese asceticism can be clearly followed in this series of documents taken in their chronological order. In the first centuries of the Christian era we have the asceticism of primitive peoples, characterized chiefly by its strict abstinence and continence, and by carelessness with regard to personal cleanliness. In the 8th cent. we can scarcely discover any trace of an ascetic properly so called (cf. the passage from *Kojiki* which the *Nihongi* thought it necessary to correct). On the other hand, there is mentioned as a hereditary priesthood, already well established, this corporate body of the *Imibe* which we see afterwards in operation in the *Engishiki* in the 10th cent., and which represents the most typical case of the abstinence practised also by many other people in all circumstances connected with religious rites. But, under this new form which so quickly succeeded the preceding one, Japanese asceticism no longer demanded abstinence properly so called, or even continence, except as an immediate preparation for certain festivals or as a temporary condition for certain functions; and, above all, far from regarding filth as a virtue, it required absolute cleanliness. Thus the idea of religious purity had undergone a complete transformation; and, in conformity with this instinct for cleanness which already manifested itself as one of the distinctive features of the national character, physical cleanliness became itself the condition of moral and ritualistic purity.

MICHEL REVON.

ASCETICISM (Jewish).—**1. Pre-exilic customs.**—Jewish piety, consisting originally of faith and trust in a covenant God, found no room for asceticism as a self-imposed discipline of the soul. Indeed, the terms of the bi-lateral covenant between Jahweh and Israel rendered asceticism impossible. For, according to the solemn transaction on Sinai, Israel became Jahweh's own people in a special manner, pledged henceforth to acknowledge Jahweh as their only God, and to obey His will as revealed to them by Divinely-inspired legislators and prophets. Jahweh in return solemnly promised to remain Israel's God. Moderate prosperity was therefore regarded as His smile on His land and people. In the midst of opulence it was possible 'to walk with Jahweh.' No mortification of the flesh or renunciation of the world was necessary to arrive at the highest stage of Jahweh-pleasing holiness. And so we find that pre-exilic customs and laws were adverse to asceticism, *e.g.* mutilation of the body was forbidden (Lv 19^{28}, Dt 14^{1} 23^{1}), fasting was only an accompaniment of prayer and confession of sin, and was therefore an act of humiliation before God, and not a self-inflicted chastisement, and, except on the Day of Atonement, was left to the free will of the faithful (1 S 7^{6}, Ps 35^{13}, Dn 9^{3}, Ezr 8^{23}, Jer 36^{9}).

2. Post-exilic legalism.—The re-organization of the community after the Exile laid the foundation of that rigid, torpid legalism from which Judaism has not yet recovered. The leaders of the nation, in their efforts to re-establish the theocracy and to guard it against internal and external foes, had recourse to the rigour of the Mosaic Law. They had already learned in Babylon that by attachment to ancestral customs they could remain the people of Jahweh outside Palestine and without a sacrificial cult. On their return, the miserable condition of the nation and the scanty materials at their disposal for re-building the State rendered adherence to the Law their only weapon in the struggle for self-preservation. The theocracy was gradually being converted into a nomocracy. 'Let it be done according to the law' (Ezr 10^{3}) became henceforth the norm of Judaism. No longer the prophet with fresh messages from Jahweh, but the expounder of the Law became the spiritual guide. Fresh cases for which the Law had made no provision were decided by an artificial deduction from the written, or by an appeal to the traditions or unwritten Law. If the name 'Pharisee' as the designation of a party sprang up after the Maccabæan rising, the spirit of Pharisaism or Nomism came with the exiles from Babylon. 'The law was forgotten in Israel, and Ezra restored it' (*Sukka*, 20*a*). Even five centuries later, Hillel, the great doctor of the Law, was called 'disciple of Ezra' (*Tos. Soṭ.* 13). Thus the State became a Church, and religion equivalent to legalism, according to which a man's acceptance with God depended on a considerable balance of good works over his failings. 'Know also,' says *Pirqe Aboth* (iv. 29), 'that everything is according to reckoning.' 'Weigh thou therefore our wickedness now in the balance, and theirs also that dwell in the world, and so shall thy name no where be found but in Israel' (2 Es 3^{34}; cf. also *Siphrā* to Lv 26^{9}). Piety was equivalent to a life of righteousness, but such righteousness as God acknowledged and demanded in the Law.

3. Ḥasidism.—The early enthusiasts of Nomism and forerunners of the Pharisees were the Ḥasidim. They were neither a sect nor a political party, as might appear from 1 Mac 2^{42}, but only the pious in the land, of whom frequent mention is made in the Psalms (cf. *JE* vi. 250 f.). They were the successors of those coadjutors of Ezra who endeavoured to fulfil the Law in all its bearings. With that they combined austerity of life and a contempt for earthly possessions (cf. Enoch $108^{8f.}$). They were expected to be more self-denying than God-fearing

men (*Shab.* 120*a*). Theirs was the highest degree of piety (*Rosh hash.* 17). 'Zeal leads to innocence, innocence to purity, purity to Pharisaism, Pharisaism to holiness, holiness to humility, humility to sin-fearing, sin-fearing to Ḥasidism, Ḥasidism to the gift of the Holy Spirit,' etc. (*Soṭa* ix. 15). Their excess of piety was so great that their practice could not be quoted to prove a doubtful halakha (*Men.* 41*a*). Only those were admitted into their circle who were learned (*Pirqe Aboth* ii. 6), and whose youth had never been defiled by sin (*Suk.* 53*a*; see also *B. ḳāma*, 103*b*). Most praiseworthy was their cultivation of an even temperament, a forgiving spirit, generosity in money transactions, and almsgiving (*Pirqe Aboth* v. 10, 11, 14). Their devotions were preceded and succeeded by an hour's meditation, and accordingly they spent nine hours a day in spiritual exercises (*Beᵉrākh.* 32*b*). In order to sacrifice the more, they occasionally took the Nazirite vow (*Ned.* 10*a*). It was probably due to their excessive fasting that they mostly died of enteric diseases, from which they suffered ten or twenty days before their death (*Sᵉmāḥ.* iii. 9; *Gen. Rab.* 62).

Since, however, the object of the Ḥasidim was not mortification of the flesh but nomism, their asceticism did not exclude such indulgences as were permitted by the Law. Hence they never eschewed marriage, although even in the married state they imposed restrictions on themselves (*Nid.* 38*a*). Unlike the Essenes, they did not live in separate communities, and therefore it is incorrect to describe them as an *ecclesiola in ecclesia*. Ḥasidism merged not into Essenism but into Pharisaism and Rabbinism. Pharisees are mentioned first in the time of Jonathan (Jos. *Ant.* XIII. v. 9). Henceforth a Ḥasid was only an exaggerated Pharisee. Most of the Rabbis who were eminent for piety bore the title Ḥasid.

4. Pharisaism and Rabbinism.—Although the Pharisees were as rigorous in their opposition to Greek hedonism as were the Ḥasidim, in their life and teaching they modified the austere views of the latter, and showed less tendency to asceticism. Starting from the principle that right and wrong were defined by the Law, and that the choice of either was in one's own power (cf., besides Josephus, *Pirqe Aboth* iii. 19), they had no inducement to inquire further into the origin of evil, or to trace any connexion between cosmic and individual evil. God created the evil inclination (יצר הרע), and God created the Law as antidote (*Ḳid.* 30^b). As long as the faithful were occupied with the study of the Law and with the performance of works of mercy, they had the power over their own evil inclination (*'Abōdā zārā*, 5*b*). Perfection could be aimed at by a punctilious attendance to the positive and negative precepts of the Law, without the suppression of the natural feelings. A legalist could therefore indulge in all those pleasures of life of which the Law took no cognizance, provided that indulgence did not interfere with Israel's separation (cf. also *Jeb.* 20*a*, 'Hallow thyself also in lawful matters'). The body was accordingly considered sacred, having been created in God's image (*Lev. R.* 34). Self-inflicted injuries were forbidden (*B. ḳam.* 91*b*).

No scribe might live in a town which did not possess, among other sanitary requisites, a bath, a barber, and a physician (*Sanh.* 17*b*). When health required, one might sell one's shoes for food; and he who stinted himself was threatened with retribution by Providence (*Shab.* 129*a*). To save life, even the life of a newborn infant, all laws except those relating to idolatry, incest, and murder might be suspended (*Joma*, 82*a*) and the Sabbath profaned (*Shab.* 128*b*; cf. also Mekh. *Ki This*, 1, 'The Sabbath is delivered unto you, not you unto the Sabbath'). A hungry invalid might be dieted on ceremonially unclean food. The wine-cup hallowed the Sabbath and great festivals, and was not missing from the social board. 'He who abstains from wine is a sinner' (*Ta'an.* 11*a*). Rab went so far as to say that in the great Judgment Day man would have to give an account for every lawful pleasure he refused (Jer. *Ḳid.* iv.). The same Rabbi on another occasion said, '*Beati possidentes* אם יש לך היטב לך, for there are no pleasures in Sheol, and death knows no delay' (*Erub.* 54*a*).

Nevertheless, moderation and contentment were among the cardinal virtues of Judaism. 'A rich man is he who is contented with his lot' (*Ab.* iv. 1). 'Man must be taught not to be a glutton' (*B. mes.* vii. 5). From Dt 14^{26} the Rabbis curiously deduce that one may not eat meat unless he has a special appetite for it (*Ḥul.* 84*a*). 'Abstain from evil, and from every appearance of evil' (*Ḥul.* 44*b*). Marriage was raised by the Rabbis to a positive precept, based on Gn I and Is 45^{18}. There are a few isolated passages in pre-Talmudic writings which seem to attach greater sanctity to the virgin and celibate state than to wedded life (see 2 Es 16^{44}, Wis 3^{13}, Sibyll. ii. 48, Test. Issachar 2). Enoch (83^2) received his revelation before his marriage (cf. also To 8^7, Jth 8^4 $9^{4.9}$ 16^{23}, Lk 2^{36}, Mt 19^{12}). But this was not in accordance with the teaching and practice of the Rabbis, to whom marriage was both a legal duty and a safeguard against sin (*Jeb.* 63*b*, *Kᵉth.* 61*b*). Nowhere in the Rabbinic literature is abstinence from marriage recommended as a help to piety.

Great merit was attached to fasting. The fact that an official calendar, the *Mᵉgillath ta'anith*, was published, which prohibits fasting on certain days, shows the prevalence of private fasting at the time of the Christian era. The bi-weekly fast, supposed to have been instituted by Ezra, which is mentioned in Lk 18^{12} and in the *Didache*, is still observed in the East by extremely devout Jews. But the ethical value of public and private fasting consisted in its sacrificial nature and in its being the outward expression of penitence; it was not regarded as a stage on the path to perfection.

The destruction of Jerusalem by Titus led many Jews to adopt ascetic practices. Some abstained from meat and wine because of the cessation of sacrifices and libations. But Joshua b. Ḥananiah argued that for similar reasons they should abstain from bread, water, and fruits, for these also were elements offered on the altar (*Baba bathra*, 60*b*).

There are, indeed, instances of Rabbis who led ascetic lives. Thus R. Zadok is said to have fasted forty years to avert the destruction of the Temple, and he was so emaciated that, at the request of R. Jochanan, Vespasian allowed him to be treated by a physician (*Giṭ.* 56*b*, *Lam. R.* i. 5). His contemporary Ḥanina b. Dosa, the thaumaturgos, subsisted only on a kab of locust beans from week's end to week's end (*Bᵉrākh.* 18). Nor were R. Ze'era and Simeon b. Jochai, though abstinent, ascetics in the true sense of the word. Asceticism was not suited to the Jewish temper. Although trials and chastisements (יסורין) were regarded as Divinely ordered for expiatory reasons and with promises of compensation, they were not willingly sought after. Both R. Ḥiya bar Abba and R. Jochanan, when asked whether trials were welcome to them, are recorded to have replied, 'No, I will have neither them nor their reward' (*Bᵉrākh.* 5*b*). The principle of Rabbinism was, 'The disciples of Abraham our father enjoy this world, and are heirs of the world to come' (*Ab.* v. 22).

5. Alexandrianism.—While Palestinian Judaism was being developed into a forensic science, that of the Greek diaspora, notably in Alexandria, assumed the appearance of a philosophical system. There

were several agencies at work to produce this effect. The inability to fulfil every precept of the Mosaic Law on foreign soil must have been the first inducement to spiritualize the Law. The Stoa further supplied them with the allegoric method, and the Greek language with a metaphysical terminology. As early as pseudo-Aristeas the Jewish delegates to Ptolemy IV. are called philosophers (Kautzsch, *Apok.* ii. 21). According to the fragments of Aristobulus, the most prominent Greek philosophers and poets derived their knowledge from Moses, who was the inspiration and source of all philosophy. One of the fundamental principles of this religious philosophy was the pessimistic dichotomy of man which led to asceticism. 'The corruptible body,' says the Book of Wisdom, 'presseth down the soul, and the earthy tabernacle weigheth down the mind that museth upon many things' (9[15]). But it is Philo who is the prophet of Alexandrianism. According to him, man's highest aim is a mystic union with the Deity, attained through asceticism and flight from the world, the former as a means of liberating the spirit from the trammels of the flesh, the latter as a safeguard against a relapse into the sensual (*de Præm. et Pæn.* ii. 411). The patriarchs were accordingly ascetics and hermits. Enoch was removed from sinful surroundings (*de Abr.* iii. 352). Abraham's call was accompanied with the command to depart from temptations of the flesh (*de Mig. Abr.* i. 437). Jacob was the true ascetic who wrestled until he obtained a vision of God (*de Som.* i. 643). But the greatest ascetic was Moses, whom self-discipline and continence qualified for the gift of prophecy, and raised to the nearest approach to God (*Vita Mos.* ii. 145 ff.). Alexandrianism left no impression on Palestinian Judaism, though some of the Philonic *Midrash* found its way into the Rabbinic *Haggada*. The *ḥokhmath Jevanith*, or Greek philosophy, had no attraction for the Rabbis. The works of Philo would have perished if they had not been preserved by Christians. The first Jew who mentions Philo is A. dei Rossi (1573).

6. **Essenism.**—The asceticism of the Essenes, as seen in the short accounts of them by Josephus, Philo, and Pliny, is so strange that we doubt whether the Essenes and their practices have any claim to be called Jewish. Even the origin of the sect is obscure. Since no satisfactory derivation of the name exists, we hazard the suggestion that Ἐσσαῖοι is an ethnic term=*Esauites*, or Idumæans, or at least a clan of Idumæa.* This would coincide with Pliny's account of their chief settlement on the western shores of the Dead Sea, and would also account for Herod's partiality for them, and for the presence of an Essene in his court. Their rejection of animal sacrifice removes them considerably from Palestinian Judaism, in which the sacrificial cult is everything. Their other tenets are so non-Jewish that the conviction is inevitable that the sect was of exotic origin, though on Jewish borderland; that in its gradual development it received accretions from Pythagoreanism, and finally from Alexandrianism; that to replenish its ranks it carried on a propaganda in Palestine and Syria where the soil was ripe for anti-hedonic movements; and that those Jews who joined the order, and among them chiefly Ḥasidim and Pharisees, would adopt only those practices of the Essenes which were not inconsistent with the State religion. Thus Onias ha-Meʻaggel, who is supposed to have been an Essene (*Ta'an.* 19 and *ib. Tos.* ii. 11), was a married man and offered sacrifices (*Ta'an.* 23). Josi b. Joezer the priest, another reputed Essene, was a wealthy man (*Baba bathra*, 133). The number of adherents, however, could not have been very considerable. The name 'Essene' is not mentioned in the NT. In the Talmud the allusions to them are scanty and doubtful, and under the appellations of *Vathiḳin* ('firm'), *Zenuim* ('modest'), *Ḥashaim* ('silent,' 'mysterious'), *Bannaim* ('builders'), and *Toblē Shaḥrith* ('morning bathers'). Perhaps the *Anshe Ma'aseh* ('men of work'), who are mentioned on a par with the Ḥasidim (*Sukka*, 51; *Soṭa* ix. 15), were Essene ascetics, *ma'aseh* being pure Hebrew for '*asek* (=ἄσκησις), 'work,' 'occupation.'

* For other etymologies cf. Kohler, *JE* v. 224.

7. **Modern Judaism.** — The teaching of the Talmud is codified in the *Ṭurim* and *Shulḥān 'Arukh*, which is still binding on Judaism. We look in vain for traces of asceticism in that code.

The Jewish devotional literature of the Middle Ages shows indeed a tendency to asceticism. Foremost among these is Baḥya's *Ḥoboth ha-Lebaboth* ('Duties of the Heart'), which is a Hebrew translation from the original Arabic made by Ibn Tibbon (1161–1180), and is as popular among orthodox Jews as Thomas à Kempis' *Imitation* among Christians. So are the *Sha'are Teshubah* ('Gates of Repentance') and *Sepher ha-Jirah* ('the Book of Fear'), by Jonah Geronoli († 1263). But this is due mainly to the influence of Græco-Arabic philosophy (see Brüll, *Jahrb.* v. and vi. 71–93). Maimonides' views are more in accordance with the Jewish spirit. In his *Mishne Torah*, *Dé'oth* iii. 1 and vi. 1, he points out that asceticism is not only unnecessary but even sinful. Judah Halevi, another prominent philosopher, in the *Kusari* (iii. 1 and 4), states: 'The prevalent custom among us is not to separate oneself from the world, nor to despise life . . . but to love the world and length of life.'

On the asceticism of the Kabbalists and Kabbalistic Ḥasidim see KABBALISM, ḤASIDISM, also ESSENES, KARAITES, PHARISEES, and SECTS (Jewish).

ASCETICISM (Muslim).—The very copious materials which are available in Arabic, Persian, and Turkish literature for the study of Muslim asceticism have hitherto received little attention from European scholars, and much remains to be done before it will be possible to give an adequate survey of the subject. This article can only attempt to sketch the main lines of development, and to illustrate the salient features of each.

1. **Introduction: the teaching of Muhammad.**—The religious ideas of the pagan Arabs were vague and scanty. Engrossed in the toils and pleasures of the present life, they seldom thought of the future, and the notion of preparing themselves for a shadowy existence beyond the grave never entered their minds. It was Christianity, not ecclesiastical, but of an irregular and unorthodox type, that sowed the first seeds of asceticism in Arabia before the advent of Muhammad, and continued to exert a dominating influence upon its development in the Muslim empire during the early centuries. In pre-Islāmic times Christianity was diffused among the tribes of North Arabia, and many Arabs had at least a superficial knowledge of its rites and doctrines (Wellhausen, *Reste*[2], 230 ff.). Allusions in the ancient poetry show that the Bedawīn were impressed by the Christian monk (*rāhib*), whose lamp, burning in his lonely

cell, was a welcome sight to travellers in the darkness of the desert. These monks, together with occasional wandering hermits, offered to the heathen Arabs a model of ascetic life, and inspired certain individuals, known as *ḥanīfs*, to reject idolatry, profess monotheism, and even adopt ascetic practices, such as the wearing of sackcloth and the abstention from particular kinds of food. There can be little doubt that the *ḥanīfs* stimulated Muhammad, with whom most of them were contemporary; two, in fact, were connected with him by blood or marriage (cf. Sir Charles Lyall, 'The words "Ḥanīf" and "Muslim,"' in *JRAS*, 1903, p. 771 ff.). The influence of Christianity may serve to explain ascetic tendencies which appeared in the oldest form of Islām—*e.g.* Muhammad and his first converts used frequently to watch and pray through the night—but which were gradually mitigated (Wellhausen, *Reste*², 241). Asceticism is characteristic neither of Islām nor of its founder. The Prophet himself enjoyed all pleasures within his reach, and commanded his followers not to abstain from the good things which God allowed them (*Qur'ān*, v. 89). It is true that he imposed on them some restrictions and obligations of an ascetic nature—the fast during Ramaḍān, abstinence from intoxicating drinks, the five daily prayers, the pilgrimage to Mecca, etc.—but these only threw into stronger relief the social, active, and aggressive spirit of Islām as contrasted with monastic quietism and renunciation. Apart from general exhortations to recognize the vanity of earthly joys, and to put trust in good works rather than in the gifts of fortune, the Qur'ān contains few passages that can fairly be interpreted in a specifically ascetic sense. *Fasting* is enjoined as a penance for certain ritual and legal offences (*Qur.* ii. 192, 257, iv. 94, v. 91, lviii. 5); *penitence*, when accompanied by faith and pious works, turns evil into good (xxv. 70); *prayer* restrains a man from committing sin (xxix. 44); the doctrine of *self-purification*, especially by means of almsgiving (*zakāt*), is preached in Sūras of the Meccan period: 'He that purifies himself (*tazakkā*) hath attained felicity' (lxxxvii. 14; cf. Grimme, *Mohammed*, 1904, pt. ii. p. 113). The root ZHD ('to renounce'), from which is derived *zuhd*, the ordinary word for Muslim asceticism, occurs in the Qur'ān only once, and is applied reproachfully to those who sold Joseph for a low price (xii. 20); but an older term, *tabattul* ('detachment from the world'), is found (lxxiii. 8) among Divinely ordained acts of devotion. Another ancient epithet of ascetics is *sā'iḥūn*, fem. *sā'iḥāt* (literally, 'wanderers'); these are mentioned honourably (ix. 113, lxvi. 5). It need scarcely be said that Muhammadan writers on asceticism interpret the Qur'ān in the light of their own theories, and import a technical meaning into many words, *e.g.* *dhikr* and *tawakkul*, which the Prophet used in the obvious signification.

2. Early Muslim and Ṣūfī asceticism.—According to the Qur'ān (lvii. 27), monasticism (*rahbāniya*) was an innovation in Christianity itself, and Muhammad in a famous sentence declared that it was no part of Islām. Nevertheless, some instances of a tendency in this direction are recorded by early Muslim tradition (see Goldziher, 'De l'Ascétisme aux premiers temps de l'Islam,' in *RHR*, vol. xxxvii. p. 314 ff.), which invariably represents Muhammad as condemning such acts of penance and mortification, whereas at a later time, when asceticism was firmly established in Islām, and had to be reconciled with the Prophet's teaching, he is constantly cited as an authority for similar practices. Goldziher has collected several examples of persons contemporary with Muhammad, or nearly so, who did penance for their sins. Thus Bahlūl b. Dhu'aib retired into the mountains in the neighbourhood of Medīna, clad himself in hair-cloth, and tied his hands behind his back with iron chains, crying repeatedly: 'O my God and my Lord! see Bahlūl, bound and shackled, confessing his sins.' Abū Lubāba, in remorse for an act of treachery (Ibn Hishām, 686), fastened himself to a pillar in the mosque at Medīna, and remained in that position until he was assured that God had pardoned him. Other forms of penance were associated with the pilgrimage to Mecca. It was not unusual for pilgrims to go on foot and without shoes, or, while circumambulating the Ka'ba, to let themselves be led like a camel by means of a ring which was inserted in the nose (cf. Goldziher, in *Vienna Oriental Journal*, vol. xiii. p. 36, n. 3). We hear of pilgrims who had taken a vow of silence; this was denounced as a heathen custom by the khalīf Abū Bakr.

The first century of Islām was singularly favourable to the growth of asceticism. The long and bloody civil wars, the fierce fanaticism of the political sects, the rapidly increasing laxity of morals, the spectacle of a military despotism enforcing its will upon devout Muslims, and openly rejecting every principle of the ideal theocracy which they wished to restore—all these circumstances contributed to excite in men's minds a disgust of earthly affairs, and fix their thoughts on the world to come. Hence arose a powerful and wide-spread ascetic movement, originally orthodox in character, but gradually developing mystical tendencies, and passing almost imperceptibly into the oldest form of Ṣūfiism. During the Umayyad period (A.D. 661–750) this movement continued to bear a distinctly orthodox stamp, and derived its leaders, if not its chief strength, from the Pietists, including Qur'ān-reciters (*qurrā*), students of the *ḥadīth*, and learned divines. Its most prominent representative was the famous theologian Ḥasan of Baṣra (ob. 728 A.D.), who may be regarded as the founder of the Baṣrite school of ascetics and mystics (cf. *Qūt al-qulūb*, Cairo, 1310 A.H., i. 129 and 166). His sayings, and those of the early Muslims in general, leave no doubt that the mainsprings of their asceticism were (1) the intense terror produced by the vivid descriptions in the Qur'ān of the Day of Judgment and the tortures of Hell, and (2) a morbid consciousness of sin, which impelled them to spend their lives in penance and devotion. 'Only extreme fear,' said Sufyān ath-Thaurī (ob. 777–778 A.D.), 'enables any one to support the burden of devotion' (*Ḥilyat al-auliyā*, i. 74*a*). 'Suppose,' said Bishr b. Manṣūr to 'Aṭā as-Sulamī, 'that a blazing fire were kindled, and proclamation made that whoever entered it should be saved?' 'I should tremble,' 'Aṭā replied, 'lest my joy might cause me to expire before I reached it' (*ib.* i. 32*b*). Many stories are told of persons who died of fear on hearing a preacher describe the anguish that awaits the wicked after the Resurrection, or who wept so violently from terror and remorse that they swooned away. The slightest infraction of the religious law required a long and painful expiation. Kahmas b. al-Ḥasan is said to have wept for forty years because he once took a piece of clay from a neighbour's wall. There was a class of ascetics called 'the Weepers' (*al-Bakkā'ūn*), a term probably borrowed from Christian monasticism (Abu 'l-Maḥāsin, ed. Juynboll, i. 396, l. 5; cf. Thomas of Margā, *The Book of the Governors*, ed. Budge, vol. i. p. cxlvii).

In this connexion the pervading influence of Christianity on the early period of Muslim asceticism should not be overlooked (see von Kremer, *Herrschende Ideen*, 52 ff., 57 ff.; Goldziher, *RHR*, vol. xxxvii. pp. 314–324, and 'Materialien zur Entwickelungsgesch. des Ṣūfismus,' in *Vienna*

Oriental Journal, vol. xiii. p. 35 ff.). Not only can the dress, vows of silence, and many other practices of Muslim ascetics be traced to this source, but in the oldest Ṣūfī biographies, besides numerous anecdotes of the Christian monk (*rāhib*), who from his cell or pillar gives instruction and advice to wandering Muslim devotees, we find unmistakable proof that the doctrines of the latter were, to a considerable extent, based on Jewish and Christian traditions. Quotations from the Pentateuch and the Gospels frequently occur among the sayings attributed to Muhammadan saints; and Biblical stories, related from the monastic point of view, were eagerly read, *e.g.* the popular collection entitled *al-Isrā'īliyāt*, which is said to have been compiled by Wahb b. Munabbih (ob. 728 A.D.), and the still extant *Qiṣaṣ al-anbiyā* ('Tales of the Prophets'), by Tha'labī (ob. 1036 A.D.). While, as has been stated, many of the early Muslim ascetics belonged to the learned class, lived in towns, and did not exclude themselves from social intercourse and public life, the movement had its roots among the common folk, of whom a great number embraced with enthusiasm the ideal of unworldliness that was held up to them, and strove to attain it by abandoning all human society, seeking shelter in caves and cemeteries, or roaming in solitary places, deserts, mountains, and on the shore. Of such wanderers Ibrāhīm b. Adham (ob. 776 A.D.) is a type, although, unlike most of them, he was of noble birth. A prince of Balkh, he clad himself in garments of wool, left his kingdom, and roamed through Syria, earning a scanty livelihood by gardening and other kinds of manual labour. On being asked why he shunned the sight of men, he replied: 'I have clasped my religion to my bosom, and am fleeing with it from town to town and from peak to peak. All who see me think that I am a camel-driver (read *jammālī* for *ḥummāʾī*) or a madman. This I do, that perchance I may save my religion from Satan, and bring my faith safely forth through the gate of death' (*Tadh. al-auliyā*, ed. Nicholson, i. 95. 15 ff.). Others, again, sought refuge from worldly temptations in the Ṣūfī monasteries which began to be founded before the close of the 2nd cent. A.H. Women took an active part in the movement, especially on its mystical side (see SUFIISM). It had no organization, no system of doctrine, but is characterized, as Goldziher has observed (*Vienna Orient. Journ.* vol. xiii. p. 37), by the one-sided elaboration of certain Qur'ānic ideas and doctrines, with a corresponding neglect of other elements equally important in the eyes of orthodox Muhammadans. In the early period, asceticism can hardly be separated from Ṣūfiism; and even when the distinction became sharp (in the 3rd cent. of Islām), many who called themselves Ṣūfīs were really little more than ascetics with a vein of mysticism. It will be convenient, therefore, to regard the early Ṣūfīs as in some degree belonging to the movement under consideration, leaving the monastic institutions and organized asceticism of a later period to be treated in the following section. We shall now deal with some practices and theories which illustrate the general character of ancient Muslim asceticism.

(*a*) *Dress*.—Garments of coarse wool (*ṣūf*) were a mark of asceticism in pre-Islāmic times: in this respect the Arabs copied the Christian hermits (Nöldeke, in *ZDMG*, vol. xlviii. p. 47). Similar garments were often worn by Muslim ascetics; hence the name 'Ṣūfī,' which came into use before 200 A.H. A synonymous epithet of rarer occurrence is *Musūḥī*, which is derived from the garments of hair-cloth called *misḥ*, plural *musūḥ* (cf. *Ḥilyat*, ii. 80ᵃ; *Nafaḥāt al-uns*, Calcutta, 1859, Nos. 89 and 90). Ascetics of both sexes are described as wearing a smock (*jubba* or *midra'a*) of wool; women sometimes added a head-covering and veil (*ḫimār*) of the same material. Sufyān ath-Thaurī (ob. 777–778 A.D.) condemned the wearing of wool as being an innovation (*bid'a*), others on the ground that it was borrowed from Christianity or savoured of ostentation (*Ḥilyat*, i. 90ᵃ; *'Iqd*, Cairo, 1293 A.H., iii. 348 f.; Sha'rānī, *Lawāqiḥ*, 1299 A.H., i. 45, penult.). Abū Sulaimān ad-Dārānī (ob. 830 A.D.) declared that a woollen garment might be worn for economy, or as a travelling dress, but not for religious purposes (*Ḥilyat*, ii. 171ᵇ). In another place (*ib.* ii. 167ᵃ) he allows the adept, whose heart is purged of all the passions, to wear an *'abā* (woollen mantle), 'which is one of the signs of asceticism,' but says that it is safer for him to wear 'two white garments' like ordinary people, so as not to excite remark. Garments of hair (*sha'r*) are often mentioned; they were sometimes worn under a rich dress, *e.g.* by Ja'far aṣ-Ṣādiq (*Lawāqiḥ*, i. 42. 20 ff.). Some pietists were recognized by their long cloaks (*burnus*, pl. *barānis*; cf. *'Iqd*, ii. 291. 7). 'Utba al-Ghulām (ob. *circa* 780 A.D.) wore two dust-coloured garments—one as a *ridā*, the other as an *izār*—so that he looked like a ploughman (*Ḥilyat*, i. 37ᵇ). Bishr al-Ḥāfī (ob. 841–842 A.D.), the well-known ascetic of Baghdād, went to market 'wearing a shabby fur (*farw*), a short boot (*ḫuff*), and a very fine *izār*' (*ib.* ii. 77ᵃ). All this shows that certain kinds of dress were peculiar to ascetics, but that ascetics were not invariably distinguished by a peculiar dress. Concerning the patched frocks (*muraqqa'āt*), which in course of time superseded the woollen garb of the Ṣūfīs, see art. ṢŪFIISM.

(*b*) *Food and fasting*.—Many ascetics attached great importance to eating only what was lawful (*ḥalāl*). Thus Ibrāhīm b. Adham said, 'Let your food be good (*ṭayyib*), and you need not pray by night or fast by day' (*Ḥilyat*, i. 199ᵃ); and he used to eat clay and earth when he could not get anything above suspicion. Sarī as-Saqaṭī (ob. 867 A.D.) was celebrated for the purity of his diet (*ib.* ii. 247ᵃ); he wished to eat no food that entailed either gratitude to man or chastisement from God, but confessed that he found this impossible (*ib.* ii. 244ᵃ). The legends of the Muslim saints furnish many instances of holy men who were miraculously guarded from eating 'dubious' viands, *e.g.* such as came from a wedding-feast or had passed through the hands of a government official. It is related of Ḥārith al-Muḥāsibī (ob. 857 A.D.) that whenever he stretched out his hand to take any food of this sort, he was warned by the twitching of a vein in the tip of one of his fingers (Qushairī, Cairo, 1318 A.H., p. 64, l. 21). Ibrāhīm b. Adham recommended warm bread with olive oil as the best food for ascetics (*Ḥilyat*, i. 199ᵃ); others favoured bread and salt, gruel made of barley-meal, etc. Some abstained from meat altogether, but this does not seem to have been usual; it was, however, eaten sparingly. Vows of abstinence from particular kinds of food, *e.g.* carrots or dates, were often made, and were supposed to confer a higher spiritual rank (*Lawāqiḥ*, i. 61. 17 ff.). Besides the obligatory fast of Ramaḍān, voluntary fasts of varying length and severity form an indispensable feature of Muslim asceticism. Their purpose was to mortify the flesh and illuminate the spirit, to procure wisdom and prevent sin. 'He who masters his belly,' said 'Abd al-Wāḥid b. Zaid (ob. 793 A.D.), 'masters his religion and masters all the virtues' (*Ḥilyat*, i. 16ᵃ). Bāyazīd al-Bisṭāmī said that he attained to knowledge of God by means of a hungry belly and a naked body (Qushairī, 16. 10). Sahl b. 'Abdallāh at-Tustarī (ob. 896 A.D.) was famous for his fasts.

He held that food should be eaten only to preserve life and reason, not to give strength, and that incapacity to perform one's devotions through weakness arising from want of food was better than the performance of them by one who had eaten his fill (*Iḥyā*, Cairo, 1289 A.H., iii. 87 f.). He used to break his fast once in fifteen days (Qushairī, 78. 31), and his name is included by Ghazālī in a list of those who had fasted forty consecutive days (*Iḥyā*, iii. 89). Later, Ṣūfīs surpassed his achievements in this line, for, according to Abū 'Uthmān al-Maghribī (ob. 983–984 A.D.), the man who is Divinely aided (*ṣamadānī*) does not eat once in eighty days (Qushairī, 79. 16).

(*c*) *Prayer.*—The five canonical prayers incumbent on every Muslim, arduous and exacting as they were, did not satisfy the zealots of the new religion. Authority for an extension of the practice was found in several passages of the Qur'ān where *dhikr* ('praise of God') is mentioned: the faithful are enjoined to praise God frequently (*Qur.* xxxiii. 14). Starting from this command, which does not refer to any special act of ritual, the early ascetics developed a regular service of litanies and devotional exercises: reading of the Qur'ān, repetition of the names of God, reiteration of certain invocations and formulas, such as *Allāh! Allāh!* and *Lā ilāha illā 'llāh!* This *dhikr* the Ṣūfīs regarded as one of the main pillars, nay, the very corner-stone, of practical religion; without constantly performing it no one could attain to God (Qushairī, 119. penult.). Here they may have imitated the Christian Euchites, as Goldziher conjectures (*Vienna Orient. Journ.* vol. xiii. p. 39) in his valuable paper on the early development of Ṣūfīism, to which the writer of the present article is deeply indebted. Even those who granted that ordinary prayer (*ṣalāt*) was the most excellent act of devotion recognized the superiority of *dhikr*, in so far as the latter was not confined to any stated times, and might be continued hour after hour without interruption (Qushairī, 120. 5 from foot). In some cases it was accompanied by acts of penance. Ḥāzim al-Ḥanafī used to knock his head against the wall of his chamber until it bled (*Ḥilyat*, ii. 251); and Shiblī (ob. 945–946 A.D.) during his novitiate was accustomed to pray in a dark cellar, and flagellate himself with a bundle of rods whenever he felt that his faculties were not concentrated (Qushairī, 120. 4 ff.). Meetings for the purpose of *dhikr* were held in the Umayyad period—Ḥasan of Baṣra is said to have presided over them—and seem to have been attended by persons inclined to quietism, who disliked the crude declamations of the *quṣṣāṣ*, or popular preachers (cf. *Qūt al-qulūb*, i. 149). The dangers lurking in a perpetual lip-service soon became apparent to the Ṣūfīs themselves; it was discouraged by the Baghdād school, which flourished in the 3rd cent. A.H., because it led to hypocrisy (Goldziher, *loc. cit.*, p. 40). Qushairī (119. last line) insists that *dhikr* with the tongue is subordinate to *dhikr* with the heart, and should be regarded as an instrument whereby the higher and truly effectual *dhikr* is acquired; nevertheless, the latter is incomplete without the former—the adept combines both. See also art. ṢŪFĪISM.

(*d*) *Renunciation and poverty.*—Qushairī, in his chapter on renunciation (*zuhd*), refers to the question whether *zuhd* consists in renouncing what is unlawful (*ḥarām*) or what is lawful (*ḥalāl*). The general opinion was that all Muslims were bound to renounce *ḥarām*, but that renunciation of *ḥalāl* was a merit; this view accords with many passages in the Qur'ān, *e.g.* 'Say, the goods of this world are little, and the next world is better for those who fear God' (*Qur.* iv. 79). At first, renunciation was understood almost exclusively in a material sense; the *zāhid* abstained from food, sleep, society, and all harmless pleasures. If a man possessed only one shirt, he might count on being admitted to paradise before his more deserving neighbour who had two (*Tadh. al-auliyā*, i. 47. last line and foll.). But since the ascetics naturally restricted *ḥalāl* to the narrowest possible limits, and condemned everything else as superfluous, it was but a short step to the view that 'nothing in the world is lawful, and therefore there is no true renunciation in renouncing the world' (Qushairī, 67. 11). The sayings of the early Ṣūfīs exhibit a strong bias towards a spiritual conception of *zuhd*. Not that they fasted less, kept fewer vigils, or relaxed their austerities, but they realized that such acts could have no value except as the expression of an inward feeling. Renunciation exists only in the heart (*Ḥilyat*, ii. 170ᵃ); it is the abandonment of all that diverts one from God (Qushairī, 67. 4), and especially the abandonment of 'self.' Self-abnegation, in its practical aspects, which alone concern us here, may be described as trust in God (*tawakkul*) or quietism (*riḍā*), and is closely connected with the doctrine of 'poverty' (*faqr*).

Most Muhammadan treatises on Ṣūfīism allude to the controversy which arose at an early period as to the superiority of poverty or riches (see, *e.g.*, *Kashf al-Maḥjūb*, Lahore ed. p. 15, l. 18 ff.; *Ḥayāt al-qulūb*, printed on the margins of *Qūt al-qulūb*, ii. 161. 15 ff.). It was debated whether the rich man who was blessed with wealth and who rendered thanks to God for it did not represent a higher ideal than the poor man who endured want uncomplainingly. Some argued that wealth (*ghanā*), being an attribute of God, should be preferred to poverty, which is an attribute of man, and cited the Prophet's saying: 'The upper hand is better than the lower,' *i.e.* 'to give is better than to receive.' The leading Ṣūfīs, however, with a few exceptions, declared in favour of poverty, quoting such traditions as these: 'O God, let me live poor, and die poor, and rise from the dead amongst the poor'; 'the poor of my people will enter Paradise five hundred years before the rich'; 'poverty is my pride' (*al-faqru faḥrī*). What poverty meant may be gathered from a saying of Sarī as-Saqaṭī (ob. 867 A.D.): 'Do not take any thing from any one, nor ask any thing of any one, nor have with you any thing that you can give to any one' (*Ḥilyat*, ii. 244ᵇ). This counsel of perfection was based on the theory of *tawakkul* ('trust in God'), which the early Ṣūfīs carried to extreme lengths (see Goldziher's investigation of the subject in the *Vienna Orient. Journ.* vol. xiii. pp. 41–56). They define *tawakkul* as renunciation of personal initiative and volition, leaving all to God, being entirely passive, like a corpse in the hands of the washer who prepares it for burial. Applying this doctrine to matters of practical life, the true *mutawakkil* could not make any effort, direct or indirect, to obtain the means of subsistence, or admit any thought of providing for the morrow. He could not beg, work for hire, or ply any trade or handicraft, but had to depend for his daily bread on what God, 'to whom belong the treasures of earth and heaven,' sent to him as a gift from Himself, or delivered to him by the hands of his fellow-creatures. He was then said to gain his livelihood *mina 'l-futūḥ*, *i.e.* through an 'opening' which God made for him. The ancient Ṣūfīs, who commonly adhered to these principles and hence are often called *al-mutawakkilūn*, seem to have been influenced by Christian teaching (Mt 6²⁵⁻³⁴, Lk 12²²⁻³⁰; see Goldziher, *loc. cit.* p. 45). In later times, when the theory had broken down, the same term was still used to denote a class of Ṣūfīs who wandered to and fro, living 'on trust' (*'alā 't-tawakkul*). It

was customary for such men to make the pilgrimage to Mecca 'without provision' (*bilā zād*), and in some cases they considered their vow of *tawakkul* to have been violated if they extracted a thorn from their feet or cried out for help on falling into a well. But, of course, the facts of nature were too strong for the doctrinaires. Living 'on trust,' if strictly interpreted, involved a serious risk of death by starvation. That some *mutawakkilūn* perished in this way is likely enough, and may possibly have evoked the assertion, which is ascribed to Sufyān ath-Thaurī (*Ḥilyat*, i. 81[a]), that those who refuse to beg, and die of hunger in consequence, go to Hell. Gradually the Ṣūfis themselves came round to the opinion that *tawakkul* was not invalidated by seeking a livelihood (*takassub*). A similar conclusion was reached as regards the question whether a *mutawakkil* might take medicine or not; but there were always individuals who refused to compromise with their conscience. Goldziher (*loc. cit.* p. 53) mentions the existence in Persia, in the 4th cent. A.H., of a numerous sect who rejected medical aid. Their leader, Abu 'l-Ḥair b. Bābā, was a Christian physician, and, like modern Christian Scientists, he recommended his patients to trust in God. It is curious that a theory which forbade beggary, or allowed it only as a last resource, should actually have produced swarms of able-bodied mendicants who made their *tawakkul* an excuse for living on charity.

3. **Development of Ṣūfī asceticism in the Middle Ages.**—(*a*) *Monastic institutions.*—The Prophet's saying, 'There is no monasticism in Islām,' was not falsified, on any large scale at least, until several centuries had elapsed. Most of the early Ṣūfis led secluded lives with a few friends and companions of the same way of thinking. Many of them were married, and some had the full legal complement of wives, like Ḥātim al-Aṣamm of Balkh, who died in A.D. 851 (*Ḥilyat*, i. 213[b]). Bishr al-Ḥāfī, although himself unmarried, is said to have acknowledged that Aḥmad b. Ḥanbal, who had followed the *sunna* approving matrimony, was his superior in this respect (*Qūt al-qulūb*, ii. 241). Nevertheless, the advocates of celibacy—for they did not always practise what they preached—soon began to make themselves heard. Ḥasan of Baṣra said that, when God wills the welfare of a man in this world, He does not occupy him with wife and child (*Lawāqiḥ*, i. 38. 10). According to Ribāḥ b. 'Amr al-Qaisī, no one attains the rank of the elect (*ṣiddīqūn*) until he leaves his wife a widow and his children fatherless (*ib.* i. 61. 4). Abū Sulaimān ad-Dārānī spoke of marriage as a backsliding and a concession to worldliness; it might be the better state for those who could endure its cares, but only the single man (*waḥīd*) tasted the full sweetness of devotion, and was able to give his whole heart to God (*Qūt al-qulūb*, ii. 247). These views, conflicting with the ancient Muslim doctrine that a man's duties towards his family are quite as important as those which concern his faith, never gained universal acceptance. Celibacy is seldom demanded by Muhammadan religious orders as a condition of membership.

We have but little information as to the origin and growth of monasticism in the early period of Islām. The first monastery (*ḫānaqāh*) for Ṣūfis is said to have been founded at Ramla in Palestine by a Christian dignitary (*Nafaḥāt*, 34), apparently before A.D. 800. Sitting in a *ḫānaqāh* was condemned, as equivalent to begging, by Abū Turāb an-Nakhshabī, who died in A.D. 859 (*Ḥilyat*, ii. 222[b]). The year 200 A.H. (=A.D. 815) is named in two fictitious traditions (*Qūt al-qulūb*, ii. 239) as the date after which celibacy would be permissible to all Muslims, and would be adopted by the best men amongst them; and this prophecy after the event seems to mark the beginning of Muslim monasticism with approximate correctness. It is probable, however, that the development of organized monastic institutions throughout the Muhammadan empire belongs to a much later period. In reading the older works on Ṣūfiism, *e.g.* the *Qūt al-qulūb*, the *Ḥilyat al-auliyā*, and the *Risāla* of Qushairī (all of which were written before A.D. 1050), one is struck by the rarity of any reference to monasteries; yet the celebrated Ṣūfis of the 3rd and 4th cents. A.H. generally gathered round them a circle of disciples, who would naturally have dwelt in religious houses, if such had been available. Maqrīzī (*Ḫiṭaṭ*, ii. 414. 3) says that *ḫānagāhs* were introduced into Islām during the 5th cent. A.H., which corresponds to the 11th cent. of the Christian era. We may accept this statement in the sense that Ṣūfī monasteries, the members of which lived together for ascetic purposes under the direction of an abbot, or *shaikh*, first became numerous and widely spread during the above-mentioned epoch. Maqrīzī's observation agrees with a passage in Qazwīnī (*Āthār al-bilād*, ed. Wüstenfeld, 241. 3 from foot), where Abū Sa'īd b. Abi 'l-Ḥair, who died in A.D. 1049 (not about A.D. 815, as was erroneously asserted by De Sacy in *Journal des Savants*, 1821, p. 725, and after him by Dozy and von Kremer), is described as the founder of Ṣūfī monasticism and rules of discipline. During the next two hundred years (A.D. 1050–1250) the system was further organized and extended by the various Dervish orders—'Adawīs, Qādirīs, Rifā'īs, Mevlevīs, etc.—which arose in rapid succession.

The well-known treatise on Ṣūfiism, entitled *'Awārif al-Ma'ārif*, by Shihāb ad-Dīn 'Umar as-Suhrawardī (ob. 1234 A.D.), supplies many interesting details concerning Muslim monastic life (see especially chapters 12–18 and 48–52). Speaking of the relation between the Shaikh and the disciple (*murīd*), Suhrawardī asserts that the latter becomes part of the Shaikh, just as in natural generation the son is part of the father. 'This,' he says, 'is a spiritual birth, according to the words of Jesus: "Except a man be born again, he cannot see the kingdom of God"' (Jn 3[3]). The disciple was usually invested by the Shaikh with a patched frock (*ḫirqa*) as a sign that he submitted absolutely to the Shaikh's authority; in this ceremony the hand of the Shaikh was considered to represent the hand of the Prophet. While the disciple remained in constant association with the Shaikh and under his care, he passed through the time of 'sucking' (*irtiḍā'*), and it behoved him not to depart without leave, but to wait until the Shaikh decided that the moment of 'weaning' (*fiṭām*) had arrived. 'The ascetics of old,' Suhrawardī continues, 'desired solitude on account of the dangers to which society exposed them, but Ṣūfis who live in convents overcome these dangers by the strength of their devotion and the soundness of their spiritual state. They are as one body animated by the single aim of dwelling together in complete accord both outwardly and inwardly; this is a unique characteristic which distinguishes them from every other sect in Islām.' The convent (*ribāṭ*) comprised men of all ages, and consisted of private cells (*zāwiya*) as well as an assembly-room (*bait al-jamā'a*). The old men, Suhrawardī thinks, should be allowed to stay in their cells, where they can sleep and rest and do as they please; but, for disciplinary reasons, it is advisable that the young should sit in the assembly-room, holding their breath and keeping their senses under control; if, however, a novice is disturbed by talking and noise, he should be sent to the Shaikh's private apartment, that his attention may not be distracted, while the Shaikh himself maintains order in the assembly-room. Novices should be em-

ployed in 'service' (*ḥidma*) and sent to help their brethren who are engaged in devotion and contemplation, and who alone are excused from menial tasks. Service is a pious work, but the Ṣūfīs do not approve of asking any one who is not a Ṣūfī to serve them; for 'they are men, and things proceed from them, in the course of human nature, which are objectionable to a stranger ignorant of their aims.' Their refusal to associate with such a person is due to respect for his feelings, not because they deem themselves superior to any Muslim. The food of the monks was either provided by endowment or procured by begging. Only those were entitled to partake of it who were so occupied with God as not to be capable of earning their livelihood, or who were excused on the score of age, or who were authorized by the Shaikh to receive it in return for their labour. Unless the terms of the endowment necessitated a certain indulgence, it was a universal rule in Ṣūfī asceticism that no idler should eat the food of the convent. Suhrawardī recommends a forty days' seclusion (*arba'īniya*) for prayer and fasting once a year. Solitude, he insists, has for its object a moral purification: it must not be sought on account of the visions and ecstasies which sometimes result from it. The disciple who goes into retirement (*ḫalwa*) should strip himself of the world and discard all that he possesses, and, after seeing that his clothes and his prayer-mat are clean, he should pray two *rak'as* and repent of his sins with weeping and humility. He ought not to leave his cell except for the public and Friday prayers (*ṣalāt al-jamā'a wa-ṣalāt al-jum'a*); on these occasions he should continue his *dhikr* and pay as little attention as possible to what he hears and sees, in order that he may not fall into temptation. During his retirement, he should perform ablutions regularly, and sleep only when overpowered by fatigue, and never cease from repeating his *dhikr* until he grows weary; then he must con it over in his heart, without any movement of his tongue (see *'Awārif*, chs. 26–28).

(*b*) *Ascetic systems.*—European writers on Ṣūfiism are often inclined to identify it with pantheism and to lay undue stress on its transcendental flights, while they ignore its ascetic and ethical foundation. This is the 'path' (*ṭarīqa*) which every Ṣūfī must traverse before he can hope to reach the goal of his journey, and which is expounded at great length in the *Qūt al-qulūb* by Abū Ṭālib al-Makkī (ob. 996 A.D.) and other manuals written with a didactic purpose. In such works the different 'stations' (*maqāmāt*) of the 'path' are carefully mapped out, and the doctrines pertaining to each are explained and illustrated by means of Qur'ānic texts, traditions of the Prophet, and sayings or anecdotes of famous saints. All systems of Ṣūfī asceticism are based on the same materials; hence it is not surprising that one is very like another externally, however much they may diverge in spirit according to the author's individual point of view. It is not possible to describe any of them in detail here, but their broad outlines can be exhibited if we briefly examine the systematic treatment of the subject by Ghazālī (ob. 1111 A.D.) in his *Iḥyā*, which is a classical text-book of orthodox Ṣūfiism. Ghazālī does not address himself to Ṣūfīs alone; his aim is the revivification (*iḥyā*) of the Muhammadan religion, and he has no desire to make every Muslim a monk. Consequently, in the first half of the work he deals with the ordinary religious duties of purification, prayer, almsgiving, fasting, and pilgrimage; then with supererogatory acts of devotion, such as recitation of the Qur'ān, praise of God (*dhikr*), supplication (*du'ā*), and vigils; and discusses exhaustively the relation of religion to social life. Many of these topics, though bearing a wider application, belong to the preliminary stage—the 'law' (*sharī'a*), as it is technically named—of Ṣūfī asceticism, but in the third and fourth volumes of the *Iḥyā* Ghazālī unfolds the method adopted by the Ṣūfīs for attaining spiritual perfection. This method falls into two parts, which may be called *purgative* and *unitive*, inasmuch as the former purifies the heart by subduing the passions, while the latter leads to union with God by the acquisition of virtues and faculties. The principles of the *purgative* way are summarized as follows (*Iḥyā*, iii. 74. 15 ff.):—Before entering on his novitiate, the aspirant must renounce four things: wealth, reputation, mechanical conformity (*taqlīd*), and sin. He will then need a Shaikh to direct him. The Shaikh, to whom he must cling 'like a blind man on the bank of a river to his guide,' will provide him with four weapons against the assaults of Satan, viz. solitude, silence, fasting, and sleeplessness. Now begins what is generally a long inward struggle with the lusts and passions. When these have been vanquished, the novice should retire to his cell and perform only the obligatory acts of devotion, and continually repeat some *dhikr*, such as *Allāh! Allāh!* or *Subḥāna'llāh!* ('Glory to God!'), until the essential meaning of it has filled his heart. He must strive to banish every thought that is not of God, and to repel the evil suggestions with which Satan plies him. Whatever passes in his mind he should communicate to the Shaikh. Then, if the Shaikh knows that his pupil is intelligent and can be trusted rightly to apprehend the Divine reality (*ḥaqīqat*), he will bid him meditate assiduously, in order that illumination may enter his heart. Herein it behoves the Shaikh to exercise the greatest possible care, for this is a perilous matter, in which many novices, going beyond their depth, are utterly lost. The weak should be confined to what they are capable of understanding, *e.g.* simple faith and practical devotion. Those who occupy themselves with meditation have to beware of many pitfalls, such as vainglory, hypocrisy, delight in visions and miracles. After this *résumé* of the *purgative* way, Ghazālī treats in ample detail of the various passions and vices, from lust and gluttony to spiritual pride, their nature, symptoms, diagnosis, and the remedies which are most effectual in each case (*Iḥyā*, iii. 78–392). Finally, in the fourth volume of his work, he expounds the *unitive* way under the following heads: (1) repentance, (2) patience and thanksgiving, (3) fear and hope, (4) poverty and renunciation, (5) unification (*tauḥīd*) and trust in God, (6) love, desire, intimacy, and acquiescence, (7) intention, sincerity, and truth, (8) contemplation (*murāqaba*) and self-examination (*muḥāsaba*), (9) reflexion (*tafakkur*), (10) meditation on death and what comes after it. Similar scales of ascent occur in every system of Ṣūfī theosophy (see ṢŪFIISM), and are possibly of Buddhistic origin (cf. Goldziher, in *JRAS*, 1904, p. 139 ff.). At any rate, Buddhism can be shown to have exerted a considerable influence on the practice and theory of mediæval Muslim asceticism; *e.g.* the use of rosaries and the custom of holding the breath were borrowed from Buddhist monks, whose example must also have powerfully affected the monastic ideals and institutions that reached a high degree of development in this period (cf. Goldziher, *loc. cit.* p. 125 ff.; von Kremer, *Culturgesch. Streifzüge*, p. 45 ff.).

4. **Philosophical asceticism.**—Suhrawardī (*'Awārif*, iii. 194 ff.) distinguishes the asceticism of the mystics, which illuminates the heart, from that practised by philosophers and materialists with the object of purifying the senses and thus facilitating the acquirement of the intellectual sciences: the latter, he says, leads to heresy. It assumes its

most interesting form in the so-called *zindīqs*, a name given by the Muslims to various kinds of heretics, particularly those who rejected positive religion and acknowledged only the moral law (for the derivation and meaning of *zindīq*, cf. E. G. Browne, *A Literary History of Persia*, 1902, i. 159 ff.; Nicholson, *A Literary History of the Arabs*, 1907, 372 ff.; and art. ATHEISM [Muh.]). Renunciation (*zuhd*) was characteristic of many on whom this epithet was bestowed. Some of them were undoubtedly influenced by Manichæan and Buddhistic ideas, but Muhammadan orthodoxy was apt to brand as 'free-thought' (*zandaqa*) any moral creed that was not built entirely on a dogmatic basis. Abu 'l-'Atāhiya (ob. 828 A.D.), though his poems are full of allusions to Paradise, Hell, and the Resurrection, was called a *zindīq* by his contemporaries, apparently because they suspected him of being a moralist in disguise; and they might have urged, with truth, that the prevailing tone of his poetry is ethical and reflective rather than religious. He sings the praises of asceticism, which he had adopted professionally in consequence, it is said, of a disappointment in love. 'The noblest of men,' he declares, 'is a king in the garb of a beggar,' *i.e.* an ascetic who is independent of the world and whose passions no longer enslave him; and again, 'those who are content with their lot are the truly free.' With much better reason the charge of heresy was brought against another celebrated Muslim poet, Abu 'l-'Alā al-Ma'arrī (see MA'ARRĪ). He too retired from a world where he had found only sorrow and failure. His asceticism, however, presents some peculiar features which it is possible, though hardly probable (cf. *JRAS*, 1902, p. 291), that he borrowed from the Indian Jains. He held that it was wrong to kill or injure any living creature, even a flea. His diet was strictly vegetarian; he abstained from fish and eggs as well as milk and honey. He wore a dress of undyed wool and wooden shoes, on the ground that no animal should be slaughtered to make leather of its skin. His celibacy was not monastic in character, but was the result of his belief that the best fate is non-existence, and that one ought to shrink from multiplying the misery of life. To pretend that such opinions and practices are typical of the moral philosophers of Islām would be unjust to Ma'arrī's eccentric and original genius. He resembled some of them in making asceticism an affair of the conscience and the understanding, an ingredient of the highest virtue instead of a stepping-stone to the Absolute. Others, like the Ikhwān aṣ-Ṣafā, or 'Brothers of Purity,' inculcate obedience to the Divine world-law and love of God, which 'gains in this life serenity of soul, freedom of heart, and peace with the whole world, and in the life to come ascension to Eternal Light.'

5. Conclusion: the Dervish orders.—As was said at the outset, this article is limited in scope, and deals only with the origin and main developments of Muslim asceticism. Nearly every Muhammadan sect could contribute something to a detailed history of the subject, and there are abundant Oriental sources for such a work, but in the present state of our knowledge a certain sketchiness is unavoidable. European writers have confined their researches almost exclusively to the modern Dervish orders, in which Ṣūfī asceticism and mysticism are carried as far as human nature can go. Some were founded before the Mongol Invasion (A.D. 1258), but since the 14th cent. they have branched out in all directions from Senegal in the west to China in the east. While basing their doctrine on the principles of mediæval Ṣūfiism, they have evolved a complex organization, extended the old practices, and introduced new ones. In some cases, too, their spirit and aims have been altered by the influence of environment and political circumstances. As regards the ascetic training which they impose on their members, naturally each order has its own rules, but they generally agree in the following points: (1) an elaborate ceremony of initiation, which is sometimes preceded by a long and arduous apprenticeship; (2) the wearing of a peculiar costume; (3) for neophytes, a severe discipline of solitude, prayer, fasting, and other austerities; (4) the immoderate use of *dhikr*, with the help of music, dancing, and diverse physical stimulants, to excite ecstasy; (5) belief in extraordinary spiritual powers vouchsafed to adepts and ecstatic persons, which they display by chewing live coals, charming snakes, predicting future events, etc.; (6) veneration, approaching to deification, of the Shaikh, or head of the order. If it is true that in most of their practices and beliefs the modern Dervishes had already been anticipated by the Ṣūfīs of the Middle Ages, from whom they are lineally descended, it is no less true that they have vulgarized Ṣūfiism by surrounding it with a network of mechanical routine, by exalting its thaumaturgy at the expense of its theosophy, and by associating its deepest mysteries with the performance of an orgiastic exercise. See article DERVISH.

Jahrhundert n. Chr.*, 1861–79; and for the asceticism of the Dervish orders: J. P. Brown, *The Dervishes or Oriental Spiritualism*, 1868; Depont and Coppolani, *Les Confréries religieuses musulmanes*, 1897.

REYNOLD A. NICHOLSON.

ASCETICISM (Persian).—An essential part of the meaning of the Zarathushtrian reform, viz. the care of cattle and pasture land, is given in 'The Complaint of the Soul of the Kine' in the *Ahunavaitī Gāthā*, *Yasna* xxix. This zeal for economics being inseparably connected with the new faith, the Prophet in his religion placed a distinct value on earthly goods and productive work, and introduced that strongly anti-ascetic tendency which separates the Avesta so widely from the higher Indian religion.

1. The Avesta moral code is not only negative ('Thou shalt not,' etc.), but also contains positive duties. In its origin it is the ethics of cattle-breeding. Zarathushtra himself was the first "meadow-keeping cattle rearer' (*vāstryō-fšuyąs*, *Yasht* xiii. 89), as well as the first priest and the first warrior. The *Gāthās* do not know any but pasture land. By the time of the later Avesta agriculture has appeared. *Vendīdād* iii. mentions the five places which are the happiest on this earth: (1) where one of the faithful is worshipping; (2) where one of the faithful erects a house with a priest therein, with cattle, a wife, children, and good herds, and where all these treasures of life are prospering; (3) where most corn and fruit trees are cultivated, and where water is led into a poorly watered soil (a later glosser has added, 'and where dryness is brought to a watery soil,' ditching being later than artificial irrigation); (4) where flocks and herds increase most; and (5) where flocks and herds yield most urine. The life-long fight against the demons means cultivating the ground, sheltering the plants from drought and frost, spreading cultivation over land strenuously conquered from the wild. Activity has always been one of the first principles of Zarathushtrianism.

Among the later writings of the Parsis, *Sad Dar* lxxxi. 10 inculcates: 'Every good work which thou art able to do to-day do not postpone for to-morrow, and accomplish with thine own hand the counsel of thine own soul'; and in *Ganje-shâyagân* (§ 126) one-third of the day (and night) is given to religious duties, one-third to the cultivation of the ground (the eight hours' working day !), and one-third to eating and sleeping.

2. The following objections are raised against ascetic principles:—

(1) Wife and children make a man superior to him who is not married (*Vend.* iv. 47). A young woman without children needs a husband, just as uncultivated ground needs cultivation. The good husband receives fruit from both (*Vend.* iii. 24–25).

Zarathushtra is of Divine origin—the heavenly glory (see art. AGES OF THE WORLD [Zoroastrian], vol. i. p. 205 f.) entered his grandmother (*Dīnkarṭ* VII. ii. 2 ff., 14; VIII. xiv. 1). But nowhere is an attempt made to eliminate his father in the flesh. Such an idea would be opposed to the Mazdayasnian ideal of holiness. The psychological relation of the union of Zarathushtra's parents in *Dīnkarṭ* VII. ii. 48–52 may be a criterion:

'Both have embraced the first time with desire for a son, and the demons shouted out unto them, in the villainous speech of sinfulness, thus: "Why shouldst thou act like this, vile Pōrūshāspō?," whereupon they started up like people who were ashamed.' The same experience was repeated a second and a third time. 'And they spoke with one another about it, and continued at this duty, and accomplished it, saying: "We will not so stop without accomplishing something, not even though both Rāk and Nōdar should arrive here together." Then that manchild, who was the righteous Zarathûsht, became complete . . . in the womb of his mother.'

The Mazdayasnian has to recite the *Ahuna-Vairya* (*q.v.*) and the *Ashem* when he goes in to his wife (*Dīnkarṭ* IX. xix. 8).

(2) The man who owns a house is superior to him who does not (*Vend.* iv. 47).

(3) Fasting is a sin. Without eating no one has strength for a vigorous piety, for cultivating the ground, for begetting strong children (*Vend.* iii. 33). The man who nourishes and develops his body through the eating of meat takes in more of *vohûman* ('good thought') than he who does not (*Vend.* iv. 48). The man who teaches or practises fasting is an *ashemaogha*, a destroyer of piety and of the holy law, and deserves punishment (*Vend.* iv. 49).

A well-known passage of the Parsi treatise *Sad Dar* lxxxiii. forbids fasting: 'In our religion it is a sin to pass a day without eating. To us fasting means to fast from sin with the eye, with the tongue, with the ear, with the hand, with the foot.'

According to al-Bīrūnī, the person who fasted was considered by the Zarathushtrians as a sinner, and had to feed a certain number of men as an expiation (*Chronology*, tr. Sachau, p. 217).

(4) All practices of mortification are prohibited. The Pahlavi paraphrase of the *Varshtmânsar Nask* of the Sasanian Avesta attributes the self-tortures prescribed by Mani to the Evil One (*Dīnkarṭ* ix. 39).

The ascetics whose doctrines are opposed in the Pahlavi writings can be identified, even if they are not expressly mentioned, as Mani in the Pahlavi *Varshtmânsar Nask* and Mazdak in the Pahlavi commentary to *Vend.* iv. 49 ('Mazdak, son of Bâmdât'). The chief form of asceticism opposed besides Manichæism was Christianity. During the persecutions of the Sasanians, marriage was not infrequently offered as an alternative to death.

The ascetics referred to in the *Vendīdād* may have been Christians (Darmesteter) or Manichæans (Spiegel). But it seems equally probable that ascetic doctrines were well known and practised in Iran before them. The Babylonian religion had unmarried brides of gods. In India the great ascetic methods of salvation were ancient.

3. Penalties, imposed for offences against the Avesta law, often illustrate the anti-ascetic tendency, inasmuch as those punishments themselves do not consist in sufferings, but in positive useful work. The requirements of penance and agriculture are fulfilled at the same time. In some Avesta fragments of the manuscript *Tahmuras* and in some of the book of ritual ceremonies, *Nīrangistân*, the degree of penalty incurred partly by omissions or smaller inadvertencies in the ritual, and appointed to be three cuts with the lash (*sraoshô-karana*, 'the instrument of obedience'), is commuted into a day's work in the fields (Fragments of *Tahmuras*, xii. 11, 12; Fragments of *Nīrangistân*, 42, 43, 69, 83, 109; *AMG* xxiv. 55 f., 105 ff.). If the penance inflicted by *Vendīdād* xiv. upon the man who has killed an otter belongs to the ideals never realized, it is nevertheless very characteristic. He must, among other penalties, kill thousands of snakes, lizards, frogs, ants, worms, and flies. He must give to good men the instruments of a priest, of a warrior, and of a farmer. He must make ditches for irrigation, and make a gift to good men of cultivated ground, a byre, and a beautiful bedstead. He must give a young virgin as wife to a good man. He must make a gift of small cattle. He has to bring up twice seven puppies, and make twice seven bridges over ditches. He must cleanse twice nine dogs from vermin, and let twice nine Mazdayasnians get a good square meal of meat, bread, strong drink, and wine (cf. quotation from al-Bīrūnī under 2 (3) above, and *Vend.* xviii. 73–74, where the killing of snakes, frogs, and ants, and the building of bridges over water belong to the punishment for sexual intercourse at forbidden times). All animals considered as bad and noxious are called *khrafstra*, and it is a most meritorious work to kill them. This is very different from the view of Lao-tse, from Indian, and from mediæval Ṣûfī and Christian asceticism and mysticism.

NATHAN SÖDERBLOM.

ASCETICISM (Roman).—1. For the purposes of this article 'asceticism' may be taken roughly to mean self-discipline, prompted either by the authority of religion or by philosophic reflexion upon life, or by a combination of both these forces. The early Roman religion, so far as we can trace its features, was not to any appreciable extent swayed by the yearnings which in the Orient gave rise to asceticism at a time immemorially remote. The primitive Romans deemed that their shadowy and impalpable divinities were under compact with the community whose exclusive property they were. They asked of their worshippers no burdensome price for the favour which they accorded. The sacrifices required by them were trifling, though the ritual of circumstance and language connected with them was complicated, and needed to be carried out with the utmost precision. The idea of a taint or impurity, displeasing to the gods, and attaching to individuals, to masses of men, or to places, and to be cleansed away only by purificatory ceremony, is old enough in Roman religion. But the expiation was easy, and called for little in the nature of self-suppression. Some of the primitive servants of the gods, particularly the Flamen of Juppiter and the Vestal Virgins, were subjected to strong ceremonial restrictions in their lives. But these resembled the religious tabus prevalent among backward races, rather than any genuine

ascetic discipline. The Roman *feriæ*, or public religious celebrations, though requiring a cessation of labour and ordinary occupations, were, for the most part, joyous in character. Even the services to appease the dead and the powers of the nether world, or to avert the wrath of heaven as declared by prodigies, were not accompanied by practices of an ascetic character.

2. It is probable that the idea of self-sacrifice as an element in religion was first made conspicuous to the Romans by some of the forms of worship which were imported from without into the Roman State. The rare traces of human sacrifice at Rome in obedience to superstition or religion may safely be referred to a foreign origin. Such an elementary ascetic form as the *fast* was not regarded by Varro as belonging to the real Roman ritual, but as a feature of the *Græcus ritus*. The earliest mention of it is in a fragment of the *Bellum Punicum* of Nævius (quoted by Nonius Marcellus, p. 197 M: 'res divas edicit, prædicit castus'). The special name for a fast, *castus* (a noun), is of doubtful derivation. The adjective *castus* implied originally purity achieved not by self-discipline but by ceremonial observance of no very exacting nature.

3. Such discipline as the early Roman underwent was not self-imposed or required by religion, but was laid upon him by his country. There was no limit to the sacrifices which she might demand of him; but only in rare cases had those a religious significance. This was particularly true of the ceremony called *devotio*, by which a commander in the field, using a solemn formula, vowed himself to death, thereby binding the gods to bestow the victory on his army (Livy, viii. 6-10). But even in such circumstances, if the enemy failed to kill the willing victim, it was possible, in true Roman fashion, to cheat the gods by burying a human image and raising a mound over it.

4. We must look, therefore, for traces of asceticism to those cults which Rome and the West adopted from Greece and the East. The fast (*castus* or *jejunium*) enjoined upon a deity's worshippers first appears in connexion with Ceres. Although her name is Latin, all her ritual in historic times was Greek, and her station in the official religion was first assigned to her in the earliest days of the Republic by the custodians of the Sibylline books, who controlled the immigration of alien divinities. Her priestesses were Greeks brought from the towns of lower Italy (Cicero, *pro Balbo*, 55). As she became a chief patroness of the plebeians and the poor, her cult grew in popularity, and new services were grafted on the old. In B.C. 191 a fast in imitation of a Greek νηστεία was instituted in her honour, and was celebrated annually on Oct. 4. By a paradox not uncommon in the history of religion, Ceres, who bestowed the boon of bread, was honoured by abstinence from bread (Fest. p. 154; Arnob. v. 16). The fast may also have indicated a participation in the sorrow of the mother (Ceres-Demeter) for the loss of her child (Libera-Persephone). Also in August a vigil was maintained during nine nights by women worshippers, and was accompanied by a strict rule of chastity. This led to Ceres being regarded as a divinity who presided over divorce, though she was commonly reckoned as one of the patronesses of wedlock. An inscription found at Bologna, and of at least as early a date as 200 B.C., seems to point to a *castus* by which Juno Lucina and Juppiter were propitiated (Ritschl, *Prisc. Lat. Monumenta*, Suppl. 11, 12).

5. A few years before the time at which the *jejunium Cereris* was introduced, the Magna Mater, the Great Mother of the gods, who dwelt especially on Mount Ida, was officially welcomed at Rome. This was due to the superstition which was generated in the minds of the people by the disasters of the Second Punic War, when the Roman gods seemed insufficient to sustain the Roman power, and a yearning arose for aid from the gods of other lands. The formless stone, which in the temple of the Great Mother at Pessinus in Galatia was venerated as her type, was brought to Rome and enshrined on the Palatine. The ritual of the goddess was frenzied and orgiastic. For the first time self-mutilation was accepted by authority at Rome as pleasing to Heaven. The favourite of the Great Mother, commemorated in her ceremonies, was the mythical Attis, who gave his name to the weird poem of Catullus. At first the priests of the goddess were imported from her original home, as their name (*Galli*) indicated, and Romans were forbidden to take office under her. But as early as B.C. 77 a breach of the rule took place, and during the Imperial period the priests and priestesses were all Roman. The worship became more and more elaborated as time went on, and it grew in popularity till it spread far and wide in the West.

6. Closely connected with the Magna Mater was the great rite of the *Taurobolium*, with its minor form, the *Criobolium* (*qq.vv.*). Its history and nature are in several respects obscure, but its essence was that the adherent of the goddess should be penetrated with a sense of impurity, of which he is rid by being drenched with the blood of a slain bull or ram. A famous inscription (*CIL* vi. 510) relates how, after undergoing the *taurobolium* and *criobolium*, a worshipper 'was born again for eternal life' (*renatus in æternum*). This ritual sprang up in the 2nd cent. A.D., and its earliest traceable home was the Vatican mount, where St. Peter's now stands. The fame of this ceremonial is significant of that great change which passed over the Western world during and after the 1st cent. A.D., when the passage was made from general scepticism to general belief and superstition, and a curious sense of guilt in the face of heaven became prevalent, with a longing to find means for purging it away. Renunciation and the repression of desire were to some extent demanded by all the worships of the East which encountered this changed spirit and endeavoured to satisfy it. The satisfaction offered was, of course, to a large extent ceremonial and magical, and sometimes, to our ideas, flagrantly unethical. But the Eastern cults in their westward march dropped most of their baser features, and, on the whole, introduced new and better conceptions of Divine power. It was possible for speculating Romans to identify the Magna Mater and also Bellona,* whose respectability in Asia Minor was not beyond question, with the divinized idea of Virtue.

7. As is well known, the soldiers who served Rome, whether Romans or aliens, and passed from land to land, were greatly instrumental in carrying westward the Eastern cults. Some of these failed for a time to obtain authoritative recognition, and were merely tolerated by Government (with occasional suppression), because of their acceptability to the people at large. But by the 3rd cent. the Roman Emperors practically abandoned the attempt to hurl back the Oriental deities who were invading Italy and the capital of the empire. A cult which long remained unofficially popular was that of the Cappadocian divinity Mâ, a form of the Great Mother, whose acquaintance the Roman soldiers made when Sulla penetrated into the country of the goddess. We have in Strabo (p. 535) a reference to her temple at Comana, with 6000 servants attached, whose forms of veneration were often far

* A Cappadocian goddess who must not be confused with the Roman deity of the same name (cf. Cumont, *Les Religions orientales*, Paris, 1907, p. 66 f.).

from reputable. She was identified by the Romans with the old Italian goddess Bellona. The populace of the West became familiar with the spectacle of hierophants in procession with strange garb, who cut themselves with the double axe and sprinkled the mob with their blood, while they uttered frantic prophecies. The priests wandered about making collections, like the begging friars of the Middle Ages.

8. Egyptian divinities, especially Isis, early made their way into the Greek districts of Italy and into Etruria. The cult of Isis ultimately had extraordinary ramifications all over the Empire, but particularly in the West, and it exercised an especial fascination over women. Stringent bodily abstinence and a sort of penance were marked features of her worship, which took upon it manifold forms. Its elaborated ritual, its perpetual services carried on (as few were) day by day, its mystical character, its discipline preceding initiation in ascending grades, the duties which its ceremonies provided for the multitude, as well as for the priests, and the brotherhoods in which the worshippers were united and in some sort fenced off from the outer world—all these characteristics proved strongly attractive to the lower classes, so that Christians of the earlier centuries saw in Isis a formidable enemy of Christ. And she contributed, indeed, to Western culture elements which penetrated into the texture of the Church. Her worship was at first regarded with disfavour by the Government, but it advanced irrepressibly, as the literature of the Augustan age and later abundantly proves.

9. There was also an influx of deities from Syria. The *Dea Syria* had close affinities with the Magna Mater and Bellona, and the priests and worshippers of these three heavenly beings were often seen in company, particularly in the last age of Paganism, when a dim consciousness of one great God beyond and above the separate divinities became prevalent. Another immigrant from Syria was the Sun-god, who played a great part in the reign of Elagabulus and later. But more important than these was the mighty Persian deity Mithra, often identified with the Sun-god. The strongly developed discipline, the advancement of the worshipper in mystic fellowship from grade to grade, and the community of the sacred brotherhoods rendered this cult highly fascinating to the West. Even in barbaric regions never wholly Romanized, numerous altars dedicated to Mithra and other traces of his worship have been found (see article MITHRAISM).

10. These new forms of worship supplied to the Italic peoples elements which were wanting in the indigenous religions—the satisfaction which comes of self-sacrifice for heaven's sake, the sensation of mystical awe and an elevation of soul born of intercommunion with the deity, also oftentimes a hope of life in a world beyond the grave. In the hard primitive life of the early Italian farmer the lack of these elements was not felt, but the expanded life of later times welcomed their advent. Mysteries of a Greek type, with symbolic ceremonies partly reminiscent of religion, partly embodying ideas that originated in the philosophic schools, seem to have begun to spread to the Italic races as early as the days of the Punic Wars. To these mysteries ascetic practices were often attached. How ready the soil was to receive and develop the seeds of these new devotions was shown by the rapid spread of the movement called by the Roman Government the 'Bacchanalian conspiracy,' which was violently suppressed in B.C. 186. The Bacchic mysteries, taking root in the Greek districts of Italy, drew into connexion with them multitudes of Italic race and large numbers of Roman citizens. Many thousands were executed by authority of the senate, after inquiry which recalls the drumhead court-martial, in defiance of the laws which guaranteed fair trial to the Roman burgess. The criminal nature of the 'conspiracy' was assumed, but never proved. The secrecy of the worship, then a strange and unfamiliar feature, produced an atmosphere of panic, generating visions of crime such as arose in the Gentile world from the mysterious nature of the early Christian observances. In later centuries, 'mysteries,' connected with some mythical or semi-mythical founder such as Orpheus or Pythagoras, or with some definite divinity, were popular in the West, but the information which has come down to us concerning them is defective.

11. The prevalence of the rites and practices to which reference has been made must have greatly changed, in the course of centuries, the primitive Roman and Italian sense of the relation between the Divine powers and man. The claims of the gods upon man were felt to be more exacting than had been imagined in early days, requiring a toll of human suffering, sometimes physical, sometimes consisting in a sharp repression of many of the desires and ambitions of the average human being. The object of the discipline was in some way to cleanse the worshipper from a taint of impurity which he conceived to stand between himself and his divinity. The sense of sin often had a merely superstitious, ceremonial, or mechanical origin, but more and more of a moral and truly religious leaven mingled with it as time went on. Rome contained a large Oriental population, mostly descendants of slaves brought from the East; these contributed to the gradual transformation of ideas which proceeded through the centuries. Juvenal (*Sat.* iii. 62–65), it will be remembered, declared that the Syrian Orontes had long since debouched into the Tiber, and many other Eastern races besides the Syrian were abundantly represented at Rome. In the orientalizing of religious sentiment, the Jews played a certain part. The populace of the capital were as familiar with Jewish ideas as the rulers of the Empire were ostentatiously ignorant of them. The action of the Christian element on the pagan cults of the West, though important, is hard to measure, and has often been over-estimated.

12. But another potent influence mingled with that of religion, and promoted a change in the moral atmosphere—the influence of philosophy. The first conspicuous example of asceticism within the bounds of Italy is seen in the extension among the Greek towns of the brotherhood founded by Pythagoras. The Roman antiquarians of the late Republic believed that early Rome itself had been influenced by the great philosopher, whose personality had already been dissolved away by legend. Down to the latest Imperial times there never ceased to exist in Italy men who called themselves his followers. The name 'Pythagorean' came to stand for simplicity of life, and for quiet of mind secured by self-suppression, self-discipline, and abstinence. Doctrines and ideas connected with the mythical name of Pythagoras entered into many of the late forms of religion and philosophy in the West. Apollonius of Tyana (*q.v.*), who was at Rome in the time of the Flavians, was supposed to be the great exponent of Pythagoreanism on its moral and religious side. This figure, like that of Pythagoras, was soon encrusted by myth. The romantic biography written by Philostratus during the reign of Septimius Severus is charged with 'Pythagorean' ideas, and is deeply coloured by asceticism.

13. But the vogue of the Pythagorean school never extended very far. The force of Stoicism in the Western world was vastly greater and more

pervading. The educated class at Rome began to be affected by it in the middle of the 2nd cent. B.C.; and the influence continued and grew until the Imperial system was submerged. The Roman character, as formed in the hard school of early military service, and of that subjection to authority in which Rome had found the secret of conquest, responded more readily to the call of Stoicism than to any other creed framed in the philosophic schools of Hellas. When the days of luxury and corruption came, the ideal Roman heroes were such men as Cincinnatus, summoned from the plough to command the State; Curius Dentatus, receiving the envoys of the Samnites while he cooked his herbs over the fire; Decius and Regulus, self-devoted to death for their country's sake. In the Augustan age, the Stoic and the ideal Roman were felt to be closely akin. There is a Stoic breath in the pessimism of Livy and Vergil, and the hope of their times for a new Golden Age and a great moral reform was often tinged by Stoic influence. It was not unnatural that many of the national heroes of later creation should be Stoics: Rutilius, 'the Roman Socrates,' who suffered on a false charge of the very crimes which he had repressed, Cato of Utica, Paetus Thrasea, and Helvidius Priscus. Even the Stoics who had opposed his predecessors on the throne, were heroes and martyrs in the eyes of Marcus Aurelius.

14. Like all the other Greek philosophies of the later time, late Stoicism laid peculiar stress on conduct, and paid comparatively little heed to old theological and cosmological speculation. It carried to a higher pitch than other schemes the enthusiasm for morality, which it raised almost to the level of a religion. A school which proclaimed the worthlessness of all ambitions except the ambition to achieve pure virtue within the soul, which regarded 'Nature' as the teacher of all simplicity, which deemed that man most god-like who had the smallest wants and the most perfect control over his desires, which enjoined absolute submission to a Divine order, and aimed at complete harmony between the individnal and the Divine will, could claim affinity with what the best Romans regarded as the true Roman spirit. The Stoic made higher moral claims than other teachers; he was therefore more severely judged by the outside world. It has been easy for the detractor in ancient and modern times to contrast the professions of many Roman Stoics with their practice, and so to exhibit their school as worthless. In equally easy fashion has the worthlessness of Christianity often been alleged. It is certain that for the Romans, and for Western society generally, during many generations Stoicism was a leaven which worked powerfully for good, transforming the noblest natures most, but more subtly affecting the tone of life over a wide area. Profoundly influencing Roman law, and creating an atmosphere which the early Church inhaled, the ideal pursued by the Roman Stoics has transmitted much to the culture of the modern world. In particular, the growth of asceticism within the early Church was made easier because society was permeated with Stoic ideas and ideas akin to them.

15. The Cynic School, which was well represented in the Imperial age, exaggerated all the ascetic elements in Stoicism. Some of the Stoics even pronounced Cynicism 'a short road to wisdom.' Cynicism was indeed Stoicism 'heated seven times more than it was wont to be heated.' Epictetus draws a striking picture of the true Cynic (*Diss.* iii. 22). He has thoroughly accepted the old Greek doctrine, which left its traces in many systems, that the body is the tomb of the spirit. The soul must turn to God for release, and liken itself to Him, so far as human strength will go, and must regard all material conditions as hampering and evil. But ascetic features were not wanting to many other sects besides the Cynics and the Stoics. They were conspicuous even in the much maligned Epicurean School. Although the motive power in human action was differently viewed by Stoics and Epicureans, yet the practical road to happiness laid down by both was much the same. The would-be happy man must learn to control, to limit, and to repress his desires, and to make himself independent of all that lies beyond his own power. Epicurus could rival Zeus in happiness on a diet of bread and water; and it was a maxim among Epicureans that the man of perfect wisdom would not cease to be happy if he were stretched upon the rack. Human misery was held to spring in large part from the mistaken value set on things external to the soul—the rest of it being due to superstition. Like other moral and all religious schemes, Epicureanism could be distorted and travestied, and could stray far away from the lines laid down for it by its founders and leaders. But true Epicureanism and true Stoicism were two trees which bore much the same moral fruit, however unlike they might be at the roots. Many of the most ascetic lessons in morality which are laid down by Seneca were drawn from the writings of the Epicurean brotherhood.

16. Platonism was early influenced by Stoicism, and the Neo-Platonic movement of the third and later centuries resumed and enforced the ascetic elements in the earlier systems. Philosophic sects and cliques other than those which have been named also existed; and nearly all showed some drift towards asceticism. But the most important movement of all was that great missionary movement which began early in the period of the Empire. Philosophers, often Cynics, but often also calling themselves by other names, left their studies and went forth into the streets of the great cities and preached to the people, urging them to change their lives and to follow after purity and abstinence, and to listen to the Divine call. The bearded preachers, wandering from city to city in coarse attire, have often reminded the modern student of the poor friars of the Middle Ages, who might have used without change many of the phrases uttered by their Stoic, Cynic, or Epicurean predecessors. Indeed, some of their utterances ring very like those of the 'revivalist' of modern days. Refined triflers like Lucian ridiculed and vilified these enthusiasts, but the common people heard them gladly, and thronged to drink in their lessons. Doubtless some impostors traded on this demand for instruction; but when every deduction has been made on account of the sounder ancient criticism, such as that by Epictetus, it would be unreasonable to doubt that these teachers did stir among the lower grades of society some yearnings after a better life. We cannot measure their influence with precision, but they must have contributed to swell the tide which bore Christianity on to its assured triumph. That the philosophic influences in the late Empire were far from worthless is seen by the example of Boethius, who, Christian as he was, found his chief consolation in philosophy.

LITERATURE.—Information bearing on this subject is to be sought in the great modern works bearing on Roman religion and on late ancient philosophy. Among them may be mentioned: Wissowa, *Religion und Kultus der Römer* (Munich, 1902); Réville, *La Religion romaine sous les Sevères* (Paris, 1886); G. Boissier, *La Fin du paganisme* (Paris, 1894); F. Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra* (2 vols., Brussels, 1896-99), and *The Mysteries of Mithra* (Eng. tr. from 2nd Fr. ed., Chicago, 1903); Zeller, *History of Greek Philosophy* (2 vols., London, 1881); Dill, *Roman Society from Nero to Marcus Aurelius* (London, 1904); and A. Gasquet, *Le Culte et les mystères de Mithra* (Paris, 1899).

J. S. REID.

ASCETICISM (Semitic and Egyptian).—Asceticism, if it means the habitual renunciation of the things of the flesh as a self-discipline for the purpose of cultivating the things of the spirit, was unknown among the old heathen Semites and Egyptians. Asceticism is fundamentally based on a dualistic conception of the universe. It is justified only by the belief that matter is inherently corrupt—that it is the work, in whole or in part, of a being other than the Creator of the soul. Such a conception had no existence among either Semites or Egyptians. To the Semites in the earliest times the soul was simply the physical breath. It sometimes in later periods designated the inner nature of man, and thus was often used for the self, but it was always closely connected with the body, and was never conceived as of such a different order of existence that it could be benefited by the destruction of the body. That God who had made the body breathed into man's nostrils the breath of life, and man became a living soul (Gn 2[7]), is the general Semitic conception. The soul was no holier than the body, for both were the work of the same deity. So dependent was the soul on the body, that after death the soul's existence was confined to the under world where the body had been placed—a dark and gloomy region, where it led a miserable and half-animate existence (see 'Ishtar's Descent,' *KB* vi. 80-91; Dhorme, *Choix de textes*, 326-341; or *Bab. and Assyr. Literature*, Aldine ed., 408-413; also Is 14[9ff.] and Ezk 32[18-32]). So closely was the soul associated with the body, that later, when Semites came to believe in a resurrection, they necessarily held to the resurrection of the physical body. Indeed, the early Semitic conception of the manifestation of divinity through the processes of procreation (see Barton, *Semitic Origins*, ch. iii.) shows that their conceptions were removed as far as possible from asceticism.

The Egyptian conception of the soul was different. They held it to be a concrete entity, impalpable during life, which had its residence in the body, but left it at the moment of death. Another entity was the *ka*—an impalpable something connected with every man. Whether it was his double, or his guardian spirit or genius, is not clear (see Steindorff, *Rel. of the Anc. Egyptians*, 121 f.). These were not, however, considered holier than the body, nor were their interests promoted by its destruction. On the contrary, the body had to be preserved for their use, and so preserved that each soul could recognize its own body; hence the great efforts made in Egypt to mummify the bodies of the dead.

It is clear, therefore, that among the peoples of whom we are speaking the fundamental thought-basis of asceticism did not exist. There are some phenomena, nevertheless, in the religions of these peoples which might to a superficial thinker seem to contradict this view. These must be briefly considered.

1. *Fasting* was practised by the Egyptians (Herod. ii. 40), by the Babylonians and Assyrians as is shown by their penitential hymns (cf. Zimmern, *Babylonische Busspsalmen*, 34; and *Bab. and Assyr. Lit.*, Aldine ed., pp. 434, 437), by the Hebrews (cf. 1 K 21[9. 12], Lv 16[29. 31] 23[27-32] etc.), and by the Arabs, as is shown by the great fast of the month Ramaḍān, which has been taken over into Islām. A careful study of Semitic and Egyptian fasting makes it clear that it was not an ascetic practice. W. R. Smith (*Rel. of Sem.*[2] 434 ff.) held that in the beginning Semitic fasting was a preparation of the body for the reception of holy food—a view which Benzinger shares ('Fasting,' in *EBi*). This is evidently the conception of it which the Egyptians entertained, if Herodotus may be trusted, for he says the fasting was immediately followed by a sacrifice and a banquet. In the later development of Semitic thought among the Babylonians and Hebrews, fasting was undoubtedly regarded as a means of expressing penitence for sin, and of exciting the pity of the offended deity. This is the view which is expressed in the penitential psalms. It is based, however, on their conception of sin, and, as is shown below, that had nothing to do with asceticism.

2. Another practice which might be interpreted by some to indicate the presence of asceticism was the *abstinence from sexual intercourse* under certain conditions. Thus 'to lie with a woman having her sickness' was tabu (Lv 20[18]). This was not, however, a manifestation of asceticism, but the tabu arose from the belief that menstruation was a manifestation of Divine power with which it was dangerous to come into contact. Herodotus tells us that among the Babylonians and Arabs all sexual intercourse was followed by purification (i. 198), which means simply that it was regarded as an especially Divine process (cf. W. R. Smith, 425 ff., 446 ff.). Sexual intercourse was also tabu among both Egyptians and Semites within the holy precincts of a sanctuary (cf. Herod. ii. 64, and W. R. Smith, 45 ff. and 481 ff.). This was the case even when sacred prostitutes were connected with the temples, for these were careful to take their partners outside the sacred precincts (cf. Herod. i. 199). It was also prohibited to warriors—war being to the ancients a holy function —and often to people under a vow. While the origin of these tabus is not altogether clear, they had nothing to do with asceticism. The tabu relating to holy places does not apparently belong to the earliest stratum of Semitic religious thought, for in the earliest period sexual licence appears to have formed a part of the religious feasts (cf. Barton, *Sem. Or.* 110). Probably at first sexual pleasures were tabued to those on pilgrimage for a reason similar to that which prescribed fasting, viz. that the body might be the better prepared for the holy function at the festival. The tabu may afterwards have been applied to the holy place as an extension of this, or may have existed from the first lest the exercise of such a holy function in a sacred spot would make it too dangerous for one afterwards to mingle with his fellows. The application of the tabu to warriors is an extension of the tabu attaching to the holy place. Sexual intercourse was also renounced by those under a vow, perhaps for the same reason that food was sometimes renounced, *i.e.* as a motive for the early performance of the vow (cf. Ac 23[14]). In any case these tabus do not spring from ascetic principles.

3. The conception of *sin* which is found in the OT, the Babylonian penitential psalms, and in lesser degree in the Qur'ān (cf. Toy, *Judaism and Christianity*, 183 ff.; Morgenstern, *The Doctrine of Sin in the Babylonian Religion*, 1905; and Qur'ān, iv. 35), has no ascetic foundation. This consciousness of sin arose from the want of harmony between environment and life, or the disparity between prosperity and merit, and had nothing to do with ascetic conceptions.

There were two apparent exceptions in ancient Semitic life to the statements made above: the Essenes (*q.v.*) in Judæa, and the *rāhibs*, *sā'ihs*, and *ḥanīfs*, who existed in Arabia at the beginning of Muhammad's career (see ASCETICISM [Muslim]). These were, however, not real exceptions, as in each case the impulse to ascetic practices came from non-Semitic sources.

The fullest contemporary description of the *Essenes* is in Josephus, *BJ* ii. 8. It appears that sunrise was a sacred time to them, though

Josephus does not, like Appian, imply that they worshipped the rising sun. The other ascetic traits connected with them were that they lived in brotherhoods, avoided trade, paid great attention to ceremonial purity, and some of them renounced marriage. Some regard this last as a natural heightening of Levitical purity, because priests had to be purified from sexual contact before performing priestly functions; others look upon it as a practice which could spring only from a dualistic conception of the universe, such as we find in Zoroastrianism. The reverence for the rising sun also points in the direction of Persian influence. Josephus makes it clear that the Essenes were confined to no locality, but were a brotherhood, about 4000 in number, scattered through the cities of Palestine. How the Persian influence reached them may be variously explained, but from the time of Cyrus the channels through which it might come were open.

Among the Arabs, the *rāhibs*, or monks, the *sā'ihs*, or wanderers, and the *ḥanīfs*, who were regarded as a kind of monk, were probably imitations of Christian monks. We learn from the pre-Islāmic Arabian poetry in what high regard the Christian monks were held during that period. In the break-up of Arabian heathenism it was no wonder that men endeavoured to find satisfaction in the way of life which was followed by these monks and anchorites. Monasticism (*q.v.*) entered Christianity from non-Semitic sources, and in a mild form was transmitted by Christianity to Arabia. The same is true of Egypt, though monasticism in Egypt was Christian, and became much more intense than in Arabia. It was grafted on to Egyptian life, however, from a foreign source.

LITERATURE.—W. R. Smith, *Religion of the Semites*[2], 1894; Barton, *Sketch of Semitic Origins, Social and Religious*, 1902; Steindorff, *Religion of the Ancient Egyptians*, 1906; Erman, *Die ägyptische Religion*, 1905; Toy, *Judaism and Christianity*, 1891; Schürer, *Geschichte des jüdischen Volkes*[3], 1898-1901; Bousset, *Religion des Judentums im neutestamentlichen Zeitalter*[2], 1906; Josephus, *BJ*, bk. ii. ch. 8; Zimmern, *Babylonische Busspsalmen*, 1885, *Babylonische Hymnen und Gebete*, 1905; Jastrow, *Religion Babyloniens und Assyriens*, 1902 to date; Morgenstern, *The Doctrine of Sin in the Babylonian Religion*, 1905; Macdonald, *Muslim Theology, Jurisprudence, and Constitutional Theory*, 1903, which cites much Muhammadan literature. GEORGE A. BARTON.

AL-ASH'ARĪ.—Abū al-Ḥasan 'Alī ibn Ismā'īl al-Ash'arī was born at Baṣra in A.H. 260 (A.D. 873), of a noble and ancient Arab family; several of his ancestors held high offices in the State, and it was one of them, Abū Mūsā al-Ash'arī, Governor of Kūfa, who after the battle of Ṣiffīn represented the cause of 'Alī in the arbitration that resulted in the proclamation of Mu'āwiya as Khalīf (A.D. 658). Of his father little is known except that he was an orthodox Muslim, a student of the Traditions, and a friend of the Shāfi'ite legist Zakariyā ibn Yaḥyā al-Sājī. Baṣra had long been a centre of active religious controversy, and had been the home of some of the most famous teachers of the Mu'tazilite school, such as Wāṣil ibn 'Aṭā, Abū al-Hudhayl, and others, and at this period—the end of the 3rd cent. of the Hijra—Abū 'Alī Muḥammad al-Jubbā'ī was famous there as the greatest living exponent of the Mu'tazilite doctrines. Al-Ash'arī seems soon to have broken away from the orthodox influences of his home and to have become a zealous Mu'tazilite as the pupil of al-Jubbā'ī. Until his 40th year, he attended al-Jubbā'ī's lectures and took an active part in the disputations of his school; having a ready wit and an engaging delivery, he was not infrequently called upon by his master to take his place, whenever al-Jubbā'ī was not prepared to lead the discussion. We have no certain information as to the mental processes through which al-Ash'arī passed before he abandoned the Mu'tazilite position, at the age of 40, and went over to the orthodox party. His biographer gives the following dramatic account of the manner in which he publicly announced his conversion: 'He shut himself up in his house for fifteen days and refused to see any one; then making his way to the great mosque of Baṣra, he went up into the pulpit and cried out, "O assembly, I have absented myself from among you so long only because I have been absorbed in meditation, for the opposing doctrines seemed to me to be equally balanced, and the true did not outweigh the false nor the false the true; so I prayed unto God for guidance, and He has led me into the true faith, such as I have written down in these books of mine. I strip myself of all my former beliefs, just as I strip myself of this my garment." So saying, he took off the robe he was wearing and cast it from him, and distributed his books among the people' (Mehren, p. 252). The conversion of so eminent a thinker and so ardent a controversialist created a great stir, and the ability with which he now began to champion the orthodox position attracted to him a large number of disciples, so that he soon became one of the most celebrated teachers of his age, and theological problems were sent to him for solution from all parts of the Muslim world. He held several controversies with his old teacher, al-Jubbā'ī, who survived the defection of his pupil only three years. We have an indication of the character of such disputations in a story which several authorities tell in slightly different forms; but in spite of its doubtful authenticity and uncertain date (*e.g.* whether it belongs to the period after or immediately before his breach with the Mu'tazilites), it is undoubtedly characteristic of the theological controversies of this period. The story, as told by Ibn Ḥallikān, (No. 618, ed. Wüstenfeld), is that al-Ash'arī proposed the case of three brothers, one of whom was a true believer, virtuous and pious; the second an infidel, a debauchee, and a reprobate; and the third an infant. They all died. What was the state of each one of them? Al-Jubbā'ī answered: 'The virtuous brother occupies a high place in heaven; the infidel is in the depths of hell; and the child is among those who have obtained safety.' 'Suppose,' asked al-Ash'arī, 'that the child should wish to ascend to the place occupied by his virtuous brother, would he be allowed to do so?' 'No,' replied al-Jubbā'ī, 'it would be said to him: "Thy brother attained to this place through his numerous works of obedience (to God), but thou hast no such works to show."' 'But suppose,' said al-Ash'arī, 'that this child said, "That is not my fault; Thou didst not let me live long enough, neither didst Thou give me the means of proving my obedience."' 'In that case,' replied al-Jubbā'ī, 'God would say, "I knew that, if I had allowed thee to live, thou wouldst have been disobedient and deserved the grievous punishment (of hell); I thus considered what was for thy advantage."' 'But suppose the infidel brother were then to say, "O God of the universe! since Thou knewest what his state would be, Thou must have known what mine would be; then why didst Thou consider what was for his advantage and not for mine?"' Then al-Jubbā'ī was put to silence (Spitta, p. 42). Indeed, al-Ash'arī seems to have become rather a thorn in the side of his old teacher, who at last declined further discussion with him; whereupon al-Ash'arī is said once to have concealed himself in a part of the lecture-hall where al-Jubbā'ī could not see him, and to have prompted a woman sitting near him with question after question to which al-Jubbā'ī was unable to give satisfactory answers, until at last he guessed the trick that was being played upon him. Of the rest of al-Ash'arī's life few details are recorded.

We know that he ended his days in Baghdad, but have no information as to why he left Baṣra, the scene of his earlier triumphs. He died in A.H. 324 (A.D. 935–6) in the arms of one of his pupils, with a curse on the Mu'tazilites upon his lips.

Al-Ash'arī was a voluminous writer, and a list of upwards of a hundred of his works has come down to us; some are theological, dealing with the exegesis of the Qur'ān or with the Traditions, others philosophical; but the greater part of them are of a controversial character—polemics against heretics and unbelievers of all kinds, and attacks upon individual thinkers, such as al-Jubbā'ī, al-Balḫī, and others of his contemporaries (Spitta, pp. 63–81). This list of his works also includes a number of pamphlets written by him in response to queries relating to difficult problems in theology and philosophy, and those authorities who give 200, or even 380, as the number of his writings must have reckoned up each one of these letters as a separate work. Out of this immense literary activity, only five treatises are known to have survived, and these exist in manuscript only.

The importance of al-Ash'arī in the history of Muhammadan theology lies mainly in the fact that he was one of the first to employ in the defence of orthodox doctrines the dialectic method, and those processes of reasoning and of proof of which the rationalists had made so effective a use. Orthodoxy thus learned to fight its opponents with their own weapons, instead of merely doggedly repeating texts and traditions in answer to all arguments and questions. Al-Ash'arī is in this respect typical of an intellectual need that was being felt by the orthodox party of his time for a rational statement and defence of their position; the same tendency manifested itself among his contemporaries in other parts of the Muhammadan world, such as al-Ṭaḥāwī in Egypt and al-Māturīdī in Samarcand. Further, in stating his theological position, al-Ash'arī held a mean between the gross anthropomorphism of some of the traditionists and the philosophical speculations of the rationalists. Thus, while devoutly accepting the statements of the Qur'ān about the face, the hands, the eyes of God, and His sitting on His throne, as articles of faith, not to be interpreted as metaphorical expressions for the knowledge and power, etc., of God, he does not take them to imply a corporeal existence analogous to that of man, but explains them as being His qualities and free from all limitations of space. In his later writings, however, when apparently he had come under the influence of the Ḥanbalite school, he gave up all such attempts to explain these anthropomorphic expressions in the Qur'ān, and maintained that they must be accepted 'without asking how and without drawing any comparison,' *i.e.* with human qualities. Similarly, he took up a middle position between the fatalistic and the libertarian schools, which has been stated by Professor Macdonald as follows: 'Man cannot create anything; God is the only creator. Nor does man's power produce any effect on his actions at all. God creates in His creature power and choice. Then He creates in him his action corresponding to the power and choice thus created. So the action of the creature is created by God as to initiative and as to production; but it is *acquired* by the creature. By acquisition (*kasb*) is meant that it corresponds to the creature's power and choice, previously created in him, without his having had the slightest effect on the action. He was only the *locus* or subject of the action' (*Muslim Theology*, p. 192). As one of the most famous theologians of this school, Abū al-Ma'ālī Imām al-Ḥaramain (A.H. 419–478), puts it, al-Ash'arī holds that man has no power over the production of his actions, but has power over the acquisition of them, whereas the Mu'tazilites maintained that he has power over both, and the Fatalists that he has power over neither (Spitta, p. 141). In similar fashion, al-Ash'arī dealt with the great controversy on the nature of the Qur'ān, which had stirred the Muslim world to its depths, and had been made the subject-matter of decrees by successive Khalīfs—al-Ma'mūn (in A.H. 202 and 218) giving official sanction to the Mu'tazilite doctrine that the Qur'ān is created, and al-Mutawakkil (in A.H. 234) as authoritatively establishing as the orthodox doctrine the belief that it is uncreated. While allying himself with the orthodox party in maintaining that the Qur'ān is the eternal, uncreated Word of God, al-Ash'arī rejected their extravagances about the letters and the ink and the sounds employed in reciting it being equally uncreated and eternal. The above examples are sufficient to indicate how far al-Ash'arī was willing to allow dialectic reasoning to be applied to theological questions, thereby avoiding the gross literalism of the anthropomorphic exponents of the orthodox position, and attempting to explain where hitherto any such attempt had been branded as heretical. But such concessions to a rationalistic method were made by him mainly in dealing with matters connected with the doctrine of *tauḥīd* ('unity'), such as the Attributes of God and the Word of God. In other matters he frankly accepted the orthodox position unmodified, *e.g.* the intercession of the Prophet, his journey to heaven (*mi'rāj*), the miracles of the saints, the evil suggestions of Satan, the coming of Antichrist, etc.

Al-Ash'arī was the founder of a theological movement that gradually won for itself a preponderating influence among Muhammadan sects, gaining a foothold first in 'Irāq, and later spreading eastward into Persia and westward into Syria and Egypt; introduced into the Maghrib by Ibn Tūmart (*q.v.*) in the 6th cent. of the Hijra, it became in a modified form the official doctrine of the Muwaḥḥids. The sect produced a number of remarkable thinkers, who by their independent speculations further contributed to the development of the system; among them the most distinguished were Abū Bakr al-Bāqilānī (ob. 403 A.H.) (*q.v.*), Abū Ja'far al-Sumnānī (ob. 444 A.H.), Abū al-Ma'ālī Imām al-Ḥaramain (ob. 478 A.H.) and al-Ghazālī (ob. 505 A.H.) (*q.v.*), who systematized the tenets of the sect into a body of doctrine that is accepted throughout the greater part of the Muslim world to the present day.

Mehren, *Exposé de la réforme de l'Islamisme . . . par Abou-'l-Hasan Ali el-Ash'ari* (Troisième Congrès International des Orientalistes, vol. ii., St. Petersburg and Leyden, 1879); Martin Schreiner, *Zur Geschichte des As'aritenthums* (Huitième Congrès International des Orientalistes, Deuxième Partie, Section i., Leyden, 1893). The creed of al-Ash'arī is given by D. B. Macdonald, *Development of Muslim Theology* (London, 1903), pp. 293–299.

T. W. ARNOLD.

ASHES.—The dust which remains after the burning of plants, animals, and human beings, has been used from the most remote times for various religious and semi-religious purposes. It is natural to think that, when once the use of fire was discovered, it would not be long before the ashes would be found to be valuable and be turned to some account.

1. In places where water is scarce, we know that sand has been used for *ablutions*. Where sand is scarce, ashes would provide an excellent substitute. And since, from the first, fire was regarded with awe and wonder, it is likely that the ashes were often thought to share its mysterious nature. At any rate, we know of the use of ashes in ablutions. Amongst the preparations which the Brāhmans made for any act of religion was an ablution called

'a bath sacred to fire,' the body being rubbed with ashes (Colebrooke, ii. 154).* Amongst the New Mexicans it was found that a newborn child was washed and then covered with ashes (Bancroft, i. 566). In this case, however, the ashes may have been used, not as part of the cleansing process, but for drying, or possibly for both purposes. People belonging to the Nahua nations were found by Bancroft to have a practice of rubbing an infant's joints, especially the knees, with ashes in order to strengthen them (Bancroft, ii. 277). This practice may have arisen from the other.

2. When ashes were used for ablutions, it would soon be noticed that the friction produced a healthy effect, or, as we should say, promoted the circulation.† In any case, it has been found that primitive folk also use ashes for *medical purposes.* Hot ashes would serve as a substitute for hot water. Thus the Nutkas apply them in order to cure headache, colic, or rheumatism; the Miwoks use a plaster of hot ashes for stomachic affections and cases of severe travail (Bancroft, i. 204, 396).‡ Vapour-baths are also produced by means of hot ashes. In parts of England the ashes of a consecrated box-tree, mixed with holy water, used to be thought an effective remedy for cold fever.§ Similar powers are attributed to the ashes of the Muhammadan sacred fire at Gorakhpur and to those of the Hindu Holi-fire; and in Ireland ashes from the bonfire on St. John's Day (June 24) are believed to aid the fertility of the fields (Crooke, ii. 197, 318). The Parsis of India dip their fingers in ashes, while the ancient Armenians venerated the ashes of the sacred fire, and scattered them in streams also considered holy. Among the modern Armenians, in like fashion, the ashes of the sacred fire kindled on Feb. 13 are held to protect men and cattle from sickness, and are carefully preserved or scattered on the four corners of the roofs, or in the stalls, the gardens, and the meadows (Abeghian, p. 73).

3. A more familiar use of ashes, however, is that associated with *mourning customs.* The Greeks showed their sorrow at bereavement by strewing themselves with ashes (Homer, *Il.* xviii. 22, *Odyss.* xxiv. 315; Plut. *de Superstit.* ch. 3; cf. Herod. ii. 85; Vergil, *Æn.* x. 844; Ovid, *Metam.* viii. 528), or by sitting in them (*Odyss.* vii. 153; cf. *Il.* xviii. 26); and the practice of sprinkling ashes over the head as a sign of affliction is wide-spread. But this simpler practice always seems to be an abridgment of the more elaborate ceremony. In course of time a mere sprinkling suffices instead of an actual sitting or lying in dust or ashes. It becomes a sign or simple expression of what was originally a stricter form of submission or humiliation, practised first before visible persons, and then before invisible beings as well. Herbert Spencer gives some interesting instances in support of this explanation of the custom. Thus, in the Congo regions of Africa, it was found that the person who would do homage to a *bansa*, or village chief, prostrated himself, kissed the earth, and strewed dust over the forehead and arms. When the Dahoman made a salutation, he prostrated himself, and poured sand or earth upon his head. It was found that the Kakanda and Balonda people used the same ceremony; and we are told of the latter, that 'when they wish to be excessively polite they bring a quantity of ashes or pipeclay in a piece of skin, and, taking up handfuls, rub it on the chest and upper front part of each arm.' To what extent this ceremony underwent abridgment we see, when, instead of sprinkling dust on the head, people made salutations by pretending to do so (Spencer, ii. 124 f.). But originally the practice seems to have been one of humiliation. At the same time, even among primitive folk, other customs have been observed in which the ashes seem to be a mere badge of mourning. Thus it was found that some of the Californians mixed the ashes of a dead person with grease, and smeared their faces with the mixture. The dirt was allowed to remain until the action of the weather wore it off (Bancroft, i. 397). In the Arunta tribe of Central Australia, it was found that the widow of a deceased man smeared her hair, face, and breast with white pipeclay; hence she received the name *inpirta*, 'the whitened one.' Sometimes she smeared ashes from a fire over the pipeclay, and was then called *ura-inpirta*, *ura* meaning 'fire' (Spencer-Gillen, p. 500). Amongst the Athapascan Tacullies it was found that after a deceased man had been burned, the ashes were collected and put into sacks. Each wife then received one, and had to carry it on her person for two years, during which she was clothed in rags, kept in a kind of slavery, and not allowed to marry. At the end of this period of mourning, structures were erected, and the bags or boxes of ashes deposited in them (Bancroft, i. 126). Here again the bag of ashes seems to be a badge of mourning.

4. When bodies have been burned, instead of buried at once, the ashes have naturally been *regarded as sacred.* They are either buried afterwards, or left on the altar and the whole covered with earth, or thrown into a river to be carried out to sea, or carefully preserved in urns. In India, when cremation first took the place of ordinary burial, they were buried; at a later date they were thrown into a sacred river. Among the Nahua nations it was found that the ashes of the common people were placed in the yards of their houses, in the temple courts, in the mountains, or in the field. In time of war, even in the case of people who have not altogether adopted the practice of cremation in their native land, it has been the practice to burn the bodies of the slain, partly to prevent the enemy from mutilating them, partly that the warriors' ashes might be carried back to their native place. This explains the fact that in the Homeric poems only the burning of corpses is mentioned.* Sometimes the ashes are gathered with a good deal of ceremony. When the Brāhmans burn a corpse, the fire has to be so arranged that some of the bones may remain for the elaborate ceremony of gathering the ashes, which is performed by the nearest kinsman on the last day of mourning (Colebrooke, ii. 175 ff.). But it has not always been thought necessary to preserve all the ashes, or at least not all in the same place. Among the Nahua nations, it was found that, when a human victim was sacrificed, his heart, after being offered to the sun, was burned, and the ashes preserved with great care and veneration (Bancroft, ii. 307). Buddha gave directions that his body should be cremated, and a *dagoba* or *stūpa* ('reliquary monument') erected over the ashes. When the body had been burned, messengers came from the chiefs or kings of the tribes around and claimed the relics. To avoid dispute, these were divided amongst them, and placed in *stūpas* built for the purpose.† When

* Works are cited simply by their authors' names. The titles of the works will be found in the bibliography.

† In this particular instance, however, we possibly have a use of ashes which were supposed to possess special qualities.

‡ Some of the Californians took an internal dose of ashes for snake-bites. This, of course, is a different kind of treatment. We need hardly remind the reader that amongst primitive folk medicine is a part of religion. See MEDICINE-MEN.

§ It should be added here (cf. § below) that, according to Bede, the dust of Oswald, king of Northumbria, was preserved as a cure for sickness (see Brand, *Popular Antiquities of Great Britain*, ed. W. C. Hazlitt, i. 320).

* See H. Blümner, *Leben und Sitten der Griechen*, ii. 80 (Leipzig, 1887).

† See Hermann Oldenberg, *Buddha*, p. 428 (Berlin, 1897); and William Simpson, 'The Worship of Death,' in the *Transactions of the Lodge Quatuor Coronati*, No. 2076, p. 28.

Mr. William Simpson was in Jelalabad during the Afghan War, he excavated the remains of a Buddhist tope, called the Ahin Posh Tope, and was fortunate enough to come upon the relic-cell, where he found some brown dust which he supposed to be the ashes of the holy individual to whose sanctity the tope had been erected. Among the ashes was a golden relic-holder. The same writer tells us that amongst the Lāmas of Tibet also, when a holy man dies, a *stūpa* is made for his ashes. But he found another practice amongst them. The ashes are mixed with mud or clay, and small figures of Buddha are made of the mixture. These are then placed in the shrines where devotions are performed. But if the ashes of one person have sometimes been distributed, the ashes of two or more persons have sometimes been mingled. In this way Domitian and Julia, Achilles and Patroclus, were united in death. In other cases, family urns gathered up the ashes of kinsmen and friends.* It should be added that a king has been known to lie in state even when reduced to ashes. Thus it was found that among the Nahua nations they gathered the ashes and valuables of a Tarascan king, made them into a figure, dressed it in royal robes, and put a mask for its face, a golden shield on its back, and bows and arrows by its side (Bancroft, ii. 621).

5. Ashes have not only been regarded as sacred, but have sometimes been *thought to possess special virtues*. We hear of migrating tribes among the Nahua nations carrying the ashes of honoured chiefs with them to serve as talismanic relics (Bancroft, ii. 348), and of other savages inoculating themselves with ashes which represent and are supposed to impart moral and other virtues. Thus, as a protection against disease, a slight incision is made in a person's temple, and some powder made of the ashes of certain plants or animals rubbed into the wound, those plants or animals being chosen which denote certain special qualities (*e.g.* the claws of a lion might be used to impart bravery). In this way the fighting-men among some tribes of South-East Africa are inoculated with strength and courage in time of war (Frazer, ii. 361 f.).† Of a similar character is a practice found among the Tarianas and Tucanos and some other tribes. They disinter a corpse about a month after burial, reduce it by burning and pounding to a fine powder, mix this in large conchs of caxiri, and drink it, in the belief that by so doing they will imbibe the virtues of the dead man (Spencer-Gillen, p. 535 f.). The Cobeus were found to drink the ashes of the dead in the same way. It was a similar kind of belief in the virtues of human ashes that led the Romans to scatter in the city the bones of a general who had celebrated a triumph.‡ In Bavaria it has been customary to sprinkle ashes from the Easter fire on the land as a protection against hail-storms, and in Bombay caste is restored by swallowing ashes given by the *guru* (Crooke, i. 293). Ashes from the burning ground in India are used in 'black' magic (*ib.* p. 261).

6. A different use of ashes from any we have mentioned is found *in connexion with the belief in ghosts*. It has been a not uncommon practice to strew ashes on the ground in order to detect by the footprints the visits of ghosts or demons. The practice has been noticed amongst the Philippine islanders; and the Peruvians, instead of ashes, scattered flour of maize or quinua about the dwelling, to see 'by the footsteps whether the deceased has been moving about' (Spencer, i. 171). Amongst the funeral customs of the Hos of N.E. India, quite an elaborate rite has been observed, in which ashes are used to detect the return of a dead person's spirit; and similar customs exist in Mirzapur (Crooke, i. 176, ii. 72–74). Another practice has been noticed in Yucatan. A child is left alone at night in a place strewn with ashes, and the animal whose footprint is found on the spot in the morning is regarded as its guardian deity. With this may be compared the old superstition that the first bird or beast which appears after the birth of a child is its spiritual protector. In German folklore we hear of the little 'earthmen' leaving footprints in strewn ashes; and in England there was once a superstitious belief that, if on St. Mark's Eve ashes were sifted over the hearth, the footprints would be noticed of any one who was destined to die within the year (Tylor, ii. 197).

MAURICE A. CANNEY.

ASH-MOUNDS (in Persia).—The ash-mounds of Persia are a series of elevations in the Province of Azarbaijan in north-western Persia, composed largely of ashes mixed with earth, and called 'Hills of the Fire-worshippers' by the modern inhabitants, who assign their origin to the fire-cult of the ancient Zoroastrians. Scores of these hillocks are scattered over the great plain around Lake Urumiah and the city of that name, which is associated traditionally with events in Zoroaster's life in Azarbaijan. The mounds are usually constructed of clay mingled with immense deposits of ashes that are saturated with nitrous salts of organic composition; and in many instances these elevations surmount a small natural eminence. It is generally conceded that there is nothing of a volcanic nature in their composition; and although we may not agree in all respects with the natives, who unanimously ascribe the origin of the mounds to the accumulation of ashes from fire-temples, century after century, we may assume that at least some of the hillocks were surmounted, in ages past, by sanctuaries dedicated to the worship of fire.

Many of these hills have been excavated in recent years by the neighbouring peasants, who have discovered the value of the alkaline quality of the ashes for fertilizing purposes and for the manufacture of saltpetre. Their casual diggings have revealed in one or two instances remnants of ancient walls, and have brought to light ancient pieces of pottery, terra-cotta figurines, and other relics of antiquity, like the small bas-relief cylinder of alabaster found at Geog Tapah, near Urumiah, and now preserved in the Metropolitan Museum of Art in New York city. The design of the cylinder is archaic Babylonian in style, and among the figures carved upon it are the sun-god Shamash and the demi-god Ea-bani, as described by Dr. W. H. Ward in *American Journal of Archæology*, vi. 286–301. The Mission museum at Urumiah contains similar relics. No systematic excavations, however, have been carried on to determine the possible

* See Sir Thomas Browne, 'Hydriotaphia,' ch. iii. (*Works*, ed. Sayle, Edin. 1907, vol. iii. p. 113).

† Modern psychology teaches that such a practice, however superstitious the original idea in it, might—and no doubt often did—have the desired effect. It would serve to remind the inoculated person of certain qualities, to concentrate the mind upon them, and so to produce them. This would be an instance of primitive folk having been led to adopt a custom for a reason of their own, which for another and a better reason has proved to be one of the factors in civilization.

‡ See F. Granger, *The Worship of the Romans*, 1895, p. 61 f.

value of the ash-hills as contributing to archæological knowledge or to a better understanding of the early religion of Irān. The study of the ash-mounds should furthermore be brought into connexion with the entire subject of kitchen-middens, cromlechs, and cairns.

LITERATURE.—For bibliographical references and a description and photographic illustrations of the Urumiah hillocks, see Jackson, *Persia Past and Present*, New York and London, 1906, pp. 90-97. A. V. WILLIAMS JACKSON.

ASHTART (ASHTORETH), ASTARTE.—*'Ashtart* עשתרת) was a goddess worshipped by the Canaanites, Hebrews, Phœnicians, and in Phœn. colonies. This vocalization of the name is attested not only by *'Athtar*, *'Attar*, etc. in the cognate languages, but by the earliest documentary evidence. In the Amarna Letters (Winckler, 142. 10, 237. 21) it appears as *Ash-tar-tu*. In a Bab. tablet (*PSBA*, Mar. 1889, p. 174 ff.) *Ash-tar-tu* is given as the Pal. equivalent of Ishtar, and in the treaty between Esarhaddon and Ba'al of Tyre *As-tar-tu* is named as one of the chief gods of Tyre (Bezold, *Catalogue*, 539). The Gr. transliteration is 'Ἀστάρτη, which appears even in the LXX along with 'Ἀσταρώθ. Augustine (*Quæst. in Jud.* 16) gives *Estart* or *Astart*. The pronunciation עַשְׁתֹּרֶת, *'Ashtōreth*, of MT is probably due to the substitution of the vowels of *bōsheth*, 'shameful thing,' as in 'Mōlech' for 'Melech' (Nöldeke, *GGA*, 1884, p. 1022).

1. Origin.—As to the origin of 'Ashtart, opinions differ. Hommel (*Zwei Jagdinschr.* 22), Delitzsch (*Assyr. Lesestücke*[4], *s.v.*), Driver (Hastings' *DB* i. 168), Zimmern (*KAT*[3] 420 f.), Jastrow (*Die Rel. Bab.* 81, 207 f.) hold that she is derived from the Babylonian goddess Ishtar. In favour of this view are the facts that Ishtar is mentioned in Bab. inscriptions long before the earliest mention of 'Ashtart, that Palestine was profoundly influenced by Bab. religion during the third millennium B.C., and that Ishtar is called *āshirat ilāni*, 'musterer of the gods,' which suggests a derivation of her name from Bab. *ashāru*, the same root from which *Ashshur* and *Asherah* may come (cf. Jensen, *KIB* vi. 409 f.).

There are, however, a number of difficulties in the way of this theory:—(1) This deity is found not merely in Babylonia and Assyria, but also in Canaan and among all the other Semites. In Syria she appears as *'Attar* or *'Atar* (see art. ATARGATIS); in Moab, as *'Ashtar* (see art. MOABITES); in South Arabia, as *'Athtar* (see art. SABÆANS); and in Abyssinia, as *'Astar* (Müller, *Epigr. Denkm. aus Abessinien*, 37 f.). In classical Arabic her name does not occur, though she herself is known under such epithets as *al-Lāt* and *al-'Uzza* (cf. Herod. iii. 8, where *al-Lāt* is identified with Urania = Astarte). It is hard to believe that the cult of Ishtar spread to all these races, since no other Bab. deity found such wide acceptance. It is more natural to suppose that 'Ashtar was a primitive Semitic goddess. (2) The phonetic changes that this name undergoes in passing from one dialect to another indicate that it is primitive Semitic. In Bab. א and ע are not distinguished. If Ishtar had been the original form, the appearance of the initial ע with the vowel *a* in all the cognates would have been impossible, and the second consonant would not have undergone the regular mutation Heb. ש = Arab. ث = Aram. ܬ. (3) The addition of the fem. ending *t* in 'Ashtar(t) is adverse to the theory of a direct borrowing of the Bab. Ishtar. (4) The absence of the fem. ending in 'Ashtar, Ishtar, favours the theory of a primitive Semitic rather than a Bab. origin of the name. Before the Semitic languages diverged from one another, the fem. ending was already developed, but a number of primitive words found in all the dialects, such as אם, רגל, are fem. without fem. ending. To this class Ishtar-'Attar appears to belong. If the Babylonians had coined this name after their separation from the parent stock, they would have appended the fem. ending. (5) The different genders of the name in the dialects witness to its primitive character. In South Arabia 'Athtar is masc., in Moab also apparently in the compound 'Ashtar-Chemosh. If these cults had been derived from Babylonia, where Ishtar was fem., the change of sex would have been impossible. If, on the other hand, 'Ashtar was a primitive Semitic name of some physical object, this might have been regarded as fem. by one tribe and masc. by another, just as in South Arabia *shams*, 'the sun,' was fem., while elsewhere it was usually masculine. (6) One of the most marked characteristics of the Babylonian Ishtar is her connexion with the planet Venus. There is no trace of this in other early Semitic religions, and this makes it improbable that she is the prototype of 'Ashtar, 'Athtar, etc. (7) The use of the plural *'ashtārōth* in the sense of 'offspring' (Dt 7[13] 28[4. 18. 51]) cannot be explained from the goddess Ishtar, but points to a primitive Semitic root עשר. The Bab. association of Ishtar with אשר, accordingly, is to be regarded as merely one of the punning combinations of which there are so many instances in Bab. literature.

2. Original sex and character.—If 'Ashtar-'Athtar was a primitive Semitic name, the question then arises as to its original gender: Was it masculine, as in South Arabia and Abyssinia (*CIS* IV. i. 40. 4, 41. 2 f., 46. 5; Hommel, *Aufs. u. Abh.* 34; Mordtmann, *Him. Ins.* 862, 886[2]; Müller, *ZDMG* xxxvii. 4. 326; Barton, *Hebraica*, x. 52-59, 202-205), and apparently in Moab (*Mesha Ins.* 17; Barton, *Sem. Origins*, 141); or feminine, as in Babylonia, Assyria, Syria, Canaan, Israel, Phœnicia, and the Phœnician colonies? Zimmern (*KAT*[3] 420) holds that it was originally masc., on account of the absence of the fem. ending, but this proves nothing if the word belongs to the earliest period of Semitic language. Baudissin (*PRE*[3] 152) suggests that there were originally both a male and a female 'Ashtar, just as there were *ilu* and *ilat*, *Ba'al* and *Ba'alat*; but no other case exists where the fem. is expressed by the same word as the masculine. The most likely view is that 'Ashtar was originally feminine. This is the gender in all the Semitic languages except South Arabic and Moabite, and therefore is probably primitive. It corresponds also with early Semitic social organization. There is a large body of evidence to show that the Semites before their separation passed through a matriarchal stage of society (see W. R. Smith, *Kinship*, 131 ff.; Barton, *Sem. Origins*, 30 ff.). The tribe was a group of people inhabiting a particular oasis in the Arabian desert. It was made up of mothers and their brothers and children. The fathers were men of other tribes, dwelling in other oases, who contracted only temporary unions with the mothers. Descent was traced through the mother, and she was the head of the clan in peace and in war. In such a society the chief deity of the tribe must have been conceived as a counterpart of the human matriarch. Male divinities might exist and be known as חל, 'maternal uncle' (cf. חלכרב, חלאסר), but they would not be called 'father,' and would play so unimportant a part that they would survive only sporadically in later religion. This view is confirmed by the fact that all those traits which are oldest and most permanent in the character of 'Ashtart-Ishtar are those which for other reasons we must predicate of the ancient Semitic tribal mother.

(1) She is the goddess of *untrammelled sexual*

love. In the Ea-bani episode of the Gilgamesh Epic, one of the earliest monuments of Bab. literature (*KIB* vi. 166–171), she is represented as forming numerous unions which bring mischief to her suitors. In the Descent to Hades (*KIB* vi. 86 f.), sexual relations among men and animals cease the moment that she enters the under world. Prostitution as a religious rite in her service is widely attested: in Babylonia, by the Gilgamesh Epic (*KIB* vi. 122–129), Herodotus (i. 199), Strabo (xvi. 1. 20), Ep. Jer [43] (=Bar 6[43]); in Syria, by Lucian (*Dea Syr.* 22, 43); in Arabia, by Theodoret (*Hist. Relig.*, ed. Sirmond, iii. 883; cf. Wellhausen, *Reste*[2], 44); in the Phœnician colonies at Carthage, Cyprus, and Sicily, by Augustine (*Civ. Dei*, ii. 4), Herodotus (i. 199), *CIS* I. i. 86, Clement of Alexandria (*Protreptikos*, 12 f.), Arnobius (*adv. Gent.* v. 19), Justin (xviii. 5), Strabo (vi. 2. 5). Among the Hebrews and Phœnicians, *ḳ*e*dēshôth*, or 'temple harlots,' are often mentioned, but they are not expressly connected with the cult of 'Ashtart (yet cf. Herod. i. 105). If, however, they belonged to her in the colonies, they doubtless belonged to her also in the home country. *Ba'alat*, 'mistress,' the goddess of Gebal (Byblus) is only a title of 'Ashtart, and prostitution in her service is described by Lucian (*Dea Syr.* 6 ff.). The identification of 'Ashtart with Aphrodite by both the Greeks and the Phœnicians is also evidence of her sexual character. In this aspect she is clearly a counterpart of the ancient Semitic woman, who bestowed her love as she pleased upon men of other and often hostile tribes, who was courted at the risk of life (cf. *Mu'allaqât of Labîd* 16–19, *of 'Antarah* 5–22, *of Ḥârith* 1–9), and who had frequent occasion to bewail the death of some Adonis.

(2) 'Ashtart-Ishtar is a goddess of *maternity and fertility.* With her is associated her son Tammuz (see art. TAMMUZ). Under the title *bêlit ilê*, 'mistress of the gods,' she is represented in Assyr.-Bab. art bearing on her left arm a child, which she suckles at her breast, while with her right hand she caresses or blesses it (Bezold, *ZA* ix. 121, line 5). She is called *bânat-ilâni*, 'creatrix of the gods' (Haupt, *Akkadische und sumerische Keilschrifttexte*, 116 f. obv. 6). She is often designated the 'mother' or 'creatrix' of men (cf. Zimmern, *KAT*[3] 428 f.). In the Deluge Story (*KIB* vi. 238 f.) men are described as her offspring. In Babylon she was known as *Mu'allidtu* or *Mulittu* (מילדת), 'she who causes to bear,' from which is derived the name *Mylitta* in Herodotus, i. 131, 199 (Jensen, *Kosmologie*, 294, 515). In a Sabæan inscription (*JA*, 8 sér. ii. 256 ff.) 'Athtar, who is commonly male, is called 'the mistress, mother-'Athtar,' and is described as the giver of children. In Arabia the goddess was comparable to the Virgin Mary with the child Jesus (Epiphanius, *Panarion*, li.). The existence of the same conception in the West is attested by the Carthaginian proper name אמעשתרת, "'Ashtart is a mother' (*CIS* 263), by the title 'mother' applied to the Paphian goddess, and by numerous myths of the sons of 'Ashtart (Aphrodite, Venus). In this aspect also she is the counterpart of the ancient Semitic woman, the fruitful mother of the children of the tribe.

(3) 'Ashtart-Ishtar is *a war-goddess.* She appears to Ashurbanipal robed in flames, with quivers on the right hand and on the left, a bow in her left hand, while with her right she draws a sword out of its sheath (*KIB* ii. 227, 251). In Babylonian art she is often depicted fully armed, standing on a leopard or a lion. In one hymn (Reisner, 108[44]) she says of herself, 'Into battle I fly like a swallow.' In like manner the Canaanite 'Ashtart was regarded by the Egyptians as a war-goddess (*ZÄ* ix. [1871] 119), and was depicted standing on a lion (Müller, *Asien*, 313 f.). The armour of Saul was placed as a trophy in the temple of the Philistine 'Ashtart (1 S 31[10]). Her statue at Cythera, a Phœnician colony, was in full armour (Pausan. iii. 23. 1), and there is little doubt that the armed Aphrodite and armed Venus of Gr.-Rom. art were perpetuations of Phœnician types. 'Attar at Hierapolis rode on a lion (Macrobius, *Sat.* i. 23. 18 f.). This warlike character of 'Ashtart stands in marked contrast to her maternal character, and is the basis of an antithesis often found in Gr. and Lat. poets. It finds a natural explanation in the analogy of the ancient Semitic matriarch, who was not only the mother of her tribe, but, like Deborah (Jg 5[7-15]) and Samsi queen of Aribi (*KIB* ii. 54 f.), its leader in battle.

Other traits of 'Ashtart-Ishtar are local or late, so that they cannot have belonged to the primitive conception of this deity. In Babylonia she is identified with the planet Venus (also with Sirius and Virgo), but this does not appear elsewhere, except in late writers who have been influenced by Babylonian theology (*e.g.* Suidas and Zonaras, *Lex. s.v.*; Lydus, *de Mens.* iv. 44; Athenæus, ix. 392 D; *Myth. Vatic.* i. 17, ii. 37, iii. 8; Philo Bybl. in Müller, *Fragmenta Historicorum Græcorum*, iii. 569. 24). The identification of 'Ashtart with the moon by Lucian (*Dea Syr.* 4) and Herodian (v. 6. 4) is unconfirmed by ancient evidence, and is due to theological speculation. The horns with which goddesses are depicted in Phœnician art are not those of the crescent moon but of a cow, and are probably derived from the Egyptian Hathor, with whom 'Ashtart was early identified (Müller, *Asien*, 314). On 'Ashtaroth Qarnaim, "'Ashtart of the two horns,' see Moore, *JBL* xvi. 155 ff.

In the light of the foregoing facts, the original conception of 'Ashtar(t) as a divine counterpart of the human matriarch seems to be established. When society changed from a matriarchate to a patriarchate, either a male deity was exalted to the chief place, and 'Ashtar(t) became his consort, as in Canaan, or her sex was changed, as in South Arabia and Moab. This could be done the more readily since her name had originally no feminine ending.

3. **Etymology of name.**—The original character of 'Ashtar(t) must guide us in the effort to find an etymology and a meaning for her name. If it is primitive Semitic, it must be derived from the root *'ashar*, Heb. עשׁר, Arab. عثر, Aram. ܥܬܪ. The *t* is infixed after the analogy of the Arab. VIII. stem *iqtatala* and Assyr. *kitshudu*, and is transposed with the sibilant after the analogy of Heb. *hishtaḥăwâh* and Assyr. *qashdu* for *qadshu*. In Heb. and Aram. עשׁר means 'to be rich,' which represents Arab. غثر rather than عثر, and therefore throws no light on the primitive meaning of عثر.

In Arab. the common meaning for *'athara* is 'stumble,' but *'athr* and *'athari*, or *'aththari*, are used of palm-trees or seed-produce which are watered naturally; and *'âthûr* means 'a channel to irrigate a palm tree such as is termed *ba'l*' (Lane, *Lex. s.v.*). If these words are primitive and not loan-words, the root may mean 'to be watered.' The parallelism in Ps 65[10] suggests the possibility of a similar meaning for עשׁר. If so, *'ashtar* in a reflexive sense may mean 'the self-watering,' *i.e.* 'the spring,' and in a passive sense 'the watered' or 'fertilized,' as in the Heb. *'ashtârôth*='offspring' or 'lambs.' All this, however, is very uncertain.

It does not seem unnatural that the primitive Semites should have regarded the numen of a spring as a divine matriarch, such as we have seen 'Ashtar(t) to be. To the spring, man and beast owed their lives in the arid desert. It formed the oasis about which as a centre the tribe rallied. It nourished the date palm, which furnished food, and which emphasized sex by its distinction of male and female trees, and its need of artificial cross-pollination. Everywhere throughout the Semitic world springs were holy (cf. Baudissin, *Studien*, ii. 148–184), and the same is true even in modern Arabia and Syria (Curtiss, *Ursem. Rel.*, 94–96, 113–115). In the Sabæan inscriptions 'Athtar is entitled 'Lord of the water-supply' (*CIS* IV. i. 41; *ZDMG* liv. 245), and is described as the giver of harvests (*CIS* IV. ii. 104, 105). *Al-'Uzzâ*, 'the mighty,' a title of the fem. 'Athtar, was connected with the sacred spring Zemzem at Mecca (Wellhausen, *Reste*[2],

34–45, 105). In a Bab. hymn (Haupt, *Akkadische und sumerische Keilschrifttexte*, 116 f.) Ishtar is described as 'the one who causes verdure to spring forth, . . . creatrix of everything.' Of Atargatis, Plutarch says, 'She is the divinity who out of moisture produces the seeds of all things.' Her chief sanctuary Hierapolis bore the native name of *Mabbog* (Bambyce; *i.e.* נבע 'spring'), and had a lake full of sacred fishes. At Askalon also she had a lake and sacred fishes, and was represented as a mermaid with a fish's tail (see art. ATARGATIS). One of the chief sanctuaries of the Phœn. 'Ashtart was at Aphaka (= אפיק, 'water-course'), at the point where the Adonis River bursts out of a cave in the side of Mt. Lebanon. Many nymphs of fountains and streams in Phœn. settlements may be only variant forms of 'Ashtart. On the whole, therefore, the etymology which connects 'Ashtart with a root meaning 'to be watered,' and interprets it as the numen of a spring, cannot be regarded as unreasonable (see W. R. Smith, *Semites*^{2}, 100; Wellhausen, *Reste*^{2}, 146; Lagarde, *Ges. Abh.* 14; Halevy, *REJ* ix. 182 f.; Hoffmann, *Phœn. Ins.* 21 f.; Baudissin, *Jahwe et Moloch*, 23 f.; Schlottmann, *ZDMG* xxiv. 657 ff.; Nöldeke, *ZDMG* xl. 742; Barton, *Sem. Origins*, 102 f.; Haupt, *ZDMG* xxxiv. 758).

4. **Primitive worship.**—As to the manner in which 'Ashtar(t) was worshipped in primitive times, we can only conjecture that those rites which are most ancient and most prevalent among the Semites were originally consecrated to her. Some offerings were cast into the sacred spring, as in Arabia (Wellhausen, *Reste*^{2}, 76), and in modern Syria (Curtiss, *Ursem. Rel.* 114, 270); but in other cases, such as bloody sacrifices, this was impracticable, and another point of contact with the goddess was needed. This was found in the *maṣṣēbāh*, or 'standing stone,' which was erected as a *beth-el*, or 'abode of deity,' near the spring. On this victims might be slain and offerings might be poured without contaminating the sacred waters. This was the form of the goddess at Petra (Epiphanius, *Panarion*, li.). Down to the latest times the 'Ashtart-Aphrodite of Paphos was identified with such a stone (Tacitus, *Hist.* ii. 3; Serv. *Aen.* i. 720; Head, *Hist. Num.* 628). The *Ba'alat* of Gebal was similarly represented, to judge from a coin of this city (Pietschmann, *Phönizier*, 200). In Canaanite temples in general *maṣṣēbôth* rather than images seem to have embodied the mother-goddess. This is alluded to apparently in Jer 2^{27} 'who say to the stone, Thou hast brought me forth' (see art. MASSEBAH). The sacred precinct around the *maṣṣēbāh* was enclosed with *'ăshērîm*, or 'totem posts,' which also received religious reverence and were early identified with 'Ashtar(t) (see art. POLES). Offerings were made of the fruits of the earth and of the increase of the flocks and herds. The first-born of animals were sacred. Circumcision was practised as a consecration of the reproductive powers, and the first-born child was sacrificed in order to secure increased fertility. In Gezer, where the cult of the mother-goddess is everywhere in evidence, the remains of hundreds of new-born infants have been discovered around the standing stones of the high place (for the existence of this custom among the Arabs, see Isaac of Antioch, ed. Bickell, 220). A spring feast was celebrated at the time when the lambs were born, and an autumnal festival at the time of the gathering of the date harvest. These occasions were marked by great sexual licence (see W. R. Smith, *Semites*^{2}, 469 ff.; Wellhausen, *Reste*^{2}, 94–101; Barton, *Sem. Origins*, 108–115; and art. SEMITES).

5. **History of cult.**—If 'Ashtart was a primitive Semitic deity, she must have been brought into Canaan by the first Semitic settlers. Her name first appears in the annals of Thothmes III. (B.C. 1478) in the name of the city *'A-s-ti-ra-tu* (Müller, *Asien*, 162, 313). In the Amarna Letters (*c.* B.C. 1400) this city is mentioned (*KIB* v., Let. 142. 10 237. 21). In the treaty of peace between Rameses II. and Khetasar (*c.* B.C. 1270) the 'Ashtart of the land of the Hittites is named (Breasted, *Egyp. Records*, iii. 172). Evidently the Canaanite mother-deity was so well known to the Egyptians that her name served as a general designation for foreign goddesses (Müller, *Asien*, 313 f.). In the mound of Gezer a large number of plaques have been discovered in pre-Israelite levels, representing a nude deity who is doubtless 'Ashtart. No other images, except of Egyptian origin, are found in these levels, and this indicates that 'Ashtart remained the principal, if not the exclusive, deity of the ancient Canaanites as of the primitive Semites (see art. CANAANITES).

In the OT 'Ashtart appears as a survival in the city-name *'Ashtārôth* (Dt 1^4, Jos 9^{10} 12^4 $13^{12.31}$, 1 Ch $6^{56(71)}$). In Jos 21^{27} = 1 Ch $6^{56(71)}$ this is called Be'eshtera, i.e. *Beth-'Ashtart*, 'house of 'Ashtart.' The plural vocalization is not confirmed by the spelling in the Amarna Letters, and can hardly be due to the fact that several 'Ashtarts were worshipped at this shrine. It may perhaps be a plural of majesty like *'Elohim*. 'Ashtaroth-Qarnaim (Gn 14^5, 1 Mac 5^{26}, 2 Mac 12^{21}) is perhaps to be distinguished from 'Ashtaroth. In Jg 2^{13} 10^6, 1 S $7^{3f.}$ 12^{10}—all from a late Elohistic or Deuteronomic hand—it is stated that the Israelites in the period of the Judges worshipped the Ba'alim and the 'Ashtaroth of the land of Canaan. Here '*Ashtaroth* means no more than 'goddesses,' as in the Bab.-Assyr. formula *ilâni u-ishtarâti*, 'gods and goddesses'—a usage that occurs as early as the time of Ḫammurabi (L. W. King, *Ḫammurabi*, ii. 34). Since 'Ashtart was known to the Canaanites, and also probably to the pre-Mosaic Hebrews, there is no reason to doubt that she was worshipped by Israel after the conquest of Canaan. According to 1 S 31^{10}, the Philistines, who also were newcomers in Palestine, had adopted the cult of the Semitic mother-goddess (read the sing. with LXX τὸ Ἀσταρτεῖον). In 1 K $11^{5.33}$, 2 K 23^{13} 'Ashtart is called the 'goddess' (or 'loathsome object') of the Sidonians, and her worship is said to have been favoured by Solomon. In the latter passages '*Ashtart* is construed as a proper name without the article. The same is true in the Phœn. inscriptions. We do not read of the 'Ashtart of Tyre and the 'Ashtart of Sidon, as of the Ba'al of Tyre and the Ba'al of Sidon. In עשתרת ארך of *CIS* 135, ארך is probably an epithet and not the name of the city Eryx. In spite of this, different 'Ashtarts were worshipped in different cities, and the plural, as noted above, could have the general sense of 'goddesses.' The use as a proper name, accordingly, is due, as in the case of '*Amm*, '*Ammi* (*q.v.*) to loss of the primitive meaning.

The worship of 'Ashtart in Phœnicia and the Phœn. colonies is well attested by inscriptions and statements in classical writers: at Sidon, by *Tabnith Ins.* 1, 2, 6; *CIS* I. i. 3. 15, 16, 18; 4. 5; Lucian, *Dea Syr.* 4; Achil. Tat. i. 1; Lydus, *de Mens.* iv. 44; Malalas, *Chron.* ed. Dind. p. 31; at Tyre, by Sanchoniathon (Philo Bybl. in Müller, *Fragmenta Hist. Græc.* iii. 569, fr. 24), Menander (in Josephus, *Ant.* VIII. v. 3, *c. Ap.* i. 18); at Um el-'Awamid near Tyre, by *CIS* 8; at Ma'ṣûb, by the *Ma'ṣûb Ins.* 4; in Cyprus, by *CIS* 11. 3; 86A. 4 (cf. 46, 72), *CIA* ii. 168; at Gul near Malta, by *CIS* 132. 3; at Eryx in Sicily, by *CIS* 135; 140. 1; at Carthage, by *CIS* 255. 4 f.; 263. 4, *C. R. Acad. Ins.* 7, Dec. 1894, Augustine, *Quæst. in Jud.* 16, *Heptat.* vii. 16 (Migne, iii. 797). It is probable that Ba'alat, 'mistress,' the goddess of Gebal and other Phœn. towns (*CIS* 1. 2 ff.; 177; Philo Byb. in Müller, *Fragmenta Hist. Græc.* iii. 569; Melito in Cureton, *Spic.* 44), is only a title of 'Ashtart. Her cult was the same as that of 'Ashtart, and she is identified with Astarte by Plutarch, *de Iside et Osiride*, 15 (cf. Cicero, *de Nat. Deor.* iii. 59). Tanith also and other Phœn. goddesses may be only local forms of 'Ashtart (see PHŒNICIANS). In Phœnicia, Cyprus, and most of the islands of the Ægean, statuettes have been found representing a nude female holding a dove. These are similar

in type to the plaques discovered at Gezer, and are generally believed to represent the Phœn. goddess (see Perrot and Chipiez, fig. 381 f.). On Phœn. coins she is represented standing on the prow of a galley with a mural crown on her head or in her hand.

Into Syria proper the cult of 'Ashtart seems never to have spread, on account of the strength of the native goddess Atargatis. Although 'Attar was originally the same as 'Ashtar, the two goddesses had diverged so far that they were never identified. Lucian (*Dea Syr.*) carefully distinguishes them. There was even a temple of Atargatis at Askalon alongside of that of Astarte, and Atargatis elsewhere invaded the territory of 'Ashtart. Accordingly, when Tertullian (*Apol.* 24), Artemidorus (*Oneirocrit.* i. 8), and Lydus (*de Mens.* iii. 35, iv. 44) call Astarte the goddess of Syria, this only shows a loose usage of the name Syria.

From the Phœnicians the cult of 'Ashtart spread to the Greeks and to the Romans. One inscription (*CIG* 6807) shows that her worship was carried, probably by Roman soldiers, as far as Corbridge in England. Hommel (*Neue Jahrb. f. Phil.* cxxv. [1882] 176; *Aufs. u. Abh.* 34) attempts to show that Aphrodite is etymologically the same as 'Ashtart; but this is doubtful. It is certain, however, that the Greeks identified 'Ashtart with Aphrodite (cf. the inscription from Delos in *Bulletin de Corresp. Hellénique*, vi. 1882, p. 473). Aphrodite often bears the title of *Urania* or *Cœlestis*, but this is also a title of 'Ashtart (Jer 7^{18} $44^{17ff. 25}$; Sanchoniathon in Müller, *Fragmenta Hist. Græc.* iii. 569). Many of the seats of Aphrodite worship were originally old Phœn. sanctuaries. The temple of Urania Aphrodite at Askalon (Herod. i. 105) must be the same as the 'house of 'Ashtart' (1 S 31^{10}). The Aphrodite whose rites at Aphaka are described by Lucian (*Dea Syr.* 6) and Eusebius (*Vit. Const.* iii. 55), and whom Sozomen (*HE* ii. 5) calls *Urania*, can have been no other than the Ba'alat of Gebal whose identity with 'Ashtart has already been discussed. The shrines of Aphrodite in Cyprus also were certainly Phœn. foundations, and when Homer calls her Κύπρις and Κυθέρεια (*Il.* v. 330; *Od.* viii. 283, xviii. 193), he shows that she was derived by the Greeks from the Phœnicians. In like manner Venus Erycina of the Romans is identical with the old Phœn. 'Ashtart of Eryx, and Cicero says expressly (*de Nat. Deor.* iii. 59; cf. Lydus, *de Mens.* iv. 44) that there are four Venuses, one originating in Syria and Cyprus, who is called Astarte and is recorded to have wedded Adonis. Compare also what Lucretius says of 'Æneadum genetrix' in the opening lines of *de Rerum Natura*. It is clear, accordingly, that much information in regard to the cult of 'Ashtart may be gained from a careful sifting of the statements of classical authors concerning Aphrodite and Venus (see art. Greek Religion). It is even possible that Rhea, Cybele, and other mother-goddesses of the ancient world may be ultimately derived from the Semitic 'Ashtart, or at least may be modified by her influence (see Atargatis, Ishtar).

Literature.—In addition to the discussions mentioned above, see E. Meyer, art. 'Astarte' in Roscher (1884); Cumont, art. 'Astarte' in Pauly-Wissowa (1896); Baudissin, 'Astarte und Aschera' (with full bibliography of earlier writers) in *PRE*[3] (1896); Driver, 'Ashtoreth' in Hastings' *DB* (1898); Farnell, *CGS*, chs. xxi.–xxiii. (vol. ii. 1896); Moore, 'Ashtoreth' in *EBi* (1899); Barton, 'Ashtoreth and her Influence in the OT,' *JBL* x. 73 ff., 'The Semitic Ishtar Cult' in *Hebraica*, ix. (1893) 133–165, x. (1894) 1–74, *A Sketch of Semitic Origins* (1902); Haupt, 'The Name Istar,' in *JAOS* xxviii. (1907) 112–119; Lewy, *Sem. Fremdw. im Griech.* 148, 186 f. See also the literature under Atargatis, Ishtar.

Lewis Bayles Paton.

ASIA (Ethnology, Religions, and Ethics).—The distinctive title of *officina gentium*, formerly awarded to Asia by common consent, was based mainly on her vast population, which greatly exceeded that of all the rest of the known world. Now it may be taken in a more literal sense, as indicating that this continent is really the *officina*, the true cradle of the human species. In art. Ethnology it is shown that man was specialized most probably in Malaysia during Pliocene times, that is, while that insular region still formed part of the Asiatic mainland.

From this centre of origin and dispersion the first migratory routes, still in the late Pliocene or early Pleistocene Age, may now be followed almost step by step through the Malay Peninsula, Indo-China, and India to the Tibetan plateau, which was not yet so sharply cut off from those lands as it afterwards was by the continuous upheaval of the Himalayan system. Recently a very old station on this route was revealed in the Pahang district, north of Johore (Malay Peninsula), where a rudely worked stone implement was found resting on limestone rock 45 feet below the surface, among some river gravel, above which was a bed of clay 43 feet thick, derived from the decomposition of the greenstone hills skirting the Tui river valley. These hills had been overlaid by the limestone deposit, and it was only when the limestone had been sufficiently denuded to allow the greenstone to emerge that the latter rock began to yield its clay. 'The amount of denudation since this emergence has been at least 300 feet' (*Straits Times*, 14th Feb. 1902). Farther north, Dr. Noetling discovered (1894) another palæolithic station in the Yenangyaung district, Upper Burma, where some chipped flints were found *in situ* in a Pliocene bed associated with *Hipparion antelopinum* and other long extinct fauna (*Natural Science*, April, 1897). In India, palæoliths are yielded, often in great abundance, by the Pleistocene beds and drift gravels of the Mirzāpur, Arcot, Orissa, Hyderābād, Narbadā, Gangetic, and other districts. Many of the objects are of the same type as those of the European Drift, and are certainly contemporaneous or even of earlier date (*JAI* xvii. 57 f.).

These primitive Indo-Malayan wanderers may thus easily have converged both from India and Indo-China on the Tibetan tableland, which, under conditions far more favourable than at present, would almost inevitably have become a new centre of specialization and dispersion for the human, as it has for so many other mammalian, species. Here was ample space, such as seems needed for the evolution of all new varieties; a different and cooler climate than that of the Torrid Zone, though, owing to its then lower altitude, more genial than at present; boundless plains intersected by ranges of moderate height, and diversified by a lacustrine and fluvial system far more extensive than that revealed by modern exploration. Here, therefore, the Indo-Malayan Pleistocene precursor must necessarily have become modified in the process of adaptation to his changed environment, and thus gradually have acquired the physical features characteristic of the Mongol division of mankind. Neither colour of the skin, texture of the hair, nor stature could present any difficulty, since in all these respects the Mongol type stands actually nearer than does the Negro to that of the generalized Quaternary ancestor (de Quatrefages). Taken as a whole, the Mongol archetype differs from the other divisions—black, white, red—mainly in the general yellowish complexion, the broad flat features, with prominent cheek-bones, small mesorrhine nose, mesognathous jaws, brachycephalous (short) head, somewhat sunken eyes, with a narrow almond-shaped aperture between the lids, a vertical fold of skin over the inner canthus, and the outer angle slightly raised; lastly, the highly

characteristic dark blue spot in the lower sacral region peculiar to all true-born Mongols, but disappearing in infancy, and said to be common also to the Simian young (Dr. Bälz, quoted by Dr. O. Nachod, *Gesch. von Japan*, 1906, p. 35). The oblique eye with its fold is also a distinct racial mark, whereas the black, lank, and rather coarse hair, round in transverse section, though constant is not exclusive, being common also to the American aborigines, and forming the most marked somatic link between the Mongol and American Indian divisions.

From the central Tibetan plateau this *Homo asiaticus fuscus*, as he has been named by Linné, radiated during the Stone Ages over the greater part of the continent, northwards to Mongolia, Siberia, and the Amur basin, eastwards to China and Indo-China, westwards to the Tarim basin, the Aralo-Caspian depression, and Mesopotamia, southwards to India as far as the Vindhyan uplands. Most of the Asiatic mainland was thus first occupied by peoples of proto-Mongol stock, who in their several new environments developed a number of sub-groups distinguished by more or less marked physical, mental, and linguistic characters. Such are the so-called *Hyperboreans*, comprising the now nearly extinct Yukaghirs, Chukchis, Koryaks, and Kamchadales of the Arctic region east of the Lena basin; the wide-spread *Mongolo-Turki* family, whose chief branches are the Mongols proper, the Tunguses with the Manchus, Koreans, Japanese, and Liu-Kiu Islanders, in the east, the Turks or Tatars, the Yakuts, Kirghizes, Samoyeds, and Ugro-Finns, in the north and west, ranging from the Lena basin to Lapland and Hungary, and loosely connected by their common agglutinating Ural-Altaic speech, of which Korean and Japanese appear to be aberrant members; the *Tibeto-Chinese* section, including the Tibetans, the Chinese, the Indo-Chinese, and several south Himalayan groups, all of more or less monosyllabic isolating speech; the extinct or absorbed *Akkado-Sumerians* of Babylonia, whose highly agglutinating pre-Semitic language is by many affiliated to the Ural-Altaic family (details in art. ETHNOLOGY, 'Conspectus).'

This first Mongol settlement of Asia left free the southern and south-western regions—a great part of India, Irania, Caucasia, Asia Minor, Syria, Canaan, and Arabia, *i.e.*, about one-fourth of the whole continent. During the early Stone Ages, most of the south-western section was occupied by various branches of the Caucasic division, ranging eastwards from North Africa, where that division appears to have been specialized (see art. AFRICA). Amongst the first arrivals were the *Semites*, who ramified from the common Hamito-Semitic stock, and occupied the Arabian Peninsula, of which they have always held exclusive possession, and whence they migrated later into Mesopotamia, Syria, and Asia Minor, becoming differentiated in their new homes as Himyarites, Arabs, Phœnicians, Canaanites (Israelites, Amorites, and others), Aramæans (Syro-Chaldæans), Assyrians, and perhaps Hittites. Other early streams of migration from Africa are now represented by the *Georgians*, *Circassians*, *Lesghians*, and others of the Caucasus, where they are distinguished by a surprising diversity of speech (whence the expression 'mountain of languages' of the mediæval Arab writers), and often by an almost ideally perfect physical type, owing to which 'Caucasic' was adopted by Blumenbach as a suitable conventional name of the white division, that is, of Linné's *Homo europæus albus*. Then came the Caucasians of Aryan speech, commonly called *Aryans* or *Indo-Europeans*, whose provenance and centres of dispersion are still moot questions, but whose various Asiatic branches are found at the dawn of history already settled in Asia Minor (Hellenes, Phrygians, Lydians, Armenians, and others), in Irania (Medes, Persians, Kurds, Afghans, Baluchi, and others), in the Hindu-Kush, Pamirs, and North India (Siah-Posh, Dards, Galchas, Vedic Aryans).

In India these Aryans were probably preceded by a now submerged *Negrito* element from Malaysia, by the *Kolarians* of the Vindhyan uplands, and by the *Dravidians* of the Deccan and Ceylon. There is no certain clue to the origin of the last two, who present mixed physical characters and speak two radically distinct agglutinating languages, Kolarian especially being of an extreme type. In its morphology it remotely resembles the Finno-Turki branch of the Ural-Altaic family, but, like Dravidian, in other respects differs profoundly from all other known forms of speech. But it is generally, and perhaps rightly, assumed that the Kolarians entered India from the north or north-east, and the Dravidians from the north-west, and that both may have been offshoots of the Mongol stock afterwards greatly modified in their new tropical homes.

This first occupation of Asia mainly by the Mongols, but also largely by the Caucasians, has undergone great changes and shiftings, brought about by the ceaseless migratory movements and racial struggles which, beginning in remote prehistoric times, were continued throughout the historic period, and are still in progress. Evidence is now available to show that the Mongol domain was encroached upon and traversed north and south by neolithic whites penetrating from Europe across Siberia and Mongolia to Manchuria, Korea, and Japan, and apparently from Africa through Syria, Caucasia, Irania, and north India to Indo-China and Malaysia. The strain of white blood is very marked amongst the Manchus and Koreans, while the Ainus, the true aborigines of Japan, are now definitely declared by Nachod to be neolithic Caucasians (*Gesch. von Japan*, 1906, I. i.). The route followed seems indicated by the station near Tomsk, West Siberia, where, in 1896, numerous worked flints and some human remains were found by Prof. Kashchenko in association with those of a mammoth. Farther east, A. P. Mositz explored (1895) five pre-historic stations in Transbaikalia, in one of which he found two highly dolichocephalic pre-Mongol skulls of the early European type (*L'Anthropologie*, 1896, p. 82). In Korea, where the evidence accumulates, H. S. Saunderson remarks on 'the frequency with which features almost European in refinement and Caucasian in cast are met with.' Here the numerous flint implements and dolmens, like those of Britain and North Africa, must be accredited to the San-Sau aborigines who occupied the peninsula long before its conquest by the Mongoloid Sien-pi from Manchuria.

The southern highway may similarly be traced from Africa through Syria, where Prof. Zumoffen describes seven stations of the early and later Stone Ages (*L'Anthropologie*, 1897, pp. 272, 426), and thence through Caucasia, India, and the Khāsi Hills to Indo-China, where the evidence again abounds. Here are numerous Caucasic groups intermingled or associated with the Mongol substratum, and conspicuous especially amongst the Kahyens of North Burma, the Cambodians of the Lower Mekhong, the Mosso, Lolo, Man-tse, and many other hillmen all along the Chinese borderlands from Assam to Annam. Mrs. Bishop (Miss Bird) describes the white Man-tse, visited by her in 1896, as 'quite Caucasian, both men and women being very handsome.' Prince Henri d'Orléans was reminded by the Kiu-tse (Khanungs, Lu-tsé) of some of his European acquaintances. Dr. Billet met some Nong people 'with light and even

red hair'; and M. R. Verneau tells us that the Mans and Thai 'differ altogether from the Mongol group represented by the Chinese and Annamese. The Mans especially show striking affinities with the Aryan type' (*L'Anthropologie*, 1896, p. 602).

In the extreme west the racial movements resulted in Mesopotamia in the extinction of the Akkado-Sumerian Mongols by the Caucasic Semites over 4000 years ago. After the rise of Islām these and most other Semites became Arabized in speech and religion, while in Asia Minor nearly all the early Caucasic peoples were displaced by the Muhammadan Turki hordes from Central Asia. Anatolia has thus become by conquest a part of the Mongol domain, which has also encroached on a considerable section of North Irania, that is, the hilly district between Herāt and Kābul, now occupied by numerous Aimak and Hazara tribes, who are ethnically Mongolo-Turks, Muhammadans in religion, and now of Aryan (Persian) speech.

In Irania and the Aralo-Caspian steppe, that is, the *Irān*, or 'land of light,' and *Turān*, the 'land of night,' of the Persian poet-chroniclers, a perpetual struggle for the ascendancy has been maintained throughout the historic period between the nomad predatory hordes of the northern wastes and the cultured agricultural populations of the fertile southern lands. These southern Aryans were dominant under the old Persian empire of the Achæmenians, which extended from the Ægean to the Oxus and Indus, and fostered the growth of flourishing settled communities throughout Central Asia. Thus it was that Irān interpenetrated Turān, expanded its higher culture by the very enlargement of its own borders, and, when further stimulated by Hellenic influences, invaded the wilderness itself. In the Tarim basin, at that time a fertile well-watered region, there arose a great centre of Iranian and Græco-Bactrian civilization, the remains of which, after lying buried for some two thousand years under the advancing sands of the Takla-Makan Desert, have again been brought to light by the Sven Hedin expeditions of 1895 and 1900, and more fully explored by Dr. M. A. Stein, who in 1901 recovered great quantities of hidden treasures, now deposited in the British Museum (*Sand-buried Ruins of Khotan*, 1903).

Later, the Caucasian ascendancy in Central Asia disappeared before the repeated invasions of Huns, Finns, Turks, and other Mongol hordes, but has been again restored, at least politically, by the spread of the Russian power over the trans-Caspian region in recent times. To these incessant ethnical movements, dislocations, and interminglings are due those intermediate Mongolo-Caucasic populations, such as the Ugrians and other Finns, the Uzbegs, Turkomans, Hazaras, and other Turki groups, who in their physical characteristics present every shade of transition between the typical white and yellow races.

In many places the cultures and social and religious institutions are similarly intermingled, although in Asia the dominant religions are in great measure distributed according to race. Thus the Tunguses and most other Siberian aborigines are pronounced shamanists; the Hindus extreme polytheists; the Tibetans, Sinhalese, Indo-Chinese, Chinese, Japanese, and Mongols proper all nominal Buddhists; the Arabs, Kurds, Afghans, Turkomans, Uzbegs, Kirghizes, and Turks generally Sunnites ('orthodox' Muhammadans); the Persians, the Moors of Ceylon, and the Hazaras mostly Shīites ('separatist' Muhammadans). Thus is seen the curious spectacle of a nomad Turki group (Kirghizes) and a nomad Mongol group (Kalmuks) encamped side by side on the Lower Volga plains, both intruders from Asia, but the former strict Sunnites, the latter Buddhists like all their Eastern kindred. This distribution, however, is purely superficial, since below the outward forms, often merely official, as in Tibet, Siam, Annam, and China, the old primitive beliefs still everywhere survive in their full vigour. In Asia these beliefs represent all the earliest developments of the religious sentiment—pure animism, personification of the powers of nature, and ancestor-worship (art. ETHNOLOGY, § 9)—not merely in juxtaposition, but often in the closest possible association. Thus ancestor-worship, characteristic of Africa, and animal-cult, dominant in America, are both prevalent in China, jointly with the belief in good and bad aerial and water spirits, and an outward adherence to the three recognized national religions — the three 'State Churches,' as they have been called—*fo-kiao* (Buddhism), *tao-kiao* (Taoism), and *ju-kiao* (Confucianism).

'In every district are practised diverse forms of worship between which no clear dividing line can be drawn, and, as in Annam, the same persons may be at once followers of Confucius, Lao-tse, and Buddha. In fact, such is the position of the emperor, who belongs *ex officio* to all three of these State religions, and scrupulously takes part in their various observances. There is even some truth in the Chinese view that "all three make but one religion," the first appealing to man's moral nature, the second to the instinct of self-preservation, the third to the higher sphere of thought and contemplation. But behind, one might say above, it all, the old animism still prevails, manifested in a multitude of superstitious practices, whose purport is to appease the evil and secure the favour of the good spirits, the *Feng-shui*, or *Fung-shui*, air and water genii who have to be reckoned with in all the weightiest as well as the most trivial occurrences of daily life. These, with the ghosts of their ancestors, by whom the whole land is haunted, are the bane of the Chinaman's existence. Everything depends on maintaining a perfect balance between the two principles represented by the 'White Tiger' and the 'Azure Dragon,' who guard the approaches of every dwelling, and whose opposing influences have to be nicely adjusted by the well-paid professors of the magic arts' (Keane, *Man Past and Present*, p. 223).

The 'professors' here referred to correspond in China to the *shamans* who control the religious world in Siberia. Shamanism will be separately dealt with, and here it may suffice to say that it is not a particular system of belief, but rather a peculiar phase of thought, which is widely distributed, and appears to be a necessary stage in the progress of all religious development. Thus the shaman belongs to no special form of belief, but holds a position somewhat intermediate between the medicine-man and wizard of the lower, and the marabout and true priest of the higher, religious systems. Although in its more advanced state the office tends to become hereditary and thus to crystallize into a regular hierarchy, in Siberia any one may become a shaman who has sufficient will-power to enforce belief in his claim to supernatural virtues, and to exercise them as intercessor between the invisible and otherwise inaccessible deities and their votaries. Hence in Siberia beneath the general shaman-craft there are all kinds of animistic beliefs, practices, and superstitions, in which animal-cult, as in North America, plays a much larger part than ancestor- or nature-worship. Wer-wolf notions are wide-spread, and the *Tatars* of the Minusinsk district about the Abakan affluent of the Yenisei, although baptized Christians, are still under the influence of the shamans, and credit the *Ainas*, that is, the invisible spirits of evil, with the power of assuming the form of dogs, foxes, birds, snakes, and other animals. These Ainas dwell in the underground regions, and are ruled by the *Irle-Khan*, who is also the familiar spirit and patron of the shamans.

So also the *Yakuts* of the Lena basin have a subordinate deity, the *Vekhsyt*, or 'Advocate,' who from time to time visits the abodes of mortals in the form of a white horse, an eagle, a cuckoo, or some other bird, and carries messages to and fro between them and the 'Merciful Chief,' creator of the world, who with his wife, 'Shining in Glory,'

is all-powerful. These are beneficent beings, but nearly all the rest appear to be devils, and amongst the Yakuts demonolatry is certainly carried to its extreme limits. The malevolent aerial spirits form twenty-seven tribes ruled by a kind of Satan, who with his wife has a numerous progeny, all hostile to man. *Sugai-toyon*, the Yakut *Juppiter Tonans*, is the instrument of his vengeance, while in the underground *Mung-tar*, abode of 'Everlasting Woe,' there dwell eight other hosts of demons under *Asharay-bioho*, the 'Mighty,' supreme in Hades. These hosts have all their female consorts, and are joined by the shamans after death. Another potent divinity is *Enakhsys*, the 'Cowherdess,' who is much dreaded because of her power to harm their cattle, strike them with murrain, and destroy the calves; hence her wrath has to be turned aside by many costly offerings (Ovarovsky).

Despite their veneer of Russian Orthodoxy, the neighbouring *Samoyeds* still cling tenaciously to their old pagan beliefs. 'As long as things go well with him [the Samoyed], he is a Christian; but should his reindeer die, or other catastrophe happen, he immediately returns to his old god *Num* or *Chaddi*. . . . He conducts his heathen services by night and in secret, and carefully screens from sight any image of Chaddi' (F. G. Jackson, *The Great Frozen Land*, 1895, p. 84). Several instances are here mentioned of this compromise between the old and the new—a subject more fully dealt with in art. ABORIGINES. Thus on the Samoyed graves the wooden cross is supplemented by an inverted sledge, which is intended to convey the dead safely over the snows of the under world. They also hold in awe the rings of stones within which human sacrifices appear to have been formerly offered to propitiate Chaddi; and although these practices have ceased, 'it is only a few years ago that a Samoyed living on Novaia Zemlia sacrificed a young girl' (*ib.*). Many of these aborigines hold that death is the end of everything, that good and evil deeds receive their deserts in this life, and that immortality is reserved only for the *tatibé*, that is, the Samoyed magicians or shamans, who either remain quietly in their graves or else wander about at night seeking an opportunity to benefit their friends or harm their enemies. Despite this limited measure of immortality, in the graves are deposited all kinds of useful objects, such as clothing, cooking-pots, knives, horns filled with tobacco, guns, bows and arrows for the men, needles, thread, or sinews for sewing, and scraping-knives for the women, everything being damaged to prevent it from being stolen. The explanation of this seeming inconsistency is that the departed do not die at once, but survive for some time in the grave, where they will require the same objects that they needed in this life.

The above-mentioned Num is an aerial god who dwells in the sky, where he generates thunder and lightning, sends down rain and snow, and rules the winds and storms. The sky itself, also called Num (cf. *Diespiter*), is his visible embodiment, and to his essence also belong the moon and stars through which he manifests himself at night, the rainbow (*numbano*) which forms the hem of his mantle, and the sun in which he is chiefly personified, and which is greeted at its rising and setting with suitable invocations. Some even hold that the earth, the sea, and all visible nature form part of the same divine system, thus anticipating the monistic and pantheistic concepts of more advanced theosophies. Num knows and sees all that happens upon earth; if men are good and benevolent, he prospers all their doings, increases their reindeer herds (one of his epithets is *Jilibeam-baertie*, 'cattle-ward'), blesses their hunting expeditions, and endows them with many days. But if they lead wicked lives, they fall into poverty and misery, and die prematurely. There is even a sort of moral code containing the precepts by which all should be guided who wish to stand well with Num: 'Believe in Num. Believe in the spirit of evil, and that he can be appeased by sacrifices, that no misfortune befall thee, or thy family, or thy herds, that he may save thee from sickness and assist thee in thy labours. Believe in the spirits that they may do thee no evil. Do not jump over the sledge in which the gods are placed; honour thy parents; reverence thy elders; kill not, quarrel not, speak no evil, tend the herds, help the poor, and Num will reward thee. Speak not of what thou hast seen, that no one may know from thee what has happened.'

Yet beneath this outward display of lofty religious and ethical notions, most of the Samoyeds are still mainly nature-worshippers and animists. They show great respect especially for the bear, which with the wolf is held in the highest veneration in Siberia. Nevertheless the Samoyeds, like the Ainus and other Eastern peoples, will capture and kill it whenever they can. When it is dead, the claws of its forepaws are usually amputated, the object being, by a strange confusion of ideas, to protect themselves from harm when next they venture to attack one of the species.

Like the Samoyeds, the *Ostyaks* of the Yenisei region have a god of the sky, *Turm* or *Urt*, who sends thunder and storms, but is also credited with a high sense of honour and rectitude. He mingles amongst mortals, accompanying them wherever they go, and judging them according to their deserts, for no act, good or evil, can escape his notice. He is inaccessible even to the shamans; no appeals can bend his will; and he controls human destinies and the course of events according to the eternal laws of justice. No sacrifices can secure his favour, since he looks only to merit in the disposal of his gifts, without the least regard to prayers or offerings. Hence in times of distress and trouble it is useless to seek his aid. It is the lesser deities and the demons alone that can be swayed by the mediation of the shamans, and, as amongst the Ugrian Finns, they are generally represented by rude stone or wooden effigies, often of extremely fantastic form. Thus Ortik, the patron of the hunt, is figured as a legless horse stuffed with hair and skins, with two linen sleeves for arms, a linen skirt, and a face made of a hammered metal plate nailed to a block of wood. A log arrayed in beaver skins stands for Meig, a peculiarly malignant goblin, who plays mischievous pranks with people, leading them astray in the woods, and overwhelming them in snowstorms. In this strange pantheon a place is also found for both the wolf and the bear, and when one of these animals is bagged in the hunt it is regarded as a stroke of luck celebrated with much feasting and revelry.

'The skin is stuffed with hay, and the people collect from all quarters to jeer, mock, and spit upon the helpless enemy. They sing songs of triumph expressed in words of insult and defiance. After their spirit of merriment is exhausted, they set up on its hind legs in the corner of the hut the now harmless effigy of the ferocious beast, and bestow upon it, for a considerable time, the veneration of a tutelar god' (A. Featherman, *Races of Mankind*, 1891, iv. 564).

But it is in the extreme east, amongst the *Gilyaks* and *Ainus*, that this animal-cult has acquired its highest development. The *kohr* (bear), who represents the *Kur*, or Lord of the heavens, is one of the chief Gilyak divinities, although under certain circumstances he is occasionally captured and eaten. When taken in his lair while hibernating in winter, he is secured by a leathern noose and dragged along with shouts and cries intended to stupefy the still half-dozing victim. He is then kept in confinement, fed and fattened on fish, and at last slain on his feast-day, after a fight in which the villagers are required to attack him without arms. Similar strange practices prevail amongst the Ainus of Yezo, North Japan, as described by the late Mrs. Bishop:

'The peculiarity which distinguishes this rude mythology is the "worship" of the bear, the Yezo bear being one of the finest of his species. But it is impossible to understand the feelings by which it is prompted, for they worship it after their fashion, and set up its head in their villages, yet they trap it, kill it, eat it, and sell its skin. There is no doubt that this wild beast inspires more of the feeling which prompts worship than the inanimate forces of nature, and the Ainus may be distinguished as bear-worshippers, and their greatest religious festival, or Saturnalia, as the Festival of the Bear. Gentle and peaceable as they are, they have a great admiration for fierceness and courage; and the bear, which is the strongest, fiercest, and most courageous animal known to them, has probably in all

ages inspired them with veneration. Some of their rude chants are in praise of the bear, and their highest eulogy on a man is to compare him to a bear' (*Unbeaten Tracks in Japan*[4], 1885, ii. 78). For further details and a possible explanation of this strange cult, see the art. AINUS in vol. i. p. 249[a], and art. ANIMALS, *ib.* p. 502[b].

In Mongolia the never-dying superstitions associated with nature-worship, animism, demonolatry, and witchcraft still survive beneath the outward show of official lamaism. Indeed, the whole system of Buddhism is everywhere coloured and modified, as in most other Buddhist lands, by the old local beliefs. The magicians are still appealed to when the flocks are smitten by disease; when 'fine weather,' which there means rain, is needed; when sickness troubles the household; or when some healthy but unfriendly neighbour is to be stricken by a mortal illness or fatal accident. The very inmates of the huge lamaseries bear the name of 'Samaneans,' perhaps a corrupt form of the Tungus word *shaman*, as if the Buddhist monks were merely the spiritual successors of the old medicine-men. Every possible transition is thus observed between the former nature- and spirit-worship and the peculiar form of lamaism introduced from Tibet after the death of Jenghiz Khan.

In Tibet itself much the same relations prevail between the 'State Church' and the pre-Buddhist *Bonbo* or *Boa-ho* religion, which persists, especially in the central and eastern provinces, side by side with the national creed. From the colour of the robes usually worn by its priests, it is known as the sect of the 'Blacks,' in contradistinction to the orthodox 'Yellow' and dissenting 'Red' lamaists; and, as now constituted, its origin is attributed to Shen-rab (Gsen-rabs), who flourished about the 5th cent. before the new era, and is venerated as the eqnal of Buddha himself. His followers, who were powerful enough to drive Buddhism from Tibet in the 10th cent., worship eighteen chief deities, the most popular being the red and black demons, the snake devil, and especially the fiery tiger-god, father of all the subordinate members of this truly diabolical pantheon. The sacred symbol of the Bonbo sect is the ubiquitous *swastika* with the hooks of the cross reversed, 卍 instead of 卐, a change said to be due to the practice of turning the prayer-wheel from right to left as the Red lamas do, instead of from left to right as is the orthodox way. The common Buddhist formula of six syllables—*om-ma-ni-pad-me-hum*—is also replaced by one of seven syllables—*ma-tri-mon-tre-sa-la-dzun* (Sarat Chandra Das, in *JRASBe*, 1881–1882).

In the upland regions skirting the Brahmaputra, between Tibet and Upper Burma, there are a multitude of primitive Mongoloid peoples—Abors, Mishmis, Garos, Khāsis, Koochis, Bodos, Kacharis, Lushais, Nagas, Kukis, Chins, Kahyens, Karens, and many others—who have been little or not at all affected either by Buddhist or Hindu influences, and whose religions or mythologies consequently present features often of exceptional interest. Thus the gods of the *Garos* are mostly vague mythical entities, dwelling in the hills or in the sky, but possessing no definite attributes or powers, and associated with many wonderful cosmical myths. Salgong, the chief deity, marries Apongma, a divine princess who descends on earth and gives birth to Kengra Barsa, father of fire and of all the heavenly bodies, and also to a daughter, Mining Mija, who marries the son of Donjogma, mother of mankind. From a granddaughter of Salgong spring the mothers of the Tibetan Bhotiyas, of the Garos, and of the Feringies (English), and so on. But beneath these fanciful legends, many of them obviously later inventions, there persists the old nature-worship, as seen in the personification of the sun, moon, and stars, of the hills, streams, and forests, with their indwelling genii, to whom are attributed divine powers as rulers of the universe, and controllers of human destinies and of all natural phenomena.

'According to the *Kuki* creation myth, the face of the earth was originally covered with one vast sheet of water inhabited by a huge worm. One day the Creator, passing over this worm, dropped a small piece of clay, saying, "Of this I mean to make a land and people it." "Nonsense," said the worm; "look here, I can swallow it." But the lump passing out of his body grew and grew until it became the world we now see. Then man sprang out of the ground by the will of the three gods, Lambra the Creator, without whose consent nothing can be done, Golarai, god of death, and the beneficent Dudukal, who operates through his wife Fapité' (C. A. Soppitt, *Kuki-Lushai Tribes*, 1887).

The *Tawyans*, a branch of the numerous Chin family, have a tradition that they were formerly very powerful, but were ruined by their insane efforts to capture the sun. With a sort of Jacob's ladder they mounted higher and higher, but, growing tired, began to quarrel among themselves, until one day, while half of them were clambering up the pole, the other half below cut it down just as they were about to seize the sun.

Although often described as devil-worshippers, the *Chins* appear to worship neither god nor devil. The northern groups believe there is no *Ens Supremum*; and although the southerners have a Kozin, or head god, they pay him no homage, and never look to him for any favours, except perhaps exemption from such troubles as he might be disposed to inflict on those who offend him in this world. There are also the countless *nats*, or spirits of the air, the streams, the jungle, the hills, and there are those that swarm in the house and in the fields. None of these can do any good, though all may do harm unless soothed by gifts. *Mithikwa*, the 'Village of the Dead,' is divided into two wards, the *Pwethikwa*, abode of the happy, and the *Sathikwa*, reserved for the wretches who die *unavenged*, and must there bide till their murder is wiped out in blood. Thus the vendetta receives divine sanction, strengthened by the belief that the slain becomes the slave of the slayer in Pwethikwa.

'Should the slayer himself be slain, then the first slain is the slave of the second slain, who in turn is the slave of the man who killed him. Whether a man has been honest or dishonest in this world is of no consequence in the next existence; but if he has killed many people in this world, he has many slaves to serve him in his future existence; if he has killed many wild animals, then he will start well supplied with food, for all that he kills on earth are his in the future existence. In the next existence hunting and drinking will certainly be practised, but whether fighting and raiding will be indulged in is unknown' (Carey and Tuck, *The Chin Hills*, 1896, i. 196).

Before the advent of the Vedic Aryans, the chthonic gods were probably supreme throughout India, and, despite the wide diffusion of Hinduism, they are still supreme amongst most of the Dravidian, Kolarian, and mixed Aryo-Dravidian aborigines. But these gods themselves are nearly all hostile to man, and consequently not easily distinguishable from devils. Hence it is that we have now official assurance that the Pahārias and other low castes, and even some of the high castes, are for the most part demon-worshippers; and this is specially true of the aborigines of Southern India. In the Cochin *Census Report for 1901*, M. Sankara Menon writes:

'Nowhere perhaps has the belief in demons a stronger hold on the popular mind than in this part of India. The existence of numerous exorcists amongst the various sections of the Hindu population, from the highest Nambudri to the lowest Paraiyan, bears ample testimony to this fact. There is a separate caste, the *Panans*, amongst whom exorcisms, sorcery, and witchcraft are hereditary occupations. The Panan is quite as indispensable a factor in the social organism of the village as the barber and the washerman. There are again certain families who have special control over particular classes of demons.' The priests attached to many families have their special family deities 'by whose aid they profess to control the action of demons and spirits. It may sound strange, but it is none the less true, that there are exorcists amongst native Christians and Musalmāns

as well. One interesting fact is that high-class Hindus exercise their magical influence by propitiating only the more refined and sublime manifestations of the gods of the pantheon, whereas the low-caste Hindus do the same by propitiating Kali in her more terrible and bloodthirsty aspects.' Some of the more evil-minded demons are 'supposed to be wandering about in mid-air, or haunting houses, trees, wells, or tanks, ever bent upon doing evil to those that come in their way. They are supposed to live upon the offerings made to them by their votaries, who are continually tormented for the purpose. Illness, accidents, and other misfortunes are often attributed to the evil influence of demons or spirits. At the sick-bed of a person, the astrologer, the exorcist, and the physician are all in attendance. The astrologer divines the causes, and prescribes propitiatory remedies. The exorcist then comes in, and goes through a more or less elaborate ceremony to drive out the demons or spirits. The physician steps in last to treat the patient, for the common belief is that so long as the patient is possessed, medicine can have no effect. The demons of smallpox and cholera, and myriads of others, have all to be coaxed into good humour to desist from doing evil. Ghosts or demons often appear in terrible form before they enter into human bodies, and with the sudden disappearance of the phantoms or apparitions a person believes himself to be possessed, and falls ill' (*ib.*).

In some places snake-worship ranks next to demonology even amongst the high castes. In Malabar nearly all the compounds have their serpent-groves, with effigies of the reptiles carved on blocks of stone; and here no orthodox Hindu will ever kill a snake, even if bitten, since an injury done to any of them would be sure to bring on leprosy, ophthalmia, or other ailments. Serpents are treated as members of the family, and served with milk, fruits, and all kinds of dainties. None but a Brâhman would dare to pluck even a flower or a twig from the trees growing in the snake-grove, where songs are chanted and religious rites observed in honour of these reptiles, which are, in fact, worshipped as gods or demons.

In the direction of the north the native superstitions seem to touch even a lower level, and among the *Kolarians* of the Vindhya uplands they were till recently associated with human sacrifices of a peculiarly barbarous character. In order to secure good harvests, the victim, often a child captured or bought from a neighbouring tribe, was put to a lingering death, by being slowly hacked to pieces with an axe, the supposition being that the greater the suffering the better pleased would be the god, and the heavier the crops of cereals. Of the *Mundas*, one of the largest Kolarian tribes, the chief social feature is their highly developed totemic system. The number of totems almost passes belief, and includes such remarkable objects as rice-weevils, cocoons, mice, leeches, mushrooms, ants, frogs, eels, worms, or even moonlight, red earth, umbrellas, ghî (clarified butter), or walking-sticks. These are all animated by indwelling spirits, so that we have here the lowest conceivable form of the animism that lies at the foundation of all natural religions.

Still more debased than the full-blood Kolarian and Dravidian aborigines are the *Aryo-Dravidian* half-breeds, who are interspersed over the northern provinces, and to their own crude religious dawnings often superadd the revolting ideas and practices of the later corrupt Hinduism. Here the blending of the higher and lower races, of the 'twice-born' Aryas ('Nobles'), and the scarcely human Nâgas, 'kindred of the dragon,' dates back to the earliest recorded times, and is typified in the mythical marriage of Arjuna, one of the high-born Pândavas, with Ulûpi, daughter of the Nâga king Vâsuki. The union took place in the still sacred city of Hardwâr on the upper Ganges, which is described as inhabited by 2000 crores (a crore = ten millions) of snake-people, whose wives were of peerless beauty; and here was also a lake which contained the waters of life, wherein all those snake-people were wont to bathe. During their later migrations the already mixed Aryas encountered the vile Dasyus, proto-Kolarians of the south Gangetic woodlands, for whom no terms of abuse are too strong, yet with multitudes of whom a fusion was eventually effected. Thus it was that 'from the union of the white, the yellow, and the black men arose the modern people of northern India' (W. Crooke). That the union was not merely ethnical, but also social and religious, is seen in the *baigâ*, or devil-hunting priest of the jungle tribes, who in the Hindu system became a Brâhman *Ojha*, or exorcizer of evil spirits; and we know that in later times whole sections of the lower races were raised to priestly rank. But this tendency towards complete fusion of all the racial elements was arrested by the institution of caste, which, though at present occupational, had originally an ethnical basis (see art. CASTE).

A clear insight into these obscure relations is necessary to a right understanding of the strange intermingling of primitive and Hindu social and religious notions prevalent amongst these mixed northern groups. But even so, great difficulties remain, and Mr. W. Crooke, himself a most diligent and shrewd observer, finds it

'all but impossible to frame a working definition of a Hindu; Musalmâns of the lower class cling to many of the beliefs of the faith from which they were originally drawn; everywhere in the lower strata the forms of faith known as Brâhmanical or Animistic constantly overlap. . . . The natural cleavage line is between Brâhmanism and Animism, and it has been found possible on this basis to define the religious beliefs of eastern and southern India, but in northern India this distinction is unworkable. Most of the menial and hill tribes profess theoretically a belief in the Brâhmanical pantheon; at the same time even the higher classes are more or less influenced by the Animistic beliefs of the lower races' (*The N.W. Provs. of India*, 1897, ch. v.). And elsewhere: 'It is little use defining a man as a Vaishnava if we know that on occasion he will worship other gods as well—will reverence the cow or the pipal tree, Mother Ganges, or the goddess of smallpox' (p. 242).

As pointed out by Mr. E. A. Gait (*General Report of the Census of India*, 1901, p. 358), the animism here in question—a belief in and dread of impersonal powers to be coerced by magic—appears to have passed into the Hindu system from two different sources. Some of its elements 'are derived from the Vedic Aryans themselves, others from the Dravidian [and Kolarian] races who have been absorbed into Hinduism.' But 'it would be fruitless to attempt to distinguish the two streams of magical usage — the Vedic and the Animistic. They are of mixed parentage, like the people who observe them, partly Indo-Aryan and partly Dravidian.' It now becomes possible to understand the picture of chaotic religious notions — some utterly revolting and immoral, others betraying some glimmering of a moral sense, but the great majority degrading—by which these mixed populations are animated. Thus some of the wide-spread *Doms*, most probably the parent-stock of the European Gipsies (Dom = Rom, *r* and *d* interchangeable), hold that raiding and robbery have divine sanction. Before starting on a nocturnal expedition they sacrifice to Sansâri Mâi, the chthonic goddess patroness of thieves, and pray in a low voice that a dark night may cloak their designs and the gang escape detection, just as the *furum dea*, Laverna, was silently invoked by the Roman *latro*:

'Labra movet metuens audiri, Pulchra Laverna,
Da mihi fallere; da justo sanctoque videri;
Noctem peccatis, et fraudibus objice nubem.'
(Hor. *Epist.* I. xvi. 60-62).

Yet these Doms, scavengers in the towns, vagrants or wandering tinkers in the country, are not quite irreclaimable, and the recent efforts to civilize them have met with a measure of success in some districts. They have even a family priest, always the sister's son, which points to matriarchal times when kinship was reckoned through the female line.

The *Agariâs* of Mirzapur, all smelters and forgers, call themselves Hindus, yet worship the tribal deity Lohâsur Devi, goddess of iron (*lohâ* =

'iron'), and also employ the *baigā* (see above) to worship the old local godlings. The black goat offered to Lohāsur Devi is worshipped before being sacrificed, and goats and fowls are also offered to the ghosts of the dead who appear to them in dreams. At the end of the difficult road to the heaven of Parameshvar (Vishnu) is a great gate guarded by terrible demons, who allow no woman to pass unless tatued. There are twenty-four forms of tatus, and the women who can show no mark of some god on their bodies are tormented by the gate-keepers, who brand them with a hot iron, roll them in thorns, and fling them down from the top of the gate. Tatuing has thus become a religious obligation, and although perhaps totemistic in origin, the forms—Ganeśa, Śiva, Krishna as flute-player, the moon, the peacock, and many others—are now merely charms to ward off evils and gain access to the abode of Vishnu. The whole religious world of the Agariās is an inextricably interwoven system of primitive and Hindu notions.

Similarly the *Agarwālas* of the Upper Ganges, although reckoned as Vaishnavas, call themselves, and are, *Nāga Upāsaki*, 'Snake-worshippers,' doing homage to *Āstika Muni*, who sprang from the sister of the great serpent Vāsuki. But there is also a deity Ohur, who saves women from widowhood, besides the tribal deity *Lakshmi* and several trees—pipal, kadam, sami, babul—which are held in special honour. Socially the Agarwālas are landowners, bankers, and money-lenders, but for them animal food, as well as onions, garlic, carrots, and turnips, is tabu, and a good illustration of the countless hair-splitting caste distinctions is the refusal of the women to eat the food prepared by their daughters-in-law.

One might almost suppose that the Hindu snake-cult had passed into Irania, so general is the respect in which these reptiles are held even by the Persian Shī'ites. No Persian will willingly kill a house-snake, partly because he thinks it harmless, but chiefly because he supposes it to be tenanted by the spirit of the late owner of the house. When one was shot by Dr. C. J. Wills, the whole household 'sulked and looked black for a week,' although the landlord, being an educated man, was glad, 'the clock-winding snake' having plagued him for years. Equally prevalent are the superstitions associated with omens, the evil eye, and astrology. Nothing serious is done in Persia without the taking of an omen, the casting of lots, or the consulting of an astrologer. A favourite place for taking omens is the tomb of the Shirazi poet and mystic, Hafiz, to whom are paid almost divine honours. Recourse is had to the *munajjim*, 'astrologer,' on all occasions; every village has its professional diviner, every town several, whose chief business it is to predict lucky hours or days, to read the future, and to discover stolen property, and in this they are often successful by laying pitfalls into which the thieves unwittingly stumble.

Apart from the fanatical Bābīs (*q.v.*), and the periodical outbursts of religious frenzy connected with the anniversary of the martyrs Husain and Hasan, the Persian Shī'ites are not particularly zealous Muhammadans. Many, indeed, of the educated classes prefer the writings of Hafiz and Sadi to the Qur'ān, are theists and even advanced freethinkers, while scepticism is wide-spread amongst the higher military and official classes. 'These say no prayers, keep no fasts, have no belief, and are utterly dead to everything but what they believe to be their own interests. Many openly boast their disbelief in anything, and this is done with impunity' (Wills, *The Land of the Lion and the Sun*, 1883, p. 339). One thing is clear. There is no danger that the monotheism which has supplanted the old Zoroastrian dualism in Persia will ever sink, like the Vedic system, to the low level of the primitive chthonic beliefs. It will rather be dissipated, like the Western creeds, in the atmosphere of philosophic unbelief.

On the other hand, these primitive beliefs are still rife in Arabia, the very cradle of Muhammadan monotheism. Muhammad enthroned Allāh, but failed to abolish the *jinns*, the *afrits*, and *shaitans* that still haunt the sandy wastes, and swarm in every wady, cave, well, and hillside of the peninsula. But it has to be remembered that the Persians are Iranians, that is, one of the noblest branches of the Aryan family, while the Arabs are Semites whose primeval 'monotheism' is probably a delusion, and whose early beliefs were 'of the earth earthy,' originally associated with the Asherahs, the Astarte and Tammuz myths, the abominations of the Baals and Molechs, and all that is implied in the primitive phallus-worship.

For the higher religions, all of which took their rise in Asia, see special articles CHRISTIANITY, JUDAISM, MUHAMMADANISM, ZOROASTRIANISM, BRAHMANISM, BUDDHISM, SHINTOISM.

A. H. KEANE.

AŚOKA.—Aśoka, emperor of India (B.C. 273-231), was the grandson of Chandragupta Maurya (*q.v.*), and son of Bindusāra, whom he succeeded on the throne in B.C. 273 or 272, although his formal coronation did not take place until B.C. 269, having perhaps been delayed by a disputed succession. According to tradition, Aśoka in his youth represented his father as viceroy at Taxila in the Panjāb, and also at Ujjain in Mālwā. Silly legends represent him as having attained power by the massacre of ninety-nine brothers, and as having been a monster of cruelty in the early years of his reign; but these are mere fables. In B.C. 261 he rounded off his vast inherited dominions by the annexation of the kingdom of Kalingā on the coast of the Bay of Bengal, corresponding with the 'Northern Circars' and part of Orissa. This was the only aggressive war of the reign. The suffering inflicted upon the conquered people made a profound impression on the conscience of Aśoka, who at about this time came under the influence of Buddhist teachers, to whom war was abhorrent. Four years later, the emperor solemnly recorded in inscriptions engraved upon the rocks his 'profound sorrow and regret' for the misery caused by his ambition, and declared that 'the loss of even the hundredth or thousandth part of the persons who were then slain, carried away captive, or done to death in Kalingā, would now be a matter of deep regret to His Majesty. Although a man should do him an injury, His Majesty holds that it must be patiently borne, so far as it can possibly be borne.'

Aśoka acted on the principle thus publicly professed and indelibly recorded, and henceforward was a man of peace, devoted to the inculcation and propagation of the Law of Piety (*dharma*), as conceived by him in accordance with the teaching of the Buddha. At a date not exactly known he

qualified himself for the highest rewards of a Buddhist saint, by accepting ordination as a monk, and donning the yellow robe of the Order, but did not then abdicate his royal power, although it is possible that in the last year of his life he withdrew from all worldly affairs. He passed away in B.C. 232 or 231 after a reign of fully forty years. The scene of his death may have been a monastery on the Golden Hill (Suvarṇagiri) at Rājāgrihā, the capital of the early kings of Magadha (S. Bihār).

The empire which Aśoka ruled comprised, in modern terminology, Afghanistan south of the Hindū Kush, Balūchistān, Sind, the valley of Kashmīr, Nepāl, the lower Himālaya, and the whole of India proper, except the southern extremity below the latitude of Madras. The central regions seem to have been governed directly from Pāṭaliputra, the modern Pātna, then on the north bank of the Sōn, the great city which continued for centuries to be the capital of India. The outlying provinces were controlled by at least four viceroys, who were often members of the Imperial family; and the orders of these high officers were executed by a regularly organized departmental service of officials. The capital was administered by a municipal commission divided into six boards, and similar arrangements probably existed in the other principal cities. A standing army of all arms —cavalry, infantry, chariots, and war elephants —was maintained in great force, and public order was well preserved.

When Aśoka became a devoted disciple of Buddha, the whole machinery of government was utilized by him for the teaching and dissemination of his Master's doctrine, and produced commensurate effects.

Gautama the Buddha, the founder of the Buddhist system as known to history, had confined his ministry to a region of moderate extent in the Gangetic valley, which may be roughly defined as lying between Gayā, Prayāg or Allāhābād, and the Himālayas. When he died in B.C. 487 or 486, his followers formed but one of many rival sects in that region, and the society of ordained monks organized by him had only limited and local influence. There is no reason to believe that the vogue of the Buddhist sect had increased very greatly during the two centuries and a quarter which intervened between its founder's death and the conversion of Aśoka. The latter event made the fortune of Buddhism, and transformed an obscure local sect in the basin of the Ganges into a dominant world-religion—perhaps the greatest of all, if measured by the number of its adherents.

Aśoka's progress in the faith was gradual. According to tradition, he was in early life an orthodox Hindu, of the Saiva sect (see SAIVISM); and it is certain that he then approved of sacrifices, and sanctioned the slaughter of animals on a large scale for the purposes of food, sacrifice, and sport. Regard for the sanctity of animal life being the cardinal principle of Buddhist ethics, he began the reformation of his habits by reducing the butcher's bill for the Imperial table to the modest amount of two peacocks and one antelope daily. The institution of the royal hunt was abolished in B.C. 259, and two years later destruction of life for the service of the royal kitchens was absolutely forbidden. In B.C. 243 detailed regulations concerning the slaughter or mutilation of animals applicable to the whole empire were published, which prohibited unconditionally the killing of many large classes of living creatures, and imposed stringent restrictions on the entire population in respect of their dealings with animals.

In the next year the emperor placed on record a solemn review of all the measures which he had taken for the propagation of the *dharma*, or Law of Piety, and reminded his subjects how he had striven to lead them in the right way by his personal example, by exhortations, expressed in oral sermons as well as in inscriptions on rocks and pillars, by suitable official arrangements for the supervision of morals and the royal alms, by detailed pious regulations, and by benevolent provision for the cure and comfort of man and beast. But Aśoka, while utilizing to the full all this machinery for the moral regeneration of his people, recognized frankly that permanent improvement must be based on a change of heart, and could not be secured by merely administrative measures; because 'pious acts and the practice of piety depend on the growth among men of compassion, liberality, truth, purity, gentleness, and saintliness.' The growth of piety, he goes on to observe, 'has been effected by two-fold means, to wit, pious regulations and meditation. Of these two means pious regulations are of small account, whereas meditation is superior. Nevertheless, I have issued pious regulations forbidding the slaughter of such and such animals, and other regulations of the sort. But the superior effect of meditation is seen in the growth of piety among men, and the more complete abstention from injury to animate beings and from slaughter of living creatures.'

The substance of Aśoka's practical ethical teaching is tersely summed up in a short edict, perhaps one of the latest:

'Thus saith His Majesty: "Father and mother must be hearkened to; similarly, respect for living creatures must be firmly established; truth must be spoken. These are the virtues of the Law of Piety which must be practised. Similarly, the teacher must be reverenced by the pupil, and proper courtesy must be shown to relations." This is the ancient nature of piety —this leads to length of days, and according to this men must act.'

The three primary duties prescribed by the Aśokan code were (1) respect for the absolute, unconditional right of the meanest animal to retain the breath of life until the latest moment permitted by nature; (2) reverence to parents, elders, and preceptors—the superiors so honoured being required, in their turn, to treat their inferiors, including servants, slaves, and all living creatures, with kindness and consideration; and (3) truthfulness. Among secondary duties, a high place was given to that of showing toleration for, and sympathy with, the beliefs and practices of others, and all extravagance or violence of language was earnestly deprecated.

The ethical teaching outlined in the above propositions, which is in agreement with the doctrine of the *Dhammapada* and other scriptures of primitive Buddhism, was developed by Aśoka in a series of edicts, probably drafted by himself. The 'Fourteen Rock Edicts,' published in B.C. 256, were incised upon rocks at seven localities in the remoter provinces, namely: (1) Shāhbāzgarhī, in the Yūsufzai country, forty miles N.E. of Peshāwar; (2) Mānsāhra, in the Hazāra District, Panjāb; (3) Kālsī, in the lower Himālayas, fifteen miles west from Mussoorie; (4) Sopāra, in the Thānā District, near Bombay; (5) the Girnār hill, near Jūnāgaṛh, the ancient capital of Kāṭhiāwāṛ; (6) near Dhauli, to the south of Bhuvanēsvar, in the Purī District, Orissa; and (7) at Jaugaḍa, in the Ganjām District, Madras.

Some of these versions, which vary in script, in dialect, and to some extent in substance, are preserved practically complete, while others are mere fragments.

The second great series is that of the 'Seven Pillar Inscriptions,' six of which exist in six copies, engraved on monolithic sandstone pillars erected at various localities in the home provinces. The seventh and most important edict is found on one

pillar only. The remaining records, particulars of which will be found in the works cited at the end of this article, are the two 'Kalingā Edicts' in two recensions, three 'Cave Inscriptions,' two 'Tarāi Pillar Inscriptions,' four 'Minor Pillar Edicts,' two 'Minor Rock Edicts' in several recensions, and the 'Bhābra Edict.' The number of distinct documents known may be reckoned as thirty-five, forming a group of inscriptions which may be regarded with justice as among the most interesting and remarkable in the world.

A large body of tradition affirms that a Buddhist church council was held at the capital by the command and under the patronage of Aśoka, in order to settle the canon of scripture and reform abuses in monastic discipline. Although the traditional details of the constitution and proceedings of the council are clearly unhistorical, the fact of its assembly may be accepted without hesitation. If it had met before the thirty-second year of the reign, in which the emperor published the 'Seven Pillar Edicts,' recording his retrospect of the measures taken for the promotion of piety, the council assuredly would have been mentioned in those documents. But they are silent on the subject, and the fair inference is that the council was held at a date subsequent to their publication, that is to say, between B.C. 242 and 231.

The Imperial arrangements for diffusing the knowledge of Buddhist doctrine, and for enforcing the moral practices recommended by the teachers of the church, were designed on a grand scale, so as to cover not only the whole Indian empire, but also distant countries in Asia, Africa, and Europe. The officials of the Government in their various grades were required, in addition to their ordinary duties, to give instruction in morals to the lieges. From the year B.C. 256 the efforts of the official lay preachers were supplemented by the more systematic labours of special functionaries, designated as Censors of the Law of Piety (*dharma-mahāmātrāḥ*), who were enjoined to occupy themselves in promoting the establishment and progress of piety among the people of all sects, Buddhist or others, and were further charged with the delicate duty of superintending the female establishments of the members of the royal family. These officers were vested with special powers for the prevention of wrongful imprisonment or corporal punishment, and were directed to investigate cases in which peculiar circumstances caused the ordinary law to press hard upon individuals. The general superintendence of female morals was entrusted to another set of officers called the 'Censors of Women.' The regulations for guarding the sanctity of animal life presumably were enforced with strictness by the Censors; and if we may judge by what is known of the procedure adopted in later ages by pious Indian kings, the penalties of disobedience must have been extremely severe, extending even to the death of the offender.

The activity of the Censors was not confined to the provinces directly controlled by the Imperial officers, but embraced all the bordering tribes and nations in the Indian hills and forests, who lived under the rule of their own chiefs, subject to the suzerainty of the paramount power.

Aśoka's zeal carried his propaganda far beyond the limits of his empire, and induced him to organize a system of foreign missions, which permanently determined the direction of the religious history of a large portion of the world. A band of enthusiastic missionaries, headed by Mahendra (Mahiṁda), younger brother of the emperor (or, according to another account, his son), evangelized Ceylon with such success that the island has been essentially a Buddhist country ever since, and the religion of the Sinhalese monks to-day is practically the same as that of Aśoka. The Sinhalese chronicles aver that a mission was dispatched at the same time across the Bay of Bengal to Pegu, but strong reasons exist for believing that Buddhism was not introduced into the Burmese countries until several centuries later. The existing form of Buddhism in Burma, which undoubtedly was derived from Ceylon, and thus is indirectly a result of Aśoka's labours, dates only from the reformation effected by king Dhammachēti in the 15th cent., the history of which is related in the Kalyāṇī inscriptions (*Ind. Ant.* vol. xxii., 1893). The Siamese church also is a daughter of that founded in Ceylon by Mahendra.

From the time of Megasthenes, who was sent as ambassador by Seleukos Nikator to the court of Chandragupta Maurya in the year B.C. 303, regular intercourse, both commercial and diplomatic, had been maintained between the Indian empire and the Hellenistic kingdoms founded by the generals of Alexander. Aśoka made use of the channels of communication thus opened, in order to convey the treasures of Buddhist wisdom to the nations of the West. His missionaries traversed the wide realms of Antiochos Theos, king of Syria and Western Asia, and penetrated the dominions of Ptolemy Philadelphos, king of Egypt, those of his neighbour king Magas of Cyrene, and even those of the European monarchs Alexander of Epirus and Antigonos Gonatas of Macedonia.

Although missionary effort did not succeed in planting branches of the Buddhist church in the foreign countries named, except perhaps in some portions of the territory of Antiochos, its effects may be traced obscurely both in the history of the Gnostic and Manichæan sects of Christianity (Kennedy, 'Buddhist Gnosticism,' in *JRAS*, 1902, pp. 377–415) and in the reflex action on India which helped to develop the Mahāyāna form of Buddhism about the beginning of the Christian era. Ceylon, as already observed, was won permanently to Buddhism, which became the dominant religion in India and the bordering countries. Of course the other forms of Indian religion were not destroyed—they were merely overshadowed for a time, and in due course recovered their ancient vigour. In India, Buddhism is practically extinct at the present day, and is hardly traceable later than 1200 A.D. But for many centuries the impulse given by Aśoka's systematic missionary propaganda made Buddhist institutions a prominent feature of Indian life; and as late as the 7th cent. A.D., Buddhism, although then slowly decaying, was still a power in almost all parts of India. The extension of the Buddhist faith to Tibet, China, and Japan, through the agency of Indian missionaries at various dates, was an indirect consequence of the Aśokan propaganda.

Aśoka, while determined to enforce with all his authority Buddhist ethics as a practical system of morals, was avowedly tolerant of other creeds, and devoted a special edict to the subject of toleration:

'His Majesty does reverence to men of all sects, whether ascetics or householders, by gifts and various modes of reverence.

'His Majesty, however, cares not so much for gifts or external reverence as that there should be a growth of the essence of the matter in all sects. The growth of the essence of the matter assumes various forms, but the root of it is restraint of speech, to wit, a man must not do reverence to his own sect by disparaging that of another man without reason. Depreciation should be for specific reasons only, because the sects of other people deserve reverence for one reason or another. . . . Self-control, therefore, is meritorious, to wit, hearkening to the law of others, and hearkening willingly.

'For this is His Majesty's desire, that adherents of all sects should hear much teaching and hold sound doctrine.'

In another passage the royal preacher repeats his profession of reverence for all sects, and adds that 'nevertheless, personal adherence to one's own creed seems to me to be the chief thing.'

Extant dedicatory inscriptions prove that Aśoka gave practical effect to these liberal principles, by hewing cave-dwellings from the rock at enormous cost, and bestowing them on ascetics of a non-Buddhist sect; while, of course, hundreds of his benefactions must have passed unrecorded.

He realised the truth that his subjects could not be expected to take his preaching to heart unless he proved by acts of material beneficence that he was really, as he had claimed to be, the father of his people. Accordingly, he organized elaborate arrangements, both in his own dominions and in those of friendly powers, for the cure of man and beast, which doubtless involved the establishment and endowment of hospitals. We are expressly informed that healing herbs, medicinal for both human beings and animals, wherever they were lacking, were imported and distributed. In pursuance of the same policy, banyan-trees were planted to provide ample shade, groves of mango-trees were laid out to supply fruit, wells were dug at every mile on the highroads, and numerous rest-houses and watering-places were constructed, for the enjoyment of man and beast. But His Majesty is careful to explain his motive by the remark that 'such so-called enjoyment is a small matter. With various blessings have former kings blessed the world even as I have done, but in my case it has been done solely with the intent that men may conform to the Law of Piety.'

Aśoka's buildings were designed and constructed on a scale of such magnificence that they were regarded by the men of later ages as the work of demons obedient to his command. Although comparatively little of his architectural masterpieces has survived, the great *stūpas*, or brick cupolas, at Sānchi, and numerous monolithic pillars, inscribed and uninscribed, which are still standing, suffice to justify his fame as a builder. The monoliths, some of which are fifty feet high and weigh fifty tons, exhibit the stone-cutter's art in perfection, and have been polished and engraved with the utmost nicety.

It is clear that Aśoka was no merely fanatic devotee, but that he succeeded in combining the piety of a saint with the practical qualities of an able king. As a king he disputes with Akbar (*q.v.*) the right to the highest place of honour among the sovereigns of India; and, in the history of Buddhism, his importance is second only to that of the founder of the system.

Aśoka seems to have been followed on the throne by his grandson Daśaratha; but hardly anything is known about his successors, in whose feeble grasp the great empire founded by Chandragupta, and maintained for three generations, quickly crumbled to pieces. See BUDDHISM, CHANDRAGUPTA.

LITERATURE.—Edmund Hardy, *König Asoka* (Mainz, 1902); Vincent A. Smith, *Asoka, the Buddhist Emperor of India* (Oxford, 1901), containing complete translations of the inscriptions known up to 1901 (an inscription on a pillar at Sārnāth has been discovered since then; *Epigr. Ind.* viii. 166; *Comptes rendus Acad. des Inscr.*, 1907, p. 25; *JASB* iii., new ser., 1907), and *The Early History of India*[2] (Oxford, 1908). All the original authorities are cited fully in those works. *Buddhist India* (1903), by T. W. Rhys Davids, may also be consulted.

VINCENT A. SMITH.

ASPIRATION may be defined generally as ardent longing. The word is sometimes used to denote worldly ambition or desire, but its proper application, as the etymology may suggest, is to desire directed upon spiritual objects, and so it finds its distinctive exercise in the spheres of ethics and religion. In each of these spheres it is a power inciting to spiritual progress, an inward impulse by which men are urged to the development of their highest nature and true ends as spiritual beings.

1. In ethics, aspiration appears as a longing for the realization of ideals. Whatever theories may be held as to the origin of moral ideas and of the moral faculty, there is no ethical system worthy of the name that is not based on some moral ideal or conception of the highest good; and aspiration is the longing that impels to the pursuit of the ideal and of all the qualities that belong to it or tend to further it. Aspirations and ideals go together, and have a reactive influence upon each other. On the one hand, aspirations are kindled by ideals; on the other, ideals are shaped and fostered by aspiration. The moral feelings depend for their strength and purity upon the clearness and immediacy of the moral vision; while the moral vision owes much of its quick discernment to the cultivation of the moral feelings. Both vision and aspiration, again, are qualified by obedience. The gleaming vision must be pursued, the sighing of the human spirit after the attainment of its ideals must not be ignored or suppressed, else moral blindness and moral apathy will inevitably follow. But when men turn away from wrong and do what they know to be right, and keep hungering and thirsting after righteousness, moral progress is the assured result.

The particular function of aspiration in the moral sphere is to mediate between vision and obedience. It is a mighty motive power by which our spiritual knowledge is utilized for the purposes of our moral activity. Without the uplifting and impelling force of aspiration, ideals would never be transformed into realities; and so it is a necessity of the moral life that men should cherish their spiritual aspirations. The voice of duty is an imperative voice, but before its high behests can be carried out there must come some urging from the heart's desire. It is faith and hope, admiration and love—and these may all be summed up in aspiration—which enable us as moral beings to walk without fainting, to run without weariness, and even at times to mount up on eagles' wings. 'Let us learn to have noble desires,' said Schiller, 'and we shall have no need for sublime resolutions.' And what is moral aspiration but an impulse of noble desire which bears the soul irresistibly forward, as on the bosom of a swelling tide, towards the realization of the highest moral ends?

2. But it is in religion still more than in ethics that aspiration finds its especial home and sphere, for aspiration is the outgoing of the soul in search of complete spiritual satisfaction, and ethical ideals, even could they be perfectly realised, would not avail to satisfy it. 'Thou madest us for Thyself, and our heart is restless until it repose in Thee' (Augustine, *Conf.* i. 1). Nothing but personal communion with the Divine Spirit will meet the wants of the aspiring human spirit. It is to the experience of aspiration as a psychological fact that the origin of religion may be traced. In the visible world men saw around them on every side the tokens of change and decay, of transience and evanescence. But this sense of the perishableness and unreality of all earthly things brought to light their own possession of the idea of something or some one real and permanent; and instinctively their hearts went out in dumb longing to seek the Unknown God. And as self-consciousness grew clearer in the course of man's ascent, the contradiction between the inner life of feeling and desire, of hope and endeavour, and the hostile powers of nature by which he was encompassed and opposed, would fill his soul with a still deeper longing for communion with that higher Power akin to himself by whose help he might gain the victory over the world.

The aspirations of the religious soul naturally express themselves in forms of worship. And if at first the forms in which men embodied their religious desires were crude, material, grotesque, and even repulsive, they testified none the less to a sincere longing after God. The blood of the sacrifice was the blood of a covenant between man and his deity; the sacrificial smoke, as it rose into the air, was a symbol of the spirit's desire

to rise heavenward; the sacrificial meal was a sacrament of fellowship between the god and his people. Moreover, as men grew in the power of spiritual conception and apprehension, their aspirations became purer, and began to find expression in forms more spiritual and refined. And when the inspiring Spirit from above stoops down to raise and inform the aspiring spirit from below, there comes the utterance of the purest spiritual desire: 'As the hart panteth after the water brooks, so panteth my soul after thee, O God.'

There is a wide difference between the aspirations of morality and those of religion. Not only is the ethical ideal an abstraction, it is an elusive abstraction. As we pursue it, it recedes before us. The horizon moves onward as we advance, and the actual and the ideal never meet. Religious aspiration, on the other hand, being a longing of the human spirit for personal communion with the Divine Spirit, is able to enjoy an immediate fruition of its object. With the dawn of religion in the soul, the restless heart of man finds rest in God. Not that there is no room in the religious life for further progress and fuller aspiration; the room for progress is infinite, and the call to it is never hushed. But progress here 'is not *towards*, but *within* the sphere of the infinite. It is not the vain attempt, by endless finite additions or increments, to become possessed of infinite wealth, but it is the endeavour, by the constant exercise of spiritual activity, to appropriate that infinite inheritance of which we are already in possession' (J. Caird, *Phil. of Rel.* 284). Hence the life of Christian faith, in which the experience of communion with God is most fully realized, is a life of aspiration satisfied yet never sated, resting joyfully in its object and yet longing to apprehend it more fully.

J. C. LAMBERT.

ĀŚRAMA.—1. General survey.—*Āśrama*, from the root *śram*, 'to exert oneself,' means (1) a place where austerities are performed, a hermitage, and (2) the action of performing such austerities. It may be doubted which of the two meanings is the original. Without dwelling on this question, we limit ourselves to the second meaning, which in the development it has taken in India reveals a very striking feature of ancient Indian life. At the time when the Indians lived in the Panjāb there was no question either of a brāhmanical order of life or of castes and *āśramas*. The castes occur only in one hymn of later date (*Rigv.* 10. 90), and the word *āśrama* is not found at all in the *Rigveda*.

Very different from this oldest period of Indian antiquity is the time after the conquest of Hindustan by the Āryans. The danger of mixing with the indigenous tribes led to the establishment of a very sharp distinction between the victorious tribes of the Āryans and the remnants of the aborigines, who later on were included under the collective name of the *Śūdras*, and were excluded from all community of life, and especially of religion, with the Āryans. This principle of setting up boundary lines between the different classes of the population was carried out to a certain degree among the conquering Āryans themselves. The great mass of the Āryans were called *Vaiśyas*, 'colonists,' and devoted themselves to agriculture, handicraft, and trade. They were ruled and taxed by the *Kṣatriyas*, the kings, and those who with them had carried out the conquest of the country. But another class claimed and obtained a preponderance over both the Vaiśyas and the Kṣatriyas. These were the *Brāhmaṇas*, the descendants of the old Vedic *Ṛṣis*, who in their families kept as an inestimable treasure the ancient Vedic hymns, without which no religious ceremony could be performed, and no higher education was possible in an age wholly without secular literature. Indeed, the Brāhmaṇas succeeded in getting into their hands not only the religious cult, but also the education of the Āryan youth. It became a custom and more and more a law that every young Āryan, whether of the Brāhmaṇa, Kṣatriya, or Vaiśya caste, should spend a series of years as a *brahmachārin* in the house of a *guru*, or brāhmanical teacher.

In the early period the father himself acted as *guru*, and instructed his son as well as he could in the sacred science in so far as it was in the possession of his family. Very often, however, the father was not able to satisfy the curiosity of his son. Not only metaphysical questions embarrassed him; the understanding of the old texts became more and more difficult, the ritual more complicated, the field of study ever broader. Thus it became necessary to apply to celebrated authorities in order to learn some special theory (*vidyā*). Wandering students (*charaka*) travelled far and wide (*Bṛih. up.* 3. 3. 1); renowned teachers itinerated from place to place (*Kauṣ. up.* 4. 1); and there were masters to whom disciples streamed 'like waters to the deep' (*Taitt. up.* 1. 4. 3).

Later it became customary for every *Āryan* to spend a series of years (at least twelve, according to Āpastamba, *Dharmasūtra*, 1. 1. 2, 16) in the house of a brāhmanical teacher. It was the latter's duty to prepare his brāhmanical pupils for their future vocation, and to teach those of the Kṣatriya and Vaiśya castes in order to inculcate in their minds the necessary directions for all their future life. We must assume (cf. Manu, 2. 241; Śaṅk. on *Bṛih. up.* p. 345, 13) that it became in course of time an exclusive privilege of the brāhmanical caste to give this instruction, and only thus can we understand the incomparable influence which the Brāhmaṇas gained and maintained over the Indian people.

It would seem that not only the outward apparel, but also the method of instruction, was different for the three castes; thus in *Ait. Ār.* 3. 2. 6, 9 the rule is laid down to communicate a certain theory *na apravaktre*, 'not to any one who will not himself become a teacher.' In return for this instruction the pupils had to work for the teacher in house and field; they attended to the sacred fires (*Chhānd. up.* 4. 10. 1), they looked after the cattle of the teacher (*Chhānd. up.* 4. 4. 5), collected for him in the village the usual gifts of charity, and bestowed a present upon him at the conclusion of their studies in his home. In the leisure time left from the duties to be performed for the *guru*, the Veda was studied; the teacher recited it verse by verse, and the pupils had to repeat it until the whole was learned by heart. It was perhaps not so much a time of learning as a time of vigorous training, as the word *āśrama* implies. The principal rule was strict obedience to the orders of the teacher (of which we read extravagant examples in *Mahābh.* i. 684 f.). It was a period devoted to practice in self-denial and mortification. But the brāhmanical system of life had the tendency to extend this *āśrama*, or self-mortification, over the whole life of the Brāhmaṇas, and as far as possible of all the Āryans. Not all, after having finished this course of study, founded families as *grihasthas*, 'householders'; some preferred to stay in the house of their teacher as *naiṣṭhikas* to the end of their life. Others again, as *vānaprasthas*, retired to the jungle and gave themselves up to privations and austerities. Some scorned even this form of a regular existence, and roamed about as beggars. These last were known as *sannyāsins*, 'throwing away everything,' or *parivrājakas*, 'vagabonds,' or simply *bhikṣus*, 'beggars.' It was only later that these various kinds of *āśramas*, 'religious mortifications,' were developed into a system embracing the whole life, the aim of which was to obtain methodi-

cally and by gradual progress that which appears as an abrupt demand in *Matth.* 19. 21.

According to this later system, the life of every Brāhmaṇa (and not only of these, for the rules given in Manu, vi., seem to extend also to Kṣatriyas and Vaiśyas) had to pass through four *āśramas*, or ascetic stages. Every Ārya had to be (1) a *brahmachārin* in the house of a teacher; (2) a *grihastha*, performing the duty of founding a family; (3) a *vānaprastha*, a hermit in the woods, devoting himself to gradually increasing austerities; and (4) towards the end of his life a *sannyāsin*, *bhikṣu*, *parivrājaka*, roving about without home or property, living merely on alms, free from all earthly ties, and awaiting his end, delivered even before it from all earthly attachments. How far the practice corresponded to this theory, given in Manu and other Law-books, we do not know; but we are free to confess that in our opinion the whole history of mankind has not much that equals the grandeur of this thought.

After this general survey let us proceed to consider the history of the *āśramas* in the Vedic and the post-Vedic age.

2. The Āśramas in the Veda.—In the older Upaniṣads the theory of the four *āśramas* is seen in course of formation. *Chhānd. up.* 8. 15 mentions only the Brahman-student and householder, and promises to these, in reward for study, the begetting of children, the practices of *yoga*, abstinence from doing injury, and sacrifice, a departure hence without return. *Chhānd. up.* 2. 23. 1 names the *tapas* (of the anchorite) side by side with these as a third 'branch of duty.' There is still no progressive series. Rather, according to this passage, the Brahman-students, in so far as they do not elect to remain permanently in the house of the teacher, appear to have devoted themselves partly to the householder's state, partly to the life in the forest. It is in harmony with this that in *Chhānd. up.* 5. 10 among the dying the anchorite in the forest and the sacrificer in the village appear side by side. *Chhānd. up.* 2. 23. 1 contrasts all three branches of duty with the position of the man who 'stands fast in Brahman.' So too, in *Brih. up.* 4. 4. 22, those who practise (1) the study of the Veda, (2) sacrifice and almsgiving, (3) penance and fasting, are contrasted with the man who has learned to know the *ātman*, and in consequence becomes a *muni* and *pravrājin* ('pilgrim'). Both have attained the knowledge of the *ātman*, and therefore the supreme goal. In the cognate passage *Brih. up.* 3. 5, on the contrary, the *brāhmaṇa* is still distinguished from the *muni* as a higher grade. In *Brih. up.* 3. 8. 10 also, the knowledge of the *ātman* as the highest aim is differentiated both from the sacrifices and benefactions (of the householder) and from the practices of *tapas* (of the anchorite).

All these passages assume only the three stages of Brahman-student, householder, and anchorite, and contrast with them the men who know the *ātman*. The last were originally 'exalted above the (three) *āśramas*' (*atyāśramin*, as it is said in *Śvet. up.* 6. 21, *Kaivalya up.* 24). This very position, however, of exaltation above the *āśramas* became in course of time a fourth and highest *āśrama*, which was naturally assigned to the end of life, so that studentship, and the positions of householder and anchorite (which stood side by side), preceded it as temporary grades in this successive order. Until the post-Vedic age, however, the separation between the third and fourth *āśramas*, between the *vānaprastha* practising *tapas* and the *sannyāsin* who has succeeded in attaining *nyāsa*, was not strictly carried out. An intimation of the fourfold number of the *āśramas* is perhaps already afforded by the words of *Muṇḍ. up.* 2. 1. 7: 'Mortification, truth, the life of a Brāhman, instruction.' Otherwise the oldest passage which names all four *āśramas* in the correct order would be *Jābāla up.* 4: 'When the period of Brahman-studentship is ended, a man becomes a householder; after he has been a householder, he becomes an anchorite; after he has been an anchorite, let him travel about on pilgrimage.'

(1) *The Brahmachārin.*—'Śvetaketu was the son of (Uddālaka) Āruṇi. To him said his father, "Śvetaketu, go forth to study the Brahman, for none of our family, my dear son, is wont to remain unlearned, and a (mere) hanger-on of the Brahman order"' (*Chhānd. up.* 6. 1. 1). From this remark it seems to follow that at that time entrance upon the life of a Brahman-student, while it was a commendable custom, was not yet universally enjoined upon Brāhmans. The entrance also of Satyakāma upon studentship appears to be his voluntary determination (*Chhānd. up.* 4. 4. 1). It was possible for a man to receive instruction from his father, as Śvetaketu (*Chhānd. up.* 5. 3. 1; *Brih. up.* 6. 2. 1; *Kauṣ. up.* 1. 1), or at the hands of other teachers, as the same Śvetaketu in *Chhānd. up.* 6. 1. 1 (contradictory to the passages just quoted). The request to be received must follow duly (*tīrthena*, cf. *vidhivat*, *Muṇḍ. up.* 1. 1. 3), *i.e.* according to *Brih. up.* 6. 2. 7, with the words *upaimi aham bhavantam*. The student takes the fuel in his hand as a token that he is willing to serve the teacher, and especially to maintain the sacred fires (*Kauṣ. up.* 4. 19; *Chhānd. up.* 4. 4. 5, 5. 13. 7, 8. 7. 2, 8. 10. 3, 8. 11. 2; *Muṇḍ. up.* 1. 2. 12; *Praśna up.* 1. 1). Before receiving him, the teacher makes inquiry into his birth and family (*Chhānd. up.* 4. 4. 4), but yet, as this example shows, in a very indulgent manner. Sometimes instruction is given even without formal reception (*Anupanīya*, *Chhānd. up.* 5. 11. 7). The duration of the period of instruction is twelve years (*Chhānd. up.* 4. 10. 1), or 'a series of years' (*Chhānd. up.* 4. 4. 5). Śvetaketu also begins to receive instruction at the age of twelve (*Chhānd. up.* 6. 1. 2), and continues his study for twelve years. During this time he has 'thoroughly studied all the Vedas' (*Chhānd. up.* 6. 1. 2), namely, the verses of the *Rigveda*, the formulas of the sacrifice, and the hymns of the *Sāmaveda* (*Chhānd. up.* 6. 7. 2), apparently therefore only the *saṁhitās*. In other instances there appears to have been at first no mention of study. In one example Upakosala has tended the sacred fires for twelve years, and yet the teacher can never make up his mind to impart to him 'the knowledge' (*Chhānd. up.* 4. 10. 1-2). Satyakāma is sent at first with the teacher's herds of cattle into a distant country, where he remains for a succession of years (*Chhānd. up.* 4. 4. 5). A further act of service on the part of the *brahmachārin* consists in his going to beg for the teacher (*Chhānd. up.* 4. 3. 5). On festival occasions also we find him in the train of the teacher and awaiting his commands (*Brih. up.* 3. 1. 2). Together with and after these acts of service, 'in the time remaining over from work for the teacher' (*guroḥ karma-atiśeṣeṇa*, *Chhānd. up.* 8. 15) the study of the Veda is prosecuted. The consequence was sometimes self-conceit rather than real enlightenment (*Chhānd. up.* 6. 1. 2). We further find the students wandering from place to place; they hastened, as stated above, from all sides to famous teachers 'like waters to the deep' (*Taitt. up.* 1. 4. 3); they roamed as far as the land of the Madras (on the Hyphasis) 'in order to learn the sacrifice' (*Brih. up.* 3. 7. 1, 3. 3. 1). As a rule, however, they lived as *antevāsins* in the house of the teacher, and not a few found this manner of life so congenial that they

'settled permanently in the teacher's house' (*Chhānd. up.* 2. 23. 1). The others were dismissed at the close of the period of studentship with advice (*Bṛih. up.* 6. 4) or admonitions. 'After he has studied the Veda with him, the teacher admonishes his pupil: "Speak the truth, do your duty, forsake not the study of the Veda; after you have presented the appropriate gifts to the teacher, take care that the thread of your race be not broken"' (*Taitt. up.* 1. 11). Further admonitions follow, not to neglect health and possessions, to honour father, mother, teacher, and guests, to be blameless in works and life, to honour superiors, to bestow alms in the appropriate manner, and in all doubtful cases to order one's conduct according to the judgment of approved authorities.

(2) *The Grihastha.*—'He who returns home from the family of the teacher, after the prescribed study of the Veda in the time remaining over from work for the teacher, and pursues the private study of the Veda in (his own) household in a pure neighbourhood (where Brāhmans are permitted to live), trains up pious (sons and pupils), subdues all his organs in the *ātman*, and, besides, injures no living thing except on sacred ground (at the sacrifice), he indeed, if he maintains this manner of life all his days, enters into the world of Brahman and does not return again' (*Chhānd. up.* 8. 15). According to this passage, the householder may remain in that state all his life long without doing injury to his soul. According to *Chhānd. up.* 5. 10, on the contrary, for those 'who in the village worship with the words "Sacrifice and pious works are our tribute,"' for those, in other words, who continue in the householder's state to the end of life, the transient reward in the moon and a return to a new earthly existence are appointed.

The most imperative duty of the householder is to establish a family and to beget a son to continue his father's works. To beget a son is considered a religious duty. In *Taitt. up.* 1. 9 it is enjoined side by side with studying and teaching the Veda. Frequently (*Chhānd. up.* 3. 17. 5, 5. 8–9; *Bṛih. up.* 6. 2. 13, 6. 4. 3) it is allegorically described as an act of sacrifice. In *Taitt. up.* 1. 11 the pupil, among other admonitions, is charged to take care 'that the thread of his race be not broken.' In *Mahān. up.* 63. 8 it is said: 'He who in his lifetime rightly continues to spin the thread of posterity, thereby pays the debt which he owes to the fathers; for it (begetting) is the payment of his debts.' His continued life in the world of men is assured by the son (*Bṛih. up.* 1. 5. 16), who stands in the place of the father in order to accomplish for him the religious works (*Ait.* 2. 4), 'and if anything whatever has been committed previously by him, his son will expiate it, therefore is his name "son" (*putra*, because he *pūraṇena trāyati pitaram*, Śaṅk.); for by the son he continues to exist in this world' (*Bṛih. up.* 1. 5. 17). Particular directions are given in *Bṛih. up.* 6. 4 how to proceed in order to beget a son or daughter of a certain quality. This chapter forms the conclusion of the Upaniṣad, and therefore probably the close of the religious instruction imparted to the student at the end of his student life. Several wives are permitted, as, in fact, Yājñavalkya himself had two (*Bṛih. up.* 2. 4, 4. 5). As further duties of the *grihastha* are named sacrifice, study of the Veda, and almsgiving (*Chhānd. up.* 2. 23. 1, 8. 5. 1–2; *Bṛih. up.* 4. 4. 22, 3. 8. 10).

(3) The *Vānaprastha* and (4) the *Sannyāsin.*—A distinction between these two periods of life was only gradually established. Originally the solitary life in the forest existed as a special branch of vocation (*dharmaskandha*) side by side with the position of householder (*Chhānd. up.* 2. 23. 1, 5. 10. 1–3). Later it may have become usual to retire into the solitude of the forest only on the approach of old age, after the obligations of the householder had been fulfilled. Yājñavalkya is an example, when he addresses his wife Maitreyī (*Bṛih. up.* 2. 4. 1 [4. 5. 1–2]): 'I will now abandon this state (of householder), and will therefore make a division between thee and Kātyāyanī.' In doing so, Yājñavalkya puts into practice what he teaches in *Bṛih. up.* 3. 5. 1: 'In truth, after that Brāhmans have gained the knowledge of this soul, they abstain from desire for children and desire for possessions and desire for the world, and wander about as beggars.' Here the third and fourth stages are not yet distinguished. The case is otherwise with the king Brihadratha, who (*Maitr. up.* 1. 2) surrenders his kingdom, retires to the forest, and gives himself up to the most painful mortifications, gazing fixedly at the sun, and standing with arms erect, and yet is obliged to confess: 'I am not acquainted with the *ātman*.' Here the anchorite, who devotes himself to ascetic practices with meditation (*Chānd up.* 2. 23. 1), has not yet attained the highest goal; he who without knowing the *ātman* 'practises austerities for many thousand years earns only a finite reward' (*Bṛih. up.* 3. 8. 10). Asceticism leads only to *pitṛyāna*, 'way of the fathers' (*Bṛih. up.* 6. 2. 16), and the case is different only with those who can say: 'Faith is our asceticism' (*Chānd. up.* 5. 10. 1). Penance and fasting are only the means by which Brāhmans 'seek to know' the *ātman* (*vividiṣanti*, *Bṛih. up.* 4. 4. 22). According to some, *tapas* is indispensable as a means to the knowledge of the *ātman* (*Maitr. up.* 4. 3, *na atapaskasya ātmajñāne 'dhigamaḥ*), according to others (*Jābāla up.* 4), it is superfluous; and this view is more in accordance with the whole system. For as long as the goal was a transcendental one, the hope might be cherished of approaching near to it by severing by means of asceticism the tie that binds to this life. If, however, emancipation is the discovery of one's self as the *ātman*, and therefore something that only needs to be recognized as already existing, not to be brought about as though it were future, the asceticism of the *vānaprastha* becomes as superfluous as the *grihastha's* sacrifice and study of the Veda (*Bṛih. up.* 3. 5, 4. 4. 21). He who knows the *ātman* is *atyāśramin*, 'exalted above the (three) *āśramas*' (*Śvet. up.* 6. 21). He has attained that which the ascetic only strives after, complete release from his individuality and from all that pertains to it, as family, possessions, and the world (*Bṛih. up.* 3. 5, 4. 4. 22). He is called *sannyāsin*, because he 'casts off everything from himself' (*sam-ni-as*); *parivrāj*, *parivrājaka*, because he 'wanders about' homeless; and *bhikṣu*, because without possessions he lives only as a 'beggar.'

(4) *The Sannyāsin* (*parivrājaka*, *bhikṣu*).—The *sannyāsa*, which is originally only the 'abandonment' of the entire brāhmanical mode of life in the three *āśramas*, assumed in course of time the position of a fourth and highest *āśrama*, which, as a rule, though not necessarily, would first be entered upon towards the close of life after passing through the stages of *brahmachārin*, *grihastha*, and *vānaprastha*. It thus, however, gained a further meaning. If it was originally a natural consequence of the knowledge of the *ātman*, it now became a final and most efficacious means by which it was hoped to attain that knowledge. The *sannyāsa*, accordingly, is represented as such a means to the knowledge of the *ātman* and to emancipation in a series of later *Upaniṣads*, of which the most important are *Brahma*, *Sannyāsa*, *Āruṇeya*, *Kaṇṭhaśruti*, *Paramahaṁsa*, *Jābāla*,

Āśrama. We find in them a full account, with numerous contradictions in details, of the preliminary conditions imposed upon the *sannyāsin*, of his departure from life, of his dress and equipment, of his food, place of abode, and occupations.*

3. **The Āśramas in post-Vedic time.**—Although the Upaniṣads teach that every man, Śūdra as well as Ārya, is an incarnation of the *ātman*, the knowledge of which, whether originating in an Ārya or a Śūdra, would lead to emancipation, yet the Brāhmans were too much under the influence of old traditions to put this doctrine into practice, and thus the Śūdras were, and remained, excluded from all religious community with the Āryas. So much the greater was their care for the spiritual welfare of the three superior castes, and the four *āśramas* became the *via salutis* through which every twice-born man (*dvija*) had to pass, *i.e.* every Brāhmana, Kṣatriya, and Vaiśya, in order to reach the highest goal. As in Vedic times, so also in the later period of Indian life, it was the rule that every twice-born man had to become first a *brahmachārin*. In this stage he lived in the house of a teacher, persisted in the fulfilment of his duties of temperance and chastity, and received, through the study of the Veda, the intellectual stamp for all his future life. He then, as *grihastha*, had to marry, to beget offspring, and to fulfil the six duties of teaching and learning, sacrificing in person and through the agency of others, giving alms and receiving presents; besides this there were five daily observances incumbent upon him: to satisfy the gods by sacrificing, the Ṛṣis by studying the Veda, the fathers by offering funeral oblations, men by almsgiving, and animals by feeding birds, antelopes, and other denizens of the forest. Afterwards he passed to the state of *vānaprastha* as it is described in Manu, 6. 2, and *Mahābh.* xii. 245. 4: 'When the householder sees his skin wrinkled and his hair white and the sons of his sons, then he has to retire to the forest,' in order to extinguish in himself, by austerities gradually augmented, all the remnants of worldly attachments. 'In summer let him expose himself to the heat of five fires, during the rainy season live under the open sky, and in winter be dressed in wet clothes, thus gradually increasing the rigour of his austerities' (Manu, 6. 23). Further, 'after having purified himself in the three social stages from all stain of sin, let him wander towards the highest goal with undaunted perseverance' (*Mahābh.* xii. 246. 3).

In this stage of *sannyāsin*, 'one who has abandoned everything,' he roamed about without home (*parivrājaka*), and lived merely on alms (*bhikṣu*). At a period of life when, according to our thought, aid from others is more than ever needed, the aged man was left to himself without any care or attendance; 'let him flee from society as from a serpent, from comfort as from a hell, and from women as from a corpse' (*Mahābh.* xii. 246. 13); 'let him not look forward to death, let him not look forward to life, let him await his time as the servant awaits a command' (*nideśam*, which is the better reading both in *Mahābh.* xii. 246. 15, and in Manu, vi. 45).

We subjoin a few more verses on the state of the *sannyāsin* from the sixth book of Manu. 'Let him put down his foot purified by his sight, let him drink water purified by (straining with) a cloth, let him utter speech purified by truth, let him keep his heart pure' (46). 'Let him patiently bear hard words, let him not insult anybody, and let him not become anybody's enemy for the sake of this (perishable) body' (47). 'Against an angry man let him not in return show anger, let him bless when he is cursed, let him not utter speech, devoid of truth, scattered at the seven gates (of the neighbours)' (48). 'Neither by (explaining) prodigies and omens, nor by skill in astrology and palmistry, nor by giving advice and by the exposition (of the Śāstras), let him ever seek to obtain alms' (50). 'Let him not (in order to beg) approach a house thronged with hermits, Brāhmaṇas, birds, dogs, or other mendicants' (51). 'His hair, nails, and beard being clipped, carrying an alms-bowl, a staff, and a water-pot, let him continually wander about, controlling himself and not hurting any creature' (52). 'Let him go to beg once (a day), let him not be eager to obtain a large quantity (of alms); for an ascetic who eagerly seeks alms, attaches himself also to sensual enjoyments' (55). 'When no smoke ascends from (the kitchen), when the pestle lies motionless, when the embers have been extinguished, when the people have finished their meal, when the remnants in the dishes have been removed, let the ascetic always go to beg' (56). 'Let him not be sorry when he obtains nothing, nor rejoice when he obtains (something), let him (accept) so much only as will sustain life, free from attachment to material things' (57). 'By eating little, and by standing and sitting in solitude, let him restrain his senses, if they are attracted by sensual objects' (59). 'By the restraint of his senses, by the destruction of love and hatred, and by the abstention from injuring the creatures, he becomes fit for immortality' (60). 'In order to preserve living creatures, let him always by day and by night, even with pain to his body, walk, carefully scanning the ground' (68). 'When by the disposition (of his heart) he becomes indifferent to all objects, he obtains eternal happiness both in this world and after death' (80).*

For further information about the four *āśramas* we must refer the reader to the detailed treatment of them in Manu, bks. ii.–vi., and to the parallel passages in the *Mahābhārata*, chiefly bk. xii. 243–246. Of special interest also is the short description, *Mahābh.* xii. 191–192, which, being in prose, may have been inserted from an old *Dharmasūtra.*†

If it is true that the highest aim of mankind is not to be found in this worldly existence, but in the realm beyond, however closed to our knowledge this may be, it is none the less true that the attempt, as we have it in the four *āśramas*, to transform the whole earthly existence into a preparatory school for eternity, merits recognition and admiration even from those who have reached the highest degree of civilization. The Indian system does not demand what is impossible; it does not tear men away roughly and abruptly from that attachment to the world which is innate in them. It offers the opportunity in the stage of *grihastha* to enjoy life, and by enjoying it to convince oneself of its futility. It then, in an advanced age, in the stage of *vānaprastha*, tends to a systematic mortification of sensuality, and it describes in the *sannyāsin* a man who, approaching the end of his days, has become free from all worldly fetters, and is best prepared for departure. What we say of so many precepts of the Gospels we may say also of the four *āśramas*: although they are by no means suitable for literal and blind imitation, yet they may serve in a certain sense as a pattern, since the way of thinking manifested in them may in other forms and modifications be precious for every age.

LITERATURE.—The literature has been given throughout the article. See also ASCETICISM (Hindu), UPANIṢADS.

P. DEUSSEN.

ASSAM.—1. **Religious history.**—There is no part of India which is more interesting in some respects to the student of Hinduism than the Assam valley. As everyone knows, Hinduism professes to be a race religion, the religion of the inhabitants of Bhārat-varṣa, of the Hindu people. Yet, since the origin of the Hindu religion is Vedic, and the Vedas were the collected hymns of the so-called 'Aryan' immigrants, the two hundred millions of people now calling themselves Hindus must, in part at least, and probably in large part, be the descendants of races who were converted to, or more properly adopted into, Hinduism. Indeed, the later developments that have sprung from Vedic worship must have been due in great measure to the influence of aboriginal

* These will be found described in P. Deussen, *Allgemeine Geschichte der Philosophie*, ii. pp. 335–343; *Philosophy of the Upanishads*, pp. 374–382.

* *SBE* xxv. 207–218.

† See Deussen, *Allgemeine Gesch. d. Philosophie*, i. 3. pp. 90–93.

beliefs on the simple nature-worship of the Aryan invaders. That was essentially democratic in its nature, whereas the hierarchy of Brāhmanism and the intellectual aristocracy of priests, philosophers, and the highly cultivated warrior chiefs who played so important a part in the development of Hinduism, must have been due to conquest, at once physical and moral, of lower by higher races. Yet in most parts of India the transition and the struggle are so distant that all memory of them is lost. The Dravidian of the South and the Bengali of the East alike believe that they were always Hindu. The higher castes and classes, it is true, have dim traditions of a time when their ancestors, fairer and slighter in figure than the aborigines, migrated from North-Western India. But the lower castes have no such traditions, and no curiosity as to how their distant ancestors came to be accepted into the Hindu community. There are, of course, notable exceptions to this rule. On the whole, however, it is only the ethnologist who can conjecture from the physical aspect of the various races of India that they were once non-Hindus and spoke some non-Aryan language. But in the Assam valley, owing to geographical and historical causes, which will presently be stated as briefly as possible, the process by which aboriginal tribes are accepted into the Hindu fraternity is seen in actual operation at the present time, and, by analogy and in some cases by actnal historical indications, the process can be traced back for some two thousand years. In the Assam valley we are on the border-land of the Hindu faith, and see the most tolerant and receptive of creeds in contact with the beliefs of Indo-Chinese races. It is singularly interesting to note how alien blood and alien civilizations are quietly assimilated by the slow, gentle, and irresistible force of Hindu ideas.

In the earliest times of which we have any knowledge, what we now call the Assam valley was the nucleus and centre of the great independent kingdom of *Kāmarūpa* (*q.v.*), a name which still survives as that of the modern District of Kāmrūp, whose capital, now Gauhāti (or Guāhāti), was then famous all over India as Prāgjyotishpur, the 'City of Eastern astrology.' This kingdom appears to have included, some 1500 years ago, not only the valley of the Brahmaputra river, but also the whole of Eastern Bengal down to the sea, and in addition (a thing even more difficult of belief for the modern traveller) the rugged and now almost inaccessible mountains of Bhutān. It was apparently in the Bhutanese hills that the kings of Kāmarūpa obtained their store of mineral wealth, and especially of copper. They were powerful monarchs, cultivated, warlike, and enterprising. Each dynasty, as it arose into power, attracted the attention of the Brāhmans, and, by one or other of the fictions common to early law and early religion in all countries, was adopted into Hinduism. It was, indeed, by common consent, at Prāgjyotishpur that there came into being the Tantrik form of Hinduism, that form which gives especial prominence to the female energy of the deity, his active nature being personified in his *śakti*, or 'wife.' Devī, as the *śakti* of Siva, is the energy chiefly identified with the mystery of sex and magical powers, which are the leading topics of the *Tantras*, the scriptures (though, of course, not the sole scriptures) of this form of Hinduism. On the Nilāchal hill, a beautiful wooded eminence near the town of Gauhāti, still stands the temple of Kāmākṣā Devī, one of the forms of the *śakti* of Śiva. The legend that explains the ancient sanctity of Kāmarūpa and of Kāmagiri (the religious name of the Nilāchal hill) is as follows:

Satī, the first wife of the god Śiva, died of sorrow at the discourtesy shown to her husband by her father Dakṣa, who was incensed by the interruption of his famous sacrifice of burnt-offering. (It may be worth mentioning, as a picturesque circumstance, that when the woods on the southern slopes of the Bhutān and Ākā hills catch fire in the dry winter season, and can be seen glowing or blazing from great distances, the people to this day assert that the far-off glare against the sky is caused by the reviving ashes of Dakṣa's interrupted sacrifice.) Śiva, overcome by grief and remorse, wandered about the world, carrying, as a penance, his dead wife's body on his head. In order to arrest this penance and to prevent Śiva from obtaining excessive power, Viṣṇu pursued him, and, by successive blows of his discus, lopped the body piecemeal, so that it fell to earth in fifty-one pieces. Wherever any piece fell, the place became a *pīthasthāna*, sacred and a fit resort for pilgrims. But the most sacred of all was the Kāmagiri hill, for this became identified with the generative powers of Satī, and, probably by some subsequent extension of the idea, with those of *Prithivī*, 'the Broad Earth,' regarded as the mother of living beings. But Śiva continued his penance, and Kāma-deva, the god of Love, was dispatched to beguile the mourner from his austerities. He succeeded. Śiva was so indignant that he burnt the Indian Cupid to ashes by a single glance from the eye in the midst of his forehead. But Love was not destined to die eternally, and the land where he recovered life to inveigle men from contemplation and austerity was the beautiful valley ever since known as Kāmarūpa, the 'Shape of Love.'

As the legend sufficiently indicates, the princes and upper classes of the kingdom of Kāmarūpa were Hindus, probably spoke some Indo-European dialect derived from Sanskrit, and were accepted as of Indian race. But the bulk of the people were not then, and many of them are not even now, Hindus. It is interesting, and not without more than ethnological interest, to indicate briefly what they were.

In the greater part of India, except in the extreme North-West, the people have a strong infusion of Dravidian blood. In the South they speak what are known as Dravidian languages, and the Southern races are of the dusky Negrito strain, and apparently akin to African peoples. In the North-East the Dravidian blood is mingled with other, and especially Indo-Chinese, infusions. In the Assam valley the Brāhmans (priests and astrologers) resemble their Bengali neighbours, and the Doms, a large fisherman caste, are plainly of Western origin. But the bulk of the people are evidently of partly Indo-Chinese blood, and their physical appearance is of the 'Mongolian' type, bearing, more or less, the characteristic aspect of the yellow races. They have themselves (with the exception of the Āhoms) no record, historical or traditional, of their advent into Assam. But the languages they speak are some clue to the successive invasions of Indo-Chinese folk from the north-east and the south-east of the valley. The oldest Indo-Chinese language spoken in Assam belongs to the Mon-Khmer sub-family, which has recently been named by Schmidt of Vienna the 'Austric' family of languages. Schmidt claims that it extends from Assam across Further India to Cambodia, and thence through Polynesia and Micronesia to Easter Island, on the coast of South America. It is worth noting, in passing, that Hindu dynasties seem once to have reigned over peoples of this race in the Far East as well as in Assam. E. A. Gait, in his *History of Assam*, quotes the case of an Indian king, Samuda, who was ruling in Upper Burma in A.D. 105, and also that of Hindus who led the Tchampas or Shans in their conquests of the mouths of the Mekong in A.D. 280. These Hindus, as Gait says, must have passed through Assam, as, probably, did the Hindus from Kām-bōd, in N.W. India, who founded and gave its name to the Cambodian kingdom in Indo-China. It is possible that Mon-Khmer peoples invaded and gave their language temporarily to much of North-Eastern India, as well as to parts of Burma. But the only Mon-Khmer tongue surviving in Assam is that of the Khāsis, now inhabiting and giving their name to the mountains between Kāmrūp and Sylhet. These interesting people remained independent until they came under British rule, and have not even now come under Hindu influences. They are a curious counterpart of the Basques in the Pyrenees. Elsewhere the Mon-Khmer element, whether in blood or speech, has become completely assimilated, and can no longer be distinguished.

The next wave of Indo-Chinese invasion is represented by the various peoples speaking the Tibeto-Burmese tongues. These have three main groups of dialects. The first of them is Nāgā, spoken in and to the east of the Nāgā hills. The second is Kuki-Chin, spoken in Manipur, Cāchār, the Lushai hills, and by the interesting race known as the Mikirs, who now inhabit an outlying bastion of the Khāsi hills jutting into the Assam plain. The people speaking these two groups of dialects have as yet hardly at all come into contact with Hinduism, and retain their own primitive animistic superstitions. The third and most important group is that now known (since Brian Hodgson's celebrated investigations into their language and ethnology) as 'Bodos.' They comprise the Meches of Northern Bengal; the Kacharis of Northern Assam; the Dimāsās, who live in the hills between Nowgong and Cāchār; the Gāros and Tipperas, inhabiting the mountains called after them; scattered plains-folk known as Lālungs and Rābhās; and (if they really

belong to the Bodo race) the Chutiyas of Lakhimpur and the great Mājuli island in the Brahmaputra. It is not to be supposed that the people who now speak Bodo languages were all of common origin. But the wide-spread survival of this group of tongues presupposes an invasion of sufficient force to impose them upon subject and assimilated races. Moreover, since the acquisition of the Bodo speech was not, as in the case of the incursion of Indo-European tongues, accompanied by the imposition of any caste restrictions, the assimilation of race was complete. It is impossible to find any ethnological difference between the various tribes now speaking the Bodo languages, except in so far as those who live in the plains among Hindus have acquired a tincture of Dravidian and, in a very slight degree, of 'Aryan' blood. The Koch race in Northern Bengal has become completely Hinduized, has adopted the Bengali language, and is practically a Hindu caste, to which modern converts from other Bodo races are still admitted. The Khyens, once a Bodo ruling race in Northern Bengal, are now wholly absorbed, and can no longer be identified. But the Meches and the Kacharis, though they live among Hindus, are still physically, linguistically, and in matters of belief, distinct races, as, to some extent, are the Chutiyas also. The Garos, Tipperas, and Dimāsās, being isolated highlanders, remain totally unaffected by Hindu influences, whether in language or religion. On the other hand, the race most properly described as Bodos (see art. BODOS) are rapidly losing their native speech, and are being adopted into Hinduism.

What the Hinduism of the great kingdom of Kāmarūpa was, it is impossible to say now with any certainty. But it was evidently the aristocratic religion of kings and nobles only, and from the fact that its centre was the hill shrine of Kāmākṣā Devī, it was no doubt of the Tantrik type identified with Western Assam and Eastern and Northern Bengal—a religion of propitiation of awful and uncomprehended natural forces by bloody sacrifices, often by the slaughter of human victims. Kāmarūpa, with its shrines, priests, kings, and heroes, figures largely in Sanskrit literature from the *Mahābhārata* downwards, and especially in certain *Purāṇas* which deal chiefly with the worship of Śiva and his *śakti*, such as the *Kālikā Purāṇa*. On the other hand, Kṛṣṇa makes a frequent appearance in the stories told in connexion with various places in the Assam valley. Many of these tales seem to imply ancient contests between the cult of Kṛṣṇa and that of Śiva.

For instance, in and round the little town of Tezpur, now the headquarters of the British District of Darrang, are the scattered remains of what seem to have been temples—stone pillars and slabs elaborately carved and ornamented. These are said to have been the palace of one Bāna Asura (the word Asura implies that the king was a non-Hindu by origin), who was the son of Bali Asura. Bāna had many sons and one lovely daughter named Ushā (perhaps after Ushas, the fair goddess of dawn). Ushā dreamt one night of a beautiful youth, and vowed that she would marry no other than the prince of her dream. Her attendant Chitra-lekhā (literally, the 'draughts-woman') had magic skill in drawing portraits, and she drew in turn the features of all the princes in India. Finally, trembling and with hesitation, she ventured to depict Aniruddha, the grandson of Kṛṣṇa himself, and this picture Ushā recognized as the vision that visited her sleep. Aniruddha was attracted by magic arts to Ushā's bower, and 'married her according to the Gandharva ceremony.' The young lovers were surprised by the princess's father, who, in high wrath, being a fervent follower of Śiva, cast the prince into prison, and confined him 'in serpent bonds.' Kṛṣṇa came to his grandson's rescue with a great fleet and army, and carried him and his bride away to distant Dwārikā in Western India, but not until a great battle was fought, in which so much blood was shed that the town is called Sonitpur or Tezpur ('the city of blood') to this day, while the little river which runs near it is known as the Bharali, or 'river of fear.' The low range of hills which here skirts the Brahmaputra bank is said to be the extinct remains of a series of fiery volcanoes cast up by the god Śiva as a bulwark for his ally, the angry father Bāna.

There is one circumstance in connexion with this tale which has a certain ethnological interest. The ruins are visited in the dry season by the Daphlas, a wild tribe who live in the Northern hills. They declare that certain mysterious marks on the carved stones are 'Daphla writing,' and that the buildings were the work of their ancestors. It is possible that the Daphlas once lived in the plains of Assam, and were driven into forest fastnesses by some forgotten incursion of Indo-Chinese invaders. Their national costume, curiously enough, resembles the traditional dress of the god Śiva, and the lower caste Hindus believe them to be of the race of that god, who is described in the books as a Kirāti, 'dweller in the hills.' It was indeed somewhere in these north-eastern hills that the Epic hero Arjuna received lessons in archery and other arts of war from Śiva. In any case, the Daphlas have only to adopt Hindu rules of eating, marriage, etc., to be readily accepted into the Hindu fraternity. Again, it is said that Bhāluka, the grandson of Bāna, built a fort, ruins of which are still visible, not far from Bāliparā at the foot of the Ākā hills. The Ākās, whose chiefs now, on occasions of state, wear costumes evidently borrowed from Tibetan Buddhists, are said to claim descent from Bhāluka. It is possible that they too are descendants of a race that was driven into the hills, was once more or less Hinduized, and may yet be accepted into the Hindu fold.

But there are many such legends, all, or nearly all, relating to powerful Asura monarchs. One of the most famous of these was Naraka Asura, son of the Earth, who is said, in the *Mahābhārata* and *Viṣṇu Purāṇa*, to have carried off the ear-rings of Aditi (the mother and daughter of Dakṣa, above described) to his impregnable castle of Prāgjyotishpur, where Kṛṣṇa, at the request of the gods, went and killed him and recovered the jewels. In the *Harivaṁśa* the same story is told in a slightly different form. Narak's son and successor was Bhagadatta, who is frequently mentioned in the *Mahābhārata*. In the *Sabhā Parvan* of the Epic, the tale is told of how Arjuna attacked Bhagadatta and compelled him to pay tribute. Subsequently, it is related that Bhagadatta went with a great army to the assistance of Duryodhan in the final struggle between the Kauravas and Pāndavas in Western India.

Those who are interested in the legendary period of Assamese history will find a full account of it in Gait's *History of Assam*. In the first half of the 7th cent. we at last get a glimpse of authentic history from the famous Chinese traveller Hiuen Tsiang, who visited Kumār Bhāskara Varmana, then king of Kāmarūpa. Assam was not then, or apparently at any time, a Buddhist country. The king and the upper classes were Tantrik Hindus, the humbler folk were not yet recognized as Hindus at all. This, in the end, was perhaps an advantage, as we shall see when we come to more modern developments of Assamese Hinduism. From the 7th to the 12th cent. our sole knowledge of the country is derived from inscriptions on copper plates, most of them discovered by Gait, which were records of grants of land made to Āyurvedic Brāhmans by Hindu monarchs. These documents contain lists of kings, and enable the historian to settle a few dates at rare intervals. When the Āhoms entered the Brahmaputra valley in 1282, the old kingdom of Kāmarūpa had been shorn of much of its pristine glory, and the history of Assam proper may be said to begin. The Āhoms were Shāns who descended into the valley over the Pātkai pass from Upper Burma. M. Terrien de Lacouperie, the eminent authority on this subject, says that the Shāns are the outcome of an intermingling of Mons, Negritos, and Chinese. They were a manly and hardy race, and (an unusual thing in the East) possessed the historic instinct very strongly. Their *bu-ran-jis* (the word is one of the very few Shān words in the Assamese language) are chronicles comparable for accuracy of detail and picturesqueness of narration with those of any country, and from this time on we have a systematic account of the rise, decay, and fall of the Āhom rule, which resulted finally in British supremacy in Assam. The name Assam itself is probably derived from the word Āhom. The religious history of the Āhoms (*q.v.*) closely resembles that of previous rulers of the country. They, like their predecessors, finally established themselves at Prāgjyotishpur (which gradually came to be called Gauhāti) after having founded Sibsāgar and other towns and palaces in Upper Assam. The kings and their Āhom subjects intermarried with their predecessors in the country,

and became, as zealous Hindus, defenders of the famous shrine of the Tantrik goddess Kāmākṣā. But the bulk of the quiet, innocent, and cheerful Hindus of Assam are not Tantriks at all. They are, like the followers of Chaitanya in Bengal, Vaiṣṇavas, and hold a creed which is manifestly tinged by Buddhistic influences. Their faith is that of the *Bhāgavatas*, enthusiastic worshippers of a monotheistic personal god, who is regarded as the Father of his creatures, as accessible to prayer, as having been incarnate in human form, and as one who loves humanity. The soul is regarded as eternal, and extinction or absorption is not considered as possible or desirable. Rather is it the object of the Vaiṣṇava worshipper to obtain by *bhakti*, or 'devotion,' and prayer, fellowship with and ultimate approach to the presence of the divinity (see BHAKTI-MĀRGA).

2. **Śāktism.**—(*a*) *Historical aspect.*—This new religion, to which the majority of the converts to Hinduism from the humbler races and classes now belong, came into being at a time when the Assam valley was divided between the Koch kings of the West and the Āhom kings who were establishing their dominion in the East. One of the greatest of the Koch rulers was Nara Nārāyaṇa, who died in 1584 after a rule of nearly fifty years. In his time the Koch power reached its zenith, chiefly owing to the warlike ability and energy of his brother, the celebrated commander Silārai. Nara Nārāyaṇa himself is described as a man of mild and studious disposition, who greatly encouraged the spread of the Hindu religion. Like all the rulers of Assam, he was himself a Śākta (a worshipper of the *śākti* of Śiva), and he re-built the temple of Kāmākṣā Devī, which had been destroyed by Musalmān invaders. He imported Brāhmans from Bengal to conduct the religious ceremonies at the temple, and, to this day, the *parvatia guṣain* ('mountain priest') who is the chief priest at Kāmākṣā, is a Bengali from the great seat of Bengal religion and culture at Nuddea. The temple contains two stone figures which are said to represent Nara Nārāyana himself and his warrior brother Silārai (or Śukladhvaj). What Śāktism then was (and what it still is in principle) may be judged from the ceremonies conducted at the opening of the restored temple. Here we cannot do better than quote from Gait's *History*.

'At this time Śāktism was the predominant form of Hinduism in this part of India. Its adherents base their observances on the Tantras, a series of religious works in which the various ceremonies, prayers, and incantations are prescribed in a dialogue between Śiva and his wife Pārvatī. The fundamental idea is the worship of the female principle, the procreative power of nature as manifested by personified desire. It is a religion of bloody sacrifices from which even human beings were not exempt. In the *Kālikā Purāṇa* it is stated that a man without blemish is the most acceptable sacrifice that can be offered, and the manner in which the victim is to be dealt with is laid down in great detail. When the new temple of Kāmākṣā was opened, the occasion was celebrated by the immolation of no less than a hundred and forty men, whose heads were offered to the goddess on salvers made of copper. According to the *Haft Iqlīm*, there was in Kāmarūpa a class of persons called *Bhogis*, who were voluntary victims. From the time when they announced that the goddess had called them, they were treated as privileged persons; they were allowed to do whatever they liked, and every woman was at their command; but when the annual festival came round, they were killed. Magic also held an important place in the estimation of this sect, and in the *Āīn-i-Akbarī* the people were accused, among other practices, of divination by the examination of a child cut out of the body of "a pregnant woman who has gone her full term of months." The religious ceremonies of the sect were equally abominable, and they were often associated with licentious orgies too disgusting to be even hinted at' (p. 56).

It may be noticed as a historical fact, that the Śāktism of Kāmākṣā was the religion in turn of dynasty after dynasty of decadent monarchs, each promoted from a state of semi-savagery by adoption into Hinduism. It may be, on the one hand, that something of savage brutality and lust were imported into the cult by association with primitive beliefs. Certain it is that all the royal families, whether of the Brahmaputra valley or of the adjacent Surmā valley, seem to have been addicted to human sacrifice and to all the excesses and abuses that go with panic-stricken cruelty. It is a fact, too, that life in the soft, enervating, and malarious climate of Assam invariably produced physical and moral decay in the fine and manly Indo-Chinese races that invaded the country. When the British took possession of Assam, the Burmese were in occupation of the valley, and were belying their Buddhist creed by cruelties probably unequalled in savagery in any part of the world. Had they established themselves on the ruins of the Āhom monarchy, there can be little doubt that they, too, would have come under the influence of environment, and that their race would have become emasculated by commixture with the degenerate plains-people. Certainly the Tantrik religion of Kāmākṣā was one of inconceivable cruelty and degradation. Before going on to describe how in the 16th cent. a reformation of the utmost importance and interest altered the whole aspect and application of Hinduism in Assam, it may be well to state briefly what the present state of Śākti-worship in the Brahmaputra valley is known to be.

(*b*) *Śāktism at the present time.*—The modern manifestations of the cult of the generative and reproductive forces of Nature are undoubtedly less sensual, less devilishly cruel, than in mediæval times, and this for a variety of tolerably obvious reasons: (1) the reaction from Burmese oppression helped the natural tendency of the Assamese temperament towards placid acquiescence and tolerance; (2) the example of the reformed and infinitely milder and purer religion of the Bhakats had a similar influence; (3) British rule, again, has made open cruelty and obscenity impossible, and even the secret performance of illegal rites dangerous; (4) above all, perhaps, the spread of education, the improvement of communication, and the fact that Assam has now probably a larger foreign population in proportion to its total numbers than any other Indian province, have effected a real change in the tenets, perhaps, and certainly in the manners of Śāktas. Śāktism remains, and must remain while the Tantras are the scriptures of the sect, a religion of blind terror, of uncomprehended forces, of the terrible mystery of birth and death. The root-idea seems to be that Nature creates only to destroy; that she creates only *because* she destroys; that life is begotten only because it is foredoomed to early destruction. The Śāktist can indeed say of his Kāmākṣā, or of some other form of the generative powers of boon nature, that, like the Lucretian Venus,

> 'per te quoniam genus omne animantum
> Concipitur, visitque exortum lumina solis.'

He can, indeed, take pleasure in the recurring marvel of love. But behind seems to lurk a morbid sense that life and death go hand in hand, or rather that one is the shadow of the other. Since the Venus of the Nilāchal hill is Mistress of Life, and Love, and Death, it is inferred that weak mortals, her children, can do her service by loving, by begetting, by slaying. This sentiment is very widely, if obscurely, present in the minds of Hindus of even the highest intelligence and culture. In *Bhānumati* (Calcutta, 1900), a novel by the poet Navin Chandra Sen, the most eminent of living Bengali men of letters, the sense of the mingled horror and rapture of Śākti-worship is expressed in a way that no mere description by a foreigner could convey. The novel contains, incidentally, a graphic account of the appalling cyclone and tidal wave which swept over the district of Chittagong in

October 1897. The whole description is a vivid reminder of the fact that this remote corner of Eastern Bengal was once part of the vanished kingdom of Kāmarūpa, and still preserves its ancient attitude towards the inscrutable mysteries of our common existence.

The tale opens with a singularly beautiful and poetic description of the smiling aspect of the Chittagong coast in late autumn, of the blue sea flecked with foam as the water of a lake is studded with swaying lilies, of the pale azure of the sky overhead, of the yellow sands shining in the happy brightness of morning sunshine, and behind them the rich gold of ripening crops, varied by the dense green foliage, in which the brown-roofed cottages of the peasants nestle. To the north soars the sacred peak of Chandra-sekhar, crowned with the gleam of the white temple of the goddess, and to the south lies the rocky island shrine of the local Venus at Māskhāl, an Indian Cyprus on a small scale. It is the eve of the annual festival at which, in old time, human sacrifices were offered to the goddess of Life and Death. The people are happy in the expectation of a plentiful harvest. They are preparing the simple presents with which they rejoice the hearts of their relatives and children; their minds are filled with gratitude for safety, and prosperity, and sufficient food. But the goddess is bent on warning her creatures that death is her function as well as life, and love, and happiness. On the fated night of the cyclone, when the rough and simple peasant folk are quietly sleeping, the great wind blows suddenly without visible warning, and, catching up the rising tide, pours it in a torrent of impartial destruction over the sleeping coast, involving all—happy homes, men, women, and children, ripening crops, prowling beasts of prey, and harmless domestic animals, even the birds of the air—in one common hecatomb. The goddess has exacted her own sacrifice, since men no longer offer victims at her altar. The chapter is significantly headed '*Raṇa-Kṣettra*,' the 'Field of Battle.'

And this, be it noticed, is not a description written by a fanatic priest. Navin Chandra Sen is an English scholar, and an administrator who rose high in the British service. He has been an ardent student of English literature, and, as his poetical works show, is deeply interested in the study of religion. But the warp and woof of the devotional texture of his mind is made up of the ancient conceptions which gave the Brāhmans of Prāgjyotishpur their supremacy through Eastern India, and the kingdom of Kāmarūpa its old reputation for magic, sorcery, and divination. It is still a land of spells and charms; and mystic formulas, rightly used, still have power to bless and curse, to draw on fellow-mortals the smile or frown of the inscrutable goddess in whose hands are the gifts of birth, love, and death alike.

The temple at Nilāchal is open to the visits of foreigners; but its rites are not, even now, very accurately known to the uninitiated. During the Amābasyā week the shrine is closed to all, because, by a quaint fancy, that is the period during which Mother Earth, obscurely identified with the goddess, is unclean. Conversely, the great river Brahmaputra, which flows under the shrine, is, for reasons mythological and other, ceremonially impure throughout the year, except on the annual bathing-festival of the Áśokāṣṭamī, when ablution in his waters becomes as cleansing as bathing in Mother Ganges herself.

In the *Report on the Census of Assam*, taken in 1891, Gait writes as follows:

'Their religious ceremonies [*i.e.* those of the Śāktas of Eastern Bengal and Assam] have frequently been the subject of adverse criticism. Robinson says* that some of the formulas used at the festival in honour of Kāmākṣā relate to things that can never become the subject of description, and that "the most abominable rites are practised and licentious scenes exhibited, which it is scarcely possible to suppose the human mind could be capable of devising." I am not aware on what authority he framed this extremely strong denunciation, but his statements are supported by other writers, and have not, so far as I know, been contradicted. It is well known that dancing girls are maintained at all the principal temples, and it seems certain that a great deal of licentiousness is permitted under the guise of religion.' Here Gait refers his readers to the account of Śāktism given by Monier Williams in his *Religious Life and Thought in India*.

The five essentials for worship are the five *Makāras*, or 'five *M's*,' namely, *Madya*, 'wine'; *Māṁsa*, 'flesh'; *Matsya*, 'fish'; *Mudrā*, 'parched grain and mystic gesticulation'; and *Maithuna*, 'the indulgence of sex.' B. C. Allen has a similar account of modern Śāktism in the *Assam Census Report* for 1901.

* *Descriptive Account of Assam*, p. 258.

Before quitting the subject of Tantrik worship in Assam, it is only right to warn the reader that descriptions based on the excesses of possibly a few enthusiasts must not be accepted as a fair account of either the religious beliefs or the ethics of the great bulk of Assamese Śāktas. Like most Eastern Indians, and especially those who have an infusion of Indo-Chinese blood, they are a mild, contented, and smiling race, little given to excesses of any kind, good sons, husbands, and fathers, and, so far as the long experience of those Europeans who have lived among them shows, not more addicted to grossly superstitious practices than the bulk of humanity. Religion with them, as with most races, is left in its more esoteric forms to priests, experts, devotees, and enthusiasts. There are a few dancing girls at the Kāmākṣā temple, it is true, and it is to be feared that these are devoted to the perversely logical extremes of a creed of panic terror, and morbid exaggeration of the facts of sense. But there is no part of India where womanly virtue and modesty are more valued and more consistently practised than in Assam, which in this respect compares very favourably with neighbouring Bengal, where prostitution is rife. In truth, the Śākti-worship of Kāmākṣā can hardly be considered as belonging to Assam in any proper sense. It is the creed, so far as it is Assamese at all, of the upper classes, all of whom claim to be of foreign origin; and there can be no doubt that, except at the temple itself, it has been purified by contact with the true national religion of the country, the reformed Vaiṣṇavism, to which it is a pleasure and a relief to turn.

3. **The Vaiṣṇavism of Assam.**—(*a*) *The historical aspect of Assamese Viṣṇu-worship.*—When the Koch king Nara Nārāyaṇa (1528–1584) ruled in Western Assam, and the Āhom king Chuhumung, whose Hindu name was Swarga Nārāyaṇa (1497–1593), ruled over the eastern part of the Brahmaputra valley, the great social and religious reform initiated in Bengal by Chaitanya spread to Assam, and became the foundation of what is still the popular and prevalent form of Hinduism in the country.

In still earlier times, when the Āhoms entered the Brahmaputra valley, there were twelve subordinate rulers or chiefs, who were known as the Bāra Bhuiyā, and these claimed to be descendants of Samudra, the minister of an ancient and still famous ruler called Arimatta. Samudra, it is said, seized the throne on the expulsion of Arimatta's son Ratna Singh. Samudra was succeeded by his son Manohar, and Manohar's daughter Lakṣmī became the bride of the sun-god, to whom she bore two sons, Santanu and Sāmanta. Santanu became a follower of Viṣṇu, and Sāmanta a Śākta and worshipper of the rival deity Śiva—another reminder of the never-ending contest between the two great Hindu schools of divinity. The brothers separated, Santanu and his sons going to Rāmpur in Nowgong, while Sāmanta remained in Eastern Assam, at Lakṣmīpur, the village from which the British District of Lakhimpur takes its name. He and his descendants seem to have exercised a gradually diminishing political power, and for a long time maintained their independence against the Kachāri or Bodo king who then ruled in Central Assam, and the powerful Chutiya monarch whose capital was at Sadiyā, near the north-eastern frontier. Ultimately, however, they fell victims to the usual law of decay to which all Assamese dynasties have been subject, and were subdued by the rising Āhom power. As in so many other cases, this semi-royal family became reconciled to the common lot of Assamese humanity, and, save for some lingering pride of race and some intellectual aspirations, were merged in the landholding class. One of Santanu's descendants, named Rājdhar, settled at Bardowa in Central Assam, and his son Kusambar was the father of the great religious reformer Śankara Deva.

This is one of two versions given by Gait of the origin of the first of the reformers of Assam. The other story does not differ in material points from that which has been summarized above. It,

too, describes Śankara Deva as the descendant of famous chiefs, but speaks of these as the wardens of the northern marches.

It is said of Śankara that he early recognised the crude and cruel features of the cult of the goddess of Life and Death, and was puzzled by the anomalies of the Śākta religion, obvious enough to modern minds, if they presented few difficulties to simple races surrounded not only by human foes, but by the frequently hostile and always terrible and incomprehensible forces of a land of fierce sunshine, and one much subject to earthquake and storm. Śankara's fate was cast in a happier and more peaceful time, when there was an equilibrium of forces between the two great powers of the Koch and the Āhom, and when men had leisure to think of the possibility that human beings might conceivably live at peace together, and that Nature herself might not be so hostile after all. He spent twelve years in Bengal, chiefly, it is supposed, at Nuddea, where he learnt the religious ideas of a greater than himself, the famous reformer Chaitanya. Like his master, he made the *Bhāgavad Gītā* his scripture, and Kṛṣṇa, the heroic incarnation of Viṣṇu, the god of his worship. He was one of the most eminent of the many teachers, both before and after Chaitanya, of the *Bhāgavata* religion, which in some of its forms so closely resembles the teachings of Christianity that it has been supposed by some that the doctrine of *bhakti*, or personal adoration of a divine Father, was borrowed from the Thomasine Christians of Southern India (see BHAKTI-MĀRGA). Sankara, at all events, abjured priests, idols, and castes, and taught that all men are alike the sons of Viṣṇu, possessed of immortal souls, and capable of being freed from sin and sorrow by addressing their prayers to their loving Father. He at first strove to propagate his ideas—and his earnest desire to find converts affords another parallel with Christianity — in the Āhom dominions. But the Āhom kings were under the domination of Śākta priests, who denounced the innovator as a heretic. Śankara was compelled to take refuge at Barpetā, in the kingdom of the mild and enlightened Koch king Nara Nārāyaṇa. It is said that the king had many interviews with the reformer, and even proposed to become his disciple. But Śankara, with characteristic modesty, refused the honour.

This story may merely record in a concise and picturesque form the fact that the Vaiṣṇavas of Assam never tried, as their Brāhman predecessors had done, to win over the ruling classes. Their 'kingdom,' if the expression may be used without irreverence, 'was not of this world,' and they were content to make converts among the humblest races and classes, those which orthodox Hinduism had, with some vague memory of the old 'Aryan' exclusiveness, regarded as Mlecchas and barbarian. It is said by modern followers of Śankara that he had studied the *Bhāgavad Gītā*, before he proceeded to Bengal, with Hari Deva and Dāmodar Deva, subsequently to be themselves founders of minor Vaiṣṇava sects. It is possible that there was at this period a widely spread wave of religious inquiry and a silent revolution against the physical and spiritual tyranny of Śākta priests. It is at least a curious coincidence that, when Luther and other reformers were rebelling against the abuses of Roman doctrine and discipline, a precisely similar movement should have produced Hari Vyāsa in Nepāl, Rāmānanda in Orissa, Chaitanya in Bengal, and Śankara in Assam.

Śankara is said to have lived to great old age, and to have died in the year 1569. He was succeeded by his favourite disciple Mādhava, a Kāyastha like himself. Among those who still follow the teaching of Śankara, Mādhava is regarded with even greater reverence than Śankara himself, and the sect is commonly known as the Mahāpuruṣiyas, the followers of the 'Great Man' or Teacher, *i.e.* Mādhava. But there were some who, on the death of their original teacher, were still under the influence of old-time ideas, and resented the founding of a hierarchy of Kāyasthas as religious guides. Several Brāhman disciples seceded and founded sects of their own. The most important of these Brāhman dissidents were Dāmodar Deva, Hari Deva, and Gopāl Deva, who founded numerous *chattras*, or centres of religious instruction. The most important and interesting of these are the institutions, not wholly unlike Buddhist monasteries, at Auniāti, Dakṣinpāt, Garamur, and Kuruābāhi — all in the remarkable Mājuli island, perhaps the longest river-island in the world, which lies in the Brahmaputra, between the modern Districts of Sibsagar and Lakhimpur. There is little Śāktism now except in Kāmrūp Laur; and that of the Vaiṣṇavas in Lower Assam is mainly Mahāpuruṣiya, while Upper Siam, including Nowgong, east of the Kalang, is inhabited mainly by followers of the Bāmumya *guṣains*.

But even in Upper Assam the Brāhmans did not in early times exercise an unquestioned sway. There was one Aniruddha, a Kolitā or writer by caste, who quarrelled with Śankara Deva and founded the Moāmāriā sect, which played an important part in subsequent political events, and is known to all students of Assamese history as the origin of the famous Moāmāriā rebellion. It is said that the word 'Moāmāriā' is a nickname, contemptuously given by the Brāhmans to the low-caste followers of Aniruddha, who lived by a fresh-water lagoon which abounded in the coarse fish known as *moā*. His disciples were known as 'killers of moā-fish.' They became 'fishers of men' to considerable purpose in later times, and furnished a hard nut for the Āhom rulers of Assam to crack.

For a time the Mahāpuruṣiyas and Bāmuniyas between them practically ousted Śāktism from Assam. Its restoration was due to the royal pride of the famous Āhom king Sukhrungphā, better known by his Hindu name of Rudra Singh (1696–1714). He wished to adopt Hinduism, and was too proud to accept the *saran*, the oath and formula of orthodoxy, from a subject. He imported one Kṛṣṇarām Bhattāchariya from Nuddea, and made him *parvatia guṣain*, the high priest of the mountain-temple of Kāmākṣā. Kṛṣṇarām was a Śākta, and the Court and its dependants adopted his form of Hinduism. The new guṣain's priestly arrogance was aptly shown when Rudra Singh died and was succeeded by his son, Sunyeophā or Lakśmī Singh. Kṛṣṇarām refused to recognize the young king, on the ground of illegitimacy. Lakśmi Singh accordingly imported another Śākta priest from Bengal, who was the founder of the family of the Na Guṣain, the 'New Priests,' as the Parvatia Guṣains are the heads of the Nāti Guṣains, who together with them form the nucleus of Śāktism in Assam. There are, however, a few representatives still of the old indigenous Śāktism of the Assam valley, who, from their habit of going about un-turbaned, are known by the title of *Mukali Muṛa*, the 'Bare-heads.' Gait believes that Śāktism has more vital force than Vaiṣṇavism. 'Many Vaiṣṇavas,' he says, 'are attracted by the more realistic worship of the Śāktas, and offer sacrifices at Kāmākṣā despite the remonstrances of their spiritual guides.' In truth, Vaiṣṇavism, as practised by its humbler converts, is but a stage removed from the animistic creed of the aboriginal races of Assam. It involves chiefly the giving up of good roast pork and rice-beer—luxuries to which the castes that have Indo-Chinese blood in their veins are much addicted. Śāktism, on the other hand, puts little check on sensual gratification, since it is always possible for enthusiasts of either sex to regard themselves as incarnations of the male or female form of the deity, and so to please divinity by pleasing themselves.

(*b*) *Vaiṣṇavism at the present time.*—It remains to say a word as to the Vaiṣṇavas as they now are. Laymen are under the supervision of the *guṣains* of one *chattra* or another, to whom they have taken the vow of obedience. They are visited from time to time by *bhakats*, or disciples of the *chattra*, who exact the doles or fines by which the community is maintained. They are mostly simple and innocent enough folk, not much given to religious or ethical speculation. Their

rustic existence is so uneventful and unchequered that a very plain and uncomplex theory of moral and material existence suffices them. The Mahāpuruṣiyas now regard Sankara and Mādhava as *avatārs*, or incarnations of Viṣṇu, though neither of them claimed this promotion in his lifetime, and would, indeed, have regarded such an assumption of divine honours with horror. The way to salvation lies through the performance of good deeds and the devout pronouncing of the name of Hari. Worship is carried out by the performances of *saṅkīrtan*, the enthusiastic singing of hymns accompanied by much beating of drums (*dhol*) and clashing of cymbals (*kartāl*). The ten incarnations, or *Daś Avatār*, of Viṣṇu are believed in. Caste prejudices, though theoretically opposed to the tenets of the sect, were not wholly destroyed by Mādhava himself, and are slowly but surely reasserting themselves, perhaps under the influence of the adjacent Śāktism. The Mahāpuruṣiyas do not, however, recognize caste so fully as the sects that have Brāhman leaders. The *Kaulia Bhakats*, the monks or recluses who live in the precincts of the *chattras*, are celibates, ascetics, and wholly ignore caste, as being of the nature of worldly distinctions. In each *chattra* there is an image of Viṣṇu, but this is said by the Kaulias to be a mere concession to the idolatrous weaknesses of the common people. They themselves do not pay any reverence to the idol, and are pure monotheists after the teaching of the *Bhāgavad Gītā*, with, no doubt, in the case of the better read among them, a leaning towards pantheism.

The Mahāpuruṣiyas eat the flesh of wild animals, such as deer, and also all feathered game. They do not eat domesticated animals or fowls. (It may be worth mentioning that the Assamese word for 'deer' is *pahu*, the local pronunciation of the Sanskrit *paśu*. The deer is, in fact, '*the* animal.') The Mahāpuruṣiyas do not kill with the knife or poleaxe, as most Indians do, but cudgel animals to death. Their principal scriptures are a *Kirtan* and *Daśam* attributed to Sankar Deva, and a *Nāmghoṣa* and *Ratnāvali* said to have been composed by Mādhava. The *Kirtan* and *Nāmghoṣa* are anthologies from different *purāṇas*. The *Daśam* and the *Ratnāvali* are extracts from the *Bhāgavad Gītā*. The Mahāpuruṣiyas refuse to eat with the Dāmodariyas, but, curiously enough, intermarriage with them is not unknown.

The Dāmodariyas worship the idol of Kṛṣṇa, and they regard their founder Damodar Deva as an incarnation of that god. Refusing the spiritual leadership of Śūdras, they refuse, necessarily, to recognize the claims to homage of Sankar and Mādhava. In other respects there is little difference between their tenets and habits and those of the Mahāpuruṣiyas. Though they are careful for Brāhmanical supremacy, they are, strange to say, less strict in diet than the Mahāpuruṣiyas, and eat the flesh of goats, pigeons, ducks, etc., following in that respect the example of their Brāhman teachers. Nor are they so particular as the Śūdra caste in matters of personal cleanliness.

The followers of Hari Deva regard their leader as an emanation of Kṛṣṇa, but do not on that account deny that Sankar was also an incarnation of Viṣṇu. Among them prevails the practice of the *bhakat-seva*, which permits their Brāhman leaders to accept indiscriminately all offerings made to them by their *jajmānas*, or disciples. Hari Deva was himself an enthusiastic admirer of Sankara and Mādhava, but in modern times the tendency is for the followers of this reformer to identify themselves with the Dāmodariyas.

Finally, a few words must be said as to the followers of Gopāl Deva. Gopāl was a disciple of Sankara, who quarrelled with his leader, and started a *chattra* of his own. But it is said that the misunderstanding did not wholly destroy their liking and respect for one another, and it is difficult at the present day to see much difference between the beliefs and practices of the followers of Gopāl Deva and the Mahāpuruṣiyas. The former hold an annual festival in honour of their founder, but in other respects are much the same as members of the rival sect.

4. **Methods of conversion.**—The most important method of conversion to Hinduism in Assam, but one always reserved for ruling princes and powerful tribes, and now obsolete, was that described by Gait as 'conversion by fiction.' As he says (*Census of Assam*, 1891, p. 83):

'The Brāhmans ingratiate themselves with the head of the tribe, discover that he is a Hindu of unexceptionable antecedents, whose ancestors have for some reason thought fit to conceal their identity, and present him with a brand new genealogy, in which his descent is traced back to some god in the Hindu pantheon or some potentate in Hindu mythology. Thus the Koch kings are said to be descended from Śiva, who, assuming the form of Haria Mandal, had intercourse with his wife, who was no other than an incarnation of Pārvati. While a divine origin for the king was thus furnished, the rest of the tribe were not forgotten. It was explained to them that they were Kṣatriyas who fled eastwards to escape the wrath of Paraśurāma, and had remained there ever since, disguised as Meches and Koches. The Kachāri kings of Hiramba were similarly converted, and, after their ancestry had been satisfactorily traced back to Bhima, the two chiefs, Kṛṣṇa and Govinda Chandra, were placed (about 1790 A.D.) in the body of a large copper image of a cow, and were thence produced to an admiring people as newly born Hindus. The whole of the Kachāris of that part of the country were also admitted to be of Kṣatriya origin, and were allowed to assume the sacred thread on declaring their adherence to the orthodox faith. The conversion of the Manipuris (or Meithei, the Kuki-Chin race inhabiting the Imphāl valley) happened in precisely the same way. Arjuna was alleged to have been the founder of the royal family, while the masses of the people, like the Kachāris, were admitted to be "concealed Kṣatriyas." To this day a Nāga or Kuki on conversion is at liberty to describe himself accordingly and to assume the sacred thread. For the Āhoms, Indra was selected as the mythical progenitor of the kings, but no special origin seems to have been assigned to the common people, so that an Āhom on conversion takes as low a place in the Hindu caste system, in his own estimation, as he does in that of orthodox Hindus.'

Here Gait adds an interesting note to the effect that Indra also enters into the traditions of the Mon-Annam races of Burma and the Far East. Indra alone of the Vedic gods, Forbes tells us, has been admitted into Buddhist mythology (*Languages of Further India*, p. 41). It is just possible that the Āhom kings brought the tradition of their heavenly descent with them from Burma, and did not obtain it from their priestly attendants.

The fictional system of conversion had its advantages. It admitted whole races at a time into Hinduism. But it involved important concessions, which the Brāhmans were not likely to make unless they could receive some equivalent in return. Converts who belong to tribes for which a high ancestry has already been invented, continue to claim admittance to their reputed caste—generally, of course, a high one. But nowadays conversion is sporadic and confined to humble folk, and such people are kept on a much lower footing than the kings, warriors, and invading races of old time. Sometimes they change their tribal name and enter a caste specially reserved for them. Sometimes they even become Hindu without changing the title of their race.

In the Assam valley the Koch caste is usually allotted to converts—a circumstance not without interest when it is considered that Koch was originally the name of a race whose members, in Northern and Eastern Bengal, changed their name to Rājbaṁsi, or 'royal-born,' when they adopted Hinduism. The true Bodos of the Kachāri Dwars usually enter this caste, while their highland

cousins, the Di-mā-fisā, as already related, have been raised to Kṣatriya rank. But even the name of Koch cannot be assumed all at once. A Kachāri, for instance, begins by placing himself under the protection of a *guṣain* and taking the oath of obedience, or *saran*. He is then called a Saraniya. At this stage he still eats pigs and fowls, and continues to drink beer and, less frequently, distilled spirits. Next he (or rather his descendants) becomes a Modāhi, which implies the renunciation of alcohol. By slow degrees the ancestral yearning for unholy food and drink diminishes or disappears, and, having become a ceremonially pure Hindu, the aforetime Kachāri is accepted as a Kāmtāli or Baṛ Koch. Even then, however, he is subject to relapses, especially in the matter of pork, as the presence of pigs in Koch villages sufficiently testifies.

In the eastern part of the Brahmaputra valley, where caste feeling is even now weaker than on the confines of Bengal, a change of name is unnecessary, and a Kachāri or Āhom retains his tribal appellation. In the Surmā valley the only Indo-Chinese tribes who are now converted are Manipuris and Kachāris; and these, as explained above, are entitled to be received as Kṣatriyas though the Kṣatriya caste no longer exists among the Bengalis. There are a few Tipperas (Bodo folk from the Tippera hills) who are received into Hinduism. These obtain the as yet unexplained caste name of Rārh.

It may be mentioned in passing that instances have been known in which members of hill tribes have undergone a stage of Christianity on their way to Hinduism.

For instance, there is a well-authenticated case of a young Kachāri in Darrang who was brought up in a mission school, was baptized, and obtained a somewhat lucrative post. To a man of his race it seemed natural that he should invest his savings in a polygamous union, and he was at some pains to convince his missionary that he could find nothing in the New Testament to prevent a layman from being the husband of two wives. It was, of course, impossible for his pastor to accept his view of the case, but he married a Koch girl *en secondes noces*, and himself in due course became a Hindu Koch.

At the present time the ferment of political agitation which is stirring in Bengal has spread, to some extent, to the educated classes in the Assam valley. The movement is largely a Hindu movement, and implies the fervent adoration of a Mātā, or mother, to whom the *Bande Mātāram* hymn is addressed. This hymn is usually interpreted as an invocation of the mother-land; and, in one sense, it undoubtedly has this meaning. But no one who will take the trouble to read the context in the well-known novel of *Ānanda Maṭh*, from which the hymn is taken, will have any difficulty in convincing himself that the invocation has also an esoteric sense, and implies the adoration of a female divinity, who is, more or less disguised, the Śakti of the old cult of the vanished kingdom of Prāgjyotishpur. The neo-Śāktists who, in Bengal and Assam at least, head the new 'national' movement towards autonomy and independence of British rule, boldly claim, on the strength of their education and intellectual ability, an equality with European races, and, of late, have exhibited a marked desire to be admitted to the amenities of European society. They themselves confess that the social and political progress of Japan has given the hint for this new ambition. It will be a matter of much interest to see whether followers of the more esoteric and, according to European ideas, less pure and elevating form of Hindu belief will be able so to transmute their social system and ideals as to obtain admittance into even the comparatively tolerant society of modern Europe. Of the intellectual ability of the Aryo-Dravidian upper classes of Bengal and Assam, the heirs of the ancient civilization of Kāmarūpa, there can be no doubt. That most of them are good citizens and excellent in their dealings with one another is equally undoubted. It may be that Śāktism at its worst was no worse than the society depicted, for instance, in the tales of Apuleius—a society which nevertheless still retained something of the administrative instincts of Republican Rome. It would be unwise to dogmatize or prophesy in a matter whose solution must depend on many incalculable events. It would be unfair to remind the political reformers of Assam that the shrine of Venus Kāmākṣā still draws its throngs of worshippers and furnishes revenue to priests who are much as were the priests of old time, when the humble civil station of Gauhāti was the proud and famous capital of Prāgjyotishpur, an early English account of which may be read in the travels of Ralph Fitch, who visited the country of Couch, or Quichen, as he calls it, when Nara Nārāyaṇa still ruled over the diminished remains of the old kingdom of Kāmarūpa.

See, further, separate artt. on ĀHOMS, BODOS, KHĀSIS, LUSHAIS, MANIPURIS, MIKIRS, NĀGAS. For an account of the Muhammadanism of Assam see ISLĀM (in Burma and Assam), and for the Buddhism see BUDDHISM (in Burma and Assam).

J. D. ANDERSON.

ASSASSINS.—1. Names.—'Assassins' was a name given, mainly by European writers, to a community properly called Ta'līmites ('Instructionists') or Ḥasanites ('followers of Ḥasan Ṣabāḥ'), forming a branch of the Bāṭinites ('followers of the Inner Meaning'), Ismā'īlians ('adherents of Ismā'īl b. Ja'far aṣ-Ṣādiq'), or Sab'ites ('Heptadists'), and sometimes confused with the Bābakites or Ḥuramites and Qarmatians (*q.v.*). For the origin of the name Assassin (spelt in base-Latin documents *assasini*, *assessini*, *assisini*, *assassi*, *hassasuti*, *heissessin*, etc.) many improbable conjectures were offered till it was finally identified by de Sacy (*Mém. de l'Institut*, iv. 44) with the Arabic *ḥasshāshīn* or *ḥashīshiyya*, 'drinkers of *ḥashīsh*' (an extract of hemp possessing intoxicating properties, with which there is reason to believe that the members of the sect were at times drugged). The story, however, to that effect which is told by Marco Polo (3rd ed., Yule, i. 139), though parallel with some Eastern narratives (see von Hammer, *Mines de l'Orient*, iv. 355), can only be regarded as a romance. The name *ḥasshāshīn* with its synonym has as yet been found in very few Arabic authors,* applied to the Syrian branch of the sect; and seems to have been a term of abuse, given to it by its enemies, who associated deceit with the habit of drinking this liquor (*ZDMG* xx. 591).

2. Tenets.—The tenets of the community are very imperfectly known, partly owing to the rarity of MSS emanating from it, and partly because their doctrines were essentially esoteric, and communicated in their entirety to very few persons. It is, however, certain that the system of the Ismā'īlians was a conflation of philosophic pantheism, emanating from India, with the formulæ of Islām; and the doctrine whereby this process was facilitated, and which won them the name Bāṭinites, was that every text of the Qur'ān had a hidden meaning, which was to be followed

* To de Sacy's references we may add Mufīd al-'ulūm (Cairo, 1310, p. 50), where *ḥashīsh* is said to be the food of the *Mulḥids* (the name by which the sect is known to its enemies).

to the exclusion of the literal sense. The name Sab'ites is ordinarily interpreted as implying that they recognized only seven *imâms*, whereas most of the Shî'ites recognised twelve; the seventh being that Ismâ'îl b. Ja'far, who was supposed to have died before his father (who therefore left the imâmate to another son Mûsâ), but in the opinion of the Ismâ'îlians either did not die but remained concealed, to re-appear at some time as Mahdî ('divinely-guided' leader), or retained his title to the imâmate and handed it on to his son Muḥammad, a real or pretended descendant of whom afterwards founded the Fâṭimid dynasty in Egypt. More probably the name Sab'ite refers to their belief in seven incarnations of the deity, called *nâṭiqs*, 'utterers,' whom they enumerate as Adam, Noah, Abraham, Moses, Jesus, Muḥammad, and Muḥammad b. Ismâ'îl; for the last, as will be seen, the head of the community for the time being was apt to be substituted. Between every two of these *nâṭiqs* there came a series of seven *imâms*, or chiefs; and each imâm was at the head of a heptad, of either followers or classes of followers, called respectively *ḥujja* ('argument'), *dhû maṣṣa* ('sucker,' *i.e.* imbiber of learning), *dâ'î akbar* ('greater missionary'), *dâ'î ma'dhûn* ('permitted missionary'), *mukallib* ('trainer') and *mu'min* ('believer'); the last class but one were not permitted to reveal the doctrines, but might shake the faith of ordinary Muslims. Similarly they had a system of seven operations required in the making of a convert, the first of which consisted in testing the capacity of a man for conversion, the second in winning confidence by flattering a man's particular taste (*e.g.* practising asceticism before an ascetic, debauchery before a loose liver), the third in suggesting doubts as to the truth of Islâm; in the sixth a man had to abandon religious observances, and interpret 'washing' as obeying the imâm, 'washing with sand' (permitted by the Islâmic code in the absence of water) as obeying the 'permitted missionary' when the imâm was away, etc. Certain other examples of the 'inner meaning' assigned by them to Qur'ânic texts are given by Ch. Schefer (*Chrestomathie persane*, i. 178):

'When the Qur'ân says Jesus had no father, the meaning is that he received instruction from no trustworthy teacher: when it says that he raised the dead, it signifies that he brought knowledge to dead understandings.'

Rather more interesting is their gloss on the Qur'ânic passages in which Pharaoh and Haman are mentioned. These names they supposed to stand for the first two Khalîfs, Abû Bakr and 'Omar, who kept the first imâm, 'Alî, out of his rights. With regard to the existence of God they maintained a sceptical attitude, so far at least as 'existence' might be regarded as an attribute; for their public symbol was at times 'we believe in the God of Muḥammad.' In their cosmogony the world of mind was said to have first come into existence; the world of soul followed, and then the rest of creation. A man's life is due to his being a receptacle of a partial soul which at death rejoins the universal soul.

3. History.—The tenets of this community seem to have attracted little attention till towards the end of the 5th cent. of Islâm; for the work of Ibn Ḥazm on sects and creeds of the middle of that century contains but a casual allusion to them as one of many sects who vainly believed in a concealed imâm. The importance of the branch known as Assassins began with Ḥasan b. 'Alî b. Ṣabâḥ the Ḥimyarite, ordinarily known as Ḥasan Ṣabâḥ, who in A.D. 1090 seized the fortress of Alamût near Kazvîn; but it was greatly reduced when, in 1256, that fortress was taken by the Mongol Hûlâgû. On that occasion the conqueror gave his vizier 'Atâ Malik Juwainî the right to inspect the library of the fortress before burning it, and the vizier thence extracted a brief history of the community, which he afterwards inserted in his chronicle called *Jahân-Kushâi*, tr. by Defrémery in *JA*, 1860.

This summary was afterwards embodied by the Persian chronicler Mirkhond (*ob.* 1498) in his *History*, together with some other matter bearing on the history of Ḥasan Ṣabâḥ and his successors (published with tr. by Jourdain in *Notices et Extraits*, ix. 143 ff.). An account in some respects more favourable to Ḥasan is given in the chronicle of Ḥamdallâh Mustaufî (*ob.* 1349 A.D.), translated by Defrémery in *JA*, 1848. Some of the matter given by Mirkhond is derived from a work by the celebrated Niẓâm al-Mulk, vizier of the Seljûks, who was well acquainted with Ḥasan and finally perished by his machinations. The most elaborate account as yet discovered is that in the chronicle *Jâmi' at-tawârîḫ* (Brit. Mus. Or. 1684), which is told from the point of view of followers of the sect. The statements of this work, and others bearing on the same subject, have been submitted to searching criticism by E. G. Browne (*A Literary History of Persia*, ii. 190 ff.), who has disposed of certain familiar myths, which need not again be repeated. According to this, his father's home was Kûfah, but he had migrated to Qum, where Ḥasan was born; both originally belonged to the Shî'ite 'Sect of Twelve,' but the son was converted to the 'Sect of Seven' through the efforts of a missionary named Amîr Ḍarrâb, and those of the famous poet and traveller Nâṣir-i-Khusraw. These missionaries, societies founded by whom had already honeycombed Persia, were agents of the so-called Fâṭimid Khalîfs of Egypt, at whose court ambition which had failed to find gratification at that of the Seljûks, now in control of Baghdad, naturally sought compensation. The myth to which reference has been made assigns Ḥasan a motive of this sort for joining the sect.

About the year 472 A.H. (A.D. 1079) Ḥasan went to the court of the Egyptian Khalîf Mustanṣir, and studied the doctrines of the community which he had joined. But he did not stay more than two years in Egypt, having espoused the cause of the Khalîf's eldest son Nizâr, who had been appointed by his father to succeed him, but was later displaced in favour of another son. Ḥasan Ṣabâḥ maintained that the expressed resolve of an imâm was unalterable. He obtained, however, some sort of certificate as Ismâ'îlian missionary, and introductions to those persons who were already playing that part in Persia, whither he returned in 1081; and a writer on religions in 1085 at the court of Ghazni already mentions Ḥasan Ṣabâḥ as a successful preacher of Bâṭinism in Khurâsân and 'Irâq (Schefer, *op. cit.*, i. 161).

According to Ibn Athîr (ed. Tornberg, vol. x. p. 213), the Ismâ'îlian revival with which Ḥasan proceeded to associate himself had about this time begun at Sâwa, where eighteen men met to perform worship in the style peculiar to the sect. There, too, their first assassination took place, the victim being a *mu'adhdhin* ('caller to prayer'), whom they had vainly endeavoured to convert to their doctrines, and had murdered when they feared he might betray them to the local authorities. The vizier Niẓâm al-Mulk ordered a carpenter who was suspected of the murder to be executed with great brutality, and thereby exposed himself to the vengeance of the sect. Since Ḥasan Ṣabâḥ's conduct is said to have been dictated by dissatisfied ambition and the desire to be avenged on Niẓâm al-Mulk, this may have been the occasion for his conversion; but the order of events is not quite certain. What is clear is that the sect was highly unpopular with the orthodox, though the skill of the missionaries caused it to spread in secret; and that the sectarians quickly felt the need for strongholds in which they could be safe from persecution. The first fortress seized was one near Qâ'in between Iṣfahân and Nîṣâbûr (see C. E. Yates, *Khurasan and Seistan*, 1900, p. 62). That of Alamût, which fell into the hands of Ḥasan, 'is 32 miles from Kazvîn; it is on a solitary rock, about 300 yards long from E. to W., very narrow, not 20 yards wide at the top; about 200 feet high everywhere save to the W., where it may be 100' (*JRGS* viii. 431; cf. iii. 15). Ḥasan

is said to have purchased it for 300 pieces of gold from an 'Alid who happened to be governor, and on whom Ḥasan imposed by professed asceticism and piety; and he probably obtained authority among the Ismā'īlians by professing to act as the deputy of the Egyptian Khalīf, whom they acknowledged as their chief. Ḥasan caused the land surrounding his fortress to be carefully cultivated, and this may have led to the legend which associated with it gardens of delight that could serve as a foretaste of the Islāmic Paradise.

Like other founders of dynasties in the East, Ḥasan was a preacher and controversialist. Works by him* or by his colleagues, embodying Bāṭinite doctrines, excited sufficient attention to evoke replies from the foremost theologian of the time, al-Ghazālī, who refuted their tenets in a work dedicated to the Khalīf Mustaẓhir (487–512 A.H.), whose reign coincided with Ḥasan's tenure of Alamūt. A second tract written by him in answer to the 'Instructionists,' called 'The Just Balance' (*al-Qusṭās al-Mustaqīm*), was published in Cairo, 1900. It is in the form of a dialogue between Ghazālī and a member of the sect. The latter maintains the doctrine of a hidden instructor, who can see all that is going on in the world, on the authority of his mother, 'and our master the lord of the fortress Alamūt,' as well as a comrade of Dāmghān Iṣfahānī, and the inhabitants of the fortresses. The treatise is occupied mainly with an account of the forms of the syllogism and the logical fallacies, and an attempt to show that there is no need for an infallible instructor. The book must have been written before 515 A.H., when its author died. The writings of Ḥasan were burned by one of his successors; but some of them were current in the time of Shahrastānī, who in his works on *Sects and Schools*, ed. Cureton, p. 150 (A.D. 1127 [521 A.H.]) gives excerpts from one of them, translated from Persian into Arabic. The purpose of this treatise appears to have been to decry the independent use of the reason, and prove that for knowledge of God (which with this sect was equivalent to salvation) recourse must be had to a divinely-authorized teacher, whence the sect are sometimes called *at-ta 'līmiyya*, or 'Instructionists.' Undoubtedly his purpose was completely to enslave the mind of his disciples, who may even have been drugged for certain periods. Although assassination was from the commencement of Islām a common way of dealing with enemies, Ḥasan Ṣabāḥ appears to have systematized the process in a manner previously unknown. A doctrine which is ascribed to the Ismā'īlians by a late writer, but which may well have been taught also by Ḥasan Ṣabāḥ, was that the soul is imprisoned in the body for the purpose of executing in all points the orders of the *imām*. If the soul quits the body while fulfilling its duty of obedience, it is delivered and transported to the regions of the upper lights; whereas, if it disobeys, it falls into darkness (Quatremère, *Mines de l'Orient*, iv. 368).

One class of disciples, called *Fidā'is*, were ready at all times to assassinate those whom the head of the order marked out for death; and in accordance with the doctrine described they would risk their own lives readily in making such attempts. Nevertheless these persons received a special training qualifying them for such missions; they were taught foreign languages and the ceremonies of foreign religions, and how to adopt and maintain a variety of disguises. Hence the assassins dispatched by the 'Old Man of the Mountain,' in order to win the confidence of their destined victims, would play a part for a series of months, or even years. The terrible certainty with which Ḥasan Ṣabāḥ could strike from his fortress soon enabled him to extend his possessions and make terms with various rulers. In the second year of his residence at Alamūt he struck down Niẓām al-Mulk, and, shortly after, the Sulṭān Malik Shāh. Emissaries of his made attempts on the lives of Malik Shāh's successor, Barqiyāruq, and the former's brother, Sinjār, installed by his nephew as governor of Khurāsān. During the war between Barqiyāruq and his brother Muḥammad, numerous fortresses were acquired by the chiefs of the sect, mainly in the region called Kuhistān. The knowledge of the existence of this society, and that many persons in high posts at the Seljūḳ courts were its secret adherents, caused terrible anxiety and disquietude. 'Whoever wished to ruin his adversary accused him of belonging to the Ismā'īlian sect; delations multiplied; suspicion hovered over every one' (D'Ohsson, *Histoire des Mongols*, iii. 159). The Sulṭān Barqiyāruq, son of Malik Shāh, was himself accused of favouring the Assassins, and was compelled to raid their country, without, however, achieving any important results.

Not long after the acquisition of Alamūt by Ḥasan Ṣabāḥ, the Assassins became strong in Syria also. Whether these Syrian Ismā'īlians at the first recognized the authority of the 'Old Man of the Mountain' is not certain; a detailed account of their history is given by Quatremère, to which something is added by Defrémery in *JA*, 1854, 1855. Ten years after the seizure of Alamūt, we hear of the Ismā'īlians establishing themselves at Aleppo; and for a time they enjoyed the almost unconcealed favour of the Seljūk prince of that place, Riḍwān, who is thought to have employed their services in getting rid of his enemy Janāḥ ad-Daula, prince of Emesa (A.D. 1100). The names of their leaders at Aleppo are given as al-Ḥakīm al-Munajjim and after him Abū Ṭāhir al-Ṣā'igh (Abū Ya'lā Ḥamzah, p. 149). Through the machinations of the latter, in 1106 they obtained possession of Apamea, whence, however, they were ere long driven by the Franks. Riḍwān's successor, Alp Arslān, the Dumb, urged on by the Persian Seljūḳs, organized a massacre of the Ismā'īlians in 1113; yet their numbers and power kept increasing, and in 1126, through the efforts of their agent Bihrām and his influence with Ẓahīr ad-Dīn Atābek, they got possession of Bāniās, whence, however, they were driven in 1129 owing to a massacre of their adherents in Damascus. In 1140 they acquired a highly important stronghold, Masyāt or Masyāf, and in the second half of the 12th cent. they were in possession of ten or eleven fortresses. Lists of the persons of eminence whom they killed have been made out by many writers. These were sometimes persecutors of the sect, but not infrequently the head of the community took pay from some foreign prince to strike down an enemy. In 1148 one of their number killed the Frankish count of Tripoli, in consequence of which the Templars invaded their territory and compelled them to pay tribute. On 29th April, 1192, an emissary of the 'Old Man of the Mountain' killed Conrad of Montferrat, signor of Tyre and titular king of Jerusalem; different accounts make the 'Old Man of the Mountain'—or rather Rāshid ad-Dīn, at this time independent head of the Syrian Assassins, resident in the fortress of Kahf—despatch the Assassins at the instigation of Saladin, and at that of our Richard I. The Assassins in this case were disguised as monks. The ability with which the Ismā'īlian chiefs could execute assassinations caused them to receive commissions for such acts from both Eastern and Western princes, including the Byzantine emperors. And many a crime of the sort was ascribed to them of which they were innocent.

* One of them is called by Muḥammad b. Malik Shāh 'the book filled with lies' (Abū Ya'lā Ḥamzah, ed. Amedroz, p. 153).

The throne founded by Ḥasan Ṣabāḥ was occupied by seven successors—Buzurg Umid (518–532 A.H.), his son Muḥammad (532–557), his son Ḥasan (557–561), his son Muḥammad (561–607), his son Ḥasan (607–618), his son 'Alā ad-Dīn (618–653), his son Rukn ad-Dīn (653–654), when Alamūt was taken by the Mongol leader Hūlāgū, and the fortresses of the Assassins in Persia were stormed one after another. This last date corresponds with A.D. 1256. In Syria the power of the Ismā'īlians continued somewhat longer, and as late as 1265 presents are said to have been sent them by various European monarchs; but the ruler of Egypt, which, after the fall of Baghdad, became the headquarters of Islām, gradually obtained possession of their fortresses, all of which were occupied by the Egyptian Sulṭān Baibars in 1273. Baibars, however, continued to favour the sect, and to make use of members of it when he required assassins; and a curious treaty is mentioned between his general Qalā'ūn and Margaret of Tyre, in which the Egyptian undertakes that no servants of his with the exception of Assassins shall molest her. At times they were able to regain possession of their fortresses, and in 1326 held as many as five. Many of the later Mamlūk Sulṭāns countenanced them, and occasionally employed their services against enemies; thus the long war between the Mamlūk Qā'itbai and the Turkomans was due to the employment by the Sulṭān's predecessor of an Assassin to remove a Turkoman prince.

Of the successors of Ḥasan Ṣabāḥ the third signalized himself by rejecting the claims of the contemporary Egyptian Khalīf to the imāmate on the ground that it had descended of right to Nizār, eldest son of Mustanṣir; and that he, Ḥasan, though supposed to be the son of the governor of Alamūt, was in reality the heir of this Nizār. In virtue of his divine right he formally absolved his subjects from many of the ordinances of Islām, including the Fast (*Ṣaum*), and made some changes in public worship. He is also charged with having given permission for various forms of immorality. The fifth successor, on the other hand, endeavoured to restore Muslim orthodoxy among his followers, and burned the books of the founder of the dynasty. He entered into friendly relations with the Sulṭāns of Baghdad, and was treated by them with distinction.

Of the members of the sect in Syria by far the most interesting is Rāshid ad-Dīn Sinān, of whose career a detailed account is given by S. Guyard in *JA*, 1877. About 555 A.H. (A.D. 1160) this person was sent by the ruler of Alamūt to take the place of Abū Muḥammad, governor of the fortress Kahf. He adopted the tactics with which Ḥasan Ṣabāḥ had previously succeeded, made himself interesting, and won respect in the neighbourhood of Kahf by religious exercises and philanthropic actions, and by an affectation of humility and asceticism. This secured him the notice of Abū Muḥammad, who received him into the fortress and treated him with honour, learning only on his deathbed that he had been sent to supplant himself. Rāshid appears to have shaken off allegiance to Alamūt, claiming to be not only *imām*, but an impersonation of the deity —a claim which won large acceptance among the Ismā'īlians, though his lameness constituted a difficulty to some minds. In the fragments relating to the doctrine of the sect published by Guyard in *Notices et Extraits*, vol. xxii., some treatises ascribed to him are to be found; in these the title *nāṭiq* (which is also given to Moses) is claimed for him. In anecdotes told about him (collected by one Abū Firās, *JA*, 1877), he figures as a magician, or rather conjuror. He claimed to be able to answer letters that he had not read, and, anticipating modern conjuring tricks, held conversation with a trunkless head.

At the beginning of the 19th cent., Ismā'īlian communities still existed both in Persia and Syria; J. B. Fraser (*Journey into Khorasan*, 1825), describes his meeting with Khalīl Allāh, the then head of the Ḥasanites (as he calls the sect) at Yezd. This chief was treated by the community with almost divine honours, and many of his adherents were visitors from India. The same personage is mentioned by J. B. Rousseau ('Mémoire sur les Ismaelis et les Nosairis,' *Annales des Voyages*, xlii., 1818), who, however, places the residence of the chief at Kehk in the district of Qum, S.S.W. of Teheran. Rousseau also gives details concerning a Syrian community of Ismā'īlians, with headquarters at Maṣyāf, twelve leagues west of Ḥamāth. They were distributed over eighteen villages, and their *shaikh*, or governor, was appointed by the governor of Ḥamāth. They were subdivided into two sects, Ḥadrāwīs and Suwaidānīs, of whom the former held seventeen villages and the latter one only; and they still possessed one of their ancient fortresses called Qadamūs. In 1809 they had sustained a treacherous attack by their neighbours the Nosairites, which, though afterwards avenged, left the community in a wretched condition.

Recent explorers of Persia and Syria seem either to ignore the existence of Ismā'īlian communities, or to speak of them as extinct (but see art. QARMATIANS). On the other hand, the Assassins are still represented in India by a community called Khōjās, who trace their origin to the mission of an Assassin named Ṣadr ad-Dīn, who some centuries ago made converts among the Hindu trading classes in Upper Sind. Col. Yule in his edition of *Marco Polo* (3rd ed., i. 146) states that the sect multiplied considerably in Sind, Kachch, and Gujarāt, whence they spread to Bombay and Zanzibar. Their numbers in Western India were then probably not less than 50,000–60,000. Sir W. Hunter (*Gazetteer of India*, 1885, iii. 52) adds that they are especially numerous in the Peninsula of Kāthiāwār. They have also established trading colonies along the East coast of Africa. The leader of the main body of the Khōjā community was then the Persian prince Aghā 'Alī Shāh, whose predecessor, the well-known Aghā Khān, was long a resident of Bombay after the troubles that drove him from Persia. About this person some further details are given by Yule in the passage quoted. Having raised a revolt in Kirmān, he fled from Persia to Sind in 1840. He had been installed as *imām* on the death of Khalīl Allāh (mentioned by Rousseau and Fraser) in a brawl at Yezd in 1818. In 1866 a schism in the Khōjā community, in which an attempt was made to exclude Aghā Khān from all rights over the sectarians and to transfer the property of the community to orthodox Muslims, led to a trial in the high court, which ended in favour of Aghā Khān. Further lawsuits have led to the appointment of a commission to inquire into the sect. According to Balfour (*Cyclopædia of India*, 1885), their sacred book is in ten chapters, of which the first nine treat of the incarnations of Viṣṇu, 'Alī being the subject of the tenth. This would imply that the conflation of Indian and Arabian ideas which characterized the sect from the first continues in its latest development.

D. S. MARGOLIOUTH.

ASSIMILATION (Psychological).—The term 'assimilation' in psychology represents a form of union or combination between presentations or presentational elements, but its precise application has been variously interpreted.

(1) In its general use it refers to a phase of the apperceptive process: a presentation is 'assimilated' when it is taken up into, and becomes an effective moment in, the total consciousness present at the time of its arrival. No new presentation is available either for memory or for knowledge or for practical application, until and unless it has been thus brought into connexion with other elements of consciousness, and with the general forms and tendencies of conscious movement which constitute for psychology the 'self.'

(2) Historically, the first usage of the term was the converse of the above: many of the Scholastics spoke of knowledge as taking place by the assimilation of the knower to the thing known, after the Greek principle (ἡ γνῶσις τοῦ ὁμοίου τῷ ὁμοίῳ): so Albertus Magnus, Thomas Aquinas, Suarez, and others. A wide-reaching corollary of this principle was that (*a*) ideas are 'copies' or images of reality, and (*b*) memory-images are 'copies' or shadowy forms of sensations; to this reference is made below.

(3) In modern psychology, 'assimilation' is applied to a form of association (*q.v.*), namely, simultaneous partial association, the features of which are (*a*) that it takes place between elements or parts of presentations, not between individual or independent presentations, as in ordinary association by contiguity; (*b*) that the two (or more) elements which enter into the association are simultaneously given in consciousness, although one is usually a 'sensation' (*i.e.* peripherally excited), the other necessarily a 'representation' (*i.e.* centrally excited); (*c*) that they cannot be separated or distinguished by *direct* analysis, thus corresponding to the 'inseparable association' of English psychology. Instances are the union of colour and form in visual perceptions, of tone-quality and distance in the perceptions of sound, of tactual quality and 'hardness' or 'softness,' 'smoothness' or 'roughness,' in the perceptions of touch.

(4) More definitely, 'assimilation' is applied to the synthesis of similar elements or elements of similar quality, and is contrasted with 'complication,' a synthesis of presentations of diverse quality, etc. It may be either *intensive*, as in the musical *clang*, or the chord, where tones of different pitch combine to give a resultant which is more than their mere sum (it is a unity in which their individuality is absorbed); or *extensive*, as when a number of discrete touch-impressions or visual impressions combine to give a continuous presentation of surface or depth. This form of assimilation is sometimes made to replace the older conception of association by similarity, as when a perception (*e.g.* that of an orange) 'reproduces' an idea (*e.g.* that of the moon), which has some element in common with the perception in question. It has been argued (*a*) that this process is possible only by the assimilation of the given element to the former experiences of itself, which must therefore be somehow 'revived'; and (*b*) that the process is not one of association, since the new and the old experience have never formed parts of one and the same consciousness, as the doctrine of association requires; (*c*) that, so far from being an association of elements which through frequent repetition have become 'inseparable,' assimilation is a process prior to and presupposed in every association.

(5) On this view, of which Höffding and Ward are the chief exponents, an assimilative process is of the essence of perception. In its simplest form, perception is *recognition* (or direct cognition), *i.e.* the awareness of an impression, or group of impressions, as familiar, as already experienced, without any explicit idea or image of the previous presentation arising in the mind. The impression is not merely repeated, but has an added quality or colouring, by which it is distinguishable from a wholly new impression. This added character or mark Höffding calls the *Bekanntheitsqualität*, 'the quality of known-ness.' It has been explained by Külpe through (*a*) the facility and power with which the known excites other ideas, and (*b*) the peculiar mood or feeling which the known arouses, as contrasted with the unknown or unfamiliar. Both of these features, however, are common to other forms of repeated consciousness; they illustrate the *law of practice*, according to which all function, and especially nervous function, 'is made easier by repetition and practice.' A more important feature in Höffding's theory is that recognition or perception involves an assimilation between two elements, namely, the new or incoming impression (A), and the reproduction or revival of the earlier impressions (a_1, a_2, etc.), the whole being symbolized by $\binom{a}{A}$; *a* is not, however, an explicit or free idea, but an '*implicate* (*gebundene*) *representation*'—a tied idea. But according to Ward there is no revival of earlier impressions: 'We have to do not with the retentiveness of a waxen tablet but with the plasticity of a growing structure. The inchoate beginning, so far from being reproduced, is obliterated and superseded by the supervening detail; and even when the acquisition is complete, the perfect identity of the new with the old forbids us to talk of memory of ideas.'*

Thus (i.) assimilation is the process underlying all *acquired* perception, as distinct from mere sensory impressions on the one hand, and the organized sensations, or perceptions, which seem to form the stimulus of instinctive behaviour on the other. (ii.) It is a product of mental activity (through interest, attention, action by way of trial and error, etc.) in which past experience is correlated with the present situation. But (iii.) this influence is not mediated by distinct images or free ideas, which are a later product. (iv.) It marks a distinct step in mental growth, and is correlated with a special development of the central nervous system (the cerebral hemispheres). (v.) Individual development, phylogeny (the evolution of the nervous system in animals, and *pari passu* of the forms of animal behaviour) and mental pathology (cortical or sensory, psychic or 'soul,' and verbal blindness, etc.), support the view that sensation, perception and assimilation, free ideas, and association are both distinct in their psychical nature and origin, and have as their 'basis' distinct physical functions and structures.

J. LEWIS M'INTYRE.

ASSIMILATION (Religious).—All development, that is growth, must proceed by means of assimilation. That is to say, religion, if it is to grow, must assimilate 'whatever is good and true in general culture' (Tiele, *Elements*, i. 242), or, if that is too wide a statement, then we may say it

* *Mind*, N.S. iii. 532.

must appropriate whatever conduces to its growth—'all that makes its creed clearer and deeper' (*ib.* 230); it must assimilate what it appropriates, and not merely 'imitate or adopt it' (*ib.* 237). What is thus appropriated will in the process be transformed to some extent, for it is 'assimilated' to religion or to the form of religion into which it is taken up. On the other hand, the form of religion which thus takes up from the environment something good and true, and assimilates it, will be affected by what it takes up; it will be brought into accord with the civilization from which it has appropriated the good or true idea; it will be different from what it was before; it will have developed or grown. But, in thus growing by means of assimilation, it must remain true to its type, it 'must form, maintain, and vindicate its *own* character' (*ib.* 242). It will also maintain and vindicate its own character by shedding dead leaves, throwing off waste tissue. And the matter thus thrown off is not matter which ought never to have been taken up, but matter which—useless and even dangerous as it now is, cumbering the ground on which it is found—was once, when first taken up, essential to the vitality and growth of religion. In now rejecting conceptions or formulæ which are dead, and being dead are injurious to continued growth and life, we are neither denying that they once were essential nor condemning the past generation with whom they originated. We are simply claiming the same right to grow which they enjoyed and exercised, the same right to grow in the same way as they—by shedding dead leaves and putting forth fresh ones.

Thus far we have illustrated the meaning of 'assimilation' by reference to ideas which religion appropriates from its cultural environment; and such ideas, though they may, at the time when they were taken up, have represented the highest scientific or philosophic knowledge of the day, may with the advance of knowledge cease to occupy that position; they may become dead leaves on the tree of knowledge, and if so, then religion, too, must shed them—or share decay with them. But a religion in the course of its history may—and if it is to grow, must—come into conflict with other religions and convert men from their old form of religion to the new. In such a case the converts cannot and do not empty their minds utterly of their old religious ideas. Some form of transaction or accommodation between the old and the new is inevitable; and no religion ever escapes from this consequence of contact. Some of the old ideas are taken up by the invading religion; but they are not simply adopted as they stand; they are assimilated. And, naturally and necessarily, they are assimilated to those elements in the new religion to which they are most akin; and they strengthen those elements. Thus, if the new religion recognizes the existence of evil spirits, whether as the cause of disease or of other ills, the gods of the old religion may appear as demons in the new. Or, if the new religion recognizes saints and angels, some of the old gods may persist by a corresponding metamorphosis. And in either case the metamorphosis immensely strengthens the element which it has reinforced. But though it strengthens the particular belief by this process of assimilation, it does not necessarily thereby make the religion which has absorbed it better as religion. On the contrary, the very belief which it strengthens may be one which religion, to live, must ultimately cast aside. 'Assimilation' is not necessarily and always beneficial to the organism. The healthiest organism may assimilate what is injurious to it.

On the other hand, what is assimilated from the old religion may be advantageous, in a greater or less degree, to the new. The habit of worshipping on stated occasions may exist in the old religion and be made usefully subservient to the purposes of the new. Yule and Easter testify by their names to the fact that they existed before Christianity, though they have been assimilated, and in the process of assimilation have been transformed, by the Church. What was thus taken up into Christianity and baptized into the name of Christ was not merely this or that outward form of worship: we have to recognize 'the selective assimilation and consequent consecration of many current customs and institutions and ideas' (Illingworth, *Doctrine of the Trinity*, p. 94). As an example of such ideas we may take the Logos doctrine. That idea was taken up—whether from Philo or from 'the general intellectual atmosphere of which he was a representative product' (*ib.* p. 88)—and baptized into Christianity by St. John. But it was not adopted just as it stood; 'the new faith fashioned a new thing' out of it (*ib.* p. 89), the new 'term was, so to speak, taken out of its old associations, to be employed thenceforward as a Christian symbol' (*ib.* p. 90).

At this point a divergence of opinion manifests itself as to what 'assimilation' means and implies. It may be maintained that assimilation never implies an addition to the original creed of Christianity—'never the imposition of a new article of faith' (Illingworth, p. 98), but simply the 'progressive formulation of doctrine' (*ib.*); the process is 'one of interpretation, and not of innovation'; it is 'the fuller explanation' of the meaning of the original teaching, 'an explanation of what was implicit, but never an addition to what was implicit in the teaching of Christ Himself' (*ib.* p. 101). This view may seem to imply that the formulation of doctrine is of necessity progressive; that the process is always one of interpretation, never of misinterpretation; that the result is always to bring out what was implicit in the teaching; and that those who hold this view have the means of knowing, and the power of declaring, infallibly, what was and what was not implicit in the teaching of Christ Himself. In the absence of such power, our confidence that the process in any given case is one of interpretation and not of innovation must vary with the particular circumstances of the case. Let us illustrate this by reference to the Logos doctrine. Every one will admit that out of the Philonian doctrine the new faith fashioned a new thing, viz. the Johannine doctrine. Was the new thing an innovation or was it not? It is evident that there was that in the new faith which was capable of being interpreted or explained by the terms and the conceptions of the Logos doctrine. But will it be maintained that, if the Philonian doctrine had been non-existent, the Logos doctrine would nevertheless have appeared, all the same, exactly as it actually does, in the Gospel according to St. John? No one can maintain that. Had the Johannine doctrine been non-existent, no one would or could maintain that it was implicit in the teaching of Christ Himself. And had the Philonian doctrine been unknown to St. John, the Logos doctrine would not have existed in the Fourth Gospel. But the Philonian doctrine did exist; it contained some truth; and that truth was recognized, appropriated, transformed—in a word, assimilated—by Christianity. To say, however, that Christian doctrine was not affected by what it assimilated, that it remained what it was, and that it is now exactly what it would have been had it never assimilated anything whatever from the spiritual and intellectual environment in which it developed, is a position which no one will undertake to maintain. Christian doctrine took over what was good and

true in the Philonian teaching; and it has grown consequently in a way in which it would not have grown otherwise. The Christian creed has grown clearer and deeper, because it had the power of appropriating and assimilating from its environment what there was good and true in that environment (*ib.* p. 144). But the power of assimilation, where it exists, is not always exercised; and, where exercised, is not always exercised wisely. We are not able to say either that Christianity left nothing good unassimilated or that everything it did assimilate was good. Neither, therefore, can we say that everything it did assimilate was implicit in the teaching of Christ Himself. We may believe—as members of the Church of Christ we must believe—that the growth and development of Christian doctrine, so far as it is the unfolding of what was implicit in Christ's teaching, is the work of the Holy Spirit, or of the Church following the guidance of the Holy Spirit. But it is simply not true that the Church has always, invariably, and in every respect, followed that guidance: 'our confidence that any given action is the result of that guidance . . . must vary with the particular circumstances of the case' (*ib.* p. 100). The fact that any given action is the action of the Church is a presumption, but no proof, that it was done under the guidance of the Holy Spirit. So far as the Church submitted to that guidance, 'it appropriated what was best and truest in the surrounding life and thought to its own purposes' (*ib.* p. 124). And that statement is as true of the present day as it is of the earliest days. But evil as well as good may be assimilated; has been, as a matter of history, assimilated; and, as a matter of fact, is being assimilated. The mere fact that a custom, institution, or idea has been assimilated constitutes no proof that it was implicit in Christ's teaching. The fact of assimilation is one to be 'constated' by scientific investigation. The value of the assimilation and of its consequences is a different question, and one which should be kept distinct.

If Christianity should come to be the dominant religion in Japan, it will inevitably, in becoming so, assimilate much from Buddhism; and it may be that the resulting form of Christianity will in some respects be higher than any hitherto taken by Christianity. That is a possibility which no one who believes in the infinite potentiality of Christianity will for one moment care to deny. But the higher form, in such case, will be a higher form of Christianity. The process will be one of assimilation; the result may be to reveal to the world that it is possible for men to make greater self-sacrifice, and to lead a more Christ-like life, than has hitherto been the case with any Christian people.

ASSOCIATION.—Association, or, the more frequently used phrase, **Association of Ideas**, denotes a doctrine of both philosophical and psychological import. In philosophy it is the explanatory principle of that theory of knowledge which would derive all knowledge from items of sensation. Psychologically considered, association is primarily the doctrine which deals with the reproduction of past experience by a present object of consciousness. The so-called 'Laws of Association' express the conditions under which reproduction takes place. Three such laws have been formulated and are still discussed in current English text-books of Psychology. (*a*) *Law of Contiguity*: a present object will recall to mind any object with which it was contiguous in space or time, *e.g.* the sight of a visitor from one's native place revives memories of that place. (*b*) *Law of Similarity*: a present object will recall one similar to itself, *e.g.* the sight of one person revives the memory of another whom he in some respect resembles. (*c*) *Law of Contrast*: a present object recalls an object contrasting with itself, *e.g.* a childless hearth revives the memory of a neighbour's merry crew of boys and girls. It is this particular psychological doctrine which is the foundation both of association as a philosophical principle and of association as a comprehensive psychological theory.

It has been claimed by Sir W. Hamilton * that Aristotle was the first to formulate the Laws of Association. The passage upon which the claim is based is from *de Memoria et Reminiscentia*, a translation of the latter part of which Hamilton gives in full, together with his own emendations in, and commentary on, the text, in the note in question. After dealing with memory (*μνήμη*), or what modern Psychology would term retention, Aristotle contrasts with it recollection (*ἀνάμνησις*).

'The occurrence of an act of recollection is due to the natural tendency of one particular change to follow another. If the sequence is necessary, it is clear that, on the former change occurring, the second will be summoned into activity; when, however, the connexion is not necessary, but due to custom, the occurrence of the second process will take place only in most cases. It so happens that some people receive a greater bent from a single experience than others in whom the sequence has frequently taken place, and hence, in some instances, after seeing the things once we remember them better than others who have seen them frequently. Thus, when we recollect, one of our previous psychic changes is stimulated which leads to the stimulation of that one after which the experience to be recollected is wont to occur. Consequently we hunt for the next in the series, starting our train of thought from what is now present, or from something else, and from something similar or contrary or contiguous to it.' †

Plato had already noticed the same striking cases of relationship between recollected idea and present object of consciousness (*Phædo*, 73 D). At the sight of his lyre the lover will recollect the beloved. The picture of Simmias is apt to remind one of Simmias. 'Recollection may be derived from things either like or unlike.' ‡ There had, however, been no formulation of the principles involved or any attempt at a scientific theory of recollection as such. All knowledge was recollection.

The fact of association was recognized in the teaching of the Stoics and Epicureans, but no new contribution was made towards the theory either by them or later by the Schoolmen.

The first important formulation of a theory is that of Thomas Hobbes. In *Human Nature* (1650), Hobbes distinguishes between the casual and incoherent flow of ideas in dreams and the orderly flow—

'when the former thought introduceth the later. . . . The cause of the coherence or consequence of one conception to another is their first coherence or consequence at that time when they were produced by sense: as, for example, from St. Andrew the mind runneth to St. Peter, because their names are read together; from St. Peter to a stone, for the same cause; from stone to foundation, because we see them together; and for the same cause, from foundation to church, and from church to people, and from people to tumult: and, according to this example, the mind may run almost from anything to anything.' §

In addition to this form of the flow of ideas, which would be order in accordance with the Law of Contiguity, Hobbes notices another and different form which one might in general term 'appetitive,' on account of the cause assigned for it.

'The cause whereof is the appetite of them, who, having a conception of the end, have next unto it a conception of the next means to that end.' ‖

* *Works of Reid*, ed. Hamilton, note D**.

‡ Jowett's tr. of *Phædo*, 74 A.

§ *Human Nature*, ch. iv. §§ 1 and 2.

‖ *Ib.* ch. iv. § 2.

'To omit that kind of discursion by which we proceed from anything to anything, there are often other diverse sorts: as first in the senses there are certain coherences of conceptions which we may call ranging; examples whereof are: a man casteth his eye upon the ground, to look about for some small thing lost; the hounds casting about at a fault in hunting; and the ranging of spaniels: and herein we take a beginning arbitrary.

'Another sort of discursion is when the appetite giveth a man his beginning, . . . where honour to which a man hath appetite maketh him think upon the next means of obtaining it, and that again of the next, etc. And this the Latins call *sagacitas*, and we may call hunting or tracing. There is yet another kind of discursion beginning with the appetite to recovery of something lost, and proceeding from the present backward, from the thought of the place where we miss at, to the thought of the place whence we came last; and from the thought of that, to the thought of the place before, till we have in our mind some place wherein we had the thing we miss: and this is called Reminiscence.'*

The recognition of these appetitive associations might have led to new theories as to the origin of the association link, but Hobbes did not pursue the theme any further, and his successors do not appear to have noticed the group of associations which he here singles out.

For Hobbes the psychological doctrine of remembrance becomes also a philosophical one, the principle of his theory of knowledge, as it was thereafter the principle for the empirical school.

'All experience being . . . but remembrance, all knowledge is remembrance,'† for it is either sense knowledge and the remembrance of this, or is knowledge of the truth of propositions and how things are called, which latter again arises from experience—

'which is nothing else but the remembrance of what antecedents have been followed by what consequents.'‡ 'When a man hath so often observed like antecedents to be followed by like consequents that, whensoever he seeth the antecedent, he looketh again for the consequent, or when he seeth the consequent, maketh account that there hath been the like antecedent; then he calleth both the antecedent and the consequent signs one of another, as clouds are signs of rain to come, and rain, of clouds past. This taking of signs by experience is that wherein men do ordinarily think.'§

It is the power of arbitrarily devising signs and so increasing associations that differentiates man, the rational being, from the brute beasts. Without such signs the coherent flow of ideas would be at the mercy of chance—

'for one conception followeth not another according to our election and the need we have of them, but as it chanceth us to hear or see such things as shall bring them to our mind. The experience we have hereof is in such brute beasts, which, having the providence to hide the remains and superfluity of their meat, do nevertheless want the remembrance of the place where they hide it, and thereby make no benefit thereof in their hunger: but man, who in this point beginneth to rank himself somewhat above the nature of beasts, hath observed and remembered the cause of this defect, and to amend the same, hath imagined or devised to set up a visible or other sensible mark, the which when he seeth it again, may bring to his mind the thought he had when he set it up. . . . In the number of these marks, are those human voices which we call names or appellations of things sensible by the ear, by which we recall into our mind some conceptions of the things to which we gave those names or appellations.'‖

To John Locke belongs the authorship of the phrase 'Association of Ideas'; yet Locke does not even mention association in his psychological account of memory.¶ The phrase for him denotes the connexion of ideas 'that in themselves are not at all akin,' as opposed to those which 'have a natural correspondence and connexion one with another.' 'This strong combination of ideas, not allied by nature, the mind makes in itself either voluntarily or by chance, and hence it comes in different men to be very different according to their different inclinations, education, interests,' etc.** Association of Ideas is for Locke the explanation of error, prejudice, and intellectual habits, but it is not given any philosophical or general psychological significance.

¶ *Essay concerning Human Understanding*, bk. ii. ch. x.

** *Ib.* bk. ii. ch. 33.

In Hume's philosophy, on the other hand, Association of Ideas plays an all-important part. In the *Treatise on Human Nature* (1739–40), he brings forward association as the principle of connexion, *not* for ideas of memory, wherein the connexion is 'inseparable' and is 'the original form in which its objects were presented,' but for ideas of imagination. We are to regard it as 'a gentle force which commonly prevails.' 'The qualities from which it arises, and by which the mind is after this manner convey'd from one idea to another, are three, viz. Resemblance, Contiguity in time or place, and Cause and Effect.'*

From the *Inquiry concerning Human Understanding*, we learn that Hume regarded himself as being the first to enumerate or class the principles of association. In this later treatise he recognizes them as principles of connexion for memory and imagination alike.

After Locke, Hume analyzes knowledge into simple and complex ideas; but with Hume association becomes what it never was with Locke, the mechanism by which complex ideas—relations, modes, and substances—arise from simple ones. Cause and effect is classed as if it were a special form of association, yet, when analyzed, it is shown to be merely a case of contiguous association. The 'necessity' which characterizes this relationship is due to the inferential attitude of mind, which again is but the effect of custom. 'After the constant conjunction of two objects, heat and flame, for instance, . . . we are determined by custom alone to expect the one from the appearance of the other.'†

Although in his theory of knowledge Hume shows an advance upon Hobbes, both in the application of the principle of association to explain our conceptions and in his systematization of the whole doctrine, yet his psychology of association is inferior to that of the earlier writer. Beyond the classification of the principles there is little attempt at a theory of association. 'Its effects are everywhere conspicuous; but as to its causes, they are mostly unknown, and must be resolved into original qualities of human nature, which I pretend not to explain.'‡ Custom is the cause of the necessary associations of contiguity, and with 'this propensity' we must rest content 'as the ultimate principle, which we can assign, of all our conclusions from experience.'§

It is in Hartley's *Observations on Man* (1749) that we first meet with association as a comprehensive psychological theory. Here for the first time there is a methodical array of the phenomena of mental life and a thoroughgoing attempt to show how the more complex mental phenomena are derived from the simpler by means of association, memory being but one particular case of this.

Here the passions and the phenomena of conduct are shown as products built up by the association of ideas (traces of sensation) with the simple sensations of pleasure and pain, and with automatic movements; just as similarly imagination and reasoning are but cases of the association of ideas with one another, and with words.

Hartley's psychological theory is closely bound up with his physiological one as to the nature of the processes which take place in the nervous system. The main outline of the general theory is best given by his own propositions, and from the psychological point of view some of these are important enough to warrant quotation *in extenso*.

'The white medullary substance of the brain is also the immediate instrument by which Ideas are presented to the mind: or, in other words, whatever changes are made in this sub-

* *Treatise on Human Nature*, pt. i. § iv., ed. Green.

† *Concerning Human Understanding*, pt. i. § v.

‡ *Treatise on Human Nature*, pt. i. § iv.

§ *Concerning Human Understanding*, pt. i. § v

stance, corresponding changes are made in our ideas; and *vice versa*.

'External objects occasion, first in the nerves on which they are impressed, and then in the brain, vibrations of the small, and, as one may say, infinitesimal medullary particles.

'Sensations, by being often repeated, leave certain vestiges, types, or images of themselves, which may be called simple ideas of sensation.

'Sensory vibrations, by being often repeated, beget, in the medullary substance of the brain, a disposition to diminutive vibrations, which may also be called vibratiuncles and miniatures, corresponding to themselves respectively.

'Any sensations, A, B, C, etc., by being associated with one another a sufficient number of times, get such a power over the corresponding ideas, *a*, *b*, *c*, etc., that any one of the sensations, A, when impressed alone, shall be able to excite in the mind *b*, *c*, etc., the ideas of the rest.

'Any vibrations, A, B, C, etc., by being associated together a sufficient number of times, get such a power over *a*, *b*, *c*, etc., the corresponding miniature vibrations, that any of the vibrations, A, when impressed alone, shall be able to excite *b*, *c*, etc., the miniatures of the rest.

'Simple ideas will run into complex ones, by means of association.'*

Sensations are associated when their impressions are made at the same instant or in successive instants. Strength and frequency of impression are the determining conditions for the association. The whole theory is full of suggestions for the later psychology wherein association becomes the great explanatory principle. Even Herbart's mathematical treatment of the relations between ideas seems foreshadowed.

'The power of miniature vibrations to raise other miniatures may, perhaps, be made clearer to mathematicians, by hinting that the efficacy of any vibration to raise any other is not in the simple ratio of its vividness, but as some power less than unity; for thus *b* may raise *c*, a weaker vibration than *b*, *c* may raise *d*, etc., with more facility than if the efficacy was in the simple ratio of the vividness, and yet so that the series shall break off at last.'†

It was because of the physiological doctrines upon which the psychological theories were made to depend that Hartley's work did not meet with the attention it merited at the hands of his immediate successors. In France, Locke had had many disciples; the analysis of all the complex ideas of knowledge into simple ideas derived from sensation had been pushed to extremes far removed from Locke's 'plain, historical method.' One might therefore expect to find in France a parallel for, if not an acceptance of, Hartley's psychological analysis of the phenomena of consciousness. But there is nothing which at all compares with it. We do find in Condillac an effort to derive all the so-called faculties of the mind from sensation. This faculty is said to comprehend all the others; analysis of it will reveal attention, imagination, judgment, etc. But an instance of such analysis will show how far removed such an effort after derivation was from the scientific method pursued by Hartley.

'To decompose the faculty of feeling, we need only observe in succession all the circumstances that happen in it, when we acquire any knowledge whatever. . . . My looking at an object is an action by which my eye tends towards the object to which it is directed: for this reason, I give it the name of attention. . . . The attention we pay to an object is therefore, as to the mind, nothing but the sensation which that object causes in us. . . . As we bestow our attention on one object, so we may on two at once, then instead of one exclusive sensation we experience two. . . . Comparison is therefore nothing else but a double attention—it consists in two sensations. . . . It is impossible for us to compare two objects and to experience side by side, as it were, the two sensations which they produce in us exclusively, without presently perceiving that they resemble each other or differ from each other. Now to perceive resemblances or differences is to judge. Judgment, therefore, is nothing still but sensation.'‡

In a similar manner Condillac proceeds to derive 'desire,' 'will,' and 'the passions' from our sensations 'if we consider them as agreeable or disagreeable.'

In Scotland, Thomas Brown, although expressly disapproving of Hartley's theory of association with its physiological basis, gave an exposition of mental phenomena in which association, or, as Brown prefers to style it, suggestion, was used as the explanatory basis. In place of the varieties of powers or mental faculties given by Reid and others, Brown grouped all intellectual phenomena (other than those of sensation) under two generic capacities—simple and relative suggestion.

* *Observations on Man*, Props. 2, 4, 8–12.
† *Ib.* on Prop. xi. p. 89.
‡ Condillac, *Logique* (1805), tr. by Neef (1809), ch. vii.

'Simple suggestion is the capacity by which conception after conception arises in the mind—precisely in the same manner, and in the same state, as each might have formed part of other trains, and in which the particular state of mind that arises by suggestion does not necessarily involve any consideration of the state of mind which preceded it.'*

The primary laws of simple suggestion are resemblance and contrast, while contiguity is treated as a secondary law. To simple suggestion belong conception, memory, imagination, habit.

Relative suggestion is 'the capacity for feeling resemblance, difference, proportion or relation in general, where two or more external objects or two or more feelings of the mind itself are conceived by us.'† To this capacity belong the so-called faculties of judgment, reasoning, and abstraction.

The true psychological descendant of Hartley is James Mill, in whose *Analysis of the Human Mind* (1829) we have association, freed from the effete mythology of vibratiuncles, used as the great explanatory principle of psychology. The phenomena of the human mind are analyzed into two classes—intellectual and active—and the psychology of these is a doctrine of elements and compounds. Sensations, including pleasurable and painful feelings, are the elements, the whole of the remaining furniture of mind being set forth as products, compounded out of these elements in accordance with the Laws of Association. Ideas are traces of sensation, and 'spring up or exist in the order in which the sensations existed of which they are copies.'‡ This order is synchronous and successive order in time, and synchronous order in space. Contiguity is thus the fundamental Law of Association, resemblance and contrast being treated as special cases. 'Not only do simple ideas, by strong association, run together, and form complex ideas, but a complex idea, when the ideas which compose it have become consolidated so that it always appears as one, is capable of entering into combinations with other ideas, both simple and complex.'§

Conception, imagination, classification, abstraction, memory, belief, inference, are shown by analysis to involve nothing but our sensations and their ideas compounded by association. Similarly for the phenomena of conduct. Will is analyzed as a chain of associations. In all cases where a certain action is desired, it is associated as cause with pleasure as effect; the idea of the 'outward' appearance of the action excites by association the idea of the inward feelings which are the immediate antecedents of the action, and then the action takes place. There is no place here for a doctrine of Free Will. 'Whatever power we may possess over the action of our muscles, must be derived from our power over our associations; and this power over our associations, when fully analyzed, means nothing more than the power of certain interesting ideas, originating in interesting sensations, and formed into strength by association.'‖ This strength, we are told, depends upon the vividness of the associated sensations and the frequency with which the association occurs.

As compounds formed in conformity with an exact law, mental phenomena admit of scientific treatment. Psychology need no longer stand without the pale of science; its method resembles that of the mechanical and physical sciences. The

* *Lectures on Philosophy of Human Mind*, Lect. 33.
† *Ib.*
‡ *Analysis of Human Mind*, vol. i. ch. iii.
§ *Ib.* vol. i. ch. iii. ‖ *Ib.* vol. ii. ch. xxiv.

service which the principle of association thus rendered to psychology was clearly recognized later by John Stuart Mill.

'A science of human nature may be said to exist in proportion as the approximate truths which compose a practical knowledge of mankind can be exhibited as corollaries from the universal laws of human nature on which they rest.' *

Given the fundamental laws of mind, the Law of Retentiveness, and the Laws of Association—

'it is a fair subject of scientific inquiry how far these laws can be made to go in explaining the actual phenomena. It is obvious that complex laws of thought and feeling not only may but must be generated from these simple laws.' †

J. S. Mill emphasizes the distinction between complex ideas which can be treated as resultant sums of the simple ideas which form them, *i.e.* are what he would term 'homogeneous effects,' and complex ideas which are 'generated by' but do not 'consist of' the simple ideas, *i.e.* are heteropathic effects. In so far as we have the former, the complex phenomena are mechanical products, but in so far as we have the latter, they are products of a mental chemistry. Our inability to find the elements in the generated compound is no disproof that a complex idea is due to an association of simple elements. Such is the case with the associations treated by Hartley and James Mill as inseparable.

But although inability to resolve the product into the elements is no obstacle to its having been generated from such elements, Mill saw clearly the weakness of attempting to prove that a particular complex idea had been generated from such and such simple ideas merely on the ground that these ideas were always present whenever mind was in possession of the complex idea. It is necessary to show, further, that if the complex idea be lacking, it will arise when the simple ideas in question are associated. And it is in the direction of a closer investigation of the mental phenomena themselves, both simple and complex, that Mill would advance psychology. He hoped that the rapid progress being made in physiology would throw light on the influence of organic on mental phenomena. By advocating a more scientific study of the phenomena of consciousness as distinguished from scientific treatment of data obtained uncritically, Mill in reality was giving an impetus to a new psychology wherein association became untenable as a comprehensive explanatory principle.

In his theory of knowledge, Mill is a thoroughgoing empiricist. All knowledge, other than that given by the senses, is inductive inference, 'generalization from experience.' *A priori* or necessary truths there are none. The truths so called are inductions. The forcibility which characterises mathematical axioms is due to the familiarity of the ideas involved. The very criterion emphasized by the champions of *a priori* truths—inconceivability of the opposite—does but testify to the law of inseparable association between ideas. 'If one exists, the other exists along with it, in spite of whatever effort we make to disjoin them' (J. S. Mill's ed. of *Analysis of Human Mind*, vol. i. ch. iii.).

Mill, however, never treats even inseparable association as a *ground* for the logical connexion of ideas. 'Assuredly an association, however close, between two ideas is not a sufficient ground of belief; it is not *evidence* that the corresponding facts are united in external nature.' ‡ Thus the relationship of cause and effect as a mere instinctive association could lay no claim to objective truth; it must be shown to be an inference, a generalization from experience.

Herein lies the difference between Mill's theory of knowledge and that of his predecessor Hume.

* *Logic*, bk. vi. ch. iii. § 2; cf. Preface to J. S. Mill's ed. of *Analysis of Human Mind*.
† *Ib.* bk. vi. ch. iv. § 3.
‡ J. S. Mill's ed. of *Analysis of Human Mind*, ch. xi. note.

The psychological statement of genesis, even if accurate, is no longer accepted as a logical criterion of the validity of relationships. Consequently Mill attempts to find an independent justification for our belief in the uniformity of nature, belief in the relationship of cause and effect in particular; and in this attempt his theory of knowledge breaks down. Psychologically he regards belief as being primordial. It makes the difference between memory and expectation on the one hand and imagination on the other. 'What, in short, is the difference to our minds between thinking of a reality and representing to ourselves an imaginary picture? I confess I can perceive no escape from the opinion that the distinction is ultimate and primordial.' * It is present when certain associations of ideas are entertained, absent in the case of others. It is present in every inductive inference, and its logical justification is 'experience'; the inferred connexion of ideas conforms to fact. Yet even in the simplest inference, since the judgment must embrace 'unobserved' as well as 'observed' cases (for otherwise it would be no inference), this guarantee, conformity to fact, already implies logically our belief in the uniformity of nature, in the uniformity of the unobserved with the observed; that is to say, the logical guarantee of the belief present in inference itself involves belief. Thus the attempt to establish as an induction the uniformity which every process of inference presupposes is foredoomed to failure; † and Mill ends by confessing that inference is not *from* uniformity, but *according to* it. What is important philosophically is not this failure to establish inductively the Law of Causation, but the recognition which this abortive effort involves, viz. the recognition of association as an inadequate doctrine in the theory of knowledge. This point might be further illustrated from Mill's own subsequent writings on Utilitarianism, where he uses association for the purpose of removing psychological difficulties in the way of his main logical thesis rather than for positively supporting it.

Alexander Bain in his *Senses and Intellect* (first published in 1855) shows adherence to the Laws of Association as the principles which should dominate the presentation of his psychology. Thus he writes in the preface to the first edition:

'In treating of the Intellect, the subdivision into faculties is abandoned. The exposition proceeds entirely on the Laws of Association, which are exemplified with minute detail and followed out into a variety of applications.'

Movements, sensations, appetites, and instincts are treated as the raw material, the data to be worked up into the various forms of intellect: memory, judgment, abstraction, reason, imagination. The fundamental properties of intelligence are consciousness of difference, consciousness of sameness, and retentiveness, of which last reproduction is a higher form. The general condition under which retentiveness is manifested is contiguity. This is the basis of memory, habit, and the acquired powers in general. Consciousness of sameness gives rise to the reproductive principle of similarity, which is dominant in invention, reason, and abstraction.

Bain then proceeds to trace out in detail the operation of these two principles upon our movements, sensations, and instincts, and the acquisitions and forms of knowledge to which they separately, and in conjunction, lead. In the *Emotions and Will* (the first edition of which appeared three years later than the *Senses and Intellect*), the same general plan of treatment prevails. Emotions and the will are secondary products. Emotions are derived from muscular feelings and sensations, while will is derived from spontaneous movement.

* *Analysis of Human Mind*, ch. xi. note.
† Cf. *Logic*, bk iii. ch. xxi.

'The modes of derivation or composition of the emotions are various; but the leading circumstance is contiguous growth or the associating process. Association operates in uniting together a number of separate feelings into one aggregate or whole. . . . It also operates largely in the transfer of feelings from their original cause to some connected object.' *

But although in general method of exposition Bain follows the lines of the association school, treating the higher mental phenomena as products built up by the mechanism of association, yet the spirit of treatment is different; the new psychology has begun. This is the more evident if one compares the later with the earlier editions of Bain's works. The compounds are not conceived as mechanical or even as chemical products, but as growths; and psychology is no longer treated on the analogy of physics, but as having its place among the biological sciences, as the science of mental life. Mental development is brought under the influence of the new theory which was transforming the biological sciences—evolution. Mental phenomena are viewed generically not as mere contents, ideas, but as processes. The complex phenomena, instead of being compounded from simple, are higher processes developed out of the lower by means of association.

Among advances in detail is the recognition of movements and instincts as data for intellect. It is from the rudiments of all the forms of mental life that association builds up the higher intellectual processes, which again in their turn aid in building up the emotions and the will. And the new conception of psychology becomes especially evident in the attempt made to give a natural history of the emotions, to describe them, trace their origin, and classify them, and by the reference made where possible to physiological facts.

With regard to the laws and conditions of association, we may notice the following points. In the later editions, Bain places Contrast on the same plane as Similarity; it is the form of reproduction derived from consciousness of difference, just as similarity is derived from consciousness of sameness. Contiguity is the all-pervasive mode in which retentiveness shows itself, and, in so far, would appear to be directly derived from this fundamental property of mind; but Bain, nevertheless, treats of special 'conditions' of association by contiguity. These are: repetition, concentration of mind, and the specific aptitude of the individual. Concentration of mind is regarded as very important.

'Properly speaking, attention or concentration is the employment of will in the sphere of intellect. It is the stimulating adjunct that renders the intellectual processes effective for their purpose, and, being itself dependent upon the feelings, it illustrates the necessity for the united action of all the forces of the mind in the sphere of intellectual production.' †

Bain is here going behind the Law of Contiguity. A and B are associated not merely because they are successive or simultaneous, but because they are attended to. In his note to the chapter on 'Association of Ideas' in James Mill's *Analysis of the Human Mind* (ed. J. S. Mill), he again emphasizes the need for analyzing the conditions of association. James Mill named repetition and vividness; the latter Bain criticizes as failing to bring out the distinction between the influence of the feelings and the influence of the will, which his own condition, 'concentration of mind,' is designed to do.

Spencer's first edition of the *Principles of Psychology* appeared in the same year as Bain's *Senses and Intellect*. Here biological conceptions are the foundation of the whole structure. The phenomena of body and of mind are identical in being forms of life, and from the conception of the general characteristics of life, the special characteristics of mental life or intelligence can be inferred. Life is briefly defined as 'the continuous adjustment of internal

* *Emotions and Will*⁴, ch. iii.

† *Senses and Intellect*, 'The Intellect,' ch. i.

relations to external relations.' * It is 'correspondence.' In the intelligence, then, it will likewise be adjustment of internal relations to external—correspondence.

'The relation between two states of consciousness corresponds with the relation between the two things producing them.' 'The strength of the tendency which the antecedent of any psychical change has to call up its consequent is proportionate to the persistence of the union between the external things they symbolize.' †

Such is the law of intelligence in the abstract and the basis for Spencer's theory of knowledge. Perfect knowledge will mean perfect correspondence between subjective and objective. This correspondence is the 'universal postulate' behind which thought cannot go. The ultimate test by which thought tries a subjective relation with respect to its objective validity is 'inconceivability of the opposite.'

'To assert the inconceivableness of its negation is at the same time to assert the psychological necessity we are under of thinking it, and to give our logical justification for holding it to be unquestionable.' ‡

Of such certainty are the 'necessary' truths and ultimate premises of our knowledge. Thus with Spencer, as with the earlier writers of the association school, the theory of knowledge is 'psychological.' This gains some additional plausibility because it is the task of psychology to trace out the processes by which the correspondence between subjective and objective relations is evolved, and in its task it must, through the doctrine of heredity, draw upon the experience of the race as well as on that of the individual. The various faculties—memory, imagination, reason—are different stages in the evolution of intelligence.

Mental life has two constituents—feelings and the relations between feelings. Our sensations are peripherally initiated feelings, ideas are secondary or faint sensations, while emotions are centrally initiated feelings.

'The requisite to the existence of a relation is the occurrence of a change, the passage from one apparently uniform state to another apparently uniform state implying the momentary shock produced by commencement of a new state.' §

Relations arise between feelings that are like or between feelings that are unlike, and again, between feelings that are simultaneous or successive. Such are the constituents. The law for their association is the Law of Similarity. Each primary or vivid feeling 'is joined to and identified with faint feelings (secondary), which have resulted from similar vivid feelings.' ‖

'Knowing a relation as well as knowing a feeling is the assimilation of it to its past kindred; and knowing it completely is the assimilation of it to past kindred exactly like it. But since within each great class the relations pass one into another insensibly, there is always, in consequence of the imperfection of our perceptions, a certain range within which the classing is doubtful—a certain cluster of relations nearly like the one perceived, which become nascent in consciousness in the act of assimilation. Along with the perceived position in space or time, the contiguous positions arise in consciousness.

Hence results the so-called law of association by contiguity. When we analyze it, contiguity resolves itself into likeness of relation in time or in space or in both. . . . Thus, the fundamental law of association of feelings is that each, at the moment of presentation, aggregates with its like in past experience. The act of recognition and the act of association are two aspects of the same act. And the implication is that, besides this law of association, there is no other; but all further phenomena of association are incidental.' ¶

This somewhat lengthy quotation will serve to make clear what association meant to Spencer. It is now a general name for the essential characteristic which Spencer finds in all processes of knowing—assimilation. Since consciousness is dependent upon change, there is also, in every process of knowing, 'differentiation'; consciousness is continuous differentiation and continuous assimilation. The finer the degree of differentiation and assimilation, the higher the process of knowing.

§ *Ib.* pt. ii. ch. ii.

‖ *Ib.* pt. ii. ch. ii.

¶ *Ib.* pt. ii. ch. viii.

This is the parallel of differentiation and integration in organic processes. In an organism increase in complexity of structure goes hand in hand with increase in function, and the establishment of closer connexion between part and part, with fuller organization of function.

'When we remember that the laws of structure and function must necessarily harmonize, and that the structure and function of the nervous system must conform to the laws of structure and function in general, we shall see that the parallelism here roughly indicated is such as might be expected. We shall see that the ultimate generalizations of psychology and physiology must be, as they here appear, different sides of the same primordial truth: both are expressions of the same fundamental process of life.'*

Viewed as a generic feature of knowing, association is not a mechanism for combining items of knowledge, but is the principle of growth whereby past progress is retained and further differentiation made possible. In the old doctrine the complex idea contained the elements out of which it was composed; here the higher process absorbs the lower, the new the old. So different is the doctrine, that one may be tempted to wonder why Spencer's psychology should be ranked with that of the association school. The reason is this: the conception of 'why' the higher is enabled to absorb the lower, the new the old, is taken unchanged from the theory of association.

Throughout the history of the school the advance in the theory of association as such is practically *nil*. There are efforts to distinguish some one form as more fundamental than the others, *e.g.* Mill selects Contiguity, Spencer Similarity, or to subsume them under some more comprehensive law, such as Hamilton's Law of Redintegration, but for all alike the theory of the process itself remains on the same level. Things are associated because they are alike, or because they are contiguous in space or time. A hint of an internal analysis of association is given, as we noticed, by Bain, and it is his study of the 'conditions' of association that marks the close of what is strictly to be called 'association psychology.'

Closer study of the 'how' and 'why' of mental development renders necessary broader conceptions than any which can be yielded by the three laws of association. Similarly, closer study of the memory processes brings a demand for a fuller statement of the conditions under which one fact of consciousness is able to suggest some fact of previous experience, and of the extent to which such a memory is 'a revival' (see MEMORY).

Although German psychologists stood outside the association school, it would be an omission not to refer to Herbart, in the general conception of whose psychology there is considerable likeness to that of Hartley and Mill. The first presentation of Herbart's psychological doctrine was the *Lehrbuch zur Psychologie* (1815). This was followed by the fuller and more reasoned exposition in *Psychologie als Wissenschaft neu gegrundet auf Erfahrung, Metaphysik, und Mathematik* (1824-1825). Herbart rebelled against the dogmatism of 'faculty psychology.' He found Locke's treatment of mind as a storehouse of ideas at least truer to experience than the analysis of mind into faculties current in the school of Wolff. The faculties are set up as *genera* and treated as causes, when there has been, and can be, no study of the particulars from which alone such generic notions could be reached. Such psychology achieves nothing but hair-splitting distinctions between these faculties, and yet withal acknowledges an unknown unity in which these faculties are contained. The whole method of this psychology stands in need of reform. It is impossible to reach generic notions by study of particulars, *i.e.* it is impossible to use induction and analogy in psychology, because our knowledge of these particulars is unavoidably defective; consciousness is in perpetual change. The new method which Herbart introduces is elaboration (*Ergänzung*) or completion by means of constructive hypothesis. One is entitled to use such a method only if the existence of certain relationships can be demonstrated, viz. relationships wherein the positing of one member renders necessary the positing of the other.

The whole task of psychology will be to complete the known facts of inner experience, and to establish relationships by which these facts shall be connected, in accordance with general laws. Psychologists have failed to find conceptions appropriate for psychology, because they have not been mathematicians, and have thus not realized the special adaptability of mathematical notions to the ever-changing phenomena of consciousness. Further, it is, in Herbart's view, necessary for psychology to be based upon metaphysics. Psychology is brought face to face with the problem of the many in one, for behind all the varying mental conditions is the unity of mind. That is to say, psychology is brought face to face with the problem of 'substance.' And again, since consciousness is in perpetual change, psychology is brought face to face with the problem of change, transformation.

Herbart's psychology, therefore, is prefaced by speculative metaphysics. The first step is to arrive at a concept of the soul. This is defined as 'a simple substance, without parts, without any plurality whatever in its quality.' What this quality is we can never know. Like all other substances, the soul's activity consists in self-preservation. Each reality or substance conserves itself against other substances, and from these conservative activities arise relations, plurality. The efforts of the soul in opposition to other substances are its ideas. These ideas are not produced by any spontaneity of the soul, but arise only in its strife against other realities; they arise, then, from external conditions, and have their quality determined by these conditions. In so far as these ideas come into relation with one another they are forces, and in virtue of their opposition to one another have a quantitative character. Every idea is a tendency, and as such is never destroyed; it may be arrested, totally or partially, or pass from consciousness to subconsciousness, but it will ever strive to reinstate itself, and will do so should opposition be removed or reinforcement come through relations to some other idea. The subject-matter of psychology is not the soul, but these relations between ideas; hence the metaphysical speculations and the general consideration of mathematical relations are followed by a statics and mechanics of ideas.

It is in his reaction against 'faculty psychology,' and in his reduction of inner experience to simple events of a homogeneous character, from whose interplay arise all the diverse forms of consciousness — memory, imagination, feeling, will, etc.— that we see the resemblance between Herbart's conception of psychology and that of Hartley or James Mill. In the metaphysical bases of their thoughts and in their methods of exposition, the German and the English writers are poles apart.

In the more recent German psychology, and independently of Herbartianism, the influence of the association school can be seen, despite the fact that the errors of its doctrines are sometimes laid bare in a none too gracious manner. Wundt has treated psychology as a doctrine of elements and compounds; thus in his *Outlines of Psychology*, which represents his standpoint in general psychology better than the more specialized *Physiological Psychology* or the lectures on *Human*

* *Principles of Psychology*, pt. vi. ch. xxvii.

and Animal Psychology, we find the following division of topics: (1) psychical elements; (2) psychical compounds; (3) inter-connexion of compounds; (4) psychical developments; (5) principles and laws of psychical development. The elements, of course, are no longer the simple ideas of, say, Mill, since they are not simple items of knowledge, but abstractions, the ultimate factors into which the simplest experience can be analyzed by thought: elements of sensation, and elements of feeling. The compounds, too, do not correspond to complex ideas; they are the phases of experience which can be recognized as having a determinate character, *e.g.* an emotion, such as anger, or a simple perception; they are not, therefore, mere sums of the elements which enter into them. Moreover, such compounds are only components of experience; that is to say, in any given state of consciousness we have an inter-connexion of such compounds, *e.g.* the emotion in connexion with perception.

The connective processes, again, are not the old forms of association. Various processes are distinguished: for building up compounds, fusion and extensive union; for the inter-connexion of compounds, association (which, however, is not association of ideas, since no such phenomena as ideas in Mill's sense—copies of sensations—are recognized) and apperception. All save the last find their determining conditions in the nature of that which is connected; but the last, apperception, is a volitional process involving choice, the motives of which can be explained only from the whole previous development of the individual consciousness. As 'volitional' it is placed on a different level from the others.* This treatment of apperceptive connexion is peculiar to Wundt, and is connected with his ontological view that 'will' expresses the ultimate reality of the soul.

The same general ground-plan is followed by Külpe in his *Outlines of Psychology*. Psychology is defined as 'science of the facts of experience in their dependency upon experiencing individuals'†—a definition of the science which assigns a leading rôle to bodily processes, since 'individual' signifies corporeal individual. The connective processes, therefore, are viewed as dependent upon psychophysical conditions. The laws of reproduction are explained in relation to the conditions of centrally initiated sensations—the 'ideas' of English psychologists—and apperception is treated as being in principle capable of subsumption under the laws of reproduction.‡ For the essential conditions of the origin and maintenance of the feature which especially characterizes apperception, viz. attention, we are referred outside consciousness to the central nervous system.§

Widely different as the specific doctrines are from those held by the earlier English writers, yet, nevertheless, the scheme of classification adopted for the scientific exposition of psychological facts would seem to be derived from the writings of the association school.

As was stated above, current English psychology does not use association as an explanatory principle. Traces of the older method of exposition are, however, to be found in Prof. Sully's text-books, *Outlines of Psychology* and *The Human Mind*, although these embody the results of modern research and learning. The three aspects of mental life—intellection, the feelings, and conation or volition—are treated separately. Under each we have a serial order of phenomena; from elements of sensation, feeling, and conation, progressively higher products are built up by elaborative processes. These processes are: differentiation, assimilation, and association. The last is discussed in connexion with retentiveness and reproduction, and is conceived as the process 'which binds together presentative elements occurring together or in immediate succession,'* and as being a 'main factor in development, resulting in a progressive elaboration of what is relatively simple into more and more complex products.'† Attention is, however, treated as a determining condition for the elaborative processes, and this saves their operation from being purely mechanical.

* Cf. § 17.
† § 5, tr. by E. B. Titchener.
‡ Cf. *ib.* § 77.
§ Cf. *ib.* § 76.

The old method is entirely departed from in the psychology of Ward and Stout. Ward's conception of differentiation and integration, in the continuous advance of which processes mental development consists, shows an advance on that of Spencer.

'We shall find in the growth of a seed or an embryo far better illustrations of the unfolding of the contents of consciousness than in the building up of molecules: the process seems much more a segmentation of what is originally continuous than an aggregation of elements at first independent and distinct.'‡

Unity of consciousness is not something which psychological theory has to account for as a product or growth, but is that from which psychology takes its start.

'Working backward from this as we find it now, we are led alike by particular facts and general considerations to the conception of a *totum objectivum* or objective continuum which is gradually differentiated, thereby becoming what we call distinct presentations.'§

'The notion, which Kant has done much to encourage, that psychical life begins with a confused manifold of sensations not only without logical but without psychological unity, is one that becomes more inconceivable the more closely we consider it.'‖

Changes within the total field of consciousness, and persistence of the old alongside of the new (retentiveness), give the bases for differentiation, and subjective selection; that is to say, voluntary concentration of attention on 'this' or 'that' within the total field explains its further progress. The connexion of sensations with movements is the first phase of integration; the pleasure or pain which accompanies sensation causes change in the distribution of attention, and thus causes movement, the initiation of 'this,' the suppression of 'that.' First 'natural selection,' then 'subjective selection,' will bring about such syntheses, and thus 'presentations originally in no way connected tend to move in consciousness together.'¶ Association is a particular instance of this. Association by contiguity is as such inexplicable; for 'contiguity' Ward substitutes 'continuity.' A and X, which have no connexion one with another, occupy 'the focus of consciousness in immediate succession. This constitutes their integration.'** Through the movements of attention they are now parts of one whole, form what Ward terms a continuum, are continuous one with another. These movements of attention 'come in the end to depend mainly upon interest, but at first appear to be determined entirely by mere intensity.'†† The power of variously distributing attention is the one power which Ward desires to leave the subject of consciousness, and it is in virtue of this power that the subject plays the rôle of agent.

In Stout's psychology we have a similar view of the unity of consciousness and of the processes of differentiation and integration.

'The process of consciousness is a process of incessant change; the changes are partly due to the play of external impressions, and to other conditions extraneous to consciousness itself. But this is rarely, if ever, entirely so. The process is in part self-determining. The successive phases have by their very nature a tendency to pass into other phases.'‡‡

This tendency is conation, and it is conation which correlates and gives a special unity to 'other-

wise disparate and disconnected processes.' For such unity the 'general condition is that the successive phases of a conscious process shall constitute a movement towards an end-state or terminus.'* There must be continuity of interest, and for this, retentiveness is essential; later phases of a conative process owe their meaning to the earlier. So in general, it is the 'dispositions' or 'traces' left by previous experience which make development possible.

Continuity of interest lies at the bottom of all association and reproduction. In association by contiguity the re-occurrence of any one of the members of a 'conative unity' re-excites the whole disposition, because of the direct continuity of all the members of such disposition. There is direct continuity between the suggesting and the suggested idea. In what is called 'association by similarity,' the suggesting factor re-excites a disposition having a member similar to, or partially identical with, itself, and does so only through the medium of this similar or partially identical member; there is thus no direct connexion between the suggesting factor and the members of the re-excited disposition. The continuity of interest is indirect.

With both Ward and Stout, therefore, association takes its place as a process depending upon the fundamental laws of psychical development, as explanandum, not explanation.

BEATRICE EDGELL.

ASSUMPTION and ASCENSION.—*Meaning and scope.*—The idea underlying these theological conceptions is the idea of communication between the natural and the spiritual order, and of a passage from the former to the latter. As the idea of 'Revelation' presupposes the possibility of movement from heaven earthward, so the idea of 'Ascension' presupposes the possibility of movement from earth heavenward. In some form or other both these conceptions have a place in every religious system; and in primitive religions they are set forth in terms of the geocentric philosophy of antiquity. The earth is the centre of the universe. Heaven, the abode of the gods, is above us in the distant sky; and the advent of heavenly messengers is represented as a physical descent, a 'coming down,' while their departure is a physical ascent, a 'going up.' So too the movement of human beings to the spiritual region is a 'going up,' an uplifting; and the language of devotion bears perpetual witness to this primitive conception. *Sursum corda* is the form which an exhortation to fix our thoughts on the realities of the spiritual world naturally takes. We speak of noble ideals as 'high' or 'lofty,' and of material ambitions as 'low'; and the abode of the Eternal is described as 'a high and holy place.' It was inevitable, while the Ptolemaic system of cosmography was accepted, that its fundamental conceptions should affect the language in which spiritual facts were described.

It is clear, however, that belief in the possibility of communication between man and God, between the natural and the spiritual, between earth and heaven, is not bound up with this geocentric philosophy which no one now accepts, although we are quite content to continue to use the language of devotion which it originally suggested, just as we are content still to speak of the 'rising' and 'setting' of the sun. Such language misleads no one in the sphere of science, and there is no reason why it should be a perplexity in the sphere of religion. That there is a region of 'spirit,' which encompasses us; that, although invisible, it is not inaccessible; that it is the dwelling-place—for we can get no better phrase—of the Divine; that it is the ultimate reality of the universe: these convictions are a sufficient background for the idea of 'Revelation,' and also for the idea of 'Ascension,' that is, the passage from the natural to the spiritual order.

* *A Manual of Psychology*, bk. i. ch. ii. § 3.

This idea has appeared in several different forms, which it is necessary to distinguish. A characteristic feature of mysticism is the belief that in supreme moments the soul is translated to heavenly places, and granted a vision of the spiritual world. Thus in the Neo-Platonic philosophy of Plotinus, knowledge of Divine things is conveyed to the human spirit in a condition of exaltation, described as *ἔκστασις*, by which man comes into contact with God (*Enneads*, vi. 9–11). The 'occult' philosophy of the East presupposes a similar means of approach to the highest truths. And the phenomena of clairvoyance and telepathy, as yet imperfectly understood, point to the possibility of free exercise of the cognitive powers, unrestrained by the limitations of the bodily senses. Here, however, there is no thought of a translation of the *body* to the unseen world; it is the *spirit* alone, temporarily divorced from the body, that is thus favoured. And, accordingly, we do not describe such an experience as an 'ascension' or an 'assumption,' these terms being reserved for the translation of the whole man, soul and body, to the region of spirit. In special cases, the vision of the spiritual order may be so clear that the man may be unable to determine, as he looks back upon it, whether he was 'in the body or out of the body.' Such was the case of St. Paul, who recalls (2 Co 12^{2-4}) how he had been 'caught up into Paradise, and heard unspeakable words which it is not lawful for a man to utter.' But it is only if the translation be of body as well as of soul that it comes within the scope of this article, which does not embrace an inquiry into 'visions,' or 'dreams,' or 'intuitions' of the Divine (see those articles).

I. *ASSUMPTIONS OF SAINTS.*—**1. Bodily translations to heaven, for purpose of revelations.**—The apocryphal and apocalyptic literature of Judaism and of Christianity furnishes (see BIBLE) some illustrations of bodily 'assumptions' into heaven, granted to individuals in order that they might be informed of spiritual truth. 'Assumptions' of this kind are temporary only; and, the vision ended, the man returns to earth. The language of Ezk 8^3 was, perhaps, not intended to be literal, and (see 11^{24}) need not convey more than an involuntary rapture of the spirit; but the story of the transportation to Babylon of Habakkuk, who was lifted up 'by the hair of his head' (Bel ^{36}), implies a translation of his body. Granted a belief in the possibility of such earthly experiences (which underlies much Eastern folklore, as in the *Arabian Nights*), the step is easy to the belief in a translation of the body from earth to heaven.

(1) The most remarkable legend of this kind is that of *Enoch*, discussed below (2, 1). But there are other instances.

(2) *Abraham.*—In the *Testament of Abraham* (ed. M. R. James, 1892), Michael takes Abraham up in a cloud with angelic chariots, to show him the world of men from the standpoint of heaven. Abraham then is brought back to his house, where after an interval he dies.

(3) *Isaiah.*—In the *Ascension of Isaiah* (chs. 7, 8), Isaiah is raised to the seventh heaven, where he has a vision of the Beloved, after which experience he returns to earth (ch. 11).

(4) *Rabbinical seers.*—Rabbinical literature tells in like manner of four rabbis who entered Paradise and were granted revelations.

(5) *Moses.*—The story of Moses in later literature has affinities with 'assumption' or 'ascension' legends of various forms. The two starting-points are the Biblical accounts of his discourse with God on the holy mountain, when the Law was revealed to him (Ex $24^{15ff.}$), and of his secret burial (Dt 34^{6}). The first of these led to the idea of an 'Apocalypse of Moses,' such as that edited from the Greek by Tischendorf; the second to the stories of his 'assumption' (cf. Jude ^{9}). Thus Josephus (*Ant.* IV. viii. 48) tells that, as Moses was discoursing with Eleazar and Joshua, a cloud suddenly enveloped him and he disappeared in a certain valley, although he wrote in Deuteronomy that he died, 'fearing lest because of his exceeding virtue men might venture to say that he had withdrawn to the Divine' (*πρὸς τὸ θεῖον αὐτὸν ἀναχωρῆσαι*). The phrase *πρὸς τὸ θεῖον ἀναχωρεῖν* is used by Josephus (*Ant.* I. iii. 4) of Enoch; and he evidently means to suggest that Moses' departure from the world was abnormal, although he will not say positively that, like Enoch, he escaped the passage of death. The legend of the 'Assumption of Moses,' as it is restored by Charles (*Assumption of Moses*, p. 106), described the living man carried up to heaven, while his corpse was hidden in the recesses of the mountains.

(6) *Muhammad.*—The journey of Muhammad to heaven affords a later instance. It has been interpreted, indeed, by some Muhammadan expositors as non-corporeal, and his experience has been described as that of a dream or a vision only. But the more popular version is that the prophet was transported by night from Mecca to Jerusalem, thence through the seven heavens to the presence of God, and then back to Mecca. Ch. xviii. of the Qur'ān claims to contain the revelation then vouchsafed to him.

2. Bodily translations to heaven, in lieu of death.—We have next to examine the legends which represent saints as being transported, without dying, to the world beyond the grave.*

In the Babylonian mythology, the apotheosis of Xisuthros, the hero of the Deluge, was of this character. In recognition of his piety, he was not subjected to death, but was assumed to heaven.† In Jewish literature, two figures stand out as having been granted this high privilege, Enoch and Elijah.

(1) *Enoch.*—The source of all the later traditions is Gn 5^{24} (Heb.): 'Enoch walked with God: and he was not; for God took him.' That he 'walked with God' or that he 'pleased God' (*εὐηρέστησε τῷ θεῷ*, LXX) does not necessarily signify more than that he spent his life in converse with the spiritual world, and that death was to him a withdrawal to God. But this simple statement, which might be made of every saint, was developed in two directions:—

(*a*) Gn 5^{24} suggested that Enoch was the recipient of supernatural revelations; and the *Book of Enoch* and the Slavonic *Secrets of Enoch* (see also the *Book of Jubilees*) were the outcome of this idea. In these books he is represented as having been 'assumed' to heaven that he might be instructed in heavenly things, which he subsequently described (*En.* lxx. 1, lxxxvii. 3; *Sl. En.* Introd.; *Jub.* iv. 21). According to the *Slavonic Enoch* (lxvii.), he lived on earth thirty days after this vision, and then 'the angels hasted and took Enoch and carried him into the highest heaven, where the Lord received him.'

* The story of Ganymede, who was caught up to heaven by Zeus that he might be the cupbearer of the gods, is not strictly parallel, for there is no suggestion that this was due to the piety of Ganymede. Cf. also the Rape of Proserpine, transported to the infernal regions by Pluto in his chariot.

† Cf. Abydenus *apud* Euseb. *Præp. Ev.* ix. 12, of Xisuthros, *θεοὶ μιν ἐξ ἀνθρώπων ἀφανίζουσιν*, and see Smith, *Chaldæan Genesis*^{2}, p. 33.

(*b*) In the last quoted passage we have the idea of a translation to Paradise in lieu of dying, which is the most familiar form of the Enoch story. Thus the LXX of Gn 5^{24} has *οὐχ ηὑρίσκετο, διότι μετέθηκεν αὐτὸν ὁ θεός* (cf. *En.* lx. 8); and Sir 44^{16} says of him *μετετέθη* (cf. Sir 49^{14} *ἀνελήμφθη ἀπὸ τῆς γῆς*). Following this tradition, He 11^{5} has *Ἐνὼχ μετετέθη τοῦ μὴ ἰδεῖν θάνατον*; and the conception of Enoch's 'ascension' without dying is frequent in Christian literature. The same idea appears in Josephus (*Ant.* I. iii. 4), who says of Enoch, *ἀνεχώρησε πρὸς τὸ θεῖον, ὅθεν οὐδὲ τελευτὴν αὐτοῦ ἀναγεγράφασι.*

(2) *Elijah.*—The Elijah traditions, like those of Enoch, seem to have developed in two different directions. The *Apocalypse of Elijah* (ed. from the Coptic by Steindorff) is a Christianized form of a Jewish apocalypse, and bears witness to the belief that Elijah received supernatural revelations (it was long supposed to be the source of 1 Co 2^{9}). But the best known form of the tradition is that which starts from 2 K 2^{11} 'Behold, a chariot of fire, and horses of fire, which parted them both asunder; and Elijah went up by a whirlwind into heaven' (*ἀνελήμφθη Ἠλειοὺ ἐν συσσεισμῷ ὡς εἰς τὸν οὐρανόν*). It re-appears in Sir 48^{9} (*ἀναλημφθεὶς ἐν λαίλαπι πυρός*) and in 1 Mac 2^{58} ('Elias for being zealous and fervent for the law was taken up into heaven'). It will be observed that the instrument of his assumption, according to the original story, was a tempest, not a chariot, of fire, as artists have loved to represent it; and that 1 Mac 2^{58} explicitly points to the piety of Elijah as the cause of his 'assumption' without passing through the gates of death.*

(3) *Other Biblical personages.*—In Rabbinical legends, other persons are held to have escaped death by a privilege similar to that of Enoch and Elijah: *e.g.* Eliezer, Abraham's steward, for his faithful service; Ebed-melech (Jer $38^{7ff.}$); Hiram; Jabez (1 Ch 4^{10}); Serah, Asher's daughter (Gn (46^{17}); and Pharaoh's daughter. So Ezra was 'taken up' after his vision (2 Es 8^{19}), and Baruch had a like privilege (Apoc. Bar., *passim*).

3. Assumptions after death.—With such 'assumptions' as have just been described, we must not confound the 'assumptions' in which *after death* the body was removed from earth and caught up to heaven.

(1) *Hercules.*—A classical example is the legend of Hercules. Being poisoned by the arts of Dejanira, he erected a pyre on the summit of Mount Œta in Thessaly, and lay down to die. Zeus, applauding his career, surrounded the pyre with smoke, and after the mortal parts of Hercules had been consumed, he was carried up to heaven in a chariot drawn by four horses. Neither his bones nor his ashes could be found, the underlying idea of the legend being that earth was not a worthy resting-place for the remains of one so godlike.†

(2) *Virgin Mary.*—A Christian legend of the same kind is that of the 'Assumption of Mary,' according to which first the soul, and after that the dead body, of the Virgin were assumed to heaven (see the *Transitus Mariæ*, ed. Tischendorf). 'It was becoming'—so Newman expresses the conviction of the Roman Church—'that she should be taken up into heaven and not lie in the grave until Christ's Second Coming, who had passed

* According to early Christian belief, Enoch and Elijah were the 'two witnesses' of Rev 11^{3}, who were at last to be manifested in Jerusalem (11^{7}), and whose ascent into heaven (11^{12}) was to be followed by the Second Coming of Christ.

† The classical myth of the quest in Hades for his dead wife Eurydice by Orpheus, who afterwards returned to earth, is the prototype of many legends of visits to the under world, such as that in Virgil, *Æneid*, vi., or in Dante. But in these there is nothing strictly comparable with the idea of 'assumption' to heaven.

a life of sanctity and of miracle such as hers.'* And, accordingly, the Feast of the Assumption of the Blessed Virgin Mary has had a place in Church Calendars (Aug. 15) since the 7th century.

II. *ASCENSION OF CHRIST*.—The narrative of the Ascension of Christ (Ac 1^{9}) is not analogous to the Jewish legends of 'ascension' or 'assumption' in either of the forms which they have taken. Christ was not 'assumed' into the heavenly places in order to receive revelations of the spiritual order, as was reported of the seers of the Jewish apocalypses. Nor, again, was His Ascension an escape from the experience of death, as was believed by some to have been the privilege of Enoch and Elijah. It is represented consistently in the early Christian documents, canonical and extra-canonical, as a withdrawal into the spiritual world with the body which He had taken upon Himself and in which He had lived an earthly life, died, and risen victorious over death. After His Resurrection, His body is represented as spiritualized and as superior to earthly conditions, to a degree which is not asserted of it during the days of His ministry; but nevertheless, according to the Christian tradition, the body in which He ascended was the same body that had hung on the cross and had been buried in the sepulchre of Joseph. The 'assumption' of Moses was conceived of as consistent with the continuance of his corpse in a hidden grave (see above, p. 152ᵃ). But this is not parallel with the Ascension of Christ, which presupposed the empty tomb. Christ's Ascension was a 'resumption' of His pre-existent state, in His glorified humanity, rather than an 'assumption' to heaven, granted by the favour of the Most High. Its meaning will be considered more fully in a later section (§ 7); at this point, we note that, as described in the Christian tradition, it has no exact parallel in history or literature. This it is essential to keep in mind.

It is next to be observed that there was nothing in the Jewish beliefs about Messiah which would naturally suggest such a consummation of the visible ministry of the Christ. An Ascension, in lieu of death, might have been expected by those who accepted the current beliefs about Enoch and Elijah; but death, followed by a re-vivification and exaltation, was not within the purview of the first disciples. Looking back upon the Resurrection, they were able to find phrases in the OT which might be thought to point forward to it; and, in fact, that Christ rose again 'according to the scriptures' (1 Co 15^{4}) became a settled point of belief. But nothing of the kind was asserted consistently of the Ascension. Ps 110^{1} was, indeed, quoted, according to Ac 2^{34}, by St. Peter, and Ps 68^{18} was quoted by St. Paul (Eph $4^{8.9}$), as applicable to the exaltation of the Christ; but that He ascended *according to the Scriptures* was never an article of the Creed. The Ascension of the Messiah had not been part of the Jewish expectation. Nor, so far as can now be discovered, did the disciples understand the allusions which, in the Fourth Gospel, Christ is reported to have made beforehand to this consummation of His visible Ministry on earth (Jn 3^{13} 6^{62} 20^{17}), any more than they understood His predictions of His Resurrection (Mk 8^{31} 9^{30} 10^{34}; cf. the Synoptic parallels, and see art. RESURRECTION). That after His visible Ministry amongst them had come to an end there would be an interval of waiting and of discipline before the final appearance of the Christ in triumph, the Apostles seem vaguely to have realized, and it had many times been put before them (Mk 2^{20} with ||, Lk 17^{22}, the parables of the Absent Master [Lk $12^{35ff.}$] and of the Pounds [Lk $19^{11ff.}$], Jn 13^{36} 14^{19} 16^{7} etc.); but in their half-formulated expectations of a period of suspense followed by an Advent of Christ in victory and judgment, His Death, Resurrection, and Ascension had no place.

1. **The Ascension in Christian literature.**—In examining the belief of Christians as to the Ascension of Christ, it is important to distinguish between the *fact* of the Ascension and its *mode*, between the conviction of Christ's beneficent activities on behalf of mankind being continued after the withdrawal of His visible presence and the acceptance of the brief narrative which describes the manner of His departure. In every Christian age the former of these beliefs has been more conspicuous than the latter. In the language of theology, Christ's 'Session' at the right hand of the Father has always been more in the thoughts of those who call Him Master than His 'Ascension' to His Throne. For the belief that Christ is now in spiritual communication with His disciples, that He guards, forgives, and guides them, is essential to the Christian life. It is historically interesting, but it is not vital, to know how the beginning of this ministry was revealed to the early disciples by the Risen Master's final withdrawal from their sight. And, in fact, while the doctrine of the activities of the Ascended Christ has always been a principal part of Christian instruction, and a favourite topic of Christian contemplation, the Festival of the Ascension (see § 3 below) has throughout the Church's history been treated with comparative neglect.* It might have been anticipated *a priori* that this Feast would have rivalled Christmas, Easter, and Pentecost in its attraction for Christian believers; but it has never approached them in its popularity, not because there has been any doubt in the Church as to the event which it commemorates, but because it is the issues of that event, rather than the event itself, in which Christians have been mainly interested. A kindred phenomenon, which points the same way, is the poverty of the hymnology of the Ascension. The subject is one which might be expected to attract the imagination and inspire the poetry of the Church; but it has never done so to any considerable extent.†

In strict conformity with these tendencies of later Christian history, we find that, while the Pauline theology is full of the conception of an Exalted Christ in spiritual fellowship with those who are 'in Him,' references to the Ascension as an event are rare. It is always presupposed, as in the phrase 'The Lord himself shall descend from heaven' (1 Th 4^{16}), for *descent* implies a previous *ascent*. But this implication becomes explicit only in Eph 4^{10} 'He that descended (*sc.* into Hades) is the same also that ascended far above all the heavens,' where the reference to the *ἀνάβασις* of Christ is unmistakable. The only other allusion in the Pauline writings to the Ascension as an event is in the fragment of an early hymn quoted in 1 Ti 3^{16} (*ἀνελήμφθη ἐν δόξῃ*).

To these may be added, from the Epistles, He 4^{14}, (*ἀρχιερέα μέγαν διεληλυθότα τοὺς οὐρανούς*) and 1 P 3^{22} (*ὅς ἐστιν ἐν δεξιᾷ θεοῦ, πορευθεὶς εἰς οὐρανόν*), both of which carry a distinct reference to the act of Ascension. In like manner, the allusions in the Fourth Gospel are express: *οὐδεὶς ἀναβέβηκεν εἰς τὸν οὐρανὸν εἰ μὴ ὁ ἐκ τοῦ οὐρανοῦ καταβάς, κ.τ.λ.* (Jn 3^{13}), *ἐὰν οὖν θεωρῆτε τὸν υἱὸν τοῦ ἀνθρώπου ἀναβαίνοντα ὅπου ἦν τὸ πρότερον;* (Jn 6^{62}), *οὔπω γὰρ ἀναβέβηκα πρὸς τὸν πατέρα μου . . . ἀναβαίνω πρὸς τὸν πατέρα μου, κ.τ.λ.* (Jn 20^{17}).‡ Whatever view be taken as

* *Discourses to Mixed Congregations*, No. xviii.

* This was noticed as early as the 4th century. *οἱ πολλοὶ ἀγνοοῦντες τὸ ταύτης μέγεθος ἧττον αὐτὴν νομίζουσι* are words at the beginning of a Homily on the Ascension printed among the works of Epiphanius (*PG* xliii. 477).

† Cf. Trench, *Sacred Latin Poetry*³, 1874, p. 172.

‡ It is possible that the words ascribed to Christ in Jn 12^{32}, *ἐὰν ὑψωθῶ ἐκ τῆς γῆς πάντας ἑλκύσω πρὸς ἐμαυτόν*, involve

to the accuracy of the reports of Christ's words in John, it is certain from these passages that, at the date of the composition of the Fourth Gospel, the Ascension of Christ as an event in time was a definitely conceived part of the Christian tradition. It did not come within the purpose of the writer to give any direct account of it, just as it did not come within his purpose to describe the institution of the Eucharist; but his allusions indicate that his readers had knowledge of both.

(1) *The Gospels.*—The end of the Second Gospel is lost, and what it contained can only be matter of conjecture, more or less probable. It is likely that the writer of Mt 28 had it before him, and that he followed the main lines of the Marcan narrative here, as in other places. If this be so, Mark in its original form did not explicitly describe the Ascension. Mark, followed by Matthew, represents the Galilæan tradition of the Resurrection-appearances, and the Ascension narrative belongs more naturally to the Jerusalem tradition, as the scene of the Ascension was Olivet. That Matthew does not describe it is to be explained precisely as his omission to describe the Appearance of the Risen Christ to the Eleven in the upper room is to be explained. He is following the Galilæan narrative of Mark, the climax of which probably was the appearance of Christ *in Galilee* (cf. Mt 28[16]), in accordance with His promise (Mk 14[28]) and with the angelic announcement (Mk 16[7]). The climax, on the other hand, of the Jerusalem narrative would be the Ascension, the last of the post-Resurrection manifestations in the neighbourhood of Jerusalem, and accordingly we find it explicitly mentioned by the writer, who follows the Jerusalem tradition of the Resurrection throughout, *i.e.* by St. Luke (cf. 9[51] *τὰς ἡμέρας τῆς ἀναλήμψεως αὐτοῦ*).

The statement, in the Third Gospel, of the events which followed the Resurrection is condensed to the point of obscurity, and the variants of the texts of the closing verses are puzzling. But when all this has been admitted, it does not seem (to the present writer at least) to be possible to regard it as silent on the subject of the Ascension, although this has been maintained by some critics. The passage is as follows: *ἐξήγαγε δὲ αὐτοὺς [ἔξω] ἕως εἰς [al. πρὸς] Βηθανίαν· καὶ ἐπάρας τὰς χεῖρας αὐτοῦ εὐλόγησεν αὐτούς· καὶ ἐγένετο ἐν τῷ εὐλογεῖν αὐτὸν αὐτοὺς, διέστη ἀπ' αὐτῶν [καὶ ἀνεφέρετο εἰς τὸν οὐρανόν]. καὶ αὐτοὶ [προσκυνήσαντες αὐτὸν] ὑπέστρεψαν εἰς Ἱερουσαλὴμ μετὰ χαρᾶς μεγάλης· καὶ ἦσαν διὰ παντὸς ἐν τῷ ἱερῷ [αἰνοῦντες καὶ] εὐλογοῦντες τὸν θεόν ['Αμήν]* (Lk 24[50f.]). The words in brackets are omitted in some (mainly Western) texts, and are marked as doubtful in WH. It is by no means certain that they did not form part of the original text; and if they did, *ἀνεφέρετο εἰς τὸν οὐρανόν* is an explicit description of the Ascension. But even if these words are left out of consideration, there remains the narrative of a solemn parting from the disciples in the act of benediction, subsequently to which they returned to Jerusalem with joy and continued in the Temple blessing God. Some special significance must have been attached to a departure of the Risen Master, so lately restored to them from death, which they would recall *with joy*, and for which they would fall to thanksgiving. Such a separation could hardly have been viewed as merely temporary; the language indicates that they regarded it as final, and the termination of the Gospel at this point shows that the evangelist conceived of it as the beginning of a new era for the followers of Christ. But a withdrawal of this nature into the spiritual region is the essence of the Ascension, to which, therefore, the conclusion of St. Luke's Gospel bears definite witness, even if it be supposed that *ἀνεφέρετο εἰς τὸν οὐρανόν* is a later gloss, explanatory, in the unscientific language of the age (see pp. 151, 156), of the manner of the disappearance of Christ into the spiritual world.

(2) *The Acts.*—In the later treatise by Luke, the Acts, this kind of descriptive language is used without hesitation when the story of the Ascension is being told: *βλεπόντων αὐτῶν ἐπήρθη, καὶ νεφέλη ὑπέλαβεν αὐτὸν ἀπὸ τῶν ὀφθαλμῶν αὐτῶν. καὶ ὡς ἀτενίζοντες ἦσαν εἰς τὸν οὐρανὸν πορευομένου αὐτοῦ, κ.τ.λ.* (Ac 1[9f.]). According to Acts, that is, the departing Christ was received in a cloud, His disciples following His passage 'upward' with straining eyes. Angelic messengers then informed them that, as was the manner of His Departure, so would be that of His Return, *i.e.* in a cloud, from the upper regions of the sky. There is no doubt as to the definiteness with which the Ascension of Christ is here narrated. The testimony of Acts is express. It remains, however, a legitimate problem, although one of no small difficulty, to determine how far the language in which it is described is to be regarded as literal, and how far it may be understood either as symbolical or as the natural, unstudied language employed in an unscientific age to describe a fact quite abnormal and unique in the experience of the narrators.

The Christian Church for many generations regarded the story as literally precise, *i.e.* it was believed that Christ went 'up' in a cloud into the higher regions of the atmosphere. It may have been so, just as the true interpretation of the words ascribed to Christ of His Second Coming 'in the clouds of heaven with power and great glory' (Mt 24[30]; cf. Mk 14[62]=Mt 26[64]) may be the literal interpretation, which was adopted by St. Paul ('we shall be caught up *in the clouds* to meet the Lord in the air,' 1 Th 4[17]). But it must not be forgotten that phraseology similar to the eschatological language used by Christ—or, at any rate, ascribed to Him by the Evangelists—is to be found in the Jewish apocalypses, which reflect the popular beliefs of the age. If the last things were to be spoken of intelligibly at all, they must be spoken of in the language of symbol and imagery familiar to His hearers. And no one doubts the verbal connexion of Mk 14[62] and parallel passages with Dn 7[13f.]: 'There came with the clouds of heaven one like unto a son of man, and he came even to the ancient of days, and they brought him near before him. And there was given him dominion, and glory, and a kingdom, that all the peoples . . . should serve him.' It is to be remembered, then, that the Ascension in Ac 1 is described as a 'going into heaven,' conceived of as a process similar to that 'coming from heaven' of which Jewish apocalyptic and Christ Himself had spoken. The cloud and the upward movement are, indeed, explicitly recorded as having been observed, and they present no special difficulty. But it is right to note that they are the natural and almost inevitable accessories of any Jewish narrative which sought to describe the solemn and unique departure of the Christ, or to enrich with detail the brief statement *διέστη ἀπ' αὐτῶν* (Lk 24[51]).

(3) *Sub-Apostolic literature.*—The *Appendix to St. Mark*, a document of the earliest sub-Apostolic age, gives no information as to the post-Resurrection appearances of Christ which is not found in the Lucan and Johannine narratives. It may have been based upon these, but in any case, like them, it follows the Jerusalem tradition. It describes

another reference to the Ascension, despite the fact that the Evangelist confines them to the Elevation on the cross. In Jn 8[28] the latter meaning must be the true interpretation of *ὑψόω*; but the context of Jn 3[14], *καθὼς Μωυσῆς ὕψωσε τὸν ὄφιν ἐν τῇ ἐρήμῳ, οὕτως ὑψωθῆναι δεῖ τὸν υἱὸν τοῦ ἀνθρώπου*, seems to show that the *ὕψωσις* is the Ascension rather than the Crucifixion. The verb *ὑψόω* is used twice in Acts (2[33] 5[31]) of Christ's exaltation to heaven (cf. Ph 2[9] *ὑπερύψωσε*). For a discussion of its meaning in John see Abbott, *Johannine Gram.*, 1906, 2642 *b*.

the Ascension in OT language : *ὁ μὲν οὖν κύριος μετὰ τὸ λαλῆσαι αὐτοῖς ἀνελήμφθη εἰς τὸν οὐρανὸν* (the phrase used 2 K 2^{11} of the Assumption of Elijah) *καὶ ἐκάθισεν ἐκ δεξιῶν τοῦ θεοῦ* (cf. Ps 110^{1}).

Later writers, Barnabas (*ἀνέστη ἐκ νεκρῶν καὶ φανερωθεὶς ἀνέβη εἰς οὐρανούς*, c. 15), Aristides (*εἰς οὐρανοὺς ἀνῆλθεν*, § 15, ed. Robinson), Justin (*ἀναβεβηκέναι εἰς τὸν οὐρανόν*, *Dial.* 38), and Irenæus (*τὴν ἔνσαρκον εἰς τοὺς οὐρανοὺς ἀνάληψιν*, *Hær.* I. x. 1 ; cf. II. xxxii. 3, III. iv. 2), carry on explicit witness to the Christian tradition into the 2nd century. To these may be added the descriptions in the *Ascension of Isaiah*, *e.g.* : 'They will teach all the nations . . . of the Resurrection (*ἀνάστασιν*) of the Beloved, and those who believe in His Cross will be saved, and in His Ascension (*ἀναβάσει*) into the seventh heaven whence He came' (iii. 18, a passage which Charles treats as belonging to the earliest part of the treatise, and as probably of the 1st cent.) ; see also the description in xi. 22 ff. of the Ascension of the Beloved through the seven heavens (a passage which looks like an imaginative amplification of He 4^{14}).

2. The Ascension and the Resurrection.—Despite the definite language of passages such as those which have been cited, it has been suggested by some writers, *e.g.* by Harnack,* that in the earliest tradition the Resurrection and the Ascension were not clearly distinguished. But the considerations already adduced (p. 153ᵇ) sufficiently explain the omission on the part of some writers (*e.g.* Clement, Polycarp, and Ignatius [yet cf. *Magn.* 7]) to make explicit mention of the Ascension as an event in time. To the thought of the first Christians, the credentials of the Gospel were the appearances of Christ after His Resurrection ; this historical fact was fundamental. But the *evidential* value of the Ascension was no greater than that of any other of the Epiphanies of the Risen Christ, and from this point of view it was not essential to make separate mention of it. So soon, however, as the Church began to formulate a Creed, the Ascension, as the event which terminated the visible ministry of Christ on earth and inaugurated His invisible ministry in heaven, was explicitly distinguished therein from the Resurrection, as it had already been distinguished in the Acts, in the Marcan Appendix, in Barnabas, and in the 2nd cent. writers. 'He ascended into heaven' is a separate article of the Creed in the earliest forms which we can trace.

Tradition, however, is not quite unanimous as to the interval between the first and last manifestations of the Risen Christ, between the 'Resurrection' and the 'Ascension.' Neither in the third Gospel nor in the Marcan Appendix is there any note of the time that elapsed ; and as the story in both cases runs continuously, a hasty reader might conclude that these writers mean to place the Ascension on Easter Day. But it is evident that the Marcan Fragment is only a summary, and not a consecutive narrative. And, although not so evident in St. Luke's account, its summarized character is clear when ch. 24 is scrutinized closely. The Supper at Emmaus was in the evening (24^{29}) ; time must be found for the return to Jerusalem, seven miles away ($24^{13. 33}$) ; for the telling of the story to the Eleven (24^{35}) ; for the Meal in the upper room (24^{43}) ; for the Discourse there and the Commission (24^{44-49}) ; for the walk of 1½ miles to Olivet (24^{50}). No tradition represents the Ascension as taking place in the middle of the night ; and yet this is what we must suppose St. Luke to state, if we take 24^{13-51} as describing the events of a single evening. The fact is that this narrative is not necessarily continuous, from 24^{43} to 24^{44} at any rate, and that therefore it does not contradict the statement of Ac 1^{3} (cf. Ac 13^{31}) that 'forty days' elapsed between the Resurrection and the Ascension.

3. Ascension Day.—'Forty' days is a round number ; and although the Church since the 4th cent. has kept the Festival of the Ascension on the 40th day after Easter,* it is not certain that the author of Acts meant it to be taken quite literally. Barnabas speaks of the Resurrection and the Ascension as having both taken place on a Sunday† (*διὸ καὶ ἄγομεν τὴν ἡμέραν τὴν ὀγδόην εἰς εὐφροσύνην, ἐν ᾗ καὶ ὁ Ἰησοῦς ἀνέστη ἐκ νεκρῶν καὶ φανερωθεὶς ἀνέβη εἰς οὐρανούς*, c. 15) ; and it is possible that he preserves a true tradition about this.‡ It has been suggested by Dr. Swete (*op. cit.* p. 69) that Sunday the 43rd day after Easter would meet the statement of Barnabas, as well as the 'forty' days of Acts ; and it may well be that this is the true interpretation of all the data.

4. Origin of belief in the Ascension.—The nature and details of the Church's tradition as to the Ascension of Christ have now been summarized. It is worthy of attention that, *a priori*, it would be difficult to account for the origin of such a belief were it not based on fact. Those who explain the belief in the post-Resurrection appearances of Christ as of *subjective* origin, and as due to the temper of strained expectancy which dominated the little company of the disciples of Jesus, may not unreasonably be asked to explain why these pious imaginings should suddenly have ceased. If the visions of the Risen Christ were evoked or created by the loving ardour of those who would fain realize the nearness of the presence of the Master whom they had lost from daily sight, why should they not have continued throughout the Apostolic Age? Granted a belief in the occasional appearances of Christ after His Resurrection, a belief in His subsequent Departure from sight and the complete withdrawal of His visible presence is a surprising phenomenon. Yet nothing is clearer in the records of the 1st and 2nd cents. than that the Church after Pentecost ceased to look for any manifestation of the Risen Lord other than His Second Coming in Judgment. Some event must have taken place which assured them that the period of the Resurrection visions was transitional, and that the consolations of the Church in the future were to be derived, not from such manifestations, but from the spiritual ministrations of a Master in heaven. There must have been, that is, some manifestation of the Risen Christ which they recognized with certainty as the last of the series, and which, therefore, in some respects was unlike those which preceded it. Such an experience was theirs, according to the Lucan narrative, in the vision of the Ascension ; and those who do not admit that the narrative is based on a historical event are under the necessity of explaining how the disciples, whose only strength was in the conviction of the nearness of their Risen Master, should have been led to imagine that the gracious Epiphanies of His presence had suddenly come to an end.

5. Manner of the Ascension.—When it is sought more closely to determine the manner of the 'Ascension,' the data are found to be insufficient. For it is represented as an Ascension of the body, as well as of the spirit, of Christ ; and yet of a body not subject to the ordinary physical conditions. Both in the Lucan (Lk $24^{31. 36-43}$) and in

* A careful and valuable examination of his argument will be found in Swete, *The Apostles' Creed*, p. 64 ff.

* Cf. *Const. Ap.* v. 19 : *ἀπὸ τῆς πρώτης κυριακῆς ἀριθμήσαντες τεσσαράκοντα ἡμέρας, ἀπὸ κυριακῆς ἄχρι πέμπτης ἑορτάζετε τὴν ἑορτὴν τῆς ἀναλήψεως.*

† Swete (*op. cit.* p. 69) points out that the *Syriac Doctrine of the Apostles* identifies the Ascension with Pentecost, which, although quite inconsistent with Acts, again places the Ascension on a Sunday.

‡ A Gnostic fancy (Iren. I. iii. 2 and xxx. 14), which is also found in the *Ascension of Isaiah* (ix. 16), represented the interval between the Resurrection and the Ascension as 18 months.

the Johannine (Jn 20[19. 26]) Resurrection narratives, the Risen Christ is represented as in a body over which His spirit has complete control. It is the same body which hung on the cross, but it has been spiritualized. To describe it we have to use St. Paul's phrase, and say that it is now a 'spiritual body' (*σῶμα πνευματικόν* [1 Co 15[44]]), a body which is the fit organ and instrument of the spirit. We can understand that such a body would not be subject to the laws of space and time, although it is impossible for us to figure in the imagination its movements. And therefore a physical theory of the Ascension is out of our reach. We are subject to spatial and temporal conditions, and although we fully recognize that they are not binding in the spiritual order, they impose limitations upon the pictures of our imagination.

6. Philosophical rationale of the Ascension.—It is, however, possible to conceive the *fact*, although not to imagine the *manner*, of the Ascension, when we remember that it represents the passage from the physical to the spiritual order. Heaven is not a place up in the sky; it is the spiritual world which encompasses us, and which is nearer than can be indicated by physical proximity. It is like a fourth dimension of space, invisible, unimaginable, and yet quite as real and quite as near as the length, breadth, and depth of our bodily environment. To move into this fourth dimension from the earthly life may be the most natural of all movements for the spirit, or for the 'spiritual body' which is its envelope, while the process may be, must be, inscrutable for the spirit confined by the 'natural body.'

Of such a process the counterpart would be a movement from the spiritual order into the physical plane. 'Their eyes were opened, and they knew him; and he vanished out of their sight' (Lk 24[31]): that is the heavenward movement—the passage *to* the spiritual order. 'Jesus cometh, the doors being shut, and stood in the midst' (Jn 20[26]): that is the earthward movement—the passage *from* the spiritual order. In neither case is the movement perceptible; the result alone, in the one case *appearance*, in the other *disappearance*, is noted by the bodily senses. Once the reality of the spiritual order is recognized, such phenomena will not be declared impossible. The capacity thus to rise superior to the earthly conditions of space, and in the power of the spirit to move unseen to and from the world of spirit, has been claimed by masters of the spiritual life in many lands; notably it has been claimed by Buddhist mahātmas. We do not stay here to examine the justice of such claims, upon which the last word has probably not yet been said by psychological science. Nor is this the place to enter upon speculation as to the power of spirit over matter, and of mind over body, the limits of which cannot as yet be regarded as defined. But it is desirable to note that the incidents in the Resurrection narratives which have been subjected to the severest criticism as abnormal and incredible present no other difficulty than this, that they presuppose a passage from the physical to the spiritual order. And, in this aspect, the only distinction between the Ascension and the previous withdrawals from sight of the Risen Christ is that the Ascension was the last of a series, and that it was purposely so effected as to give the impression that it would be the last.

7. Implications of the Ascension from the Christian point of view.—This, however, would be a quite inadequate conception of the Ascension from the Christian point of view, for no account has been taken in the preceding section of the unique Personality of the Ascending Christ. We proceed, therefore, briefly to exhibit the significance of the Ascension—or, more strictly, of the Heavenly Session which is its sequel, and which it initiated—in its relation to the fact of the Incarnation, with which it is associated in the Creeds. In what follows, the Christian doctrine of the Incarnation (see INCARNATION) is assumed, and an attempt is made to indicate the doctrinal implications of the Ascension, as they have been recognized by the Church looking back upon the Revelation of God in Christ.

(1) *Exaltation of Christ's Manhood.*—The Christian gospel is that God became man, (*a*) to free man from the bonds of sin, and (*b*) to restore him to the dignity of fellowship with the Divine. (*a*) The beginning of the movement of Divine Love is *Christ Incarnate*, i.e. *Christ in the Humiliation of His Deity*. 'The Word became flesh.' And the Divine sacrifice of the Cross marks the consummation of the Redemption of humanity. But (*b*) the Divine purpose is not fulfilled until man is restored to his true estate. 'The Incarnation could only identify the Redeemer with the essential elements of humanity. It could not spiritualize that bodily organization which is no less a part of the true being of man than his intellectual and moral gifts. . . . The Resurrection and Ascension needed to follow, that the quickening Spirit of Jesus, thus set free, might enter into our spirits, and make us sharers of its victory.'* Thus the end of the movement of the Divine Love is *Christ Ascended*, i.e. *Christ in the Exaltation of His Manhood*. The Ascension was *ἔνσαρκος*, as Irenæus has it (see I. 3); it was not a mere *ἀνάληψις*, or Assumption, of Christ's spirit; it was a true *ἀνάβασις*, an exaltation, of Christ as the Representative Man to the glory of the heavenly life. The doctrine of the Incarnation does not teach that Christ assumed human nature, body and spirit, only for the years of His visible ministry, and then abandoned it like a discarded cloak. In the light of the Ascension it means that He is still Man, and that as Man He is in communion with Deity. This is the significance of the Ascension when Christ resumed His heavenly condition, the same yet not the same, for He had become man, who thenceforth may dwell in Him, as He in man.

(2) *Completion of His ministry for mankind.*—The Ascension, therefore, marks the completion of the ministry of Christ in His relation to humanity; henceforth His Messianic offices of King, Prophet, and Priest are fulfilled in perfect measure and without the restraints to which He submitted Himself in the flesh. The service of man is always a service of *leadership*, of *counsel*, of *reconciliation*. These three functions exhaust the service which man can offer to his fellows; he may rule, he may teach, or he may by sacrifice of himself bring them nearer to each other and to God. And in the Ascended Christ as the Perfect Man these ideals are perfectly fulfilled.

(i.) *The Ascended Christ as King.*—It was under this image that the Hebrews most vividly conceived of the Messianic Deliverer who was to come. Their natural leader in war was their king, who not only directed the campaign from afar, but himself descended to the battle-field. So, too, under the conditions of Eastern autocracy, the king was the judge, who assigned reward and punishment by his own authority. And thus, when Christ spoke in parables of His future relation to mankind, the images most frequently used were the images of kingship and a kingdom: 'Henceforth ye shall see the Son of man sitting at the right hand of power' (Mt 26[64]); and it is 'the King' who is to dispense blessing and cursing at the Last Assize (Mt 25[34]). The Apocalypse represents Him as a Warrior going forth to smite the nations, 'King of kings and Lord of lords' (Rev 19[16]), whose victory at last shall be complete: 'the

* Milligan, *The Ascension of our Lord*, p. 30.

kingdom of the world is become the kingdom of our Lord, and of His Christ' (Rev 11^{15}). In this there is an inner moral necessity, according to St. Paul: 'He *must* reign till he hath put all his enemies under his feet' (1 Co 15^{25}). The rule of the Ascended Christ, seated in majesty at the right hand of power, is the rule of an absolute monarch; and the Ascension marks the Enthronement of the King. The Hebrew conception of a Messianic Prince merges in the larger conception of an invisible Master in heaven, who directs the history of the world, and holds the keys of the future.

(ii.) *The Ascended Christ as Prophet.*—That 'the Spirit was not yet given, because Jesus was not yet glorified' (Jn 7^{39}), is a principle frequently laid down in the Fourth Gospel. The thought of Christ as 'the Servant of Jahweh,' the Prophet who was to be raised up, was prominent in the earliest Christology (Ac $3^{13.22.26}$ 7^{37}). That He came to reveal the Father's will was His own claim from the beginning (cf. esp. Mt 11^{27} ‖ Lk 10^{22}). Nevertheless, this prophetical office, although fulfilled by the Incarnate Christ in such measure as no prophet or seer before Him had reached, was not to be fulfilled in its perfection until after the Ascension, when it was to be exercised through the ministry of the Spirit: 'It is expedient . . . that I go away: for if I go not away, the Paraclete will not come. . . . I have yet many things to say unto you, but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he shall guide you into all the truth' (Jn $16^{7.12.13}$). *Accipe Spiritum Sanctum* is the final gift of Christ, who became a 'quickening spirit' after His Resurrection. The gift of the Spirit is the supreme grace and glory of the Church, and through this ministry the prophetical office of Christ is perpetuated and perfected for all time.

(iii.) *The Ascended Christ as Priest.*—Of the conception of Messiah as Priest there is but little in the OT literature. The idea emerges, in Ps 110^{4}, of His Eternal Priesthood, although not after the order of Aaron, but 'after the order of Melchizedek'; but the thought was not developed until the Epistle to the Hebrews expanded it. The consummation of the official service of the Jewish high priests was reached when, on the Day of Atonement, the sin-offering on behalf of the people having been sacrificed outside, the blood of the victim was brought within the Holy Place and sprinkled before the Mercy-seat (Lv 16^{15}). So, it is argued (He $9^{11.12}$), the consummation of the offering of the great High Priest is His Ascension to the heavenly Mercy-seat, where the efficacy of His sacrifice of blood is perpetually pleaded. It is the function of a priest *to offer sacrifice*, and this is perfectly fulfilled in the voluntary sacrifice of the Victim-Priest, which is efficacious to the cleansing from *sin* and not merely from ceremonial defilement (He 10^{12}), and which, further, is unique and needs not to be repeated (He 7^{27} $9^{25.26}$). But the higher, and more spiritual, function of a priest is *to intercede*, and this is perfectly fulfilled in the perpetual intercession (He 7^{25}) of the Priest who has 'passed into the heavens' (He 4^{14}), 'made higher than the heavens' (He 7^{26}), 'who sat down on the right hand of the throne of the Majesty in the heavens' (He 8^{1}), whose priesthood is 'unchangeable' (He 7^{24}). It has been debated by theologians when the Priesthood of Christ began. Is He to be regarded as a Priest during any period of His visible ministry, or did He enter upon His Priesthood only in heaven?* The answer seemingly implied in Hebrews is that, while He was always Priest throughout His Ministry and Passion, and while the supreme sacrifice of His priestly ministration was the sacrifice of Himself on the Cross, yet the consummation of His priestly service is to be found in His perpetual intercession in heaven. Just as the Jewish priest did not reach the highest moment of his service until he had brought the blood of the victim within the Holy Place, so Christ did not fulfil His priesthood in perfect measure until He had ascended. The Ascension marks the complete fulfilment and consummation of His work as Priest no less than as King and as Prophet. For the Ascension no less than for the Passion, there was an inner moral necessity in the Divine counsels: *οὐχὶ ταῦτα ἔδει παθεῖν τὸν Χριστὸν καὶ εἰσελθεῖν εἰς τὴν δόξαν αὐτοῦ*; (Lk 24^{26}).

* For opposing views, see Milligan, *op. cit.* 77 ff., and Westcott, *Hebrews, passim.*

3. Practical issues of the dogma.—While the Ascension has thus always been viewed in Christian theology as the 'Glorification' of Christ and the entrance upon His reward, the practical issue of belief in it has always been the same as that which is recorded of its first witnesses: 'They continued in the Temple, blessing God' (Lk 24^{53}). The vision of the Ascension is a call to worship: Let us draw near unto the throne (He 4^{16}). That Christ 'ascended' is not only the pledge that His Ministry for mankind is perfect and final; it also conveys the assurance that heaven is near, and that the earthly order is encompassed by the spiritual. The practical theology of the Ascension is the idealism of the Christian life.

ASTROLOGY AND ASTRONOMY.—See STARS, also SUN, MOON.

ASURS.—The Asurs of the present day are a non-Aryan tribe of the Kolarians in Chota-Nagpur, Bengal. A people of the same name is mentioned in the religious books of the Hindus. According to the *Śatapatha Brāhmaṇa*, they are the descendants of Prajāpati ('the Lord of the Creation'). How they became evil spirits or *A-sura* (='not-God') is not clear; the fact alone is stated that they fought against the Devatās 'for the possession of the earth,' and that they were overcome and finally succumbed. The historical grain of truth in this poetical story is apparent: the Aryans, in their invasion of what is now called India, were obstructed by that fierce and savage-like people whom they called *Asura*, or demons, and whom they expelled and partly annihilated.

Whether the Asurs living in Chota-Nagpur are the offspring of these opponents of the Aryans or are connected with the Asura builders of those ancient embankments still found in the Mirzāpur district, is, of course, an open question; yet there seems to be nothing to exclude such suppositions. This much is certain, that Chota-Nagpur was partly inhabited by Asurs before the Kolarian and Dravidian tribes entered it from the North-West, when they likewise had been expelled from their former seats by the stronger and more intelligent Aryans.

There are still traces of copper mines in Chota-

Nagpur, which seem to have been worked in ancient times, and tradition attributes these to the Asurs. The conclusion may readily be drawn that the Asurs, before leaving their former settlements, lived for some time as subjects of the conquering race (the Aryans), by whom they became to some extent civilized. At the present time their occupation consists in digging iron ore, melting iron, and making agricultural implements for their neighbours.

When the Kolarians were compelled by the Aryans to seek refuge in the hills and the dense forests of Chota-Nagpur, they met there the Asurs, and a severe fight ensued for the possession of the arable land, in which the Asurs were overcome, and again almost annihilated. The remnant fled to the plateaux of the Chota-Nagpur and Palāmau hills, where we find them to-day. A few of them have emigrated to adjacent districts.

The spirits of the slain Asurs must ever have haunted the superstitious and demon-fearing Kols, and they, perhaps with the help of some Hindu hermit versed in the Purānas, invented the so-called *Asur legend*. In this legend may perhaps be found some traces of the tradition of the tower of Babel, and the supposition is allowable that such a legend was current among the Kolarians when the story of the destruction of the Asurs and the dispersion of their remnant was added and mixed up with it in later times. The legend as told at present by the aborigines in Chota-Nagpur amounts to the following story:—

There were twelve brethren (septs) of Asurs with their wives and children. They melted iron, they ate iron, and made such a big fire in the melting furnace that Singbongā, the sun-god, was annoyed. He first sent two birds with a message of warning, but the Asurs maltreated the divine messengers, sullied their colour, and plucked feathers from the tail of one of them until only two were left; these birds were the raven and the black starling. Seeing that the Asurs were bent on doing even more mischief, Singbongā at last sent his son in the form of a *Kasrā Korā*, or leprous youth. He sought and found shelter with an old Muṇḍā chief and his wife. The Asurs got hold of him and threw him into the furnace; but he came out of the ordeal cleansed of his leprosy, and bearing in his hands large lumps of gold. This roused the covetousness of the Asurs, and bidding their wives to tread the bellows well, they jumped into the fire, and perished one and all, leaving their wives and children widows and orphans. These surrounded the son of Singbongā, and did not let him return to heaven until he had assured them that they might occupy the high mountains, the forests, the rivers and desert places, where people would worship them, offering fowls and goats, and rice and liquor, to feed and satisfy them. Whereupon the old ladies dispersed and became the malicious spirits of the mountains, the Sāl-forest, the barren fields and the springs, where they receive the offerings of the people, and are content as long as they are appeased.

The Asurs in Chota-Nagpur number 4894, besides 4616 Brijiā and Agariā. They claim to be connected with the Brijiā or Binjhiā tribe, an agricultural and land-holding class in Chota-Nagpur, who within their own households speak Uriya. A subdivision of the Asurs are the Agariās, beggars wandering about with tamed monkeys, whose feats they exhibit. Another sub-tribe, following the vocation of blacksmith, call themselves 'Loharā-Asurs.' Others are called Pahārias or Hill-Asurs. Though few in number, the Asurs are divided into several totemistic septs, such as *Bāsriār* (=sprung from the bamboo), *Makrār* (=spider), *Ind* (=eel), *Hōrō* (=tortoise), etc. The totems of these septs do not appear to be tabu, though marrying within one of these sections is eschewed as far as practicable.

Customs.—Child marriages are unknown among the Asurs. A price for the bride is given, varying from 3 to 5 rupees. Polygamy is permitted, as well as re-marriage of widows. No priestly functions are required for the marriage ceremonies, which are very simple. Rice-beer is indulged in by both sexes, but smoking only by the men. The Asurs have no dancing places like the Kols, as they lead almost a nomadic life, leaving their own settlement when the iron ore or the land is exhausted; the latter they till only in the most primitive way, without manuring or ploughing. They have scarcely any musical instruments, and seldom sing or dance. The women, however, are notorious for their lax morality, and are easily enticed away into the towns and large villages of Chota-Nagpur, where they earn a living as dancing girls. As to food the Asurs are not very particular, eating almost anything, the flesh of the carcass of a cow not excluded.

Language.—The language of the Asurs, which they call *Dukma*, is a dialect of the Kolarian family of languages, and was most probably adopted from their conquerors, the Muṇḍās, with such alterations in the pronunciation as suited their nature. For example, almost all Muṇḍāri words found in *Dukma* that commence with *h* change this consonant into *v*; and wherever a vowel follows *n* in Muṇḍāri, the Asur inserts the semi-vowel *y* between the two. There are no traces of an original tongue in the Asur *Dukma* as spoken at the present day, for almost every word in its vocabulary can be traced to Kolarian or Dravidian sources. From the Dravidian languages the Asurs subsequently added to their vocabulary. Through contact with Aryans, they have adopted also a number of words derived from Sanskrit. What has been said about their language is not opposed to the assumption that the Asurs are essentially a Kolarian tribe. They may have separated from the rest of the Kolarian ancestors at a remote period, developing a language of their own, until they were conquered by the Kolarian tribe of the Muṇḍās, whose dialect they adopted to a great extent. The features and bodily appearance of the Asurs are distinctly and decidedly Kolarian.

Religion.—This is somewhat different from the animism of their Kolarian relatives. The Asurs are not demon-worshippers, and have no priestly institution. Where they are found sacrificing to the evil spirits of the forest, the mountain, or the field, this is due to their being members of a village community, consisting of Kolarian or Dravidian inhabitants, who worship those deities. Wherever they live by themselves, they do not worship any of the petty gods or demons of those tribes. The Asurs believe in a great benevolent spirit, the Creator and Preserver of the world. He does not require to be worshipped in any way. When they identify him with the sun, or rather believe him to be resident in the sun, they most likely follow therein the notions of the Muṇḍāri tribe. It is true that they also believe in evil spirits, and have to propitiate them by making bloody sacrifices, consisting of fowls. These evil spirits, however, with the Asurs, are exclusively the departed spirits of their forefathers, who must be provided with food, and propitiated whenever they become hungry and irritable. All the diseases and troubles of this life are ascribed to their anger; they must be appeased, therefore, with sacrifices of fowls, presented by the head of the family at the house-altar, the fire-hearth. In new-born children the Asurs see the re-born spirits of ancestors. Witches and the evil eye are therefore unknown within the tribe, but people from without may bewitch an Asur baby, or a foreigner may cast an evil eye upon him, and for this reason anklets of iron are required to protect the little Asur child.

The Asur has no moral code, all his obligations being confined to the one important matter of keeping the spirits of his ancestors at ease, or, when disturbed, of quieting them in the manner described above. Every departed parent becomes a spirit—a good one if he died a natural death, an

evil one if he died suddenly or by accident. In the former case it is essential to provide him with food for the journey beyond, and in the latter to present a sacrifice at the funeral. The Asurs burn their dead, and at the funeral some rice must be put on the funeral pile, and for eight days after cremation portions of the regular meals must be placed outside the door of the house in the name of the departed. After the time mentioned he will settle down in quiet. At the close of the eight days the nearest relatives and friends come for the funeral meal, when they partake freely of home-brewed rice-beer. After this, good spirits of the ancestors need no further attention, and may be trusted to help and protect their people on earth. It is only the unfortunate evil spirit which so frequently becomes irritable and ill-disposed. He is to be feared, and in time of sickness and calamity to be reconciled by offerings of rice and liquor, and by sacrifices. See art. AGARIĀ.

AŚVAGHOṢA.—Aśvaghoṣa is well known as the author of the Buddha-charita, a poetical description of Buddha's life.* To him is ascribed the Alaṅkāra, a collection of Buddhist stories with their respective moral teachings. The authenticity of these traditions is confirmed by the external evidence of I-Tsing's statement,† and the internal evidence does not contradict it.

We learn from the colophon to the Tibetan Buddha-charita,‡ and from a biography of Vasubandhu, that Aśvaghoṣa was a native of Sāketa. According to the latter authority, it was he who was summoned to Kābul by Kātyāyanīputra, the alleged composer of the 'Abhidharma in Eight Sections,' in order to help him in the compilation of the great commentary (Mahāvibhāṣā) on the text of that Abhidharma. As we learn from Yuan Chwang (Hiuen Tsiang), this compilation took place under the patronage of King Kaniṣka, who is now generally believed to have flourished in the 1st cent. A.D. That Aśvaghoṣa was contemporary with Kaniṣka is confirmed from another source,§ which describes Aśvaghoṣa's life in detail, and from which are derived the later legends concerning him.

We are told that Aśvaghoṣa was a learned but haughty man, who was at last converted to the Buddhist faith in the nonentity of the phenomenal world. The agent in his conversion was Pūrṇayaśas, a disciple of Pārśva,‖ who is said to have presided over the compilation of the above-mentioned great commentary. After his conversion Aśvaghoṣa worked eagerly for the propagation of Buddha's teaching in Kusumapura (the modern Patna), not only as a preacher, but also as a poet and musician. When that town was taken by the army of Chandana Kaniṣṭha, the king of the Yueh-chis, Aśvaghoṣa was carried away to their country in the north as a portion of the tribute paid to the conqueror by the Magadhans.

Another biography of Aśvaghoṣa tells essentially the same story. The indebtedness of Aśvaghoṣa to Pārśva and Pūrṇayaśas is confirmed by the expression of homage at the beginning of the Alaṅkāra, while his connexion with King Kaniṣṭha is elsewhere asserted.*

Thus far the traditions about Aśvaghoṣa's life, which are the oldest sources of our knowledge about him, may be regarded as comparatively authentic. But when we take up many other writings which bear his name, we find ourselves in the dark as to the identity of the person.† And the matter is made no clearer by the Tibetan tradition, which applies many epithets to him. This tradition dates from the 16th cent., and itself seems to be the result of confusion.

According to it, Aśvaghoṣa was living under King Bindusāra, the son of Chandragupta, and was connected with Kanika, the king of Ṭili and Mālava in the west. Of six epithets given to him we mention: Mātṛcheta, Dhārmika-Subhūti, Śūra. Comparing these different traditions, we find little reason to see in this Aśvaghoṣa the author of the Buddha-charita, except the connexion of the name with King Kaniṣka or Kanika. The Tibetan author, it is true, states expressly that the Kanika mentioned there is not to be confused with Kaniṣka, yet there is reason enough to suspect his accuracy.

The following are the works attributed to a person or persons bearing the name of Aśvaghoṣa.

1. 'Hymn in one hundred and fifty stanzas.' This has been handed down to us in a Chinese and in a Tibetan version. The two agree fairly well with one another, and in both the author is known as Mātṛcheta. The colophon to the Tibetan version identifies this Mātṛcheta with Aśvaghoṣa. But I-Tsing, the translator of the hymn into Chinese, seems to regard him as different from the author of the Buddha-charita. On the other hand, there is in Tibetan an epistle sent from Mātṛcheta to King Kanika of the Kuśa race.‡ King Kaniṣṭha is mentioned in Aśvaghoṣa's Alaṅkāra as of the Kuśa race. But there Aśvaghoṣa speaks of the king as of one who lived in the past. It remains quite uncertain whether Mātṛcheta and Aśvaghoṣa, on the one hand, and Kanika, Kaniṣka, and Kaniṣṭha, on the other, are respectively to be identified or not.

2. The Vajra-sūchi,§ a refutation of the caste-system, bears the name of Aśvaghoṣa as its author; but the same text in the Chinese translation (Nanjio, No. 1303) is ascribed to Fā Hien, lit. 'law-fame.' This name is usually rendered as Dharmayaśas, but may be Dhārmika-Subhūti, lit. 'lawful-glory.'

3. Further, a work, in the Chinese translation, called 'The Distinctions of the Fruits of Works' (Nanjio, No. 1349), is ascribed to a Bodhisattva 'Great Valour,' which is surely Mahāśūra in Sanskrit. Another book, 'Transmigration in the Six Resorts,' agrees with the above in substance, and its authorship is ascribed to Aśvaghoṣa.

The two instances given above seem to be confirmatory of the Tibetan tradition, but they are not strong enough to establish the identity of these Aśvaghoṣas with the author of the Buddha-charita.

4. Another book ascribed to Aśvaghoṣa is 'A Nirgrantha's Inquiry into the principle of Non-ego.'‖ It expounds the contrast of phenomena and reality, just as in the sermon delivered by Pūrṇayaśas to Aśvaghoṣa which is preserved in the Records of the Patriarchs. Probably this Aśvaghoṣa is the same as the Aśvaghoṣa of those Records.

5. There is mention of the name Aśvaghoṣa in the memoirs of Yuan Chwang. This Aśvaghoṣa was a contemporary of Nāgārjunana, of Deva, of Kumāralabdha, and of the man who detected a Brāhman possessed by a demon. Though Yuan Chwang calls this Aśvaghoṣa a Bodhisattva, we have no ground for identifying him with any of the Aśvaghoṣas mentioned above.

6. Finally, we have Aśvaghoṣa the author of *The Awakening of Faith*.¶

This last work represents a well-reasoned exposition of the doctrines of the final metaphysical principle and of the phenomenal world as contrasted with it. Everything phenomenal is unreal, because it is made up of constituents and is governed by the law of causality. Now reality transcends every distinction and qualification. It is the ὄντως ὄν, and cannot but be named *tathatā*, i.e. 'the

‖ Possibly an epithet of Kātyāyaniputra.

* Nanjio, No. 1329, *Ratnapiṭaka*, tr. by Kiṅkārya. He gives the name as something like Kaniṭa (or, -ṭṭha); but a later translator, Sūryayaśas, gives Kaniṣṭha.

† T. Suzuki has made a very exhaustive collection of the materials respecting these works and legends in his introduction to Aśvaghoṣa's *Awakening of Faith*, Chicago, 1900. But he was too anxious to regard any Aśvaghoṣa as identical with the author of the book he translated.

¶ Nanjio, No. 1249 f., translated by T. Suzuki; see above, note †.

Thatness.' The final aim of Buddhist enlightenment consists in the full realization of this absolute reality, which is the true and highest condition of Buddhahood. That is the eternal substance of the Truth revealed by Buddha, and is, therefore, the true doctrine and, at the same time, the true body or entity of Buddha, *i.e.* the *Dharma-kāya*. But the absolute, which is unique in its substance, does not remain without its manifestations. When it appears to us in its state of bliss, it is the Buddha in enjoyment (*sambhoga*). When it is manifested in this world in order to save us personally, it is the Buddha incarnate or in *kenosis* (*nirmāṇa*), as, for example, Śākyamuni. In order to attain the ideal of enlightenment, it is necessary for us to believe in any of these three aspects of Buddha's personality, and to be saved by his grace (*parigraha*, lit. 'grasping').

Thus we see in this work of Aśvaghoṣa a concise systematization of later Buddhist metaphysics in their consequences, and of Buddhist religious faith, expressed in the doctrines of the three personalities (bodies) of Buddha,* and of the relation between grace and faith.

Summing up these statements, we have not enough evidence either to affirm or to deny the identity of any of the Aśvaghoṣas enumerated under heads 1–6, except 4, with the author of the Buddha-charita. The same epithet may have been applied to many authors in different periods, because of their poetic talent or of their wisdom, which is said to have touched the heart even of a horse. The Tibetan tradition seems to have erroneously regarded these different persons as one with many names.

AŚVAMEDHA.—The *aśvamedha*, 'horse-sacrifice,' is one of the most imposing sacrifices in Indian ritual. It ranks as one of the great or solemn sacrificial ceremonies (*mahākratu* or *yajñakratu*). As early as the Rigveda itself two hymns are found composed for this particular occasion (i. 162 and 163). The sacrifice is described in detail in the Śatapatha-Brāhmaṇa (xiii. 1–5) and Taittirīya-Brāhmaṇa (iii. 8–9), as well as in the special treatises on ritual known as the Śrauta-sūtras, of Kātyāyana (xx.), Āpastamba (xx.), Āśvalāyana (x. 6 f.), Śāṅkhāyana (xvi.), and others. In the Mahābhārata (xiv. 71. 14 ff.) the horse-sacrifice which King Yudhiṣṭhira celebrated after his victory over the Kurus, as a purification from all sins, is described with epic diffuseness. The *aśvamedha* was thus the royal sacrifice *par excellence*. The privilege of sacrificing the horse belonged only to a ruler whose sovereign power was undisputed. It was designed to secure for him continued success, the fulfilment of all his desires, increase of strength and extension of the empire. Consequently the sacrifice was made before an expedition for conquest (*digvijaya*), or after a campaign which had ended in victory. The Aitareya-Brāhmaṇa (viii. 21 f.) gives a list, adorned with antique verses, of the kings of olden times who, after ascending the throne, marched victoriously through the whole earth and then celebrated a horse-sacrifice. The *aśvamedha* thus became a great State function in the performance of which the people took part officially, and with which were associated customs of a secular and often very gross character, accompanied by oratorical displays. In the strictly regulated ritual these last were prescribed in detail; but in olden times, before the ritual had hardened into fixed rules, they were a matter of spontaneous improvization. These two features, its more secular character and its national colouring, distinguished the *aśvamedha* from most of the other sacrifices, which were exclusively priestly.

The sacrifice began in spring or summer, and, with the preparatory ceremonies, occupied more than a year. First, a suitable victim had to be carefully selected. The animal chosen must be of pure breed and valuable, distinguished by special marks. After it had been set apart for sacrifice by the symbolical act of tethering to the sacrificial post, and had been bathed, it was granted full freedom again. It was allowed to run loose for a whole year, and to sport freely in the company of a hundred old horses. A hundred royal princes, a hundred noblemen, a hundred sons of officials of higher, and a hundred of those of lower rank, all armed in accordance with their station, formed its escort and guarded it against danger or theft, without interfering with its freedom of movement. Conflicts or wars (cf. especially Mahābhārata, xiv.) often resulted from attempts to steal the horse during its wanderings. If it were lost, the ceremonial had to be partly repeated and another animal substituted.

While the horse thus roamed about at a distance, the people at home awaited the time of its return, and in the meantime took part in all kinds of festivities. Gifts were offered daily to the god Savitṛ; daily also at a festive gathering before the king and the court the *hotṛ* had to give a recital. Every eleven days this cycle of recitations was repeated. The recital concluded with an appropriate chapter from the Vedas, together with singing, lute-playing, and impromptu verses, composed by a noble bard in honour of the king, the giver of the sacrifice, in which he was compared with the pious rulers of olden times. The recital itself was enlivened by dramatic action. According to the class of persons who formed the subject-matter of the recitation, it was arranged that the audience and chorus to whom the reciter addressed himself should consist of old or young people, snake-charmers, robbers, usurers, fishermen, bird-catchers, or sages. When the year had expired and the horse had returned, the sacrifice began with consecration (*dīkṣā*) of the king.

The ceremony proper lasted three days, and was accompanied by numerous other animal-sacrifices, and by the pressing of the soma. On the second day, the sacrificial horse, decked with gold, was once more yoked with three other horses to a gilded car, driven round, and then bathed. On its return, it was anointed by the three chief wives of the king and decorated, while the *hotṛ* and the superintendent of the sacrifice (Brāhman) performed a *Brahmodya*, or theosophical enigma-play. The horse was then bound, together with a he-goat, to its sacrificial post, the other animals for sacrifice, to the number of several hundreds, being bound to similar posts; and, having been covered with cloth, it was suffocated. The chief wife of the king had to lie down by the corpse under a covering and submit to an obscene ceremony, while the sacrificial priests took part with the women and maidens in sportive questions and answers (*Vājasaneyi-Saṁhitā*, xxiii. 22 f.), not distinguished by delicacy. As soon as the chief wife had arisen, the horse was skilfully cut up. After another series of enigmatic questions in which all the chief priests and the sacrificer joined, the served portions of the horse were roasted on a spit and offered to Prajāpati. On the third day the whole festival closed with the bath of purification of the donor of the sacrifice and with gifts to the sacrificing priests. The honorarium (*dakṣiṇā*), which was measured with a very liberal hand, was derived from booty captured in the conquered land. Even

wives of the king with their maids figure among the presents.

ASYLUM.—Asylum (Lat. *asylum*, Gr. *ἄσυλον*, 'refuge,' 'sanctuary,' neut. of adj. *ἄσυλος*, 'inviolable,' from ἀ priv. and *σύλη*, *σῦλον*, 'right of seizure') means a place of shelter and protection from which a refugee is not allowed to be forcibly removed.

1. Among many peoples at different stages of civilization sacred places are asylums. Thus among the Aruntas of Central Australia there is in each local totem centre a spot called *ertnatulunga*, in the immediate neighbourhood of which everything is sacred and must on no account be hurt. The plants growing there are never interfered with in any way; animals which come there are safe from the spear of the hunter; and a man who is being pursued by others cannot be touched as long as he remains at this spot.[1] At Maiva, in the South-Eastern part of New Guinea, 'should a man be pursued by an enemy and take refuge in the *dubu* [or temple], he is perfectly safe inside. Any one smiting another inside the *dubu* would have his arms and legs shrivelled up, and he could do nothing but wish to die.'[2] In Upolu, one of the Samoan Islands, a certain god, Vave, had his residence in an old tree, which served as an asylum for murderers and other great offenders; if that tree was reached by the criminal, he was safe, and the avenger could pursue no farther, but had to wait for investigation and trial.[3] In the island of Hawaii there were two *puhonuas*, or cities of refuge, which afforded an inviolable sanctuary even to the vilest criminal who entered their precincts, and during war offered safe retreat to all the non-combatants of the neighbouring districts who flocked into them, as well as to the vanquished. As soon as the fugitive had entered, he repaired to the presence of the idol and made a short ejaculatory address, expressive of his obligations to him in reaching the place with security. The priests and their adherents would immediately put to death any one who should have the temerity to follow or molest those who were once within the pale of the *pahu tabu*, and, as they put it, under the shade or protection of the spirit of Keave, the tutelary deity of the place. After a short period, probably not more than two or three days, the refugee was permitted to return unmolested to his home, the divine protection being supposed still to abide with him.[4] In Tahiti the *morais*, or holy places, likewise gave shelter to criminals of every kind.[5]

2. In many North American tribes certain sacred places or whole villages served as asylums.[6] Thus the Arikaras of the Missouri had in the centre of their largest village a sacred lodge called the 'medicine-lodge,' where no blood was to be spilled, not even that of an enemy.[7] 'In almost every Indian nation,' says Adair, who wrote about the tribes of the South-Eastern States, 'there are several peaceable towns, which are called "old-beloved, ancient, holy, or white towns"; they seem to have been formerly "towns of refuge," for it is not in the memory of their oldest people that human blood was ever shed in them, although they often force persons from them, and put them to death elsewhere.'[1] Among the Acagchemen Indians, however, in the valley and neighbourhood of San Juan Capistrano in California, a criminal who had fled to a *vanquech*, or place of worship, was secure not only as long as he remained there, but also after he had left the sanctuary. It was not lawful even to mention his crime; all that the avenger could do to him was to point at him and deride him, saying, 'Lo, a coward, who has been forced to flee to Chinigchinich!' Yet this flight turned the punishment from the head of the criminal upon that of one of his relatives.[2]

3. On the coast of Malabar a certain temple situated to the south-east of Calicut affords protection to thieves and adulterous women belonging to the Brāhman caste; but this privilege is reckoned among the sixty-four *anatcharams*, or abuses, which were introduced by Brāhmanism.[3] Among the Kafirs of the Hindu-Kush there are several 'cities of refuge,' the largest being the village of Mergrom, which is almost entirely peopled by *chiles*, or descendants of persons who have slain some fellow-tribesman.[4] In the Caucasus holy groves offer refuge to criminals, as also to animals, which cannot be shot there.[5]

The Barotse of South Central Africa have a city of refuge, where anybody who has incurred the king's wrath or committed a crime is safe; the man in charge of it is expected to plead for him before the chief, and the refugee can then return to his house in peace.[6] In Congo Français, according to Miss Kingsley, there are several sanctuaries. 'The great one in the Calabar district is at Omon. Thither mothers of twins, widows, thieves, and slaves flee, and if they reach it are safe.'[7] In Ashanti a slave who flees to a temple and dashes himself against the fetish cannot easily be brought back to his master.[8] Among the Negroes of Accra, criminals used to 'seat themselves upon the fetish,' that is, place themselves under its protection; but murderers who sought refuge with the fetish were always liable to be delivered up to their pursuers.[9]

4. In Morocco the tombs of saints and mosques offer shelter to refugees, especially in those parts of the country where the Sultan's government has no power; even the descendants of the saint or his manager (*mḳaddam*) can only by persuasion and by promising to mediate between the suppliant and his pursuer induce the former to leave the place.[10] In other Muhammadan countries there are, or have been, similar places of refuge.[11] In Persia the great number of such asylums proved so injurious to public safety, that about the middle of the 19th cent. only three mosques were left which were recognized by the government as affording protection to criminals of every description.[12]

Among the Hebrews the right of asylum originally belonged to all altars (Ex 21[13f.]; cf. W. R.

Smith, *Rel. of Semites*², 1894, p. 148, n. 1); but on the abolition of the local altars it was limited to certain cities of refuge, three on either side of the Jordan (Dt $4^{41ff.}$ $19^{2ff.}$). Unintentional manslayers were sheltered in these cities; whereas, if a refugee was found guilty of murder, he had to be taken away from the asylum by the elders of his town and delivered to the next kinsman of the murdered person, to be put to death by him (Dt $19^{4ff.}$). According to the post-exilic law, the refugee could leave the place, after the high priest's death, without being exposed to the pursuit of the avenger of blood (Nu 35^{28}); but he was not permitted to purchase an earlier return to his possession with a money ransom (Nu 35^{32}). However, the restriction of the legal right of asylum to the case of involuntary homicide was undoubtedly a narrowing of the ancient custom. Many heathen sanctuaries of the Phœnicians and Syrians retained even in Roman times what seems to have been an unlimited right of asylum, and at certain Arabian shrines the god likewise gave shelter to all fugitives without distinction, and even stray or stolen cattle that reached the holy ground could not be reclaimed by their owners.[1]

5. In Greece many sanctuaries possessed the right of asylum down to the end of paganism, and any violation of this right was supposed to be severely punished by the deity.[2] According to an old tradition, Romulus established a sanctuary, dedicated to some unknown god or spirit, on the slope of the Capitoline Hill, proclaiming that all who resorted to it, whether bond or free, should be safe.[3] This tradition and also some other statements made by Latin writers[4] seem to indicate that from ancient times certain sacred places in Rome gave shelter to refugees; but it was only at a comparatively late period of Roman history that the right of sanctuary, under Greek influence, became a recognized institution of some importance.[5] This right was expressly conferred upon the temple which in the year 42 B.C. was built in honour of Cæsar;[6] and other imperial temples, as also the statues of emperors, laid claim to the same privilege.[7] When Christianity became the religion of the State, a similar claim was made by the Churches; but a legal right of asylum was first granted to them by Honorius in the West and Theodosius in the East.[8] Subsequently it was restricted by Justinian, who decreed that all manslayers, adulterers, and kidnappers of women who fled to a church should be taken out of it.[9]

6. The right of sanctuary existed among the pagan Slavs, or some of them,[10] and, as it seems, among the ancient Teutons.[11] After their conversion to Christianity the privilege of asylum within the church was recognized in most of their codes. In the Middle Ages and later, persons who fled to a church or to certain boundaries surrounding it were, for a time at least, safe from all prosecution, it being considered treason against God, an offence beyond compensation, to force even the most flagrant criminal from His altar. The ordinary of the sacred place, or his official, was the only one who could try to induce him to leave it; but if he failed, the utmost that could be done was to deny the refugee victuals, so that he might go forth voluntarily.[1] In the *Lex Baiuwariorum* (i. 7) it is asserted in the strongest terms that there is no crime which may not be pardoned from the fear of God and reverence for the saints. But the right of sanctuary was gradually subjected to various restrictions both by secular legislation and by the Church.[2] Innocent III. enjoined that refuge should not be given to a highway robber or to anybody who devastated cultivated fields at night,[3] and, according to Beaumanoir's *Coutumes du Beauvoisis* (xi. 15 ff.), dating from the 13th cent., it was also denied to persons guilty of sacrilege or arson. The Parliament of Scotland enacted that whoever sought the protection of the Church for homicide should be required to come out and undergo an assize, that it might be found whether it was committed of 'forethought felony' or in 'chaud-mellé'; and only in the latter case was he to be restored to the sanctuary, the sheriff being directed to give him security to that effect before requiring him to leave it.[4] In England a malefactor who took refuge in a consecrated church could not be removed from it; but it was the duty of the four neighbouring 'vills' to beset the holy place, prevent his escape, and send for a coroner, who then came and parleyed with the refugee. The latter had his choice between submitting to trial and abjuring the realm. If he chose to abjure the realm, he hurried, dressed in pilgrim's guise, to the port which was assigned to him, and left England, being bound by his oath never to return. His land was escheated, his chattels were forfeited, and if he came back his fate was that of an outlaw. But if the refugee would neither submit to trial nor abjure the realm, then the contention of the civil power was that, at all events after he had enjoyed the right of asylum for forty days, he was to be starved into submission; although the clergy resented this interference with the peace of Holy Church.[5] In the reign of Henry VIII. there were certain places which were allowed to be 'places of tuition and privilege'—in fact, cities of permanent refuge for persons who should, according to ancient usage, have abjured the realm, after having fled to a church. There was a governor in each of these privileged places, charged with the daily duty of mustering his men, who were not to exceed twenty in each town, and who had to wear a badge whenever they appeared out of doors. But when these regulations were made, the protection of sanctuary was taken away from persons guilty of murder, rape, burglary, highway robbery, or arson. The law of sanctuary was then left unchanged till the reign of James I., when, in theory, the privilege in question was altogether denied to criminals.[6]

Yet, as a matter of fact, asylums continued to exist in England so late as the reign of George I., when that of St. Peter's at Westminster was abolished.[1] In the legislation of Sweden the last reference to the privilege of sanctuary is found in an enactment of 1528.[2] In France it was abolished by an *ordonnance* of 1539.[3] In Spain it existed even in the 19th century.[4] Not long ago the most important churches in Abyssinia,[5] the monastery of Affaf Woira in the same country,[6] and the quarter in Gondar where the head of the Abyssinian clergy has his residence,[7] were reported to be asylums for criminals. And the same was the case with the old Christian churches among the Suanetians of the Caucasus.[8]

Among the ancient Irish the right of sanctuary also existed. This was of two sorts: temporary within the precinct (*maigen*) of a person of rank, and permanent within the land of a hostel (*bruden*) or the glebe (*nemed, termann*) of a church. The *maigen* varied according to the status of the owner of the land, ranging from the radius of one spear-cast to the entire plain in which the palace of a provincial king, the king of Ireland, or the Archbishop of Armagh, stood. Within the *maigen* the fugitive, when duly certified of the character of the place and granted formal permission to enter, was safe, so long as he in no wise injured the *maigen* or its owner, for a time, but must sooner or later incur the penalty of his original misdeed. Within the *bruden*, on the other hand, a homicide was safe from the vengeance of his victim's friends until he could obtain a fair trial before a *brehon*, or judge. 'The right accorded to the maigen of a dwelling was for the protection of the owner against scenes of violence on his premises by outsiders—not primarily in the interest of the fugitive; and as it depended on the will—or caprice—of the owner, it was uncertain. It was indeed not an asylum at all in the proper sense of the word. But the sanctuary of a church or the asylum of a bruden was absolute and inviolable, depending on no conditions and on no man's will or caprice.'[9]

7. In many cases the tombs of dead or the houses of living persons serve as asylums. The Arab poet Ḥammâd found a safe refuge at the tomb of his enemy's father.[10] In the monarchical states of the Gallas, in Eastern Africa, homicides enjoy a legal right of asylum if they have succeeded in escaping to a hut near the burial-place of the king.[11] Among the Barotse[12] and Kafirs[13] the tombs of chiefs are places of refuge. Among the Ovambos in South-Western Africa the village of a great chief is abandoned at his death, except by the members of a certain family, who remain there to prevent it from falling into utter decay; and condemned criminals who contrive to escape to one of these deserted villages are safe, at least for a time.[14] Among various peoples the domicile of the chief or king is an asylum for criminals;[1] and in some places in West Africa the same is the case with the house of the high priest.[2] In Usambara, again, a murderer cannot be arrested at any of the four places where the great wizards of the country reside.[3] But even the house of an ordinary man may possess the right of asylum. Among the Bareas and Kunamas, in Eastern Africa, a murderer who finds time to flee into another person's dwelling cannot be seized, and it is considered a point of honour for the community to help him to escape abroad.[4] In the Pelew Islands 'no enemy may be killed in a house, especially not in the presence of the host.'[5] In Europe the privilege of asylum went hand in hand with the sanctity of the homestead;[6] and the reach of a man's peace was proportionate to his rank.[7]

8. The right of sanctuary has been ascribed to various causes. Obviously erroneous is the suggestion that places of refuge were established with a view to protecting unintentional offenders from punishment or revenge.[8] The restriction of the privilege of sanctuary to cases of accidental injuries is not at all general, and where it occurs it is undoubtedly an innovation due to moral or social considerations. Very frequently this privilege has been attributed to a desire to give time for the first heat of resentment to pass over before the injured party could seek redress.[9] But although such a desire may have helped to preserve the right of asylum where it has once come into existence, it could hardly account for the origin of this right. It should be remembered that the privilege of sanctuary not only affords temporary protection to the refugee, but in many cases altogether exempts him from punishment or retaliation, and that shelter is given even to animals which have fled to a sacred place. And if the theory referred to were correct, how could we explain the fact that the right of asylum is particularly attached to sanctuaries? It has been said that the right of sanctuary bears testimony to the power of certain places to transmit their virtues to those who entered them.[10] But it is doubtful whether we have any evidence that the fugitive is supposed to partake of the sanctity of the place which shelters him. In Morocco, persons who are permanently attached to mosques or the shrines of saints are generally regarded as more

or less holy; but, so far as the present writer knows, this is never the case with casual visitors or suppliants, hence it is hardly from fear of the refugee that his pursuer refrains from laying hands on him. Prof. Robertson Smith has stated part of the truth in saying that 'the assertion of a man's undoubted rights as against a fugitive at the sanctuary is regarded as an encroachment on its holiness.'[1] There is an almost instinctive fear of disturbing the peace, and particularly of shedding blood,[2] in a holy place; and if it is improper to commit any act of violence in the house of another man, it is naturally considered equally offensive, and at the same time much more dangerous, to do so in the homestead of a supernatural being. But this is only one aspect of the matter; another, equally important, still calls for an explanation. Why should the gods or saints themselves be so anxious to protect criminals who have sought refuge in their sanctuaries? Why do they not deliver them up to justice through their earthly representatives?

The answer lies in certain ideas which refer to human as well as divine protectors of refugees. The god or saint is in exactly the same position as a man to whose dwelling a person has fled for shelter. According to Moorish ideas, the owner of the house or tent must, in his own interest, assist the fugitive; for, by being in close contact with him and his family and his belongings, the refugee is thought to be able to transfer to them curses and evil wishes. He is in the *'âr* of his host, and *l-'âr* denotes a compulsory relation between two persons, the constraining character of which is due to the belief in the transference of a conditional curse.[3] Ideas of this sort seem commonly to underlie the duty of assisting a suppliant;[4] and especially when the protector is so mighty a personage as a king or chief or high priest, his domicile then readily comes to be regarded as an inviolable place of refuge. Sometimes a criminal can, in a similar way, be a danger to the king even from a distance, or by meeting him, and must in consequence be pardoned. In Madagascar an offender escaped punishment if he could obtain sight of the sovereign, whether before or after conviction; hence criminals at work on the high road were ordered to withdraw when the sovereign was known to be coming by.[5] In Usambara even a murderer is safe as soon as he has touched the person of the king.[6] Among the Marutse and neighbouring tribes, a person who is accused of any crime receives pardon if he lays a *cupa*—the fossilized base of a conical shell, which is the most highly valued of all their instruments—at the feet of his chief; and a miscreant likewise escapes punishment if he reaches and throws himself on the king's drums.[7] On the Slave Coast, 'criminals who are doomed to death are always gagged, because if a man should speak to the king he must be pardoned.'[8] In Ashanti, if an offender should succeed in swearing on the king's life, he must be pardoned, because such an oath is believed to involve danger to the king; hence knives are driven through the cheeks from opposite sides, over the tongue, to prevent him from speaking.[9] So also among the Romans, according to an old Jewish writer, a person condemned to death was gagged

to prevent him from cursing the king.[1] Fear of the curses pronounced by a dissatisfied refugee likewise, in all probability, underlay certain other customs which were prevalent in ancient Rome. A servant or slave who came and fell down at the feet of Juppiter's high priest, taking hold of his knees, was for that day freed from the whip; and if a prisoner with irons and bolts on his feet succeeded in approaching the high priest in his house, he was let loose and his fetters were thrown on to the road, not through the door, but from the roof.[2] Moreover, if a criminal who had been sentenced to death accidentally met a Vestal virgin, on his way to the place of execution, his life was saved.[3] So sensitive to imprecations were both Juppiter's high priest and the priestesses of Vesta, that the Prætor was never allowed to compel them to take an oath.[4] Among several peoples even ordinary women are regarded, in a way, as asylums, probably from fear of the magic power attributed to their sex. In various parts of Morocco, especially among the Berbers and Jbâla, or northern mountaineers, a person who takes refuge with a woman by touching her is safe from his pursuer. Among the Arabs of the plains this custom is dying out, owing to their subjection to the Sultan's government;[5] but among certain Asiatic Bedawin, the tribe of Shammar, 'a woman can protect any number of persons, or even tents.'[6] Among the Circassians, 'a stranger who intrusts himself to the patronage of a woman, or is able to touch with his mouth the breast of a wife, is spared and protected as a relation of the blood, though he were the enemy, nay even the murderer, of a similar relative.'[7] The inhabitants of Barèges in Bigorre have, down to recent times, preserved the old custom of pardoning a criminal who has sought refuge with a woman.[8]

Now, as a refugee may by his curse force a king or a priest or any other human being with whom he establishes some kind of contact, to protect him, so he may in a similar manner constrain a god or saint as soon as he has entered his sanctuary. According to the Moorish expression, he is then in the *'âr* of the saint, and the saint is bound to protect him, just as a host is bound to protect his guest. It is not only men that have to fear the curses of dissatisfied refugees. Æschylus puts the following words into the mouth of Apollo, when he declares his intention to assist his suppliant, Orestes: 'Terrible both among men and gods is the wrath of a refugee, when one abandons him with intent.'[9]

EDWARD WESTERMARCK.

ATARGATIS.—Atargatis (Ἀτάργατις, Ἀταργάτη, Ἀτέργατις, Ἀταργάτειτις, Ἀττα[ρ]γάθη) is the Greek pronunciation of עתרעתה, a Syrian goddess often mentioned by classical writers. The Aram. name was shortened into תרעתה, the regular form in the Talmud, Syr. literature, and Armenian; and from this was derived Δερκετώ, Derceto, a

common Gr. and Lat. form. The origin of this name was a matter of much speculation to earlier scholars. Selden (*de Dis Syris*, 178) explained it as a corruption of אַדִּיר דָּג, 'great fish,' and connected it with Dagon; Sickler (*Die Hieroglyphen*, 74 f.) and Gesenius (*Com. üb. Is.* ii. 342) interpreted it as אַדִּיר גָּד, 'greatness of fortune'; Movers (*Phönizier*, i. 594) as Aram. תרעתא, 'cleft,' like Heb. נְקֵבָה, as a designation for 'female'; de Vogüé (*Syrie Centrale, Insc. Sem.* 7 f.), followed by Baudissin (*Jahve et Moloch*, 25), as עֲתַר־עֵתָה, 'fullness of favourable time.' All these etymologies were set aside by the discovery of inscriptions bearing the name עתרעתה, the original Aram. designation of the goddess (see below). Ewald (*Inschr. von Sidon*, 1856, p. 52) at once recognized that this was compounded out of עתר, 'Atar, and עתה, 'Ate, two well-known Syrian deities, and in this view he has been followed by Levy (*Phön. Stud.* ii. 39), Nöldeke (*ZDMG* xxiv. 1870, pp. 92, 109), Baudissin (*Studien*, i. 238; *PRE*[3] ii. 172), Baethgen (*Beiträge*, 69 ff.), and nearly all recent scholars. Lagarde (*Mitt.* i. 1884, 77 f.) doubts the correctness of this view, and Jensen (*Hittiter und Armenier*, 1898, 157 f.) suggests that Atargatis is derived from a hypothetical Hittite goddess Tarkhu. Neither of these scholars has succeeded, however, in disproving the commonly accepted etymology.

'*Atar*, the first element in the compound, is the Aramaic form of the name that appears in Canaan as 'Ashtar(t), (Astarte); in Assyr. and Bab. as Ishtar; in South Arabia as 'Athtar; in Abyssinia as 'Astar; in Moab as 'Ashtar. Heb. שׁ and Arab. ث regularly correspond with Aram. ת, so that Heb. עשתרת becomes Aram. עתתר. '*Athtar* was soon assimilated into '*Attar*, and this was written עתר, the usual form in the inscriptions. The phonetic relation of these various forms shows that 'Athtar ('Ashtart, Astarte) was a primitive Semitic deity who must have been worshipped by the Aramæans from the earliest times. The first appearance of the name is in the Annals of Ashurbanipal (Rassam, viii. 112, 124 = *KIB* ii. 221 f.; Cyl. B, vii. 92 = *KIB* ii. 215, n. 4), where the form *Atar-samain*, 'heavenly Atar,' indicates the Aramaic origin of the divinity. It appears also in Syrian proper names such as Atar-bi'di, Atar-gabri, Atar-'idri, Atar-sûri (Johns, *Ass. Doomsday Book*, 17; Hilprecht, *Bab. Exp.* ix. 51, 76). A gem bears the inscription עתרעז, 'Atar is strong' (Levy, *Phön. Stud.* ii. 38; E. Meyer, *ZDMG* xxxi. 1877, 732, n. 1). From none of these early mentions does it appear whether 'Atar is masculine or feminine. In South Arabia, Abyssinia, and Moab it is masculine, in Assyria and Canaan it is feminine (cf. Barton, *Semitic Origins*, ch. iv.). Winckler (*Altorient. Forsch.* i. 528) has shown, however, that Ashurbanipal in two texts equates Atar-samain with the Assyrian Ishtar, which is always feminine (in spite of the absence of fem. ending). Strabo also (xvi. 785) says that Athara is the same as Atargatis, and Atargatis is always feminine. *Athara* seems clearly to be a variant form of '*Athtar*, '*Attar*, and Nöldeke (*ZDMG* xxiv. 109) explains it on the analogy of Arab. '*Athur* for '*Aththur*, '*Ashshur*, 'Assyria.' Justin (*Hist. Phil.* xxxvi. 2) speaks of Arates (Arathis = Athares) as the wife of Damascus, for whom he built a temple. In the light of this evidence there can be no doubt that the Aramæan Atar was a goddess (see ASHTART).

'*Ate* or '*Athe*, the second element in the compound name Atargatis, appears in the forms עתה, עתא, and עת in Palmyrene proper names, *e.g.* עתנתן, עתעקב, 'Αθηακαβος, זבדעתה, זבדעתא, Σαβδααθης or Σαβδεαθης, גרעתה, עבדעתה, עתה as the name of a man, and עתי as the name of a woman (de Vogüé, *Insc. Sem.* No. 30, 5, 19, 63, 74, 107, 143, 54; Mordtmann, 'Neue Beiträge z. Kunde Palmyra's,' *SMA* 1875, 47; Sachau, *ZDMG* xxxv. 1881, p. 740 f.). It appears also in Phœn. inscriptions from Cyprus in the names גרעת and עתסמך (*CIS*, No. 93, 79; cf. Nöldeke, *ZDMG* xlii. 1888, p. 471; Halévy, *Mélanges de critique et d'histoire*, 1883, 146). In Gr. inscriptions and authors it assumes the forms 'Αθη, 'Αθης, 'Αθας, 'Εθαος. These forms and the masc. verbs in the Palmyrene proper names suggest that 'Ate is a male divinity, but there is so much looseness in Palmyrene in the agreement of the verb with the gender of its subject that this argument is not conclusive. Pseudo-Melito (in Otto's *Corp. Apol. Christ.* ix. 426, 505; Cureton, *Spicileg.* 44, 25 Syr.) describes ܥܬܝ, 'Ati, as worshipped at Hadyab (Adiabene), and uses the feminine in speaking of her, but this testimony also is far from decisive. As uncertain as the sex of 'Ate is his (or her) identity. De Vogüé and Baudissin think that the name is ܥܬܐ, Heb. עת, in the sense of 'favourable season,' and that it was used originally merely to distinguish the 'Atar of Heliopolis from other 'Atars, but subsequently was separated from her as the name of an independent deity. This is very unlikely. Combinations of two deities into one are common in the Semitic world, but the separation of one into two is an unknown phenomenon. Levy (*Phön. Stud.* iv. 7) and Six (*Numism. Chron.* 1878, 108) hold that '*Ate* comes from '*Ante*, '*Anath*, but the Gr. equivalent 'Αθη makes this view difficult. Baethgen (*Beitr.* 71 ff.) identifies 'Ate with Attes (a Lydian deity), which appears in the proper names Sadyattes, Myattes, Alyattes, and he appeals to Lucian's story (*de Dea Syr.* 15) of the founding of the temple at Hierapolis by Attes the Lydian in honour of Rhea who had castrated him. In that case the phonetic relation of *Athes* to *Attes* is the same as that of *Athara* to *Attar* (see above). Hommel (*PSBA*, 1897, p. 81) thinks also that the original seat of the worship of 'Ate was in eastern Asia Minor (see ATE, ATTIS).

When so much doubt exists as to the character of 'Ate, it is difficult to determine what is the relation of 'Atar to this deity in the compound 'Atar-'Ate, or how the character of the primitive Semitic 'Atar is modified by this relationship. Meyer (*ZDMG* xxxi. 730) and Hommel (*l.c.*) regard 'Atar as the wife of 'Ate, but Hadad is always represented as her consort. Halévy (*l.c.* 224) suggests that 'Atar is the daughter of 'Ate, and compares 'Ishtar the daughter of Sin.' Baudissin (*PRE*[3] ii. 173) thinks that, if 'Ate is a real name and not a mere title of 'Atar, he is probably the son of 'Atar (cf. Ishtar and Tammuz and the legends given below of Atargatis and her son). Baethgen (*Beitr.* 71 ff.) thinks that the relationship is 'Atar = 'Ate, *i.e.* Attes has lost his identity in 'Atar; and he appeals to Lucian's story (see above). The philological method cannot throw much light on this problem, and we are compelled to turn to the allusions in the inscriptions and in classical writers in order to ascertain the character of Atargatis.

The earliest references to the worship of this goddess are found in fragments of Ctesias († *c.* B.C. 400) scattered through the writings of later classical authors (cf. Ctes. *Reliq.* ed. Bähr, 393–395; Müller, in Dindorf's *Herodotus*, 16 ff.). Strabo (xvi. 785) says that Ctesias calls Atargate *Derkĕtó*. Diodorus Siculus (ii. 4), in dependence upon Ctesias (cf. ii. 20), narrates that Aphrodite was angry with Derkĕtó, and caused her to fall in love with a beautiful youth among those who sacrificed in the temple in Askalon. By him she became the mother of Semiramis. Filled with shame, she caused the youth to disappear, and placed the child in a desert, where she was fed by doves. She then

cast herself into a lake near Askalon and was changed into a fish, with the exception of her face. This is the origin of the half-human half-fish image of Derkĕtó. The same story is repeated by Athenagoras (*Legat. pro Christ.* 26) and by an anonymous author (Bähr, *op. cit.* 393 f.; Müller, *op. cit.* 18), who also calls Derkĕtó 'the Syrian goddess.' Eratosthenes (*Cataster.* 38) cites Ctesias as his authority for the statement that Derkĕtó was saved by a fish at Bambyce (Hierapolis, the modern Membidj) in northern Syria. He also calls her the goddess of Syria. Hyginus (*Astron.* ii. 41) states, on the authority of Ctesias, that a fish rescued Isis (*i.e.* Derkĕtó) from the sea, and therefore the Syrians regard fishes as holy, abstain from eating them, and worship golden images of them. Xanthus the Lydian, a contemporary of Ctesias, cited by Mnaseas, according to Athenæus (viii. 37), states (if the citation be genuine) that Atargatis because of her pride was seized by the Lydian Mopsus and cast with her son Ichthus ('fish') into a lake near Askalon, where she was devoured by fishes. Hesychius (*s.v.* Ἀτταγάθη) says that she is called Ἀθάρη by Xanthus.

The earliest epigraphic evidence of the worship of Atargatis is found on a coin bearing on one side the inscription עבד הדד, 'Abd-Hadad, on the other עתרעתו, 'Atar'atu (de Luynes, *Essai sur la numismat. des Satrap.*, 1846, p. 39, pl. v.; Blau, *ZDMG* vi. 1852, pp. 473 f.). De Luynes supposed that this belonged to the Persian period, but it is probably to be assigned rather to the early Greek period. It comes perhaps from Hierapolis, and is interesting as confirming the statements of later writers that Hadad and Atargatis were the two great divinities of Syria. Other coins of 'Abd-Hadad show the more usual spelling עתרעתה, 'Atar'ateh (see Waddington, *RN* vi. 1861, p. 9 ff.; Six, *Numismatic Chronicle*, 1878, p. 105).

According to 2 Mac 12[26], Judas Maccabæus in the year B.C. 164 went forth against Carnion and the temple of Atergatis (τὸ Ἀτεργάτιον) and slew 25,000 people. In 1 Mac 5[43] this is described as τὸ τέμενος ἐν Καρναΐν. From this it appears that the cult of Atargatis flourished during the Greek period not only in Hierapolis and Askalon, but also in Bashan. An inscription of the same period from Kefr Hauwar, on the road between Damascus and Banias, bearing the word [Ἀ]ταργάτῃ indicates probably that there was a temple of Atargatis in this place (Waddington, No. 1890). Excavations in Delos have disclosed a number of votive inscriptions to Atargatis dating from a period shortly before the beginning of the Christian era. Here occur the forms Ἀταργάτῃ, Ἀτέργατις, Ἀταργάτειτις (*BCH* iii. 407), and Ἀτάργατις (*ib.* vi. 495 ff., vii. 477, viii. 132). These inscriptions combine Atargatis and Adados (Hadad) and identify Atargatis with Aphrodite. In one case she is called Ἀφροδίτῃ Ἀτάργατις, in another ἁγνῇ Ἀφροδίτῃ. Her priests are called 'Hierapolitans,' either because this was a colony that had come from Hierapolis, or because the cult was known to be derived from that city.

Ovid († A.D. 17) tells how Dercetis was changed into a fish in Palestine (*Metam.* iv. 44–46). Germanicus († A.D. 19) calls her 'the Syrian goddess,' Derceto, and Atargatis (*Scholia on Aratus*, ed. Breysig, pp. 65, 98 f., 125, 176), and adds the new information that she was changed into a fish at Bambyce (Hierapolis). Strabo († A.D. 24) says, 'Atargate (according to some MSS, Artagate) the Syrians call Athara, but Ctesias calls her Derkĕtó.' Here Atargatis is identified with 'Athar (=Athtar, Ashtart, Astarte) in the same manner in which she is identified with Aphrodite in the Delos inscriptions (cf. xvi. 748, 785). Cornutus († A.D. 68) records (*de Nat. Deor.* 6) that fishes and doves were sacred to Atargatis, the goddess of the Syrians, and therefore were not eaten. Pliny († A.D. 79), in *HN* v. 13 (14), 69, says of Joppa, 'There is worshipped the fabulous Ceto.' Whether this is to be understood of the sea-monster (κῆτος), whose skeleton, according to Strabo and Pliny, was shown at Joppa, or whether it is to be regarded as a truncated form of Der-ceto, is uncertain (cf. Baudissin, *Studien*, ii. 178). In v. 23 (19), 81, Pliny identifies Atargatis with Derceto, and says that she was worshipped at Hierapolis, or Bambyce, or Mabog. In xxxii. 2, (8) 17, he speaks of the pond of sacred fish at the temple of Hierapolis. Plutarch (*Crass.* 17) says of the goddess of Hierapolis that some call her Aphrodite, others Hera, while others regard her as the divinity who out of moisture produces the seeds of all things, and has shown men the way to all good things.

A Palmyrene bilingual of the year A.D. 140 (de Vogüé, *Inscr. Sem.* 3 = Waddington, 2588) mentions עתרעתה, or [Ἀταρ]γάτει, as one of the 'good' or one of the 'national' gods. On the strength of this inscription a broken Palmyrene text (*CIG* iii. 4480) is doubtless to be restored [Ἀταργ]άτει. Another inscription of the 2nd cent. from Astypalæa, near Crete, reads, Ἀταργατειτὶ ἀνέθηκαν (see Rayet, 'Dédicace à la déesse Atergatis,' *BCH* iii. 1879, pp. 406 ff.; cf. *CIG* iv. 7046; *ZDMG* xxxix. 43).

The fullest of all the accounts of the cult of Atargatis at Hierapolis is found in the treatise of Lucian († *c.* A.D. 200), *de Dea Syria*. Lucian was himself a Syrian, and speaks as an eye-witness. He never calls the goddess Atargatis, and refuses to identify her with Derkĕtó of Askalon, because the image in that place had a fish's tail, while the one in Hierapolis had perfect human form (14). He prefers to call her Hera (1, 16), although he admits that there is much to be said in favour of the view that she is Rhea (15). Nevertheless, there is no doubt that his 'Syrian goddess' is really Atargatis. His title Συρία θεός is one that is constantly applied to this divinity by other writers. Hierapolis is known to have been a chief centre of her cult. The priests of Atargatis at Delos entitle themselves Hierapolitans. In the temple was a pond of sacred fish, such as Pliny describes in the temple of Atargatis at Hierapolis; and Lucian himself narrates that the people said that the temple was built by Semiramis in honour of her mother Derkĕtó, and that they abstained from eating fish and doves, in the same manner as the people of Askalon (14).

The temple of Hierapolis is described by Lucian as the largest and richest in Syria. To it pilgrims came from all parts of Western Asia (10). It stood on a hill in the midst of the city, and was surrounded with two walls, one of which was very ancient. To the north of the sanctuary lay a court 100 cubits square. In this stood a row of huge stone *phalli*, one of which a man ascended twice a year, and remained on the top seven days offering prayers for the people, who placed gifts at the bottom. In the court there was also an altar of bronze, and round about it were a multitude of statues of gods, heroes, and kings, among them 'Semiramis.' Here also bullocks, horses, eagles, bears, and lions fed together (28–29, 39–41). In the inner temple, to which only certain priests were admitted, stood three golden images. The first was that of Hera (Atargatis), which had attributes not only of Hera but also of Athene, Aphrodite, Selene, Rhea, Artemis, Nemesis, and the Fates. In one hand she carried a sceptre, in the other a distaff. On her head, which was surrounded with rays, she wore a tower-crown, and she was encircled with a girdle like that of Urania. She stood on lions, and had a drum like that of Rhea (32, cf. 15). The second image bore a general resemblance to Zeus, although it was called by a different name. It was, doubtless, Hadad, who was represented armed with a thunderbolt. Between these two stood a third image, the sex of which Lucian could not determine. It had no name, he says, but was called merely σημήιον, 'sign.' [Baethgen (*Beiträge*, 73) is doubtless correct in regarding this statement as due to a mistake on Lucian's part of אתה for עתה. The third divinity was really 'Ate, whose name appears as the second element in עתרעתה, Atargatis.] As to the origin of the temple, some said it was built by Deucalion, others by Attes (= Ate?), others by Semiramis, and others by Stratonice. Lucian preferred to believe that it was the work of Dionysus (12–29).

The priesthood of the temple was very numerous, and was divided into classes that exercised different functions. Conspicuous among these were the *Galli*, or eunuch-priests. On

festal occasions young men worked themselves into a frenzy through music and other religious exercises, and then castrated themselves. After this they wore women's dress, and travelled about the country carrying an image of the goddess, which they worshipped with wild orgies, flogging one another and cutting themselves with knives (50–53, cf. *Asin.* 35–44). Of this custom Lucian offers two explanations. One was that it was in honour of Attes (Ate?), who was castrated by Rhea, and wandered through the world in female attire; the other was that it was in memory of Combabus, who mutilated himself in order to avoid compromising himself with Queen Stratonice. There were also female devotees in the temple (43), and licentious rites were practised as a part of religion (22).

One of the great annual ceremonies consisted in carrying the third image (Ate?) to the sea-shore and bringing thence jars of sea water, which were poured into a hole in the temple precincts (13, 33, 48). Another ceremony in the spring consisted in piling up trees in the outer court of the temple, heaping upon them garments, treasures, and all sorts of animals, and then burning the whole in the presence of all the gods of Syria, who were brought by their devotees to witness the rite (49). Domestic animals, except the hog, were offered in sacrifice. These were presented in the temple, and were taken home to be slain, but sometimes they were killed by being cast down from the portico of the temple. Children also were occasionally offered in this way. Pilgrims always shaved their heads when coming to the sanctuary, and young men and women presented their hair in gold or silver boxes before marrying. Tatuing in honour of the goddess was a common practice (54–60).

Apuleius (*Metamorph.* viii. 170) speaks of the 'omnipotent and all-producing Syrian goddess.' Ælian (*Hist. Anim.* xii. 2) speaks of the reverence for fishes at Hierapolis or Bambyce. Athenæus (viii. 37) gives the goddess the name of Ἀτέργατις. Arcadius (*de Accent.* ed. Barker, 36. 18) calls her Ἀταργατῖς. The book *de Legibus*, ascribed to Bardesanes († A.D. 223) (in Cureton, *Spicileg. Syr.* 1855, 20, tr. 31), calls her *Tar'atha* (ܬܪܥܬܐ), and says that she is worshipped in Syria and Edessa (the Gr. translation speaks of Rhea as worshipped in Syria and Osroēne). He also mentions castration as practised in her worship. Tertullian (*ad. Nation.* ii. 8, cf. *Apol.* 24) calls Atargatis 'the goddess of the Syrians.' Macrobius (beginning of 5th cent.) says that among the Syrians the sun is called Hadad, the earth Adargatis. The latter is represented mounted upon a lion, with her head encircled by rays (*Sat.* i. 23, 18). Jacob of Sarug († A.D. 521), in the documents published by Martin (*ZDMG* xxix. 1875, 132), states that Tar'atha (ܬܪܥܬܐ) was worshipped at Harran. Simplicius (6th cent.) has the form Ἀταράτη (cf. Lagarde, *Ges. Abhl.* 1866, 238). The Talmud (*Abôdâ zârâ*, 11*b*; tr. Ewald, 1868, p. 85) calls her *Tar'atha* (תרעתא), and says that she is worshipped at מבג, *i.e.* Mabog (Bambyce, Hierapolis). In Armenian writers the goddess appears as *Tharatha*. Moses of Chorene (ii. 27) says that Abgar built Edessa and brought into it his idols, Nabok, Bel, Bathnichal, and Tharatha. For other Armenian authorities see Lagarde, 'Armenische Studien' in *AGG* xxii. 1877, p. 58, § 846; Mordtmann, *ZDMG* xxxix. 43.

From these accounts it appears that Atargatis is merely a local form of the primitive Semitic goddess Ishtar-'Athtar. Strabo and Hesychius both affirm her identity with Athara, and the Delos inscriptions call her Aphrodite. Like Astarte, she was a goddess of life-giving water and of fertility. The main seats of her cult, Askalon, Karnaim, and Delos, were places long devoted to the worship of Astarte. Doves were sacred to her as to Astarte, and, according to Artemidorus (*Onirocrit.* i. 8), fish were not eaten by the worshippers of Astarte any more than by the worshippers of Atargatis. The emphasis upon sex in the cult at Hierapolis, as described by Lucian, also favours the original identity of Atargatis with Astarte. At the same time it is doubtless true that, in the mind of the common people, the Astarte of Hierapolis was distinguished from the Astartes of other cities as a separate deity, just as Ishtar of Arbela was distinguished by the Assyrians from Ishtar of Nineveh. At Askalon there was a temple of Astarte as well as one of Derkĕtó, and there is no evidence that the Atargatis of Karnaim was regarded as the same as the old Ashtoreth of Karnaim. See ASHTART, ISHTAR.

Hierapolis was, doubtless, the starting point of her cult, because her name is Aramaic. Mabog, the native name of Hierapolis, is apparently מַבּוּעַ, 'spring,' and is derived from a sacred spring in the precincts of the goddess. From Mabbog or Manbog comes the Gr. *Bambyce*. From this centre the cult spread in every direction. We find it at Palmyra, in the Ḥauran, at Karnaim, at Askalon, and in the Greek islands. Into every place where the worship of Astarte had gone that of Atargatis seems to have followed. During the Hellenistic period she became well known in all ports of the Mediterranean, and by Greek and Latin writers she was commonly called 'the Syrian goddess.'

LITERATURE.—In addition to the special treatises referred to above, see the art. and full bibliography by Baudissin in *PRE*[3] ii. (1897) p. 171; also artt. 'Atargatis,' in Hastings' *DB* i. (1899), 194; Cheyne, art. 'Atargatis,' in *EBi* (1899); Barton, *Semitic Origins* (1902), 238–243.

LEWIS BAYLES PATON.

ATAVISM.—This word is used in three senses. (1) It is used to denote the hereditary re-appearance of a character not seen in the parents, or even in the immediate ancestry, but found in an ancestral race or in one related thereto. Thus, markedly projecting canine teeth in man have been regarded as re-expressions of a Simian character, and supplementary mammæ on the breast of a woman have been regarded (probably quite erroneously) as atavistic re-appearances of a characteristic of the Lemuroids. (2) It is used to denote the hereditary re-appearance of a character not seen in the parents, but known to have occurred in a definite ancestor belonging to the stock. Thus, a child may have the peculiar hazel eyes or a peculiar lock of hair characteristic of a great-grandparent, and not expressed in the intervening lineage. To such cases the term 'reversion' is often restricted—'the full re-appearance in an individual of a character which is recorded to have occurred in a *definite* ancestor of the same race' (K. Pearson, *Gram. of Science*[2], 1900, p. 489), while 'atavism' is restricted to 'a return of an individual to a character not typical of the race at all, but found in allied races supposed to be related to the evolutionary ancestry of the given race' (*ib.*). This would be a useful distinction between atavism and reversion, but unfortunately some scientific writers have used the two terms in the very opposite way, applying 'reversion' to (1) and 'atavism' to (2). The distinction which Pearson makes seems quite clear, but we doubt if it is now practicable. (3) It remains justifiable to use 'atavism' and 'reversion' as synonyms denoting the hereditary re-appearance of characters which were latent in the parents at least, but which were expressed in definite—not problematical—ancestors near or remote. It need hardly be said that an atavism is not necessarily a deterioration; it may be a throw-back to a higher degree of differentiation. That depends on the direction in which the species or stock is evolving in relation to its ancestors.

Examples.—A dovecot with carefully bred pigeons was left to itself for some years, after which it was found to contain numerous blue pigeons, resembling in many ways the wild rock-dove (*Columba livia*), believed to be the ancestor of all the domestic breeds of pigeon. In exact experiment this reversion to the rock-dove type has been repeatedly observed. Cultivated flowers and vegetables, such as pansies and cabbages, sometimes produce forms hardly distinguishable from their wild progenitors. The nectarine, which is derived from a peach, may produce what is practically a peach again; the white flowering-currant, which is derived from the common red form, may have branches with red flowers. In a hornless breed of

cattle, derived originally from a horned breed, a horned individual may suddenly re-appear. A dark bantam hen, crossed with an Indian Game Dorking cock, produced amongst others a cockerel almost identical with a jungle fowl (*Gallus bankiva*)—*i.e.* with the original wild stock (Cossar Ewart). Similarly, in his horse-zebra hybridizations, Professor Cossar Ewart obtained forms whose stripings were at least plausibly interpreted as reversions to an extremely old type of horse, such as is suggested by the striped ponies of Tibet.

There is no doubt that organisms often show peculiarities which their parents did not possess, but which their ancestors possessed. Summing up such cases *descriptively*, we may say that they seem to illustrate atavism, but the use of the term *as an interpretation* is not justified unless we can give some reason for believing that the resemblance to an ancestor is due to the rehabilitation of latent items in the inheritance. To do this we have to try to eliminate other interpretations, and that is often difficult. (*a*) What looks like an ancient feature may be due to an arrest of development through lack of appropriate nutrition. (*b*) Similar conditions of life, *e.g.* of food and climate, may induce an acquired or modificational resemblance between the organism and its great-grandparent, but this would not be an atavism. (*c*) Many organisms normally have certain 'vestigial organs,' and these are often variable. A quantitative variation in a normally present vestigial organ is not what is meant by an atavism. (*d*) It is conceivable that an independent individual variation may happen to coincide with one that occurred generations before, but this is different from the re-awakening of a latent item in the inheritance. (*e*) Filial regression, or an approximation towards the mean of the stock, is of everyday occurrence in blended inheritance, and must be kept quite distinct from reversion or atavism. (*f*) The list of alleged atavisms must also be reduced by the subtraction of what are called Mendelian phenomena. In certain cases, such as peas and mice, the crossing of two sharply contrasted pure-bred parents results in hybrid offspring which are all like one of the two parents as regards the contrasted characters; when these hybrid offspring are inbred, their progeny resemble in definite proportions the two grandparents.

The fact seems to be that many phenomena have been labelled atavisms which admit of other interpretations, and that genuine atavisms are rather rare. Let us repeat that an atavism is a harking back to a more or less remote ancestor, the harking back being due to the re-assertion or re-awakening of ancestral contributions which have lain for several generations latent or unexpressed.

It seems unnecessary to use the term 'atavism' for the common phenomenon of resemblance to a grandparent. There is every reason to believe that an individual inheritance is like a mosaic, built up of many contributions, through the two parents, from the grandparents, great-grandparents, and so on. It is a normal and frequent fact of inheritance that an offspring exhibits a peculiarity known to have occurred in one of the grandparents but not in either of the parents. There seems little utility in calling this very frequent 'skipping a generation' an atavism, though it is of the same general nature, and though it is obviously difficult to decide where to draw the line. For how long must a character have been absent or latent before its re-assertion or re-awakening is to be called an atavism? A drone-bee arises from an unfertilized egg; it has a mother and two grandparents, but no father. But it seems rather absurd to call its resemblance to its grandfather atavistic or reversionary. This is a *reductio ad absurdum*, for the drone-bee would resemble its father if it had one! The case may serve to show that it is undesirable to use the term 'atavism' unless the throw-back is to an ancestor more than two generations antecedent.

The exact study of atavistic phenomena must have regard to characters which can be definitely measured and registered, and only when this study has reached secure results will it be possible to discuss with precision what may be called psychical atavisms, re-awakenings, often more fitly termed recrudescences, of ancestral traits which have lain latent, it may be, for generations. The garden of a shepherd's cottage which was swallowed up in a deer forest, lost all trace of its previous cultivation, and became a weed-ground. After many years, under more humane conditions, it was re-delved, and there sprang up many different kinds of old-fashioned flowers whose seeds had lain dormant for several generations. So may ancient flowers and weeds now and again re-appear out of latency in that garden which we call our inheritance.

Highland and Agricultural Soc. of Scotland*, 1901; I. H. F. Kohlbrugge, *Der Atavismus*, Utrecht, 1897; Karl Pearson, 'On the Law of Reversion,' in *Proc. Roy. Soc.* London, lxvi. (1900) pp. 140–164, also *The Grammar of Science*[2], London, 1900, p. 486; J. Arthur Thomson, *Heredity*, London, 1908, see ch. v.

J. ARTHUR THOMSON.

'ATE.—A Semitic deity first mentioned in Assyrian proper names such as *Ata-idri*, *Ata-suri*, *Ate-iana* (cf. *KAT*[3] 435), then in Palmyrene inscriptions under the forms עתה, אתא, עת, Ἀθη, Ἀθης, Ἀθας, and in Gr. and Syr. writers. This divinity was associated with the old Semitic mother-goddess 'Attar-Ishtar-'Ashtart in the compound name עתרעתה 'Attar-'Ate, Atar-gatis (see ATARGATIS). The characteristics and even the sex are uncertain. It is possible that the Lydian god Attis is only another form of the name, in which case his myths may be used to supplement the meagre information in regard to 'Ate (see ATTIS).

ATHANASIAN CREED.—See CREEDS.

ATHANASIUS.—I. Life.—There is no trustworthy record of the early years of Athanasius, but his writings show that his education was Greek (Gwatkin, *Studies of Arianism*[2], Camb. 1900, pp. 67–70). He is acquainted with Greek literature (Homer, Demosthenes, and Plato) and with the later Greek philosophy. In knowledge of the Greek Bible he is second to none of the Fathers.

He first passes into the light of history at the Council of Nicæa in A.D. 325, at which the Arian party was opposed by 'Athanasius, a deacon of the church of the Alexandrians, who was highly esteemed by Alexander the bishop' (Socrates, i. 8). The rest of the life of Athanasius coincides in the main with the history of the Arian controversy, in which he was the protagonist on the Catholic side. In A.D. 328 he succeeded Alexander as bishop (Cureton, *Festal Letters*, p. xxxvii f.), though it was asserted that he was 'too young' at the time* (p. xliv). It was further asserted that his election was secret (*Apologia*, § 6).

* Gwatkin (*Ar.* 67 [71], note) and Robertson (*Selected Works of Athan.* p. xiv, note) say that the assertion that A. was 'under age' (*sic*) at his consecration must have had some semblance of truth, and they draw the conclusion that he was about 30 in A.D. 328; but the argument is precarious. There is not sufficient evidence to show that a canon was accepted at this time at Alexandria prescribing 30 as the age qualification for the episcopate. The *Didascalia*, both Syriac (Lagarde, p. 10) and Ethiopic (Platt, p. 16), lay down the general rule that a bishop must not be less than 50 years of age, and the Apostolic Constitutions (Funk, p. 31) uphold the same limit. Canon xi. of the Council of Neocæsarea (A.D. 314 or later) prescribes 30 as the age for a presbyter, but does not touch the case of a bishop.

The objection to Athanasius on the score of his youth is instructive. He was, indeed, representative of the new age which began with the conversion of the Emperor Constantine. Eusebius of Cæsarea, the older contemporary of Athanasius, stood for the bygone order. He had been a confessor during the terrible Palestinian persecution, and so he feared heathenism chiefly as a persecuting power, and was lulled into security when Constantine adopted Christianity. But a new and more subtle danger was arising. Crowds of heathen followed the Emperor with a facile profession of his religion on their lips, and a traditional attachment to heathenism in their hearts. When, therefore, Arius represented the Son of God as a (heathen) demi-god, his teaching secured ready listeners. To the young Athanasius, the man of the new age, fell the task of detecting the working of the heathen leaven, and of meeting it with Christian medicine.

Athanasius succeeded Alexander in a troubled heritage. Not only were the (new) Arians to be reckoned with, but also the (old) Meletians. In 306, during the Galerian persecution, Meletius, bishop of Lycopolis, separated from Peter of Alexandria on the ground that Peter's treatment of the lapsed was too mild (E. Schwartz, in *GGN*, 1905, p. 164 ff.). The schism continued throughout the episcopate of Alexander. The Council of Nicæa endeavoured to heal the breach, but the election of Athanasius seems to have widened it; indeed, Gwatkin (*Ar.* 66, note) thinks it probable that the Meletians elected a candidate of their own, one Theonas.

Athanasius' career as bishop falls into three periods: (*a*) 328–345, the double contest, personal with the Meletians, doctrinal with the Arians; (*b*) 346–356, the steady growth of his influence over Egypt, and the decline of Arian power in that country; (*c*) 357–373, the contest with those who denied the Divinity of the Spirit, and the reconciliation of the old Conservatives of the East to Nicene orthodoxy.

(*a*) *First period* (A.D. 328–345).—During the first period the battle waged by Athanasius against Arianism was confused with personal issues. The Meletians worked for his deposition, because he was a strong man and not their own candidate; the Arians aided them, because he was known as an opponent of Arianism. His enemies declared his rule to be oppressive, and accused him of violence, and even of murder. At the Council of Tyre in 335, in which several Arian sympathizers took part, Athanasius was deposed. He appealed to Constantine, but the Emperor compromised the dispute by sending him into honourable banishment to distant Treves. He returned at the accession of Constantius for a troubled period of sixteen months, but was expelled in Lent, 339, by the prefect Philagrius, his enemies asserting that the sentence pronounced at Tyre was still binding. Gregory, a Cappadocian and (according to *Epist. Encycl.* 4, 6) an Arian, became bishop. Athanasius fled to Julius, bishop of Rome, and after some negotiations was re-tried in 343 by a Council held at Sardica (Sofia, in Bulgaria), and was acquitted of the charges on which he had been condemned at Tyre. The Eastern bishops, however, seceded from the Council, and refused to receive Athanasius. The doctrinal question lay behind the personal. The result of the Council showed that the West was Nicene, while the East outside Egypt was in the main (though not Arian) certainly anti-Nicene. In 345 Gregory died, and Constantius conciliated Alexandria by allowing Athanasius to return to his see.

All through his period of exile Athanasius showed himself a true pastor to Egypt and Alexandria. His 'Festal Letters' (announcing the date of Easter each year and warning his flock to prepare for it) are preserved for many eventful years. They show the pastoral side of the bishop and the depth of his religious feeling. On the occasion of his expulsion by Philagrius, he wrote his *Epistula Encyclica*, a narrative of the acts of outrage with which the intrusion of Gregory was accompanied. The four *Orationes c. Arianos* were probably composed about the same time (so Loofs, in *PRE*[3]).

(*b*) *Second period* (346–356).—In the autumn of 346, Athanasius returned to Alexandria. The great welcome he then received and the ten prosperous years which followed are sufficient proof that the bishop had won the hearts of his people. During this decade he may be said to have completed his work of bringing Egypt round to the doctrine of the ὁμοούσιον. Indeed, his position became so strong that it excited the envy and alarm of the suspicious Constantius. For a while the political condition of the West stayed the Emperor's hand, but when Constantius became master of the whole Empire in 353, he marked out Athanasius for overthrow. The well-known affection of the Alexandrians for their bishop protected him for a year or two, but he was driven from his seat in 356. Syrianus, 'dux Ægypti,' with 5000 men broke into the church of Theonas in which Athanasius and his people were keeping vigil, and Athanasius was forced to flee for his life. For years he flitted from hiding-place to hiding-place in different parts of Egypt, encouraging his flock by letters and by secret visits. George, an Arian of Cappadocia, took the see of Alexandria, and ruled without gaining affection or success.

(*c*) *Third period* (357–373).—The ejection of Athanasius, however, greatly encouraged the various anti-Nicene parties of the East. It was followed in 357 by the issue of a manifesto by a few bishops gathered at Sirmium (Mitrovicz in Slavonia on the Save), which condemned the Nicene ὁμοούσιον and the 'Semi-Arian' ὁμοιούσιον, and stated without disguise the Arian doctrine of the Person of the Son. But this act roused the conservatives of the East, and compelled them to approach the theological position of Athanasius. While still hesitating to accept the word ὁμοούσιον, they began to adopt the language and arguments of the Nicenes. At the Council of Seleucia in 359 the majority signed the Lucianic Creed, a conservative confession, and deposed Eudoxius of Antioch, George of Alexandria, and some other leading Arians. Athanasius in exile heard the news. In his *de Synodis* he approaches the conservatives with a friendly appeal to them not to stumble at the *word* ὁμοούσιον, since (he says) they accepted the *doctrine* which it represents. This act was the beginning of a policy of conciliation which bore good fruit a few years later.

For the moment it failed. A new party, the Homœan, gained the Emperor's ear and the predominant voice in the Church. The Homœans, by their confession that the Son is *like* (ὅμοιος) the Father, stood opposed to the extreme Arianism which denied this likeness, but otherwise they represented colourless doctrine and a policy of toleration for all, including the Nicenes. (The Homœan supremacy, with the brief interruption of the reign of the pagan Julian [A.D. 361–363] and of Jovian [A.D. 363–364], lasted until the accession of Theodosius in A.D. 379.)

In 362 Athanasius returned from hiding and held a Council at Alexandria. The work of conciliation was continued. Arian clergy who came over to the Nicene side were allowed to retain their rank on accepting the Nicene Creed and anathematizing those who spoke of the Holy Spirit as a creature (κτίσμα, *ad Antioch.* 3). To the doctrine of the

Holy Spirit Athanasius had already devoted an important work, the Epistles *ad Serapionem* (356–361, Loofs). The subject remained with him to the end of his life, but he was unwilling to see any addition made to the bare clause as it stood in the Nicene Creed—*καὶ εἰς τὸ Πνεῦμα τὸ ἅγιον* (*ad Afros*, 10, 11).

Athanasius retained his position (with one short interval) under the Homœan emperor Valens. It was during this last period of his life (364–373) that he was able to see the promise of the coming decisive victory of the Nicene Creed. In Cappadocia, the province which had produced many of the Arian leaders, there now grew up under the leadership of Basil of Cæsarea a party devoted to Nicæa. Basil's early connexions had been with the conservatives, but Athanasius accepted his overtures, and gave the support of his name to Basil's schemes for reconciling the conservatives with the Nicenes. Acacius, the Homœan of Cæsarea in Palestine, and Meletius the conservative of Antioch, and others like them, became willing at last to accept the Nicene Creed. Egypt and the West were already Nicene, and the work of Basil, blessed by Athanasius, made Orthodoxy victorious. In 373, eight years before the Council of Constantinople registered the victory, Athanasius, Confessor and Reconciler, departed this life.

2. Theology.—*Introduction.*—(1) Athanasius, though an Alexandrian, was not a speculative theologian, but (as his Festal Letters show*) a great Christian pastor. Bishop of Alexandria in name, he was, in fact, the effective spiritual father of the numerous Christian congregations of Upper and Lower Egypt and of Libya. The ascetic spirit of Egypt, in which he shared, deepened his religious life without impairing his vigour as a Christian ruler. Arianism was to his pastoral mind not heterodoxy, but impiety and soul-destroying (*ἀσέβεια, ἀνθρωποκτόνος*). Redemption was the centre of his teaching.

(2) As far as Athanasius' theology was systematic, it was a systematizing of Scripture. His knowledge of the text was wide; he compares Scripture with Scripture, and appeals to the sense rather than to the words. As regards the contents of the Canon, there is no reason to believe that his opinions ever changed in any important particular, but his list of the Canonical books belongs to the last years of his life (Festal Letter 39, written for Easter, 367). In the NT his list coincides with our own; in the OT Esther is reckoned with the 'other' (*ἕτερα*) books, and is placed between Sirach and Judith.

(3) In forming an idea of Athanasius' teaching, we have to use his works, even those given by the Benedictines as genuine (*PG* xxv., xxvi.), with discrimination. The *Expositio Fidei*, *Oratio iv. c. Arianos*, *Vita Antonii*, and *Sermo Maior de Fide*, though probably genuine, are not free from difficulty. Some phrases may be non-Athanasian. *Historia Arianorum ad Monachos* was written, perhaps with the help of Athanasius, but not by his hand. The *de Incarnatione et c. Arianos* is probably of mixed authorship. The two *Libri cont. Apollinarium* are doubtful according to Loofs and Bardenhewer, non-Athanasian according to Stülcken and others. The genuineness of *de Virginitate* (*PG* xxviii. 251–282) has recently been defended by von der Goltz, but the phrase *Πατὴρ καὶ Υἱὸς καὶ ἅγιον Πνεῦμα, τρεῖς ὑποστάσεις* is in any case not likely to have come from Athanasius.

Discussions of the genuineness of Athanasius' works are found in Loofs' 'Athanasius,' in *PRE*[3]; in Stülcken's 'Athanasiana,' in *TU*, new ser. iv. 4; and in O. Bardenhewer's *Patrology*, p. 258 ff., Eng. tr., 1908; see also von der Goltz, 'de Virginitate,' in *TU*, new ser. xiv. 2*a*.

* See also the Letters *ad Dracontium* and *ad Ammunem monachum* included among the 'ascetical works.'

i. *Redemption.*—An account of Athanasius' theology begins naturally with his presentation of the doctrine of Redemption. Athanasius speaks of the death of a Divine Christ as 'the sum of our faith' (*κεφάλαιον τῆς πίστεως*, *Incarn.* 19; see, too, *Orat.* i. 34, where the same term is applied to the doctrine of the threefold name into which Christians are baptized).

'After showing the proofs of His Godhead from His works, He next offered up His sacrifice also on behalf of all, yielding His Temple (Jn 2[21]) to death in the stead of all, in order, firstly, to make men quit and free of their old trespass, and, further, to show Himself more powerful even than death, displaying His own body incorruptible, as firstfruits of the resurrection of all' (*Incarn.* 20).

In all references to Redemption, Athanasius gives an important place to the thought that Christ delivered mankind from physical extinction.

Adam and Eve were 'by nature corruptible, but destined by the grace which followed from partaking of the Word to have escaped their natural state, had they remained good' (*Incarn.* 5).

They fell, however, and so corruption remained with them; the rational man made in God's image was disappearing (*ἠφανίζετο*, *Incarn.* 6) by a gradual course of deterioration. So the Word by whom man was made came into the world by the Incarnation in order to re-make man, that God's purpose in creation might not be disappointed. The mere coming of the Word in a human body availed in one aspect to save man. Human nature could not finally perish, seeing that the Word united Himself with it.

But a further work remained for the incarnate Word. Death, owing to God's sentence against Adam, had acquired a certain authority; this authority, however, was exhausted by the Passion of Christ (*πληρωθείσης τῆς ἐξουσίας ἐν τῷ κυριακῷ σώματι*, *Incarn.* 8). This annulling of Death was demonstrated by the Lord's resurrection with an incorruptible body, and those who believe in Christ know that they themselves have become incorruptible through the Resurrection (*Incarn.* 27).

In connexion with this annulling of the authority of death, the death of Christ is spoken of by Athanasius as a sacrifice or offering (*θυσία, προσφορά*, *Incarn.* 10); yet whether to God or to the Divine justice he does not say.

'By offering *unto death* (*εἰς θάνατον*) the body He Himself had taken, as an offering and sacrifice free from any stain, straightway He put away death from all His peers by the offering of an equivalent' (*τοῦ κατάλληλου*, *Incarn.* 9).

In another passage Athanasius uses the forensic analogy, yet without definitely saying that Christ's death was a satisfaction of Divine justice by a substitution. His statement follows Scripture closely:

'Formerly the world as guilty was under judgment from the Law, but now the Word has taken on Himself the condemnation (*τὸ κρίμα*), and, having suffered in the body for all, has bestowed salvation upon all' (*Orat.* i. 60).

But these statements are general; so far (says Robertson, p. lxx) as Athanasius works out the doctrine of redemption in detail, it is

'under physical categories without doing full justice to the ideas of guilt and reconciliation, of the reunion of *will* between man and God.'

On the other hand, Athanasius loves to dwell on the spiritual illumination of mankind wrought through the Incarnation, and the restoration thereby to man of the lost Divine likeness (*Incarn.* 14, 15).

If Athanasius does not attain to the Scriptural fullness of the doctrine of Redemption, yet his own teaching as to the Incarnation and the Passion is Scriptural in its grandeur. He seeks to express what he finds in the Scriptures, and often sums up the teaching of many passages in one terse phrase of his own. Regarding the purpose of the Incarnation, his summary is: 'He was made man, that we might be made Divine' (*ἵνα θεοποιηθῶμεν*, *Incarn.* 54; cf. *Orat.* i. 39). Any other attempt to summarize the work of the Incarnate Word is renounced by Athanasius.

'In a word,' he writes, 'the achievements of the Saviour resulting from His becoming man are of such a kind and number that, if one should wish to enumerate them, he may be compared to men who gaze at the expanse of the sea and wish to count its waves' (*Incarn.* 54).

ii. *THE DIVINITY OF THE SON.*—Athanasius is best known for his defence of the Godhead of the Son. His older contemporary Arius challenged the whole Christian world by the answer which he gave to the question, In what sense is Jesus the Son of God? Arius wished to maintain the doctrine of the Divine unity, and at the same time the doctrine of the personality or separate existence of the Son. Lest he should confess two Gods, he treated the title 'Son of God' as honorific only. According to Arius, the Son was not God, or eternal, or omniscient, or immutable, but a creature (*κτίσμα*), yet unique among the creatures. The Son as Son was later than the Father, therefore not eternal, therefore not God but a creature. This bald logic involved Arius in a great contradiction. Beginning by basing his argument on the title 'Son of God,' he ended by emptying the title of all meaning. The Son was not a Son, but only a favoured creature of God.

The doctrine of Arius is easy to state, for it was only a theory of something conceived of as finite; but this is not the case with that of Athanasius. It is true, indeed, that Athanasius accepted from the first the Nicene Creed and defended it to the last. Negatively, in agreement with its anathematisms, he contradicted the favourite Arian formulæ, *ἦν τότε ὅτε οὐκ ἦν—ἐξ οὐκ ὄντων ἐγένετο—ἐξ ἑτέρας οὐσίας*, etc. Positively, in loyalty to the terms of the Creed, he taught that the Son was born *ἐκ τῆς οὐσίας τοῦ Πατρός*, and that He is *ὁμοούσιος τῷ Πατρί*. But these two last watchwords of orthodoxy were not the invention of Athanasius; nor were they, in their orthodox sense, of Eastern origin. Neither Athanasius nor any other Eastern received them without allowing his thought to play round them and put them to the test.

When we turn from the acknowledged fact of Athanasius' acceptance of the Nicene Creed to study his own works, we are met by two important facts: (1) Athanasius does not restrict himself to the Nicene watchwords, but (2) on the contrary he uses a great variety of language in order to assert the true Deity of the Son. His language is, in fact, a maze through which we might perhaps make our way more easily, if we could be sure of the dating or at least of the order of his works. But much remains uncertain. The two apologetic works (*c. Gentes; de Incarnatione*) are usually assigned to a date before the outbreak of the Arian controversy; but, as Loofs points out, the same kind of evidence might be urged in favour of a similar dating of some of the Festal Letters. The important *Orationes c. Arianos* are assigned by the Benedictines to *c.* 358 A.D., but Loofs gives good grounds for *c.* 338 A.D. The short *Expositio Fidei* contains no certain indication of date, though it is important to know at what period Athanasius made use of the rather surprising language found in it. If, however, we may accept in general the Benedictine dates in addition to Loofs' early date for the Orations, we may say that in his later works Athanasius seems to hesitate less to use and defend the special term *ὁμοούσιον* than in the early work. To this extent there seems to have been a development in Athanasius' teaching.

In his early works, however, far from confining himself to the watchword *ὁμοούσιον* and to the language of the Nicene Creed in general, Athanasius allows himself great freedom, and not seldom seems to avoid *ὁμοούσιον*. Thus in *Expositio Fidei* (§ 1) he writes: *Υἱὸν αὐτοτελῆ . . . τὴν ἀληθινὴν εἰκόνα τοῦ Πατρὸς ἰσότιμον καὶ ἰσόδοξον* ('Very Son . . . true image of the Father, equal in honour and glory'), while later in the section he uses even *ὅμοιος τῷ Πατρί* ('like to the Father'), the formula adopted by the Homœans in A.D. 359–360 (*de Syn.* 30) for evading the issue. In *Orat.* i. 40, in arguing with his opponents he uses for the moment *ὅμοιος κατὰ πάντα*, the formula of the fourth Council of Sirmium (*de Syn.* 8), and in iii. 11 he similarly employs *ὅμοιος κατ' οὐσίαν*, a variant of *ὁμοιούσιος*. These, no doubt, were intended to be only approximations to Athanasius' full meaning, but it is worthy of note that in i. 58, where he seems to aim at full and explicit statement, he gives not *ὁμοούσιος* but *τῆς τοῦ Πατρὸς οὐσίας ἴδιος καὶ ὁμοφυής*. In *Orat.* iii. 1 he writes, in almost untranslatable phrase, *πλήρωμα θεότητός ἐστιν ὁ Υἱός* ('The Son is the completeness of Divinity,' *i.e.* is completely Divine).

Similarly Athanasius seems often to avoid the Nicene [*γεννηθέντα*] *ἐκ τῆς οὐσίας τοῦ Πατρός*. In the Orations (cf. *de Decr.* 26; *de Syn.* 35) he gives *ἴδιον γέννημα τῆς οὐσίας τ. Π.* ('proper offspring of the essence of the Father'). For *οὐσία*, 'essence,' 'substance,' Athanasius sometimes prefers *φύσις*, 'nature.' Thus he writes *τὸν Μονογενῆ τοῦ Θεοῦ τὸν ἀχώριστον τῇ φύσει* (*Omnia tradita*, § 3), and *ἡ φύσις μία καὶ ἀδιαίρετος* (§ 5). It is clear that Athanasius recognized that the terms *οὐσία* and *ὁμοούσιος* raised real difficulties. *Οὐσία*, 'substantia,' suggested to many thoughts of that which is material, while *ὁμοούσιος* suggested some previously existing *οὐσία* in which both Father and Son shared as brethren (cf. *de Syn.* 51). Consequently Athanasius received these two terms only in the sense in which they were used by the Nicene Council, and only for the purpose which the Council had in view. He contended so long not for the un-Scriptural word *ὁμοούσιος*, but for the official condemnation of Arianism which it registered.

'The Bishops,' he writes, 'were compelled (*ἠναγκάσθησαν*) to gather once more from Scripture the general sense (*τὴν διάνοιαν*), and to write that the Son is of one substance (*ὁμοούσιον*) with the Father' (*de Decr.* 20; cf. *de Syn.* 36).

Athanasius' own doctrine is best described as a direct and complete repudiation of the teaching of Arius. He denies *seriatim* all Arius' propositions, holding that the Christ of Arius could not be the Saviour of the world. Athanasius maintained that the Son is Divine, because He is the true Son of God (*ὡς ἐκ πηγῆς ζωὴ καὶ φωτὸς ἀπαύγασμα*, *de Syn.* 42). But he shrank from attempting to tie this truth to set phrases.

'The more I desired to write,' he says, 'and endeavoured to force myself to understand the Divinity of the Word, so much the more did the knowledge thereof withdraw itself from me; and in proportion as I thought I apprehended it, in so much I perceived myself to fail of doing so. Moreover, also I was unable to express in writing even what I seemed myself to understand; and that which I wrote was unequal to the imperfect shadow of the truth which existed in my conception' (*Historia Arianorum: Epistola*, § 1).

Athanasius' argument for the Divinity of the Son may be stated under five heads. (1) He argues from the notion of a Trinity (*τριάς*) that it is folly to suppose that it is partly created and partly uncreate, in part eternal and in part not eternal (*Orat.* i. 18). (2) He identifies the Son with the Word (*Λόγος*, *Orat.* i. 28), and urges that the Son must be eternal, because the Father can never have been without His Word or Reason (*ἄλογος*, *Decr.* 15). (3) He appeals to the Divine works of the Son, namely, Creation (*Orat.* ii. 22) and Redemption (*Incarn.* 20). (4) By a copious use of Scripture, and particularly of the Fourth Gospel and the Epistle to the Hebrews, he shows how great is the difficulty of reconciling the Arian theory of the Person of Christ with the language of Scripture. (5) Similarly, he shows that the Christian consciousness demands a Divine Christ (*Χριστιανοὶ γάρ ἐσμεν, ὦ Ἀρειανοί, Χριστιανοὶ ἐσμεν ἡμεῖς*, *Orat.* iii. 28).

Defensively Athanasius meets the Arians with a

careful exegesis of the chief passages of Scripture which they quoted in defence of their views. The passages are collected and discussed in *Orat.* i. 37–iii. 58. They may be classified under various heads. Some of them seem to speak of the Son as a creature, *e.g.* Pr 8^{22} (*ἔκτισέν με*, LXX), He $3^{1.2}$ (*τῷ ποιήσαντι αὐτόν*); others of His advancement from a lower state, *e.g.* Ph $2^{9.10}$, Ps 45^{7}; others of His entire dependence on the Father, *e.g.* Mt 11^{27}, Jn 5^{30}; others of His progress in knowledge or of His ignorance, *e.g.* Mk 13^{32}, Lk 2^{52}; others of His prayers, *e.g.* Mt 27^{46}. Others again seem to draw a line of separation between Him and the Father, *e.g.* Jn 17^{3}. On the whole, it must be said that Athanasius shows a great grasp of Scripture, and that his interpretations are sounder than those of his opponents. Most of the passages cited above he understands of the human nature of Christ, telling the Arians that their objections are really objections to the Incarnation itself. The passages which refer to advancement he explains less convincingly as referring to the exaltation of human nature through union with the Word by the Incarnation.

iii. *CHRIST'S HUMAN NATURE.*—THE UNION OF THE TWO NATURES IN CHRIST.—Though Athanasius' language is not that of the Chalcedonian definition or of the *Quicumque vult*, he maintains in fact the true manhood and the true Godhead together with the true union of the two Natures in Christ. The apparently Nestorian language of such a passage as *Expositio Fidei*, § 1 (*τὸν ἡμέτερον ἀνείληφεν ἄνθρωπον* Χ. Ἰ. . . . *ἐν ᾧ ἀνθρώπῳ σταυρωθεὶς . . . ἀνέστη ἐκ νεκρῶν*), has to be judged in connexion with other statements of a different form.

'He became man; he did not merely enter into a man' (*Orat.* iii. 30). 'It behoved the Lord in putting on man's flesh to put it on in its completeness with its own passions' (*μετὰ τῶν ἰδίων παθῶν αὐτῆς ὅλην*, *Orat.* iii. 32). 'They [truly] confessed that the Saviour had not a body without a soul, nor without sense or intelligence; . . . nor was the Salvation effected in (through) the Word Himself a salvation of body only, but of soul also' (*Antioch.* 7). 'If the works of the Word's Godhead had not taken place through the body, man had not been deified; and again, if the things proper to the flesh had not been predicated of the Word, man would not have been completely delivered from them' (*Orat.* iii. 33; cf. 32).

iv. *DIVINITY OF THE HOLY SPIRIT.*—The Fathers of Nicæa contented themselves in their Creed with the brief clause, 'and in the Holy Ghost'; they added nothing regarding His Person or work. For thirty years after the Council met, Athanasius kept himself within the limits thus laid down. Though he was engaged in contending for the full Divinity of the Son, though in this contest he often uses the Trinitarian baptismal formula and the word 'Trinity' (*τριάς*), he does not attempt to complete formally his doctrine of the Trinity by extending or adapting to the Spirit the Nicene definitions which asserted the Divinity of the Son. Perhaps he realized that, when the doctrine of the Godhead of the Son was accepted, the acceptance of the Godhead of the Spirit must follow as a consequence.

In the Epistles *ad Serapionem*, written some time after A.D. 356, Athanasius begins to speak fully of the Divinity of the Holy Spirit. He learned that certain of the Arians were teaching that the Holy Ghost was a creature, one of the ministering spirits, superior to the angels only *in degree* (*βαθμῷ*, *Ser.* i. 1). It appears also that there were others who disagreed with the Arians as to the Deity of the Son, but were content to regard the Holy Spirit as a creature. To these last Athanasius utters the challenge: 'Is God a Trinity or a Duality?' (*τριάς ἐστιν ἢ δυάς*, *Ser.* i. 29).

Athanasius unfolds his doctrine of the Holy Spirit in his Epistles to Serapion, much as he develops his teaching on the Son in the Orations. (1) He maintains that the Trinity must be a real (eternal) Trinity, in which no creature is included (*Ser.* i. 9, 17, 20, 28; iii. 7). (2) He asserts that the work ascribed to the Spirit implies His Godhead. Thus he asks: 'Who shall unite (*συνάψει*) you to God, if ye have not the Spirit of God Himself, but the spirit of the creature?' (*τῆς κτίσεως*, i. 29; cf. i. 6). He carefully discusses passages which appear to speak of the Spirit as a creature (*κτίσμα*), and rejects the Arian interpretation of them (i. 3, 4, 10), pointing out that *πνεῦμα* anarthrous does not mean the Holy Spirit (i. 4, 9, in reference to Am 4^{13} *κτίζων πνεῦμα*). He appeals to 2 Co 13^{14}, and expounds Eph 4^{6} of the Father, the Word, and the Holy Spirit (i. 28). If his opponents point to passages (*e.g.* 1 Ti 5^{21}) in which only two Persons of the Trinity are mentioned, he answers that the Trinity is indivisible (*ἀδιαίρετος*) and united within itself, so that, when one Person is mentioned, the other Persons are understood (i. 14). He accepts fully the doctrine of *περιχώρησις*, 'circumincessio,' based on Jn 14^{10} 'I in the Father and the Father in me.'

'Therefore also,' he writes, 'when the Father gives grace and peace, the Son also gives it, as Paul signifies in every Epistle, writing, Grace to you and peace from God our Father and the Lord Jesus Christ' (*Orat.* iii. 11).

Athanasius avoids applying directly to the Holy Spirit the contested word *ὁμοούσιον*, except in a very few places (*e.g.* *Ser.* i. 27).

He writes: 'It is sufficient to know that the Spirit is not a creature' (i. 17). He describes the Spirit as 'united to the deity of the Father' (*ἡνωμένον τῇ θεότητι τοῦ Πατρός*, i. 12), and as immutable and unchangeable (*ἄτρεπτον καὶ ἀναλλοίωτον*, *Ser.* i. 26). Usually, however, he asserts the Deity of the Spirit *through His relation to the Son.*

'If the Son . . . because He is own offspring of the Father's essence is not a creature, but *ὁμοούσιος τοῦ Πατρός*, so neither would the Holy Spirit be a creature, because He is proper to the Son' (*διὰ τὴν πρὸς τὸν Υἱὸν ἰδιότητα*, iii. 1; cf. i. 33).

v. *PROCESSION OF THE HOLY SPIRIT.*—Athanasius can hardly be said to have a doctrine of Procession. He approaches it in *Ser.* i. 15, where he represents his opponents as saying: 'If the Spirit is not a creature (*i.e.* as we hold), but proceedeth from (*ἐκ*) the Father (*i.e.* as ye hold).' Cf. i. 33, 'Who deny that the Spirit (*αὐτό*) is from (*ἐκ*) the Father in the Son.' But if this seems to attribute to Athanasius the doctrine of Procession from the Father alone, Athanasius himself (*Ser.* iv. 4) describes the Spirit as *ἴδιον τῆς τοῦ Λόγου οὐσίας*, 'proper to the essence of the Word,' so that the two passages taken together supply evidence that Athanasius approximated to the Western doctrine of Procession from the Father and the Son. The same might be said of *de Incarn. et c. Arianos*, 9: 'David (a reference to Ps 36^{9}) knew that the Son, being with the Father (*παρὰ τῷ Πατρὶ ὄντα*), is the source (*τὴν πηγήν*) of the Holy Spirit,' but the genuineness of the passage is highly doubtful (Stülcken, p. 63 f.).

On this mysterious subject Athanasius does not forsake his custom of keeping as closely as possible to the language of Scripture. 'The Son is the Son of God,' he says, 'and the Holy Spirit is the Holy Spirit, and not the offspring (*ἔκγονον*) of the Father' (*Ser.* iv. 4). He doubtless prefers to speak of the Procession in Time: 'The Spirit who proceedeth from (*παρά*, Jn 15^{26}) the Father, and, being proper to the Son, is given by Him to the disciples and to all that believe on Him' (*Ser.* i. 2).

vi. *THE TRINITY.*—Athanasius is clear and express in his teaching that the Trinity is one in nature and cannot be divided (*Orat.* iii. 15; *Ser.* i. 2), but he is less precise in his doctrine regarding the nature of the (personal) distinctions within the Godhead. He writes with severe restraint, keeping himself as far as possible to the words of the

Baptismal formula (Mt 28[19]) and the Pauline benediction (2 Co 13[14]). Indeed, 'Person' is not one of Athanasius' theological terms; the phrase *εἷς θεὸς ἐν τρισὶν ὑποστάσεσι* (*de Incarn. et c. Arianos*, 10), 'one God in three Persons' (or 'Subsistences'), belongs to a passage of highly doubtful authenticity. In *de Syn.* 36 he reckons the phrase *τρεῖς οὔσας ὑποστάσεις* among the un-Scriptural phrases used by his opponents. It is true, indeed, that once (*Omnia tradita*, § 6) he uses the term much as Westerns use it:

'For the fact of those venerable living creatures (Is 6) offering their praises three times, saying, "Holy, Holy, Holy," proves that *the Three Subsistences* (*τὰς τρεῖς ὑποστάσεις*, if the text be sound) are perfect, just as in saying, "Lord," they declare the One Essence (*τὴν μίαν οὐσίαν*).'

In the *Expositio Fidei*, however, he points out the danger which lurks in the term:

'Neither can we imagine three subsistences (Persons) separated (*μεμερισμένας*) from each other, as results in the case of men from their bodily nature, lest we hold a plurality of gods like the heathen' (§ 2).

Accordingly Athanasius never makes *τρεῖς ὑποστάσεις* a test of orthodoxy, and in his later years he tells the Antiochenes (*Antioch.* 5, 6) that he received those who professed belief in *τρεῖς ὑποστάσεις* (meaning three 'Persons') on condition that they in their turn received those who confessed *μία ὑπόστασις* (meaning one 'Substance'). Indeed *ὑπόστασις*, a synonym of *οὐσία* in the Nicene anathematism, could never become fixed for Athanasius himself to the meaning 'Person,' though he might tolerate the innovation in others. Sometimes Athanasius writes simply ἄλλος ὁ Πατήρ, ἄλλος ὁ Υἱός (cf. *Orat.* iii. 4), and similarly, 'The Father is Father, and the Son Son' (*Orat.* iv. 2).

Conclusion.—Looking at the teaching of Athanasius as a whole, we see that it was shaped with a practical aim, and that it was expressed as little as possible in set theological terms. The profound mind of Athanasius realized that Christian truths strain to the breaking point the formulas in which men strive to express them. He invented no theological terms himself, and if in his later writings (from *de Decretis* onward) he strenuously defended the *ὁμοούσιον* of the Nicene Council, this defence was justified by an experience of many years that this word, and this word only, was a 'bulwark' (*ἐπιτείχισμα*) against Arian error (*de Syn.* 45).

LITERATURE.—i. *ANCIENT*.—The works of Athanasius printed in Migne, *PG* xxv.-xxviii. (with these works are associated a number of contemporary documents of great value). To these must be added the *Festal Letters* (almost wholly lost in Greek, but edited in Syriac with an Introduction by W. Cureton, Lond. 1848). Though several doubtful or spurious works are included in Migne, yet enough remains which is certainly genuine to yield a full account both of his life and of his teaching. Athanasius' writings ('Pamphleten,' as E. Schwartz calls them) illustrate in a living way both the vicissitudes of his own life and the varying fortunes of the Arian controversy. (The later writers, Rufinus, Socrates, Sozomen, and others tell us little in addition that is trustworthy, and, moreover, misrepresent much which is given in Athanasius' own writings.)

Information with regard to the MSS of the works of Athanasius is to be found in *JThSt* iii. 97-110, 245-258, two articles by F. Wallis, supplemented by notes by A. Robertson, and C. H. Turner; also in *JThSt* v. 108-114, notes by Kirsopp Lake; *JThSt* vii. 600-608, note by C. H. Turner, calling attention to G. Bertolotto's art. in the *Atti della Società Ligure di storia patria*, 1892, pp. 1-68. Bp. Wallis's work has been used and supplemented in the valuable account of MSS given by E. von der Goltz in his ed. of [Athanasii] *de Virginitate*, Leipzig, 1905 (= *TU*, new ser. xiv. 2a).

ii. *MODERN*.—Modern authorities have thrown much additional light on Arianism and on Athanasius. Full bibliographies are given in Gwatkin, *Arianism*, 1882 and 1900, and in Bardenhewer (see below). Gwatkin's book is itself almost a life of Athanasius. A. Robertson, *Selected Works of A. translated into English* (Oxford and N.Y. 1892), gives an important Introduction on the *Life* and Teaching of Athanasius. W. Bright, 'Athanasius,' in Smith-Wace's *DCB*, and Loofs, 'Athanasius,' in *PRE*[3], are both valuable. E. Schwartz, 'Zur Geschichte A.'s,' in *GGN*, 1904, 1905 (and 1908), throws light on some obscure points. O. Bardenhewer, *Patrology* (Eng. ed. by Shahan), Freiburg i. Breisg. 1908 (pp. 253-264), and A. Stülcken, 'Athanasiana,' *TU*, new ser. iv. 4 (on the genuineness of some disputed works), are both of value. Cf. J. F. Bethune-Baker, 'The Meaning of homoousios' (1901), in Cambridge *TS* vii. 1. Of general histories of doctrine it is sufficient to mention Harnack, *Hist. of Dogma* (Eng. tr. 1896-98), especially iii. 272 ff., 290 ff., iv. 1-163. Among general Historians of the Church, L. Duchesne, *Histoire ancienne de l'église*, ii. (1907), tells the story of Athanasius and the Arian struggle with much freshness.

ATHEISM.

ATHEISM AND ANTI-THEISTIC THEORIES.—*Introduction.*—Atheism is sometimes said to be equivalent to pancosmism, *i.e.* the doctrine that the universe consists of nothing but those physical and psychical existences which are perceptible by the senses or are cognizable by the imagination and finite understanding. Pancosmism, however, is a positive doctrine, while atheism, both by etymology and by usage, is essentially a negative conception, and exists only as an expression of dissent from positive theistic beliefs. Theism is the belief that all the entities in the cosmos, which are known to us through our senses, or are inferred by our imagination and reason, are dependent for their origination and for their continuance in existence upon the creative and causal action of an Infinite and Eternal Self-consciousness and Will; and in its higher stages it implies that this Self-existent Being progressively reveals His essence and His character in the ideas and ideals of His rational creatures, and thus stands in personal relationship with them. In its earlier stages theism conceives of God simply as the Cause and Ground of all finite and dependent existences; but as it develops, it realizes the idea of God as immanent and self-manifesting as well as creative and transcendent. Until it attains to this consciousness of felt personal communion with the immanent Cause and Ground of the universe, it is more appropriately described as deism.

As was said above, atheism presupposes the existence of theism. It can hardly be said to arise until the human mind has formed the conception of a Unitary Self-existing Cause on whom all things and persons depend, and to whom the sentiments of reverence and worship are directed. Anthropology shows that long before the idea of One Infinite Supreme Being is reached, uncivilized races, through the experience of dreams and supposed ghosts, as well as through the intuitive judgment that the energies in nature which resist human volitions are the manifestation of wills resembling their own, come to believe in the existence of superhuman beings who act for or against human welfare, and are thus the objects of worship or of fear. But along with this conception of a variety of finite superhuman personalities there dawns on the more advanced minds of savage peoples, through the intuitive idea of infinity, the felt Divine authority of conscience, and the gradual

intellectual perception of a pervading unity behind all the changing phenomena of nature, the conception of One Supreme Spiritual Reality who is the omnipresent Cause that originates and controls all the forces of nature, and in varying degrees manifests Himself within the human soul.

It is not till this theistic idea is to some extent present that real atheistic negation becomes possible. If a Hindu or a Greek came to disbelieve in one or all of the deities of his national pantheon, he would not necessarily be an atheist; for it often happened that this scepticism, which the vulgar called atheism, arose simply from a more or less clear apprehension of the One Supreme object of worship. Max Müller well says in his Gifford Lectures on *Natural Religion* (p. 228):

'We must remember that to doubt or deny the existence of Indra or of Juppiter is not Atheism, but should be distinguished by a separate name, namely, Adevism. The early Christians were called ἄθεοι, because they did not believe as the Greeks believed nor as the Jews believed. Spinoza was called an atheist, because his concept of God was wider than that of Jehovah; and the Reformers were called atheists, because they would not deify the mother of Christ or worship the Saints. This is not Atheism in the true sense of the word; and if an historical study of religion had taught us that one lesson only, that those who do not believe in our God are not therefore to be called Atheists, it would have done some real good, and extinguished the fires of many an *auto da fé*.'

Atheism, as we have seen, is not, like theism and pantheism, a positive belief the phases of which can be depicted in their relation to one unifying conception. It has no organic character. The history of it is little more than a collection of the instances in which doubt and negation in regard to some essential element in theism have arisen. And the occasion and cause of this atheistic frame of mind will generally be found in some new scientific or philosophical ideas, which have, for the time being at least, appeared to be incompatible with the current form of deistic or theistic belief.

The following lines of scientific and philosophical speculation have been especially influential in calling forth atheistic protests against theistic belief. First, *materialism*, or the theory that matter and physical forces constitute the ultimate reality of the universe, and that, through the aggregation of the elements of matter in various organic forms, life and the infinitely varied forms of consciousness have originated. Another line of speculation which has largely concurred with materialism in undermining religious belief is the doctrine of *sensationalism*, which originated early among Greek thinkers, and which the genius of our philosopher, John Locke, presented in so plausible a form that both in this country and in France it led to much atheistic negation. Locke himself was a devout theist; for though, according to his basal theory, all our ideas are derived from sensations or from reflexion on sensations, he still held that the human mind is compelled to postulate an adequate creative cause for all material and psychical existences. Had Locke, however, carried out his sensationalism to its logical results, it would have led him, as it led many sensationalists in France, to an atheistic conclusion. If all our ideas arose out of sensations, we could have no conception either of an infinite God, or of ultimate causation, or of that absolute moral imperative which has been to Kant and to several other thinkers the main foundation of theism. A third source of atheistic doubt, and one which has been strongly operative since Evolution became recognized as the method of nature, is *distrust of the argument from design*—an argument which, ever since the time of Anaxagoras, has been one of the chief supports of theism. This argument appears, however, to be recovering its former power even in the scientific world, for Huxley and other scientists have admitted that, when account is taken of the process of evolution as a whole,

'it is necessary to remember that there is a wider Teleology which is not touched by the doctrine of Evolution, but is actually based upon the fundamental proposition of Evolution' (Huxley, *Critiques and Addresses*, 1878, p. 305). See art. DESIGN.

Among the intellectual causes which have led, not indeed to atheism but to extreme agnosticism, is the doctrine of *the relativity of knowledge*, which, when carried to such length as it has been by the Greek sceptic Carneades, and by recent thinkers such as Mansel and H. Spencer, precludes all insight into the essential nature and character of the ultimate cause and ground of the universe. This complete agnosticism has been ably criticized by Calderwood in *The Philosophy of the Infinite*, and by Martineau in several of his philosophical Essays and Reviews.

1. **Criticism of atheistic materialism.**—Of the alleged reasons for rejecting theism, materialism has been, and still is, the most influential. It is the basis of much of the earliest atheism, and also of the recent atheism which appears in the writings of H. G. Atkinson, Bradlaugh, Büchner, and Haeckel. For this reason it seems desirable, before presenting a brief sketch of the chief historical instances of atheism, to state what appear to be the most potent answers given by theists to the arguments for materialistic atheism.

Idealists, as their name implies, make short work with materialism; for their basal assumption is that matter and force have no existence apart from the sensations and ideas in self-conscious minds. Most theistic writers, however, hold that the experience of resistance to our volitional efforts justifies the conviction that entities exerting energy exist independently of perceiving minds. But while the theist maintains that these entities depend for their origination, their continuance in existence, and their special properties on the creative activity of an Infinite and Eternal Self-consciousness and Will, the atheist contends that matter is itself the ultimate and self-existent reality, that in virtue of its modes of motion and the properties which intrinsically belong to it, it can, when its elements are aggregated in certain ways, manifest life and, in the case of the highest organisms, all the forms of personal consciousness and volition.

Perhaps the most conclusive reply to the atheism which asserts that out of uncreated matter and energy all that we know of life and consciousness has been evolved, is based on an appeal to the recognized philosophical principle that no effect can contain more than is contained in the ground and cause from which the effect has proceeded. The American writer Dr. M. J. Savage thus expresses himself on this point:

'If you can prove to me that "dead" matter, the matter we find in a brick or a piece of marble, under some mysterious transformation comes to have the power to live, to think, to feel, to love, to hope, to sacrifice itself for another, to aspire, to look onward towards an immortal life—if you can prove to me that matter can do that, you have simply changed your definition of matter, and made it coincide with what I call spirit' (*Belief in God*, Lond. 1881, p. 40).

Haeckel would probably reply to this by saying that in his view the elements of the ultimate and self-existent 'Substance,' out of which the universe arises, have their psychical as well as their physical side or aspect, and that it is owing to the former aspect that organic compounds of matter become capable of feeling, thinking, and volition. Does he, then, mean that all the higher attributes of mind are already implicit in the ultimate eternal 'Substance,' out of which, by condensation or otherwise, that which we call matter, energy, and life proceeds? Is the perfection of all human ideals already present, though invisible to the scientific gaze, in 'the Infinite and Eternal Energy,' which is H. Spencer's mode of describing Haeckel's ultimate 'Substance'? If so, the self-existent 'Substance' is nothing less than the theist's Eternal

God; and the molecular corpuscles are simply variously limited modes which the will of God imposes upon a portion of His own eternal life, or, as Lotze and Martineau would say, are differentiations or individuations of His own essential being, to which He delegates some measure of individuality or selfhood. In each of them the Ground and Cause of all created things and persons is immanent and active, and through His creative presence there is no limit to the possibilities of the development of the creatures whom He calls into existence. If it were true, as Tyndall said, that 'in matter are the promise and potency of all terrestrial life,' that could be the case only in the sense that in the ground and cause of each molecule there are already involved all the energy, all the intellectual, moral, and spiritual powers and ideals, which are gradually evolved in the course of the development of the cosmos. The fallacy in Haeckel's 'Weltanschauung' is that, though he gives to the separate molecular corpuscles out of which the universe proceeds a mental side, a germ of consciousness, there is nothing in his account of these elements of matter and energy which at all explains how it comes about that all these innumerable corpuscles conspire together to produce the present harmonious and intelligible cosmos, or how sentient organisms should at length become cognizant of those authoritative ideals which prompt them to subordinate their own personal aims to the general good, and which enable them in a measure both to see and to act from the point of view of the immanent God. It is for want of this recognition of the constant creative presence of the source of ideals throughout the course of evolution that Haeckel's theory, no less than the theories of coarser materialists, must be condemned as unsatisfactory. It fails to show that the 'Substance,' which he represents as the cause and ground of all things, contains within itself the power to produce the effects which we experience in ourselves, and which we discern in the cosmos.

Some eminent physicists and philosophers, including Sir Oliver Lodge, Professor J. H. Poynting, and Professor James Ward, have recently assailed materialism on the ground that the mechanical and chemical movements which matter exhibits in its inorganic condition appear to be quite different from the action of matter in the case of living organisms.

'Matter,' says Sir Oliver Lodge, 'possesses energy, in the form of persistent motion, and it is propelled by force; but neither matter nor energy possesses a power of automatic guidance and control. Energy has no directing power (this has been elaborated by Croll and others—see, for instance, *Nature*, vol. xliii. p. 434—thirteen years ago, under the heading 'Force and Determination'). Inorganic matter is impelled solely by pressure from behind, it is not influenced by the future, nor does it follow a preconceived course nor seek a predetermined end. . . . The essence of mind is design and purpose. There are some who deny that there is any design or purpose in the universe at all; but how can that be maintained when humanity itself possesses these attributes? Is it not more reasonable to say that, just as we are conscious of the power of guidance in ourselves, so guidance and intelligent control may be an element running through the Universe, and may be incorporated even in material things?' (*Hibbert Journal*, Jan. 1906, p. 327).

The celebrated astronomer Laplace maintained that a Perfect Calculator,

'who for a given instant should be acquainted with all the forces by which nature is animated and with the several positions of the beings composing it, if, further, his intellect were vast enough to submit these data to analysis, would include in one and the same formula the movements of the largest bodies in the universe and those of the lightest atom. Nothing would be uncertain for him; the future as well as the past would be present to his eyes' (see Ward, *Naturalism and Agnosticism*, i. 41).

Professor Poynting pertinently asks whether this 'Perfect Calculator' would find all his predictions verified as his atoms (see ATOMISM) came in contact with living matter, and were themselves concerned with life.

'Suppose the man into whose brain the atoms entered were Laplace's friend and chief, Napoleon. If the calculator took into account every atom in Napoleon's frame, would he be able to calculate all the motions of Napoleon, all his actions on the similar surrounding groups of atoms which we call his generals? Could the calculator foretell the eclipse of Waterloo as surely as the astronomer foretells an eclipse of the sun? Is man, in fact, from the physical point of view a group of atoms, each of which behaves as it would with the same neighbours were it part of a non-living system?' (*HJ*, July 1903, p. 739).

After showing elaborately that there is contrast, rather than correspondence, between physical action and mental action, Professor Poynting concludes as follows, and his testimony to the real freedom of the will is specially interesting and important, as coming from a high authority in physical science:

'I hold that we are more certain of our power of choice and of responsibility than of any other fact, physical or psychical. . . . It appears to me equally certain that there is no correspondence yet made out between the power of choice and any physical action, and there does not seem any likelihood that a correspondence ever will be made out. . . . Holding this view, I am bound to repudiate the physical account of Nature when it claims to be a complete account. I am bound to deny that the Laplacean calculator can be successful when he takes man and the mind of man into his calculations' (*ib.* p. 743 f.).

While Sir Oliver Lodge holds that the mind or will thus controls the atomic movements of the brain, he yet maintains that this power of guiding energy does not involve any creation of energy whatsoever. 'Life,' he says, 'is not a form of energy, but guides energy.' On this secondary question he appears to differ from some contemporary thinkers, who agree with Sir John Herschel that in a volitional act the will does originate *some* force,

'though it may be no greater than is required to move a single material molecule through a space inconceivably minute.' 'It matters not,' continues Sir John, 'that we are ignorant of the mode in which this is performed. It suffices to bring the origination of dynamical power, to however small an extent, within the domain of acknowledged personality' (*Familiar Lectures on Scientific Subjects*, p. 468).

The difference between Sir Oliver Lodge and Sir John Herschel is of some importance in regard to the philosophy of religion; but it does not in any way affect the force of the argument against materialism. Both authorities agree that mind or will controls and guides the atoms of the brain, and that, therefore, will cannot possibly be a mere attribute or accompaniment of the cerebral structure.

In connexion with the criticism of materialistic atheism, reference has to be made to two lines of argument which have often been employed by theists in the past, but which are now falling, and probably justly, somewhat into disuse. One of these is the appeal to the inability of present science to prove the existence of any case of abiogenesis (*q.v.*), as if it afforded clear evidence of special Divine creation. But it is impossible to show that a natural passage from non-living to living matter has never taken place, or that it would not take place now if the fitting conditions for it could be reproduced. The argument from our ignorance is not conclusive; and probably most thinkers would agree with Sir Oliver Lodge that, 'though we do not know how to generate life without the action of antecedent life at present, that may be a discovery lying ready for us in the future' (art. 'Life,' in *Hibbert Journal*, Oct. 1905, p. 106). But if this discovery should one day be made, it would not at all destroy the force of the argument against materialism; for if under certain circumstances the elements of inorganic matter assume an organic form, and manifest psychical properties, that change can be accounted for only by assuming the presence in nature of a cause which guides the movements of the corpuscles, and is competent to confer on them, or to manifest in connexion with them, the germs of that self-conscious and self-directing principle of life which

no mechanical properties of matter could possibly generate. The creative power and directing influence of immanent intelligence and will are equally necessary to explain the emergence of organism and life out of the mechanism of the inorganic world, whether that emergence took place once only by a special creative act, or always takes place when the antecedent conditions are realized. As Professor Flint well says, 'Were spontaneous generation proved, materialism would remain as far from established as before' (*Anti-theistic Theories*, p. 164).

The other doubtful argument which has often been employed by theistic writers is that the universe must have come into existence at some point of past time. This again appears to be a question in regard to which dogmatism is out of place. Science assumes that matter and energy are indestructible; that the present arrangement of them results from a previous arrangement, and this in turn from one still earlier. Thus science affords no justification for the belief in a temporal origin of all things. When our present solar system is traced back to its earlier condition in a revolving fiery mist, it is not supposed that this discovery brings us at all nearer to the origin of the cosmos. Some theists have maintained, however, that an infinite regress of these secondary or scientific causes is inconceivable, and that we are compelled to assume that at some remote moment the great First Cause by a creative act started this series of entities and phenomena which science endeavours to understand. This alleged inconceivability is not admitted by some eminent theistic thinkers. Regarding the laws of nature as the method of God's creative action, they see no conclusive reason against the supposition that creation is perpetual, and that there never was a time when the universe did not exist as a visible garment and expression of God's eternal life. This appears to be the view of great scientists, such as St. George Mivart and Sir Oliver Lodge, and it is also the view of such theistic philosophers as Lotze and Martineau. It is at the heart of present physical and psychical reality, and not at some imagined beginning of things, that both science and philosophy most effectually find the immanent and living God. The universe, in all its particulars and throughout its entire history, depends for its existence upon the Eternal Cause, the methods of whose activity science gradually discovers, and whose essential character is progressively revealed in the authoritative ideals of truth, beauty, righteousness, and love, which constantly testify to their Divine and self-existent source at the centre of our dependent and created being (cf. Upton, *Bases of Rel. Belief* [Hibbert Lectures, 1894], p. 209 f.; and art. MATERIALISM).

2. **Atheism in the East.**—It is not till we reach the period of Greek civilization that we meet with atheistic arguments sufficiently explicit to call for detailed description and criticism. In the ancient civilization of China, materialistic atheism appears to have been rife; and in the 3rd cent. B.C. the eminent philosopher Mencius, the disciple of Confucius, speaks of it as a moral danger to the State. The Chinese appear to have been almost incapable of thinking of spirit as existing apart from matter. Dr. Legge, in his prolegomena to the edition of Mencius, translates an essay by a certain Yang Choo, which, as Dr. Flint says, is 'one of the oldest systems of ethical materialism and of materialistic ethics' (*op. cit.* p. 47). He advises men

'to care nothing for praise or blame, virtue or vice; to seek merely to make themselves as happy as they can while happiness is within their reach; to eat and drink, for to-morrow they die' (*ib.*).

Concerning recent materialistic and atheistic speculations in China, there does not appear to be at present much reliable information. See CHINA.

In regard to materialism and atheism there is a great contrast between China and India. The introspective and philosophic character of the Hindus led them to dwell especially on that Absolute Spirit or Self which they felt to underlie, and to reveal itself in, all finite personalities. In comparison with this infinite and eternal Being, the visible world appears to them as an illusory appearance. Hence in Hindu speculation materialistic atheism plays but a small and inconspicuous part. In a conspectus of philosophical systems written by Mâdhavâchârya in the 14th cent. A.D. (recently translated into English by Cowell and Gough, and published in Trübner's 'Oriental Series,' 2nd ed., Lond. 1894), there is mentioned as one of sixteen schools, including the Buddhists and Jains, a school called the Materialists, who denied the existence of the soul and God, and rejected the whole theory of *karma* and transmigration.

'These were known under various designations, and in the 14th century A.D. their ideas were fathered on a mythical ogre in the Mahâbhârata, named Chârvâka. Denying transmigration, they rejected the entire claims of the Brâhmans. Matter was the only reality, and sense-perception the only form of knowledge. The pedigree of their text-book was traced back ironically (Macdonell) to Brihaspati, preceptor of the gods, and bitter verses survive, declaring, "There is no heaven, no final liberation, nor any soul in any other world"' (J. E. Carpenter, 'Oriental Philosophy and Religion,' in *DPhP* ii. 234). See also ATHEISM (Indian).

Atheism among the Buddhists as well as among the Greeks and Romans will be dealt with in separate articles following, and may therefore be passed over here.

3. **Modern atheism.**—Soon after the time of Christ scepticism declined, and its place was taken by that eclectic blending of Platonic, Aristotelian, and Oriental ideas which flourished in Alexandria and exercised at times considerable influence over Christian thought. The influence of the Church, and the reverence for Aristotle's writings, as well as the absence of any vigorous interest in science, explain the fact that until the close of the Middle Ages atheistic speculation was to a great extent in abeyance. It was not till the *Renaissance*, when new scientific discoveries were made, and freer principles of Biblical criticism began to be applied, that atheism again raised its head; and here, as in similar cases in India and Greece, the reputed atheism was in some cases genuine, but was more frequently a name applied to the theism or pantheism which was intellectually in advance of the theological thought of the time.

(*a*) *Atheism in England and France.*—It was not till the fifteenth century that materialistic interpretations of the universe began to show themselves in modern times. F. A. Lange, in his *History of Materialism* (vol. i. p. 225), mentions one isolated case in the 14th century—that of Nicolaus de Autricuria, who at Paris in 1348 was compelled to make recantation of several doctrines, and among others this doctrine, that *in the processes of nature there is nothing to be found but the motion of the combination and separation of atoms.*

'Here,' says Lange, 'is a formal Atomist in the very heart of the dominion of the Aristotelian theory of nature. But the same bold spirit ventured also upon a general declaration that we should put Aristotle, and Averroës with him, on one side, and apply ourselves directly to things in themselves. Thus Atomism and Empiricism go hand in hand together! In reality the authority of Aristotle had first to be broken before men could attain to direct intercourse with things themselves.'

The speculations which followed the incoming of the Copernican conception of the universe, such as those of Bruno and Vanini, were pantheistic rather than atheistic in their character. It was not till the first half of the 17th cent. that the ripe fruits of the great emancipation of thought began clearly to present themselves. On the

materialistic side these fruits appeared in the writings of Bacon, Gassendi, and Hobbes, and, on the spiritualistic side, in the works of Descartes. The materialism of the former writers cannot be called atheistic, for the atoms as they conceived them were not self-existent. There were probably a good many professors of materialistic atheism in this early part of the 17th century.

Père Mersenne, a contemporary and friend of Descartes, makes the startling statement that there were in his time as many as 50,000 atheists in the city of Paris alone. It seems likely, however, that the majority of these were called atheists simply because they declined to accept any longer the authority of Aristotle. Descartes himself had been accused of atheism on this ground.

About this time there was much scepticism and speculation which came very near to atheism, but escaped it by an adhesion that was, no doubt, in some cases insincere, but in other cases genuine enough, to the national Church. Whether the attachment of Thomas Hobbes to the English Church was sincere has been questioned. His philosophy was thoroughly materialistic. He held that even human sensation is nothing but the motion of corporeal particles; but he sheltered himself from the charge of atheism by saying that, in regard to his view of the universe, he confined himself exclusively to the phenomena which are knowable, and can be explained by the law of causality. Everything of which we can know nothing he resigns to theologians. The way in which, in his *Leviathan*, he utilizes religion for State purposes appears to render the genuineness of his theism very doubtful.

'He lays down the following definition, "Fear of power invisible, feigned by the mind or imagined from tales publicly allowed, *Religion*; not allowed, *Superstition*"' (Lange, *op. cit.*, vol. i. p. 283).

While both Thomas Hobbes and the other great English thinker of the 17th cent., John Locke, were attached to Christianity, and the latter no doubt most sincerely so, their writings had no little effect in preparing the way for future manifestations of positive atheism. Both the materialism which formed the basis of Hobbes' philosophy, and his selfish system of morals, were quite uncongenial to theistic belief. And Locke's doctrine of the origin of all ideas in sensation, though its atheistic tendency was, as we have seen, neutralized in his own case by his inconsistent belief in the necessity of an adequate causal ground for the universe, and by his recognition of the validity of the teleological argument, yet really undermined the rational basis of theism, and when consistently carried out, it, in conjunction with Hobbes' materialism, was largely instrumental in bringing about the positive atheism which flourished in France towards the middle of the 18th century. What kept Locke and, indeed, most thoughtful persons in England from atheism during the 17th and 18th cents. was the indestructible principle thus ennunciated by Locke:

'Whatsoever is first of all things must necessarily contain in it, and actually have, at least all the perfections that can ever after exist; nor can it ever give to another any perfection that it hath not actually in itself, or at least in a higher degree; it necessarily follows that the first eternal being cannot be matter' (cf. Flint, *op. cit.* p. 142).

It should be added that, as Dr. Flint acutely remarks, the absence in England of much positive scepticism and professed atheism during these two centuries is partly to be accounted for by the strong tendency at that time, and also till far on in the 19th cent., to refer theological insight and philosophical knowledge to two quite distinct sources. In § I it has been argued that in the above principle lies the most conclusive refutation of materialism and atheism. But though Locke built his own theism mainly on this foundation, it is a principle which finds no justification in his own exposition of the origin of knowledge. It is a purely *a priori* conception and belief, such as are also the conceptions of moral authority and of infinity. Accordingly, when Locke's ideas were introduced into France in the 18th cent., his doctrine of the origin of all knowledge in sensation was consistently worked out, and led several thinkers to atheism. The belief in a separate and specially inspired source of theological truth had to a large extent passed away among French thinkers; and hence what was simply neutral materialism in London became often positive atheism in Paris. The physician La Mettrie, the author of *L'Homme Machine* (1748), was led, through observing in his own case the influence of the movements of the blood on the power of thought, to maintain that all thinking and willing have their origin in sensation. He admits that it is probable that a Supreme Being exists, but adds that, if so, it is a theoretical truth without any use in practice.

'For our peace of mind,' he says, 'it is indifferent to know whether there is a God or not, whether He created matter, or whether it is eternal.' But a little further on he appears to agree with a friend of his whom he represents as arguing that 'the world would never be happy unless it was atheistic' (Lange, *History of Materialism*, ii. 78).

Lagne, who gives an excellent account of La Mettrie's writings, remarks that

'La Mettrie's friend has only forgotten that even religion itself, quite apart from any revelation, must be reckoned among the natural impulses of man, and if this impulse leads to all unhappiness, it is not easy to see how all the other impulses, since they have the same natural origin, are to lead to happiness' (*ib.*).

In his treatises on *Volupté* and *L'Art de Jouir*, La Mettrie seeks to justify the pursuit of sensual enjoyment in a manner which Ueberweg justly describes as 'still more artificially exaggerated than frivolous.'

About twenty years after the publication of La Mettrie's *L'Homme Machine*, appeared the work which is regarded as the *chef-d'œuvre* of French materialism. Its title is *Système de la nature ou des lois du monde physique et du monde moral* (1770). On its title-page it professes to be written by a M. de Mirabaud, who was a deceased secretary of the French Academy, but the real author was known to be Baron d'Holbach. Holbach's system, says Ueberweg, 'combines all three elements of the empirical doctrine, which till then had been cultivated separately rather than together, viz. materialism (La Mettrie's), sensationalism (Condillac's), and determinism (which Diderot had at length admitted).' In this elaborate treatise the atheism is most pronounced, so that when a translation of it was published in London by the secularists in 1859, it bore on its cover the title *The Atheist's Text-Book*. It directly attacks the existence of God, and traces the origin of religion to fear and ignorance. Holbach substitutes for God matter and motion. The work is highly rhetorical, and in parts quite eloquent. Its ethics resembles that of Epicurus. Like Epicurus, Holbach points to the pleasure and happiness which friendship and sympathy can impart, and reaches a code of morals which superficially seems somewhat exalted. In his concluding chapter he says:

'Be just, because equity is the support of human society. Be good, because goodness connects all hearts in adamantine bonds! Be thankful, because gratitude feeds benevolence, nourishes generosity! . . . Forgive injuries, because revenge perpetuates hatred! Do good to him that injureth thee in order to show thyself more noble than he is; and in order to make a friend of him who was once thine enemy. Be temperate in thine enjoyment, and chaste in thy pleasures, because voluptuousness begets weariness, intemperance engenders disease' (p. 513).

It is characteristic of this ethical theory, as of all sensational ethics, that the intrinsic grandeur

and worth of all these virtues are undermined and destroyed by the egoistic motives to which they are referred.

Several other French writers of this epoch show anti-theistic leanings, even when they repudiate atheism, such as Diderot, in his later life, Helvetius, Lalande, Maréchal, etc. (see Flint's *Anti-theistic Theories*, pp. 469–474). The great astronomer Laplace is sometimes classed among atheists, because, when reminded by Napoleon that in his treatise on *Mécanique Céleste* he had said nothing about God, he replied, 'Sire, I had no need of that hypothesis.' But it is quite possible that in this reply he meant simply that he could account for the celestial movement by the forces of which alone science takes cognizance, and he may not have implied that these second causes do not demand for their existence a self-existent 'Cause of causes' (see § I, above; and cf. Fiske, *Through Nature to God*, p. 141). It is related of David Hume that, when dining once with a party of eighteen at the house of Baron d'Holbach, he expressed a doubt as to whether it was possible to find any person who would avow himself dogmatically an atheist. On which his host replied, 'My dear sir, you are at this moment sitting at table with seventeen such persons.'

The greatest French writer, however, of this time, Voltaire, felt no respect for these sceptical or atheistic reasonings. That powerful and original thinker (like Locke in the previous century) saw that only by a spiritual First Cause could living and self-conscious beings be produced; and in the universe he saw such clear evidence of beneficent purpose that more than once in his writings he dwells eloquently on that old argument from design to which from the time of Anaxagoras and Socrates theists have confidently appealed, and which, as we shall afterwards see, the facts of evolution have by no means invalidated.

The materialistic atheism which flourished in France before and during the Revolution gradually decayed, owing partly to Kantian and Hegelian influence, and partly to that spiritual philosophy which was developed in France itself by Maine de Biran and Victor Cousin.

(*b*) *German anti-theistic theories.*—About a century after the advent of materialism and atheism in French thought, there arose in Germany, partly as a result of the extreme idealistic thinking, but to a still greater extent as a reaction against it, a succession of anti-theistic writers of whom the latest, Professor Ernst Haeckel, is still exercising great influence, both on the Continent and in Britain. The first of these in date, Ludwig Feuerbach, began his intellectual career as an idealist. Along with the still more celebrated writer David Strauss, he came forth from the extreme left wing of the Hegelian school. Both of these thinkers found the supreme object of interest not in the Hegelian Absolute Spirit, but in human nature; and hence Feuerbach was a humanist like Auguste Comte rather than a materialist.

'In his view,' says R. H. Hutton, 'God is but the magnified image of man reflected back upon space by the mirror of human self-consciousness. As pilgrims to the Brocken often observe, during an autumn sunrise, shadows of their own figures enormously dilated confronting them from a great distance, bowing as they bow, kneeling as they kneel, mocking them in all their gestures, and finally disappearing as the sun rises higher in the sky, so the German Atheist maintains that in the early dawn of human intelligence, man has been deluded by such a Brocken-shadow of himself, which has been childishly worshipped as an independent being and named God, but which must vanish soon' ('The Atheistic Explanation of Religion,' in *Essays Theological and Literary*, vol. i. p. 25. This article is an admirable exposition and criticism of Feuerbach's position).

The translation of Feuerbach's chief work, *The Essence of Christianity* (*Das Wesen des Christenthums*, 1841), by Miss Marian Evans (George Eliot) in 1854, which was reviewed in the before-mentioned article by R. H. Hutton, attracted much attention in this country. The feature in his thought which has led to his being classed among materialists is his doctrine that only the sensible is real.

'The body,' he says, 'is part of my being; nay, the body is its totality, is my Ego.'

Consistently with this view, he emphatically rejected all belief in personal immortality.

Far more decisively materialistic than Feuerbach was Carl Vogt, who in his *Physiological Letters* (1845–1847) developed the ideas of the French author Cabanis (1798), and argued that 'thought stands in the same relation to the brain as the bile to the liver, or the urine to the kidneys.' In 1852 appeared Jacob Moleschott's famous work, *The Circulation of Life* (*Der Kreislauf des Lebens*), which maintains that all vital phenomena can be explained as a perpetual circulation of matter from the inorganic to the organic world, and then back again from the organic to the inorganic. This doctrine has recently been acutely criticized by Sir Oliver Lodge, who contends that the phenomena of organization and life find their only satisfactory explanation in the assumption that a higher principle, life, guides and controls the elements of matter and energy (see his article on 'Mind and Matter' in *HJ*, Jan. 1905). 'Without phosphorus,' says Moleschott, 'there is no thought'; and he concludes that thought is a movement of the matter of the brain.

The book which in this materialistic and atheistic movement of the 19th cent. had much the same position and influence as Holbach's *System of Nature* had in the century preceding, was Professor Ludwig Büchner's *Force and Matter* (*Kraft und Stoff*, 1855). Büchner was the first of those German materialists who afterwards came under the influence of Darwin's book on *The Origin of Species* (1859). He professed that he found in Darwinism the chief support of materialism, and in the later editions of his book he declared that the doctrine of Natural Selection had wholly destroyed the force of the teleological argument. His general inference is that—

'not God, but evolution of matter, is the cause of the order of the world; that life is a combination of matter which in favourable circumstances is spontaneously generated; that there is no vital principle, because all forces, non-vital and vital, are movements; that movement and evolution proceed from life to consciousness; . . . that there is no God, no final cause, no immortality, no freedom, no substance of the soul' (Case, 'Metahpysics,' in *EBr* 10, vol. xxx. p. 647).

Sometimes Büchner speaks of mind as an effect of matter, and sometimes as a movement of matter, and he uses these expressions indifferently. He defines psychical activity as 'nothing but a radiation through the cells of the grey substance of the brain of a motion set up by external stimuli.' Büchner argues that his 'philosophic system, since it puts at its head not matter as such, but the unity and indivisibility of force and matter, cannot be described as materialism' (*Last Words on Materialism*, p. 273). But, as Professor Case points out, if a philosophy makes force an attribute of matter, as Büchner's does, it will recognize nothing but matter possessing force, and will therefore be at once materialism and monism, *i.e.* materialistic monism.

The most recent anti-theistic work of importance in Germany is Professor Haeckel's *Riddle of the Universe* (*Die Welträthsel*), of which there is an English translation by J. McCabe (see § I, above). The peculiar feature of Haeckel's theory is that, like the ancient Hylozoists, he represents the original substance as having a psychical as well as a physical side. Because of this he contends that his philosophy is not materialism. As, however, in his doctrine mind is always spoken of as an attribute of body, and cannot be conceived to exist dissociated from matter, it would appear that his system, like

Büchner's, is fitly described as materialistic monism. Haeckel derives everything from an eternal primitive substance, which by condensation passes first into imponderable ether, and then by further condensation into the elements of ponderable matter. This eternal substance is God. His system bears some resemblance to that of Leibniz in so far as his monads possess the germs of perception and appetition. The souls of animals and men have no origin separate from that of their bodies. Sensation is the property of all matter. In plants and the lowest animals he considers sensation and will to be present, but only in a rudimentary and unconscious form. As to the point in evolution at which consciousness first clearly presents itself, he is not explicit.

'However certain,' he says, 'we are of the fact of this natural evolution of consciousness, we are, unfortunately, not yet in a position to enter more deeply into the question' (Haeckel, *Riddle of the Universe*, p. 191).

On this Case makes the weighty remark:

'Thus in presence of the problem which is the crux of materialism, the origin of consciousness, he first propounds a gratuitous hypothesis that everything has mind, and then gives up the origin of conscious mind after all. He is certain, however, that the law of substance somehow proves that conscious soul is a mere function of brain, that soul is a function of all substances, and that God is the force or energy, or soul or spirit, of Nature.' (See Professor Case's admirable article on 'Metaphysics' in *EBr*[10] for a fuller account and criticism of the systems of Büchner and Haeckel.)

As was before remarked, Haeckel's philosophy affords no explanation of how it comes about that the corpuscles from the primitive substance conspire not only to form organisms, but to produce an orderly and teleologically arranged cosmos. What is needed for this is not only the psychical character which he assigns to each corpuscle, but an intelligence and will dominating the whole and co-ordinating all its separate parts. He calls his philosophy the monistic or mechanical philosophy, as contrasted with the teleological.

'There is everywhere,' he says, 'a necessary causal connexion of phenomena, and therefore the whole knowable universe is a harmonious unity, a *monon*' (*Evolution of Man*, ii. 356).

But Haeckel's 'Law of Substance' gives no explanation of the cause of this 'harmonious unity,' nor does it at all account for the origin of the ideas which he makes the very bases of religion—the ideas, namely, of the good, the true, and the beautiful. In his system, spirit and matter are inseparable, and therefore spirit can neither create nor control matter. This circumstance alone shows that there is an impassable gulf between his world-theory and any world-theory that can be rightly termed theistic.

Along with German anti-theistic theories must be classed a doctrine which, so far from being materialistic, is intensely idealistic, namely, the doctrine of 'ethical idealism,' which is propounded by F. A. Lange in the third volume of his very able *History of Materialism*. Lange, under the influence of the agnostic side of the Kantian philosophy, came to the conclusion that there exist in the universe no reality or realities corresponding to our ideal conceptions. But these ideal conceptions, he contends, are in themselves of incalculable value to the soul, and it is in this sphere of the poetic imagination alone that we must look for the satisfaction of our religious sentiments and aspirations. The intelligible world is, in his view, a world of poetry. The greatest poems, he argues, have immortal worth, though the heroes celebrated in them may have had no historical existence. To this illustration pastor Heinrich Lang of Zürich very pertinently replied:

'Poems hold their own when they æsthetically satisfy: religion decays so soon as it is seen that the objects of faith are imaginary and not real.' An admirable criticism of the school of religious thought of which Lange is one of the leaders will be found in Martineau's Address on 'Ideal Substitutes for God' in his *Essays, Reviews, and Addresses* (vol. iv. p. 269 ff.).

4. **Positivism.**—Positivism, both as a philosophy and as a religion, appears to have about as much influence in England as it has in the land of its birth. In Mr. Frederic Harrison and Dr. J. H. Bridges it has had remarkably able exponents and advocates in this country; and its monthly organ, *The Positivist Review*, often reaches a high level of philosophical and sociological thought. As a philosophy, Positivism professes to be an exclusively non-metaphysical system. It teaches that the phenomenal world is the only knowable world, and it deprecates as wholly without value or interest all speculations concerning the nature of the ground or cause beneath or behind the phenomena of the sensible universe. While Herbert Spencer holds that our very conception of the relative character of all our scientific knowledge compels us to believe in the existence of an Absolute Reality behind the world of phenomena, and that it is this Unknowable Reality which forms the object of religion, the Positivists, on the other hand, maintain that what is wholly unknowable is wholly without interest to mankind, and therefore can never excite or satisfy religious ideas or emotions. According to Comte's celebrated law of the three stages of religious insight, mankind begins by assigning the causation of cosmical phenomena to the supernatural volition of personal deities, and finally to one Supreme Deity, when the stage of monotheism is reached. Reason, Comte held, gradually overthrows this theological belief, and in place of a personal cause sets up metaphysical abstractions such as centrifugal force, elective affinity, or vitality as the causal principles behind phenomena. Science, however, at length concludes that these abstractions rest upon no real experience; and the third and final stage is that of Positivism. The Positive stage of conviction, towards which all culture is approaching, means, he says, the recognition of the truth that all ontological causes (whether metaphysical or theological) are wholly beyond the scope of man's intellectual insight. It has been shown by many critics of Positivism that these three ways of considering the universe are not necessarily successive, but constantly occur together in the history of philosophical and religious thought.

There is one true and valuable feature in Comte's philosophy which raises it far above the level of the 18th century materialism of La Mettrie, d'Holbach, etc. They carried up the materialistic and mechanical principles, by which they explained the inorganic world, into the sphere of life and consciousness, and thus arrived at the description of man as a machine (*L'Homme Machine*). This, said Comte, is materialism, and against it he strongly protested. He would never allow that the mechanical theory was rationally applicable beyond the limits of the physical world, and held it to be self-condemned so soon as it was pushed into the provinces of biology and human character (Martineau, *Types of Ethical Theory*, i. 503).

Comte's religious conception appears to be atheistic, in so far as it rejects the view that nature and humanity are the products of a self-existent and self-conscious Eternal Cause. In the place of God, in the theistic sense, he substitutes the *Grand Être*—Humanity—as the supreme object in the universe. Some critics hold that the real object of the Positivist's adoration is the ideal of human perfection, which he practically hypostatizes and adores. Positivists, however, will not admit this, for this would be, in their view, equivalent to the worship of an abstraction. In the *International Journal of Ethics* for July 1900 (p. 425), Dr. Coit, the founder of the 'ethical culture' societies in England, says:

'So far as I am aware, the Positivists have never declared that Humanity is God. But they have maintained that all the homage

and obedience which has been rendered to God should now be transferred to Humanity. They have worshipped Humanity, they have prayed to it, they have found consolation and strength in communion with it. Surely, then, it has become their God.'

In the next number of the *Positivist Review*, however, Mr. Frederic Harrison expresses strong dissent from this statement, and denies that Positivists have prayed to and worshipped Humanity.

The non-metaphysical character of the Positivists' religion provokes a comparison of it with Buddhism. There are, however, vital differences between the two. The religious sentiments of Positivists do not centre in a glorified personal being; nor has Positivism as a religion anything corresponding to the doctrines of *karma* and transmigration, which bring Buddhism into some affinity with theistic religion. Cf., further, art. POSITIVISM.

5. **Anti-theistic theories in England in the nineteenth century.**—It was not till the middle of the 19th cent. that anti-theistic writings had much influence in England. The *Essay on the Origin and Prospects of Man* (3 vols., 1831)—a posthumous work by Mr. Thomas Hope, the author of a brilliantly written novel, *Anastasius, or Memoirs of a Modern Greek*—is a confused medley of materialistic speculations respecting the origin of the inorganic and organic worlds from molecules, which are represented as proceeding by way of radiation or evolution from the substance of God, the inconceivable primary cause. On its appearance Thomas Carlyle characterized the book as 'a monstrous Anomaly, where all sciences are heaped and huddled together' (*Miscellaneous Essays*, iv. 31). Some illustrative passages are quoted from it in Flint's *Anti-theistic Theories* (pp. 476, 478).

A much more lucid materialistic treatise, and also more decidedly atheistic, appeared in 1851, in the form of *Letters on the Laws of Man's Nature and Development*, from the pens of Mr. H. G. Atkinson and Miss Harriet Martineau. In this book Atkinson says:

'I am far from being an Atheist, as resting on second causes. As well might we, resting on the earth, deny that there is any depth beneath; or, living in time, deny eternity. I do not say, therefore, that there is no God; but that it is extravagant and irreverent to imagine that cause a Person; the fundamental cause is wholly beyond our conception' (p. 240).

As these writers, however, always speak of matter as if it were eternal, declare that 'the mind of man is the result of material development,' and assert that 'philosophy finds no God in nature, nor sees the want of any,' it is impossible to deny that their book is fundamentally atheistic. Like most atheistic treatises, it denies the freedom of the will and personal immortality, and declares that 'there is no more sin in a crooked disposition than in a crooked stick in the water, or in a hump-back or a squint.' At the time of its appearance the work was severely criticized by James Martineau in the *Prospective Review*, and there is another acute criticism of it in Professor J. S. Blackie's *Natural History of Atheism* (1877).

6. **Secularism.**—English Secularism appears to be almost entirely an indigenous growth. During the early portion of the 19th cent. there appeared several writings which, though by no means atheistic, yet prepared the way for the incoming of a non-religious and also of an anti-religious drift of thought. The phrenological writings of George Combe, though they were in his own case associated with theistic views, were calculated to encourage a materialistic view of mind. Thomas Paine and Richard Carlile were themselves Deists, but many of the admirers of their rationalism did not admit the validity of their deistic views. The philosophy of the philanthropic socialist, Robert Owen, exercised a strong anti-theistic influence. Owen held a doctrine somewhat resembling Haeckel's, in which God is conceived as permeating all the particles of the universe. At this time there was also an important circle of thinkers, of which Jeremy Bentham was the centre, and which was strongly antagonistic to positive religious beliefs. Professor Bain in his *Life of James Mill* says:

'That Mill's acquaintance with Bentham hastened his course towards infidelity it is impossible to doubt. Bentham never in so many words publicly avowed himself an atheist, but he was so in substance. His destructive criticisms of religious doctrine in *The Church of England Catechism Reviewed*, and still more his anonymous book on Natural Religion, left no residue that could be of any value. As a legislator he had to allow a place for Religion; but he made use of the Deity, as Napoleon wished to make use of the Pope, for sanctioning whatever he himself chose, in the name of Utility, to prescribe. John Austin followed on the same tack; but this course was too disingenuous to suit either of the Mills. It is quite certain, moreover, that the whole tone of conversation in Bentham's more select circle was atheistic' (cf. *Mind*, vol. ii. p. 527).

All these circumstances had probably some influence in bringing about that secularist movement in which George Jacob Holyoake and Charles Bradlaugh were the leading spirits. Bradlaugh in the *National Reformer*, and Holyoake in the *Reasoner*, appealed to a large number of readers, especially of the artizan class. The work thus begun has been continued down to the present time by a succession of lecturers and writers; but it has now to a large extent lost its positively atheistic character, and is merged in the larger movement of agnosticism, which the numerous cheap publications of the 'Rationalist Press Association' are doing much to advance. The name 'Secularist,' as distinguished from 'Atheist,' was originated by Holyoake in 1851. The latter word, to which Bradlaugh had no dislike, was objected to by Holyoake on the ground that it was often understood to mean 'one who is not only without God but also without morality.' The two leaders were of very dissimilar types of mind. Holyoake, like Robert Owen, of whom he had been a disciple, was of a constructive disposition; he would have liked to give to the word 'secularism' a meaning which would not have excluded theists. Bradlaugh, on the contrary, was naturally aggressive. He identified all theological ideas with superstition, and the work of undermining them he evidently found very congenial.

The chief logical ground on which they both rejected theism differed somewhat from that which was taken by earlier atheists of that century. These, as we have seen, asserted the existence of a First Cause, though they regarded its character as wholly unknowable. Holyoake and Bradlaugh, on the other hand, started with matter, maintaining that it needed no cause, being itself self-existent and eternal. Their contention was that the creation of matter by a self-existent Spirit is inconceivable. To this the theist replies that, though we have no experience of it, such creation would violate no necessary law of thought; and he further contends that the atheist's assertion that out of lifeless matter organization and life spontaneously arose is not only inconceivable, but actually violates the law of thought which compels us to believe that no cause for an effect can be admitted unless there is some element in it which can be conceived as capable of giving rise to the effect.

Another very prominent feature in both Bradlaugh's and Holyoake's attack on theism was their attempt to invalidate that argument from design in which so many thinkers, including Locke and Voltaire, have found a sure basis for theistic belief. Holyoake in his chief works, *Paley Refuted* and *The Trial of Theism*, dwells at great length on this question. Finding it impossible to explain the order and systematic organization of the cosmos on the materialistic hypothesis, he tries to overthrow the theist's explanation by contending that, if it were a real explanation, it would involve other necessary assumptions which experience shows to have no existence in fact. Admit,

he says, that there was a designer, then that designer must have been a person; and if a person, he could not have designed the universe unless he had possessed what all persons whom we know possess, namely, a cerebral organization, a brain; and, he concludes, there is no evidence of the existence of such a brain. This argument has also been employed by Professors W. K. Clifford and Du Bois-Reymond in the anti-theistic interest. It has been replied to by eminent thinkers, both scientific and philosophical. On the relations between mind and matter Sir Oliver Lodge says:

'Fundamentally they amount to this: that a complex piece of matter called the brain is the organ or instrument of mind and consciousness; that if it be stimulated mental activity results; that if it be injured or destroyed no manifestation of mental activity is possible. . . . Suppose we grant all this, what then? We have granted that brain is the means whereby mind is made manifest on this material plane, it is the instrument through which alone we know it, but we have not granted that mind is *limited* to its material manifestation; nor can we maintain that without matter the things we call mind, intelligence, consciousness, have no sort of existence. Mind may be incorporate or incarnate in matter, but it may also transcend it. Brain is truly the organ of mind and consciousness . . . but no one is at liberty to assert on the strength of that fact that the realities underlying our use of those terms have no existence apart from terrestrial brains' ('Mind and Matter,' *HJ*, Jan. 1905, p. 324 f.).

In § 1 reasons have been given for concluding that organization can be explained only by assuming that a higher principle guides the arrangement of the material particles. If this is the case, life is the cause of the structure of brain, while brain is posterior to life, and is the organ through which life and the material universe interact. Dr. James Martineau, in his article on 'Modern Materialism: its Attitude towards Theology,' very carefully discusses this question. He argues that, though a finite and created mind needs a cerebral organ for its communication with the physical world, it is highly probable that a self-existent and eternal Mind is not thus conditioned. 'Further,' he says,

'I would submit that in dealing with the problem of the Universal Mind this demand for organic centralization is strangely inappropriate. It is when mental power has to be localised, bounded, lent out to individual natures and assigned to a scene of definite relations, that a focus must be found for it and a molecular structure with determinate periphery be built for its lodgment. And were Du Bois-Reymond himself ever to alight on the portentous cerebrum which he imagines, I greatly doubt whether he would fulfil his promise and turn Theist at the sight; that he had found the Cause of causes would be the last inference it would occur to him to draw; rather would he look round for some monstrous *creature*, some cosmic megatherium, born to float and pasture on the fields of space' (*Essays, Reviews, and Addresses*, vol. iv. p. 254).

If the objector still insists that the Eternal Mind must have some material organ, both Sir Oliver Lodge and Dr. Martineau point out that

'it has been surmised that just as the corpuscles and atoms of matter, in their intricate movements and relations, combine to form the brain cell of a human being, so the cosmic bodies, the planets and suns and other groupings of the ether, may perhaps combine to form something corresponding as it were to the brain cell of some transcendent mind. The thing is a mere guess, it is not an impossibility, and it cannot be excluded from a philosophic system by any negative statement based on scientific fact' (Sir Oliver Lodge, *loc. cit.*, p. 325; cf. Martineau, *op. cit.*, p. 256).

In addition to these two arguments for atheism, Bradlaugh appeals to some metaphysical obstacles which, in his opinion, bar the way to a theistic conclusion. The chief of these is that we are necessitated by the laws of thought to conceive of Substance as 'that which does not require the conception of anything else antecedent to it'; and therefore Substance cannot have been created or originated. To this Dr. Flint well replies:

'If he [Mr. Bradlaugh] can conceive substance *per se*, and not merely through its qualities, effects, and relationships to his own faculties, he is logically bound to abandon sensationalism and all its consequences, and betake himself to absolute idealism or to mysticism' (*op. cit.*, p. 517).

In a similar strain Bradlaugh contends that, if God were infinite, it would be impossible to conceive of any addition to Him, and that, therefore, an infinite God and a created universe are incompatible ideas. Such arguments as these, even if they were valid (which all theists would deny), would have little or no weight with secularists in general; for such arguments assume the existence of an *a priori* source of knowledge, and this very few atheists would grant.

Besides Holyoake and Bradlaugh, there have been other secularist lecturers and writers, such as Charles Watts, G. W. Foote, Mrs. Besant (who has since become a leader among the theosophists), W. S. Ross, etc. An account of the books, pamphlets, and periodicals which have been issued by this school of anti-theistic thought will be found in Dr. Flint's *Anti-theistic Theories* (pp. 509–519). See also art. SECULARISM.

7. Recent Agnosticism.—In connexion with this subject, brief reference needs to be made in conclusion to some recent distinguished writers, whose speculations, though often by no means atheistic, have unquestionably weakened theistic belief in the case of many of their readers. The most eminent among them are the scientific writers, G. J. Romanes, W. K. Clifford, John Tyndall, T. H. Huxley, and the philosopher, H. Spencer. In 1878 there was published anonymously a decidedly atheistic work, entitled *A Candid Examination of Theism*, by Physicus. Many years later, Romanes acknowledged the authorship, and stated at the same time that he had then come to see that his most important objections to theism were invalid. In the above work he says that he had at one time been convinced by Baden Powell's work on *The Order of Nature*, that this order necessitates the hypothesis of an eternal creative intelligence and will, but that, on the appearance of Spencer's *First Principles* and Charles Darwin's work on *Natural Selection*, his views had undergone a total change, and that at the time of writing the *Candid Examination* he felt assured that the appearances of design in the universe could be explained without the assumption of a creating mind. About the year 1889, however, he wrote three articles on the 'Influence of Science upon Religion,' and these, together with some other notes on theism from his pen, were published, after his death, under the title *Thoughts on Religion*, by Dr. Charles Gore, now the Bishop of Birmingham. In these articles Romanes declares his recovered faith in the validity of the teleological argument.

'I think it is perfectly clear,' he concludes, 'that if the argument from teleology is to be saved at all, it can only be so by shifting from the narrow basis of special adaptation, to the broad area of Nature as a whole. And here I confess that to my mind the argument does acquire a weight which, if long and attentively considered, deserves to be regarded as enormous. For although this and that particular adjustment in Nature may be seen to be proximately due to physical causes . . . the more ultimate question arises, How is it that all physical causes conspire, by their united action, to the production of a general order of Nature? It is against all analogy to suppose that such an end as this can be accomplished by such means as those, in the way of mere chance or "the fortuitous concourse of atoms." We are led by the most fundamental dictates of our reason to conclude that there must be some cause for *this co-operation of causes*' (*Thoughts on Religion*, p. 67 f.).

He then proceeds to show that this adequate cause can be nothing short of a Divine Mind, though that Infinite Mind may be, and indeed must be, beyond the comprehension of man's finite intelligence. For the views of Dr. Romanes on the 'character' of God, and on Christianity, the *Thoughts on Religion* must be consulted. Bishop Gore mentions that his friend, shortly before his death, expressed his belief that it is by 'intuition' we become acquainted with God, and added that he was in cordial agreement on this subject with Knight's *Aspects of Theism*.

Professor W. K. Clifford held a world-theory somewhat similar to that of Haeckel. Everything, both physical and psychical, was, he maintained, composed of elements of 'mind-stuff,' and

when these elements are compounded in a nervous system, they manifest the phenomena of consciousness. As to the cause which so arranges these elements as to form out of them the actual orderly universe of matter and mind, his writings furnish no explanation. With Holyoake and Du Bois-Reymond, he regards the existence of a self-existent personal cause as highly improbable, owing to the want of evidence for the existence of a corresponding brain. What has been previously said in reply to Holyoake's secularistic atheism applies equally to Clifford's reasons for denying the existence of God. Clifford's view of religion was akin to Positivism.

'In such a moment of utter sincerity,' he says, 'when a man has bared his own soul before the immensities and the eternities, a presence in which his own poor personality is shrivelled into nothingness arises within him, and says, as plainly as words can say, "I am with thee, and I am greater than thou." Many names of Gods, of many shapes, have men given to this presence, seeking by names and pictures to know more clearly the guide and the helper of men.'

These words appear to point to a theistic conclusion, but Clifford disappoints this expectation; for his final judgment is that, 'after all, such a helper of men, outside of humanity, the truth will not allow us to see' (*Lectures and Essays*[2], 386).

Professor John Tyndall's Address before the British Association at Belfast in 1874 excited much attention, and called forth many criticisms from the theistic side. Among these perhaps the most important was a paper in the *Contemporary Review* on 'Modern Materialism: its Attitude towards Theology,' by Dr. James Martineau, between whom and Professor Tyndall there had often been mental encounters at the meetings of the Metaphysical Society. (This paper, together with another on 'Religion as affected by Modern Materialism,' is reprinted in vol. iv. of Martineau's *Essays, Reviews, and Addresses.*)

Though in the 'Address' Tyndall says, 'I discern in matter the promise and potency of all terrestrial life,' he declined to be called a materialist. His view somewhat resembled Haeckel's, in that he maintained that sensation could not arise unless the elements of matter had a psychical as well as a physical side. He did not, however, regard sensation as a property of matter, but rather as a universal concomitant of matter. The passage from the physics of the brain to the facts of consciousness he admitted to be altogether inconceivable by the human mind. As to the cause of the atoms and of the processes of evolution, his position was not atheistic but agnostic. In an Address at Birmingham, a few months later than the one at Belfast, he says, in reply to the question whether there are not in nature manifestations of knowledge and skill higher than man's:

'My friends, the profession of that atheism with which I am sometimes so lightly charged would, in my case, be an impossible answer to this question.'

Like Lange, he confines religion to the sphere of idealism and emotion. In reference to Tyndall's statement that 'we must radically change our notions of "Matter" if we are to understand how it carries with it the promise and potency of all terrestrial life,' Martineau remarks (*op. cit.* iv. 175) that what Tyndall says simply amounts to this:

"'Charge the word [matter] with your *quæsita*, and I will promise to elicit them explicitly." It is easy travelling through the stages of such an hypothesis; you deposit at your bank a round sum ere you start; and, drawing on it piecemeal at every pause, complete your grand tour without a debt. Words, however, are they can hold such richness of prerogative, will be found to have emerged from their physical meaning, and to be truly *θεοφόρα ὀνόματα*—terms that bear God in them, and thus dissolve the very theory which they represent. Such extremely clever Matter—matter that is up to everything, even to writing *Hamlet*, and finding out its own evolution, and substituting a molecular *plebiscite* for a divine monarchy of the world—may fairly be regarded as a little too modest in its disclaimer of the attributes of Mind.'

The views of Professor T. H. Huxley differ in one important respect from those of his great friend, Professor Tyndall. The former, through his study of Hume, was inclined to accept the principles of sensational idealism, whereas the latter sided with the agnostic realism of Herbert Spencer. Huxley, accordingly, seeks to rebut the charge of materialism, by declaring that he is utterly incapable of conceiving 'the existence of matter if there is no mind in which to picture that existence' (*Method and Results*, Lond. 1893, p. 245). But, while he thus makes the existence of matter dependent on mind, he at the same time holds the doctrine of 'human automatism,' *i.e.* that while states of consciousness depend upon the molecular movements of the cerebral substance, 'there is no proof that any state of consciousness is the cause of change in the motion of the matter of the organism' (*ib.* p. 244).

At a meeting of the Metaphysical Society, when Huxley had read a paper on the subject, 'Has the Frog a Soul?' one of the members present said: 'I was walking down Oxford Street this morning, intending to go straight to the Marble Arch; but, happening to glance at my boots, I saw that I needed a new pair, and I accordingly turned into Regent Street, where my bootmaker lives.' Then, addressing Huxley, he asked, 'Am I to understand that the coming into my mind of the idea about the boots had no causal connexion with the change in the direction of my walk?' 'Most certainly you are,' replied the professor.

It is clear, then, that though Huxley in words rejects materialism, and asserts that the body is only a group of mental symbols, he is virtually a decided materialist, for he represents mind as dependent for its existence on this group of mental symbols, and possessed of no power to act in any way upon the reality for which these symbols stand.

As Huxley maintained that nothing is knowable but phenomena, *i.e.* states of consciousness, he held that we can neither affirm nor deny the existence of God or of any metaphysical realities behind phenomena. To describe his attitude towards these metaphysical questions he coined the convenient word 'Agnostic.' The charge of atheism he emphatically repels, saying:

'The problem of the ultimate cause of existence . . . seems to me . . . hopelessly out of reach of my poor powers. Of all the senseless babble I have ever had occasion to read, the demonstrations of these philosophers who undertake to tell us all about the nature of God would be the worst, if they were not surpassed by the still greater absurdities of the philosophers who try to prove that there is no God' (*Method and Results*, p. 245ff.).

With regard to the relation of the Darwinian account of evolution to the argument from design, Huxley expresses himself as follows:

'No doubt, it is quite true that the doctrine of Evolution is the most formidable opponent of all the commoner and coarser forms of Teleology. . . . The teleological and the mechanical views of nature are not, however, of necessity mutually exclusive. On the contrary, the more purely a mechanist the speculator is, the more firmly does he assume a primordial molecular arrangement, of which all the phenomena of the universe are the consequences; and the more completely is he thereby at the mercy of the teleologist, who can always defy him to disprove that this primordial molecular arrangement was not intended to evolve the phenomena of the universe' (*Critiques and Addresses*, pp. 305–307).

It would seem that Huxley should here have asked himself the question whether this 'primordial arrangement,' from which a universe abounding in marks of adaptation has proceeded, does not by a necessity of human thought demand an adequate cause. Romanes, as we have seen, did put this question to himself, and the answer to it in which he finally found satisfaction was that it is only on the hypothesis of the creative action of an Eternal Mind that the facts of physical and mental evolution are at all satisfactorily accounted for. Huxley, however, never fairly faces the question of ultimate causation, but concludes his criticism of the teleological argument with the words:

'Why trouble oneself about matters which are out of reach, when the working of the mechanism itself, which is of infinite practical importance, affords scope for all our energies?' (*ib.* p. 307).

He forgot that the human mind has other aspirations and faculties besides those which lead

to scientific discovery; that it cannot content itself with the ascertainment of the order of phenomenal succession, but must perforce, for the satisfaction of its rational, its ethical, and its religious nature, ever seek after insight into the reality and the character of the *Causa causarum*.

Herbert Spencer's attitude towards theism was by no means so negative or neutral as was that of Tyndall and Huxley; and with good right he maintained that his philosophical system might be pantheistic, but could not justly be termed atheistic. His conception of the basal reality of the universe rested upon an assumed *a priori* principle.

In opposition to the doctrine of Mansel and Sir W. Hamilton, he maintains,

> 'Impossible though it is to give to this consciousness of the Absolute any qualitative or quantitative expression whatever, it is not the less certain that it remains with us as a positive and indestructible element of thought' (*First Principles*[6], p. 77; cf. *Nineteenth Century*, July 1884, pp. 5–7).

In his view it is the same ultimate reality which in the inorganic world manifests itself in the form of matter and motion, and in living beings in modes of consciousness. His philosophy, however, furnishes no explanation of how, from the modes of matter and motion which physical science discerns, organic structures can spontaneously arise. He states that the volumes in which he would have explained the passage from the inorganic to the organic had for want of time not been written. What these volumes would have contained we can only conjecture from other passages in Mr. Spencer's writings, where he maintains that, in his doctrine of an infinite and eternal energy out of which all phenomena, both psychical and physical, arise, he has reached a reality which satisfies the demands alike of science and of religion. In 1884, he declares that

> 'though the attributes of personality, as we know it, cannot be conceived by us as attributes of the Unknown Cause of things, yet duty requires us neither to affirm nor to deny personality, but to submit ourselves in all humility to the established limits of our intelligence, in the conviction that the choice is not between personality and something lower than personality, but between personality and something higher; and that the Ultimate Power is no more presentable in terms of human consciousness than human consciousness is representable in terms of a plant's functions' (*Nineteenth Century*, July 1884, p. 7).

Were it not for the last clause in this quotation, one might suppose that Spencer held a view akin to the theistic doctrine of Lotze, *i.e.* that personality under human limitations must needs be imperfect, and that it is only in God that perfect personality is realized. Lotze's doctrine is theistic, because it implies that, in conceiving of God after the fashion of the highest form of human personality, we have a real and positive, though imperfect, insight into the nature of God. The last clause of the above quotation, however, denies the possibility of any such insight, and thus entirely separates Spencer's doctrine from true theism. Further, Spencer's attempt to derive all moral ideals and all consciousness of moral authority from the experiences of pleasure and pain, makes it impossible for him to recognize in our ideals any insight into the *character* of God; and hence his Ultimate Reality cannot be regarded as an adequate object of religious faith and worship.

This article may conclude with the obvious remark, that at the present time atheism in the definite form which it has often assumed in the past has almost entirely disappeared, and an agnostic form of rationalism has taken its place. Benn's treatise on *The History of English Rationalism in the Nineteenth Century*, and Robertson's *Short History of Freethought*, will give a tolerably clear idea of the forms of negation with which the defenders of theism will probably have to deal during the present century.

CHARLES B. UPTON.

ATHEISM (Buddhist).—1. Buddhism, in so far as it is a philosophic system, is radically averse to the idea of a Supreme Being—of a God, in the Western sense of the word. It must be remembered that this atheism is not a characteristic peculiar to Buddhism alone. The 'Lord' (*Īśvara*) of the nominally theistic schools (*aiśvarikas*), when He is not conceived of as an Oriental despot, arbitrarily imputing sin or virtue and assigning hell or heaven to His creatures, is practically only an Organizer of the world, keeping account of the actions (*karma*) of creatures in order to ensure their due recompense, and, after each period of chaos, re-constructing the universe in order to set each creature in the place which befits it. All the Hindus believe, as a matter of fact, in endless transmigrations.

Another point worthy of remark is that, although the Buddhists maintain the uselessness of this 'Lord,' a mere delegate of the *karma* of creatures, they nevertheless personify the *karma*, or Law. 'Even if I hid my sin from every one, I should not hide it from the Law' (cf. *SBE* xxxv. 295). But, as a general rule, retribution for deeds is believed to operate automatically by reason of an energy called the 'indestructible' (the 'invisible' of the Brāhmanical treatises), and the system is therefore atheistic because it does away with the thought of a personal Being who would scrutinize the 'book of debts' of which their treatises sometimes speak. It must be acknowledged, however, that to believe in infallible and immutable justice is to recognize at least one of the thoughts which constitute the idea of God. The Buddhists know that good actions can mix with evil ones and counteract their unhappy consequences; they especially praise repentance, and by doing so raise themselves above the purely mechanical idea of *karma* (*q.v.*), which they view as an intelligent force.

It may be further remarked, that the contemplation of the Buddha plays in early Buddhism a rôle analogous to that which the *Sāṅkhya-Yoga* assigns to the contemplation of the 'Lord' (*Īśvara*).

2. It will be profitable to read the 2nd chapter of the *Brahmajālasutta* (Rhys Davids, *Dialogues of the Buddha*, Lond. 1899, p. 30), where the Buddha explains how the god Brahmā, being born at the commencement of the world-age in the midst of the heaven prepared for him by his *karma*, unconscious of his former existences, and witnessing the birth of the other gods whom he wished to have as companions, imagines that he is in truth 'the Supreme One, the Lord of all, the Creator, the Ancient of Days, the Father of all that are and are to be.' 'These other beings are of my creation. And why is that so? A while ago I thought, "Would that they might come!" And on my mental aspiration behold the beings came.'

The *Kevaddhasutta* (*ib.* p. 280) is also very instructive. It shows the reverence of the gods for the great Brahmā, and how Brahmā is inferior to the Buddha. A certain monk, in order to solve

a problem of cosmology, traverses the celestial regions, consulting the divinities. They refer him to Brahmā. 'He is more potent and more glorious than we. He will know it.' 'Where, then, is that great Brahmā now?' 'We know not where Brahmā is, nor why Brahmā is, nor whence. But when the signs of his coming appear, when the light ariseth and the glory shineth, then will He be manifest.' Soon after, Brahmā became manifest, and that monk drew near to him and asked, 'Where do the four great elements cease, leaving no trace behind?' Brahmā then took the monk by the arm and led him aside and said, 'These gods, my retinue, hold me to be such that there is nothing I cannot see, I have not realized. Therefore I gave no answer in their presence. But I do not know where the four elements cease. Therefore return to the Buddha, and accept the answer according as he shall make reply.'

3. In the later literature of Buddhism there are found formal proofs of the non-existence of a God who creates and organizes the world, for example in the *Bodhicharyāvatāra*, ch. ix. ver. 119 f.

'Theists say that God is too great for us to be able to comprehend Him; but then it follows that His qualities also surpass our range of thought, and that we can neither know Him nor attribute to Him the quality of a Creator. Theists further maintain that the nature of God is incomprehensible, and His work comprehensible. But (1) God has created neither souls nor elements which are eternal: He does not bring about the birth of knowledge in the mind [compare Malebranche], since knowledge is produced by its object; He does not allot pain and pleasure, which result from *karma*. Then (2) if God acts without desiring to act, it is because He is subject to another; if He acts because He desires to act, He is subject to desire; therefore He is not independent; and (3) if He is independent of others, why does He not accomplish at one and the same time the creation, preservation, and destruction of the universe? An eternal and immutable cause ought to produce all its effects at the same time. Thus everything is momentary.'

LITERATURE.—'Abhidharmakoça,' in Burnouf, Introduction, Paris, 1844, p. 572; *Buddhacharita* ix. 53 (*SBE* xlix. 100); Nāgārjuna, 'Friendly Epistle,' in *JPTS*, 1886, p. 16; 'Bodhicharyāvatāra,' ed. with commentary, in *Bibl. Buddhica*, Fr. tr., *Introduction à la pratique des futurs Bouddhas*, Paris, 1906; Rhys Davids, *Dialogues of the Buddha*, Lond. 1899, 'Brahmajālasutta,' and also 'Tevijjasutta': 'that no Brahman has ever seen Brahmā'; Oldenberg, *Buddha*[5], 1906, p. 380; Edm. Hardy, *Buddhismus*, Münster i. W. 1890, p. 130; St. Clair-Tisdall, *The Noble Eightfold Path*, Lond. 1903, p. 161 f. (ch. iv. 'Buddhism and Christianity').

LOUIS DE LA VALLÉE POUSSIN.

ATHEISM (Egyptian).—No trace has yet been found of any definite atheistic teaching in Egypt. The contradictory, wholly incompatible, doctrines current in Egypt regarding the future life must have caused every thinking man to wonder and doubt, and when such a man appeared to accept them all and act upon them, if his motive was not simply to conform with custom, or to satisfy the superstition of his women-folk, it must have been the hope that one of the alternatives might possibly be correct enough to help towards bliss. The Song of the Harper, engraved in banqueting scenes in the tombs of kings and priests, urges to present enjoyment because death comes to all, and no one has ever returned to tell what has become of the dead; the most learned scribes and philosophers pass away and become as though they had never been. 'Follow thy heart greatly; but give bread to him that hath no field—so shalt thou have a good name among all posterity.' Such is the teaching of the Song. This text dates from the Middle Kingdom, but was in vogue also later. Another, of late Ptolemaic age, when the Egyptian religion was indeed on the decline, is put into the mouth of a deceased lady. Inscribed upon her tombstone, it is addressed to her husband, the high priest of Ptah at Memphis, who was almost, if not quite, at the head of the Egyptian hierarchy. She counsels merrymaking and enjoyment in the years of life upon earth: the 'western' land of the dead is a land of wakeless sleep, of heavy darkness, of forgetfulness; and apparently implies that nothing could relieve the misery if the dead could feel it. It seems that these views belonged in some degree to the varied face of orthodoxy, which preached the Psychostasia, the reward in rich fields of Aalu and abundant food and happiness; or, again, the attainment by the dead of all Divine powers; or, again, the sad doctrine of a gloomy existence in the dark under world, relieved only by one hour of illumination each night while the sun passed between two of the clanging gates.

LITERATURE.—There is no literature on the subject. For translations of the Songs, see W. Max Müller, *Die Liebespoesie der alten Ägypter*, Leipzig, 1899, p. 29 ff.

F. LL. GRIFFITH.

ATHEISM (Greek and Roman).—As a dogmatic creed, consisting in the denial of every kind of supernatural power, atheism has not often been seriously maintained at any period of civilized thought, and Plato goes so far as to assert that, while other erroneous views about the gods might be permanent, no one, after embracing in his youth the doctrine of atheism, had ever continued in it up to old age (*Legg.* 10. 888 C). Thus, in dealing with the statements of Greek and Latin texts, it is necessary to distinguish those thinkers, such as Xenophanes (fr. 15, Diels, etc.), who rejected the gods of the popular religion, from those who repudiated the idea of God in its entirety. There are further difficulties arising from the fragmentary and often untrustworthy character of our authorities. A charge of atheism was a favourite controversial weapon, and how careful we should be in accepting isolated statements which impute it may be learnt from a consideration of the cases of Socrates (Plat. *Apol.* 26 C) and of the early Christians (Gibbon, *Roman Empire*, ii. 225). Moreover, the sceptic is always liable to be confounded with the atheist. Thus the attitude of Protagoras towards the problems of theology is sufficiently indicated by the sentence preserved by Diogenes Laertius (ix. 51), in which he declares himself unable to affirm of the gods either that they are or that they are not. Nevertheless, other authorities (Epiphanius, *adv. Hæres.* iii. 2. 9; Diels, *Doxogr.* p. 591, 1) testify to his absolute denial of the existence of God. These considerations will show the difficulty of appraising the statements which impute atheism to the physicist Hippo, a contemporary of Pericles (Plut. *Comm. Not.* 31, p. 1075 A, etc.), or to the more notorious Diagoras of Melos. The latter, familiar to us from the allusions of Aristophanes (*Nub.* 830; *Av.* 1072), is said to have turned to atheism because the gods failed to visit with punishment a flagrant wrong which had been committed against him (Sext. *Math.* ix. 53). We have more definite information about Theodorus of Cyrene, a follower of Aristippus, who lived in the latter years of the 4th cent. B.C. His atheism was absolutely uncompromising (Diog. Laert. ii. 97; Epiphan. *l.c.*; Diels, *Doxogr.* p. 591, 25), and formed a reasoned element in a philosophical system which was subversive of the foundations of customary morality.

Again, atheism is the logical result of the rationalizing system of Euhemerus; but the charge is made against him (Plut. *Is. et Osir.* 23, p. 360 A) on precisely the same grounds as against the Stoics (Plut. *Amat.* 13, p. 757 C), and cannot of itself be held to imply more than his opposition to received religion. The same is true of the earlier attempt of Prodicus, who held that Divine honours were in the first place bestowed upon such natural objects as the sun and moon and the fruits of the earth, and next in order upon the civilizing benefactors of the human race (Gomperz, *Greek Thinkers*, Eng. tr., Lond. 1901, i. 430). To the same period belongs Critias, the leader of the Thirty Tyrants, who is ranked with the atheists by Sextus

Math. ix. 54) on the strength of some remarkable verses, referred by other authorities, erroneously, as it would seem (Diels, *Doxogr.* proll. p. 59. 1), to the *Sisyphus* of Euripides. These lines are conceived in the spirit of a Callicles or a Thrasymachus, as we meet them in the *Gorgias* and the *Republic*. The argument is founded on the Sophistic distinction between nature and convention; and the belief in God, which is made subsequent to the rule of morality imposed by law, is attributed to the policy of a cunning legislator, who sought to check secret immorality by the fiction of an eternal, all-seeing, and all-wise power, and to procure obedience to its decrees by investing it with awe-inspiring attributes.

Though denounced as a fiction in the age of the Sophists, the universality of religious belief among the nations of the world was always one of the strongest weapons possessed by the advocates of theism (Plat. *Legg.* 10. 886 A; Sext. *Math.* ix. 60). The only exception which ancient tradition, as preserved by Theophrastus in his treatise on *Piety* (Bernays, *Theophr. üb. Frömmigkeit*, p. 56), records was furnished by a doubtful story concerning the Thoës or Acrothoitæ. They are said to have been a tribe living on the borders of Thrace, who, like Hesiod's Silver Race (*Op.* 133 f.), neglected entirely to sacrifice to the gods, and were swallowed up by an earthquake as a punishment for their atheism (Porphyr. *de Abst.* ii. 7, 8; Simplic. *ad Epict. Enchir.* 31. p. 95, 34, Dübn). Thus, whether viewed in connexion with popular opinion or with scientific thought, atheism appears to have been regarded by the ancients as a mark of coarseness, depravity, or eccentricity.

LITERATURE.—See the commentators on Parmenides and Heraclitus, and L. Campbell, *Religion in Greek Literature*, Lond. 1898, p. 295. For the charges against astronomers, Plato, *Legg.* 12, 967 A. Boissier, *La Religion romaine*[4], Paris, 1892; and other reff. throughout the article.

A. C. PEARSON.

ATHEISM (Indian, ancient).—The beginnings of Indian atheism can be traced back into the Vedic period. In the Rigveda the national god Indra is derided in several passages (iv. 24. 10, x. 119); and we read (ii. 12. 5, viii. 100. 3) of people who absolutely denied his existence even in those early days. We have here the first traces of that naive atheism which is so far from indulging in any philosophical reflexion that it simply refuses to believe what it cannot visualize, and which, in a later period, was known as the disbelief of the Lokāyata system; that is to say, of crass materialism (see art. LOKĀYATA).

It is different with the atheism which had grown into a conviction as the result of serious philosophical speculation; this, in distinction from the other naive form, we may describe briefly as *philosophic* atheism.

When the old Vedic religion developed into pantheism, the figures of the old gods faded and became transient creatures. But, as such, they still lived in the philosophic systems of India, even in the atheistic Sāṅkhya system (see SĀṄKHYA), and in the religions of Buddha and Mahāvīra, which found support in this system, and, like it, recognize no *real* God. Here these shadow-like gods afford an illustration of a fact which can be noted throughout the history of religion—that religious ideas belonging to earlier periods project themselves into a later and differently-conceived view of the world—one with which in essence they have ceased to have anything to do, but to which, nevertheless, they adapt themselves. In the Sāṅkhya system, in Buddhism, and in the religion of the Jains, we find the belief in the existence of gods, demi-gods, and demons, as well as in heavens and hells. But the gods are only more highly organized and happier beings than men; like the latter, they are within the *saṁsāra*, 'circle of life,' and, unless they gain the saving knowledge which enables them to withdraw from worldly existence, they are obliged to change their bodies again. Nor have they escaped the power of death; consequently they are lower than the man who has reached the highest goal. In India, recognition of these faded gods of the people has been fully reconciled with the atheistic view of the world. In the Sāṅkhya system, belief in gods who have risen to evanescent godhead (*janyeśvara*, *kāryeśvara*) has nothing whatever to do with the question of God Eternal (*nityeśvara*), as regards whom the theists assume that He made the world by His will. The use of a special term (*Īśvara*, 'the powerful') in Indian philosophy obviously arose out of the endeavour to distinguish this God even verbally from the shadow-like gods of the people (*deva*).

The positive way in which the existence of God is denied is one of the characteristic features of the Sāṅkhya philosophy, which on that account is also continually denoted as *nirīśvara* ('godless'). Again and again in the Sāṅkhyasūtras it is stated that the existence of God cannot be proved (i. 92–94, v. 2–12, 46, 126, 127, vi. 64, 65, with the respective commentaries). Having regard to the aphoristic conciseness of this work, it is clear from this frequent repetition what importance was attached by the adherents of the Sāṅkhya system to this point—the actual absence of any strict proof of the existence of God. The denial of God in the Sāṅkhya philosophy is in essence the result of the following ideas: (1) the doctrine that there is inherent in unconscious matter the force which operates with physical necessity to develop itself for the purely receptive souls; and (2) the general Indian conception of the after-effects of the actions of living beings, which instigate that natural force and guide its activity into definite channels. Other reasons seem to have contributed, especially the realization that the problem of misfortune cannot be solved by any of the speculations of theism. This idea is made use of by Vāchaspatimiśra (12th cent. A.D.) in the *Sāṅkhya-tattva-kaumudī* to *Sāṅkhya-kārikā*, 57, as one of the main supports of the atheistic explanation of the world. It will be useful here, we think, to give a translation of this passage, which is so important and so characteristic of Indian thought. It runs thus:

'Every conscious action is, without exception, determined either by an egoistic purpose or by kindness. Since these two motives are excluded in the case of the creation of the world, it becomes impossible to assume that the creation of the world was due to conscious action. For a God whose wishes are all fulfilled can have had no personal interest whatever in the creation of the world; the possibility of any egoistic purpose consequently disappears. But neither can God have undertaken the creation from kindness; since *before* the act of creation souls suffered no pain—senses, bodies, and objects not having come into existence yet—from what could the kindness of God wish to have souls released? If, on the other hand, we suppose that the kindness of God was shown later, when, after the act of creation, He saw His creatures full of pain, we can hardly escape the argument in a circle: creation was the result of kindness, and kindness the result of creation! Further, a God who is actuated by kindness would create only joyful creatures, but not creatures in different conditions. If to this some one objects that the difference results from the difference in that work for which individuals receive a reward from God, we reply that in that case the direction of the work on the part of that conscious, highest Being is entirely superfluous, for the effectiveness of the work performed by individuals (that is to say, the consequences of merit and guilt) fully explains itself without any supreme direction on the part of that God. . . . On the contrary, that operation of unintelligent matter which we assume has no egoistic purpose behind it, nor is kindness its motive; consequently it cannot be substantiated as against *our* theory that the stated grounds of refutation apply to it as well.'

This argument of Vāchaspatimiśra was repeated almost entirely by Mādhavāchārya (14th cent.

A.D.) in the Sāṅkhya chapter of his *Sarvadarśana-saṅgraha* (p. 228 of tr. by E. B. Cowell and A. E. Gough). These and similar reflexions had certainly already forced themselves upon Kapila, the originator of the Sāṅkhya philosophy, when he decided to take the bold step of publicly declaring for atheism. That no other doctrine in the Sāṅkhya system was so often and so fiercely attacked as this may be inferred even from the fact that Patañjali, the founder of the Yoga system (see art. YOGA), introduced the idea of a personal god in the hope that he would thus make the Sāṅkhya philosophy acceptable to his countrymen. The strict adherents of the Sāṅkhya doctrine, on the other hand, tried to derive from their own system new arguments by which to ward off the attacks made upon the denial of God. They placed first and foremost the sophistical alternative: Is God to be thought of as a free or as a fettered soul? Regarded as a *free* soul, that is to say, one not connected with a body or with any physical organ, God would be devoid of all qualities, and particularly of desire and will—the prerequisite of all creative activity; He would also be without any motive for directing the world. Regarded as a *fettered* soul, God would belong to the *saṁsāra*, and, like all other beings, would be deluded, and be hampered by human infirmities; in which case again He could not be creator and controller of the world, but only a nominal (*pāribhāṣika*) god who came into existence at the beginning of this world-period, and passes away with the end of it. If a theist raises against this argument the obvious objection that in that case God would belong neither to the free nor to the fettered souls, but must be assigned an exceptional place, he receives the answer, 'When a thing is defined as being unique in character, every basis upon which to argue is removed.'

This atheism of the Sāṅkhya philosophy, somewhat softened by the recognition of the gods of the people, was taken over, as we have already noted, into Buddhism and the religion of the Jains. But in all probability it also had an influence upon two schools of Brāhman philosophy—the Vaiśeṣika and the Nyāya (see the two articles). These two schools were originally atheistic, and did not go over to theism until after their amalgamation.

R. GARBE.

ATHEISM (Indian, modern).—In modern India, philosophic atheism still survives in the religion of the Jains. (For Jain and Buddhist atheism see the special articles.) As regards the materialism professed by the ancient Lokāyatas, the modern predominance of a religious attitude founded on *bhakti*, or faith devoted to a personal Supreme Deity, has practically extinguished it. Sporadic attempts to revive it have been made by isolated teachers, with but small success. The best known of these was the composition of the *Sūnisār*, or 'Essence of Emptiness,' by a religious mendicant named Bakhtāwar, the promulgator of the so-called *Śūnyavādī* doctrine. He flourished in the early part of the 19th cent. under the patronage of Dayā Rām, a Jāt Rājā of Hāthras in the central Gangetic Doab. Bakhtāwar's teaching went a step beyond simple materialism, and was an attempt to popularize it. According to him, nothing—God, or man, or any material object—exists. All is emptiness (*śūnyatā*). The one thing that exists is the Ego, and all conceptions are but reflexions of this Ego. 'It is an error,' he says, 'to think that the reflexion of my face in a glass is not my face, but is that of another. Similarly, whatever you see elsewhere is but yourself, and father and mother are non-entities. You are the infant and the old man, you are the wise man and the fool, the male and the female. It is you who are drowned in the stream, and it is you who pass over safely. You are the killer and the slain, the slayer and the eater, the king and the subject. You seize yourself and let go, you sleep and you wake; you dance for yourself and you sing for yourself. You are the sensualist and the ascetic, the sick man and the strong. In short, whatever you see, that is you, as bubbles, surf, and billows are all but water' (Wilson, *Rel. Sects*, 361).

It was not to be expected that such a dreary creed would retain many adherents, and it is doubtful if the few who were first attracted by it have left any representatives at the present day.

The atheism of the Sāṅkhya school is still professed by those learned men who follow that system of philosophy, and these and the Jains are the only real atheists of modern India.

LITERATURE.—Wilson, *Religious Sects of the Hindus*, Lond. 1862, 359 ff.

GEORGE A. GRIERSON.

ATHEISM (Jain).—Jainism is atheistical, if by atheism we understand the belief that there is no eternal Supreme God, Creator and Lord of all things; for the Jains flatly deny such a Supreme God. Nor need it surprise us that atheism should be essential to a religious system; for even the most orthodox Brāhmanical theologians, the Mīmāṁsakas of Kumārilabhaṭṭa's school, deny the existence of a Supreme God, though, of course, on other grounds than those of the Jains (see *Ślokavārtika*, sec. 16, Calcutta, 1907).

The Jains admit the existence of innumerable gods of many kinds and various degrees of perfection. But none of these gods is eternal; however long their life, it must come to an end when the merit of the god in question is exhausted. The longest life of a celestial being is that in the highest heaven Sarvārthasiddhi, which lasts between 32 and 33 *sāgaropamas* ('oceans of years'). Gods are embodied souls, just like men or animals, differing from them in degree, not in kind; for their greater power and perfection appertain to their divine body and organization, which is the reward for their good deeds in a former life, and which they lose on the exhaustion of their merit, to be born again in some other state of life. But those souls who are not born again, or, in other words, are liberated, go up to the top of the universe and remain there for ever in the state of absolute perfection; they have no longer any connexion with the world, and cannot, therefore, have any influence upon it. Accordingly the functions of a Supreme God, as Lord and Ruler of the world, cannot be attributed to liberated souls; and as the not yet liberated souls, *i.e.* the souls in the state of bondage, are subject to re-birth, none of them can be regarded as an eternal God. Therefore the Jains cannot acknowledge a Supreme God in our sense of the word.

Following up their theoretical views on this point, the Jains have strenuously combated, and denounced the fallacies of, the arguments by which the Nyāya and Vaiśeṣika philosophers tried to prove the existence of an eternal and omniscient God as Creator and Ruler of all things, viz. the famous argument that all things, being products, presuppose a maker who has an intimate knowledge of their material cause. The refutation of this argument will be found in the *Syādvādamañjarī*, in the *Commentary on the Ṣaḍdarśanasamuchchaya*, and many similar works. The Jains also controvert the views of the Vedāntins and of the followers of the Yoga philosophy regarding Brahman or Īśvara as the Supreme God and Cause

of the world. But the Nyāya-Vaiśeṣikas seem to have been their most formidable opponents in this controversy about the existence of God.

Though the Jains are undoubtedly atheistical, as we understand the term, still they would probably object to being styled atheists. While admitting that the world is without beginning or end, and therefore not produced by a god, or ruled by one, they recognize a highest deity (*paramadevatā*) as the object of veneration, viz. the Jina, *i.e.* the teacher of the sacred Law, who, being absolutely free from all passions and delusion, and being possessed of omniscience, has reached absolute perfection after having annihilated all his *karma* (*Ṣaḍdarśanasamuchchaya*, 45 f., Calcutta, 1907). It must be remarked, however, that there are innumerable Jinas who, having proclaimed the sacred Law, have reached perfection, and have passed out of this world of change and woe. Prayers are addressed to them by the faithful, just as if they did or would bestow happiness and bliss on the devout adorer; but, of course, a Jina cannot show favour to anybody, as he is utterly indifferent to all that belongs to the world, and is entirely free from all emotions. He therefore does not reward the adorers or satisfy their wishes, but in his stead the gods who watch and control true Discipline (*śāsanādhiṣṭhāyikā devatās*) hear their prayers; for the practice of the discipline taught by the Jinas is the best mode of worshipping them. In the case of spiritual gifts vouchsafed to the worshipper, the explanation given comes to this: the adoration of the Jina purifies and sanctifies the soul of the worshipper through his meditating on the perfections of the Jinas. In this sense the Jinas are regarded as the highest deity (*paramadevatā*); temples are erected for their worship, and a kind of divine service is instituted in them on the model of that practised in Hindu temples.

LITERATURE.—There is no literature beyond the texts quoted in the article.

H. JACOBI.

ATHEISM (Jewish).—Atheism as a system of thought has no place in Judaism, and there is no equivalent for the term in the Hebrew language or literature. The deliberate denial of the existence of a Being who is responsible for the activity of nature and for the course of history presupposes a systematic analysis and explanation of natural and historical phenomena as the necessary effects of existing uncreated causes. The ancient Hebrew had no disposition to analyze the natural phenomena in the way the Greek did, and to trace them back to physical laws and principles—the indispensable basis of all conscious atheistic doctrines. He was more disposed to err on the side of polytheism than on that of atheism.

1. Atheism in ancient Israel.—Nevertheless there are passages to be found in the OT from which we can conclude that disbelief in the existence of God (or gods) was extant among the people in pre-exilic times, and that this disbelief was regarded by the prophets and psalmists as the source of the wickedness of the masses. It is also likely that the polytheism and idolatry against which the prophets contended were not the result of genuine superstition, but of real indifference towards all the gods served, whose worship was merely a pretext for indulgence in all kinds of licence and crime, and whose recognition was prompted mostly by political and social considerations. But the reason for this unbelief was always supposed to be thoughtlessness, indifference, ignorance, sensuality. There was no system of thought leading to the denial of God which the prophets deemed it necessary to combat. They merely wished to awake the people and to induce them to shake off their indifference. Jeremiah very often speaks in this tenor. The most outspoken passage is Jer 5[12] 'They have denied the Lord, and said, He is not.' Here the prophet has in view the more intelligent members of his race, 'the great men' who ought to 'know the way of the Lord' (5[5]). While pleading absolute ignorance and folly for the degraded masses with whom it would be useless to argue (5[4]), he addresses himself to the leaders who are avowed atheists. The fact that they swear by the name of Jahweh (5[2]) does not contradict the assumption that the prophet accuses the people of practical atheism. As their oaths are false, the perjurers only misuse the name of Jahweh without believing in His existence. Jeremiah employs the cosmological proof for the existence of God (5[20-25]), in order to convince the people of their folly. But the confident use of the proof makes it quite clear that he merely intends to dispel the thoughtlessness of the people, and not to refute any antagonistic theories concerning the natural phenomena he refers to (cf. also Is 32[6], Pr 30[1-4], Ps 12. 36. 58[11] 74). Psalms 10 and 14 (53) contain passionate outbursts against the *nābhāl* ('impious,' 'fool') who denies the existence of God, and thus degenerates into a dangerous criminal. 'The impious says in his heart, There is no God' (Ps 14[1]). 'The wicked in the haughtiness of his countenance saith, He will not require. All his thoughts are: There is no God' (Ps 10[4]). The *nābhāl*, however, typifies the whole people. 'There is none that doeth good, no, not one.' It is not likely that Ps 14[1] refers to Edom or some other enemy of Israel (see Baethgen, *Psalmen*[3], p. 36, Delitzsch, and others; the reading of 'Gebal' by Cheyne seems quite unfounded). Here it is the reckless ignoring or denial of the omniscience of God or His very existence that is dwelt upon by the psalmist as the immediate cause of the moral decay of the Jewish people (which in the end must lead also to political ruin). Atheism and immorality are regarded as being inseparably connected with each other.

2. Post-exilic times.—In late post-exilic times we lose sight of any atheistic tendencies that may have existed among the Jews, for there were no more prophets to chronicle the sins of the people. Moreover, the contact with Babylonian culture had given rise to the mythical beliefs which from the days of Ezekiel became identified with Judaism, and which have found definite recognition in the Talmudic and Rabbinic literature. Again, the revival of the religious and national spirit under Ezra was destined to dispel that ignorance and thoughtlessness of which Jeremiah and the psalmists complained, and the second Temple could not very well accommodate arrogant and defiant unbelievers. The influence of Hellenism was no doubt responsible for the slackening of religious fervour and the loss of national self-consciousness during the period immediately preceding the time of the Maccabæans, but that influence never went so far as to cause the Jews to adopt the Greek Pantheon or to deny the existence of an invisible God. It was their unflinching faith in their only (invisible) God that later on prevented the Jews in Alexandria and elsewhere from joining their fellow-citizens in the worship of the local deities, and created the feelings of hatred which resulted in the curious charge of 'atheism' being made against the Jews—a charge which Josephus refuted with great vigour (Josephus, *c. Apionem*, ii. § 6).

3. Philo against Atheism.—Jewish thinkers, however, have never ignored atheism. Philo devotes two chapters in his *de Somniis* (§§ 43, 44) to a refutation of all atheistic doctrines from a Jewish standpoint. The wicked say that 'this Universe is the only thing which is perceptible to the outward senses, and visible, having never been created, and being destined never to be destroyed, but being

uncreated and imperishable, not requiring any superintendence or care, or regulation, or management.' This view must lead to universal disorder and anarchy, that means to the ruin of mankind (*ib.* § 44). All that uphold this view are sure to meet with severe but well-deserved punishment, as all wicked people always do (§ 45). The world cannot exist without a ruler, as a house cannot exist without a master, or a country without a leader (*ib.*).

4. Atheism in Talmudic and Rabbinic literature.—The final ruin of the Jewish nation and its great humiliation by the Romans in the 1st cent. after Christ made reckless ignoring or denying of the existence of God impossible. The deepening of the religious sense and the attachment to the great literary products of the past caused by the downfall led to the development of the Talmudic and Rabbinic literature, which henceforth dominated Judaism and put an end to atheistic beliefs and practices. There is no reference in the Talmud to theoretical atheism, and no attempt is made to prove the existence of God. The *Min* or the *Apiḳoros* (Epicurean) is not necessarily an atheist, but one who denies one of the principles of the Jewish faith. Immortality, Resurrection, Divine origin of the Law, and several other tenets are of equal importance with the belief in God as regards the application of the above designations. The term that approaches most closely the meaning of the word 'atheist' is *kofer bé' iḳḳar* (*i.e.* 'one who denies the first principle'), which occurs for the first time in Bab. *Shabbath*, 16*b*, and is frequently used in modern Rabbinic literature.

Among the Jewish thinkers and religious philosophers of the Middle Ages, there was none who denied the existence of God or could in any way be described as an atheist (although pantheistic ideas are frequently to be found in their works). The problem of reconciling Aristotle with the Bible necessitated the discussion of the question of creation, of the attributes of God, and of the eternity of matter (maintained by the Muhammadan atheists and adopted by Crescas), but the existence of a free, personal God had never been questioned by any Jewish philosopher down to Spinoza.

5. Spinoza.—Spinoza himself can scarcely be described as an atheist. To an atheist nature is possible without God, and matter is responsible to itself—not to mind—for its existence and development. Mind is altogether denied, for the assumption of mind is incompatible with the materialistic conception of the Universe which leads to atheism. Spinoza denies the existence of anything beyond God. Mind and matter are attributes of the same substance, of *deus* (*sive natura*). Certainly there is no free, personal God in existence according to Spinoza, and in a religious sense this amounts to atheism. But man himself is part of God, and is thus in no need of worshipping any Deity. It is the 'intellectual love of God' that makes man perfect—an idea which, although vague and capable of various interpretations, is incompatible with consistent atheism. The influence of the Jewish religious philosophy on Spinoza was too great to allow him to become anything but a pantheist.

6. Modern Jewry.—The philosophical views and ideas of modern Jews are so closely connected with the standard of culture and the ideas of the nations among whom they live, that they do not admit of separate treatment. Every school of thought has its Jewish followers, and Büchner, Darwin, and Haeckel are just as popular among free-thinking Jews as they are among free-thinking Christians. But the charge often made against modern Jews, that the proportion of atheists among them is greater than among their Christian neighbours, is unfounded. There is scarcely a Jewish thinker to be found who has included atheism in his system, while the great masses of the Jewish people all over the globe still faithfully believe in the God of their fathers, and twice daily proclaim their faith in the words of Moses: 'Hear, O Israel, the Lord our God, the Lord is one.' In the last decade or two there has been a tendency growing among the Jewish proletariat of the East of Europe to combine doctrines of atheism and hatred of religion with their socialistic ideas. The well-educated leaders of the working classes succeeded in spreading those doctrines among the young Jewish workers, by providing them with the necessary literature in their own Yiddish language by translation from the European languages. But the rise of the Jewish national (Zionist) movement has in the last few years proved most effective in stopping the growth of those tendencies, and is now bringing the despairing, ill-treated, starving Jewish labourer back to the camp of Israel and to the God of his fathers. With the revival of the hope for better times, the belief in God's mercy and omnipotence has also been revived. A great truth is expressed in the saying of the Rabbins: 'Israel, and the Law, and the Holy One (blessed be He!) are one.' Israel cannot exist without a firm belief in his God, 'the one and only God, the Creator and Ruler of the Universe.'

SALIS DAICHES.

ATHEISM (Muhammadan).—The Muslim world has at no time been a favourable soil for the growth or continuation of agnosticism, and in Arabic literature unorthodox tenets of all sorts are apt to be described by the word *zandaqah*, which, though of uncertain origin (being derived by some from the Syriac, by others from the Persian), is probably the correct term for such systems as deny the existence of a personal God and the moral government of the world. Another name for the holders of such opinions is derived from the word *dahr*, 'time,' and signifies 'believers in the eternity of the world,' *i.e.* in its having no beginning. The earliest persons credited with these doctrines are certain of Muhammad's Meccan opponents, including the leader of the long-continued opposition against him, Abū Sufyān b. Umayyah, who are all supposed to have learned their 'atheism' from the Christians of the Harrah [? Ḥīrah] (Tha'ālibī, *Laṭā' if al-ma'ārif*, p. 64). The charge against Abū Sufyān is not borne out by history, and of the others we know too little to estimate its probability; but the supposition that such opinions would originate from Christians, and especially monks, seems to have been due to the cultivation by Oriental Christians of certain forms of Greek philosophy; whence, in the legend that tells us how the Khalīf Ma'mūn (ob. A.D. 833) acquired his library of Greek books, the Greek king is advised to send his library to the Muslim ruler on the ground that 'these sciences' have never been engrafted on a religious system without ruining it.

In early Arabic writers the system of the *Zindīqs* seems to be inextricably confused with that of Manes, whose followers were fiercely persecuted by the early Abbāsids. The *locus classicus* on the subject for the early Abbāsid period is in the *Zoology* (iv. 141-144) of Jāḥiẓ (ob. A.D. 869), where, however, a *Zindīq* is confuted by the Khalīf Ma'mūn by means of a puzzle which could only trouble one who believed in dualism. The verses which the author cites show, nevertheless, that the

persons with whom he is dealing held the leading tenets of the atheists: 'You have given presents,' says Ḥammād 'Ajarrad in a lampoon on 'Umārah b. Ḥarbiyyah, 'to one who asserts that the heavens made themselves, and that the earth was not laid out by its Creator.' On this the author makes the curious remark that no one asserts that the universe with its organization came of itself, and that Ḥammād's ascription of this doctrine to the persons whom he lampoons might count as a proof that he held them innocent; and that, in fact, the satirist was himself a colleague of the objects of his lampoon. Jāḥiẓ then proceeds to enumerate the persons who constituted this society of sceptics, and his list contains some names that are familiar from the *Kitāb al-Aghānī*, while others are more obscure: Ḥammād 'Ajarrad, Ḥammād the Reciter, Ḥammād b. al-Zibriqān, Yūnus b. Hārūn, 'Alī b. al-Khalīl, Yazīd b. al-Faid, 'Ubādah, Jamīl b. Maḥfūẓ, Qāsim, Muṭī', Wālibah b. al-Ḥabbāb, Abān b. 'Abd al-Ḥamīd, 'Umārah b. Ḥarbiyyah. 'All these were in constant communication, and might be considered one person.' Of these, Yūnus addressed a pamphlet to the Byzantine emperor, showing up the vices of the Arabs and the defects of Islām. Abān figures in a satire by the well-known poet Abū Nuwās (ob. A.D. 810), partly as a follower of Manes, but partly as a rationalist:

'I sat one day with Abān (plague on him!), when the time for the first prayer came, and the call was duly uttered by a correct and clear-voiced speaker.

We all repeated the call to prayer to the end. Then said Abān: "How could you testify to that [*i.e.* the Muslim formula of faith] without ocular demonstration? So long as I live I shall never attest anything but what I see with my eyes." Then I said: "Glory to God"; he said: "Glory to Manes." I said: "Jesus was an Apostle"; he said: "Of Satan." I continued: "Moses was the interlocutor of the Gracious and Faithful One"; he said: "Then your God must have a tongue and an eye. And did He create Himself, or who created Him?" So I held my tongue before this obstinate blasphemer.'

The poet then gives a list of sceptics, containing several of the names that have already been mentioned. In the tales told about them in the *Kitāb al-Aghānī* they are not distinguished from dualists, and 'their book,' which was said to be in the hands of the daughter of Muṭī' b. Iyās when arrested for *zandaqah*, was probably the work ascribed to Manes. In Ṭabarī, iii. 588 (A.D. 786), an account is given of their system which is clearly more positive than negative, enjoining washings, to which Jāḥiẓ (*loc. cit.*) adds respect for animal life and vagrancy.

'Vagrancy means with them that they may not abide two nights in the same dwelling; the vagrants among them always wander in pairs, and adopt four rules—saintliness, purity, veracity, and poverty.'

The author then tells a story about two of these *Zindīqs*, who suffered themselves to be beaten almost to death on suspicion of stealing jewels which they had seen an ostrich swallow, rather than let any harm happen to the ostrich. From these 'atheists' *par excellence* other free-thinkers were careful to distinguish themselves: *e.g.* the poet Basshār b. Burd (ob. A.D. 783), who himself had a reputation for unorthodoxy, and in one of his verses prayed to the Prophet Muhammad to join with him in an attack upon the Deity. Abū Nuwās himself was severely punished for being a 'dualist,' because he ridiculed the angels (Ṭabarī, iii. 964).

Although this sect was persecuted almost to extermination in the 2nd cent. of Islām, this fact did not prevent the rise of other systems branded by the orthodox as 'atheistic.'

The most famous founder of a system of the sort in the latter part of this and the first half of the 3rd Islāmic cent. was Abu'l-Ḥusain Aḥmad b. Yaḥyā al-Rāwandī, reckoned by later historians as one of the three *Zindīqs* of Islām. A sect bearing the name Rāwandī is mentioned by Ṭabarī shortly after the accession of Manṣūr (A.H. 140 [A.D. 757–8]). They came from Rāwand in the country between Qāshān and Iṣfahān, and held the strange opinion that Manṣūr was himself the Deity. Aḥmad al-Rāwandī was somewhat later, as he died in A.H. 245 or 250, but as early as A.H. 189 he recited his works in Baghdad. His followers were also called *abnā'u al-daulah*, 'sons of the Empire,' with reference to a book by him called 'The Empire,' in about 2000 leaves. He appears to have taught the eternity of matter, as a book was written in refutation of his opinion that 'a body could not be created out of nothing.'*

Besides sectarians, there were persons of importance notorious for holding liberal opinions at most periods of the Khalīfate. In the 2nd cent., atheistic verses, it is said, were composed by the Umayyad Khalīf Yazīd b. al-Walīd b. 'Abd al-Malik (ob. A.D. 744; *Aghānī* vi. 123), who also displayed great contempt for the ordinances of religion. In the 3rd cent. the poet Abū Tammām (ob. A.H. 231 [A.D. 846]) had this reputation, though his extant poems appear to show no trace of unorthodoxy. It was earned with apparently more justice by his successor as chief poet in the following century, Abu'l-Ṭayyib Aḥmad al-Mutanabbī (ob. A.H. 354 [A.D. 965]), whose brilliant odes are, in the opinion of Muslim critics, defaced by utterances which imply disrespect for prophets and revealed religion. His most offensive line in their opinion is one in which he tells his patron, an 'Alid, 'the greatest miracle of the man of Tihāmah (*i.e.* Muhammad) is that he is thy father'; in another he tells a patron that if his sword had hit the head of Lazarus on the battlefield, Jesus would not have been able to restore him to life; and that if the Red Sea had been like his hand, Moses could never have crossed it.

Somewhat later in the 4th cent. of Islām comes the second of the great *Zindīqs*, Abū Ḥayyān 'Alī al-Tauḥīdī (ob. A.H. *c.* 400 [A.D. 1009]), whose works are said to have been more dangerous than those of the others, because, while the others proclaimed their unbelief, he expressed his in innuendoes. Such of his works as are now accessible seem harmless and even pious. Still, in a story told by him in an apparently lost book, copied by Yāqūt in his *Dictionary of Learned Men* (ii. 45–51), he pours ridicule on a secretary of State who is advised by his friends to study Euclid, but finds heresy in the first two definitions, and so will proceed no further. And, indeed, the study of Greek philosophy, of which portions were translated or travestied in Arabic, and taught to aspirants after the medical profession, was generally thought to indicate atheism; and 'the naturalists and physicians,' with whom the astrologer is sometimes joined, are said to deny the resurrection of the body, and therewith the future life.

It is curious that the writer who brings this accusation is himself the third of the great *Zindīqs*, Abu' l-'Alā Aḥmad b. 'Abdallah of Ma'arrah (ob. 1057 A.D.), 'discovered' by Alfred von Kremer, who translated many of his verses. Three of his works in particular were supposed to be tainted with unbelief: the *Luzūmiyyāt*, 'Double Rhymes,' made familiar by von Kremer; the 'Divine Forgiveness,' epitomized by R. A. Nicholson in *JRAS*, 1902; and a volume of poems called 'I ask pardon, and do thou ask it,' of which the present writer has collected some fragments in his dissertation, 'Index operum Abu' l-'Alæ Ma'arrensis,' in the volume of studies in memory of Amari. The most considerable collection of heretical or atheistic

* One of his criticisms on the Qur'ān is quoted in the *Letters* of Hamadhānī (ob. A.H. 396 [A.D. 1005–6]), ed. Beyrūt, p. 18. He asked the grammarian Ibn 'Arābī whether 'to make one taste the garment of hunger' (*Qur.* xvi. 113) was really an Arabic phrase.

epigrams composed by or attributed to this author is to be found in Yāqūt's *Dictionary of Learned Men* (i. 189–194); and, indeed, they seem to go in the direction of agnosticism as far as it is possible to go. All known religions are branded as error. Mankind consists of two classes—the wise who have no religion, and the fools who are religious. The real meaning of the assertion that there is a Creator outside space and time is that he who asserts it has no intellect.

'Do not suppose the statements of the Prophets to be true; they are all fabrications. Men lived comfortably till they came and spoiled life. The "sacred books" are only such a set of idle tales as any age could have and indeed did actually produce. What inconsistency that God should forbid the taking of life, and Himself send two angels to take each man's! And as for the promise of a second life—the soul could well have dispensed with both existences.'

It is remarkable that the author should also have preached vegetarianism in an extreme form, as apparently was done by the earlier *Zindīqs*; still more, that he should have devoted much of his time to the composition of sermons and other works of an edifying character.

In orthodox circles the possession of philosophical books long continued to be an indication of heretical tendencies, and the burning of such books by authority was not uncommon. The employment of Avicenna and similar students of Greek systems in government offices was unpopular, and is condemned by historians. In the 6th cent. of Islām there was a considerable development of pantheistic Ṣūfīism, which produced a series of works which, under pretence of orthodoxy and devoutness, in reality substituted for the personal God and the future life of Islām notions that were irreconcilable with either and were supported by an interpretation of the Qur'ān so far-fetched as to be ludicrous and irreverent. The most famous of these are the poem of Ibn al-Fāriḍ (556–632 A.H. [A.D. 1161–1235]), called from its rhyme *Tā'iyyah*, and the treatise of Ibn 'Arābī (550–638 A.H. [A.D. 1155–1240]) called *Fuṣūs al-Ḥikam*, 'Gems of Maxims.' Both these works at different times brought their owners into danger, and were the cause of riots (see Ibn Iyās, *History of Egypt*, ii. 119 [875 A.H.] and 219 [888 A.H.], where the latter book is described as the work of a worse unbeliever than Jew, Christian, or Idolater). Of the comments on the Qur'ān which this work contains it is sufficient to cite that on the story of the Golden Calf; according to Ibn 'Arābī (or the Prophet, who revealed this work to him in a dream), Moses found fault with his brother for not approving of the worship of the Calf, since Aaron should have known that nothing but God could ever be worshipped, and therefore the Calf was (like everything else) God.

Refutation of the opinions of the 'atheists' was one of the purposes of the science called *kalām*, or metaphysical theology. They are divided by the theologian Ghazālī (ob. 505 A.H. [A.D. 1111]), in his treatise called *Al-Munqidh min al-ḍalāl*, into three classes: the *duhris*, 'an ancient sect who denied the Creator, maintained the eternity of the world, and the eternity of generation,—these are the *zindīqs*'; the 'Naturalists,' who allow the existence of a Creator, but suppose the life and soul to be the result of the admixture of elements and humours in the body, and to cease at death; and the 'Deists,' viz. Socrates, Plato, Aristotle, and their followers.

A somewhat different division is given in the treatise on *Sects* by Ibn Ḥazm (ob. 456 A.H. [A.D. 1064]), where, after refutation of the Sophists, who make knowledge either non-existent or relative, the author deals with those who (1) say the world is eternal, without Creator or Governor; (2) say that the world is eternal, with a Creator and Governor; (3) say that, besides God, Time, Space, and the Soul are eternal. In addition to the other names that have been mentioned, this author gives the believers in these positions the name *mulḥid*, 'heretic,' and gives the name of one of the upholders of the first as 'Abdallah b. 'Abdallah b. Shunaif. It could not be expected that many names of the supporters of such unpopular opinions would be recorded.

LITERATURE.—There is no treatise, so far as we are aware, in any European language bearing on the subject. The original sources are given in the course of the article.

D. S. MARGOLIOUTH.

ATHLETICS, ATHLETICISM.

ATHLETICS, ATHLETICISM.—Athleticism, notwithstanding the great and elaborate developments which have taken place in the last hundred years, is to be understood only as an expression of a very primitive instinct—the instinct to play. All the evolution of twentieth century sports and games—the elaboration of rules, the development of muscle and nerve—is a provision for the impulse, the same in lambkins and in babies, in savages and in civilized men and women, to stretch their limbs, to overcome elemental forces, to contend against self-imposed difficulties and against each other.

It is interesting, in an attempt to analyze athleticism or to review athletics, to note the various forms of amusement which have sprung from that instinct to gambol, and the various factors in modern sports which make them appeal to various people. It is impossible to treat the subject exhaustively; one could scarcely enumerate all the different kinds of sport, much less discuss them. There are, however, some points worthy of consideration as suggesting the different kinds of development in physique and in character, acquired by different forms of exercise. Walking, running, leaping, dancing, hill-climbing, and swimming are our simplest sports. In these a man pits himself against natural difficulties, for the most part fighting against the force of gravity, and develops muscle and nerve in comparatively gross combinations of movements. In other words, there is achieved by these primitive exercises the kind of development of muscle and nerve which all young animals achieve when they learn to disport themselves in air, on land, or in water. That is the elementary stage of athletics, very like what the savage attains to when he executes a war-dance. It represents the demand of the body to be allowed to grow to its full stature—and a little over. The surplus we call *play*. In these days the same kind of simple development is achieved by such exercises as are now in England associated with the name of Sandow. If one has not opportunity to climb hills or battle with waves, one may 'bring up' the muscles by daily contest with improvised forces of an elastic nature, when the strain and the stress are finely adjusted and each day's ambition is to increase both. At this level of athleticism there seem to be only two kinds of gain—the opportunity to get rid of surplus energy, and the function of the muscle substance and the skin in disposing of elements in the blood which clog the vital mechanism.

Another kind of effect is experienced when implements are introduced for outdoor sport. About the simplest of exercises at this level are stilt-walking and pole-vaulting, and here we begin to realize a development which can never be achieved by primitive exercises. The feeling one has in pole-vaulting, when, by his own effort, he raises himself on a pole over a nine-foot fence, is quite different from the effect in simple high leaping. So also is the effect of high stilt-walking. In both of these there is demanded also a skill in movement which, added to the pleasant sensation.

makes a nerve-muscle combination on a plane much higher than that of natural movements.

This brings us to the innumerable varieties of games in which a ball of some kind is used. Of these football is the most elementary, so far as the impedimenta of the game are concerned. There has always been a great difference of opinion as to whether the Rugby or the Association game is the better, but the discussion is idle, for the two games are not comparable. The feeling and the skill in a Rugby game when one plays with an oval ball and is allowed to use one's hands freely, are obviously quite different from those of an Association game, which is played with a round ball and in which the use of the hands is not allowed. The same sort of idle dispute is waged over the respective advantages of golf and cricket. The two games have little in common, except that, in both, one tries to strike a ball with an implement under conditions which usually make the stroke difficult, and in those who are skilful at such games the nerve-muscle development is of a very high order. The same, of course, is true of other games—lacrosse, hockey, tennis, racquets, lawn-tennis, croquet, and the rest. A most important change comes about when the athlete employs something to carry him—a boat to row in or to sail, a bicycle, motor, or horse. The game of polo is probably the most athletic of all games. It develops strength and endurance; it requires co-operation between man and beast which is always inspiriting; and to be able to strike a ball which may be moving with great rapidity, the striker himself riding at breakneck speed, while all the time one hand is engaged with the pony, betokens a development of eye and nerve and muscle of the highest order. One is naturally tempted to pass from polo to other forms of horseback exercise, but one may not dwell upon the glories of the chase.

1. The *hygienic* effect of athleticism is its first justification. The contribution to the health of the community derived from sports is incalculable. It consists chiefly in the development of the chest from full breathing of fresh air; in the increase in the circulation from the acceleration of the heart's action; in the quickening of appetite and the promotion of digestion; in the elimination of waste products achieved by muscular exercise, rapid breathing, and perspiration; and, perhaps most important of all, in the rest and change it affords to a tired and dull brain. When we hear any one ask what form of exercise would be best for him, our answer, especially in the case of adults, should almost invariably be—that which he most enjoys. Even exercises so mild as bowling and croquet promote nearly all the good results just enumerated if entered into with zest and keenly pursued. On the other hand, caution should be exercised lest excess of effort lead to injury. The most important ill effect, and one not sufficiently considered and often entirely overlooked, is a dilatation or strain of the heart. This sometimes occurs in young people who are pressed to do too much. Boys at school may suffer irreparable injury from being made to play a strenuous game of football, or take a long cross-country run, when they are not toned up to the effort. More frequently heart-strain occurs in adults who are of a sporting nature—men who, perhaps on the occasion of their school sports, come ill-conditioned from the desk and try a quarter-mile race; or who tramp for eight hours on 'the Twelfth' without preparation; or who are carried away in the Christmas vacation, after weeks of muscular idleness, and ride to the finish on their first day with hounds. The next most important injury is perhaps apoplexy—a rupture of a blood-vessel. We read frequently of some one having suffered a paralytic shock when engaged in sport, and that means that he has neglected his exercises and allowed his blood-vessels to become hard, then has subjected them to an unwonted stress. It is doubtful if bones become brittle from want of exercise, though some authorities maintain that they do. It is certain that, without exercise, muscles become flabby and cannot meet unwonted demands of a severe kind. In wrestling, for example, which has become very popular of late (and deservedly so, for it calls into play more functions than any other game not implemented by tools), one is apt to ask the bones and muscles to do too much, and strain and laceration of muscle are very likely to follow. The lesson to be gathered is that one should keep oneself as fit as possible, take as much moderate exercise as may be, but never attempt anything severe without due preparation.

2. The good and the ill effects of athletics *in moulding character* are not to be so plainly set forth. It is certain, however, that sports have been and are of enormous importance in their effect upon a nation's mind and morals; and probably nowhere so much as on British soil. The kind of trite saying which echoes 'the Duke's' remark about our battles being won on the playgrounds of our schools, describes only a fraction of the influence exerted by athletics on a people's character. It would be unwise to be an unconditional advocate of sport, but it is useful to try to see what the effects of it are.

It may be well to dispose first of the evil effects often attributed to athletics. And, at the outset, let us observe that athletics never can give to man or boy, woman or girl, what they did not have at least potentially before. Athletics are a form of education, and can only elicit and develop the qualities, physical and mental, good or ill, already gifted by nature. Thus, for example, we are told that athletics tend to make men brutal, but that is true only of those who are already cruel. In any case, well-conducted sport, as, for example, modern football with its penalties for rough play, tends all the other way. In the present writer's opinion, the charge is most fairly laid at the door of those who conduct big 'shoots' in which there is wanton destruction of birds which may almost be described as domesticated fowl; and there are other so-called sports sometimes conducted so as to transgress the law of sport that every creature should be given a fair chance. But these are the exceptions. A good Master of Hounds is as humane as he is expert, as just as he is ingenious, in the pursuit of stag, fox, or otter. To a big-game hunter the temptation to kill for killing's sake, when, as often happens, no other white man is at hand to see, may be considerable. But even then self-restraint and humanity are part of the etiquette of the sport. Sometimes it is alleged of single-handed games, like golf, that they are selfish; that, when a man is playing for his own hand, he is doing something not so good as when he is playing for his side, as in cricket. The argument is superficial, as both results and theory show. It is safe to assert that the average cricketer plays as selfishly as the average golfer. In both cases the play itself makes wholly for self-forgetfulness. The man who, at the moment of the stroke, thinks what is going to happen to him because of it will thereby spoil his game. Both games, and all games, weed out those whose attention is not wholly upon the thing to be done at the moment. It will be found that most of the 'selfishness' in games crops up in the talk of the pavilion or club-house, when the salutary stimulus of the game is withdrawn. Other evils spoken of, and especially gambling, are quite accidental, and are no more part of athletics than weather or geography.

On the other hand, the advantages which ath-

letics confer cannot be gainsaid. First come the qualities which go to make up what we confusedly call physical courage—pluck, endurance, and indomitable resolve. But these are transferred in essence to a higher plane, and a sound athletic training teaches the adult, if he has it in him, not to be afraid, not to give in, and not to think too meanly of himself. Probably the most important, because the most constant contribution—and a very desirable one—is that which well-ordered games make to those qualities which are related to a sense of justice. It is questionable if it be possible to convey to a youthful mind a living meaning of fair play by any method so well as by the give-and-take of the playground. There also is to be learned a most wholesome discipline. First and foremost comes the training of the colt, to use a cricket phrase, reined and whipped to abide by the rules of the game, taught the obedience which he must give to the captain of his team, the unselfishness which he must show in sacrificing himself for the good of his side; and such discipline is invaluable. And in games, more easily perhaps than by any other means, a lad learns to take a just measure of himself, neither too high nor too low, to know what he can and what he cannot do, wherein he excels his fellows and wherein he falls short. Finally, we may repeat, one of the greatest advantages of sport, though not immediately recognized as of value, is that it offers an opportunity for sheer forgetfulness of the oppressive things in life, when in the zest of a mild game or the excitement of a dangerous contest, the sportsman is 'beside himself' for a brief spell, wholly removed from the sense of laboriousness and hardship and care. That way sanity lies. See also art. GAMES.

G. R. WILSON.

ATIMIA.—An Athenian in full enjoyment of all civic rights was spoken of as *ἐπίτιμος* (*ἐπιτιμία* of the condition); the word *ἀτιμία* denotes, therefore, the various degrees of penal limitation of such rights (Lat. *capitis deminutio*).

How old such limitation of rights was in Athens is not known; it occurs as early as the legislation of Dracon (about B.C. 620), and by Solon's time (B.C. 594) apparently a large number of Athenians had incurred disfranchisement on various grounds. Solon restored their civic rights to such, with the exception of those who for treason or crimes of violence were in exile. From the wording of his law (Plut. *Sol.* 19) it would appear that we should distinguish two classes: (1) those who were living at Athens disfranchised, and (2) those who had gone into exile, which necessarily also involved loss of civic rights, and must in many cases have involved loss of property also; but it does not therefore follow that such perpetual exile should be regarded as forming part of the penalty of *ἀτιμία*, any more than that the confiscation of property, which in post-Solonian times is found sometimes conjoined with it, is so to be regarded. It is possible, indeed, that the Athenian law never attained a perfect clearness of conception in regard to this connexion.

The *locus classicus* upon this subject is a passage of Andocides (*de Myst.* 73 f.), in which he distinguishes the following three varieties of *ἀτιμία*: (1) deprivation of civic rights and confiscation of property, in which category he enumerates only public debtors; (2) loss of civic rights, without confiscation—inflicted upon thieves, those who received bribes, those guilty of breaches of military duty or thrice convicted of perjury, or children convicted of unfilial conduct; (3) a minor degree of disfranchisement (*κατὰ προστάξεις*), in which certain specific disabilities were inflicted for certain varieties of offence.

The distinction of three degrees of 'atimia,' made by Meier in his treatise *de Bonis Damnatorum* (Berl. 1819), which he entitles *infamia maxima*, *media*, and *minima*, upon the analogy of Roman law * and upon the basis of the above-cited passage of Andocides, does not seem to be substantiated by the evidence. For the passage of Andocides is clearly of the nature of a popular classification, which omits several well-established categories of offences, and is in general devoid of any logical principle of division. It would seem safer to adhere to the view enunciated by Caillemer, according to which 'atimia' *per se* was limited to the civic status of the subject; but we must also recognize that in practical effect it was a necessary concomitant of a sentence of exile (*ἀειφυγία*), and that, on the other hand, confiscation might in certain cases be conjoined with a sentence of *ἀτιμία*.

From this point of view 'atimia' must be distinguished simply as (1) total, and (2) partial.

1. Total 'atimia' meant the entire loss of civic personality (Lat. *caput*), so far as its active functions were concerned. The citizen who was pronounced totally *ἄτιμος* † was incapable of holding any civil or priestly office within the Athenian empire, or of acting as herald or ambassador; he might not appear in the Agora or attend meetings of the Senate or Assembly, or appear in any public sanctuary or public ceremonial; nor could he appear either as principal or witness in any court of law (see the enumeration of disabilities in Æschines, i. 21; Demos. *Meid.* 87: *οὔτε λαχεῖν ἀδικηθέντα*). Under the conditions of Athenian life the prohibition against taking part in the business of the public Assembly (*λέγειν καὶ γράφειν*) naturally covered most of the privileges here enumerated, and consequently this right is frequently spoken of as that which *par excellence* was forfeited by the *ἄτιμος* (Demos. *Steph.* i. 79: *τίνα τῆς πόλεως . . . καὶ τῆς ἐν αὐτῇ παρρησίας ἀπεστέρηκα*). In general, the condition of the *καθάπαξ ἄτιμος* was inferior to that of the alien (Demos. *Theocr.* 88: *μηδ' ἐλπίδα ἡμῖν εἶναι μηδεμίαν τοῦ μετασχεῖν τῆς καὶ τοῖς ξένοις διδομένης παρρησίας*), and is spoken of by Isocrates as worse than exile (Isocr. xvi. 47: *ἀτιμίας, ἣν ἐγὼ φυγῆς μείζω συμφορὰν νομίζω· πολὺ γὰρ ἀθλιώτερον παρὰ τοῖς αὐτοῦ πολίταις ἠτιμωμένον οἰκεῖν ἢ παρ' ἑτέροις μετοικεῖν*).

The *ἄτιμος*, in fact, was in the State, but was not of it.‡ Precisely how far his disabilities extended is not known; our authorities do not furnish an answer to all questions which suggest themselves. It has been pointed out, for example (see art. ADOPTION [Greek]), that *ἀτιμία* on either side would be a practical bar to adoption; but whether in law it was so is uncertain, and the suggestion might be hazarded that, in order to prevent the extinction of a family, testamentary adoption, at any rate, may not have been denied. Again, the case of one holding an hereditary priesthood presents a difficulty. And we may ask what legal protection was given to the life and property and personal dignity of one who was *ἄτιμος*, and under what forms. The consequences of *ἀτιμία* in detail are not treated by modern writers, who content themselves with the above-given generalizations as to its significance; but even these cannot be taken quite *au pied de la lettre*. It may be conjectured that redress of personal wrongs in the case of an *ἄτιμος* was secured, if at all, by means of a public prosecution (*γραφή*) undertaken by a friend of the aggrieved (see Demos. *Meid.* 47). The free use of depositions, which obtained in Attic legal procedure, would obviate the difficulty in regard to evidence (cf. Demos. *Meid.* 95). If so, we must say that in point of law a sentence involving total

* *Dig.* iv. 5. 11: 'Capitis deminutionis tria sunt genera, maxima, media, minima; tria enim sunt quæ habemus, libertatem, civitatem, familiam. Igitur cum omnia hæc amittimus [*e.g.* by death or slavery], maximam esse capitis deminutionem; cum vero amittimus civitatem, libertatem retinemus, mediam esse,' etc.

† Cf. Demos. *Meid.* 87: *ἁπάντων ἀπεστέρηται τῶν ἐν τῇ πόλει καὶ καθάπαξ ἄτιμος γέγονεν*.

‡ Cf. Arist. *Ath. Pol.* viii. 5: *ἄτιμον εἶναι καὶ τῆς πόλεως μὴ μετέχειν*.

ἀτιμία was equivalent to civil death, but stopped short of outlawry.* Attic law protected even the murderer who had fled beyond jurisdiction (*CIA* i. 61; Demos. *Aristocrat.* p. 631).

The crimes for which total disfranchisement was the penalty were the following: †

(1) *Treason* (προδοσία).—The penalty was death, confiscation of property, and a declaration of ἀτιμία, which became the unavoidable inheritance of the heirs of the disfranchised, falling also upon any who subsequently adopted them. To the same penalties those were liable who conspired to subvert the democracy (δήμου κατάλυσις).

(2) *Theft* (κλοπή) in its more serious forms; cf. Andoc. *l.c.*: ὁπόσοι κλοπῆς . . . ὄφλοιεν, τούτους ἔδει καὶ αὐτοὺς καὶ τοὺς ἐκ τούτων ἀτίμους εἶναι.

(3) *Corruption* (δώρων or δωροδοκία of the recipient; δεκασμός of him who bribed) on the part of public functionaries (Demos. *Meid.* 113). For some forms at least of this offence the penalty was hereditary ἀτιμία and confiscation of goods.

(4) *Various offences in respect of military service by sea or land*—refusal to serve, desertion, cowardice in the field, etc. (Andoc. *l.c.*: ὁπόσοι λίποιεν τὴν τάξιν ἢ ἀστρατείας ἢ δειλίας ἢ ἀναυμαχίας ὄφλοιεν ἢ τὴν ἀσπίδα ἀποβάλοιεν). For all such offences disfranchisement was the penalty, and in some cases confiscation seems to have been conjoined.

(5) *Perjury* (ψευδομαρτυρία, with the particular variety ψευδοκλητεία, false assertion of service of writ). According to Andoc. *l.c.*, disfranchisement was incurred only after a third conviction, but other authorities seem to prove that a single conviction was sufficient (see Wyse on Isaeus, v. 17 and art. PERJURY).

(6) *Unfilial conduct* (κάκωσις γονέων).—The law seems to have specified four varieties of the offence—actual ill-treatment, withholding food, expulsion from the house, and refusal of funeral ceremonial.

(7) *If a man gave in marriage to an Athenian citizen a foreign woman, falsely alleging her to be his daughter and a citizen of Athens*, he incurred loss of civic rights and confiscation of property.

(8) *Contempt of the sentence of a court or of the Council or Assembly.*—Disfranchisement fell upon a President of the Assembly (πρόεδρος) who put to the vote the illegal question of remitting a debt to the Treasury.

(9) *Unauthorized proclamations by the herald in the theatre.*

(10) 'Any one who *suffers injustice at the hands of the public Arbitrators* (διαιτηταί) may appeal to the whole Board of Arbitrators; and if they find the magistrate guilty, the law enacts that he shall lose his civil rights' (Arist. *Ath. Pol.* 53: case in point, Demos. *Meid.* 87). A Heliastic court could confirm or reverse this verdict on appeal.

(11) *Offences against the dignity of a superior magistrate* (Demos. *Meid.* 32; Greenidge, *Rom. Publ. Life*, p. 190).

(12) Disfranchisement was the penalty for any *proposal to modify the old (Drakonian) law relating to homicide.*

(13) *Condonation of a wife's adultery*, if she were caught in the actual commission of the offence.

(14) A law attributed to Solon visited with loss of civil rights the man who *in time of party-strife* (στάσις) *did not take a side* (Plut. *Sol.* 20; cf. Cic. *ad Att.* x. 1. 2: 'ego vero Solonis, popularis tui, ut puto etiam mei, legem neglegam, qui capite sanxit, si qui in seditione non alterius utrius partis fuisset.' See on this Grote, *Hist. of Greece*, iii. 144; Mahaffy, *Problems in Greek History*, p. 87 n. The intention was that he should side with the established government, for armed assault upon it was itself a capital offence). This law was apparently obsolete by the end of the 5th cent. B.C.

(15) A law of Solon, traditionally derived from Egypt, but probably in existence in Drakon's time, made ἀτιμία the penalty on a *third conviction for incorrigible idleness* (ἀργία).

(16) Disfranchisement was the penalty for those who, having been guilty of *unchastity for hire* (ἑταίρησις), took office or spoke in the Council or Assembly, or who had *wasted their substance in riotous living.*

(17) Every citizen who, having reached the age of 59, at which he was competent to serve as *Public Arbitrator* (διαιτητής), *failed to do so*, became ἄτιμος (Arist. *Ath. Pol.* 53).

2. Partial atimia signified that a man lost certain of his rights, retaining in respect of the remnant an equality with his fellows. Partial 'atimia' in its various forms was the penalty in the following cases:

(1) Generally, one who initiated a public prosecution (γραφή) and thereafter dropped it, or who in the event did not obtain a fifth part of the votes of the jury, was fined 1000 drachmas and lost the right to bring a similar suit in the future (Harpocr.: ἐάν τις γραψάμενος μὴ μεταλάβῃ τὸ πέμπτον μέρος τῶν ψήφων, ὀφλισκάνει χιλίας καὶ πρόσεστιν ἀτιμία τις. Andoc. *l.c.*: ἑτέροις οὐκ ἦν γράψασθαι, τοῖς δὲ ἐνδεῖξαι, which would seem to include all forms of γραφαί; others think that only the particular form in which the prosecutor failed was henceforth debarred to him. See Goodwin's Demos. *de Cor.* p. 331, n. 3).

(2) Any one who had been thrice convicted under a γραφὴ παρανόμων of submitting illegal or unconstitutional proposals was debarred in future from making any further proposals in the Senate or the Assembly.

(3) Certain disabilities attached to certain specified classes (these are cases of ἀτιμία κατὰ προστάξεις properly so called, although Andocides, *l.c.*, applies this term to all cases of what we have called 'partial atimia'). For example, those citizens who had remained in the city and constituted the military force of the Oligarchs in B.C. 411 were deprived of the right of sitting in the Senate or the Assembly. Andocides mentions other cases of deprivation of specific rights, but we know not on what grounds it was inflicted.*

3. Conditional atimia.—To these two degrees of disfranchisement, a third variety, which may be styled 'conditional atimia,' must be added. This form was not in consequence of a verdict of any court of law, but was in a way voluntarily assumed. The class concerned is that of all who were in any degree debtors to the Treasury. All such debtors as failed to meet their obligation by the date fixed by law became *ipso facto* ἄτιμοι in the full sense of the word until the debt was paid. The amount of the debt was immaterial. A list of such State-debtors was kept by the Praktores in the Acropolis. The ninth Prytany, or decimal part of the year, constituted the official limit of grace, on the expiry of which the Poletai sold the possessions of the debtor to double the amount owing; in the meantime the debtor remained disfranchised, and if the proceeds of the sale were insufficient to pay the debt, he continued so until the balance was forthcoming. If the debtor died before the balance was paid, his heirs inherited his ἀτιμία until the claims of the State were finally satisfied. The moment the debt was discharged, full civil rights were *ipso facto* regained. In a general way, then, it rested with the man himself to retain or lose his citizen rights on this account. The institution of the Eranos, or Club, must have been of some importance in this regard.

If an ἄτιμος continued, nevertheless, to exercise any of the rights which he had lost, he was liable to the summary processes of arrest (ἀπαγωγή) or ἔνδειξις (information laid before a magistrate).† If transgression was proved, he might be punished, without further proceedings or appeal, with imprisonment or death. The above methods would be employed when there could be no dispute as to the existence of the disability, *i.e.* when the ἀτιμία was the consequence of conviction on some charge for which it was the penalty. It was possible, however, that a man might be notoriously or otherwise guilty of conduct (*e.g.* ill-treatment of parents, or unchastity—ἑταίρησις) which, if proved, involved disfranchisement, though he had never, owing to public apathy or his own influence, been charged before a court therewith. So long as he did not challenge public opinion by conspicuous exercise of his civil rights, he was safe; but the attempt to speak in the Assembly or to hold office rendered him liable to the process called ἐπαγγελία δοκιμασίας, or challenge to stand judicial inquiry into character before a jury court. If the jury

* Outlawry was indeed known and applied by the Greeks, but is not indicated by the single expression ἄτιμος without the addition of further explanatory terms and phrases (see art. OUTLAWRY).

† In order to keep the article within bounds, a general reference to the classical work of Meier and Schömann, *Der attische Process* (new ed. by Lipsius, 2 vols., 1883-1887), for the justificatory texts must here suffice.

* Seeing that a woman had no political rights, perhaps we may class here the 'atimia' which by a law of Solon fell upon a woman taken in adultery: she was forbidden to adorn herself or to enter the temples (Æsch. *Timarch.* 183: ἀτιμῶν τὴν τοιαύτην γυναῖκα καὶ τὸν βίον ἀβίωτον αὐτῇ παρασκευάζων).

† For a complete discussion of these processes, consult Meier-Schömann, *Der att. Proc.*[2] 270-294.

found a verdict of guilty, sentence of disfranchisement was formally pronounced. Whether from the moment of the challenge the right to ascend the Bema, etc., remained in abeyance until the issue of the trial is uncertain.

It is to be observed that a sentence of 'atimia,' once pronounced, was perpetual, and, moreover, was in certain cases an inheritance no more avoidable by a man's heirs than was his other estate (see art. INHERITANCE). Rehabilitation, at any rate, was so hedged round with conditions as to make it hopeless in the vast majority of cases. No citizen could propose a restoration of civic status to one disfranchised, without the protection of a preliminary Bill of Indemnity (*ἄδεια*), for the validity of which at least 6000 votes were requisite (Demos. *Timocr.* 46: *ἄλλος οὗτος νόμος, οὐκ ἐῶν περὶ τῶν ἀτίμων οὐδὲ τῶν ὀφειλόντων λέγειν οὐδὲ χρηματίζειν περὶ ἀφέσεως τῶν ὀφλημάτων οὐδὲ τάξεως, ἂν μὴ τῆς ἀδείας δοθείσης, καὶ ταύτης μὴ ἔλαττον ἢ ἑξακισχιλίων ψηφισαμένων*—by which we should probably understand 6000 votes in all, not 6000 affirmative votes). If the Bill of Indemnity were passed, the main proposal would be carried as a matter of course. But it is, in fact, easier to find examples of rehabilitation on a large scale than on a small, as, for example, the Act of Rehabilitation passed by Solon (Plut. *Sol.* 19). In times of national peril, above all, such wholesale enfranchisement was not infrequent (cf. Cic. *in Verr.* v. 6: 'perditæ civitates desperatis iam omnibus rebus hos solent exitus exitiales habere, ut damnati in integrum restituantur, vincti solvantur, exules reducantur, res iudicatæ rescindantur'). Examples from Athenian history are the decrees passed just before the battle of Salamis, and during the siege of Athens, and after the defeat at Chæroneia (see art. AMNESTY).

In the above account no notice has been taken of a species of *ἀτιμία* which, although a natural consequence of certain acts, was yet not part of their legal penalty. 'Atimia,' in this non-legal sense of the verdict of popular opinion, is alluded to by Demos. *Meid.* 72 (of the insult of a blow received in public), and by Aristotle (of the dishonour attaching to the suicide).* Similarly, and equally naturally, the sycophant, the disowned son, and the children of a man who had been executed, were all under this species of 'atimia' (cf. Demos. *Arist.* i. 30).

'Atimia' in this non-legal sense in Athens is akin to 'atimia' as it presents itself at Sparta, where there was not the same development of legal ideas and procedure; but all the more strong there was the force of public opinion, which perhaps to a greater degree than elsewhere in Greece was identical with law. At Sparta such 'atimia' fell upon all departure from the customs of the community (Xen. *Resp. Lac.* x. 7, iii. 3). An example is the case of Aristodemos who survived the battle of Thermopylæ (Herod. vii. 231: *ἀπονοστήσας ἐς Λακεδαίμονα εἶχε ὄνειδός τε καὶ ἀτιμίην*; cf. Xen. *op. cit.* ix. 4; Plut. *Ages.* 30). Those who surrendered at Sphacteria, however, were treated more leniently (Thuc. v. 34: *ἤδη καὶ ἀρχάς τινας ἔχοντας ἀτίμους ἐποίησαν, ἀτιμίαν δὲ τοιάνδε ὥστε μήτε ἄρχειν μήτε πριαμένους τι ἢ πωλοῦντας κυρίους εἶναι*—a penalty corresponding to 'partial atimia' at Athens). The number of those defeated at Leuctra made it impossible to carry out the law even to this extent. Spartans who remained unmarried were also subjected to a certain 'atimia,' being deprived of all claim of respect from their juniors, and excluded from certain festivals (Plut. *Lyc.* 15). Inability to provide the fixed contribution to the common mess excluded a Spartan *ipso facto* from the class of Peers (*ὅμοιοι*), which probably implied the loss of political rights, as distinguished from the civil rights, of citizenship (Arist. *Polit.* ii. 9; Xen. *Hell.* III. iii. 5). Apparently full rights were at once recoverable by conformity to the required conditions; even Aristodemos by his valiant conduct at Platæa recovered caste, though not, indeed, entirely (Herod. vii. 231 and ix. 71). It would hence appear that 'atimia' at Sparta was in general analogous to what we have called 'conditional atimia' at Athens.

The existence of 'atimia' as a penal measure is proved for other States of Greece (*e.g.* Chalcis and Eretria in Euboea, Chios, Lokris, Ephesos, etc.) by inscriptions ranging in date from the 5th to the 1st cent. B.C. In certain cases Athenian influence may have operated, as in Euboea (see Hicks, *Manual of Greek Historical Inscriptions*[2], No. 40: *ὀμόσαι δὲ Χαλκιδέων τοὺς ἡβῶντας ἅπαντας. ὃς δ' ἂμ μὴ ὀμόσῃ, ἄτιμον αὐτὸν εἶναι καὶ τὰ χρήματα αὐτοῦ δημόσια*); and perhaps also at Delphi, where, in the 2nd cent. B.C., at any rate, State-debtors were *ἄτιμοι* (Dittenberger, *Sylloge*[2], No. 306). But, in general, it is probable that the penalty of 'atimia' was practically a universal method among the Greek States, and followed immediately from the Greek conception of the relationship between the State and the individual (on this subject see Newman's *Politics of Aristotle*, vol. i. p. 30 f.).

LITERATURE.—Besides the works above specified, see also P. van Lelyfeld, *De infamia iure Attico*, Amst. 1835; H. M. E. Meier, *Historia iuris attici de bonis damnatorum*, Berl. 1819; Thonissen, *Le Droit pénal de la république athénienne*, Brussels, 1875. Paul Usteri, *Ächtung und Verbannung im griechischen Recht* (Berl. 1903), gives the most exhaustive treatment of the subject; following out the ideas of H. Swoboda (in *Arch-Epigr. Mitt. aus Österr.-Ung.* xvi. [1893] p. 49 f.), he draws a sharp distinction between *ἄτιμος* in the sense of 'outlawed' and *ἄτιμος* = 'disfranchised,' but without apparently attaining any very significant result.

W. J. WOODHOUSE.

ATĪṢA (or Dīpaṅkara).—A learned Indian Buddhist friar, who effected the most profound reformation of Lāmaism. Entering Tibet in A.D. 1038, and finding the prevalent Buddhism in the hands of an immoral priesthood and extremely debased by demonolatry, he founded a new Order, on a purer Buddhist model, which he called 'Bound by the Orders' (*Kah-dam*). This afterwards became the 'Yellow-cap' sect or 'the Virtue Practisers' (*Ge-luk*), now the dominant State Church. In his reform Atīṣa restored celibacy and purged the ritual of much of its grosser devil-worship. He wrote a great many doctrinal works, and translated into the Tibetan scriptures a large number of Indian Buddhist commentaries. The beneficial effects of his teaching also initiated other semi-reformed sects, the Saskya and Kargyu, which arose somewhat later. He died in A.D. 1052 at Ne-t'ang, near Lhāsa, where a large funereal mound, or *stūpa*, was erected over his grave and still exists.

LITERATURE.—C. F. Köppen, *Lamaische Hierarchie und Kirche* (Berlin, 1857–59), ii. 78, 117, 127, 285; L. A. Waddell, *Buddhism of Tibet* (1895), pp. 35, 36, 54, 57, also *Lhasa* (1905), p. 320 f.

ATĪTS or, incorrectly, Atiths; **AVADHŪTS**, sometimes Abdhūts, Audhūts, Avdhūts (Skr. *atīta*, 'passed away [from worldly care]'; *avadhūta*, 'shaken off').—These two names can conveniently be taken together. They are generally applied in India to any religious mendicants, as indicating that they have 'passed away' from or become liberated from worldly cares, or have 'shaken off' all caste and personal distinction. *Avadhūt* is applied to both Vaiṣṇavas and Śaivas (*qq.v.*); but, so far as the present writer is aware, *Atīt* is applied only to the latter. Mr. Risley,* however, states that Vaiṣṇava Atīts exist in Bihār. In this technical

* Ar. *Eth. Nic.* v. 11: *καί τις ἀτιμία πρόσεστι τῷ ἑαυτὸν διαφθείραντι ὡς τὴν πόλιν ἀδικοῦντι.* This should not be taken, as is usually done, of a penal consequence. For upon whom should it fall?

* *Tribes and Castes of Bengal*, s.v. 'Atīt.'

sense, *avadhūta* often occurs in Sanskrit literature, but the technical use of *atīta* seems to be more modern, and to be confined to the vernaculars. *Atīt* is often confounded with the word *atith* (Skr. *atithi*), 'a guest,' which has more than once given rise to fanciful explanations. In addition to this customary general sense, both words are sometimes employed to indicate special classes of religious mendicants.

In this narrower sense *Atīt* is applied to six and a half of the Dasnāmī, or ten sections of Śaiva mendicants, who claim spiritual descent from the great reformer Śaṅkarāchārya (*q.v.*). Three and a half of these sections, who are called *Daṇḍīs* from their habit of carrying a *daṇḍa*, or staff, are considered to have retained Śaṅkarāchārya's doctrine in all its purity. The rest, viz. the Vanas, Araṇyas, Purīs, Girīs, Pārvatas, Sāgaras, and half the Bhāratīs, are reputed to have fallen to some extent from orthodoxy, but are still looked upon as religious characters. These are the Atīts. Unlike the Daṇḍīs, they carry no staff. They differ from the latter also in their use of clothing, money, and ornaments, their methods of preparing food, and their admission of members from any order of Hindus. Some of them lead an ascetic life, while others mix freely in the world, carry on trade, and acquire property. Most of them are celibate, but some of them marry, and are then known as *saṁyōgī* ('married') or *gharbārī* ('householder') Atīts. They are often collected in *maṭhs*, or monasteries, and some officiate as temple-priests. They wear ochre(*gērū*)-coloured garments, and carry a rosary of the *rudrākṣa* seeds sacred to Śiva. They do not eat flesh or drink spirits. They worship Śiva, usually under the name of Mahādeva or Bhairon, and also pay devotions to the monkey-god Hanumān or Mahāvīra. Their religious theories (when they have any) are based on the *advaita* Vedānta (*qq.v.*) of their founder Śaṅkarāchārya.

The Śaiva Avadhūts (when the word is employed in the narrower sense) are ascetics of a sterner mould. They wear as few clothes as possible, making up the deficiency with mud, and let their hair grow long and matted (technically called *jaṭa*). They practise silence, and live on alms. In the cold weather they may be seen cowering over a small fire. Their life is in every way an extremely hard one. Gorakhnāth (*q.v.*), the founder of the sect of *Kānphāṭā* Yogīs, is often referred to as a typical Avadhūt of this class.

As regards Vaiṣṇavas, the term *Avadhūt* has a special significance. When Rāmānanda made his great reformation amongst the followers of Rāmānuja, and abrogated the distinction of caste in religious orders, he gave this title to his followers, to signify that they had, so to speak, 'put off the old man.' They had 'shaken off' all personal distinction by adopting a religious life, and thus quitting the ties of nature and of society. For an account of the religious tenets and customs of these Avadhūts, see RĀMĀNANDIN and BHAKTI-MARGA.

LITERATURE.—These names can hardly be called the titles of distinctive religious sects, and hence little has been written about them. The above article has been compiled partly from the writer's private notes and partly from the following works: H. H. Wilson, *Essays on the Religion of the Hindūs* (ed. 1861), i. 204 ff. ('Atit'), 55 ff. ('Vaiṣṇava Avadhūts'); H. H. Risley, *Tribes and Castes of Bengal* (1891), *s.v.* 'Atit'; W. Crooke, *The Tribes and Castes of the North-Western Provinces and Oudh* (1896), *s.vv.* 'Atit,' 'Awadhūt.'

GEORGE A. GRIERSON.

ĀTMAN.—1. Etymology.—The origin of the word *ātman* is doubtful. It is usual to compare it with the Greek ἀτμός, ἀϋτμήν, ἀϋτμή, and the Teutonic *ātum*, *āðom*, *ǣðm*, and it is then derived either from *an*, 'breath' (*Petersburger Wörterbuch*), or *at*, 'go' (Weber), or *av* (=*vā*), 'blow' (Curtius, Grassmann, etc.). The development of meaning would therefore be—(1) breath, (2) soul, (3) self. However, *ātman* in the sense of breath (of the wind) occurs only in four passages of the Rigveda, mostly in hymns of younger date; and, what is more important, we find more frequently in the Rigveda the abridged form *tman* (in the case-forms *tmanam*, *tmanā*, *tmane*, *tmani*, *tman*), in the sense partly of a reflexive pronoun, partly of an adverb. It might then be that *ātman*, and perhaps also the Greek αὐτός, originate from two pronominal stems, *a* (in *a-ham*) and *ta* ('this'), and the meaning would be 'this ego,' 'this my own self.' However this may be, the word *ātman* came very early to signify 'the self in contrast with that which is not self,' and this meaning developed in four directions: (1) the own person, the own body, opposed to the outside world; (2) the trunk of the body as opposed to the limbs; (3) the soul as opposed to the body; (4) the essence as opposed to what is not essence. Examples of these various meanings are frequent in the Vedic texts.

2. Philosophical meaning.—It is evident from this that the idea of *ātman*, 'self,' is *relative*, pointing to something which is not the *ātman*, and *negative*, in so far as the positive sense is not in it, but in that which is to be excluded. Such relative-negative concepts are frequent in philosophy, and have been used with great advantage to signify the inner principle of the universe, excluding from it the whole content of the phenomenal world. Of this kind is the ἀρχή of Anaximander in contrast to all things which have antecedents; the ὄν of Parmenides in contrast to the γένεσις and ὄλεθρος which rule in the world of sense; the ὄντως ὄν of Plato in contrast to the γιγνόμενον καὶ ἀπολλύμενον; the *substantia* of Spinoza in contrast to the *modi*, of which the whole world, corporeal as well as intellectual, consists; and the *Ding an sich* of Kant in contrast to the whole phenomenal world, which contains the things only in so far as they exist *for us*, *i.e.* for our intellect in its innate forms, viz. time, space and causality. All these concepts, ἀρχή, ὄν, ὄντως ὄν, *substantia*, *Ding an sich*, are *negative*, for they state only what the principle is not, and not what it is. They are therefore empty of content, and herein lies their great value for the science of metaphysics, which has to do with a subject eternally unknowable. Of this kind is also the concept *ātman*, which requires us to direct our attention towards the Self of our own person, the Self of everything else, the Self of the whole world, and to discard all that, strictly speaking, does not belong to this Self. It is the most abstract, and therefore the best name which philosophy has found for its sole and eternal theme. All those other names, ἀρχή, ὄν, ὄντως ὄν, *substantia*, *Ding an sich*, still smack of the phenomenal world, from which they originate. *Ātman* alone touches the precise point at which the inner, obscure, never-appearing essence of things reveals itself. Nor is it by accident that Indian thinkers, above all others, arrived at this most abstract, and therefore best, expression for the eternal subject of all metaphysics; for the Indian genius is animated by a restless desire to penetrate to the depths, a longing to be rid of all that is external and non-essential, as we shall see later on in some famous examples from the Upaniṣads.

3. Brahman and Ātman.—There are two words, *brahman* and *ātman*, which are often used in the Upaniṣads to signify the inner essence of the individual as well as of the whole world, and which cannot be considered separate from each other. *Brahman* means originally, and wherever it occurs in the Rigveda, 'prayer'; and it is very strange (and recalls the similar case of the Biblical λόγος)

how this word came to mean the essential principle of the world. In prayer the devotee felt himself elevated above his own individuality, above the phenomenal world, in union with the gods; in prayer he felt awaking within himself a power which was above all beings, above all worlds, and even above the gods. So it came about that to the question already raised in Rigveda, x. 81. 4, 'What was the wood, what was the tree, of which they have carved heaven and earth?' the following answer is given later on in a Brāhmaṇa (Taitt. Br. ii. 8, 9): '*Brahman* was the wood, *Brahman* was the tree, of which they have carved heaven and earth.' We cannot enter here into further details; let it suffice to say that we can follow in the Vedic literature step by step the path by which the word *brahman* from the original meaning 'prayer' came to signify the 'principle of the world.' It might be supposed that a similar development could be traced for the word *ātman*. And, indeed, there are some who believe that, side by side with the theological significance attached to the word *brahman*, there was a more philosophical tendency which circled round the word *ātman*, and that both views expanded more and more until they coalesced in the identification of *brahman* and *ātman* as it is found in the Upaniṣads. But this hypothesis is not confirmed by the facts. It is useless to attempt to gain in the hymns and Brāhmaṇas the necessary materials for a history of the word *ātman*, as we can for the word *brahman*. On the contrary, we see the word *ātman* emerging here and there, and quickly disappearing again, until the Indian thinkers, becoming aware of the advantage of this term, began to use it more and more frequently to express what they felt without being able to clothe it in words. In fact the word *brahman*, 'prayer,' originally expressed a subjective feeling; and it was only by intensifying this subjective, and at the same time metaphysical, character that they came to take hold of the word *ātman* as the most striking and happy expression for the inner essence of the individual, and for the inner essence of the whole world (see art. BRAHMAN). A few examples may serve to illustrate this process.

4. Examples from hymns and Brāhmaṇas.—Even as early as the Rigveda, in the profound and difficult hymn of Dīrghatamas (i. 164. 4), the poet asks: 'Who has seen how the firstborn, being the Bone-possessing (the shaped world), was born from the Boneless (the shapeless)? Where was the vital breath, the blood, the Self (*ātman*) of the world? Who went to ask him that knows it?' Here the poet, penetrating deeper and deeper, passes from the vital breath to the blood, from the blood to the *ātman*, or inmost Self. It may seem strange that the Indian philosophers ask earlier after the Self of the world than after the Self of the individual, but the mind is like the eye, which sees everything else before it sees itself.

Many other quotations of similar import will be found in the present writer's *Geschichte der Philosophie*, i. 1, especially p. 331 ff. It is said, for example, of Prajāpati (a mythical personification of the creative power) in the Taittarīya Āraṇyaka, i. 23: 'In building the worlds and the beings he entered with his own Self (*ātmanā*) into his own Self (*ātmānam*)'; in Atharvav. x. 8. 44: 'He who knows him does no longer fear death, him the wise, undecaying, ever-young *ātman*'; in Taitt. Br. iii. 12. 9. 7: 'He through whom the sun shines, enflamed by glowing fire—only the knower of the Veda when departing this life understands him, the great omnipresent *ātman*. He, living in the Brahmans as their greatness, is not augmented or diminished by works; the Self is his pathfinder; one who knows him is no more stained by evil deed'; in Taitt. Ār. iii. 11. 1: 'He who lives in us as our ruler, who is one, and yet appears in many forms, in whom the hundred lights of heaven are one, in whom the Vedas are one, the priests one—he is the intellectual Self (*mānasīna ātmā*) in man.'

These passages already approach the standpoint of the Upaniṣads, which is fully reached in the so-called 'Science of Śāṇḍilya' (Śatap. Br. x. 6. 3) and Chhānd. Up. iii. 14: 'Verily this world is *Brahman*. Let a man meditate upon it in silence as *Tajjalān* (origin, annihilation, and breath of the world). Mind is his stuff, life his body, light his shape, truth his thoughts, his Self the infinite. All-working is he, all-wishing, all-smelling, all-tasting, all-embracing, silent, unconcerned; He is my soul (*ātman*) in the inner heart, smaller than a rice-corn or a mustard-corn, or a millet-corn, or a rice-corn's kernel; He is my soul (*ātman*) in the inner heart, greater than the earth, greater than the atmosphere, greater than the heaven, greater than all these worlds. The all-working, all-wishing, all-smelling, all-tasting, all-embracing, silent, unconcerned, He is my ātman in the inner heart, He is the Brahman; to Him, when departing, I shall enter. Whoever obtains this, verily he does not doubt! Thus spake Śāṇḍilya, Śāṇḍilya.'

5. The Ātman in the Upaniṣads.—The words just quoted, 'He is my *ātman* in the inner heart, He is the *Brahman*,' contain the two words about which circle nearly all the thoughts of the Upaniṣads. Very often they are used without any distinction; but wherever, as in the quotation just given, a difference is observable, *Brahman* means the eternal principle as realized in the whole world, and *ātman* the same principle as realized in ourselves. Assuming this, the fundamental thought of all the Upaniṣads can be expressed by the simple equation:

Brahman = *ātman*,

meaning the identity of *Brahman* and *ātman*, or, as we should say, of God and the soul. It is thus expressed in the so-called 'great words': *tat tvam asi*, 'that art thou' (Chhānd. Up. vi. 8. 7), and *aham brahmā asmi*, 'I am Brahman' (Bṛih. Up. i. 4. 10). That means: *Brahman*, the power which creates all the worlds, supports them, and destroys them. This all-mighty, all-pervading, eternal power is identical with the *ātman*, with that which, rightly understanding, we have to consider as our soul, as our own unchanging, imperishable Self. The grandeur of this thought is manifest. We do not know what ways are reserved for philosophy in future ages, we do not know what discoveries may be made in times to come, but so much we know with certainty: if a solution of the riddle which this phenomenal world presents to us is possible in any way to mankind, the key to that riddle can be found only where Nature manifests herself not merely from the outside, but where she exceptionally reveals her secret to us, and allows an insight, however limited, into her abysmal depths, *i.e.* into our own inner Self, into our *ātman*. This way was trodden by the Indian philosophers in the Upaniṣads, and no future time will cease to learn from them. But what have we to consider as our Self, as our *ātman*? It was not without serious researches that the Indians came to a satisfactory answer to this question. *Ātman*, the Self, might be simply the body, it might be the vital principle, the individual soul (*jīva*) in us, it might be something higher than all this. It is wonderful to follow the Indian thinkers in their researches after the real essence of the *ātman*, as they lie open before us in the various Upaniṣads; here, however, we must limit ourselves to a few examples.

In the second *vallī* of the Taitt. Up. the philosopher takes man as he appears as a bodily existence. In so far he consists of food, he is *annarasamaya*, 'consisting of the essence of food'; but this body is only the sheath which envelops something else, the *prāṇamaya ātman*, 'the Self consisting of vital breath.' This, again, hides another being, the *manomaya ātman*, 'the Self consisting of will.' This, again, contains the *vijñānamaya ātman*, 'the Self consisting of consciousness'; and only by removing this, as an envelope, do we come to the inmost Self, the *ānandamaya ātman*, 'the Self consisting of bliss.' Having come to this, the text says: 'Verily this is the essence; for whoever obtains this essence is filled with bliss. For who could breathe, who could live, were not this bliss in the ether of his heart? For it is he who creates bliss. For whoever in that Invisible, Incorporeal, Unspeakable, Unfathomable finds peace, finds rest, he really has come to peace. But whoever assumes in it a distinction, a separation between himself and this *ātman*, there is fear for him; it is the fear of the man who thinks himself wise' (Taitt. Up. ii. 7).

As in this passage five different *ātmans*, one within the other, are distinguished, so another

text speaks of three *ātmans*—the corporeal, the individual, and the highest *ātman*. In Chhānd. Up. viii. 7, Prajāpati said: 'The Self (*ātman*) which is free from sin, free from old age, from death and grief, from hunger and thirst, whose wishes are true, whose counsels are true, that is to be investigated, that is to be understood; he obtains all worlds and all wishes, whoever has found that Self.' These words of Prajāpati were heard by the gods and by the demons; and in order to learn the true Self the gods sent Indra, the demons Virochana, to Prajāpati. He consented to teach them, and began his instruction with the words: 'Look at yourself in a vessel of water, and tell me what of your Self you do not see there.' They answered: 'We see, O venerable master, this our entire Self even to the hairs, even to the nails.' And he said: 'Well, that is the Self, that is the Immortal, the Fearless, that is the Brahman.' They went away with satisfied heart, but Prajāpati said: 'There they go away, without having perceived, without having found the Self.' Virochana, the messenger of the demons, remained content with the answer; but Indra, without returning to the gods, came back and said: 'O venerable master, just as this Self is well adorned when the body is well adorned, well dressed when the body is well dressed, well cleaned when the body is well cleaned, even so that Self will be blind when the body is blind, lame when the body is lame, crippled when the body is crippled, and, in fact, will perish as soon as the body perishes; therefore, I see no consolation in this doctrine.' Prajāpati then led him to a higher conception of the Self, saying: 'He who moves about happy in dreams, he is the Self, this is the Immortal, the Fearless, this is Brahman.' Indra departed, but, before reaching the gods, came back and said: 'Venerable master, it is true that the Self is not blind when the body is blind, not lame when it is lame, it is true that it is not affected by the infirmities of the body; it is not killed when the body is murdered, is not lamed when it is lamed, but it is as if it were killed, as if it were vexed, as if it suffered pain, as if it wept, —in this I see no consolation.' Prajāpati gave a new instruction: 'When a man, being asleep, reposing, and at perfect rest, sees no dreams, this is the Self, this is the Immortal, the Fearless, this is Brahman.' Indra departed, and returned again: 'Venerable master, in that way he does not know himself, does not know "I am this," nor does he know anything that exists. He is gone to annihilation. I see no consolation in this.' And now Prajāpati, after having led his pupil from the bodily Self to the conscious individual Self in dreams, and from this to the unconscious individual Self in deep sleep, revealed the full truth about the Self: 'O mighty Indra,' said he, 'this body indeed is possessed by death. It is the abode of that immortal, incorporeal Self. Possessed is the incorporated Self by pleasure and pain; for, because it is incorporated, there is no escape from pleasure and pain. But the incorporeal Self is touched neither by pleasure nor by pain. Bodiless are winds, clouds, lightning, and thunder; and as these, being hidden in the heavenly ether, rise from it, and, approaching the highest light, appear in their own form, thus does that serene being, arising from this body, approaching the highest light (the knowledge of Self), appear in its own form. He then is the highest spirit. He obtains all worlds and all wishes who knows and understands this Self.'

6. **Conclusion.**—Even in the oldest texts of the Upaniṣads there is found a bold *idealism* which maintains the sole reality of the *Ātman*, and denies an existence beyond the *Ātman*. This standpoint, however, could not be maintained for any length of time, for the reality of the phenomenal world imposed itself upon the mind; and, therefore, the desire to satisfy both convictions, that of the sole existence of the *Ātman* and that of the reality of phenomena, led to a kind of *pantheism* (represented chiefly by the Chhāndogya Upaniṣad), whose thesis was the identity of the universe and the *Ātman*. But this identity, however often proclaimed, was and remained unintelligible. Substituting for it the more comprehensible concept of causality, the thinkers of the Upaniṣads came to what we would call *cosmogonism*, asserting that the *Ātman* was the cause, and the world its effect. The *Ātman* creates this world, and, having created it, He incorporates Himself in it as individual soul.

Taitt. Up. ii. 6: 'He desired: "I will be manifold, I will propagate myself." He performed austerities. Having performed austerities, he created this whole world, whatever exists. Having created it, he entered into it.'

Even thus the *Ātman* remained what it was before, the Self in us. This Self creates the world, and enters into it as the individual soul. As early as the Kāṭhaka Upaniṣad this theory developed into a kind of *theism*, distinguishing between the highest *Ātman* who creates the world, and the individual *ātman* who lives in it. It is very remarkable that this theism then passed into the atheism proclaimed in the Sāṅkhya system. The highest *Ātman*, being distinguished from the individual *ātman*, in which it had its real certification, was no longer sufficiently certified, and was rejected by the thoroughgoing realism of the Sāṅkhya philosophy. There remained only material nature called *prakṛti*, and a multitude of individual *ātmans* called *puruṣas*. The last step in this process of degeneration was the *apsychism* of the Buddhists and the Chārvākas, who in part doubted, in part denied, the *ātman* altogether.

Thus the lofty idealism of the Upaniṣads was altered, and at last destroyed, by the realistic tendencies of a later age.

P. DEUSSEN.

ATOMIC THEORY.

ATOMIC THEORY (Greek).—The originator of what is called the atomic theory was Leucippus, of whom even the ancients knew so little that Epicurus could entirely deny his existence—a conjecture which was revived in modern times, but may now be regarded as finally abandoned. Leucippus' native country was Ionia (Miletus ?), and he lived between the times of Parmenides and Democritus. We are acquainted with his teaching only in the form which it took in the mind of his disciple, Democritus. The latter was born at Abdera; but the ancient writers knew nothing about the period in which he lived except what he himself had stated in a written work. He was a young man, evidently, when Anaxagoras had attained a rather advanced age; this would imply that he was in his prime in the years B.C. 430–420 The logical consistency of his thought, the wide range of his knowledge of natural science, and the excellence of his composition, made the success of

his numerous writings very considerable. His views were thoroughly discussed and opposed by Aristotle and Theophrastus.

Leucippus was led to his theory by the reaction against the Eleatic School, whose views had been placed on a scientific basis by Parmenides. It had denied all motion and change, and declared them to be an illusion of the senses; the truth being, they maintained, that reason leads us to perceive that what exists is unchangeable. This assumption so entirely contradicts all experience that a more plausible explanation of the processes of nature had to be found; account had to be taken of Heraclitus' correct observation that a continual change is taking place in the world. But it was no longer permissible to explain—as was formerly done—this change as due to transformations of a primordial substance, for neither could the conversion of fire into water and earth, and *vice versa*, as Heraclitus claimed, be grounded on experience, nor could the Eleatic principle be ignored that anything that is permanent must be present in the change. While the Pythagoreans found this permanent element in number, and therefore entirely abandoned the explanation of materialism, Leucippus and Democritus recognized it in atoms—those particles of matter so minute that they cannot be further divided, and are not perceptible to the senses—of varying size and form, but all consisting of the same substance, or matter, which cannot be more narrowly defined. Particular things come into existence when these atoms combine, and disappear when they separate; but the atoms themselves are eternal and indestructible. The combination and separation of the atoms are not possible unless there be motion, nor this again, as the Eleatic School had already noted, unless there be empty space; but whereas the Eleatics had denied motion and empty space, the atomists held both to be real, indeed to be the only reality (Democr. *Fragm.* 125, Diels: *νόμῳ χροίη, νόμῳ γλυκύ, νόμῳ πικρόν, ἐτεῇ δ' ἄτομα καὶ κενόν*). For these principles Democritus also found support in special observations; *e.g.*, a body can grow only by the nutriment penetrating the open pores.

The atoms differ in form, composition, and condition; with the form is connected the size, and on this depends the weight. But these characteristics of bodies are primary, all other sense-qualities being secondary; *e.g.*, warmth was supposed to appertain to round atoms, whiteness to rough atoms, blackness to smooth atoms, sourness to small angular atoms, and sweetness to larger round atoms (there is some apt criticism by Theophrastus, *de Sens.* 68, in Diels[2], p. 376). Since it depends upon chance which kind of those different atoms that form a body makes most impression upon the senses, these secondary qualities are at the same time subjective (*νόμῳ*, see above). The other elements assumed by physicists are, of course, for Democritus composite bodies; but he made fire an exception by supposing it to consist of only one kind of atom, globular in form. On this point he was no doubt influenced by Heraclitus.

There are great difficulties in the question whence, in the ultimate analysis, the motion arises which causes combination and separation of atoms. It was clear to Democritus that all change is motion in space, though, at the same time, Epicurus was perhaps the first to say so expressly. The old atomists did not answer this question; on the contrary, they assumed an eternal, primordial motion of the atoms, and gave up the idea of specifying its first cause. Whether they thought of the motion as a falling movement like that of gravity or as an irregular whirl is not quite clear. Zeller takes the former view, Brieger and Liepmann the latter. In any case, they had no strict idea of gravitation or of the necessity of falling; and this makes the dispute very difficult to decide. In this motion the particles impinge upon one another, seemingly in consequence of their unequal weight, receive blows, break off other particles, and so produce a whirling motion, a kind of primordial dance in which several atoms combine, provided that their form renders them capable of adhering to one another (the modern theory has actually been led to make similar assumptions). Every such whirl may develop into a world; and this led the atomists to the assumption—to which Plato objected (*Tim.* 55 C)—that there were innumerable worlds, several of which had passed out of existence again through colliding with greater ones. The space between these worlds Epicurus called *μετακόσμια* (in Cicero, *intermundia*). Round the whirling mass of atoms a crust was formed out of hook-shaped particles. This crust, in the course of a long process of rotation, became thinner and thinner (the *flammantia mœnia mundi* of Lucretius, i. 73). The heavier atoms gathered in the middle and formed the earth, the lighter atoms remaining at the circumference. The crust holds fast those bodies which, coming from without, conglomerate at the edge of the world, and are aflame with the velocity of their motion: these are the stars. Worlds may perish by becoming feeble or old, but also by collision with other worlds.

In psychology also Democritus carried his views to their logical consequences. The human soul consists, in like manner, of atoms, and of the most mobile of these—that is to say, of fire-atoms, which are so distributed throughout all bodies that between every two body-atoms there is one soul-atom, and which produce both motion and thought. The preference here given to fire is again due to the influence of Heraclitus. Even the sensations are explained atomically; for instance, sight is produced by fine particles, which retain the form of bodies (*εἴδωλα, δείκελα*), detaching themselves from the surface of bodies and pressing upon the eye. Similarly sound is a material thing. But perception gives only a dull cognition; thought alone makes it clear (*γνώμης δὲ δύο εἰσὶν ἰδέαι, ἡ μὲν γνησίη, ἡ δὲ σκοτίη· καὶ σκοτίης μὲν τάδε σύμπαντα, ὄψις, ἀκοή, ὀδμή, γεῦσις, ψαῦσις· ἡ δὲ γνησίη, ἀποκεκριμένη δὲ ταύτης.* *Fragm.* 11 Diels).

To the school of Democritus belonged Nausiphanes of Teos (Diels, *Fragm. d. Vorsokr.*[2] i. 462), who became the teacher of Epicurus (*c.* 325 B.C.) and introduced him to the atomic theory. But while it had been the aim of Democritus to explain the world-phenomena in a uniform way, Epicurus merely wished to give his own views on human happiness a satisfactory basis in natural science (*Sent. Sel.* xii. *οὐκ ἦν ἄνευ φυσιολογίας ἀκεραίους τὰς ἡδονὰς ἀπολαμβάνειν*); he regarded the whole of natural science as superfluous except in so far as it served this purpose, and declined to recognize as final any solution of a question if it failed to rid us of fear (*Sent. Sel.* xi.). Consequently he accepted Democritus' theories without introducing much change into them (Cic. *de Fin.* i. 21: 'Quæ sequitur, sunt tota Democriti. Atomi, inane, imagines, quæ *εἴδωλα* nominant'). A number of the changes which he did make have been abortive, and, when carried to their logical conclusions, are such as to shake the foundation of the system. For instance, even the ancient writers had noticed that Democritus did not avail himself of chance as an explanation of certain phenomena (Eudem. *ap.* Simplic. in *Phys.* 330, 14). Epicurus, on the other hand, made frequent use of this expedient.

Again, the only existing things, according to him, are atoms and empty space, and he finds the former characterized by hardness (*ἀντιτυπία*), and the latter by pliability (*εἶξις*). The atoms, on

account of their minuteness, are not perceptible, and yet they are not infinitely small in a mathematical sense, but simply, by reason of their hardness, not further divisible. They fall downwards by their weight, like rain, and with equal rapidity, empty space yielding to them; here then, in opposition to Democritus, a characteristic primordial motion is ascribed to them. Since, however, in this way no contact could ever take place between them, Epicurus found himself forced to make the assumption—fundamentally monstrous, and derided even by the ancients—that certain atoms deviated very slightly ('nec plus quam minimum,' Lucr. ii. 244) from the perpendicular direction, thus colliding with others and producing all those processes which, from Democritus' point of view also, led to the formation of worlds. He made use of this deviation of atoms as an explanation even of the freedom of the will (Brieger, *Abhandl. für Hertz*, Berlin, 1888). The idea that the motion of the atoms is permanent, and does not cease even in the interior of the bodies formed from them, also appears to be new. Even the soul Epicurus makes to consist of material atoms, though not now merely of fire-atoms, but of fire, air, *pneuma*, and an indefinable substance which was supposed to be the vehicle of feeling; thus he gave the soul a separate status in contradiction to the logic of materialism. Perception he explained in exactly the same way as his great predecessor, but he seems to have laid greater emphasis on the identity of perception and motion in the soul-particles, being here, as often, influenced by Aristotle. While Democritus had explained the sense-qualities as subjective, Epicurus ascribes reality to them, and denies that the senses can ever deceive. But since all kinds of atoms are intermingled, and one person perceives more of one kind and another more of another, the same things may affect different men differently (Fragm. 250, Us.). Epicurus' teaching about the mingling was more correct than that of Democritus. The latter had assumed that parts of the mingled matter lay side by side, but was met by Aristotle with the objection that in this way only a medley could arise, and not a real mingling. Consequently, Epicurus now made, not the particles of matter, but the particular atoms come to the side of one another, and thus approached very near to the views of modern chemistry.

The school of Epicurus held to the teaching of its founder with greater tenacity than any other, and consequently in ancient times atomism subsequently underwent no development. Thus Lucretius, although he is hardly indebted directly to Epicurus, but to later Epicureans, faithfully reproduces the views of the master. A little before him lived the physician Asclepiades of Bithynia, who grounded his theory of medicine on the basic ideas of the Epicurean doctrine of atoms (M. Wellmann, in Pauly-Wissowa, ii. 1632).

W. KROLL.

ATOMIC THEORY (Indian).—In the oldest philosophical speculations of the Brāhmans as preserved in the *Upaniṣads*, we find no trace of an atomic theory; and it is therefore controverted in the *Vedānta Sūtra*, which claims systematically to interpret the teachings of the *Upaniṣads*. Nor is it acknowledged in the Sāṅkhya and Yoga philosophies, which have the next claim to be considered orthodox, *i.e.* to be in keeping with the Vedas; for even the *Vedānta Sūtra* allows them the title of *Smṛtis*. But the atomic theory makes an integral part of the Vaiśeṣika, and it is acknowledged by the Nyāya, two Brāhmanical philosophies which have originated with, or at least been favoured by, secular scholars (*paṇḍits*), rather than by divines or religious men. Among the heterodox it has been adopted by the Jains, and, as is stated in the *Abhidharmakośa vyākhyā*,* also by the Ājīvikas. It seems to have been unknown to original Buddhism; for the well-known Pāli scholar, Professor Franke, states that no mention is made of it in the Pāli canonical books. It is different, however, with the Northern Buddhists; for the Vaibhāṣikas and Sautrāntikas were adherents of the atomic theory, while the Mādhyamikas and Yogāchāras opposed it, as they declared the external world not to be real.

The speculations of the sects and philosophical schools just mentioned may be arranged in three groups. The first is represented by the Jains; the second by the Vaiśeṣika and Nyāya *Sūtras* and the *Bhāṣya* on the latter by Vātsyāyana, and, on the other hand, by the Northern Buddhists; while the last phase of the theory is that which appears first in the *Praśastapāda-Bhāṣya*, the oldest systematic exposition of the Vaiśeṣika system, and has since been generally adopted by the combined Vaiśeṣikas and Naiyāyikas.

I. We place the Jains first, because they seem to have worked out their system from the most primitive notions about matter. These may be taken to be the following. Matter is an eternal substance, undetermined with regard to quantity and quality, *i.e.* it may increase or diminish in volume without addition or loss of particles, and it may assume any forms and develop any kind of qualities. Material substances may coalesce into one substance, and one substance may divide into many.

Now, the Jains maintain that everything in this world, except souls and mere space, is produced from matter (*pudgala*), and that all matter consists of atoms (*paramāṇu*). Each atom occupies one point (*pradeśa*) of space. Matter, however, may be either in the gross state (*sthūla*, *bādara*), or in the subtle (*sūkṣma*). When it is in the subtle state, innumerable atoms of it occupy the space of one gross atom. The atoms are eternal as regards their substance; each atom has one kind of taste, smell, and colour, and two kinds of touch. These qualities, however, are not permanent and fixed for the several atoms, but they may be changed and developed in them. Two or more atoms which differ in their degree of smoothness and roughness, may combine to form aggregates (*skandha*). The figures formed by the arrangement of the atoms into groups are manifold, and are precisely described in the *Bhagavatī*; every thing is believed to be formed of groups of one kind only. The atom may develop a motion of its own, and this motion may become so swift that by means of it an atom may traverse in one moment the whole universe from one end to the other.

It is evident, from what has been said, that there are not different kinds of atoms corresponding to the four elements, earth, water, fire, and wind; but though it is not explicitly stated, still we may assume that the atoms, by developing the characteristic qualities of the elements, become differentiated and thus form the four elements. For the latter are presupposed by the belief in elementary souls:

* The passage is quoted, *s.v.* 'Aṇu,' in a Buddhist dictionary now [1908] being printed in Calcutta, for the proofs of which the present writer is indebted to the courtesy of Prof. de la Vallée Poussin.

earth-souls, water-souls, fire-souls, and wind-souls, *i.e.* souls in various phases of development, which are embodied in particles of earth, etc. The elements must accordingly be regarded as the bodies, or even corpses, of particular living beings; at any rate they are not without beginning and end.

We must mention the opinion of the Jains concerning *karma*, *i.e.* merit and demerit, in its bearing on the atomic theory. *Karma* according to them is of material nature (*paudgalika*). The soul by its commerce with the outer world becomes literally penetrated with material particles of a very subtle kind. These become *karma* and build up a special body, the *kārmaṇaśarīra*, which never leaves the soul till its final emancipation. Thus the atoms of which the *karma*-matter is composed are believed to be invested with a peculiar faculty which brings about the effects of merit and demerit. The opponents of the Jains understood this theory to mean that *karma* is the property of atoms, and produces a motion in them so that they combine to form the body, and that the internal organ enters it.*

II. In our second group the conception of atoms has been combined with that of the four elements in the following way: There are four distinct kinds of atoms corresponding to the four elements, earth, water, fire, and wind; and the distinctive qualities of the latter are already found in the several atoms. Now, the belief that all material things are made up of four elements, singly or jointly, was current in India probably long before the philosophical systems of which we are speaking came into existence. We first meet it in the *Chhāndogya Upaniṣad* (vi. 2 ff.). There it is said that the *Ens absolutum* created fire, fire created water, and water created earth (*anna*), and that these three elements combining produce all existing things. In other places, wind (*vāyu*) is regarded as an element, and at last space (*ākāśa*) was reckoned as the fifth element; for it seemed proper that there should be five elements corresponding to the five organs of sense.† This theory of the five elements has been adopted in the Sāṅkhya philosophy, and there it has been further developed by distinguishing two sets of elements, subtle (*tanmātra*) and gross (*mahābhūta*). The elements in Sāṅkhya are, however, not atomic or eternal, but are developed from primeval matter (*prakṛti*) by a process which need not be detailed here. Of these traditional five elements, the fifth, *ākāśa*, has a peculiar character of its own, as it is not considered to enter into combination with the other elements, but to be a simple, *i.e.* an infinite and continuous, substance; nor did the Buddhists even reckon it among their elements (*mahābhūta*). And the Vaiśeṣikas also, who distinguished space (*diś*) from *ākāśa*, the substratum of sound, count the latter among the simple and infinite substances (*vibhu*), together with space, time, and the souls. Accordingly, both Brāhmanical and Buddhistic atomists admitted only four atomic substances, viz. earth, water, fire, and wind. But in other details their opinions vary.

As we have as yet but defective and second-hand information about the atomic theories of the Buddhists, we shall first describe that of their opponents, the Vaiśeṣikas and Naiyāyikas.

1. Vaiśeṣika being chiefly concerned with physics, and Nyāya with metaphysics and dialectics, the physical side of the atomic theory was more the province of the former, and the metaphysical of the latter system. Hence it may be supposed that the atomic theory is more intimately connected with the Vaiśeṣika system, and indeed Bādarāyaṇa regards it as their cardinal tenet.‡

The opinions of the Vaiśeṣikas on atoms and their qualities, as well as the arguments connected therewith, are epitomized in a few aphorisms of the 4th and 7th chapters of the *Vaiśeṣika Sūtra* by Kaṇāda. They reasoned in the following way: Things that exist and are not produced from a cause are eternal; they may be inferred from (the fact that all known things are) products. Besides, as we call everything we perceive non-eternal, this idea of non-eternity presupposes eternity (IV. i. 1–4). And finally the fact that we do not perceive the ultimate, *i.e.* uncaused, causes of things, constitutes our ignorance, and thus we are forced to assume that these ultimate causes are eternal.

But there is another interpretation of the last sūtra (IV. i. 5), which consists only of one word, 'ignorance'; *i.e.*, as we can imagine no other cause of the destruction of a thing than the disjunction or destruction of its causes, it follows that the last causes must be eternal.

For the interpretation of the sūtras here given the writer relies not so much on the modern commentaries (for there is no old one in existence), as on their refutation by Śaṅkara, which shows us what was the meaning attached to them more than a thousand years ago. It is to be understood that these eternal things, the causes of the non-eternal ones, are the *atoms*; but they are not visible. For the sūtra goes on to declare that a great thing may be visible, if it has many constituent parts and possesses colour (IV. i. 6). The next sūtra (not in our text, but as quoted in the *Nyāya Vārtika*, p. 233) states that the atom is invisible, because it is not composed of material parts. Now, a thing is great if it is composed of many constituent parts, or if the parts themselves are great, or if they are arranged in a peculiar way (VII. i. 9, not as in our text, but as quoted by Śaṅkara on *Ved. Sut.* II. ii. 11). The reverse of this holds good with the small *aṇu* (*i.e.* atom); that is to say, the atom is not composed of parts.

The discussion, carried on in the next sūtras (10–20), comes to this. The expressions 'great, small, long, short,' as used in common parlance, are relative terms, the same thing being called great with reference to one thing and small with reference to another. These expressions refer to great (or long) things only, since only such are visible, and therefore they are used in a secondary meaning. In their *primary* sense 'great' and 'small' are not relative terms, but denote distinct kinds or *genera* of dimension (just as red and blue are different kinds of colour). For otherwise we should speak of great or small greatness, *i.e.* we should attribute qualities (great or small) to a quality (greatness), which would be against the principle that qualities have no qualities. Greatness and smallness are non-eternal in non-eternal things; in eternal things they are eternal, *i.e.* absolute or infinite. The absolutely small is called globular (*parimaṇḍala*).

About the other properties of the atoms we have the following statements. The qualities of earthen and other things—colour, taste, smell, and touch—vanish on the destruction of the thing itself; accordingly they must be eternal in eternal things, *i.e.* in atoms. And so they are in the atoms of water, fire, and wind. In earth, however, as well as in atoms of earth, (some) qualities are *pākaja*, *i.e.* changeable by heat (VII. i. 1–6). Different atoms may come into conjunction (IV. ii. 4). In the beginning of creation the atoms are set in motion by *adṛṣṭa*, *i.e.* merit and demerit of creatures in the past period (V. ii. 13). The internal organ also is an atom (VII. i. 23).

This is all the information about atoms we can gather from the *Vaiśeṣika Sūtra*. But, short though it be, it is enough to show us the actual state of the atomic theory at the time of Kaṇāda and the arguments used by him in establishing that theory. Two things deserve to be noticed. Firstly, the word for 'atom' used in our text, and, it may be added, in the *Nyāya Sūtra* too, is *aṇu*; only in the sūtra quoted in the *Nyāya Vārtika* do we meet with *paramāṇu*, the usual form with all later authors; but this may be a mistake of the Vārtikakāra, who quoted from memory. Secondly, the argument for the existence of atoms, which is based on the impossibility of unlimited division of a thing, was not yet made use of by the author of the *Vaiśeṣika Sūtra*.

2. In the *Nyāya Sūtra* by Gautama, and especially in the *Bhāṣya*, or old commentary on it, by

* *Vātsyāyana*, p. 191, and Vācaspati's remark in the footnote, and *Nyāya Vārtika*, p. 448.

† This subject is treated at some length in Dr. Sukhthankar's dissertation, 'Teachings of Vedānta according to Rāmānuja,' in *Wiener Ztschr. f. d. Kunde d. Morgenl.* xxii.

‡ *Vedānta Sūtra*, II. ii. 11 ff., and Śaṅkara's remarks on II. ii. 1 f.

Vātsyāyana, who wrote in the 5th cent. A.D. or earlier, some aspects of the atomic theory are discussed, and objections raised to it by opponents are refuted. Gautama shared the opinions of the Vaiśeṣikas on the physical properties of the atoms described above. For, since he incidentally remarks (IV. i. 67) that the black colour (of earthen atoms) is not eternal (though existing from eternity), it follows that he considered the properties of water, fire, and wind to be eternal. The metaphysical questions, however, relating to atoms are fully discussed by Gautama, and further explained by Vātsyāyana. In the two places (II. i. 36 and IV. ii. 14 ff.) where they occur, they are brought in at the end of the discussion of the 'whole and its parts.' The Naiyāyikas maintain that the whole is something more than its parts; it is a different thing (*arthāntara*), not separated from its parts, but rather something in addition to them. We perceive the whole thing as such, *e.g.* a tree, though we see only the front parts, and not the middle and back ones; and thus we see a thing though we cannot see the atoms of which it consists. The question of atoms is then discussed in this way. A thing consisting of parts is called a whole, but each part must again be considered as a whole, and so the parts of a part, and so on *ad infinitum*. If we never could come to last parts, we could not conceive the idea of the whole, and so the whole would be dissolved into nothing. But the division reaches its limit in the atom, which cannot be divided any further, as we assume it to be absolutely small.

Another proof is the following. If the division into parts had no limit, the mote (*truṭi*) would not differ in size from the highest mountain, because both would have the same number of parts (IV. ii. 1 f.). The text then proceeds to refute objections raised against the notion of atoms as indivisible smallest things without parts. *Ākāśa* ('air'), as the Vaiśeṣikas assert, is a simple, all-pervading, and infinite substance: the question is put whether it penetrates the atoms or not. If it does, the atom must have parts; if not, *ākāśa* would not be all-pervading. The reply is that the atom has no exterior or interior, nor is it hollow inside, but it is a simple not a compound thing. It is further objected that, since the atom has a form, being globular, and since the form of a thing consists in the disposition of its parts, the atom must have parts. And again, when three atoms are in juxtaposition, that in the middle touches the one to the left with its right side, and that on the right with its left side; and when the atom is surrounded on all sides, we can distinguish six sides of the atom which must be considered its parts. And if the six sides were reduced to one (*i.e.* if the atom were a mere point), then the aggregate of the seven atoms would take up no more space than one atom, and consequently a jar could be reduced to the size of an atom, and hence become invisible. These arguments are met by the declaration that the division of the atom into parts is not real, but a mode of expression only.

The following are some opinions on atoms, which are mentioned in the *Nyāya Vārtika* (6th cent. A.D.), but the authors of which are not named. Some thought that the mote which is seen in a ray of the sun entering a window is an atom. Others believed that atoms do not occur singly (*asaṁhata*), but always in aggregates (p. 234). Some, apparently Buddhists, maintained that the atoms were not eternal, because they possess motion. The Naiyāyikas agree with the Vaiśeṣikas that the atoms are set into motion by *adṛṣṭa*, *i.e.* merit and demerit, but expressly state that God (*Īśvara*) directs the action of the atoms.*

3. The chief opponents of the Naiyāyikas, who held different views on atoms, were Buddhists of the Vaibhāṣika and Sautrāntika schools, as was said at the beginning. The Vaibhāṣikas maintained that external things can be directly perceived, the Sautrāntikas that they can only be inferred. Śaṅkara, who comprises both under the name of Sarvāstivādin, describes their opinions on atoms in his commentary on *Ved. Sut.* II. ii. 18 thus:

'These Buddhists acknowledge the four elements, earth, water, fire, and wind, with their properties and products, including the organs of sense; the four elements are atomic; the earth atoms have the quality of harshness, the water-atoms that of viscidity, the fire-atoms that of heat, and the wind-atoms that of motion; in combination these atoms form earthly things,' etc.

More details we learn from the work of the Tibetan *ḥjam yaṅ bśad pa*, of which Wassilieff has given an abstract,* from the *Abhidharmakośa vyākhyā*, a work of the idealistic school Yogāchāra (for a transcript of which the present writer is indebted to the courtesy of Prof. de la Vallée Poussin), and from Prajñākaramati's commentary on the *Bodhicharyāvatāra* (ix. 8 f., 95 f.).

The Vaibhāṣikas admitted that an atom had six sides, but they maintained that they made but one, or, what comes to the same, that the space within an atom could not be divided. Their opinion has been disputed by the Naiyāyikas in an old verse quoted in the *Nyāya Vārtika* (p. 521). They further asserted that atoms were amenable to sense-knowledge, though they were not visible apart, just as a dim-sighted man sees a mass of hair, though he cannot see a single hair. This view, too, was disputed by the Naiyāyikas, who maintained that the atom is transcendental (*atīndriya*), not perceptible to sense (*aindriyaka*).†

The Sautrāntikas seem to have regarded the aggregate of seven atoms as the smallest compound (*aṇu*).‡ Their opinion seems to have been that the (globular) atoms did not touch one another completely, but that there was an interval between them; but some held different views. All agreed that the atom is indivisible, though some admitted that it might be regarded as having parts, viz. eight sides. Both the Vaibhāṣikas and the Sautrāntikas declare that atoms are not hollow, and cannot penetrate one another.

Most points in the Buddhistical opinions which we have related are also discussed in the *Nyāya Sūtra*, *Bhāṣya*, and *Vārtika*; all the speculations on atoms we have dealt with in this our second group (the *Vaiśeṣika Sūtra* perhaps excepted) must, therefore, be regarded as having been current in the same period, *i.e.* in the beginning of our era down to the 6th cent. and later.

III. The latest improvement of the atomic theory consists in the assumption of *dvyaṇukas*, etc. It was first taught by *Praśastapāda* (p. 28), and is plainly referred to by Udyotakara;§ it was received as a tenet in all later works of what may be called the combined Nyāya-Vaiśeṣika. The fusion of these two schools began early, and seems to have been complete at the time when the *Nyāya Vārtika* was written; for in this work the *Vaiśeṣika Sūtra* is several times quoted simply as the *Sūtra* or *Śāstra*, and once (p. 222) its author is called *Paramarṣi*, a title accorded only to the highest authority. From that time *dvyaṇukas* are quite familiar in Sanskrit writers. It is assumed that two atoms (*paramāṇu*) form one binary (*dvyaṇuka*), and that three or more‖ *dvyaṇukas* form one *tryaṇuka*, which is 'great' and perceptible by the eye. From *tryaṇukas* are produced all things. Modern writers further assume *chaturaṇukas*, formed of four *tryaṇukas*, etc. The reasoning that led to this highly artificial theory is the following.¶ The rule that the quality of the product is derived from the corresponding quality of the cause does not apply to *dvyaṇukas* and *tryaṇukas*. For in that case the 'small' *dvyaṇukas* would produce a 'small' *tryaṇuka*, not a 'great' one as required. And if the smallness of the *dvyaṇukas* were produced from the like quality of the *paramāṇus*, it would be of a higher degree, just as two great things produce one greater

thing; but the *paramāṇu* is that than which nothing smaller can be imagined. Therefore it is not the dimension of the cause, viz. of the parts, which produces the peculiar dimension of the *dvyaṇuka* and *tryaṇuka*, but another quality: *number*. The number of the *dvyaṇukas* in the *tryaṇuka* has the effect of producing, on the latter, greatness, a dimension which differs in kind from that of its parts. *Dvyaṇukas* have been assumed for the following reason. As great things are of two kinds, eternal (viz. the infinitely great ones, *e.g.* space) and non-eternal, so both kinds must be found in 'small' things. Eternal small things are, of course, the atoms. Non-eternal ones must therefore consist of atoms; they are the *dvyaṇukas.** Now number is produced by the 'notion which refers to many unities' (*apekṣābuddhi*); and such a notion presupposes an intellect to form it; in our case it must be the intellect of one who perceives all the atoms and *dvyaṇukas*, and who therefore must be omniscient—that is, God. Without him in whose intellect the notion of duality in *dvyaṇukas* subsists, there would not be any *dvyaṇukas* or any *tryaṇukas*, and consequently there would not be anything whatever. This strange idea, found *in nuce* already in *Praśastapāda*, was brought forward by Udayana (12th cent.) as a proof of the existence of God.

Having passed in review all forms of the atomic theory which are known to us at present, we must now inquire into the origin of that theory. Two points appear to be of chief importance for our inquiry: firstly, that the name of atom is *aṇu*, 'small,' or *paramāṇu*, 'absolutely small'; and secondly, that 'small' was generally considered to differ, not in degree but in kind, from 'great.' In accordance with this notion which is shared by all, even by the opponents of the atomic theory, the small, or, as we had better call it, the infinitesimal, had to be assumed as existing, and needed no further proof. The idea of the infinitesimal in this sense seems to have already been current in the time of the *Upaniṣads*, where we frequently meet with the statement that *Brahman* is smaller than the small, and that the self (*ātman*) is small (*aṇu*). In order to arrive at the conception of the atom, the idea of the infinitesimal had not only to be applied to matter, but it had, at the same time, to be joined to the idea of its indestructibility. Reasoning from analogy apparently came in to help; as the absolutely great, *e.g.* space, is acknowledged by all to be eternal, so the absolutely small, the atom, must also be assumed to be eternal. At any rate, the notion of the infinitesimal led, by easy steps, to the conception of the atom. It was probably in this early stage of development that the Jains took up the idea of the atom and made use of it in their metaphysical speculations. But in India the inventors of a new theory have generally been forgotten, and the fame attached to it went to those who succeeded in defending the theory against all opponents and in thus putting it on a base of firm reasoning. This task seems to have been performed by the Vaiśeṣikas. For the atomic theory makes an integral part of their system, and in their *Sūtra* we find the outlines of the arguments used to establish it. Moreover, when the atomic theory is discussed in the *Vedānta Sūtra*, it is there ascribed to the Vaiśeṣikas, and at the same time treated as one of their cardinal tenets; we may therefore conclude that the author of the *Vedānta Sūtra* looked on the Vaiśeṣikas as the principal upholders, if not the authors, of the atomic theory.

When once firmly established, the atomic theory must have had much persuasive power with many philosophers; for it put in place of the primitive conception of matter as an eternal but quite undefined substance the more rational notions which offered an intelligible explanation of the perpetual change of things while still maintaining the eternity of matter. The Northern Buddhists adopted it, though they had to deny the eternity of atoms, according to the fundamental tenet of Buddhism that there are no eternal things. Even some adherents of Yoga admitted *paramāṇus*, defining them as the smallest particles in which the three *guṇas* are present.* The Mīmāṁsakas are said by Prajñākaramati to have acknowledged eternal atoms; † and the same holds good with the Ājīvikas, as stated above.

It must, however, be mentioned that Dr. W. Handt ‡ has maintained the Buddhist origin of the atomic theory. 'Starting,' he says, 'from the fundamental view of original Buddhism, which looked on the *saṁsāra* as continual springing into existence and perishing, they regarded the whole material world as an aggregate of non-eternal atoms, just as the spiritual one was produced by the aggregate of the five *skandhas*.' But non-eternity seems to reverse the idea of the atom as it is generally understood. And if, as Handt asserts, the Buddhists, in order to explain the perpetual flow of existence, 'naturally hit on the assumption of non-eternal atoms which are divided into four classes according to the four elements,' still it would seem not to have sufficed them even for that purpose. For the Sautrāntikas have brought forward their famous theory of the momentariness of all things (*kṣaṇikavāda*). Every thing, according to this theory, exists but for a moment, and is in the next moment replaced by a facsimile of itself, very much as in a kinematoscopic view. The thing is nothing but a series (*santāna*) of such momentary existences (*kṣaṇa*). Here time is, as it were, resolved into atoms. This theory explains perfectly well the perpetual change of things, and apparently was invented for that purpose. Still, the Sautrāntikas retained the atomic theory alleged by Dr. Handt to have been invented by the Buddhists for the same purpose. We shall therefore not err in supposing that the Buddhists did not invent the atomic theory as a prop for their fundamental dogma, but advocated it because it belonged to the stock of physical and metaphysical ideas which passed current during the early centuries of the Christian era in Northern India.

ATOMIC THEORY (Muhammadan).—The genesis of atomic theories among Muslim thinkers is shrouded in obscurity. It is probable that such theories found their way into Islām through the medium of the Aristotelian physics and the Neo-Platonic commentaries dealing therewith. As far back, at all events, as we can follow the growth of atomism in this field, we find it imbued with the conceptions of Aristotelian and Neo-Platonic thought.

We can trace the presence of such atomistic doctrine as early as the 9th century. Al-Naẓẓām († A.D. 845) is mentioned as having been an opponent thereof, while al-Kindī († A.D. *c.* 870) wrote a treatise against its adherents.

The first recognizable form of the doctrine is that which it assumed in the hands of Abū Hāshim of Baṣra († *c.* 933 A.D.). His theory, which is practically

that of the Basrensian Mu'tazilites of the 10th cent., is found in the *Kitābu 'l-masā'il* of Abū Rashīd Sa'īd b. Muḥammad b. Sa'īd al-Naisābūrī, whose lifetime falls between A.D. 932 and 1068. We give here a concise summary of his views.

The atom (*al-juz' alladhi lā yutajazzu'*), or, as it is commonly called, the substance (*al-jauhar*), possesses in itself (*jauhar fard*), as the attribute involved in its very essence, the capacity of filling space (*taḥayyuz*). The 'substances' are of cubical form, and they are all of the same sort. Hence the only real difference amongst them lies in the fact that each occupies a definite portion of space (*ḥayyiz*). Besides existence and spatiality, each has likewise a certain range (*jiha*), or spatial persistence, by means of which others are prevented from usurping its position. Finally, the substances have the property of assuming accidents, in virtue of which they are qualitatively determined.

These substances move in empty spaces, and interact by pressure and impact. The proof of this is sought not merely on deductive lines, but by way of simple experiments. According to the older form of atomism, as set forth by Democritus, Nothing is no less a fact than Something (*μὴ μᾶλλον τὸ δὲν ἢ τὸ μηδὲν εἶναι*), and by 'nothing' in this case was meant simply empty space. As a result of the infusion of later theories, however, this idea is wholly discarded in Islām, and the states of being and not-being are distinguished as existing in the substance itself; or, in other words, even the non-existent, as something known, *i.e.* distinguished from something else, is possessed of substantiality.

The essence of the atom, or substance, is independent of its existence—a statement which probably means that such essence might form the content or object of the Divine thought or of human knowledge. The substances are not created by God: He simply brings them into existence, or lets them come forth. When they have attained the status of actual being, they have certain necessary modes of existence (*'akwān*), such as motion and rest, union and separation. Other accidents again are contingent, *i.e.* each several substance may assume an indefinite number and variety of accidents, so long as these are not mutually antagonistic.

The substances and the bodies they go to constitute are endowed with duration in time. Their annihilation—the cessation of their existence—is possible, but only in their totality, *i.e.* only if the whole world were to pass away at once.

Such, apart from insignificant differences of view, was the theory of the Basrensian thinkers. From these the scholars of Baghdad differed in many ways. The teaching of the latter school is known to us most fully in the form subsequently given to it—first of all, probably, by Abū Bakr al-Bāqilānī († *c.* 1012)—in the Ash'arite or orthodox *Kalām*. A most comprehensive account of this doctrine is given by Maimonides (1135–1204), and it is largely upon his description that the following outline is based.

The entire world, of which God is the absolutely free Creator, consists of indivisible substances or atoms, and their accidents. These substances, taken separately, are mere points; they have no magnitude or extension, and are thus imperceptible to sense. They have their *ḥayyiz*, or natural position, which, however, in contradistinction to *makān*, does not involve quantity or spatial magnitude. Only by aggregation do the infinitesimal substances become spatially extended bodies occupying the tri-dimensional *makān*. By union or separation of substances—which are all of the same kind—bodies are produced or dissolved. What is true of space holds good also of time. The latter is generated by the combination of points of time or moments (*'ānāt*). Motion also, like space and time, is discontinuous.

Every individual substance possesses at all times a large number of accidents. Some thinkers even hold that it possesses all possible positive accidents or their opposites. Negative states, or privations, in fact, are just as truly accidents as positive states: death as well as life, ignorance no less than knowledge, etc. Life, feeling, thought—in a word, the soul—are quite consistently classed amongst the accidents. Some writers regard the soul as belonging to all the atoms of the body, while others are of opinion that it is composed of finer atoms, or again, that the soul and the mind appertain to only one particular atom in the body.

No accident can subsist for more than an instant, and as the substance is inseparably united with its accidents, the measure of its persistence likewise shrinks to a moment of time. Now, since the entire aggregate of spatial points which constitutes the world can maintain itself only for a moment, it must follow that the world is created anew by God every instant. There is no such thing as causal connexion or natural law, nothing save the arbitrary act of an omnipotent Creator, to whom being and not-being are alike. God creates as many worlds one after another as He chooses, and when He ceases to create any more, what He then really creates is Nothing.

Here, then, is the religious purpose of this atomistic doctrine achieved. The theory is meant to be, not an explanation, but a subversion, of nature. All natural causes whatever are sacrificed to the arbitrary fiat of Allāh. Anything is possible; whatsoever is capable of being figured in thought or imagination may come to pass. Of everything that happens the opposite might quite as well happen, if Allāh but willed it so.

This atomistic teaching seems almost an anticipation of Occasionalism, especially as applied, not to the course of nature merely, but also to human action. The classical illustration is that of a man engaged in writing. It was maintained that Allāh creates within him, and, indeed, creates anew every instant, first the will, and then the capacity, to write; next, the movement of the hand, and, finally, the motion of the pen, concurrent therewith, etc. Every factor in the transaction is independent of every other, all the several stages of the process emanating from God alone. It is only in appearance that we have a coherent action; only in appearance is there a self-consistent and harmoniously-working world in space and time. That the world and human life appear to be pervaded by a causal nexus is due simply to the fact that meanwhile, and as a rule, Allāh does not choose to interrupt the continuity of events by a miracle. It is possible, however, that He might so intervene at any moment.

T. J. DE BOER.

ATOMIC THEORY (Mediæval and Modern).—**I. History.**—If we seek for an explanation of the phenomena of expansion, contraction, solution, and precipitation, we are inevitably led to adopt the hypothesis that matter is, in its minute structure, formed of particles with interspaces. If matter is a continuum, these phenomena are ultimate facts,

not to be likened to, and not to be explained by, any other facts. We may conceive the possibility of expansion and contraction of a continuum, but we cannot explain it. If, however, we assume that matter consists of discrete particles, a crowd of particles is like a crowd of people. Expansion is a widening out, contraction is a drawing in, of the crowd. Solution is the thorough mixture of two crowds, precipitation is the expulsion or segregation of certain members of the crowd. Other phenomena, too, find an easy explanation. Thus, evaporation is the passing away of members of the crowd from its boundary. It is no necessary part of the hypothesis that the space between the particles is a vacuum. We know that there is air between the members of a crowd of people. So there may be some kind of material between the particles of matter, displaced when other particles squeeze their way in.

When we trace the history of the speculations about the constitution of matter from mediæval into modern times, we find that the atomic doctrine of Greek philosophers—the doctrine that the minute particles are indivisible—has fallen into disfavour (see ATOMIC THEORY [Greek]). The mediæval philosophers no doubt thought of matter as composed of minute parts, and they followed the ancient philosophers in regarding the parts as of four kinds, four elements—fire, air, earth, and water. Ordinary bodies were 'mixed bodies,' mixtures of these four, in different proportions in different bodies. But the elements were not always elements in the modern sense. It was sometimes thought that they could be transformed one into another. Roger Bacon, for instance, in the 13th cent. held that the four elements were made of *hyle* (ὕλη), that each could be converted into the nature of another, and everything into anything else. Wheat is a possible man, and man is possible wheat (*de Arte Chymiæ*).

These four elements were still dominant when modern science began; and long thereafter they hindered progress, not disappearing indeed till the 18th century. At the beginning of the modern period, matter was regarded as consisting of particles, but the particles were not atomic. Thus **Francis Bacon** in the *Novum Organum* (1620) in several passages mentions the 'atoms' of Leucippus and Democritus only to discard them, and in one passage he says:

'Nor by this are we brought to the (Epicurean) Atom, which presupposes a vacuum, and matter immutable (both of which are false), but to true Particles, as they are found to be' (*Nov. Org.* bk. ii. § 8, Kitchin's tr.).

Bacon made an important contribution to the theory of matter by his clear statement of the doctrine that heat is a mode of motion of the particles:

'Heat is motion, not expansive uniformly in the whole, but expansive through the lesser particles of the body; and at the same time restrained, repelled, and reflected; so that it obtains an alternative motion, ever hurrying, striving, struggling, and irritated by repercussion; whence the fury of fire and heat has its origin' (*ib.* bk. ii. § 20, iii.). 'Heat is motion, expansive, restrained, and struggling through the lesser parts of (a body)' (*ib.* iv.).

These passages clearly imply a crowd of separate particles knocking each other further apart when heated, that is, when thrown into more violent motion. Between the particles Bacon appears to have supposed that there was an intangible, weightless, continuous material which he called 'spirit.' Had he lived later, probably he would have called it 'ether.' He speaks of

'the action and motion of spirit enclosed in tangible bodies. For everything tangible that we know contains an invisible and intangible spirit, and covers and seems to clothe it. Hence that powerful triple source (of effects) and wondrous *process* of spirit in a tangible body. For spirit in a tangible thing, (1) if emitted, contracts and dries up bodies; (2) if retained, softens and melts them; (3) if neither entirely emitted nor entirely retained, models them, gives them limbs, assimilates, carries them out, organizes them,' etc. 'Spirit has no weight' (*op. cit.* bk. ii. § 40).

It may be worthy of note that Bacon held that the totality of matter is constant.

The first attempt at a detailed theory of the constitution of matter was made by **Descartes** in his *Principia Philosophiæ* (1644). He held that whatever we can clearly perceive is true, clear perception being of that which is present and manifest to the mind giving attention to it (pt. i. xxx., xlv.). Applying this doctrine to the parts of matter, he is led to the rejection of indivisible atoms. For however small we suppose the parts, we are always able in thought to divide any one of them into two or more smaller parts, and may accordingly admit their divisibility. Again, he holds that a vacuum or space in which there is absolutely no body is repugnant to reason. Extension in space is extension in substance. All space, then, is filled with matter. Sensible bodies are composed of insensible particles (pt. iv. cci.). These insensible particles are of three elementary forms (pt. iii. lii.), though constituted out of the same kind of material. The first element consists of very minute bits, of irregular shape and capable of very rapid motion; chips off the particles forming the second element, and entirely filling the spaces between them. The particles of the second form have become spheres by attrition. They are very minute, and beyond the range of vision. The third form is larger and slower in motion. The sun and stars are composed of the first element, the sky of the second, and the earth and planets of the third. The second and third elements appear to have vortices of the first element round them, and these vortices account for the forces which the particles exert upon each other. They are like the vortices which Descartes supposed to exist round the sun and planets to account for orbital motion.

This theory of the three elemental forms of matter, fanciful in its beginning, becomes more fanciful as he builds it up. It does not appear to have served, except in the mind of Descartes, to co-ordinate facts or to stimulate investigation. But it is important historically, as the first suggestion that it might be possible to consider in detail the ultimate structure of matter and to explain phenomena by this structure. It is important, too, in that it is purely mechanical, that all phenomena are to be explained by configuration and motion of the ultimate particles. Descartes insisted that the sensations are excited by the *motion* of matter only.

'Our mind is of such a nature that the motions of body alone are sufficient to excite in it all sorts of thoughts, without its being necessary that these should in any way resemble the motions which give rise to them, and especially that these motions can excite in it those confused thoughts called sensations' (pt. iv. cxcvii., Veitch's tr.). We perceive nothing outside ourselves 'except light, colours, smells, tastes, sounds, and the tactile qualities; and these I have recently shown to be nothing more, at least so far as they are known to us, than certain dispositions of the objects, consisting in magnitude, figure, and motion' (pt. iv. cxcix.).

That is, there is not a separate light principle or substance, smell principle, sound principle. These are in our minds. All the different senses are excited by the size, shape, and motion of the small particles of which matter consists.

Like Bacon, Descartes held that heat is a mode of motion of the particles (pt. iv. xxix.).

The most influential writer on the structure of matter in the generation succeeding that of Descartes is Robert Boyle, who in the *Sceptical Chymist* (1661), *Origin of Forms and Qualities* (1666), and other works, laid the foundation of modern chemical theory. He was probably an atomist.

'We may consider,' he says, '(1) that there are in the world great store of Particles of matter, each of which is too small to be, whilst single, sensible; and, being entire, or undivided, must needs both have its determinate shape, and be very Solid. Insomuch that though it be *mentally*, and by Divine Omni-

potence divisible, yet by reason of its Smallness and Solidity, Nature doth scarce ever actually divide it; and these may in this sense be called *Minima* or *Prima Naturalia*. (2) That there are also multitudes of corpuscles, which are made up of the coalition of several of the former *Minima Naturalia*, and whose bulk is so small, and their Adhesion so close and strict, that each of these little Primitive Concretions or Clusters (if I may so call them) of Particles is singly below the discernment of Sense, and though not absolutely indivisible by Nature into the *Prima Naturalia* that composed it, or perhaps into other little fragments, yet, for the reasons freshly intimated, they very rarely happen to be actually dissolved or broken, but remain entire in great variety of sensible Bodies, and under various forms or disguises' (*Forms and Qualities*, p. 71).

Yet in the prefatory address to the reader in the same work, he says that he has forborne to use arguments that are grounded on or suppose indivisible corpuscles called atoms. Though not a Cartesian he followed Descartes, as indeed all the world has followed him, in ascribing the qualities of natural bodies to the 'Catholick and fertile Principle *Motion*, *Bulk*, *Shape*, and *Texture* of the minute parts of Matter' (*Forms and Qualities*, last page). He, too, regarded heat as a vehement agitation of the parts of the body tending all manner of ways ('Heat and Cold,' *Works*, Shaw's ed. i. 560). Fire, however, is the violent agitation of the particles of a subtle matter. But it is for his clear idea of the nature of chemical combination that we are chiefly indebted to Boyle. In the *Sceptical Chymist* he discards the old elements, air, earth, and water, and says that these three are to be regarded as made up of mixed bodies rather than mixed bodies as made up of them; and by mixed bodies he means ordinary bodies which had been regarded as mixtures of air, earth, and water, and had so come to be called mixed bodies. He dwells on the idea that an enormous number of compounds may be made by various arrangements of corpuscles, and that they differ from each other in nothing but the various textures resulting from the magnitude, shape, motion, and arrangement of the small parts.

'One and the same parcel of universal matter may by various alterations and contextures be brought to deserve the name sometimes of a sulphureous, and sometimes of a terrestrial or aqueous body' (Shaw's ed. iii. 282).

Boyle agreed, then, with Descartes in thinking of matter as one in kind, the differences being due solely to shape, size, and motion of the parts.

Newton does not appear to have concerned himself very much with speculations about the ultimate structure of matter. He was, above all, an experimental philosopher, determining laws by experiment and observation, using mathematics to deduce their consequences, and comparing these consequences with further experiment and observation, thereby verifying or correcting the laws. The framing of atomic hypotheses did not come into this programme. In the *Principia* he hardly uses the hypothetical structure of matter at all. There is a suggestion of it in the determination of the velocity of sound, but a mere suggestion. In the series of queries at the end of the *Optics* (2nd and 3rd editions) he gave himself free play, and among a number of speculations he declared himself an atomist. 'It seems probable to me that God in the beginning formed matter in solid, massy, hard, impenetrable, movable Particles' (3rd ed. p. 375). In the history of the subject Newton is mentioned only as in all probability deflecting attention from it. His immediate successors were occupied so much in following out his methods that theories of matter were apparently little studied or considered by leaders in physical thought.

But the atomic doctrine was probably making way. One very notable contribution to the particle theory was made by D. Bernouilli in his *Hydrodynamica* (1738), § x.. He suggested that a gas consists of very minute corpuscles moving with very great velocities in all directions, and that the pressure of a gas against the walls of a containing vessel is due to the bombardment by these corpuscles. He showed that with this constitution the pressure would be inversely as the volume if the volume were changed, which is 'Boyle's Law'; and that if the temperature were raised by increase in the velocity of the corpuscles, the pressure would be proportioned to the square of the velocity. His reasoning is somewhat obscure and unconvincing, and, perhaps on that account, his theory remained almost unnoticed for more than a century, when it was re-discovered and was developed on better lines.

In 1758, Boscovich published his *Theoria Philosophiæ Naturalis*. In this work he begins with his celebrated hypothesis of the nature of an atom, and then seeks to show how physical phenomena, such as collision, cohesion, fluid pressure, viscosity, and elasticity may be accounted for if matter is composed of atoms such as he imagines. According to his hypothesis, an atom is a central point to which mass or inertia is assigned, a mass-point let us say, and towards this point force is acting so that another mass-point is urged towards it with an acceleration proportional to the mass of the first point, and varying with the distance in such a way that at a great distance the attraction is inversely as the square of the distance. But when the distance becomes very small the force undergoes one or more alternations of repulsion and attraction, finally ending with a repulsion which is infinitely great when the two points are infinitely near each other. Two central mass-points can therefore never actually coincide. Boscovich did not assign any formula for the force, probably considering that future experiment alone could determine the law, but it is easy to devise expressions which satisfy his general conditions.

For instance, if a mass-point is distant r from a mass-point m, and if its acceleration to m is expressed by $m(r-a)(r-2a)(r-3a)/r^5$, the force is attractive, and inversely as the square of the distance if r is very great, it increases as r diminishes to a certain point, and then diminishes to zero when $r=3a$. Between $r=3a$ and $r=2a$ it is a repulsion, again vanishing at $r=2a$. Between $r=2a$ and $r=a$ it is an attraction changing again to a repulsion when r is less than a, a repulsion becoming infinite when r is infinitely small. Whatever the velocity of approach, that velocity will be destroyed before the two points coincide, *i.e.* they never will coincide.

Perhaps we can form an idea of the way in which Boscovich's atoms would act, by imagining that two solid surfaces are brought together. At great distances apart there is merely the inverse square law of gravitative attraction. When, however, they come very near, there is mutual pressure, which we may represent by supposing that the surface atoms have come into each other's first sphere of repulsion, and outside pressure is required to overcome this repulsion. If the outside pressure is made very great, we may force the atoms through this sphere of repulsion into the second sphere of attraction, and we may have equilibrium at the point where the attraction again changes into repulsion. If we can reach this point, the surfaces will adhere even when the outside pressure is removed. Thus the hypothesis explains the adhesion of bodies pressed very closely together.

Boscovich's predecessors had, like Newton, imagined a little hard nucleus round the centre of the atom; Boscovich showed that the nucleus was unnecessary. Its place was efficiently taken by the repulsive force rapidly increasing as the centre was approached. The nucleus had no part to play, and might be discarded.

The hypothesis at once excited attention. It was adopted, for instance, by Priestley (*Vision*, 1772, and *Matter and Spirit*, 1777). In the next century it attracted Faraday, who definitely adopted it (see two letters to R. Phillips, *Researches in Electricity*, 1844–55, ii. 284, iii. 447). Faraday laid stress on the uselessness of the little hard nucleus of finite size

—an idea which had again gained ground in the form of the atomic hypothesis of Dalton. He urged that the powers of matter, the forces which it exerts, are all that we know about it. These powers or forces *are* the matter, and where they extend the matter also extends. Each atom, then, extends through all space. Faraday symbolized the forces by straight lines extending out on all sides from the atomic centres, and thought of light as tremors or minute jerks carried along these lines—an idea which has been revived and made precise by Sir J. J. Thomson.

In recent years, Lord Kelvin took up 'the inevitable theory of Boscovich,' and sought to show how the grouping of Boscovichian atoms could account for crystalline arrangement and for the phenomena of light.

For purposes of calculation, the Boscovichian atom is indeed inevitable, in some form or other, in any atomic theory in which the forces depend solely on the distance. Mathematically, there is no difficulty in thinking of one point, B, moving towards another point, A, with an acceleration expressed by $mf(r)$. We then define m as the mass of A. If A moves towards B with an acceleration $m^1f(r)$, we call m^1 the mass of B, and we say that the force is $mm^1f(r)$. But, physically, there is some difficulty in reducing all to force. We think of force as effort, symbolized by muscular effort; and if we have force alone, it is difficult to assign meaning to effort acting on effort. We must have a duality, at least in thought. If we think of force, we think also of that which the force moves, or perhaps more fundamentally that which resists the force, and we call this matter. If with Boscovich and Faraday we identify the moved with the mover, and say that the matter is but force, then we have a dual aspect of force. In one aspect it acts, in the other it suffers action. One is the symbol of will, the other of sensation. Whatever may be the ultimate fate of Boscovich's atom in physical theory, the conception of the unity of matter and force, and unity as force rather than as matter, is a permanent contribution to philosophical ideas.

We have now come to the time when chemistry began to influence atomic speculation. Up to the latter half of the 18th cent. it was a hindrance rather than a help. Of course, chemical knowledge was continually increasing, so far as concerned the extraction of the metals from ores and the preparation of definite substances. But progress in chemical theory was hopeless while the doctrine of the four elements, fire, air, earth, and water, held sway. About 1700 the phlogiston theory of Stahl came into vogue, and added to the confusion of thought. This theory held that the metals contained a something called 'phlogiston' which they gave off on combining with air, that oxygen was air deprived of phlogiston, that nitrogen was air containing phlogiston, and some chemists even supposed that hydrogen was phlogiston itself. There must have been some expression or symbolization of fact in a theory which was accepted by discoverers so great as Black, Cavendish, and Priestley. But it is difficult now, so entirely is our point of view changed, to see what facts it expressed. It is obvious only that any advantage in its adoption was far outweighed by the confusion of thought which attended it. Towards the end of the 18th cent. the fog in which chemical theory was enveloped began to lift. The atomic theory had been making way, though in a vague form, and in many minds Boyle's idea that chemical compounds consisted of definite groups of atoms had taken root. The word 'molecule,' originally used as equivalent to particle, was now adopted for atomic groups. The four elements, fire, air, earth, and water, were being gradually disestablished from their supreme position. A number of gases were discovered with definite properties, and obviously not mere modifications of air. Air itself was found to consist almost entirely of two gases which we now call nitrogen and oxygen, and so air ceased to be regarded as an element. Cavendish's discovery that water was a compound of hydrogen and oxygen removed it, too, from the list. Earth was resolved into at least several different earths, and the discovery by Lavoisier of the part played by oxygen in ordinary combustion killed phlogiston. Fire and flame, however, still remained as substances; for the idea that heat was a form of motion, or, as we should now say, of molecular energy, so often put forth in the 17th cent., had fallen into abeyance, and heat was regarded as a subtle substance. The way was being prepared for the atomic theory of Dalton, and there were several foreshadowings of it, the most notable by William Higgins, who in 1789 published *A Comparative View of the Phlogistic and Antiphlogistic Theories*, in which he says that 'we may justly conclude that water is composed of molecules formed by the union of a single ultimate particle of dephlogisticated air [oxygen] to an ultimate particle of light inflammable air [hydrogen], and that they are incapable of uniting to a third particle of either principle.' But it is doubtful whether he considered this as an example of a general principle, and he does not appear to have considered the 'ultimate particles' of an element as all alike.

In 1804 the modern doctrine of chemical combination was definitely formulated by Dalton, and communicated to his friends. In 1808 he first published it in his *New System of Chemical Philosophy*. According to Dalton, the particles or atoms—he uses the terms indifferently—in a simple body are all exactly alike, and in a finite space enormous in number.

> 'Chemical analysis and synthesis go no farther than to the separation of particles from one another and to their reunion. No new creation or destruction of matter is within the reach of chemical agency. We might as well attempt to introduce a new planet into the solar system, or to annihilate one already in existence, as to create or destroy a particle of hydrogen. All the changes we can produce consist in separating particles that are in a state of cohesion or combination, and joining those that were previously at a distance.' Compounds are definite groupings of definite atoms. Thus 1 atom of A + 1 atom of B may form 1 atom of C, binary; or 1 atom of A + 2 atoms of B may form 1 atom of D, ternary, and so on.

Here he uses 'atom' for C and D where we now use 'molecule'; and it is evident that he does not think of an atom as an indivisible particle, but as the smallest particle of a body which has the properties of the body. If this particle is divided, the substance is resolved into different substances. Dalton goes on to show that the relative weights of two elements entering into, say, a binary compound are proportional to the weights of the atoms themselves, and he gives the first table of atomic weights of the elements, taking the hydrogen atom, the lightest, as having weight 1.

Dalton's great advance appears to consist in the clearness of his conception of an element as consisting of particles all alike, and whether truly atomic or not, yet indivisible by ordinary chemical agency, and in his supposition that compounds consisted in general of small groups of these elementary particles or atoms. This gave an easily pictured hypothesis to account for the chemical fact, by this time established, that the elements combine in definite proportions, which are always integral multiples of the smallest proportions in which they enter into combination. From this time forward, chemists, freed from the burden of the four elements, sought for bodies which were not to be decomposed by ordinary chemical and physical agency. These they termed 'elements,' and they investigated the

proportions in which the elements entered into compounds.

Soon after the publication of Dalton's theory, Avogadro put forward the hypothesis that in gases at the same temperature and pressure equal volumes contain equal numbers of molecules—a hypothesis then supported by experiments on the combination of gases, and since shown to be in accord with the kinetic theory of gases.

We have seen that with Dalton the atom was not necessarily indivisible, but merely undivided, and in modern times probably no one has held the indivisibility. Indeed, quite early in the development of the atomic theory by chemists, the old idea was revived, that the atoms of the different elements were really made of one kind of material, differing only in the quantity or arrangement of that material. Prout held that all the atomic weights were exact multiples of the atomic weight of hydrogen, a supposition which seems to imply that other elements were really groups of hydrogen atoms not to be divided by known agency. Later, it was suggested that discrepancies with this theory might be accounted for by taking one half or one quarter of the hydrogen atom as the unit out of which other atoms were built. But subsequent research on atomic weights has not supported these suggestions. There were, however, other reasons for supposing some community of plan in atomic structure. If weights of different metals be taken, containing, on the atomic hypothesis, equal numbers of atoms, nearly equal quantities of heat are required in many cases to raise these weights through one degree of temperature. In electrolysis, equal quantities of electricity are required to turn equal numbers of atoms out of combination. If the atoms of different elements had, as their only common property, weight or gravitation, and in other qualities were entirely different, we should hardly expect these quantitative relations.

The chemical atomic theory, as set forth by Dalton, is a statical theory. For chemical purposes the atoms may, up to a certain point, be considered as little bodies somehow held together in compounds by forces which need not be specified; and their motion and the motion of the molecules need not be regarded.

By the middle of the 19th cent. the researches of Joule and others had led every one to reject the doctrine of heat as a substance, and had brought to the front the old idea that heat was the energy of motion and of separation of the atoms and molecules. The dynamic aspect of the atomic and molecular theory now began to be seriously studied. We have seen that D. Bernouilli made an early but fruitless attempt to show that gas pressure could be accounted for by molecular motion. Other attempts were made by Herapath in 1821, by Waterston in 1846 (published only in 1892, when Lord Rayleigh disinterred the paper from the archives of the Royal Society), and by Joule.

Joule, in 1848 (*Scientific Papers*, i. 290), was the first to publish a calculation of the velocity with which the molecules are flying about. But the general acceptance of the dynamical, or, as it is now termed, the kinetic, theory began with the work of Krönig, Clausius, and Maxwell about 1856, and from that time onwards the theory has been developed in a series of memoirs by various authors, especially by Clausius, Maxwell, and Boltzmann.

2. **Kinetic Theory.**—The kinetic theory has been studied chiefly with regard to gases. It supposes that a gas consists of an enormous number of molecules, all exactly alike in a given gas, but so small that their average distance apart is very great compared with the size of any one molecule. These molecules are flying about in all directions with very great velocities, continually colliding with each other and with the walls of any containing vessel. The collisions are of such a kind that on the whole the energy of motion remains the same so long as the temperature is constant. The molecules are so far apart that they do not act upon each other except just during the moment of collision. Between collisions, then, they move in straight lines, and the average length of path between two collisions is called the 'Mean Free Path.' The velocities of the molecules are not all equal, but are grouped about a mean value which remains constant, and when the gas is in a constant or steady condition the grouping about this mean value is constant. It can be shown from simple mechanical considerations that if $\bar{v}^2$ is the average of the squares of the velocities, if p is the pressure, and if ρ is the density, then $\bar{v}^2 = 3\ p/\rho$. If we suppose that $\bar{v}^2$ remains constant so long as the temperature is constant, when the density is changed by changing the pressure, p/ρ is constant. This gives 'Boyle's Law.' The mean velocity is not quite the same as $\bar{v}$ (the square root of the mean of the squares), but the difference is only small. For hydrogen at 0° C. $\bar{v}$ is about 1800 metres per second—over a mile per second. For oxygen and nitrogen it is about a quarter of a mile per second. It can be shown that in a mixture of gases it is necessary that the average kinetic energy of each kind of molecule be the same in order that the collisions shall not affect the general condition; hence it can be further shown that the number of molecules in equal volumes of two gases at the same temperature and pressure is equal. This is 'Avogadro's Law.' Experiment shows that the pressure of a gas in a closed vessel increases by equal amounts with equal rises of temperature, and is, in fact, proportional to the temperature reckoned from −273° C. as zero. Then $\bar{v}^2$ is also proportional to this temperature. Or the mean kinetic energy of the particles is proportional to the temperature reckoned from −273° C. On this scale of temperature the sun's surface is probably about twenty times as hot as the earth's surface, so that the molecules of hydrogen there have about twenty times as great a $\bar{v}^2$ as they have here. Their velocity is thus about 4½ times as great, say, some 5 or 6 miles per second.

So far it is not necessary to enter into the structure of the molecules; but for further developments with regard to the specific heats of gases, structure has to be taken into account, and difficulties arise into which we need not enter.

The mean free path, or the average distance travelled in a straight line between two collisions, plays a very important part in the theory. It is evident that the rate of diffusion of one gas into another, or the diffusion of one part of the same gas into another part, will depend partly on the mean free path, partly on the velocity; and from certain phenomena depending on the rate of diffusion, most simply from the resistance to the travelling of one layer of gas over another, the mean free path can be calculated. For hydrogen at atmospheric pressure it is about 0·00002 cm., or, say, a little less than a hundred thousandth of an inch. For air it is almost half as much. This implies that the hydrogen molecule is effectively less than the air molecule, since it can thread its way farther through its neighbours without collision.

The greatest triumph of the kinetic theory consists in its determination of the size of the molecules and of the number in a given space. By the size of the molecules we are not to suppose some definite solid shape. Imagine two molecules approaching so closely that they just begin to deflect each other, *i.e.* just begin to collide. Draw equal

spheres round each, just touching. Then the radius of either sphere is termed the radius of molecular action, and the sphere round each molecule is taken to be the size of the molecule, even though the atomic centres may be far within the surface of the sphere. It is evident that the mean free path of a molecule depends partly on the number of molecules in a given space, and partly on their size, just as the distance a man can walk straight on in a street without touching another passenger will depend partly on the number of people, partly on their breadth from shoulder to shoulder. A relation can be found connecting the mean free path, the molecular size, and the number present in unit volume; and since we know the mean free path, this gives a relation between size and number. Another relation can be obtained from the supposition that when the gas is condensed to a liquid the contraction is due to all the molecular spheres coming into contact. We may illustrate this by thinking of a cloud of equal water drops in a vessel as representing the molecules. When the cloud sinks to the bottom of the vessel, the volume of water at the bottom will be equal to the volume of each drop multiplied by the number of drops. So the observed volume of liquid into which a given volume of gas condenses may be taken as equal to the volume of each molecule multiplied by the number of molecules. At least it may be taken as nearly equal. We cannot say how closely the molecules are packed in a liquid, and thus some uncertainty is introduced into the results obtained. Thus we have two relations between number and size, and from these two we can calculate approximately both number and size. The result obtained is that the number of molecules in a cubic centimetre of a gas at 0° C. and atmospheric pressure is about 6×10^{19}. The mass of a molecule of hydrogen, which we must suppose to consist of two atoms, is a little less than 10^{-24} of a gramme. The radius of molecular action, differing somewhat for different gases, lies between 10^{-7} and 10^{-8} of a centimetre. The number of molecules in a cubic centimetre of water is about 10^{22}, and the distance from centre to centre about 10^{-8} cm. (These results can be translated into inches if it is remembered that 1 inch = 2·5 cm.) The number of molecules of gas per cubic centimetre has been calculated in other ways, most notably from certain experiments on electric discharge, and the results obtained are in fair accordance with those given above. Unless, then, we reject the theory altogether, we may assume that we know with fair accuracy both the 'size' and the average distance apart of the molecules in a body.

The kinetic theory, when applied to account for the properties of solids and liquids, has made very little progress. In the gaseous condition the molecules, according to the theory, spend most of their time in moving in straight lines, and when the collisions do occur there is no need to consider the forces acting. It is enough to assume that, on the whole, collisions do not alter the general condition. Many properties can then be accounted for. But when we come to solids and liquids, the molecules are supposed to be so closely packed as to be always entangled with each other, and there is no mean free path. Hence we cannot go far without knowing the forces between the molecules; and even if we could specify the forces, the calculations of their effects in such complex systems would probably be exceedingly difficult. In the solid condition, we must suppose that the molecules do not move far from a mean position. Each is held by its neighbours, so that though it may be violently agitated it keeps slackly anchored, as it were, to one spot. In a liquid, the molecules are still entangled with each other, but they possess more energy, and are able to break away every now and then from their anchorage and get into new surroundings. A liquid may probably be regarded as a cross between a solid and a gas—solid-like if time be reckoned by millionths or billionths of a second, gas-like if it be reckoned by seconds.

3. **Atomic and molecular structure.**—Since the kinetic theory of matter arose, several attempts have been made to imagine atomic structures which should serve to give some account of phenomena. **Rankine** (Nichol's *Encyclopædia*, *s.v.* 'Heat,' p. 353) assumed that the atoms were little nuclei surrounded by atmospheres whirling round them in vortices—a revival of Descartes's idea. Though Rankine made use of the theory himself, it is obscure in detail, and has not been used by others.

The vortex atom of Lord Kelvin (*PRSE*, Feb. 1867) is a much more celebrated hypothesis. This atom is founded on Helmholtz's investigations on fluid motion. We are to suppose that space is full of a frictionless incompressible fluid of uniform density throughout. An atom is a vortex ring in this fluid, a ring-shaped portion of the fluid distinguished from the rest solely by its peculiar whirling motion. The whirling motion may be understood by running an india-rubber umbrella-ring along its stick. The friction makes it move round and round as it travels. The rings which an expert smoker makes are vortex rings. A spoon drawn sharply across a cup of tea makes half a vortex ring of which the two cut ends, as it were, appear as little whirlpools, the half ring being below the surface. We can make rings in real fluids, because they possess viscosity or friction. But in a frictionless fluid, the creation and equally the destruction of a ring would require forces to act which the fluid itself does not possess; so that a ring if in existence must have existed in all past time, and will persist in all future time, the same portion of fluid always existing in it. We thus have a suggestion for an indivisible and eternal atom. The difficulty of the mathematical investigation of the mutual actions of vortex rings is so great, that little progress has been made in the theory. But it possesses value in suggesting the possibility that all energy is of one kind, energy of motion either of the rings themselves or of the fluid outside the rings. In accounting for the eternity of the atom it perhaps goes too far. In recent years the theory has dropped into the background.

Another hypothesis, due to **Larmor** (*PRS* lxi. [1897] p. 275), supposes that space is filled with an elastic solid, or jelly, capable of vibrating and carrying waves. An atom is the centre of a strain or twist in the jelly. The strain is persistent, but it can move from point to point in the jelly, using new parts as it travels along. It is the form of strain which is the persistent atom. The atom may be likened to a kink on a rope which travels along the rope, new material continually passing into the kink to take the place of the material which passes out of it.

Larmor has developed this hypothesis in several memoirs, showing how electrical and optical phenomena are to be interpreted in terms of it.

The latest atomic hypothesis is one which assigns an electrical structure to the atom. Here we can only give a sketch of the subject. Fuller details will be found in *Electricity and Matter* and *The Corpuscular Theory of Matter*, by Sir J. J. Thomson, on whose researches the hypothesis is chiefly based, and in *Electrons*, by Sir Oliver Lodge.

The idea that the forces keeping the atoms together in the molecule are electrical in nature is

as old as Davy. It is rendered probable by the fact that electric charges put into a liquid will decompose it, and by the fact that one of the chief sources of electricity is the voltaic cell in which chemical combination occurs and charges are given out. We may suppose that, if a molecule contains two constituent atoms or groups of atoms, one of these is positively electrified and the other negatively electrified, and that it is the attraction between the two charges which binds the atoms together to form the molecules.

Faraday discovered that, when a liquid is decomposed by an electric current, a definite charge of electricity of each kind is required to disengage a definite amount of an element from a compound, and that, if we accept the atomic theory, the charge is proportional to the number of atoms disengaged. The hydrogen atom always requires the same charge. Other atoms require either the same charge as the hydrogen atom or twice the charge or a small multiple of it. There is no evidence for the existence of a smaller charge than that on the hydrogen atom, and apparently all other charges are exact multiples of it. Thus electricity appears to be, as it were, atomic. Any quantity of it consists of multiples of the hydrogen atom charge, which is an undivided unit. We have to suppose that, when we decompose a molecule, each constituent has a charge, one positive the other negative, and we have to put in equal neutralizing charges to render the products of decomposition neutral. This interpretation of Faraday's discovery may be regarded as the foundation of the theory of the electrical atom.

The superstructure began with a discovery made by Crookes, when investigating electric discharge in highly rarefied gases. If the discharge takes place between two metal plates in a space sufficiently rarefied, Crookes found that a stream of negatively electrified matter shoots straight out from the plate to which negative electricity is supplied. This stream of matter can be deflected by a magnet. Sir J. J. Thomson found that it can be deflected also by electric force. In a series of brilliant experiments on the deflections by known magnetic and electric forces, he made the immensely important discoveries that the mass carrying a given charge is the same whatever the gas used, and that it is $\frac{1}{1700}$ part of the mass of hydrogen which would carry the same charge. By further experiments he showed that each particle in the stream carried a charge equal to that of the hydrogen atom, so that the mass of each particle is $\frac{1}{1700}$ part of the mass of the hydrogen atom. These minute carriers of negative electricity he termed 'corpuscles.' They are usually now called 'electrons.' We must suppose that the electric forces during the discharge tear away the negatively electrified portions of the atoms at the negative plates, that these are alike for all atoms, and that their mass is but $\frac{1}{1700}$ part of the mass of the hydrogen atom. If the atom was neutral before the corpuscle was torn from it, an equal positive charge remains behind upon what is left.

In building up the electric atom we must bear in mind that all experiment shows that there are equal quantities of the two opposite charges. We do not know of such a thing as a charge of one kind alone. One kind of charge is always accompanied by the other kind of charge—either united to it as in a so-called neutral atom, or separated from it by a greater or less distance, yet connected to it by forces. We imagine, then, that an atom consists electrically of a charge of positive electricity and a greater or less number of electrons, and there are reasons for supposing that the number of electrons is proportional to the atomic weight. The oxygen atom will possess, for instance, 16 times as many electrons as the hydrogen atom. The positive charge is equal to the sum of all the negative charges on the electrons. This positive charge is supposed to be spherical, and to be distributed uniformly within the sphere. In some way it coheres and occupies a definite volume of the order of the atomic volume, say, 10^{-8} cm. radius. The spherical supposition is made for simplicity of treatment. The electrons are moving about inside the globe, and can move without resistance through the positive. With these suppositions, it can be shown that, if there were a single electron moving within the globe of positive, it would have a definite period of revolution round the centre of the globe, the same whatever its distance from the centre. With a number of electrons moving in orbits round the centre, each would affect the time of revolution of the others, but certain arrangements of orbits would persist. Other arrangements might be unstable, and then electrons might be thrown out of the atom. As the electrons circulate in their orbits, they radiate out energy in the form of waves, one wave for each revolution, and the hypothesis thus seeks to account for light and other radiation of like kind. If two such atoms approach each other, one may be so nearly unstable that it parts with one electron, giving it to the other, which may absorb it into its own system. One atom, then, gains a small balance of positive, while the other has acquired an equal small balance of negative, and, these opposite charges attracting each other, the atoms keep together and form a molecule.

The atom possesses an enormous store of energy in the motion of the negative electrons. It may become unstable through mutual action of these in their orbits, and some part may fly off to form a new atom. Thus the hypothesis seeks to account for the breaking down of the atoms which appears to occur in radium and other radio-active bodies.

We have seen that the mass of each electron is $\frac{1}{1700}$ part of that of the hydrogen atom. The hypothesis gives an account of this mass which we owe to J. J. Thomson. If a body with an electric charge upon it is moving, it acts like a short length of electric current, and it is surrounded by a field of magnetic force; that is, there is magnetic energy in the space around as well as electric energy. If the moving body is a sphere with the charge upon its surface, the quantity of magnetic energy is directly proportional to the square of its velocity, and is inversely as its radius. Now, the mass of a body may be measured by the energy required to get up in it a given velocity v, for that energy is $mv^2/2$. If the sphere has mass m and no charge, its energy when moving with v is $mv^2/2$. If it has a charge, then there is in addition the magnetic energy also proportional to v^2, say, $m^1v^2/2$, or the total will be $(m+m^1)\ v^2/2$. Suppose that when without charge the sphere has no mass, m will be 0. When it has a charge, there will still be mass m^1, or rather the sphere will behave just as if it had this mass. It is possible, then, that the mass of the electron is entirely due to its charge. Calculation shows that a massless sphere carrying a surface charge equal to that of the hydrogen atom, and about 10^{-13} cm. in radius, would behave as if it had mass $\frac{1}{1700}$ of the hydrogen atom.

If we could suppose that the hydrogen atom contains 1700 electrons, we could thus account for its whole mass. But it appears much more probable that that atom contains but one or a few electrons, so that if we are still to give an electrical account of mass, we must break up the positive globe into very small spheres enormous in number, and each containing a very small charge, far smaller than

that on the electron, these being scattered through the globe. But for this supposition there does not as yet appear to be any justification, *i.e.* it does not account for any observed phenomena.

Certain experiments do seem to show that the mass of the electrons is fully accounted for by the magnetic energy of their charges when in motion; but even if we accept this account it is very doubtful if we have 'explained' mass. Certainly all our measurements of energy involve the idea of mass, and it may perhaps be maintained that the magnetic energy in the space round the moving electron implies the existence of mass in that space to serve as a seat for the energy. If so, the electric theory of mass only takes the mass from the inside of the moving sphere and spreads it through the outside space. Again, we come to the Boscovich-Faraday conception, that an atom is wherever its force acts—not at the centre alone, but spread through all space.

Summary.—Present position of the atomic theory.—The belief that matter is granular in structure, that it consists of exceedingly minute discrete particles, is irresistible. The particle structure accounts for a vast host of observed facts, for which no other explanation has been suggested. We must accept it, unless we abandon all explanation by means of hypothesis, and are willing to content ourselves with mere description of phenomena—a frame of mind which is non-existent. When we pursue the particle structure into detail, we find an excellent explanation for the facts of chemistry in the hypothesis that, in a definite chemical compound, the particles are molecules, all alike, and that each molecule consists of a group of still smaller particles, which, without prejudice to their divisibility, we call atoms. The chemist finds that the compound can be resolved into bodies, each of which is incapable of further resolution by ordinary chemical agency, and which he terms 'elementary.' An element is supposed to consist of atoms all alike in each one kind. No explanation other than this has been devised for chemical phenomena, and it works so well that it has been universally accepted. So far, we cannot even conceive of any other hypothesis. The hypothesis that in a gas the molecules are, on the average, far apart and rushing about leads to a simple explanation of many gas properties, and has suggested properties hitherto unknown which investigation has shown to exist. Again, no alternative hypothesis has been offered; and if we accept this, we are bound to accept the determinations of number and size, determinations arrived at also from other starting-points.

So far, no special assumptions need be made as to atomic or molecular structure. But if we seek an explanation, on the atomic hypothesis, of certain electrical phenomena, we must imagine some definite structure for the atom. The electrical atom, in some such form as that described, is the only atom yet imagined which has any value for the purpose. It has served to explain many of the phenomena, and it has suggested researches which have led to new and important discoveries. It is easy to criticize it, to point out the large assumptions on which it is founded. There is, for instance, the coherent globe of positive electricity held together by unknown agency and allowing the negative electrons to move about freely in it. For this we require properties unlike the properties of any known electrical system. But the chief value of such a hypothesis lies, not in its objective truth, but in its success in accounting for, in co-ordinating, what we actually observe, and in predicting results which are afterwards verified. It is to be regarded as a 'working model' which gives the same results as the actual atom, though, it may be, by quite different machinery. From this point of view the electrical atom is a brilliant success.

We observe phenomena due to matter in large masses. Our senses tell us nothing of ultra-microscopic structure, and perhaps the sparkling of zinc sulphide when exposed to radium is the only phenomenon which can fairly be ascribed to single atoms, each sparkle being assigned to the impact of one atom. When we go behind observed phenomena and assume a minute structure to account for them—a structure far beyond the range of our senses in minuteness, and probably utterly beyond direct verification—it is possible to imagine many types of structure which will account for what we observe; just as when we stand in front of a clock which we cannot open, we can imagine many different trains of wheel-work which will account for the motion of the hands. We must, therefore, accept only provisionally any one type of atomic structure which may be offered. It is, on the highest valuation, only one possible solution of the problem. We must be prepared for alteration, for addition, for re-construction, as new phenomena are observed and need to be accounted for. We must be prepared even to abandon it altogether if some better 'working model' is devised. The hypotheses of science are continually changing. Old hypotheses break down and new ones take their place. But the classification of known phenomena which a hypothesis has suggested, and the new discoveries of phenomena to which it has led, remain as positive and permanent additions to natural knowledge when the hypothesis itself has vanished from thought.

LITERATURE.—For early history: R. Angus Smith, *Memoir of John Dalton, and History of the Atomic Theory*, London, 1856. For the present condition of knowledge on Atomic Weights: S. Young, *Stoichiometry*, 1908. For the Kinetic Theory: O. E. Meyer, *Kinetic Theory of Gases* (Eng. tr. 2nd ed.); an elementary exposition is given in Poynting and Thomson, *Heat*[3], 1908, ch. ix. For the Vortex-ring Theory: J. Clerk Maxwell, 'Atom' in *EBr*[9]; J. J. Thomson, *Motion of Vortex Rings*, 1883 [an advanced mathematical treatise carrying the subject to its furthest point]. For Professor Larmor's investigations: J. Larmor, *Æther and Matter*, 1900 [a mathematical exposition]. For Lord Kelvin's views on the Boscovichian Atoms, his *Baltimore Lectures*, Cambridge, 1904 [a treatise on optics]. For the Electrical Atomic Theory: J. J. Thomson, *Electricity and Matter*, 1904, *Discharge of Electricity through Gases*, 1898, and *Corpuscular Theory of Matter*, 1907; Sir O. Lodge, *Electrons*, 1906. For the use of the Electrical Theory in Optics: P. Drude, *Theory of Optics*, 1902 [a mathematical treatise on optics, developed on the Electro-magnetic Theory of Light, and using the conception of the electric construction of the Atom].

ATONEMENT.—See EXPIATION AND ATONEMENT.

ATROPHY.—This term in its simplest meaning signifies lack of nourishment, but in its strictest use is applied to the diminution and enfeeblement of the limbs and organs, or parts of organs, of complex animals and vegetables as a result of disuse. The rapid decrease in weight of an animal as a result of starvation, or the wasting (emaciation) so commonly seen as a consequence of prolonged fever or malignant disease, does not even in the medical sense come under the heading 'atrophy'; this term is used to express such changes as the wasting of a muscle when its nerve supply is cut. Muscles are in reality the specialized end-organs of motor nerves, and without the necessary stimulus from the nerve-centres the muscle is useless. The atrophy of a muscle is brought about not only by dividing its dominant nerve, but also by destroying the nerve-centre in the spinal cord or brain from which its impulses to contract are derived. Examples of atrophied muscles from these causes may be found in every Poor Law infirmary in Great Britain. Similar results may be studied in other special sense-organs like the

eye; when the optic nerve is divided, or the visual centre in the brain destroyed, the retina, the delicate structure in the eyeball which is the recipient of light rays, quickly atrophies. It is likewise a matter of importance for the preservation of highly organized structures that they be kept in moderate use. It is common knowledge that living animals kept in dark places lose their acuteness of vision, and in fish, crustaceans, and burrowing forms of animal life the sense of vision is not only diminished but is actually lost, and the eyeballs diminish to inconspicuous dots.

The most interesting examples of atrophy and suppression of parts are those which come under the observation of naturalists and morphologists. These observers are especially interested in the effects produced by disuse of organs of animals and plants caused by changed habits of life, or by the increasing importance of other organs. This is illustrated by tadpoles. When the frog embryo emerges from the egg, it has a long tail and external gills; in the course of its metamorphosis limbs appear, and the tadpole assumes more and more the form of a frog; the gills and tail do not drop off, but are slowly absorbed and disappear, and the aquatic tadpole is changed to the amphibious frog. The disappearance and modification of the cartilaginous arches which supported its gills, and some correlated changes in the framework of the skull, are as remarkable, though not so obvious, as the atrophy of the tail. Similar atrophy of organs may be studied in many animal forms which in their early life enjoy a free existence, but later become fixed forms, such as ascidians. Many remarkable instances of the atrophy and disappearance of larval organs may be studied among invertebrates, especially sea-urchins and star-fishes. Whilst wondering at these remarkable things, we should not overlook the fact that many instances of this suppression of parts occur in the highest mammals, even in man. The fall of the milk-teeth is due to a process similar to that which causes the loss of the tail in tadpoles and ascidians. Puppies are born blind, owing to the existence of a vascular membrane occupying the space known as the pupil of the eye; this membrane atrophies, and the pups become sensible to light. In the human embryo this membrane is also present, but it disappears shortly before birth.

The bodies of all mammalia contain many remnants of organs which in the early stage of their development were of first-rate importance in their economy; but when the animals are born and become lung-breathers, the alteration in the manner of respiration leads to very great changes in a few of the larger blood-vessels, causing them to atrophy; but they remain throughout life detectable by the eye and scalpel of the anatomist. Even more remarkable are the great number of vestiges of parts which may be discovered in every special organ of the body; and the more specialized the organ has become, the greater the number of atrophied parts it contains. The brain abounds in such remnants, and contains rudiments of a third eye. The organ of hearing, and even the external ear, or auricle, contain many atrophied parts. This is true of the eyeball and its protecting lids. A child can verify for himself that a horse or a dog has three eyelids, merely by holding the paired eyelids apart; and if he examines the nasal side of his own orbit he will see the little pink cone representing the third eyelid (nictitating membrane) of the horse, dog, and owl, and with a magnifying glass may distinguish the delicate hairs upon it. The larynx, the heart, the liver, the intestines, and even the limbs abound in vestiges. In those remarkably modified mammals the whales, the hind limbs are represented by mere rudiments concealed in blubber.

Probably the result of atrophy in producing profound modification of outward form and structure and yet leaving traces of its steps in the form of atrophied organs is nowhere so convincing as, or more easily studied than, in those interesting flowers known as orchids. The present writer believes that it is hardly an exaggeration to urge that orchids hold the same relation in the floral world in regard to modification of form through atrophy and suppression of parts—the results of a changed environment—that whales hold for the same reasons among mammals.

Not the least important aspect of atrophy is its relation to sexual organs. It is well known that flowers represent the reproductive organs of phanerogamous plants, and that in many of them a single flower contains male and female parts. In some plants the sexes of the flowers are separate, some being male and others female. A careful investigation of the development of certain flowers which, when fully blown, are of single sex, shows that they possess the germs of organs belonging to both sexes, and that in the course of growth the organs of one sex develop and attain maturity, whilst those of the opposite sex remain rudimentary or completely atrophy. It happens, and not infrequently, that in a flower of a plant normally unisexual the male and female parts develop equally: such are called hermaphrodite. Exactly similar conditions have been detected throughout the animal kingdom, even to its summit—man. In the higher mammals, hermaphrodite forms are always sterile, and regarded as malformations. In addition to suppressed or atrophied parts resuming a former higher grade of development, they may even in their degenerate condition, like idlers in a community, be a source of much trouble. Very many curious and often dangerous conditions, known to surgeons as cysts and tumours, arise in the remnants of belated organs. Many occur in the neighbourhood of the mouth, tongue, and neck. Probably the two most persistently fatal are the vermiform appendix, and the remnant of the representative of the yolk-sac, known as Meckel's *diverticulum*, a fertile source of intestinal obstruction as well as a cause of malformation in that part of the alimentary canal known as the *ileum*.

When an organ, or part of an organ, which is usually suppressed, or represented by an atrophied rudiment in the adult, appears as a fairly formed part in an animal, it is regarded as a malformation. For example, men and women normally possess twelve pairs of ribs, but the vertebral segments in the neck, and some of those in the loin, possess minute undifferentiated ribs. In many vertebrates the corresponding cervical and lumbar vertebræ bear well-developed ribs, but, as they are always present, it is usual to speak of them as normal. Occasionally in man the rudimentary ribs in the neck and loin appear as well-developed elements in the skeleton. Thus a skeleton with thirteen pairs of ribs is described as being abnormal. The condition has a deeper meaning. The interpretation which the morphologist places on the matter is this: Man is descended from an ancestor who normally possessed more than twelve pairs of ribs; the cervical and lumbar ribs have undergone suppression, and are represented by rudiments or vestiges. When a vestige of this character reappears in a functional form, it is described as an example of atavism (*q.v.*) or reversion.

Atavistic phenomena are easily studied in plants. This has been a subject of great fascination since Goethe drew the attention of botanists to the fact that the various parts of a flower may be regarded as modified leaves. This does not mean that each

part of a flower is a metamorphosed leaf, but that we are able to trace every structural gradation, from leaves to bracts, from bracts to sepals; and not infrequently sepals will be replaced by or become converted into true leaves. The changes from sepals to petals, and from petals to stamens, are as gradual as from bracts to sepals; and the homology is often declared by the stamens becoming petals, and petals appearing as leaves. Even stamens occasionally revert in this way, and constitute abnormalities or monstrosities.

Atavistic conditions of this kind are met with in animals, especially in connexion with the appendages of crustaceans; and it is astounding to see a lobster with an antenna surmounting its eye-stalk and replacing the whole or part of its eye. Yet parallel malformations occur in sheep, dogs, and children, when the conjunctival covering of the eyeball reverts to skin and produces hair. Although men offer explanations of these curious phenomena, and call them reversions to ancestral types or adaptations to environment, or seek to solve them by the phrase 'natural selection,' it must be admitted that the cause still remains veiled in impenetrable mystery. It is also certain that, if we knew the cause of the shedding of the milk-teeth in children, we should be able to explain the origin of species, and the cause of the great division of plants and animals into males and females. See also DEGENERATION, DISEASE.

ATTACHMENT.—Attachment may be considered in three relations: (1) attachment to the things of sense; (2) to objects of affection; (3) to the fruits of action.

1. *Attachment to the things of sense.*—This is the uncontrollable attraction that the physical and emotional environment has for the lower consciousness in man. Now it is obvious that attachment in this sense is perfectly natural, and is quite necessary for long stages of evolution during which the ego in man is gaining experience and learning the necessity for self-control, while the various faculties of the mind are developed through the activities induced by the struggle for life and goods. The characteristic of this form of attachment is that it centres in the personal self, and is essentially selfish, and so cannot be an abiding condition in the life of humanity. A time comes in the evolution of each individual soul when that attachment is weakened and a new centre formed; and it is religion that then begins to draw in opposition to that downward absorption in worldly affairs which claims so strongly the energies of man. There may indeed be long periods during which the attraction towards a spiritual life may seem almost inoperative, but sooner or later must come the conversion to a new course of life, when the old way will be forsaken and an upward path adopted.

2. *Objects of affection.*—Though attachment here, in the more primitive phases, is strongly permeated with selfishness, yet there is always and in all cases a centre of attraction formed outside the self, and this change, implying new motives, at once begins to humanize and improve the entire nature. From sex and family affections—extended gradually to comrades and friends—there eventually arises a wide love of mankind, losing all the elements of attachment as it grows in unselfishness and approaches union with the Divine.

3. *The fruits of action.*—Man seeks advantageous results; he sets his mind on success, and is proportionally elated or depressed as events turn out in accordance with his wishes or against them. He is attached to the outcome of his efforts, and is not content solely with doing his duty, or his best, and leaving the result to God. It is on this kind of attachment that the *Bhagavad Gītā* (ch. 5) has so much to say: 'The man who is devoted and not attached to the fruit of his actions obtains tranquillity; whilst he who through desire has attachment for the fruit of action is bound down thereby.' Man acts less and less selfishly as he rises towards perfection, and he remains undismayed and patient when the results appear adverse. When he has rid himself of all the lower attachments, he is no longer a slave to the lower desires, and has become ready to enter the abode of bliss, or the Kingdom of Heaven, for he has conquered self and obtained freedom.

G. A. GASKELL.

ATTENTION.—

'Strange to say, so patent a fact as the perpetual presence of selective attention has received hardly any notice from psychologists of the English empiricist school. The Germans have explicitly treated of it, either as a faculty or as a resultant; but in the pages of such writers as Locke, Hume, Hartley, the Mills, and Spencer, the word scarcely occurs, or if it does so, it is parenthetically and as if by inadvertence. The motive of this ignoring of the phenomenon is obvious enough. These writers are bent on showing how the higher faculties of the mind are pure products of "experience"; and experience is supposed to be of something simply given. Attention, implying a degree of reactive spontaneity, would seem to break through the circle of pure receptivity which constitutes "experience," and hence must not be spoken of under penalty of interfering with the smoothness of the tale' (James, *Principles of Psychology*, i. 402).

This is the opening paragraph of James's chapter on Attention, which introduced into English-speaking countries a new and better way of treating the subject. Other writers on Psychology have written luminously on the subject, and readers of the works of Ward, Baldwin, Stout and others, may now have an adequate conception of the function of attention in the evolution of mental life, and of its significance in mental work.

While the empiricists have, for the reason stated by Professor James, thrust attention into the background, and have neglected the whole function of mental activity in experience, other schools also have conspired towards the neglect of this form of mental action. Idealism in all its forms finds scarcely any place for it and its function. As the empiricist, in the interest of a view which regarded experience as given and determined by the pressure of the external order on the mind, insisted that all experience is implicit in sense impressions, so the idealist regarded experience as determined by the evolution of the Idea. Will is, for some of them, especially for Mr. Bradley, the self-realization of the Idea. But in the evolution of the Idea there is no room for selective attention; there is scarcely room for any activity of the subject at all. It is curious that both idealists and empiricists come to practically the same result. Empiricists ignore selective attention, because they wish to account for all the products of experience by laws of association which cluster things together independently of the activity of the subject; and idealists, in the interests of the ideal order, regard experience as dictated by the objective selection of pure thought.

In truth, the question of attention and its significance involves the whole question of the possibility of spontaneity in life, and of whether the movement of life is wholly determined from without, or whether the organic being has the power of selecting, out of various possibilities, what it can be and do. Is there such a thing as subjective selection, as Dr. Ward calls it, or organic selec-

tion, as Professor Baldwin calls it? Or is the life of an organism determined for it by factors in which it has no function? Is there subjective selection, or is all determined by what is called Natural Selection? The question is too large to be argued here, but it is named because the same fundamental issue is raised by writers on attention. It may be well, then, simply to state the issue as it appears from the view of Biology before we discuss it from the narrower view of Psychology and Ethics.

The question may be broadly stated thus: Is there an autonomy of life? Is the proper activity of the organism a real factor in biology? And are there new concepts required to describe the functions of life, in addition to those which are required for an adequate account of the phenomena of the inorganic world? A quarter of a century ago, it was strongly affirmed that a true and adequate scientific account of vital behaviour could be reached only when the behaviour of life could be expressed in terms of physics and chemistry. Vital phenomena were only transformed physical and chemical processes. They were altogether determined by the pressure of physical and chemical activities. Let one read the writings of Huxley, or the art. 'Zoology' in *EBr*[9], and it will be seen that the physical and chemical explanation held the field. It holds the field no longer. There are now many who do not fear to speak of the autonomy of life, and who do not hesitate to affirm that the chief factor in biological science is the proper activity of the organism. It is questioned now whether any organic feature can be explained, even in the most general way, by the action of physical forces.

'What at first seems to be the result of mechanical pressure may afterwards be found to be an active process of growth, and what at first seems to be a full effect of capillarity among homogeneous elements may afterwards be shown to depend on specialized metabolic conditions of the surfaces as its principal cause' (Driesch, *The Science and Philosophy of the Organism*, i. p. 93).

As Driesch further shows, these processes do not constitute life, 'they are used by life.' In this sentence the issue is stated with clearness and precision. Life uses for its own purpose the physical and chemical processes, and account must be taken of the activity of life, if we are to understand the problem of vital behaviour.

Life, then, uses the physical and chemical processes, and by its own activity disposes of them for its own purpose, and puts them to uses not forthcoming in the inorganic world. Alien matter is taken up, transformed, raised to a higher level, and used for the weal of the organism. Life selects out of the environment what is needed for itself. There is selective activity on the part of life; it takes what it needs and neglects what it does not need.

'Turn a miscellaneous lot of birds into a garden: a flycatcher will at once be intent on the gnats, a bullfinch on the pease, a thrush on the worms and snails. Scatter a mixture of seeds evenly over a diversified piece of country: heath and cistus will spring up in the dry, flags and rushes in the marshy, ground; violets and ferns in the shady hollows, gorse and broom on the hilltops. . . . By the principle of subjective selection special environments are singled out by different individuals from the general environment common to all, and so far there is not necessarily any competition. Two artists or two anglers may be in each other's way, but an artist and an angler will hardly incommode each other. A garden would still interest a flycatcher if there were neither pease nor cherries in it, provided the insects remained; whereas the bullfinch would at once forsake it. Natural selection, as distinct from subjective selection, comes into play only when two anglers contend for the same fish, two artists compete for the same prizes, when the early bird gets the worm that the later one must go without' (Ward, *Naturalism and Agnosticism*[3], i. 296 f.).

For a complete explanation of biological phenomena, account must be taken, no doubt, of the two comprehensive factors summed up under the names of 'natural selection' and 'subjective selection.' This is not the place to deal with them in any comprehensive manner (see art. ACTIVITY and other related articles). Here it is sufficient to say that natural selection (comprehending under that name all external conditions, and all that Darwin sets forth under the comprehensive title of Natural Selection) is not sufficient to describe the behaviour of life, or to account for its manifold activities. Life itself counts for something in the final result. Growth, assimilation, and reproduction attest the activity of life. These show that life so far selects its environment, and that, if there are a thousand species in a square mile of ground, each selects its own environment, and each uses it in its own way, and for its own purposes.

The wider problem set to biology by the activity of the organism, and by subjective selection in relation to natural selection, is parallel to the problem set to the psychologist and the moralist by the relation of attention to the general conditions imposed on conscious individual life by the fact that there are logical laws, laws of association, psychological conditions of thought, action, and feeling, and other conditions which seem to determine the limits within which attention is to be exercised. As in biology we ask the question, Does natural selection account for vital experience without the postulate of the activity of the organism? so here we ask the question, Do the logical, psychological, and other laws and conditions of mental life account for mental behaviour without the postulate of the conscious activity of the individual subject?

As regards life in general, it is to be observed that its first work is concerned with those movements which are indispensable to vital functions and to its existence as a living body. As a primary condition of existence an organism must adapt itself to its surroundings, and a series of actions must proceed in order that such an end may be accomplished. These activities relate themselves to the general ends of self-preservation and the preservation of the species. A full account of the phenomena connected with this problem would lead us into the region of the relation of organ and function, the relation of appetite and desire to their objects, and also the relation of feeling generally towards physiological processes on the one hand and mental processes on the other. Without entering into these, we shall merely notice here that life can be described only as a series of actions having reference to an end. That end is the preservation of the individual or the preservation of the species. It is a question whether those activities which are said to be instinctive in the individual are really so; that is, whether they are the outcome of activities which at the outset were acts of choice, these being by repetition consolidated into habit; or whether they were automatic from the beginning. Some contend that actions at present instinctive were originally the outcome of choice, and that these actions, stimulated by a feeling of pleasure, which usually accompanies the exercise of vital functions, have been translated into habit, and have passed into the region of reflex action. Habit is 'lapsed intelligence,' *i.e.* voluntary action may become instinctive, or impulsive, and in the evolution of life may become habitual or reflex action.

But, if we take any organism as it stands, leaving undecided the question as to the forces which have operated to make it what it is, there is no doubt that every organism has to adjust itself to its environment. Whether it has been made by the slow processes of what is called natural selection, or whether it has had something to do with the making of itself, yet, as it is there in its circumstances and conditions, it has to strive,

to work, to adapt itself to varying conditions; and if it is to survive, it must select the most advantageous course of action. In the case of life generally this is comparatively simple. The individual organism adapts itself to its environment by a series of actions directed to the main ends of self-preservation or the preservation of the species.

'All acts of willing, whether external or internal, are divided into two great classes, the first comprising simple or impulsive acts; the second, complex acts, which imply freedom of choice. Simple or impulsive acts are determined by a single motive, whereas complex acts, though they may be determined by a single motive, imply a choice between several. An impulsive action, whether internal or external, is therefore quicker than an act of choice, which is preceded by a feeling of doubt and hesitation. The latter is also termed a free act, or an act of "free-will," because it expresses more clearly than any other the freedom, spontaneity, and independence of the individual with regard to external stimuli. Impulsive acts are also acts of volition, though in a lesser degree than acts of free-will, and possess the character of spontaneous consciousness, which distinguishes all manifestations of the will' (Villa, *Contemporary Psychology*, p. 218).

In an ordinary organism, up to the appearance of reflective consciousness, action is directed to its ends mainly by what Villa calls 'a single motive.' Driven by the impulse of hunger or of love, the action of the organism goes straight to its object. Whether this is the outcome of natural selection, or whether it is acquired by the organism itself as the result of a process of education, it is not necessary here to decide. For in either case the adaptation is there, and the action of the organism is the result of subjective need finding its satisfaction in an appropriate object. In any event, the action and its motive are simple, direct, and imperative.

In a life which is merely organic, the need of the organism may be regarded as in direct and simple relation to its external objects, and proceeds straight to the appropriation of them; in conscious life, or in the life which is on the way towards self-consciousness, other factors enter in, and the situation becomes more complex. Yet the more complex situation rises naturally out of the simpler. There is no abrupt break in the evolution of mental life, and we can scarcely say when what we call attention begins to be properly exercised. In every organism there is a centre, to which all movements are referred. The organism is aware of its own needs, and of the objects which are to satisfy those needs. With the growth of consciousness, the awareness becomes intensified, until, in the fully-developed self-conscious life, consciousness is aware of itself and of all its needs and aims. But consciousness in general is just this awareness, and this awareness involves that mental activity which we call attention. More fully described in the words of Dr. Ladd, attention is 'a purposeful volition, suffused with peculiar feelings of effort or strain, and accompanied by a changed condition of the field of discriminative consciousness, as respects intensity, content, and clearness' (*Psychology, Descriptive and Explanatory*, p. 61). While the description just given seems to apply in its fullness only to a mental life completely developed, it is in a measure applicable to all conscious life. It will be observed that in the definition given above there is no attempt to limit attention to the exclusive operation of any particular activity of the mind. It is, on the contrary, the synthesis of all the activities of the mind, whether of feeling, willing, or thinking. Attention is thus elementary and universal; it belongs to every state of consciousness, and is present in every field of consciousness, or, as is said by Dr. Ward:

'As to the subjective relation of objects, the relation of presentation itself, we have merely to note that on the side of the subject it implies what, for want of a better word, may be called *attention*, extending the denotation of this term so as to include even what we ordinarily call inattention. Attention so used will thus cover part of what is meant by consciousness—so much of it, that is, as answers to being mentally active, active enough at least to "*receive* impressions." Attention on the side of the subject implies intensity on the side of the object: we might indeed almost call intensity the matter of a presentation, without which it is a nonentity' (*EBr*[10], art. 'Psychology,' p. 41b).

Awareness of the stream of consciousness, as it passes on, becomes attention in the stricter sense as elements in experience become more or less intense. It is impossible here to enumerate all the elements which enter into consciousness, nor is it necessary. For the reaction of the mind against its presentations, whatever these may be, gives us at once the elementary condition of attention. At the outset, before mind has come to the possession of itself, it is possible that attention is without purpose, that it is aroused by change in mental experience—by pleasure or pain, or by the over-stimulation of sense or faculty—and that it is exercised in an unthinking, involuntary way. But such rudimentary forms of conscious activity are the foundations on which voluntary, deliberate, and sustained attention are built up. Some, indeed, limit the term 'attention' to its more developed form, and refuse to recognize the more rudimentary forms as worthy of the name. But without the rudimentary forms there would be no possibility of the development of mental life, and no possibility of the deliberate sustained attention which fashions for itself a scheme of living, and shapes means for realizing it. Mental activity in accepting the given, in being interested in it, finds that it can enhance the intensity of some elements, may hasten or retard the flow of the stream of consciousness, may also discriminate between desirable and undesirable elements, and thus the value of attention is recognized. For mental life cannot grow without proper mental activity, and the proper name of such activity is simply 'attention.'

Usually the conditions of attention are just the conditions of consciousness in general. We have seen from Dr. Ward that a large part of the stream of consciousness is properly included under the phenomena of attention. It so happens that many writers on this topic so describe the conditions of attention as to leave out of sight any proper activity on the part of the subject. It is possible so to describe the effects of attention as to leave out all reference to the selective activity of the individual. One may say, with Professor Pillsbury, that 'the essence of attention as a conscious process is an increase in the clearness of one idea or group of ideas at the expense of others' (*Attention*, p. 11). This is quite true, only it leaves out the essential element of how attention was directed so as to produce that result. In fact, in the able work cited so much stress is laid on processes and conditions of attention that attention itself scarcely ever appears. Thus there are many valuable descriptions of the motor concomitants of attention, of its conditions, of the effects of attention on consciousness, and so on, and yet the proper character of mental activity receives hardly any recognition. We may quote from the summaries, usefully appended to each chapter. The summaries of the chapter on 'The Conditions of Attention' are these:

'The conditions of any act of attention are to be found in the present environment (objective conditions) and in the past experience of the individual (subjective conditions). The main objective conditions are the intensity, extent, and duration of the stimulus. The subjective conditions are to be found in the idea in mind at the time, in the mood of the moment, the education, previous social environment, and heredity of the individual' (p. 52).

Professor James has said:

'My experience is what I agree to attend to. Only those items which I notice shape my mind; without selective interest experience is an utter chaos. Interest alone gives accent and emphasis, light and shade, background and foreground—intelligible perspective, in a word. It varies in every creature, but without it the consciousness of every creature would be a grey,

chaotic indiscriminativeness, impossible for us even to conceive' (*Psychology*, i. 402 f.).

But Professor Pillsbury in his summary of the chapter on 'Interest and Feeling of Activity as Conditions of Attention' speaks thus:

'Neither interest nor "mental activity" can be regarded as a condition of attention. Interest is either a general name for the subjective conditions of attention when ascribed to the object, or it is used to designate a mood which accompanies all attending. Mental activity is really bodily activity—a mass of sensations that comes from the contraction of muscles in different parts of the body. The contractions result from motor innervations which accompany attention' (p. 68).

According to Professor James, we attend to things because they are interesting. Professor Pillsbury is of opinion that 'things are interesting because we attend to them, or because we are likely to attend to them: we do not attend to them because they are interesting' (p. 55). The cart and the horse are somehow united, but we are left in doubt as to which comes first. To us it appears that in the solution of Professor Pillsbury the cart is before the horse. His book is the largest and most elaborate of any work we know on 'Attention.' It contains many things which are of the highest value. But it does not seem to cast much light on its main theme. Attention in its proper meaning seems to be conspicuous by its absence. We quote from the chapter called 'General Conclusions':

'Using attention as a type, it is possible to bring many of the other mental processes under that head and to make it serve as a basis for the classification of states of mind. We have seen, for example, that attention influences recalled impressions in practically the same way that it influences their original entrance. When a memory image is once given in consciousness, it will be retained very much as a perception received immediately from the external world. Furthermore, attention largely determines which of the many possible associates of any impression shall become actual. In this sense it selects the memories offered by association just as it selects the objects of sense that shall be permitted to enter. By attention in this sense we mean again from the side of the conditions the effect of the sum-total of previous conscious states, as united in the purpose of the moment, the general trend of the preceding thought, the character of the man, his profession, and further back the complete series of earlier experiences and inherited tendencies which make him what he is. His thought about any subject, no matter what the starting-point, is an expression of himself in the fullest meaning of the term' (p. 313 f.).

When Pillsbury in the passage quoted describes attention as 'the effect of the sum-total of previous conscious states,' etc., has he not left out the most essential element in attention? When he speaks of the complete series of earlier experiences and inherited tendencies which have made 'him what he is,' has he not neglected the most potent factor, namely, the share which the man has in the making of himself? Take members of the same family, descended from the same parents, subject to the same kind of earlier experiences, the same inherited tendencies, responsive to the same environment in family, school, and neighbourhood, and how on his principles does he account for the manifold differences between them? It seems to the present writer that Professor Pillsbury, in his earnest desire to lay stress on the general conditions, has forgotten the personal equation of each individual. He has imitated the procedure of the biologist, who lays the whole stress on natural selection, and neglects the part played by the subjective in the evolution of life. General laws can never account for particular effects. It is a useful study to seek to find out the general conditions which have helped to make a man what he is; but that has to be supplemented by a particular study of the man in his habit as he lives. It does not help us much to say that Shakespeare was an Englishman, and that Burns was a Scotsman; for we have still to learn what were the topics which interested these great men, and what was the interest which directed their attention to this or to that line of thought and action. It is possible that we may never be able to give a scientific explanation of the individual in this relation or in any other; for the individual, as such, is outside of general rules, and must be accepted in all his concreteness as a subject of study by himself.

It is pointed out by Höffding (*Outlines of Psychology*, pp. 108–112) that, in immediate sensations and in the flow of them, interest and the attention determined by the interest play an essential part. He points out (p. 120) that we are not given over in a purely passive way to the impressions of the external world. Excitations from without call forth movements which serve to retain or pursue them. An involuntary search and accommodation help to determine the character of the sensation.

'If a sensation takes complete possession and almost succeeds in driving all else out of consciousness, it then arrests our activity also. An exclusive sensation therefore presupposes attention, but is not one with it. Besides, how does a sensation become exclusive? Excitations can flow in upon us simultaneously from several sides. The eye, *e.g.*, receives simultaneous excitations from several points of light. Several senses, moreover, may be in operation together. If purely passive, sensuous perception would afford at every instant a chaos of diverse sensations. But from the multitude of these diverse sensations, in every instant, one is selected which becomes the centre. Reflexly and instinctively the attention moves from one excitation to another . . . The motive which decides the attention to leave one excitation and turn to another is to be looked for in a sense of fatigue or in a feeling of dullness, which makes it a necessity or a recreation to turn to a new excitation, especially to one which is a natural counterpart or supplement of a preceding excitation. In every such transition an elementary choice takes place' (p. 120 f.).

Referring to the whole discussion for further elucidation, we may now say that even in sensations and in the flow of them choice has a part, and attention may determine what sensations may occupy the centre of consciousness, what may be thrust into the background, and what may be thrust altogether outside the threshold of consciousness.

But such attention may be involuntary, or may have the character of reflex movement. Yet this elementary choice is the necessary condition of such new arrangement of sensations as will be transformed into those results of human effort which we recognize in the contents of science, art, philosophy, and in all other results of human effort. Out of elementary choice and out of almost unconscious attention come the magnificent results which we have already named. We may attend to things because we cannot do otherwise. But when we have an express volition to attend to this or to that, we call it voluntary attention. All other attention is called nonvoluntary or spontaneous. The relations between spontaneous and voluntary attention are manifold. They may be antagonistic to one another, or they may act in such a way that the one passes into the other. Thus voluntary attention to an uninteresting object may invest it with such interest as to make attention to it a spontaneous matter. For example, when we are occupied with any matter, as when a great misfortune has befallen us, or when we pass in review a certain course of conduct in order to find the cause of failure, it may take possession of our minds to such a degree that no effort of will can make us cease from brooding over it. An article has to be written, or a book is in process of preparation; the work is carried on to the loss of sleep, and we are unable to tear ourselves away from it; the attention which began voluntarily has become an obsession.

On the other hand, experience shows that, by the constant and ever-renewed effort of attention, a subject which at the outset was dry and uninteresting may become full of interest as we master it, and learn its meaning and its issues. The power of concentrating our attention on the subject may become stronger, the intervals of con-

centration may become more prolonged, until no effort is needed to attend to the subject. Voluntary attention has become spontaneous (see Stout, *Analytic Psychology*, vol. i. p. 241 f.).

It would be tedious and would not be profitable to enumerate the various kinds of involuntary attention. Reference may be made generally to systematic treatises on Psychology, in which the various kinds are described. Vital needs, the calls of love or hunger, pleasure and pain, every relation between the organic being and his environment, may give rise to that exaltation of consciousness which calls forth the reactive energy which we name 'attention.' It is possible, however, to classify all of these under two great divisions, and to speak of them under the general heads of 'external' and 'internal.' The external are the presentations with the accompanying emotions which precede action. These are usually simple and single in their procedure. The internal are those which, as already indicated, consist in a variation of the current of presentations and feelings. In these we have emphatically the presence of choice, of the selection of one motive out of many, with the increase of intensity and urgency resulting from the concentration of the mind on it.

In the description of these external and internal movements an attempt has been made to introduce greater precision into psychological phraseology. Instead of the phrases 'involuntary' and 'voluntary,' which many still use as adequate, some psychologists have introduced the terms 'perception' and 'apperception' (*q.v.*). By 'perception' they mean a content of which we are conscious. When we concentrate ourselves on a content of consciousness so that it stands out distinctly or as distinctly as possible, we say that it is 'apperceived.' In the art. APPERCEPTION will be found the history and meaning of this term; it is sufficient to say here that those psychologists who use attention in this sense define it as that peculiar state, characterized by certain special feelings, which accompanies apperception. Spatial illustrations are used to describe the state of apperception. Consciousness is figured as a circle, the centre of which represents the focus or point of apperception. The circumference of the circle represents the threshold of consciousness; and of the various stimuli some pass along chords of the circle, while others pass along a diameter, and so through the centre. Or it might be represented by a reference to the great circles of navigation. These pass through the centre of the earth. Apperceived mental contents correspond to great circles, which pass through the centre of consciousness. These spatial illustrations do not add much to our knowledge, yet the distinction between perception and apperception might be very helpful, if writers on Psychology were to use the terms in precisely the same sense.

With regard both to our perceptions and to our apperceptions we are never wholly passive. We have seen that even in the immediate sensations, as well as in the flow of them, the attention is determined by interest, and the interest has a determining influence on sensations selected for closer examination. So it is in the flow of ideas. Here, too, interest has a determining influence. We can never account for the association of ideas, or for the ways in which ideas are clustered together in the mind, by a mere regard to the laws of association, or to any other laws of a general kind. There are laws of association, as there are laws of science, of logic, of psychology, but these do not act as if they aggregated themselves together merely by their own action. Like other general laws, they are used by life, and as regards mental laws they are used by the mind. The determining influence is in the conscious mind itself, which guides its action by its own law of action, so that each experience is essentially a unique experience. To determine accurately the practical problem of attention for any individual would be to determine the real character of personality. But that is beyond the scope of science, which deals with the general, and with the superpersonal, or the infra-personal.

The characteristic difference between perception and apperception, or between involuntary and voluntary attention, is that in the one case the strain follows directly on the presentation of the stimulus, and in the other case the strain, or the turning of the mind in a certain direction towards a certain object, is present before the stimulus.

'The fusion of the sensation with the corresponding idea, whence perception arises, thus takes place in inverse order in voluntary and involuntary attention. We see in great measure what we wish to see, and as a general rule are able to see only what we wish. Hence the possibility of strokes of genius and prophecies, as also of illusory interpretations of facts. The originally sanguine tendency of human nature anticipates experience, and only gradually accepts correction from it. Fortunately experience has the power to open our eyes and force us to see. But the activity of the will is always an essential condition' (Höffding, *Outlines of Psychology*, p. 315).

The relation of attention to the general laws of the system in which we live is too large a subject to be discussed here. Generally it is analogous to the relation of life to the system of which life forms a part. The conscious subject lives in relation to an environment. In interaction with it, it realizes itself. But the process of self-realization is an active process. It reacts against the environment, it selects out of it what it can use, and what it needs and wants, and it makes out of it something new. Merely organic life modifies itself in order to adapt itself to its surroundings. Conscious life modifies its environment so as to make it in a measure accomplish its ends. It impresses itself on the environment, and modifies the earth so as to command its resources in the shape of food, clothing, and houses. Homes are built, cities are founded, facilities of travel are made to abound. We need not enumerate the resources of civilization. The forces of nature are at the service of man, just because man has modified nature to accomplish his ends. But these are the outcome of attentive activity, and cast light on the nature of attention, and on the relation of attention to the laws of the system. Attention of the intellectual kind may be set forth as the activity arising out of the desire to know what are really the laws of the system in which we live. No doubt this is the characteristic of the highest form of intellectual life. But it exists, and ought to be recognized. Into this also choice enters, for it is allowable for a man to think twice, or more than twice, in order that his thoughts in their flow may correspond with reality. Thus into the most abstract and intellectual of our pursuits voluntary activity may enter.

Truth has thus a value of its own, and the greatest determinant of attention is just the scale of values which human judgment has set up for itself. It is this scale of values that determines our interest, and our interest dominates our attention. Referring to the art. VALUE for the full account of the doctrine of values, we state briefly here that it is the characteristic quality of highly-evolved, conscious, moral, spiritual life to transform the given world into a world which will correspond with its highest ideal, and be the image of its deepest thought. What forms these may take, and what strivings may issue from the attempt to make a world in which our values may be realized, cannot be described here. But whatever value may be striven

after by this people or by that, or by this man or by that, it can be realized only by thinking about it, attending to it, working at it, till airy nothing obtains a local habitation and a name. Thus, for the man of science, truth may have the highest value, and he may concentrate his attention on the effort to see the flow of things as it is; for philosophy, everything else may be neglected in the desire to know reality, and to see it in its wholeness; while for the artist a thing of beauty is a joy for ever, and the beautiful is the value that is highest. On the other hand, for some the highest of the values is the good, and so on, around the whole circle of human activity. In whatever direction we look, we find that it is the scale of values that determines the interest of man, and sets him to work for its realization. Values—artistic, scientific, ethical, spiritual—are the dominating interests of conscious life, and these are the ends which all men seek to realize.

For the conscious spirit, then, the given world is plastic, something to be formed into a world of specific value in which it may find its appropriate home. The machinery of the world, its laws, whether mental or material, may submit to new directions, take on new meanings, and issue in results not to be accounted for apart from the activity of the conscious spirit. Material laws may find a new expression in the *Principia* of Newton, which, after all, is as much poetry as science. It is nature as transformed in the mind of Newton. The philosophy of Hegel, *e.g.*, or of other great masters in philosophy, is a revelation of personality, as much as, or even more than, it is a transcript of the meaning of reality. For each mind in the world has to make a world for itself, and it will be the centre of its own world. How each world so made corresponds to the world which is common to all, how the general is related to the individual world, is another question. What concerns us here is that the phenomenon which we call voluntary attention is the chief means by which the world of values is made; and without its working no world is possible for man.

JAMES IVERACH.

ATTIS.—Attis was a male Asiatic deity whose relation to Cybele, the Great Mother, was analogous to that borne by Adonis to Aphrodite, Baal to Astarte, Osiris to Isis, etc. Of Semitic origin, or at least greatly influenced by Semitic religion, his worship, always in dual connexion with that of the Great Mother, and never independent of it, became strongly centralized in Phrygia and Lydia, spread to the adjacent countries, was introduced into Greece, and finally became known throughout the Roman Empire. According to the legend given by Pausanias (vii. 17) as current among the Phrygians, the seed of Zeus, discharged in sleep upon the earth, begot the hermaphroditic monster Agdistis, who was afterwards deprived of male organs by the gods. An almond tree having sprung from these, the daughter of the river Sangarius ate of its fruit and bore Attis, who, after having been exposed, was reared by a he-goat, became very beautiful, and inspired passion in Agdistis. Being about to wed the king's daughter, Attis was struck with madness by Agdistis (who suddenly appeared during the nuptial hymn), and emasculated himself. Agdistis in repentance prevailed upon Zeus to preserve the body of Attis from wasting away or decaying. In Arnobius (*adv. Nationes*, v. 5–8) the fruit is the pomegranate, the daughter of the river-god is named Nana, and the king and his daughter are Midas and Ia. The Great Mother, created by Deucalion and Pyrrha on Mount Agdus, also loves Attis, and plans the marriage in order to rescue him from the shameless love of Agdistis, who strikes the entire company with madness. Attis mutilates himself under a pine tree, and Ia, after wrapping Attis in wool and mourning over him, kills herself. The fatal pine is borne by the Mother into her cave, where she and Agdistis wildly lament Attis. Zeus allows the body of the youth to remain undecayed, his hair to grow, and his little finger to move. Agdistis has the body of the youth consecrated at Pessinus, a city in Galatia near the borders of Phrygia, and also institutes annual ceremonies in his honour. The little finger (*digitus*, δάκτυλοι) is interpreted as the phallus by Georg Kaibel (*GGN*, 1901, p. 513). In Diodorus Siculus (iii. 58, 59), Attis is a stripling whom Meion, the king of Phrygia and Lydia, slays because of an intrigue between him and the king's daughter Cybele. As a consequence of plague and famine, worship of both is instituted by the Phrygians. In Ovid's version of the legend (*Fast.* iv. 223 ff.), Attis breaks his pledge of chastity to Cybele; Sagaritis, the nymph who has sinned with him, is destroyed by the goddess; while the youth himself mutilates his own person in a frenzy on Mount Dindymon. In the version of Arnobius the blending of two forms of the Attis legend is apparent—one accounting for the birth of Attis, the other for his relation to Cybele—and the latter and Agdistis are really identical. A Lydian form of the legend, in which the youth is killed by a boar, is found (Paus. vii. 17).

There is no evidence of an Attis cult in Asia Minor until the 4th cent. B.C., though it must have existed long before that time. It never attained to great prominence in Greece, because of the strange and un-Hellenic nature of its rites. The same is true of it in Italy up to the Empire. There is no direct evidence of the existence of the worship of Attis at Rome under the Republic, and the general probability of its existence is rendered very slight by the lack of monumental and literary evidence where such evidence might be expected (Showerman, 'Was Attis at Rome under the Republic?' in *TAPA* xxi., 1900, pp. 46–59). Under the Empire, however, from the time of Claudius onward, it rapidly increased in importance, Attis being worshipped side by side with the Great Mother, and frequently appearing in literature and on the monuments with her. His prominence in the cult is indicated by his part in the annual season of festivals in honour of the Great Mother which covered the period March 15–27 (Hepding, *Attis, seine Mythen und sein Kult*, Giessen, 1903, pp. 123–176). On March 15 the college of *Cannophori*, or reed-bearers, took part in the ceremonies of the day by carrying reeds in procession—a custom explained as a commemoration of the finding of Attis by the Great Mother on the reedy banks of the river Gallus, but more likely a reminiscence of a primitive phallic procession (see Showerman, 'Canna intrat and the Cannophori,' in the *Classical Journal*, ii. 28–31). Sexual abstinence and fasting were prescribed for the day. On March 22 the sacred pine, the emblem of the self-mutilation of Attis, was borne in procession by the *Dendrophori* to the temple of the Mother on the Palatine, its trunk wound with fillets of wool and its branches hung with garlands of violets, the whole being regarded as a commemoration of the wrapping of Attis's body in wool by Ia and the decking of the original tree by the

Mother with the violets which sprang from Attis's blood. On March 24, *Dies Sanguinis*, fasting and mourning symbolized the grief of the Mother at the death of Attis. The special feature was the orgiastic dance and song of the priests, culminating in self-laceration, and even self-emasculation (not attested at Rome), in commemoration of the final deed of Attis. At night the mystics partook of a sacrament, and perhaps underwent the baptism of blood in the *taurobolium* (wh. see). March 25 was the day of rejoicing (*Hilaria*) at the resurrection of Attis. On March 27, after a day of rest known as *Requietio*, occurred the *Lavatio*, a ceremonial bathing of the goddess in the Almo, a stream a short distance south of Rome, followed by universal rejoicing, a feature of which was dramatic representation of the story of the Mother and Attis. The *criobolium* (wh. see), or sacrifice of a ram, involving the blood-baptism, and consequent purification and regeneration, of the person who performed it, was a ceremony created on the analogy of the *taurobolium*, a similar sacrifice to the Great Mother, for the purpose of giving full recognition to Attis in the dual worship. The high priest of the cult bore the traditional title of Attis. The Attis in Catullus lxiii. is intended to represent a type of the priesthood.

The Cybele-Attis myth, according to the philosophers, symbolized the relations of Mother Earth and her fruitage. Attis is the plant kingdom beloved by her; his emasculation is the cutting of her fruits; his death, his burial, and his preservation by the mourning Mother symbolize the death and preservation of plant life through the cold and gloom of winter; his resurrection is the return of the warmth of spring. The festival of the *Hilaria* occurred on March 25, the first day of the ascent of the sun, while the *Dies Sanguinis*—the day of lamentation and self-scourging—was the last day of winter. In the 4th cent. A.D., under the influence of syncretism, Attis came to be regarded as a symbol of the sun. He and the Great Mother were also sometimes thought of as a parallel to Christ and the Virgin (Isidor. *Ep.* iv. 31. 28).

In art, Attis appears only under the Empire, and for the most part in connexion with the Mother. He is usually standing or leaning against the pine, wears the Phrygian cap, and carries the pedum or syrinx. The most important statue of him is the Lateran Attis, discovered at Ostia, representing him as the shepherd-lover of the Mother, the symbol of the fruits of the earth and of the sun. Half nude, with a long mantle fastened over his breast, he reclines on a rock representing Mount Ida, his left elbow on the head of Idæan Zeus. In the left hand is the pedum, in the right fruit, flowers, and three spears of grain, on the head a pine garland with fruits, and a tiara with five rays, a half moon, and two spears of grain. The half moon indicates his identity with the Phrygian moon-god, Men.

(1900) pp. 46-59, and 'The Great Mother of the Gods' in *Bulletin of the University of Wisconsin*, No. xliii., Madison, 1901. See also artt. CYBELE and GREAT MOTHER.

GRANT SHOWERMAN.

ATTRACTION and REPULSION.—'Attraction' is the name given to those forces exerted between bodies which tend to draw the bodies together or to resist their separation. 'Repulsion' is the name given to forces that have the opposite effect. Both forces are to be seen exerted in the following familiar phenomena: in gravitating bodies, in various magnetic and electric phenomena, in chemical affinity, in the cohesion of the parts of a body, and in the adhesion of one body to another.

If we adopt the analysis given by Kant (*Monadologia physica*, 1756, and *Metaphysische Anfangsgründe der Naturwissenschaft*, 1786), we may even add: the very existence of a space-filling body presupposes these two forces or tendencies. A body must resist compression (repulsion), or it would become a mere mathematical point; and, again, it must resist expansion, or it would be scattered indefinitely through space.

Attraction and repulsion are to be differentiated from two other similar forces, tension and pressure, in that they act from a distance; and this characteristic has made them especially the subject of philosophical discussion. Can a body exert a force where it is not? The day has gone by when the metaphysician had the temerity to give an *a priori* answer to the question thus simply put; but in the 17th and 18th cents. the correct answer was a frequent matter of debate. The followers of Descartes, including Leibniz, were strongly opposed to the affirmative answer; for it seemed contrary to 'natural light' that a body can act where it is not (cf. Leibniz, Erdmann's ed. p. 767). For us of to-day the question is more complicated; but it still involves a truly metaphysical or *a priori* problem. On the one hand, empirical evidence leads us to believe that we do not know of any instance in nature of absolute contiguity between bodies. Moreover, mathematical intuition would add that the only true contiguity is where bodies have one point in common, and this, in turn, would involve complete coincidence of the two bodies; for the same problem of contiguity must be raised regarding all the points in each body. On the other hand, there is much prejudice, well or ill grounded, against the doctrine that a body acts at a distance. Faraday, it seems, had this prejudice; and his discovery of a medium between two bodies acted upon by magnetic forces, along with evidence of tension and pressure within this medium, justified his point of view. Again, there have been repeated attempts to reduce the forces operating in the phenomena of gravitation to pressure (cf. the theory of Le Sage, and Clerk Maxwell's article 'Attraction' in *EBr*[9]). Possibly this prejudice has its origin in the fact that our bodies must come in contact with objects to move them or to exert a force upon them, and, in turn, that when we are moved we feel the pressure of the outside body, or medium, upon the surface of our body. Such an explanation of this prejudice does not, however, do it full justice.

Here, then, the metaphysical problem arises: Is there an ultimate presupposition actually present in man's attempt to explain nature, forbidding him to rest satisfied with an explanation that involves the action of one body upon another from a distance? Whenever we are forced to adopt as an explanation such a force as gravity, ought we not simply to regard it, not as a final solution, but as a confession of ignorance? Does there not remain in all such cases an unsolved problem bidding us seek for a medium between the two bodies? Faraday sought a medium in one set of cases, and found it. Ought not science to seek it in all cases? Hence, is not this prejudice a fundamental methodological attitude? If so, we can call it an axiom, meaning by an axiom an assumption that seemingly we have to make, but have no hope of either proving or disproving. We cannot prove that bodies do not act upon one another from a distance, nor can we prove that they do; for these latter cases mean, at the most, that we have not as yet been able to find any known medium.

Moreover, the mathematical statement that in a continuous space all particles of matter must be separated, and therefore cannot be in absolute

contiguity, does not contradict this axiom. It simply introduces the larger metaphysical question: Is not nature a continuum, and therefore an inexhaustible source of problems; that is, does not all scientific explanation leave residual problems which arise the moment we think of any given system analyzed into yet minuter entities than those which we are considering, and so on *ad infinitum*? In short, our axiom means contiguity relative to the type of spatial objects involved in the problem at hand, not absolute or mathematical contiguity. Cf. artt. ATOMIC THEORY.

AUGSBURG CONFESSION.—See CONFESSIONS.

AUGURY.—See DIVINATION.

AUGUSTINE.—**1. Life.**—Aurelius Augustine (the prænomen 'Aurelius' is attested by contemporaries but does not occur in his own works or in his correspondence) was born of mixed heathen and Christian parentage, 13 Nov., A.D. 354, at Tagaste, a small municipality in proconsular Numidia. He was taught in his childhood the principles of Christianity, and great sacrifices were made to give him a liberal education. From his youth he was consumed by an insatiable thirst for knowledge, and was so inflamed by the reading of Cicero's *Hortensius* in his nineteenth year that he thenceforth devoted his life to the pursuit of truth. The profession to which he was bred was that of rhetorician, and this profession he practised first at Tagaste, and then successively at Carthage, Rome, and Milan up to the great crisis of his life (386). In his early manhood he had fallen away from his Christian training to the Manichæans, who were the rationalists of the age (373); and subsequently (383) had lapsed into a general scepticism; but he had already fought his way out of this, under the influence of the Neo-Platonists, before his conversion to Catholic Christianity took place at Milan in the late summer of 386. He spent the interval between this crisis and his baptism (Easter, 387) in philosophical retirement at Cassiciacum, and then, after a short sojourn at Rome, returned to Africa (autumn, 388) and established at his native town a sort of religio-philosophical retreat for himself and his friends. Early in 391 he was almost forcibly ordained presbyter at Hippo Regius, and nearly five years later (shortly before Christmas, 395) was raised to the rank of coadjutor-bishop. From the first he sustained practically the entire burden of the administration, and, soon succeeding to its sole responsibility, continued bishop of that second-rate diocese until his death, 28 August 430.

In this simple framework was lived out the life of one who has been strikingly called incomparably the greatest man whom, 'between Paul the Apostle and Luther the Reformer, the Christian Church has possessed.'* We cannot date from him, it is true, an epoch in the external fortunes of the Church in the same sense in which we may from, say, Gregory the Great or Hildebrand. He was not, indeed, without ecclesiastico-political significance. He did much to heal the schisms which tore the African Church. He regenerated the clergy of Africa by his monastic training school. And it must not be forgotten that the two great Gregorys stood upon his shoulders. But his direct work as a reformer of Church life was done in a corner, and its results were immediately swept away by the flood of the Vandal invasion.

2. Writings.—It was through his voluminous writings, by which his wider influence was exerted, that he entered both the Church and the world as a revolutionary force, and not merely created an epoch in the history of the Church, but has determined the course of its history in the West up to the present day. He was already an author when he became a Christian, having published (about 380) an æsthetical study (now lost), on *De pulchro et apto*. But his amazing literary productivity began with his conversion. His first Christian writings were a series of religio-philosophical treatises, in which he sought to lay the foundations of a specifically Christian philosophy. These were followed by a great number of controversial works against the Manichæans, Donatists, Pelagians, interspersed with Biblical expositions and dogmatic and ethical studies. The whole was crowned by four or five great books in which his genius finds perhaps its fullest expression. These are his *Confessiones* (397–400), in which he gives an analysis of his religious experience and creates a new *genre* in literary form; the *de Doctrina Christiana* (397–426), in which the principles of his Biblical exposition are expounded; the *Enchiridion ad Laurentium* on Faith, Hope, and Charity (421), which contains his most serious attempt to systematize his thought; the *de Trinitate* (395–420), in which its final formulation was given to the Christian doctrine of the Trinity; and the *de Civitate Dei* (413–426), in which are laid the foundations of a rational philosophy of history.

He seems to have been himself aware of the significance of the writings into which he had so unstintedly poured himself, and he devoted some of his last years to a careful survey and revision of them in his unique *Retractationes* (426–428), in which he seeks to compact them into an ultimate whole. The influence which they exerted from the beginning is attested no less by the spiteful comments on their volume which escaped from those less well affected to them (*e.g.* the interpolators of Gennadius), than by the wondering admiration of the better disposed (already, Possidius, *Vita*, ch. vii.). In point of fact they entered the Church as a leaven which has ever since wrought powerfully towards leavening the whole mass.

3. Influence.—(*a*) *Its extent.*—The greatness of the influence exerted by Augustine is fairly intimated by the suggestion that the division between the Eastern and Western Churches may properly be represented as having been 'prepared' by him.* No doubt, according to Renan's saying, the building of Constantinople contained in it the prophecy of the division of the Empire, and the division of the Empire the prophecy of the division of the Church. But it was Augustine who imprinted upon the Western section of the Church a character so specific as naturally to bring the separation of the Churches in its train. It must not be inferred, however, that his influence was felt only in the West. The prevailing impression to this effect implies some failure to appreciate not only the extent of the intercourse between the East and the West in Augustine's day, but also the indebtedness of the East to the West for its theological constructions. The interest of the Antiochenes in Western Christo-

* Harnack, *Monasticism and the Confessions of Augustine*, p. 123.

* Reuter, *Augustinische Studien*, vii. 490.

logical thought, as illustrated, for instance, in the *Eranistes* and the correspondence of Theodoret, is only one example of a much wider fact; and in any event, the great doctrines of the Trinity and the Person of Christ, which form almost the entirety of 'dogma' in the East, so far from being a gift from the East to the West, as often represented, had their origin in the West, and were thence communicated to the East—the former through the intermediation of 'the great Hosius,' and the latter through that of Leo the Great. Augustine, through whom—working, no doubt, in full knowledge of what had been done by the Greeks, but in entire independence of them—the doctrine of the Trinity received its completed statement, came too late to affect the Greek construction of this doctrine, and accordingly gave form on this great topic only to the thought of the West. But his Christological conceptions underlay the formulations of Leo, as those of Ambrose underlay his, and through Leo determined the Christological definitions of the East as well as of the West. Accordingly, while the doctrines of the East and the West on the Person of Christ have remained identical, in their doctrines of the Trinity the two sections draw somewhat apart, not only with respect to that perennial bone of contention, the *filioque* clause in the definition of the procession of the Spirit, but in what underlies this difference—their general conception of the relations of the Trinitarian Persons. This in the East is ruled by subtle subordinational inheritances (embedded in the Nicene formulary in the phrase θεὸς ἐκ θεοῦ and its equivalents), while in the West it is dominated by that principle of equalization which found its sharpest assertion in the ascription of αὐτοθεότης to Christ by Calvin, whose construction marks the only new (subordinate) epoch in the development of the doctrine of the Trinity after Augustine. This complete determination of Western thought on the fundamental Christian doctrine of the Trinity fairly illustrates at once the place of Augustine in Western Christian thought, and the effect of his supreme influence there in creating a specifically Western type of Christianity.

It is worth while, no doubt, to distinguish between the actual influence exerted by Augustine in the West, and what may perhaps, in a more external sense, be called the authority enjoyed by his name in the Latin Church. To no other doctor of the Church has anything like the same authority been accorded, and it seemed for long as if his doctrine of grace at least was to be treated as a definitely defined dogma, *de fide* in the Church. Already in 431 Celestine sharply reproved the bishops of Gaul for permitting Augustine's authority to be questioned in their dioceses; and soon afterwards, Gelasius (493) addressed to the bishop of Picenum a similar letter of rebuke for the like carelessness. Subsequent deliverances of Hormisdas (520), and Boniface II. (530–531), and John II. (534) confirmed the authority thus assigned him; and their encomiums were repeated by many later Roman bishops. It very naturally became, therefore, the custom of the 'Augustinians' in the Church of Rome—like Diego Alvarez, Jansen, Noris—to ascribe 'irrefragable authority' to his teaching; and the question was gravely debated among the theologians whether a truly plenary authority were really to be attributed to him, or whether he were only to rank as the first of the Church's authorized teachers. The result was very naturally that every tendency of thought in the Church was eager to claim for itself the support of his name; and the extraordinary richness of his mind, and the remarkable variety of, so to say, the facets of his teaching, lent him more than ordinarily to the appeal of numerous and even divergent points of view. The possibility of this was increased by the long period of time covered by his literary activity, and the only gradual crystallization of his thought around his really formative ideas. The Augustine of Cassiciacum or even of the presbyterate was a somewhat different Augustine from the Augustine of the episcopate; and not even at his death had perfect consistency been attained in his teaching. Accordingly the most amazing variety of doctrine, on almost every conceivable subject, throughout the Middle Ages, and later in the Church of Rome, has sought support for itself in some saying or other of his; and both sides of almost every controversy have appealed with confidence to his teaching. Schools of thought which had drifted entirely away from his most fundamental postulates still regarded and represented themselves as 'Augustinian'; and the Church of Rome itself, whose whole history since the second Council of Orange (529) has been marked by the progressive elimination of Augustinianism from its teaching, is still able to look upon him as the chief doctor of the Church, upon whom its fabric is especially built. Confusion became so confounded that the Confession of Faith which Pelagius presented to Innocent was inserted quite innocently into the *Libri Carolini*, and was even produced by the Sorbonne in 1521 against Luther as Augustine's own.

Obviously this universal deference to the name of Augustine furnishes no accurate measure of his real influence. It supplies, however, a fair general reflexion of its extent. In point of fact the whole development of Western life, in all its phases, was powerfully affected by his teaching. This, his unique ascendancy in the direction of the thought and life of the West, is due in part to the particular period in history in which his work was done, in part to the richness and depth of his mind and the force of his individuality, and in part to the special circumstances of his conversion to Christianity. He stood on the watershed of two worlds. The old world was passing away; the new world was entering upon its heritage; and it fell to him to mediate the transference of the culture of the one to the other. It has been strikingly remarked that the miserable existence of the Roman Empire in the West almost seems to have been prolonged for the express purpose of affording an opportunity for the influence of Augustine to be exerted on universal history.* He was fortunate even in the place of his birth and formative years; although on the very eve of its destruction, Africa was at this precise moment, in the midst of the universal decadence, the scene of intense intellectual activity—into which he entered with all the force of his ardent nature. He gathered up into himself all that the old world had to offer, and re-coining it sent it forth again bearing the stamp of his profound character. It belonged to the peculiarity of his genius that he embraced all that he took up into himself 'with all the fibres of his soul'; not, as has been said, 'with his heart alone, for the heart does not think, nor with the mind only; he never grasps truth in the abstract, and as if it were dead,'† but with his whole being, giving himself to it and sending it forth from himself as living truth, driven on by all the force of his great and inspiring personality. Accordingly, when, having tested everything that the old world had to offer and found it wanting, he gave himself at last to Catholic Christianity, it was with no reserves. Catholicism, frankly accepted as such, became his

* Harnack, *Grundriss d. Dogmengeschichte*, Eng. tr. p. 335.

† Portalié, in Vacant-Mangenot, *Dictionnaire de la Théologie Catholique*, i. 2453.

passion, and into the enthusiastic maintenance of it he threw all his forces. It was primarily as a Catholic Christian, therefore, that he thought, and worked, and lived. But the man who threw himself with such zeal into the service of Catholic Christianity was a man who had already lived through many experiences and had gathered much spoil in the process. He had sounded the depths of heresy in its most attractive form, and had drunk the waters of philosophy in its culminating development; life in the conventicles of the sects and in the circle of cultured heathenism was alike familiar to him. But, above all the spoil he brought from without, he brought with him himself. He was a man of the highest and most individual genius—intellectual, but far beyond that, religious—who had his own personal contribution to make to thought and life. If we cannot quite allow that there were in very truth many Augustines, we must at least recognize that within the one Augustine there were very various and not always consistent currents flowing, each of which had its part to play in the future. Within the Catholic Christian a philosopher of the first rank was restlessly active; and within both a religious genius of the highest order was working; while for the expression of the resulting complex of feelings and ideas a literary talent was available second to none in the annals of the Church.

It is no wonder, therefore, that the Western Church has felt the force of his influence in all the main lines of its development, and in no one of its prominent characteristics could it have been without him what it has become. In him are found at once the seed out of which the tree that we know as the Roman Catholic Church has grown; the spring or strength of all the leading anti-hierarchical and mystical movements which succeeded one another through the Middle Ages; at least the promise and pre-formation of the great types of Western philosophical thought; and, above all, the potent leaven of vital religion. Beginning in the first force of its fresh promulgation by overcoming the ingrained rationalism of the popular Christianity expressed in Pelagianism and its daughter movements, it refused to be bound by the compromises of the Council of Orange, compacted though they were into a system by the genius of a Thomas, and given irrefragable authority in the Church of Rome by the decrees of Trent, but manifested its power by outbreak after outbreak, from Gottschalk in the 9th to Jansen in the 17th cent.; and then burst all bonds and issued in the Protestant Reformation in the 16th century.

(*b*) *Augustine as a Church-teacher.*—No doubt it is pre-eminently as the great Catholic doctor that Augustine stands out on the page of history. To his own consciousness he was just a Catholic Christian; and the whole mass of his teaching was conceived by him as simply the body of Catholic doctrine. It is, accordingly, interesting to observe that it is precisely as the Catholic doctor that he has lived in the hearts of the people. The legends which have gathered around his name picture him pre-eminently as the expounder of the *principia* of the Christian faith, particularly of the mysteries of the Godhead, who abode continually *in excelsis disputans de gloria excellentissimæ Trinitatis*, and communicated to the Church the results of his high meditations 'as he was able'—a note of humility caught from his own habitual tone when speaking of himself.* The task to which he consciously gave himself was to apprehend, so far as it was given to him to apprehend, to proclaim, maintain, and defend the Catholic truth; and from this task he never swerved. It was no empty formula with him when he declared, as he repeatedly declared, 'This is the Catholic faith, and it is therefore also my faith'; and he was altogether in earnest when he exhorted his readers not to love him more than the Catholic faith, and his critics not to love themselves more than the Catholic truth.* The body of Catholic doctrine constitutes thus the traditional element in Augustine's teaching. But, of course, it by no means left his hands precisely as it entered them. Nor did he contribute to it merely intellectual precision and logical completeness; he impressed on it the stamp of his religious fervour, and transmuted its elements into religious entities.

It was particularly in the doctrine of the Church, which he thus took up and transfigured, that he became in a true sense the founder of Roman Catholicism, and thus called into being a new type of Christianity, in which 'the idea of the Church became the central power in the religious feeling' and 'in ecclesiastical activity,' 'in a fashion which has remained unknown to the East.'† This idea of the Church was, to be sure, so little the creation of Augustine that he took it over whole from his predecessors, and in his innermost thought, indeed, never thoroughly homologated it. It was Cyprian, not Augustine, who identified the Church with the Episcopate, and to whom the Church outside which there is no salvation was fundamentally the hierarchical institution. It was Gregory the Great who first spoke of the organized Church as the Divine *civitas*. To Augustine the Church was fundamentally the *congregatio sanctorum*, the Body of Christ, and it is this Church which he has in mind when he calls it the *Civitas Dei*, or the Kingdom of God on earth. He is, however, not carefully observant of the distinction between the empirical and the ideal Church, and repeatedly—often apparently quite unconsciously—carries over to the one the predicates which, in his fundamental thought, belonged properly to the other. Thus the hierarchically organized Church tends ever with him to take the place of the *congregatio sanctorum*, even when he is speaking of it as the Kingdom or City of God in which alone any communion with God is possible here, and through which alone eternal blessedness with God is attainable hereafter.

In the Donatist controversy, although the distinction between *habere* and *utiliter* or *salubriter habere* is made to do yeoman service, the conception of the Church as the sole sphere of salvation, passing into the conception of the Church as the sole mediatrix of grace, and therefore the sole distributor of salvation, was necessarily thrown into high emphasis; and the logic of the situation too directly and too powerfully identified this Church with the empirical Church for the deeper-lying conception of the *congregatio sanctorum* to remain in sight. Thus Augustine, almost against his will, became the stay of that doctrine of the Church as the sole instrument at once of true knowledge of the Divine revelation and of saving grace which provides the two *foci* about which the ellipse of Roman Catholic doctrine revolves. What before him was matter of assertion became in his hands a religion, and went forth to conquer the world. His profounder conception of the Church as the *congregatio sanctorum*, and the consequent distinction between the empirical and the ideal Church, with all its implications with respect to the action of the sacraments and the effect of ecclesiastical decrees, and even of excommunication, did not indeed remain unobserved or unutilized when occasion demanded. Thus, for example, they came forward in their completeness

* Cf. Stilling, *Acta Sanctorum*, Aug. vi.

* *De Trinitate*, I. iv. 7; iii. *præf.* 2.
† Reuter, *op. cit.* p. 499.

in the arguments of the Imperialists in the great controversies of the later 11th century.* These also, and in a truer sense than the Papalists in that debate, were 'Augustinians.' But the main stream of Augustine's influence flowed meanwhile in the traditionalist channel, and gave the world the Church as the authoritative organ of Divine truth and the miraculous vehicle of saving grace, through which alone the assured knowledge of the revelation of God could be attained, or the effective operations of His redeeming love experienced. Many of the subsidiary conceptions which fill out the system of Roman Catholic doctrine also find their direct prop in his teaching—its doctrine of merit, the distinctions between precepts and counsels, mortal and venial sins, and particularly the elaborate sacramental system, with its distinction between matter and form, its assertion of *ex opere operato* action, and of the indelible character of baptism and ordination, and even the doctrine of intention. On this side of his teaching the Roman Catholic Church may well be accounted Augustine's monument.

(c) *As a thinker.*—But beneath Augustine the traditionalist lay Augustine the thinker, and as a thinker he gave law not only to the Church but to the world. From the moment of his conversion, to be sure, religion became paramount with him. But this did not quench his philosophical impulse; it only made his specifically a religious philosophy, and himself, to adopt Rudolph Eucken's more precise definition,† 'the single great philosopher on the basis of Christianity proper the world has had'—in the richness of his thought and poetry of his expression alike, not unworthy of comparison even with his great master Plato.‡ He brought with him into Catholic Christianity not only a sufficient equipment of philosophical knowledge, but a powerful and trained intelligence, and an intellectual instinct which had to find scope. It was in the rôle of Christian philosopher, seeking to give form and substance to fundamental verities from the Christian standpoint, that he first came forward in the service of faith; and though later the religious teacher and defender of the faith seemed likely to swallow up the philosophical inquirer, they never really did so, but his rich and active mind kept continually at work sounding all depths. Thus not only was there imparted to all his teaching an unwonted vitality, originality, and profundity, but 'the activities set in motion were not confined to the narrow circle of theological science, but extended, directly or indirectly, to all forms of human life.'§ In every department of philosophical inquiry he became normative for the succeeding centuries; and until the rise of Aristotelianism in the 12th cent. and its establishment in influence by the advocacy of such teachers as Albertus Magnus and Thomas Aquinas, Augustinianism reigned supreme. Throughout the remainder of the Middle Ages it contended masterfully with its great rival, forming many compromises with it, and tending to off-set the rationalism into which Aristotelianism was ever degenerating by itself falling into mysticism. It thus became the support of the tendency towards Mysticism which prevailed through the Middle Ages, or rather its protection from the pantheism into which, when drawing more directly from Neo-Platonic sources, it was ever liable to deteriorate. From it every Catholic Reformer drew his strength, and to it the whole body of Reformers before the Reformation made their appeal. From its partial

* Mirbt, *Die Stellung Augustins in der Publicistik*, etc., p. 80.
† Eucken, *Die Lebensanschauungen*, etc.², p. 216.
‡ Cf. E. Norden, in *Die Kultur der Gegenwart*, i. 8, 1905, p. 394: 'Augustine was the great poet of the ancient Church, though just as little as Plato did he write in verse. These two go together as the great poet-philosophers of all time.'
§ Mirbt, *op. cit.* p. 1.

obscuration it emerged at the Renaissance, and burst again into full view in the 17th cent. to lay the foundations of modern thought. Siebeck accordingly bids us see in Augustine 'the first modern man';* and, if Eucken questions the exactness of the designation, he is free to allow that the modern world finds in Augustine many points of contact, and, not only in questions of religious philosophy may wisely take its start from him rather than from Luther or Thomas, Schleiermacher or Kant, but in purely philosophical matters will find him in many respects more modern than Hegel or Schleiermacher.†

It was in the spheres of psychology and metaphysics that the dominion of Augustine was most complete. He aspired to know nothing, he tells us, but God and the soul; but these he strove with all his might to know altogether. His characteristic mark as a thinker was the inward gaze; the realities of consciousness were the primary objects of his contemplation; and from them he took his starting-point for reflexion on the world. Antiquity supplies no second to him in the breadth and acuteness of his psychological observation. And in his establishment of 'self-assured subjectivity,' as Windelband calls it,‡ in 'the controlling central position of philosophical thought' he transcended his times, and became 'one of the founders of modern thought.' If he may truly be said to have derived from Plato and Plotinus, in a far truer sense he stood above his Neo-Platonic teachers, and of his lineage have come Descartes and Malebranche and all that has proceeded from the movements of thought inaugurated by them. Even the famous ontological argument for the being of God, and, indeed, the very *cogito, ergo sum* of Descartes, have not merely their material but their formal pre-formation in him. It was not, however, in abstract thought alone, or chiefly, that he made his mark on the ages; his own thinking was markedly concrete, and nothing characterized it more strongly than the firmness of its grasp upon the realities of life, to the understanding and direction of which it was held strictly ancillary.

His impact upon the world might accordingly not unfairly be summed up, from one point of view, in the ethical revolution which he wrought. 'In essence,' remarks Harnack,§ 'Augustine's importance in the history of the Church and dogma lies in his giving to the West in the place of the Stoic-Christian popular morals, as that was recapitulated in Pelagianism, a religious, specifically Christian ethics, and so strongly impressing this on the Church that at least its formulas maintain up to-day their supremacy in the whole extent of Western Christianity.' Indeed, we might do worse, in seeking an index of his influence as a thinker, than fix upon the place he has occupied in political theory and practice. The entire political development of the Middle Ages was dominated by him; and he was in a true sense the creator of the Holy Roman Empire. It was no accident that the *de Civitate Dei* was the favourite reading of Charlemagne: 'he delighted,' Einhard tells us (*Vita Caroli*, 24), 'in the books of St. Augustine, and especially in those that bear the title *Of the City of God*.' And in the great struggle between the Empire and the Papacy in the later 11th cent. it was expressly to him that the controversialists on both sides made their appeal. No Father is quoted by them as often as he, except, perhaps, Gregory the Great; and no series of documents is cited more frequently than his writings, except, perhaps, the pseudo-

* *ZPhP*, 1888, p. 190. † Eucken, *op. cit.* p. 249.

§ *Dogmengesch.* [Eng. tr. v. 80]; cf. on Augustine's place in the history of ethics, Joseph Mausbach, in *Die Kultur der Gegenwart*, i. 4, 1906, p. 526.

Isidorian decretals.* Not only do writers like Walram of Naumburg and Wido of Ferrara reflect accurately his conception of the Church, with its emphasis on unity and its vacillation between the ideas of the *congregatio sanctorum* and a hierarchical organization—echoes of which still sound in William of Occam's *Defensor Pacis* and the discussions of the conciliatory party in the Roman Church whose ornament was Gerson—but they made their appeal to Augustine in their endeavours to give validity to their defence 'of the State as a Divine institution, of the moral significance and relative independence of the earthly sovereignty, of the necessary concordance of the *Sacerdotium* and *Imperium*,' and the like.†

On the theoretical side he must be accredited, in this aspect of his thought, with the creation of the science of the Philosophy of History. For the primary significance of the *City of God* lies in the fact that 'in it for the first time an ideal consideration, a comprehensive survey of human history found its expression.'‡ No doubt his external position at the division of the ages, when the old world was dying and the new world, under the dominion of Christianity, was struggling into its place, supplied him with incitement for the creation of this new science; and the demands which the times, in the crash of the secular order, made for an apology for Christianity, powerfully determined him to a general historical philosophy. But it was Christianity itself, as the entrance into the world of a renovating force, and his own particular conception of Christianity (leading him to conceive the history of human society no less than the course of the individual life, as the continuous evolution of the Divine purpose, and impelling him to interpret all the forces of time as working harmoniously onward towards that far-off Divine event to which all creation moves) that gave him not only the impulse to work out a philosophy of history, but the elements of the particular philosophy of history which he actually presents in his epoch-making treatise, which, incomplete and perhaps one-sided as it is, still retains full validity in its fundamental traits.

(*d*) *As a religious genius.*—Not even, however, in Augustine the philosopher do we find the Augustine whose influence has wrought most powerfully in the world. The crisis through which he passed at his conversion was a profound religious revolution; and if he gave himself at once to the task of constructing a philosophy, it was distinctively a Christian philosophy he sought to construct, built though it was largely out of Platonic materials: the authority of Christ, he tells us in the earliest of the writings in which this task was prosecuted, ranked with him even above that of reason. And if he devoted all his powers to the exposition and defence of the Catholic faith, it was because he saw in the Catholic faith the pure expression of religion, and poured into the Catholic faith all the fullness of his religious emotion. It is not Augustine the traditionalist, or Augustine the thinker, but Augustine the religious genius, who has most profoundly influenced the world. The most significant fact about him is that he, first among Church teachers, gave adequate expression to that type of religion which has since attached to itself the name of 'evangelical'; the religion, that is to say, of faith, as distinct from the religion of works; the religion which, despairing of self, casts all its hope on God, as opposed to the religion which, in a greater or less degree, trusts in itself; in a word —since religion in its very nature is dependence on God—religion in the purity of its conception, as over against a *quasi*-religious moralism. What requires particularly to be noted is that he gave full expression to this type of religion both in its vital and in its thetical aspects—the former most adequately in that unique book in which he reveals his soul, and admits us as spectators to the struggles of his great heart as it seeks to cleanse itself of all trust in itself and to lay hold with the grasp, first, of despair, next of discerning trust, and then of grateful love, on the God who was its salvation; and the latter most adequately in that long series of writings in which he expounds, defends, and enforces with logical argument and moving exhortation the fundamental elements of the theology of grace, as against the most direct assailants which that theology has been called upon to meet in the whole history of Christian thought. The great contribution which Augustine has made to the world's life and thought is embodied in the theology of grace, which he has presented with remarkable clearness and force, vitally in his *Confessions*, and thetically in his anti-Pelagian treatises.

It would be altogether a mistake to suppose that Augustine consciously discriminated between the theology of grace which was his personal contribution to Christian thought, and the traditional Catholicism which he gave his life to defend and propagate. In his own consciousness, the two were one: in his theology of grace he was in his own apprehension only giving voice to the Catholic faith in its purity. Nevertheless, however unconsciously, he worked with it a revolution both in Christian teaching and in Christian life, second in its depth and its far-reaching results to no revolution which has been wrought in Christian feeling and thought in the whole course of its history. A new Christian piety dates from him, in which, in place of the alternations of hope and fear which vex the lives of those who, in whatever degree, hang their hopes on their own merits, a mood of assured trust in the mercy of a gracious God is substituted as the spring of Christian life. And a new theology corresponding to this new type of piety dates from him; a theology which, recalling man from all dependence on his own powers or merits, casts him decisively on the grace of God alone for his salvation. Of course, this doctrine was not new in the sense that it was Augustine's invention; it was the doctrine of Paul, for example, before it was the doctrine of Augustine, and was only recovered for the Church by Augustine, though in that age, dominated in all its thinking by the dregs of Stoic rationalism, it came with all the force of a new discovery. And, of course, Augustine did not discover it all at once. Because his conversion was a vital religious experience, in which the religious relation was realized in thought and life in unwonted purity and power, the fundamental elements of his religious revolution were from the first present in his mind and heart; in his earliest Christian writings he already gives expression to both the formal and the material principles, as we may term them, of the theology of grace. The authority of the Divine revelation in and through Christ, embodied in the Scriptures, and the utter dependence of man on God for all good (*potestas nostra Ipse est, da fidem*), are already the most intimate expression of his thought and life. But just because the religious system to which he gave himself on his conversion was taken over by him as a whole, time was requisite for the transfusion of the whole mass by the consistent explication and conscious exposition of the 'Augustinianism' implicitly summed up in such maxims. The adjustment went on slowly, although it went on unbrokenly. It required ten years before the revived Paulinism attained even a fully consistent positive enunciation (first in the work, *De diversis quæstioni-*

* Mirbt, *op. cit.* p. 75. † Reuter, *op. cit.* p. 508.
‡ Seyrich, *Die Geschichtsphilosophie Augustins*, 1891, p. 68.

bus ad Simplicianum, 396); and, though the leaven worked steadily thereafter more and more deeply and widely into his thought, death intervened before all the elements of his thinking were completely leavened. That is the reason why Augustine was both the founder of Roman Catholicism and the author of that doctrine of grace which it has been the constantly pursued effort of Roman Catholicism to neutralize, and which in very fact either must be neutralized by, or will neutralize, Roman Catholicism. Two children were struggling in the womb of his mind. There can be no doubt which was the child of his heart. His doctrine of the Church he had received whole from his predecessors, and he gave it merely the precision and vitality which ensured its persistence. His doctrine of grace was all his own: it represented the very core of his being; and his whole progress in Christian thinking consists in the growing completeness with which its fundamental principles applied themselves in his mind to every department of life and thought. In this gradual subjection to them of every element of his inherited teaching, it was inevitable, had time been allowed, that his inherited doctrine of the Church, too, with all its implications, would have gone down before it, and Augustine would have bequeathed to the Church, not 'problems,' but a thoroughly worked out system of evangelical religion.

(*e*) *Augustine and Protestantism*.—The problem which Augustine bequeathed to the Church for solution, the Church required a thousand years to solve. But even so, it is Augustine who gave us the Reformation. For the Reformation, inwardly considered, was just the ultimate triumph of Augustine's doctrine of grace over Augustine's doctrine of the Church. This doctrine of grace came from Augustine's hands in its positive outline completely formulated: sinful man depends, for his recovery to good and to God, entirely on the free grace of God; this grace is therefore indispensable, prevenient, irresistible, indefectible; and, being thus the free grace of God, must have lain, in all the details of its conference and working, in the intention of God from all eternity. But, however clearly announced and forcefully commended by him, it required to make its way against great obstacles in the Church. As over against the Pelagians, the indispensableness of grace was quickly established; as over against the Semi-Pelagians, its prevenience was with almost equal rapidity made good. But there advance paused. If the necessity of prevenient grace was thereafter (after the second Council of Orange, 529) the established doctrine of the Church, the irresistibility of this prevenient grace was put under the ban, and there remained no place for a complete 'Augustinianism' within the Church, as Gottschalk and Jansen were fully to discover. Therefore, when the great revival of religion which we call the Reformation came, seeing that it was, on its theological side, a revival of 'Augustinianism,' as all great revivals of religion must be (for 'Augustinianism' is but the thetical expression of religion in its purity), there was nothing for it but the rending of the Church. And therefore also the greatest peril to the Reformation was and remains the diffused anti-'Augustinianism' in the world; and, by a curious combination of circumstances, this, its greatest enemy, showed itself most dangerous in the hands of what we must otherwise look upon as the chief ally of the Reformation—that is to say, Humanism. Humanism was the ally of the Reformation in so far as it too worked for the emancipation of the human spirit; and, wherever it was religious, it became the seed-plot of the Reformation. But there was a strong anti-'Augustinian' party among the Humanists, and from it emanated the gravest danger which threatened the Reformation. Where this tone of thought was dominant the Reformation failed, because religious depth was wanting. What Spain, for example, lacked, says R. Saint-Hilaire justly, was not freedom of thought, but the gospel.* In the first stages of the Reformation movement in the North, this anti-'Augustinianism' may be looked upon as summed up in Erasmus; and Erasmus, on this very ground, held himself aloof from the Reformation movement, and that movement held itself aloof from him. 'I am at present reading our Erasmus,' wrote Luther six months before he nailed his theses on the door of the Schloss-Kirche at Wittenberg, 'but my heart recoils more and more from him. . . . Those who ascribe something to man's freedom of will regard these things differently from those who know only God's free grace.' Do we realize how much we owe to Erasmus and his friends that they remained Roman Catholics, and thus permitted the 'Augustinianism' of the Reformation to plant its seed and to bear its fruit?

LITERATURE.—The literature upon Augustine is immense. An excellent selection from it is given by Loofs at the head of the art. 'Augustinus' in *PRE*[3], with which should be compared that given by Harnack, *Hist. of Dogma*, v. 61 f. The following deal directly with the influence of Augustine: Feuerlein, 'Ueber die Stellung Augustins in der Kirchen- und Kulturgeschichte,' in von Sybel's *Historische Zeitschrift*, 1869, xxii. 270–318; Reuter, *Augustinische Studien*, Gotha, 1887, vii. 479–516; Cunningham, *S. Austin and his place in the History of Christian Thought* (Hulsean Lectures for 1885), London, 1886; Schaff, *History of the Christian Church*, iii., New York, 1884, § 180, pp. 1116–1128; Eucken, *Die Lebensanschauungen der grossen Denker*, Leipzig, 1890 (2nd ed. 1896, pp. 216–250; 4th ed. 1902, p. 211, etc.); Nourrisson, *La Philosophie de Saint Augustin*, Paris, 1886, ii. 147–276; Werner, *Die Scholastik des späteren Mittelalters*, iii., Vienna, 1883, and 'Die Augustinische Psychologie in ihrer mittelalterlich-scholastischen Einkleidung und Gestaltung,' *SWAW*, Vienna, 1882, pp. 435–494; Siebeck, 'Die Anfänge der neueren Psychologie,' in *ZPhP*, 1888, p. 161 f., cf. his *Geschichte d. Psychologie*; Ehrle, 'Der Augustinismus und der Aristotelismus in der Scholastik gegen Ende des xiii. Jahrhundert,' *Archiv für Literatur- und Kirchengeschichte des Mittelalters*, 1889, v. 603–635, cf. also *ZKT*, Innsbruck, 1889, xiii. 172–193; Mirbt, *Die Stellung Augustins in der Publicistik des gregorianischen Kirchenstreits*, Leipzig, 1888; Koch, *Der heilige Faustus Bischof von Riez*, Stuttgart, 1895, pp. 129–191; Gwatkin, *The Knowledge of God*[2], 1908, ii. 179: Portalié, 'Augustine,' in *Catholic Encyclopædia*, ii. 84–104, New York, 1908. The text of Augustine is most generally accessible in *PL* xxxii.–xlvii.; and his chief writings are translated in *Nicene and Post-Nicene Fathers*, 1st ser. i.–viii., Oxf. and N.Y., 1886–88.

BENJAMIN B. WARFIELD.

AURANGZĪB. — Aurangzīb (Abū-l-Muẓaffar Muḥyī-ad-dīn Muḥammad Aurangzīb 'Ālamgīr Pādishāh Ghāzī), sixth of the so-called Mughal emperors of India, and third son of Shāh-Jahān, was born at Duhad, on the borders of Mālwa, on Nov. 4th, 1618. Nothing is recorded of his early years, except that he was held by his grandfather Jahāngīr as a hostage for his father's loyalty, and was educated in the conventional manner of Ḥanafī Muhammadanism. In 1636 he was appointed nominal governor of the Deccan, but his religious exaltation led him seven years later to renounce the world, and to adopt the rigorous rules of a *faqīr*. For a year he practised self-mortification in his retreat in the Western Ghāts, to the indignation of his father and the ridicule of his family. His active spirit, however, was not satisfied with the life of contemplation; he resumed public duties as governor of Gujarāt, and in 1647 was ordered to command the recently annexed provinces of Balḥ and Badaḥshān beyond the Hindū Kūsh. A brief experience convinced him of the uselessness of attempting to hold these distant provinces against the resistance of the Uzbegs, and he retired with heavy loss. He was equally unsuccessful in his next command, when he was sent in 1649 to relieve Kandahār, then besieged and soon captured by the Persians; nor was a second attempt in 1652 more fortunate. These campaigns, however fruitless to the empire,

* *RCh*, 1857, p. 146.

taught Aurangzīb the lessons of strategy, and taught his followers to respect their commander's courage. They laid the foundations of his future dominating influence. He was again governor of the Deccan in 1655–57, when the illness of his father brought about a fratricidal struggle for the throne. Allying himself with his youngest brother, Murād Bahsh, Aurangzīb defeated the Imperial army under Jaswant Singh at Dharmātpūr on April 25th, 1658, and again at Samūgarh on June 2nd, when his eldest brother Dārā was forced to fly. Agra fell into the hands of the victors; Shāh-Jahān was held a prisoner till his death seven years later; the other brothers were ruthlessly killed; and Aurangzīb, who had already been proclaimed Emperor at Delhi in July, 1658, formally ascended the throne on May 26th, 1659, with the title of *'Ālamgīr*, 'World-grasper.'

Though he had won the throne by treachery and by the murder of his brothers, Aurangzīb was humane by nature, and no subsequent act of barbarity has been proved against him during his reign of half a century. The keynote of his character was a rigid Muslim's puritanism. It is impossible to doubt his sincerity, for he had nothing earthly to gain and everything to lose by his stern adherence to every tittle of the law of Islām. He might have cast Muhammad's precepts to the winds, as his father and grandfather had done, and only strengthened his hold of his Hindu empire.

'There was nothing but his own conscience to prevent Aurangzīb from adopting the eclectic philosophy of Akbar, the luxurious profligacy of Jahāngīr, or the splendid ease of Shāh-Jahān. The Hindus would have preferred anything to a Muhammadan bigot. The Rājput princes only wanted to be let alone. The Deccan would never have troubled Hindūstān if Hindūstān had not invaded it. Probably any other Mughal prince would have followed in the steps of the kings and his forefathers, and emulated the indolence and vice of the court in which he had received his earliest impressions. Aurangzīb did none of these things. For the first time in their history the Mughals beheld a rigid Muslim in their Emperor, a Muslim as sternly repressive of himself as of the people around him, a king who was prepared to stake his throne for the sake of the faith' (Lane-Poole, *Aurangzīb*, p. 69).

In his daily life Aurangzīb observed not only the minute details of the Muslim ritual, but an extreme austerity. He ate no meat, drank only water, kept all the fasts and vigils, passed whole nights in prayer and reading the Qur'ān in the mosque, gave alms profusely, and used the utmost simplicity in his dress and manners. In accordance with the Prophet's precept that every Muslim should practise a trade, he made skull-caps; he was also a fine calligraphist, and twice copied the whole Qur'ān, which he knew by heart. Laxity of morals, lewd conversation, the dancing of the Nāch girls, even music, were his detestation. Since to the fanatical puritanism of a strict Muslim were added an indomitable will and a courage so cool that he would dismount and recite the ordained prayers at the customary hour in the very thick of a battle, it is clear that far-reaching changes were in store for the mixed populations and religions of India. The storm began to gather in 1669, when the temple of Viṣṇu at Benares was destroyed by his order, and the idols buried under the feet of good Muslims at the mosque at Agra. Three years later came a rebellion of the Hindu devotees called Satnāmīs at Nārnaul, which was sternly suppressed. Soon afterwards Aurangzīb imposed the intolerable *jizya*, or poll-tax, upon all non-Muslims, and turned the whole Hindu population against him. An interference with the infant princes of Mārwār led to a revolt of the Rājputs, and though this was more or less extinguished in 1681, Aurangzīb lost thereby the support of the finest fighting force in Hindūstān.

The loss of Rājput loyalty was felt as soon as the Emperor undertook the reduction of the Deccan, which he regarded as 'infidels' land,' *Dār el-ḥarb*, and resolved to make *Dār el-Islām*. He had nearly conquered Gulkanda when he was called away to fight for the throne in 1657, but since then a new Hindu power, more formidable than the Muhammadan kingdoms of Bījāpūr and Gulkanda, had arisen by the energy of Śivājī the Marātha freebooter, who had gradually established an era of brigandage on an heroic scale, built up a kingdom in the Western Ghāts, and widened his authority to the extent of levying blackmail over a great part of the Deccan. His death in 1680 did not end the revolt, and Aurangzīb found that he had to deal with an indomitable nation of freebooters, whose strength and skill in guerrilla warfare he was never able to break. The Mughal generals had been too often repulsed, and the Emperor took the field in person in 1681. He first attacked the old Deccan kingdoms which appeared to shelter the Marāthas: Bījāpūr fell in 1686, and Gulkanda in the following year. Their extinction, however, only strengthened the Marāthas, whose disbanded armies swelled the forces of rebellion. The effeminate Mughal troops, deprived of the Rājput 'stiffening,' grew more and more demoralized by year after year of guerrilla fighting; and, whilst Aurangzīb effected a kind of military occupation of the whole Deccan, except the Portuguese possessions and the extreme point south of Trichinopoly, his hold of the country was illusory; and the moment the Mughals turned their backs the hardy Marāthas emerged from their mountain fastnesses and recovered the territory lately occupied by their enemy. The country, devastated by the horde of invaders, welcomed the mountaineers as deliverers from a hateful foreign yoke. Aurangzīb was engaged in a hopeless struggle, yet he never lost heart. For twenty years he fought his evasive foe, planned every campaign himself, issued all general orders and controlled every detail, conducted sieges in person, and in extreme age was barely withheld from leading the assault. It was all in vain; Hindūstān itself was full of revolt in the prolonged absence of its Emperor; the Deccan was a desert; the army was enfeebled and clamouring for its pay; and the Marāthas ever hung about its skirts and insolently defied it. Finally Aurangzīb died, alone as alone he had lived, with all the puritan's sense of sin and unworthiness and dread of death, and full of the dejection of a colossal failure, on March 4th, 1707, in the 49th year of his reign, and the 89th of his age. With him the orthodox Muhammadan revival in India died also.

LITERATURE.—The native annalists are quoted in substance in Elliot and Dowson's *History of India as told by its own Historians*, vol. vii. (London, 1876). European contemporary observers are Bernier, *Travels*, ed. Constable (London, 1891); Manucci, *Storia do Mogor*, ed. W. Irvine (4 vols., London, 1907–8); Gemelli Careri, in Churchill's *Voyages*, vol. iv. (London, 1745); Tavernier, *Travels*, tr. V. Ball (2 vols., London, 1889). Fryer's *New Account of India* (London, 1698); and Hedges' *Diary*, ed. Sir H. Yule (3 vols., London, Hakluyt Society, 1887–9), may be consulted. The present writer contributed a biography of Aurangzīb to the 'Rulers of India' series (Oxford, 1893).

STANLEY LANE-POOLE.

AURELIUS.—See MARCUS AURELIUS.

AUSTERITIES.—**I. Introduction.**—Asceticism, strictly so called, is not found among peoples of lower grades of culture, but the practice of various kinds of austerities is very common. These take the place in the social, moral, magical, and religious life of savages which asceticism holds in that of more advanced peoples, but it is also noticeable that in certain instances, as where these austerities have the form of a self-discipline or are performed as part of the service of the gods, they approach very near to some aspects of asceticism. In savage life the precarious nature of existence, exposure, the struggle for food, the constant state

of warfare between different peoples, the ravages of diseases whose nature and cause are misunderstood, and many other things, are productive of much suffering and call for great endurance on the part of those whom they affect. More particularly women must undergo many austerities, whether as mothers, or as workers, or as suppliers of food; yet many of these are cheerfully undergone. Thus in carrying her child for miles on long journeys in great heat and often with little food, and in relieving its wants at the expense of her own comfort, the savage mother, in thus fulfilling her functions of motherhood, will willingly bear pain and discomfort. Nor are similar forms of austerity lacking, especially among the poor, even in our highest forms of civilization, where want, toil, and suffering must be undergone to satisfy the conditions of existence. The savage methods of punishment, the various forms of the ordeal, of revenge or recrimination, are usually of the most cruel and painful kind. But all such forms of austerity do not concern us here. Those alone are dealt with which are self-inflicted or which are willingly borne, for definite purposes, subserving now magical, now religious, now ethical ends.

Unwilling as the savage is to suffer pain, his theory of the universe constrains him to undergo it on many occasions in order to fit him better for the ends of life, or to make life more tolerable, or to please the gods or spirits by whom he believes himself to be surrounded. Such austerities, undergone at one time for magical purposes, frequently change their nature. Thus they may come to be regarded as possessing a disciplinary character, in which case they are hardly to be differentiated outwardly from the disciplinary exercises, often of the same kind, of a higher asceticism, though they may not possess the same ethical or religious content. Others, again, as time goes on, may assume a more or less symbolic character, their excessive severity being then much lessened. On the other hand, even where such earlier forms of austerity survive in higher forms of religion, their severity is often by no means decreased, although the motive may have become a nobler one. Examples of this will be found in the various forms of austerity discussed here. These are mainly austerities connected with a variety of initiatory ceremonies, flagellation, fasting, mutilations of the body, tatuing, and medical rites, while some notice must be taken of self-restraint among savage races.

Before passing on to these, we may notice that the universal custom of sacrifice, involving a greater or less renunciation of property and possessions, of food-stuffs, and not infrequently life itself, or, as a substitute for that, of some part of the body, is a marked form of austerity; and its equivalent in the higher ascetic life—the devotion to poverty, the willing renunciation of comfort and luxury for the sake of love to God—has surely received a considerable impulse from this wide-spread custom of ethnic religion, though by no means wholly derived from it. In other cases, which need not be more fully detailed here, life itself is sacrificed in suicide, often through pride or shame or a sense of duty (see A. Sutherland, *Origin and Growth of the Moral Instinct*, London, 1898, ii. 35). Or, where it is thought that one ought to pass into the other world before the body and mind have become frail, decrepit, and worn out, life is often freely yielded up by the aged or the sick (see ABANDONMENT AND EXPOSURE). Though the custom may appear cruel and frequently is accomplished by cruel means, it is mostly a willing self-surrender of life that a higher life may be attained beyond the grave (see Letourneau, *Sociology*, London, 1893, 154 ff.; Westermarck, *Origin and Development of the Moral Ideas*, vol. i., London, 1906, p. 383 ff.).

2. Adolescence initiation ceremonies.—Among savage tribes the passing of a boy or girl to manhood or womanhood is usually accompanied by a number of ceremonies, several of which are most severe and painful, but must be undergone willingly in order to preserve their effect. This stage of life, being a highly critical one, the beginning of sexual existence properly so called, demands many safeguards, and, taken as a whole, the various ceremonies are intended to ward off or neutralize the evil influences incident to that period. Where a youth is concerned, there is the beginning of a new life which requires ceremonies of a purificatory kind, besides preparation for entrance upon a stage of new relations with the other sex. Hence there must be seclusion for a time, while the youth is usually debarred from intercourse of any kind with the other sex, and silence is frequently imposed. Fasting is also made use of, either in the sense of complete abstinence from food for a longer or shorter period, or abstinence from certain foods which are tabu at such a stage. This is intended to prevent the entrance of evil influences to the body with such foods, or to prepare the way for receiving them later on. Other ceremonies have the purpose of strengthening the youth for manhood; these are often of a severe character, and, joined with others which are intended to purify from the contagion of evil, easily pass over into tests of endurance. Some form of mutilation, more or less severe—the more severe forms being circumcision, loss of a tooth, or cutting of the flesh,—is frequent. In this case, perhaps, the primary intention is, by losing some part of the body, to secure the rest from evil influences; but it easily passes over into the idea of sacrifice, or some purificatory ceremony, or simply a test of endurance. Again, the youth at this period sometimes obtains a guardian spirit, whose nature is revealed to him in most cases by fasting in solitude, exposed to all the terrors which imagination and the sense of mystery may conjure up. This sense of mystery exciting fear is usually present at all these initiatory ceremonies, for now the youth is instructed not only in sexual matters but in such tribal lore—magical, religious, moral, or otherwise—as is confined to the men. Thus, though in different places the nature of the rites may vary, or their severity be greater or less, they call for the endurance of great austerities on the part of the youth. See art. INITIATION.

A few examples chosen from different localities will show the nature of the austerities undergone at this period. Among the northern tribes of Central Australia the long and complicated ceremonies of initiation to manhood include beating, which must not be resented, circumcision, sub-incision or cutting open the urethra, and biting the youth's scalp; while, as a rule, though fasting is not carried to an extreme, several foods are tabu. During the painful rites of circumcision and sub-incision the youth's mouth is gagged with 'fur-string' to prevent his crying out, while no attempt is made to spare him pain when his scalp is bitten, the object being to cause a plentiful growth of hair. With some of the tribes knocking out a tooth is part of the ceremony, with others it has no connexion with it (Spencer-Gillen[b], ch. i.). Among the Macquarrie tribes any exhibition of shrinking when the tooth is knocked out or the body scarified makes the youth unfit for manhood (Angas, *Savage Life*, London, 1847, ii. 224). With other tribes scourging is practised, and the young men must endure it silently (Ridley, *Kamilaroi and other Aust. Lang.*, Sydney, 1877, 154). With the Andamanese the initiatory period—for both youths and girls a period of fasting from several tabued foods—begins from the 11th to the 13th year, and lasts from one to five years, though sometimes a youth will extend the period in order to boast of his powers of endurance afterwards. It is said to be intended as a test of endurance or self-denial, but as various complicated ceremonies mark the first partaking of these foods at the time when tabu is raised from each, the intention probably goes further than this (Man, *JAI*, 1882, xii. 94, 129). In New Guinea the initiation of boys to the Malu cult is attended with great mystery and severity. They are not allowed to cut or dress the hair, to dance, feast, smoke, or behave in an unseemly way; they are beaten with clubs and severely wounded. These rites are said to have had a strong educative effect. Boys among the Cape York natives were secluded for a year, at the

end of this time a tooth was knocked out, and a year later a further test of endurance was applied (Haddon, *Head Hunters*, London, 1901, 50 ff., 191). Similarly in Mabuiaig lads were tortured and chastised, and the tests increased with a refractory boy, who was speared, scraped, or beaten with the nests of green ants which stung him furiously (*ib.* 140). In many parts of Africa similar rites are found. Thus among the natives of the Bondei region the *galo* ceremonies include passing the boy through a narrow pit smeared with the juices of a plant which burn his skin, incision of tribal marks on the arm, and the performance of secret ceremonials in some of which he is severely handled, death occasionally resulting (Dale, *JAI*, 1896, xxv. 189 ff.).

But it was among the tribes of North America that such austerities at initiation were most severe, especially where they were connected with the choice of a *manitou*. Thus among the Californian tribes abstinence and indifference to hardship and privations were insisted upon, and before the youth could rank as a warrior his naked body was stung with nettles till he could not move, after which he was laid on the nest of a virulent species of ant, which, swarming over his body and stinging it, caused him fearful agony. To discover his *manitou* he was made to fast for three or four days, and was intoxicated and harassed until he confessed to seeing it. A figure of the *manitou* was then moulded and placed on his breast, where it was ignited so that the figure might be indelibly marked on the flesh (Bancroft, *Native Races of the Pacific States*, London, 1875, i. 413 ff.). Among the New Mexicans the ordeal consisted in scarifying the skin till the blood ran, the candidate being expected to show no sign of pain (*ib.* i. 580). With the tribes of British Columbia boys were secluded at puberty and made to eat and drink very sparingly: in other cases they were made to bathe in all weathers, their naked bodies were whipped daily, they had to gash themselves with knives in the sweat-house, or lie out exposed to the elements all night. Prolonged fasts, bathings, forced vomitings, and other exhausting exercises for a longer or shorter period were among the means employed in solitude for obtaining mystic dreams and a knowledge of the *manitou* (Hill Tout, *JAI*, 1904, xxxiv. 32, 316; 1905, xxxv. 143-144). Rigorous fasting was compulsory on boys and girls among the Algonquin tribes, and the longer the period of abstinence the greater the merit which accrued. During these fasts, which were common to practically all the American Indian tribes, the greatest attention was paid to dreams, for it was mainly through these that the revelation of the *manitou* came (Tanner, *Narrative*, New York, 1830, 288; Schoolcraft, *Indian Tribes*, Philadelphia, 1857-1860, *passim*; Beverley, *Hist. of Virginia*, London, 1722, 177 ff.).

Similar austerities are found among the South American tribes. Thus, in Guiana, before the youth can marry he must endure the infliction of flesh-wounds, or he is sewn up in a hammock full of fire-ants, or undergoes other hardships (Im Thurn, *Indians of Guiana*, London, 1883, 221). Among the ancient Peruvians, at fifteen or sixteen years, boys had to practise rigorous fasts until they were worn out, to watch for twelve nights in succession, to fight with each other at the risk of wounds, or death, to undergo flogging, and many other privations, before receiving the signs of their new position as men (Garc. de la Vega, *Comm. Real.*, Madrid, 1609, vi. 25). So in ancient Mexico, before being introduced to the aristocratic warrior class, the youth, covered with rags, was shut up in different temples in succession, offering his blood to the divinity, watching and fasting for periods of four days and four nights (Lopez de Gomara, *Hist.*, Madrid, 1852, ii. 78). See § 8 (3).

In the case of girls, the arrival of puberty, in accordance with the universal theory of menstruation as containing an element of danger to the girl herself, but more especially to others, and even to nature itself, is marked by several painful ordeals. Among these the most common is the absolute seclusion of the girl for a longer or shorter period, so that no man may see her and that the sun may not shine on her. Fasting, excision, cuttings, and other barbarities are also commonly found at this period.

Girls in New Guinea, on the first signs of puberty, are shut up for three months and permitted only vegetable food (Haddon, *op. cit.* 185). In New Ireland they are confined for several years in the dark in small cages, and this custom is general over Melanesia (*JAI*, 1888, xviii. 284). Seclusion is also found among most African tribes, as among the Kafirs (MacLean, *Kafir Laws and Customs*, Mount Coke, 1858, 101) and in Loango (Ploss, *Das Kind*, Leipzig, 1884, ii. 439). With the Bondei people the rite for girls, corresponding to the *galo* of the boys, lasts for twelve days. On the last day the girl fasts. During this period she is taught the *vikili*, or secrets, and this teaching is accompanied by severe and painful ordeals (*JAI*, 1896, xxv. 193). The custom of seclusion is common among the N. American tribes, varying from a few days to a year or longer. Girls among the Ahts are hidden behind mats in the house, where they can see neither sun nor fire, and are allowed no food for several days (Sproat, *Savage Life*, London, 1868, 93 ff.). Among Alaskan tribes the girl was shut up in a cage with a small air-hole, or in a hut, where she remained on hands and knees. This treatment lasted for a year, and no communication with others or exercise of any kind was allowed (*GB*[2] iii. 211). Bancroft cites many instances among the tribes of the Pacific coast. Thus among the Isthmian tribes the girl was closely confined, sometimes for a period of two years (*NR* i. 772, cf. 82, 110, 197, 278). Among the Californian tribes she was laid over a hole previously heated, and kept without food for some days. Or she was buried up to the neck and the ground about her beaten till she perspired profusely (*ib.* 414). Among the Salish tribes of British Columbia, seclusion in a cubicle for ten days was the rule, the girl being allowed little food or water. With other Salish tribes she was secluded outside the settlement for a month under many food restrictions (*JAI*, 1905, xxxv. 32, 319). In other tribes she had to squat for some days in a hole made in the hut, while her seclusion lasted for a much longer period. She fasted entirely for four days, and afterwards abstained from all fresh meats (*ib.* xxxv. 136). In S. America these customs also flourished among most of the tribes, as in Brazil, where the girl's back was cut with a sharp tooth, after which she was bound and hung in a hammock, in which she remained without food or drink for three days. New gashes were then inflicted upon her, and she remained in the hammock under less strict rules of abstinence until the third month (Lafitau, *Mœurs des Sauvages Amér.*, Paris, 1724, i. 290 ff.). The Uaupes of Brazil also seclude the girl for a month on an abstemious diet. When released she receives several severe scourgings at intervals, death sometimes ensuing as the result (Wallace, *Amazon*, London, 1895, 345). In Guiana the hammock seclusion lasted for a month, after which the girl's naked body was exposed to the bites of venomous ants (Labat, *Voy. en Guinée*, Amsterdam, 1731, iv. 365).

Similar instances might be cited, occurring among more advanced races, *e.g.* the Hindus, though with less severity. Here it may also be noted that, on account of similar beliefs regarding the danger and impurity of menstruation, women, among most savage tribes, must go into seclusion, often at some distance from the village, abstain from certain foods, or fast (see Stoll, *Geschlechtsleben in der Völkerpsychologie*, Leipzig, 1908, 835 ff.; *NR* i. 549; *JAI*, 1904, xxxiv. 323; *GB*[2] iii. 222 ff.). This is also found at higher levels of civilization (cf. Lv $15^{19ff.}$; Avesta, *Vendīdād*, xvi.). Similarly, women, being tabu among many peoples at pregnancy on account of the danger arising from this critical period of their life, have frequently to go into entire seclusion, or are in some way separated from others, and must abstain from certain kinds of food (Crawley, *Mystic Rose*, London, 1902, 9, 167, 200, 417; *NR* i. 413, 734; *JAI*, 1882, xii. 364). See also §§ 6 (*b*), 8 (5).

3. Admission to secret societies or 'mysteries' at opening manhood or womanhood was, in many cases, also characterized by severe austerities, which, though no doubt intended as a preparation for the revelation of secret knowledge, myths, or ritual, can hardly be separated in their origin from the pains undergone at puberty, while in some cases they seem to have been intended also as puberty ceremonies. Yet, in so far as these and certain ordinary initiatory ceremonies pave the way for the communication of religious and, occasionally, moral teaching, we see such forms of austerity almost passing over to a kind of disciplinary asceticism, and certainly possessing the primitive meaning of ἄσκησις as 'training.' In Australian mysteries, for example, the advice given by the old men was intended to 'soften the heart,' and, as among the Kurnai, the stomachs of the boys were kneaded to drive out selfishness and greed (*JAI*, 1883, xiii. 296; 1884, xiv. 313), while unselfishness is taught in the Yao mysteries, a selfish person being called 'uninitiated' (Macdonald, *Africana*, London, 1882, i. 130; cf. the moral teaching given by headmen to boys at circumcision and initiation during the painful rites attendant thereon among the Mavendas of S. Africa, *JAI*, 1905, xxxv. 268). Further, in many of these mysteries, the initiation to which lasts for a long period of time, the candidate is supposed to die and come to life again as a new being. Although this idea may not have the intention of ascetic renunciation—*Stirb und werde*—yet in it and in the moral training for the attainment of 'selflessness,' so far as a savage can grasp the idea, we see a connexion with the later ascetic ideals.

In Africa, examples of such initiations are numerous. Among others may be cited those of the west coast, in which the youths are taken by their instructors into the depth of the forest, where they are subjected to a severe course of training during a year; they are naked and smeared with clay (M. H. Kingsley, *Travels in W. Africa*, London, 1897, 531). In the Mwetyi society of the Shekani tribes—a woman's society—the initiation lasts for two weeks, and is accompanied by severe ordeals and fasting, while the girls must gaze at the sun until they fall back in a swoon. Most of the ordeals are intentionally hard, so that the wills of the candidates may be broken and secrecy ensured (Nassau,

Fetichism in W. Africa, London, 1904, 249). With candidates for the Malanda society among the Batangas the sun-gazing ordeal is applied to the lads; then, while everything is done to augment their sense of awe and mystery, they are confined in a hut for twenty days along with a corpse, and beaten severely with rods until they are submissive (*ib.* 322). In Melanesia entrance to such societies is possible only after a severe initiation, including hardships and tortures. In other cases the candidates are stung with leaves of the nettle-tree, made to fast and to take live embers in their hands, and are trodden upon, or, as in the Welu society, they are each placed in a hole in the ground and burning fronds of the coco-nut palm are thrown on their backs, yet they must not utter a cry (Codrington, *The Melanesians*, London, 1891, 82, 87, 88). In these and many similar initiation rites the youths are daubed with clay, charcoal, mud, or filth, which must not be washed off till the ordeal is at an end; this rite may signify the putting away of the old life, as it did in certain Greek mysteries (Lang, *Custom and Myth*, London, 1884, 40; *JAI*, 1889, xix. 261; Demosthenes, *de Corona*, 313). Here, too, may be noted the initiatory customs used in the Eleusinian and other Greek mysteries, in which, besides other tests, the candidates had to prepare themselves by fasting for several days; the similar fasting before initiation to the cult of Osiris and Isis in Egypt; and the various tests of endurance undergone by candidates for initiation to Mithraism (see artt. MYSTERIES, MITHRA, SECRET SOCIETIES, and Apul. *Metam.* xi.).

4. Initiation to the priesthood.—As in savage societies the priest, sorcerer, or medicine-man has a commanding station and exercises so much influence by virtue of his relation to the spiritual world, it is natural that those who seek to enter upon that profession should be subjected to a severe course of training, involving many austerities. And as the communications of the medicine-man with the other world are usually associated with a state of trance, or his revelations are given in some ecstatic condition, the candidate's course of training is intended to adapt him for the production of these states either by reducing him to an abnormal condition of body and mind, or by accustoming him to the use of such severe methods as will readily produce them. The phenomena of hysteria, epilepsy, catalepsy, and such-like diseases are believed by savages, and indeed by many peoples at a higher grade, to denote possession or inspiration by gods, spirits, or demons. Hence such persons as are subject to them are often deliberately chosen for the profession of medicine-man, while their abnormal states are only heightened by the austerities undergone. In other cases, in accordance with the prevailing theory of the nature of inspiration and of the state into which the inspired person is thrown, the production of such states at will is the object of the painful processes to which the candidate must submit. The course of training includes solitude, exposure to the elements, scarifying the body, castigation, fasting, and drinking various unwholesome beverages. By all these means the candidate soon arrives at a hysterical or abnormal state. He acquires the faculty of seeing visions, of producing a convulsionary state of body, or of falling into a trance. A few examples of the method of training will suffice to show its severity and the painful nature of the austerities undergone (see also artt. MEDICINE-MAN and PRIEST).

In Greenland the preparation for the profession of *angakok* begins at an early age, and includes retirement into solitary places and a severe course of fasting. By these methods trances are produced in which the novice obtains a *tôrnak*, or guardian spirit, or falls into fits in which his ravings are held to be communications from the spirits (Rink, *Tales and Traditions of the Eskimo*, London, 1875, 58; Cranz, *Grönland*, Leipzig, 1770, 268). Among the American Indians similar methods are adopted: protracted fasts, severe bodily exercises, and solitary vigils all reduce the candidate to a hysterical state, in which he dreams or has revelations; and the greater his austerities the more vivid and copious are his visions, and hence the higher is the estimation in which he is held (*JAI*, 1904, xxxiv. 26; Schoolcraft, *Indian Tribes, passim*). Among the Isthmian tribes, youths are chosen for their natural aptitude to the office of *piaces*, or sorcerers, and are confined in a solitary place, subjected to a severe discipline for two years, fasting from all flesh meat and living only on a scanty diet of vegetables and water; while all sexual intercourse is prohibited (*NR* i. 777). In S. America we find similar methods employed. Among the Abipones the aspirants had to remain seated on the branches of a tree and to fast for several days. By this means they contracted 'a weakness of brain, a giddiness, and kind of delirium, which makes them imagine that they are gifted with superior wisdom, and give themselves out for magicians' (Dobrizhoffer, *Abipones*, London, 1822, ii. 68). Training for the office of *peaiman* in Guiana involves a painful and severe trial of endurance. The candidate fasts for protracted periods, wanders alone in the forest, and accustoms himself to drinking large draughts of tobacco-juice mixed with water. The terrors of solitude and the drinking of the nicotine produce intense delirium, in which he holds converse with spirits. Epileptic subjects are preferred for the office (Im Thurn, 334).

In Africa, among the Zulus, those who wish to become diviners have to acquire the power of intercourse with the spirits in states of coma or ecstasy by solitude, prolonged fastings, and flagellation, until they become a 'house of dreams' (Callaway, *Rel. of Amazulu*, London, 1884, 387; Grout, *Zulu-Land*, London, 1865, 158). Among the Bondeis the youth who aspires to be a doctor must submit to be scarified all over his body (*JAI*, 1895, xxv. 213). The *manangs*, or medicine-men, among the Sea Dayaks must prove their call to the office by prolonged fasting, and by ecstatic states and trances in which they foam at the mouth (Ling Roth, *Natives of Sarawak*, London, 1896, i. 266). And among the Todas, the *palal*, or priest, at his initiation must remain naked for three days and two nights, whether the weather is hot or freezing, and eat only a little porridge at night (Reclus, *Primitive Folk*, London, 1891, 221).

For similar trials among American tribes before appointment to the office of chief, etc., including fasting, flagellation, stinging with ants, see Letourneau, *Sociology*, 473; Biet, *Voy. en l'Isle de Cayenne*, Paris, 1664, iii. 10.

In these and hundreds of similar cases the discipline may be more or less severe, and its period longer or shorter, but the intention in all is the same. Not only so, but in future the medicine-man, or shaman, previous to communicating with the spirits, giving oracles, healing, and the like, must produce the abnormal state by these painful processes, which will, of course, be more or less extensive according as he readily passes over into that state or not. Frequently it is spontaneously produced, either because the shaman is a hysterical subject or on account of the training he has undergone; but generally it is artificially produced by fasting, by wild dances and screams, by contortions of the body, by flagellation, by cutting the flesh, or by swallowing various narcotics and herbs (cf. Parish, *Hallucinations*, London, 1897, 40). The result is a trance, a nervous seizure, frenzied movements, foaming at the mouth, and raving utterances. Similar results followed the hysterical excitement which attacked whole communities in the Middle Ages, and which was often produced by such artificial means, especially convulsive movements and dancing. They are seen again in the American Indian ghost-dances, in which, following convulsive gyrations, trance and catalepsy are induced, or in the indifference to pain and wounds among Muhammadan dervishes in consequence of ecstasy produced by similar movements (Tuckey, *Psycho-Therapeutics*[3], London, 1891, 12; Ellis, *Psychology of Sex*, London, 1902, ii. 161; Myers, *Human Personality*, London, 1903, ii. 190; and *Proc. Psych. Research Soc.* 1885, p. 31).

5. Flagellation. — As has been said above, scourging or beating is a frequent practice at the various forms of initiation. A wider view of this rite among savages and as a folk-survival leaves little doubt as to its original purpose. The scourging is intended to drive away the contagion of evil, and the malignant presence of demoniacal powers. The pain is inflicted less as a means of hurting the victim than of making these evil influences suffer, or of frightening them so that they will depart. This is especially noticeable where the scourging is done not with rods, but with branches or plants which are supposed to possess magical virtues; in such cases it is not always necessarily painful. It may, however, be made painful where the plant has poisonous juices or is of a stinging variety. But its original intention soon passes over into that of simply inflicting pain or undergoing voluntary suffering, either by way of hardening or as a means of self-discipline with a definitely religious or moral end. Here it becomes a true ascetic

austerity, but it may also be a pathological form of asceticism. Or, again, it may be used as an erotic stimulation, though here it assumes a pathological form as subserving genesic excitability. In other cases its religious disciplinary use is conjoined with some pathological erotic purpose, as in the case of Brother Cornelius and his penitents, or of Père Girard (Cooper, *Hist. of the Rod*, London, 1870, 122 ff.; Zöckler, *Askese und Mönchtum*[2], 609). The pain caused by flagellation, again, made it an obvious and well-nigh universal form of punishment. With this and its previous use we are not concerned here. Finally, it remains to notice how, while subserving its primitive purpose or used simply as a means of producing pain, it may be regarded as a form of sacrifice to gods who will that their worshippers should suffer, or it may pass as a substitute for an offering of the person himself as a human sacrifice. Most of these purposes are also served by using instead of a scourge some stinging plant or some substance causing pain to the tissues when applied to the body, as has been seen in several cases of initiation rites.

The primitive purpose of flagellation is seen in the fact that those animals or men on whom the evils of a community were laid (scape-goat), and who were driven away or slain, had probably in the first instance been regarded as representatives of a spirit of vegetation who was slain. They were frequently scourged, and the scourging had the effect of driving off 'any malignant influence by which at the supreme moment they might conceivably be beset' (*GB*[2] iii. 128). When they were regarded simply as scapegoats, the scourging became a means of causing pain. Instances of this use of flagellation to drive away evil are found in many places. When a king was installed in the Sandwich Islands, the priest struck him on the back with a sacred branch, in order to purify him from defilement (Ellis, *Polynes. Researches*, London, 1829, iii. 110). Brazilian Indians scourge themselves on the genital organs with a certain plant at the time of the new moon (Nery, *Folk-lore brésilien*, Paris, 1889, 253). Sometimes the scourging is done on a substitute, as in New Caledonia, where, when a chief is ill, a girl is severely whipped to drive away the evil (Featherman, *Soc. Hist. of Races of Mankind*, London, 1891, ii. 92). Or it may be mutually inflicted, as in Peru at an autumn festival, where the people beat each other with torches, saying, 'Let all harm go away' (Acosta, *Hist. of the Indies*, Hakl. Soc. 1880, ii. 375). Similar practices still survive in folk-custom (*GB*[2] iii. 131 ff.).

With the same object of driving out the demon of disease which has entered into a patient's body, in accordance with the universal primitive view of the cause of sickness, flagellation is resorted to in savage medicine, the patient often undergoing great suffering through this cure. Thus among the Californian Indians, in cases of paralysis, the affected parts are whipped with nettles (*NR* i. 419). Among the Ainus beating with herbs to drive out the demons of sickness is part of the healer's method (Batchelor, *Ainus and their Folklore*, London, 1901, 313). In Timor-Laut, if a smallpox *prao* should be stranded on the coast, the people are beaten with branches, which are then put on the *prao* before it is launched away again, and the demon of smallpox is besought to depart (*GB*[2] iii. 98, citing Riedel). Women suffering from demoniacal possession in Burma are thrashed with a stick, the demon alone being supposed to feel the blows (Bastian, *Östl. Asien*, Jena, 1866–71, ii. 152). These methods survived into later medicine, especially in the case of madness, though here the curative virtue was evidently supposed to lie in the rough treatment to which the patient was subjected (Cooper, *op. cit.* 204).

The magical value of flagellation is seen in the flogging of women with thongs cut from the skins of the sacrificial goats by the Luperci at the Lupercalia in Rome. This act, communicating to them magically the beneficent influence of divinity, was believed to render them prolific (Ovid, *Fasti*, ii. 267 ff.). Although the numerous cases of scourging or stinging at initiation frequently have the primitive purpose here discovered, they are sometimes expressly said to be done with the view of causing pain or testing endurance. Thus, among the Bavendas, after circumcision, the youths, stripped naked, are beaten and suffer other hardships by exposure to the intense night cold, in order to harden them (*JAI*, 1905, xxxv. 252). Among other Bechuana tribes, after circumcision the youths are scourged at intervals with great severity, and it is a point of honour that they should show absolute impassibility even though the blood spouts from their backs, and the whip leaves life-long scars. At the same time they are allowed no flesh meat but what they can themselves obtain, and are subjected to the endurance of cold and hunger (Livingstone, *Missionary Travels*, London, 1857, 146 ff.; *JAI*, 1889, xix. 268 ff.).

The primitive view of scourging has here, as in other cases, been superseded by a later conception of it as a painful test of endurance. At this point the cruel flogging of youths at Sparta in connexion with the cult of Artemis—the blood from the wounds caused by the whip being shed on the altar—can scarcely be viewed in any other light than that of a survival of earlier rites of initiation, especially as the Spartan youths, like the Bechuanas, were allowed no food save what they could discover for themselves. The flogging was done in presence of their parents, who encouraged them to show no sign of suffering; and so severe was it that the youths sometimes died. Various mythical explanations of this flogging were current, but it was generally regarded as a substitute for human sacrifice ordained by Lycurgus (Paus. iii. 16; Lucian, *Anacharsis*). But in the light of similar customs elsewhere, the origin must be sought in old initiation rites of a savage past, remains of which, like the 'bull-roarer' (ῥόμβοι) and daubing with mud, were also found in the Greek mysteries. Similar scourgings took place elsewhere in Greece (Potter, *Antiq. of Greece*, Edinburgh, 1824, i. 258); and among the Thracians, according to Artemidorus, flagellation in honour of their Artemis was also practised.

Such tests of endurance by flagellation enter sometimes into festival dances, as among the Arawaks, where the men armed with whips lashed each other alternately until they were covered with bleeding wounds, yet the pain was 'borne and inflicted with perfect good temper' (Im Thurn, 326; cf. a striking match, resulting often in death, among the Mosquito Indians, *NR* i. 735). Probably this is to be connected with a group of rites in which blows, effusion of blood, etc., are intended to promote fertility (see § 8 (*b*)). For the discipline of self-flagellation in the Christian Church, see artt. ASCETICISM, FLAGELLANTS; Zöckler, *op. cit.* 458, 528 ff.; Cooper, *op. cit.* Beginning as an act of monastic asceticism in the 11th cent., it assumed a pathological form with the later orders of Flagellants (especially during the ravages of the Black Death), who regarded it as more efficacious than the sacraments.

Flagellation as a sacrifice or as a substitute for sacrifice has already appeared in the case of the Spartan youths. Perhaps the mutual flagellation of the Galli at the spring festival at Hierapolis, accompanied as it was by self-cuttings (Lucian,

de Dea Syria, 50), and the flagellation of the Egyptians at Busiris during the festival of Isis (Herod. ii. 61, 'for whom they beat themselves it would be impious for me to divulge'), also had this character. An analogous instance may be found in the custom of the Indians of Guiana who rub red pepper into their eyes when approaching any place haunted by spirits, in order that the latter may not see them. But it is probably in its intention a sacrificial act—the suffering endured being intended to placate the spirits (Im Thurn, 368). See art. FLAGELLANTS.

6. Fasting.—Fasting as a form of austerity enters largely into savage life. Hunger is one of the most pressing trials of the savage, although he can go for long periods with little food, like the Bushman observed to live for fifteen days on water and salt (Thompson, *Trav. in S. Africa*, London, 1827, 99). Sometimes, too, the savage will undergo fasting as a purely unselfish act, giving his food to his starving children or sharing his scanty supply with his fellows, who, when it is exhausted, starve to death with him (Nansen, *Eskimo Life*, London, 1893, 103, 115). Frequent periods of abstinence, especially in regions where the food supply is scarce, are forced upon him. We are here concerned, however, with voluntary fasts rather than with those imposed upon savage man. Although he regards fasting quite differently from the civilized ascetic, and probably has no strong wish to suffer the pangs of hunger, yet voluntary fasting is forced upon him for different reasons.

The origin of fasting is complex, but on the whole it seems to have been adopted at first for magical reasons. Man's experience of hunger in times of scarcity may have suggested to him that to fast voluntarily might guarantee him against scarcity, and also have the effect of increasing the food supply. Thus at the Intichiuma ceremonies of Central Australian tribes, which have for their purpose the increase of the totem food supply, fasting is a part of the rite (Spencer-Gillen[b], 290). On more purely religious grounds an analogy is found where the sacrifice of one person wards off danger menacing a whole group. Fasting is also intimately connected with the system of food tabus. In some cases these may arise from the selfishness of stronger members of a human group, who forbid others to touch certain foods sacred to themselves, or again from the wise practice of establishing a 'close' time when certain foods are likely to become scarce, as in Polynesia, where, if a bad harvest is feared, a tabu is placed on bananas, hens, etc., to establish a reserve (Letourneau, *Sociology*, 489). But they often arose out of man's peculiar views regarding the contagion of evil influences which might be warded off by, so to say, sacrificing a part in lieu of the whole. Food was eminently a vehicle for evil influences entering the body, hence by the tabuing of some particular food other foods would be rendered harmless. Tabu is also connected with totemism, where some particular animal or plant species is not eaten by those whose totem it is. But it also has a much wider range, and affects foods which may not be eaten at certain periods of life, *e.g.* before a youth is initiated, before marriage, during pregnancy, at the time of the couvade, during hunting or war. In this aspect fasting from the tabued food also acts as a kind of purification. Fasting in all such cases includes such varieties as abstinence from certain foods, or from meat, or from food with which women have had to do (sexual tabu), or from all food for a varying period. In certain cases kings or priests might not eat certain foods for tabu and other magical reasons, such as their being recognized as incarnate divinity, which often occurs. Frequently, too, women might not eat men's food, and *vice versa* (see Crawley, *Mystic Rose*, 172, etc.; cf. an instance cited by Im Thurn, 256, where the Indians would have starved rather than resort to cooking some cassava roots, because cooking was woman's work).

Whatever be the reason for a food-tabu, it argues considerable self-restraint, akin to the restraint which desires to discipline the body through fasting among peoples of a higher culture. To break such a tabu is universally considered the greatest crime, to be visited by severe punishment or by automatic results—sickness or death. Many instances are known where a savage would rather starve to death than eat some tabued food though that alone was available, and though all risk of detection by fellow-clansmen was out of the question. Again, since during periods of fasting as the result of famine, morbid conditions of psychic life are induced, with dreams and visions, fasting is in turn resorted to in order to produce these, as has already been seen (§ 4). Finally, since it is believed that the gods are pleased with suffering, fasting becomes a painful service rendered to them, or, again, it is used as a penitential discipline. This occurs in many barbaric cults at a higher stage than mere savagery, and in the later usage fasting speedily becomes an ascetic exercise (see art. FASTING).

(*a*) Fasting before marriage has mainly a magical aspect, and is doubtless intended as one means out of many of lessening the dangers supposed to attend this critical stage of sexual life, while it avoids the possibility of evil influences entering the body through food. The following typical examples will suffice. Among the Macusis the man must abstain from meat for some time before marriage, and will rather go without food altogether upon occasion than break this tabu (Im Thurn, 222). The newly-married pair among the Wa-teetas are shut up for three days without food, and among the Bondeis they eat nothing and only wash out their mouths with water on the day of the wedding (Thompson, *Travels in S. Africa*, London, 1827, 343; *JAI*, 1895, xxv. 199). Similarly with the Thlinkets, bride and bridegroom must fast for two days, then eat a little food, and again fast for two days (*NR* i. 111).

(*b*) The custom of a woman's abstaining from certain foods or fasting before the birth of a child, in which abstinence the husband frequently joins her, is intimately associated with and has the same *rationale* as the husband's fasting during the period of the couvade in which he lies in instead of his wife. The reason for the practice of fasting here is the intimate connexion between parents and child which is emphasized at such a time, so that they must abstain from all such foods as might injure the child through eating them. Thus in the Andaman Islands the mother abstains from pork, turtle, honey, iguana, and paradoxurus, and after a time her husband avoids the two last, 'in the belief that the embryo would suffer were he to indulge in such food' (*JAI*, 1882, xii. 354). Among the Californian Indians the mother fasted for three days after the birth, drinking nothing but warm water. This formed part of a ceremony of purification, and for two moons she was allowed no meat (*NR* i. 413). Where the couvade is concerned, the husband usually abstains for some weeks from all flesh food and lives on a very abstemious diet, and such customs are widely prevalent among most savage peoples (see art. COUVADE, and Lubbock, *Origin of Civilization*, London, 1870, 16 ff.).

(*c*) In many cases where fasting occurs at initiation, we almost see it passing over from its magical intention of the avoidance of evil influences and of a preparation for the reception of new food to an act of religious preparation for the divine and ethical revelations about to be made to the lad. A similar transition to a more religious view of fasting is seen in other cases. Among many peoples when the harvest, whether of corn, yams, bananas, etc., has been gathered in, no one may eat of it until the first fruits have been offered to a divinity or partaken of by a priest, chief, or king, and in some cases a fast of several days' duration takes place. This, though it is primarily a preparation for the reception of new food, is also part of a group of purificatory rites, while it has also a religious element. Thus, among the Creek Indians, part of the elaborate ceremonies included a strict fast for two nights and one day, while a bitter decoction was drunk in order 'to purge their sinful bodies.' This was followed by a sacramental eating of the new crops (Adair, *Hist. of the Amer. Ind.*, London, 1775, 96 ff.). A similar solemn fast took place among the Natches for three days along with the observance of silence at the Fire Festival, when the maize was offered on the altar of the Sun; and was also observed among the Cherokees by the warriors, who at the same time abstained from sexual intercourse (Chateaubriand, *Voyage en Amérique*, Paris, 1835, 130 ff.; Featherman, *op. cit.* iii. 157). The Comanches had yearly gatherings to light the sacred fires, when they took 'medicine' for purification and fasted for seven days. Those who could endure to keep the fast unbroken became sacred in the eyes of the others (Palmer,

Harper's Magazine, 1889, xvii. 451). Again, where foods are tabu, either through totem restrictions or for some other reason, abstinence from them is frequently regarded as an honour done to the totem animal or to a divinity who would resent any breach of the rule, or it has the nature of a sacrificial act of self-denial. Thus among the Samoans, Fijians, and others, certain animals, which were probably earlier totems, were believed to be incarnate gods or sacred to particular deities, and each man had some particular animal species, which he would under no circumstances eat (Turner, *Samoa*, London, 1884, 112; Williams, *Fiji*, Lond. 1858, i. 219). Or among the Andaman Islanders at certain seasons a number of foods are abstained from because the god Puluga requires them at those times (*JAI* xii. 154). Or, as among various West African tribes, certain prohibited foods, or *orunda*, which a man will not eat even when suffering from hunger, are 'literally a sacrifice ordained for the child by its parents and the magic doctor as a gift to the governing spirit of his life,' and to eat of it would be a sin at once punished by the spirit and requiring atonement by expensive ceremonies and gifts (Nassau, *op. cit.* 78; M. H. Kingsley, *Travels*, 456), or they are not eaten because they are dedicated by man to the use of his attendant spirit (Dennett, *Folk-lore of the Fjort*, London, 1898, xxix.). Abstinence in all such cases is a religious rather than a magical act.

(*d*) Fasting to induce visions in which the spirits or divinities reveal themselves has already been noticed, but a few further instances will serve to show the austere character of the act. The Algonquins would fast six or seven days, 'till both their bodies and their minds became free and light, which prepared them to dream' (Tylor, ii. 411–412). Chiefs among the Columbians in times of perplexity practise both fasting and laceration (*NR* i. 203). In general, the American Indian fasted before any undertaking in order to receive direction in his dreams. Among the Caribs a father fasted for a long period in order to see in a vision the destiny of his newly-born son (Müller, *Amer. Urrel.* Basel, 1855, 214). Similar fasts were customary in Greece among the priests and priestesses of oracular shrines, in order to obtain visions (Paus. i. 34); and in India fasting is a recognised mode of obtaining intercourse with the gods (Meiners, *Gesch. der Relig.*, Hanover, 1806–1807, ii. 147). The visions and revelations obtained by Christian saints and ascetics are in some degree due to similar austerities.

(*e*) From the use of abstinence and fasting as a general religious act to its use as a species of sacrifice by which the gods are appeased, or as a penitential discipline, the step is not a long one. Instances of such uses are found mainly among barbaric and civilized peoples, though not unknown among savages; while fasting, either as a means of purification, or as a penitential discipline, or as a preparation for mystical illumination, rapidly became part of the practice of the Christian Church. Penance, including fasting, self-torture, and confession of evil, is found among many tribes of the American Indian stock, but among the ancient Mexicans it had an especially prominent place. Some fasts of a rigorous kind lasted from three to five days; others, probably less rigorous, from twenty to 160 days. These were binding upon either individuals or the whole people, were intended both as purifications and as penances, and, in the latter form, were accompanied by other extreme forms of self-discipline for sins committed. Such were generally imposed by the priests (Clavigero, *Hist. Mex.*, London, 1787, i. 353, 397 ff.). Fasts of a similar character and intention were also common in Peru. In Babylonia and Assyria fasting had also a systematic form, either for the whole people in times of danger (cf. Jon 3[5]), or for individuals as part of the penitential discipline with which men approached the gods seeking forgiveness, as is seen in the penitential psalms, *e.g.* 'Food I have not eaten, weeping is my nourishment' (Jastrow, *Rel. of Bab.*, Lond. 1898, 332; Sayce, *Rel. of Anc. Egypt and Bab.*, Edin. 1902, 418, 477). The more primitive savage custom of appealing to the gods through the pain borne by their worshippers is seen in a Fijian custom. A priest, after unsuccessfully supplicating his god for rain, slept for several successive nights exposed on the top of a rock without mat or pillow, hoping thus to move the obdurate deity to send a shower (Williams, i. 228).

In certain cases men fast until some act of revenge is performed, as in Fiji, where, to indicate sworn revenge, a man would deprive himself of favourite or necessary food (Williams, i. 129). Compare the curious Celtic custom of 'fasting against' a person (see ASCETICISM [Celtic]). This was a legal process in Ireland, by which any one who desired a stronger person to yield to his plaint sat fasting at his door until he yielded (*Ancient Laws of Ireland*, Dublin, 1869–79, i. 112 ff., ii. 46; Joyce, *Social Hist. of Ancient Ireland*, Lond. 1903, i. 204–207).

7. Mourning ceremonies.—Here again universally in savage and barbaric life the death of a relative or of some chief or great warrior, etc., involves the practice of many austerities, varying in degree, among the survivors. The motive of these is complex; and, though all may be regarded as different ways of showing grief, it seems certain that they did not all originate from that ground. Among mourning ceremonies of a simpler and less painful class may be enumerated wailing, wearing old or unusual clothes, the rejection of ornaments, rubbing charcoal, clay, and other substances on the body, shaving the hair or allowing it to grow unusually long, the discarding of pleasant food or of customary unguents, sleeping on the grave or in the open air (cf. Nassau, 10; Williams, *Fiji*, London, 1858, i. 4; M. H. Kingsley, *Travels in W. Africa*, 483, 487; Haddon, *Head Hunters*, 206; *JAI*, 1905, xxxv. 417). But others of a much more severe character are also extremely common, *e.g.* gashing or cutting the body, amputating a finger, and fasting.

(1) The origin of gashing or cutting the body may be found simply in an ecstatic expression of grief, at first spontaneous, then reduced to a custom. The pain caused by such methods of wounding, though in the ecstasy and delirium of grief it may be less than we imagine (Beckworth says of the horrible gashings of the Crow Indians that 'they seemed to feel no pain,' *14 RBEW*, p. 898), is itself an expression of sorrow. But other meanings were perhaps given to these self-inflicted wounds. Thus there may have been some idea of union with the dead through the blood spilt on the grave, as in N. S. Wales, where the men stood over it and cut each other with their boomerangs, letting the blood trickle down into it (cf. W. R. Smith, 305). This bond of union with the dead implies 'on the one side submission, on the other friendliness' (Spencer, *Cerem. Inst.*, London, 1879, 70). Or, again, the blood may be an offering to the dead in order to refresh them (*ib.*; cf. Westermarck, *Origin and Development of Moral Ideas*, i. 476). In either case the rite would have a propitiatory aspect. It is found among the Australians, Melanesians, Polynesians, in Africa and America, and it existed in ancient Israel (Lv 19[28]), among the Greeks, Turks, Huns, etc. (cf. Stoll, *op. cit.* 88 ff.; Spencer, *op. cit.* 70–71), and with some of these peoples assumed a ghastly form, while it was frequently proportionate to the rank of the dead person. The wounds included lacerating or cutting the arms, breasts, or legs, piercing them, slitting the ear lobes, wounding the head, etc. Thus the Crow Indians made two cuts down the length of the arm, tearing away the skin, or cut the flesh on the breast and shoulders (*BE*, *loc. cit.*); the Tongans cut and bruised themselves with shark's teeth, shells, axes, clubs, and knives (Mariner, *Tonga Islands*, London, 1817, i. 380, 403); the Spartans tore the flesh from their foreheads with pins and needles to gratify the ghosts of the dead (Potter, *op. cit.* ii. 204). The descriptions of mourning ceremonies among all savage tribes supply copious instances of the severity of these lacerations.

(2) The mutilation of some member of the body, usually a finger, occasionally an ear, is also found as a common sign of grief at mourning ceremonies. Spencer regards this as an act of sacrificial propitiation of the dead and a sign of submission (*op. cit.* 56), and it certainly has the significance of a propitiation of divinities or spirits, *e.g.* in cases of illness, etc. (see § 8, 2). In some cases it may be regarded as a substitute for human sacrifice, giving a part in place of the whole, as when a widow has her finger chopped off in the Nicobar Islands, evidently in place of being slain at her husband's grave (Tylor, ii. 363). But it might readily become a formal expression of grief, as in Fiji, where, on the death of a chief, orders were given that a hundred fingers should be cut off (Williams, i. 197). Yet even in Fiji a child's finger was cut off as a sign of affection for a dead father (*ib.* i. 177). Usually a joint or the whole of the little finger is cut off, though another finger may be removed later when this is lacking. This painful custom is found among some Australian tribes, in Tonga and Fiji, among various N. and S. American Indian tribes, among the Hottentots

when a widow re-marries, and occasionally with Chinese widows as a sign that they will not remarry (Stoll, *op. cit.* 274 ff.; Spencer, *op. cit.* 55 ff.; Kolb, *Caput Bonæ Spei*, Nuremberg, 1719, 572; Giles, *China and the Chinese*, London, 1879, 202).

(3) The custom of fasting is here met with once more as a natural expression of mourning, often of a severe and prolonged character. The Fijians fasted for a dead chief for ten or twenty days (Williams, i. 197). Some of the Salish tribes of British Columbia fast for four days after a death, while a widow must not eat fresh meat for a year, a widower for a shorter period (*JAI*, 1905, xxxv. 138–9). The Andamanese must abstain from certain favourite foods, and here relations are often joined in this custom by other members of the tribe as a token of sympathy (*JAI*, 1882, xii. 142, 146). The Japanese partake only of a spare vegetable diet during the period of mourning, while in Korea the mourners drink rice water for some days, and then are allowed to partake of gruel for the rest of the time (*JAI* xii. 225, xxv. 350).

(4) Finally, though the custom of a wife's being slain at her husband's death may have become a mere customary rite, and though its origin may be sought in sacrificial ideas and in the belief that she must accompany him beyond the grave, it is frequently found as an extreme act of austere devotion, the wife devoting herself to death out of affection. Instances of this are found in Fiji (Williams, i. 189), where wives were frequently sacrificed at their own instance; in India, where a wife lit the pyre with her own hands; in China, where wives will take their own lives to follow their husbands into the next world (de Groot, *Rel. System of China*, Leyden, 1894, ii. 1. 735 ff.); among the ancient Greeks, with whom historic instances of this suicidal devotion are recorded (Euripides, *Supp.* 1000 ff.; Paus. iv. 2. 7); and among the ancient Celts (Leahy, *Heroic Romances of Ireland*, London, 1905, i. 105; cf. Cæsar, vi. 19, slaves and clients beloved by the dead; Mela, iii. 2. 19; see artt. SATI and MOURNING).

8. **Mutilations.**—A great variety of ethnic mutilations involving a considerable degree of pain may be classed among austerities. Each one of these may have a different origin or intention, some may be mere customary or symbolic followings of archaic rites, but this makes no difference in the degree of suffering which is borne or in the stoical patience with which it is endured (see art. MUTILATIONS).

(1) The custom of *cutting the body* and using the blood for some specific purpose is widely extended, and has already been met with as a mourning ceremony.

(*a*) It is found as part of the ceremonies of initiation in various quarters. Thus in North Central Australia the final ceremony among several of the tribes consists of making a series of cuts on the back and one on the neck of the candidate. These are said to commemorate certain events in the *Alcheringa*, or mythical period (Spencer and Gillen [b], 335). A similar rite is found among S. Australian tribes (Schürmann, in *Nat. Tribes of S.A.*, Adelaide, 1879, 231 ff.). Scars are also made on the face and body at puberty among the Ba-Mbalas (*JAI*, 1905, xxxv. 402) and elsewhere in Africa (Burton, *Abeokuta*, London, 1863, i. 104; Denham, *Travels in Africa*, London, 1828, iii. 175: 'the process is said to be extremely painful on account of the heat and flies'). These appear to be of the nature of totem or tribal marks. Among the Abipones the marks were made with thorns, and ashes were rubbed into the wounds—a species of tatuing (Dobrizhoffer, ii. 36 ff.).

(*b*) Cutting or gashing the body in order to obtain blood, usually for magical purposes or for use in various ceremonies, is found all over Australia. Thus among the Dieri two men are bled with a sharp flint, and the blood is allowed to flow on others of the tribe. The ceremony was intended to produce rain, the blood representing rain (Gason, in *Nat. Tribes of S. Aust.* 276). Among the Wiradthuri tribes, at initiation rites men wounded their gums or the flesh under their tongues with sharp pieces of bone, and allowed the blood to fall on the seat used in the ceremony; and among the Kamilaroi, at the *bora*, quantities of blood were collected from gashes made in men's arms with flint or shell (*JAI*, 1895, xxv. 301, 325). Among the Central Australian tribes 'it is astonishing what an enormous amount of blood is used for decorative purposes by these savages, one of whom will think nothing of bleeding himself perhaps twice a day for a week or two in succession.' Here it is also drawn from gashes in the body for a variety of other purposes—to seal a covenant, to be administered as a strengthening potion, or applied to the body of the sick or aged (Spencer-Gillen [b], 596 ff.). Among the Basutos the hands of those who have carried a corpse to the grave are scratched with a knife, and magic stuff is put into the wounds to remove the contagion of death (*GB*[2] i. 302). Here, too, may be mentioned a group of customs already alluded to (§ 5), in which the inhabitants of a district divide into two parties and engage in a sham fight, in which, however, severe blows are given and received, blood is shed, limbs are broken, and sometimes life itself is taken, the fight lasting for some hours. This fight takes place at some given moment in the processes of agriculture, and has for its object the promotion of fertility. The *rationale* probably is that the blood shed fertilizes the earth, for among the Acobambans of Peru women caught the blood and sprinkled it on the fields (Bastian, *Der Mensch in der Geschichte*, Jena, 1860, iii. 73). Similar fights, more or less severe, have been observed among the Tongans, American Indians, African tribes, among the Khonds, in China; they occurred in the form of stone-throwing in Greece at certain festivals; and they still occur in modified form in European folk-custom (see Frazer, *Pausanias*, iii. 267).

(*c*) Incisions in the flesh and blood-letting are also customary before marriage in many places. Incisions which leave raised scars are made on the bodies of young men and women among the Kikuyus of E. Africa, the purpose being ornamental (*JAI*, 1905, xxxv. 255). Elsewhere the blood-letting, followed by each spouse drinking or swallowing the blood in food, has the purpose of uniting them, and shrinks in some cases to a mere symbol (Crawley, *Mystic Rose*, 385; see artt. BLOOD, BROTHERHOOD [artificial]). Or, again, the opening of a vein in both bride and bridegroom is a species of blood-offering, mainly among American Indian tribes (Zöckler, *op. cit.* 80).

(*d*) Frequently the making of scars and cicatrices, painful as the process is, seems to have mainly an ornamental purpose, as among the Australians (Spencer-Gillen[b], 56), Tasmanians and Melanesians (Letourneau, *Sociology*, 80), and N. American tribes, *e.g.* the Thlinkets (*NR* i. 97), though with most of these they are also made for other purposes. Among West Coast African tribes, with whom tatuing is rare, cicatrices are made by cutting the skin and then placing in the wound the fluff of the silk cotton tree (M. H. Kingsley, *op. cit.* 530). In New Guinea women make scars on the chest when a brother spears his first dugong (Haddon, 113).

(*e*) Finally, gashes are frequently used to draw blood as a propitiation of the gods. Thus, among

the Mosquito tribes of Central America, besides sacrifices to influence the gods before war or any important undertaking, blood was drawn from tongue, ears, or other parts of the body (*NR* i. 723, 740). Similar gashings were made by the priests of Baal (1 K 18[28], cf. Jer 41[5]), the Aztecs at the feast of the Earth-goddess, and the Peruvians, both of whom drew blood from gashes in arms, legs, ears, nose, etc. (Garcilasso de la Vega, i. 52; Zöckler, *op. cit.* 84). These are sometimes thought to be relics of earlier human sacrifice, like the commutation of a human victim among the Gauls, who made an incision in the victim's flesh (Pomp. Mela, iii. 2, 18). But possibly they may have been intended to promote union with the divinity through the vehicle of blood. Connected with this is the custom of self-castration seen in the Phrygian worship of Cybele and analogous cults in Syria, etc. In these the priests also wounded themselves in the arms and scourged each other (Tert. *Apol.* 25; Lucian, *de Dea Syria*, 50). Similarly in the Roman cult of Bellona the priests made gashes in their shoulders and the blood was sprinkled on the image of the goddess and used in the sacrifices (Lactantius, i. 21; W. R. Smith, 304).

(2) *Amputation of fingers.*—This practice, already met with as a mourning ceremony, is also found sporadically as a sacrificial observance. In sickness Bushmen sacrifice a joint of their fingers (Farrer, *Prim. Manners and Customs*, London, 1879, 143). The Cochimis of California, when all other means had failed, cut off a finger from a daughter or sister of a sick man, in the belief that the blood would preserve him (Adelung, *Gesch. von Califor.*, Lemgo, 1769, i. 76). This was also done by the Tongans in cases of illness as a propitiatory offering to the gods, while a man would also cut off his own finger to avert their anger when danger threatened (Mariner, *Tonga Islands*, i. 454, ii. 210). During initiation the candidate among the Mandans held up his finger to the Great Spirit expressing his willingness to offer it, and then had it chopped off with a hatchet (Lewis and Clarke, *Travels*, London, 1817, 86). In India the practice is found in custom and myth. Mothers will cut off their own fingers as sacrifices for the preservation of their children, while Siva is said to have cut off his finger to appease the wrath of Kali (Tylor, ii. 401). Mothers in Bengal frequently draw blood from their chests, when a husband or son is ill, to propitiate the goddess Chandika (Rajendralâla Mitra, *Indo-Aryans*, London, 1881, i. 111). This may also have been a Celtic practice, since in one legend Ethne the Horrible is said to have cut off the ends of her children's little fingers to make them longer-lived (Windisch-Stokes, *Irische Texte*, Leipzig, 1891–1897, iii. 363). We may compare with these rites the Chinese custom of cutting pieces of flesh from the thighs, while offering a prayer to Heaven to accept this as a species of self-immolation on behalf of a sick relative, who then was given the flesh to eat (de Groot, *op. cit.* iv. 2, 386).

(3) *Circumcision.*—This has already been found as one of the rites of initiation to manhood; and, in general, where it occurs it is performed at puberty, though sometimes, as with the Jews, it takes place in childhood. We are not concerned here with the various reasons assigned for it by the different peoples who practise it, or with its original intention, though this may have been, as already suggested in other cases, to ward off danger from the whole organ by removing a part, which part might also harbour dangerous influences. What concerns us here is the painful nature of the rite, and its wide-spread use. Practised by many peoples of antiquity, Egyptians and others (Herod. ii. 104), it is found among most African tribes, in N. and S. America, in Polynesia, Australia, and parts of Melanesia, and sporadically elsewhere. Among most of these peoples it is regarded as a disgrace not to have it done, or as rendering a man unclean. If the patient shrieks or cries, this is frequently considered unmanly, but occasionally he is in such a frenzied state as not to feel pain at the moment. But sometimes, besides the actual pain of the cutting, the youth has to undergo other ordeals. Thus, among the Bantu peoples of W. Africa cayenne pepper is squirted on the wound (Nassau, *op. cit.* 12), and among the Mavendas of S. Africa the candidates are subjected to exposure for some time in a nude condition and to treatment of a harsh nature (*JAI* xxxv. 268). See art. Circumcision, and Andree, *Ethnographische Parallelen*, Leipzig, 1889, 166 ff.; Ploss, *Das Kind*, Leipzig, 1884, i. 340 ff.; Stoll, *op. cit.* 499 ff.; Wellhausen, *Prolegomena*, Edinburgh, 1885, 360; *L'Anthropologie*, Paris, 1896, vii. 653 ff.

(4) The practice of *sub-incision* or *mika* or *pura-ariltha-kuma* has already been referred to (§ 2). This terrible rite involves the slitting open of the under side of the urethra, and is found in Queensland, N. S. Wales, S. Australia, and among N. and W. Australian tribes (Spencer-Gillen[a], 212 ff.; *ib.*[b] 133, 328 ff.). Analogous to this is the custom of semi-castration, practised, according to Kolb, by the Hottentots (*op. cit.* 420 ff.), though it has been questioned by later observers; it is also found among the Ponapes in the Caroline Islands and in the Friendly Islands (Finsch, *ZE* xii. 316). For other mutilations of the sexual organs for different purposes among the Dayaks, Battas, ancient Romans, etc., see O. Hovorka, *Mitt. der Anthr. Gesell. in Wien*, 1894, xxiv. fasc. 3; *JAI*, 1892, xxii. 45; Stoll, *op. cit.* 496 ff., 921 ff.

(5) Girls at puberty among many separate peoples must also undergo the equally painful rite of excision, probably with the same original intention as circumcision, and like it frequently an initiation ceremony. It is found among various African peoples, in Nubia, Abyssinia, Galla and Masai Lands, on the west coast, and also in the south, while it is also met with among several S. American peoples, occasionally in N. America, and sporadically in Indonesia (Stoll, *op. cit.* 523; Ploss, *Das Kind*, i. 379 ff.; Merker, *Die Masai*, Berlin, 1904, 60 ff.; Martius, *Zur Ethnog. Amerikas*, Leipzig, 1867, 445; *JAI*, 1904, xxxiv. 133). With it may be classed the cutting or artificial rupture of the hymen, mainly among several Australian tribes, but occurring elsewhere also. With the Australians it is an initiatory rite, and also serves as an immediate preparation for marriage (Spencer-Gillen[a], 93; *ib.*[b] 133). Even more painful is the rite of 'infibulation' of marriageable girls, which is found mainly in the Nile region, the Sudan, Galla and Somali Lands, Nubia, Kordofan, and the Abyssinian highlands, and also in Pegu (Stoll, *op. cit.* 548 ff.).

(6) Among other forms of mutilation causing considerable suffering may be mentioned (*a*) knocking out one or more of the front teeth, usually as an initiation ceremony, though various interpretations of its purpose are current among those who practise it, and with some it is regarded as an ornament. Perhaps arising as a preparation for the reception of new food at puberty, it soon became a mark of acquired manhood, and sometimes, as witn the Kavirondos, any one not undergoing it endangered his life in battle (Johnston, *Uganda Protectorate*, London, 1902, ii. 728). Among many Australian tribes it is found as a regular initiation ceremony performed only on youths, but among the central tribes it has ceased to be so, and is performed on both sexes indifferently (Spencer-Gillen[a], 588 ff.). The custom is found among most African tribes,

Bantu and Negro; in N. America, *e.g.* among the Seri Indians, who practise it on girls before marriage (*17 RBEW*, p. 169); in Formosa among the Pepos, who think it assists breathing (Ploss, *Das Kind*, ii. 424); while it was practised by the ancient Peruvians, who regarded it as a punishment ordained on their ancestors and binding upon themselves, or as a service rendered to the divinity (Garcilasso de la Vega, ix. 3; Herrera, *Historia general*, Madrid, 1730, v. 6, 1). It is also found as a mourning mutilation at the death of a chief in the Sandwich Islands (Ellis, *Tour through Hawaii*, London, 1826, 146).

(*b*) Filing the teeth, usually to sharp points, grinding them down, and breaking part of them, are found sporadically, sometimes as initiation ceremonies. Among the Malays the first method takes place soon after circumcision; the rite, though painful to behold, is borne with great patience (Skeat, *Malay Magic*, London, 1900, 355). Elsewhere, as in Sumatra, Borneo, etc., the teeth are filed, broken, or pierced, and then ornamented with gold or blackened, the operation sometimes causing great pain (Marsden, *Sumatra*, London, 1811, 52; *Hist. gén. des voyages*, Hague, 1757, xv. 97; Ling Roth, *Natives of Sarawak*, ii. 78). But the custom is also supposed to preserve the teeth. Filing the teeth was also practised by the Mayas of Yucatan (Diego de Landa, *Relación*, Paris, 1864, 31), as it is still among some East African tribes (*JAI*, 1904, xxxiv. 138), and peoples of the Congo region (Stoll, *op. cit.* 255); and, as among the Californian tribes, they were ground down to the gums (*NR* i. 333 f.; see also Frazer, *Totemism*, Edinburgh, 1887, 28; *ZE* xiv. 213).

(*c*) Making holes or slits in the nose, lips, cheek, or ears, in which are inserted various objects, is a world-wide practice, and, though regarded as a means of ornamentation, was probably in its origin of a magical character (the objects serving as amulets), while it was also and still is in many cases associated with initiation rites. Frequently the hole or slit is begun in childhood, but the permanent object is inserted only at puberty. Only the most extreme instances of this form of mutilation need be referred to here. Among the Thlinkets the under lip of female children is pierced and a small object inserted. As time goes on, a larger object is placed in the slit to extend the aperture, causing a painful and continuous strain, until, at the age of maturity, a grooved block of wood sometimes six inches long and half an inch thick can be inserted (*NR* i. 99). The Botocudos of S. America treat the under lip and the ear lobe in the same manner, gradually enlarging the apertures, until wooden plugs of a considerable size can be inserted, the ear lobe sometimes reaching to the shoulder (von Wied-Neuwied, *Reise nach Brasilien*, Frankfort, 1820, ii. 5). Every variety of these mutilations, either singly or together, is found over the American continent; lip-slitting occurs in Africa, ear-slitting and ear-extension in Fiji, Easter Island, and the Nicobar islands, while ear-piercing, with a religious significance, occurs all over India, Burma, and the Malay Peninsula (see Stoll, *op. cit.* 98 ff.; Hovorka, 'Verzierungen der Nase,' *Mitt. der anthr. Ges. in Wien*, xxv. pts. 4 and 5, 1875; *3 RBEW*, p. 76 ff.).

(*d*) The well-known and painful custom of deformation of the foot among Chinese women is regarded as the chief point of beauty and attractiveness, while it has apparently also some erotic character. The process is begun in early childhood by bandaging the feet firmly so that all growth is hindered, until they become little more than stumps, rendering walking a matter of difficulty (Brandt, *Sittenbilder aus China*, Stuttgart, 1895, 53 ff.; Ploss-Bartels, *Das Weib*, Leipzig, 1904, i. 173 ff.). A similar custom is found among the Kutchin Indians, where a child's feet are bandaged to prevent growth, small feet being there thought handsome (Richardson, *Arctic Searching Expedition*, London, 1851, 384).

9. **Tatuing.**—This custom is of world-wide extent; but while every variety of motive is ascribed to it, it frequently has a religious or magical significance, and it is commonly done as an initiation rite. Among the Eskimos the process usually consists in passing a needle and thread dipped in soot below the skin (Egede, *Besch. von Grönland*, Copenhagen, 1790, 153). More usually pricking the skin or cutting it, and then rubbing in some pigment, is resorted to. Or in some cases figures are cut or cauterized on the skin and the cicatrices painted, as in the Deccan and among the Mosquito Indians (Forster, *Voyage round the World*, London, 1777, 588; *NR* i. 716). Still, however done, the process involves much suffering, especially where great parts of the body are tatued; but to shrink from it or to show signs of suffering is held as evidence of cowardice. Mœrenhout says of the operation in Polynesia that it was the cause of such sufferings that sometimes the girl died under them. Yet in spite of this the operation, which is a tedious one, is seldom or never refused (Wilson, *Miss. Voyage*, London, 1799, 339). Nearly every observer of the actual carrying out of the process speaks of its extremely painful and even dangerous character. Hence it may be regarded, for whatever purpose it is undergone, as by no means the least serious of the many kinds of austerities practised by lower races. Thus, when it is undergone at puberty, it affords a test of the individual's capacity for enduring pain and showing courage (cf. *JAI*, 1882, xii. 331). Where it has a religious significance, as in Fiji, where it was held to have been appointed by the god Ndengei, it may be regarded as a kind of offering made to a divinity, while it also secured the entrance to, or the recognition of the individual in, the other world, un-tatued persons being there subjected to torture (Williams, *Fiji*, i. 160; cf. *FL*, 1894, v. 33, 318; Hall, *U.S. Explor. Exped.*, Philadelphia, 1846, 99, for other instances). The practice of making marks or designs on the body by cuts or scars, into which some pigment is often rubbed, is found among many peoples, especially those with darker skins (Australians, Tasmanians, Papuans, etc.), and must involve considerable suffering. See art. TATUING; Joest, *Tätowiren, Narbenzeichnen und Körperbemalen*, Berlin, 1887.

10. **Medical austerities.**—The methods of healing used by the medicine-man, or doctor, in savage societies are often of a drastic and acutely painful nature, though they are generally borne submissively by the patient. Resting mainly upon the theory that all disease is caused by evil spirits, the object of the treatment is to drive these away or to obtain possession of the object which they have placed in the body. Hence a great part of the treatment consists of yelling and singing, noises of all kinds, dances, and fumigations. But in addition the patient is subjected to a variety of vigorous remedies wrought upon his person. Among the most common of these are scarifying the flesh and bleeding. Thus among the Andamanese the flesh is cut with quartz or glass flakes (*JAI*, 1882, xii. 85), elsewhere, as among the Dinkas (*JAI*, 1904, xxxiv. 156), with knives, and sometimes, as among the Bondeis, a very smarting medicine is rubbed in (*JAI*, 1895, xxv. 215). Similar scarifications are used by many other peoples—Australians, Papuans, American Indians, both north and south. A primitive method of cupping is found in different parts of Africa, consisting of making an incision in the flesh, placing a horn above the incision, exhausting the air by

suction, and then closing the orifice. The horn is then gradually filled with blood (Nassau, *op. cit.* 183). Sucking the surface of the skin till it is blistered, or sucking blood from an incision in the flesh, is common, *e.g.* in N. America (Bancroft, *passim*; Pétitot, *Traditions indiennes*, Paris, 1886, 434). There, too, kneading and pounding the body violently, and pressing the fists into the pit of the stomach until the patient's strength is exhausted, are in great favour, and occasionally the medicine-man bites the patient with his teeth and shakes him (*NR* i. 246, 355; Kane, *Wanderings*, London, 1859, 225). Another remedy is to make the skin smart by applying pungent spices, or by stinging it with ants or whipping it with nettles (*GB*[2] i. 301, iii. 216). This, like flagellation in cases of madness, is intended to drive off the demon of disease. A favourite remedy for fever and other diseases among American Indians is the sweat-bath. This is a small hut which by various means is heated to suffocation. In it the patient is placed, and afterwards, dripping with perspiration, he rushes out and plunges into cold water. This treatment sometimes causes death, but it is also in use as a purificatory rite (*NR* i. 246, 285). A similar remedy for madness is found in Gabun (Nassau, *op. cit.* 273). It is to be noticed also that sometimes the relatives of the patient, or even of the medicine-man, fast, to assist the progress of the remedy (Ploss, *Das Kind*, i. 150; Dall, *3 RBEW*, p. 426). See Bartels, *Medecin der Naturvölker*, Leipzig, 1893.

II. **Self-restraint.**—A certain degree of self-restraint, especially in marital relations, though scarcely coming under the heading of 'Austerities' as do other forms of self-restraint, *e.g.* fasting, is found on particular occasions among lower races and may be taken notice of here, since it shows the power of current theories or beliefs or customs to strengthen the will even of a savage, and cause it to stifle bodily desires. Thus, though the ultimate purpose is no doubt different, such forms of self-restraint are yet akin to the self-discipline and continence of later forms of asceticism. Examples of continence are most marked during war or hunting, the intention probably being the avoidance of possible loss of strength and also of the potential dangers lurking in sexual relations generally. But in some cases the prohibition has assumed a religious sanction, especially among American Indian tribes. The Winnebagos observe continence in war because it was commanded by the Great Spirit; among other tribes it is said to be based on religious grounds, and the Dakotas thought that the violation of captives would be resented by the spirits of the dead (Drake, *Ind. Tribes*, Philadelphia, 1884, i. 188; Waitz-Gerland, *Anthrop.*, Leipzig, 1859–1871, iii. 158; Schoolcraft, *op. cit.* iv. 63).

A religious motive is also to be seen in those cases where such continence has become a binding form of tabu, as among the Maoris, with whom, not only during war, but on other important occasions, women are strictly tabu to men, who must not approach their wives until war is over (*JAI*, 1889, xix. 111; Waitz-Gerland, vi. 349). This is also found in parts of New Guinea, where the warriors are *helega*, or sacred, for some days before fighting, and must not even see a woman (Chalmers, *Pioneering in N. G.*, London, 1885, 65). But the original basis of such continence may be seen in the Seminole belief that connexion with women enervated men and unfitted them for their duties as warriors (Schoolcraft, v. 272); or, as in Halmahera, that they must practise continence during war else they will lose their strength (Riedel, *ZE* xvii. 69). This rule of continence is practically universal among savages, and applies to the period immediately preceding war or during the actual course of the war, while it also appears at higher levels of civilization (cf. Cæsar, vii. 66; 2 S 11[11]). The rule also applies frequently before or during a hunting or fishing expedition. Chastity is part of a seven days' tabu among the Malays when fishing (Skeat, *op. cit.* 315), but a similar rule prevails generally in such cases; while, as among the Aleuts, it is connected with religious beliefs, since during a whaling expedition unfaithfulness on the part of the men or their wives would be punished by the whale, an object of reverence to them (Reclus, *op. cit.* 53). In some cases, too, the rule of continence is accompanied by fasting, ceremonial preparations, and the infliction of pain. Thus, among the Nutkas, before war, some weeks are spent in preparation, which consists mainly of abstinence from women, bathing, scrubbing the skin with briers till it bleeds, and finally painting the whole body jet-black (*NR* i. 189). Among the Bondeis a man is scarified down the arms as a charm against sword-cuts (*JAI*, 1895, xxv. 205); while, before hunting, the Indians of Guiana subject themselves to the stings of ants and the irritation caused by the hairs of certain caterpillars (Im Thurn, 229). Again, probably on the principle of sympathetic magic and the intimate connexion between a man and his wife, fasting and other forms of rigorous discipline are enjoined on women in many quarters while the men are absent on war or the chase, as in the Babar Islands, where women must fast and abstain from sexual intercourse (Riedel, *Selebes en Papua*, Hague, 1886, 341).

The rule of continence is also followed in various other circumstances. In Congo, when the *Chitomé* is on circuit, a fast of continence is proclaimed, the penalty for breaking it being death. By such continence 'they preserve the life of their common father' (Reade, *Savage Africa*, London, 1863, 362). Strict continence is also observed by men during the Cherokee new year's festival of purification already referred to (§ 6 (*c*)). It is also a common tabu after slaying a man or touching the dead, here probably connected with the contagion of death, which necessitates the avoidance of one's fellows till a certain time has elapsed or certain purifications have been performed. Fasting frequently accompanies continence on such occasions. Contact with women is forbidden for one month after the shedding of blood among the Kikuyus of E. Africa (*JAI*, 1904, xxxiv. 264); and among the Natchez, after the first scalp-taking or securing a prisoner, the warrior had to abstain from seeing his wife or eating flesh for a month (Charlevoix, *Histoire de la Nouvelle France*, Paris, 1744, vi. 186; cf. Westermarck, *op. cit.* i. 375). In many places continence must be observed for a time after marriage and after a birth (Crawley, *op. cit.* 345 ff.; Lubbock, *op. cit.* 81).

Even among savages chastity on the part of the priesthood is sometimes a necessity. Thus Algonquin priests were ordained to a life of chastity, and could not eat food prepared by a woman (*NR* ii. 212), and in Yucatan the 'captain,' during his three years' tenure of office, had to observe the same rule (*ib.* ii. 741). This corresponds to the general rule of chastity found among higher priesthoods, while there, too, celibate orders are found, *e.g.* those in Mexico dedicated to the service of Quetzalcoatl, and the virgins of the sun in Peru, who, though regarded as the brides of the Inca, had otherwise, on pain of a cruel death, to live in chastity, in this exactly resembling the Vestal virgins in Rome (Zöckler, *op. cit.* 85; Prescott, *Peru*, London, 1890, 53; cf. also the purity enjoined on the Roman Flamen Dialis and his household).

LITERATURE.—This is given in the article.

J. A. MACCULLOCH.

AUSTRALASIA (Ethnology, Religions, and Ethics).—*Australasia* is here taken in its widest sense, so as to cover the great insular world which comprises nearly the whole of the Indian and the Pacific Oceans, and constitutes one of the five main divisions of the globe. The term is practically synonymous with *Oceania*, which is still favoured by most Continental geographers, but for which English writers now generally substitute *Australasia*, as harmonizing better with the other divisions, and at the same time serving to recall its essential characteristics—'firstly, that it is geographically a southern extension of Asia; and secondly, that the great island-continent of Australia forms its central and most important feature' (A. R. Wallace, *Australasia*, p. 2).

As thus understood, this Oceanic region comprises five main insular groups, which form the subjects of separate articles, but may here be summarily tabulated with their more important subdivisions:

I. AUSTRALIA with TASMANIA.

II. MALAYSIA, comprising the Malay Peninsula; the large Sunda Islands (Sumatra and Java); the Lesser Sunda Islands (Bali, Lombok, Sumbawa, Flores, Sumba, Allor or Ombay, Timor, Wetta, Serwatti); Borneo; Celebes; Jilolo or Halmahera; Ceram; the Moluccas; Sulu; the Philippines; Formosa; and the outlying Andaman and Nicobar groups.

III. PAPUASIA, with two sections:

1. *New Guinea*, with the D'Entrecasteaux, Louisiade, and other insular dependencies.
2. *Melanesia*, comprising the Bismarck Archipelago (New Britain, New Ireland, Duke of York); Solomon; Santa Cruz; Banks; Fiji; New Hebrides; New Caledonia; and Loyalty Archipelagoes.

IV. POLYNESIA, including New Zealand; Tonga (Friendly); Cook or Hervey (Mangaia, Rarotonga, etc.); Austral (Tubuai); Society (Tahiti); Low (Tuamotu); Marquesas (Nukahiva, Fatuhiva, etc.); Navigator (Samoa); Union (Tokelau); Ellice (Funafuti); Savage (Niuĕ); Sandwich (Hawaii) and Easter (Rapanui) groups.

V. MICRONESIA, comprising the Pelew (Palau); Ladrones (Marianne); Caroline; Marshall (Ralick, Radak); Gilbert (Kingsmill); Phœnix and Penrhyn (Manahiki) groups.

For Madagascar, which should properly be included in No. II., see art. AFRICA. The Seychelles, Mascarenhas, and other scattered clusters in the Indian Ocean are excluded because uninhabited when discovered, and the same remark applies also to Norfolk, Kermadec, Pitcairn, and a few other South Sea islands. Note that South Sea is synonymous with Pacific Ocean.

All the lands in this table have been occupied by man since the remotest times, and it is argued in the art. ASIA that the cradle of the human family lay most probably in Malaysia (Java). From this central area of dispersion the first migratory movements ranged north to Asia, west to Africa, and east and south over the whole of the Oceanic world by land connexions which have since been greatly reduced by subsidence (see art. ETHNOLOGY, § 3). It would thus appear that the first inhabitants of Australasia must have been direct descendants of a Pleistocene precursor whose prototype is found in the Javanese *pithecanthropus erectus*, and who are themselves represented by the black elements still persisting in Malaysia (Malay Peninsula, Flores, Timor), in Papuasia, Australia, and even in Polynesia and Micronesia, though here mostly absorbed or assimilated by later intruders from Asia. As in Africa, there are two black elements in Oceania: (*a*) the dwarfish *Negritos* surviving in the Andamans, in the Malay Peninsula (Sakais, Semangs), in the Philippines (Aëtas), and in Java (the nearly extinct Kalangs); and (*b*) the medium-sized or even tall *Papuasians*, who form nearly the whole of the population in New Guinea (Papuans proper), and throughout Melanesia. For several reasons, such as their physical, linguistic, and religious differences, it is desirable to treat the Papuans proper and the Melanesians as two distinct though closely related sub-groups, while both may be conveniently comprised under the collective name of *Papuasians*. The Melanesians, for instance, are of Malayo-Polynesian speech, and worship no devils, whereas the Papuans speak numerous languages fundamentally distinct from any others, and are pronounced demonolaters. Dr. Hamy speaks of their origins as lost 'dans les profondeurs d'un insondable passé,' while W. Volz shows that in pre-Malay times they occupied all the Pacific Ocean (*AA*, Nov. 1894). Their westward extension to the large Sunda Islands, where no full-blood Papuans are now found, is also established by B. Hagen, who groups together the Battas, Gayos, and Alas of Sumatra, the Ulu-ayars of Borneo, the Semangs and Aëtas of Malacca and the Philippines, the Torajas, and the Toalas recently discovered by Dr. Sarasin in Celebes, the Melanesians, Papuans, and Australians, 'as local varieties and remains of a great wide-spread primitive southern race,' which he calls 'the old pre-Malay ethnical element' in Oceania (*Globus*, 1904, 76, No. 2, p. 24 f.). These pre-Malayans therefore constitute the substratum, the true aborigines, everywhere in Australasia.

Their watery domain was later, but still in remote pre-historic times, encroached upon first by Caucasic and then by Mongoloid immigrants, both from the Asiatic mainland. It is shown in art. ASIA that during the Stone Ages two branches of the western Caucasians reached the uttermost confines of the continent, one probably from Europe through Mongolia to Korea and Japan, the other from North Africa through Irania to India and Indo-China. Some of the northern branch, all dolmen or megalithic builders, appear to have passed from Japan to Micronesia, where they may have joined hands with those of the southern branch who ranged from Indo-China southwards to Malaysia and thence eastwards to Polynesia. Thus are explained those astonishing *marais* and other monolithic structures which are found scattered over the Pacific islands as far east as Rapanui (Easter Island), and culminating in the stupendous works of Ponapé (Eastern Carolinas) with cyclopean walls 10 to 18 feet thick, constructed of huge basaltic blocks, some measuring 25 ft. in length by 8 ft. in circumference (F. J. Moss, *Atolls and Islands, passim*). There is a trilithon at Maui (Tonga group) which looks like one of those 'Druidical-like shrines' seen by Mr. R. T. Turley in North Korea, where some of the people 'show Caucasian and not Mongolian features' (*Geograph. Jour.*, April 1904, pp. 478, 479). That the two Caucasic streams must have met and commingled in these North Pacific waters is shown, amongst other indications, by the fact that the Nukuor islanders near Mortlock (Central Carolinas) still speak a pure but archaic form of the Maori language away to the south (New Zealand).

In order to distinguish between the Mongoloid (Malayan) peoples and these primitive Caucasians who long sojourned in the Eastern Archipelago, and are there still represented, amongst others, by the Mentawi islanders (west coast Sumatra), Logan introduced the term *Indonesian*, which has now been extended to all the natives of European type throughout Australasia. They are found sporadically in Papuasia and Melanesia, and are in exclusive possession of Polynesia, so that all the South Sea Islanders east of a line running from New Zealand by Samoa to Hawaii may be called Indonesians, and the collective names *Mahori*, *Sawaiori*, and others formerly applied tentatively to them may now be discarded. Their claim to be regarded as an Oceanic section, not of the 'Aryans,' as is sometimes assumed, but of the pre-Aryan Hamitic and Iberian Caucasians, can no longer be seriously questioned, since by the unanimous testimony of all competent observers they are one of the very finest races on the globe, with physical characters connecting them anthropologically with

the western Caucasians. Of the Tonga natives Lord George Campbell writes:

'There are no people in the world who strike one at first so much as these Friendly Islanders. Their clear light copper-brown coloured skins, yellow and curly hair, handsome faces, their *tout ensemble*, formed a novel and splendid picture of the *genus homo*; and, as far as physique and appearance go, they gave one certainly an impression of being a superior race to ours' (*Log Letters from 'The Challenger'*; and see also Guillemard's *Australasia*, ch. 14).

But it was shown above that the whole Oceanic area was first peopled by the Papuasians, which explains the constant occurrence of a black strain, very marked in Micronesia, but also met with all over Polynesia. The natives of Niuē (Savage Island) have a tradition that, when they occupied the island from Samoa, they found a black population with whom they intermixed. The same statement is made by the Hervey people, and is confirmed by their dark complexion and kinky hair, while in Mangaia the Melanesian features—frizzled hair, dark-brown skin, and full beard—predominate. Even the Tahitians and Maoris, both in other respects splendid Caucasians, here and there betray the dark element in their protruding lips, very dark-brown skins, curly hair, and slightly developed beard. In Malaysia the above-mentioned Mentawi islanders are the finest of all the surviving Indonesians, and of them Von Rosenberg writes that, 'as regards physical appearance, speech, customs, and usages, they stand almost quite apart. They bear such a decided stamp of a Polynesian race that one might far sooner compare them with an inhabitant of the South Sea Islands' (*Der malayische Archipel*. i. 189).

'It is somewhat difficult to say what the original type of the true Polynesian was; but it is probable that the handsome, tall, oval-faced, high-browed, lithe, active, light brown, black straight-haired, black or very dark brown-eyed, cheerful, dignified individual so frequently met with, is the nearest to the true original Polynesian' (Percy Smith, *Hawaiiki*, p. 14).

As the western Indonesians moved eastwards to their present homes in the Pacific, their place was taken by the Asiatic Mongols, who are now represented in the Eastern Archipelago by the light- or olive-brown populations commonly called *Malays*. They form, in fact, the Oceanic section of the Mongol family, and as their right to be regarded as members of this family is no longer contested, the point need not here be laboured. Interminglings with the pre-Malayan dark and fair elements (Papuans and Indonesians) have caused considerable local modifications and given rise to some marked varieties, such as the Nias Islanders, the Bornean Dayaks and Kayans, the Bugis and Minahassas of Celebes, the Tagalogs and others of the Philippines, and the Formosan aborigines. But the dominant historical Malays, whose original home was in the Menangkabau district of Sumatra, and whose language has become the *lingua franca* of the Archipelago, are a true Mongoloid people, distinguished by their 'light yellowish and brownish skins, long lank and black hair, small stature, rather oblique eyes, and prominent cheek-bones' (Meyer, *Minahassa auf Celebes*, Berlin, 1876, p. 7). These Oceanic Mongols do not occupy the whole of the Archipelago, the eastern parts of which are still held by full-blood and half-caste Papuans, the ethnical parting line, as drawn by Wallace, running from east of the Philippines along the west side of Jilolo through Bouro, and curving round the west end of Flores, then bending back by Sandalwood so as to take in Rotti near Timor (Wallace, *Malay Archipelago*[5], p. 590).

Now comes a difficulty. All the Australasian peoples except the Papuans and Australians—Malayans, Malagasy, Philippine Islanders, Melanesians, Indonesians, and Micronesians—speak numerous idioms which differ greatly in their lexical and phonetic characters, and often even in their grammatical structure, but are none the less regarded as members of a common stock language which is usually called Malayo-Polynesian, and has a prodigious range—from Madagascar to Easter Island, within some 2000 miles of the South American coast, and from New Zealand across the Pacific to Hawaii. All are *polysyllabic* and *untoned*, whereas those of the south-eastern Mongols—Indo-Chinese and others—are *monosyllabic* and *toned*. But the Malayans belong to this connexion, hence should presumably speak toned languages like Burmese, for instance, or Siamese, or Annamese. The explanation seems to be that the Oceanic Mongols reached their present domain in remote times, before the Indo-Chinese tongues had become disintegrated—that is, before the development of monosyllabism by phonetic decay. Not only do such untoned languages still survive on the mainland, but they so closely resemble the Oceanic tongues that they may be called proto- or archaic-Malayan. Of the continental Malay mother tongue there are several varieties, such as Khmer (Cambodian), Redais, Bahnar, Samré, and Charay, which are all toneless, and have a great number of words in common with the Oceanic Malay, while 'the grammatical structure of both is absolutely identical' (C. Fontaine, quoted by H. Mouhot, in *Voyage dans les royaumes de Siam*, etc., Paris, 1868, p. 216). The organic kinship is seen especially in the characteristic infix system, which is everywhere precisely the same, as in the Khmer *sauk*, 'to corrupt,' *samnauk*, 'a bribe'; the Malagasy *tady*, 'twisted,' 'a rope,' *tomady*, 'strong'; the Javanese *hurub*, 'flame,' *humurub*, 'to flare up'; the Tagalog *kapatir*, 'brother,' *kinapatir*, 'brotherly'; the Malay *sipit*, 'to grasp,' *sinipit*, 'an anchor,' and so on (the infix elements always the same, *m*, *n*, and *mn*).

A harder problem is the extension of this *vrai groupe malay continental* (Dr. Hamy) not only to the Mongoloid Oceanic lands, but also to Melanesia, whose black inhabitants speak many more primitive varieties of Malayo-Polynesian than either the Polynesians or the Malayans, although they are neither Polynesians nor Malays themselves, but a branch of the primordial Oceanic Negroid race. Here Dr. Codrington, the leading authority on the subject, vouches for three essential points: (1) the substantial unity and homogeneous character of the Melanesian tongues, under considerable dialectic diversity, and apart from a number of Indonesian enclaves, such as Uea, Futuna, Fate, Mae, Tikopia, and Ongtong Java; (2) their fundamental kinship with the Malayo-Polynesian family; and (3) their archaic character as compared with all the other members of that family. 'As compared with Fiji [a Melanesian tongue], the languages of Tonga and Samoa [Indonesian] are late, simplified, and decayed' (Codrington, *Melanesian Languages*, Oxf. 1885, p. 26). The question therefore arises, How came these savage head-hunters and cannibals to lose their original forms of speech, such as still survive amongst the kindred black peoples of New Guinea and of Australia, and have but recently become extinct in Tasmania? And then, how did they everywhere, from the Bismarck to the Loyalty groups, acquire Malayo-Polynesian languages of primitive type? Early Indonesian or Malayan conquests, followed by miscegenation, naturally suggest themselves, but are excluded by the absence of those modified Negroid physical characters which must necessarily have resulted from such postulated interminglings. The Melanesians are quite as full-blood Negroes as the Papuans, and show even more marked Negro features than the somewhat modified Australian aborigines. Codrington, who gives a few instances of mutual assimilation and interchange of type and speech, especially in Fiji, remarks that—

'It is conceivable, on the supposition that the languages now spoken by Melanesians are not originally their own, that the original stock is not now represented anywhere, either in vocabulary or in grammar, that languages derived from without have entirely taken the place of some earlier [Papuasian?] speech; but it is difficult to allow it to be more than possible. . . . There is the great difficulty that the present Melanesian languages certainly have not been introduced by intruders speaking the present Malay or Polynesian languages.' He then suggests a tentative solution of the problem which 'would account for the Polynesians having a language allied both to the Malay and to the Melanesian' (p. 81).

It should be added that Malayo-Polynesian has not the remotest connexion either with the heterogeneous tongues of the New Guinea Papuans or with the homogeneous agglutinating languages of the Australian aborigines. As a rule the Negritos both of the Philippines and of Malacca have lost their original tongues, and now generally speak those of the surrounding Malayan peoples. On the other hand, the Andamanese may claim to have developed in their long secluded island homes perhaps the most remarkable form of speech known to philology. It has no kinship with any other, and its most striking feature is a superabundance of pronominal prefixes and formative postfixes, so that 'in adding their affixes they follow the principles of the ordinary agglutinative tongues; in adding their prefixes they follow the well-defined principles of the South African [Bantu] tongues. Hitherto, as far as I know, the two principles in full play have never been found together in any other language. In Andamanese both are fully developed, so much so as to interfere with each other's grammatical functions' (R. C. Temple, *Anthrop. Journ.* 1882, p. 123). Yet, like the Australians, these paradoxical 'Mincopies,' as they were formerly called, have an infantile arithmetic with no words for the numerals beyond *two*.

In the Oceanic area the various religious systems may be broadly described as consisting of diverse forms of the crudest and the most advanced animism, leading in some places to the purest psycholatry, in others to nature- and ancestor-worship, above which has been raised a luxuriant growth of myth and legend. With all this are combined some strange aspects of demonology and tabu, wide-spread over the Indo-Pacific domain, besides totemism, ordeals, omens, and fetishism, in forms which throw light on the origin of these practices. Less wide-spread are true idolatry, shamanism, priestcraft, animal and human sacrifices, lycanthropy, tree-cult, witchcraft, the evil eye, rain- and weather-doctoring, and the other superstitions usually associated with primitive religions. The ethical standards present enormous differences, although the Oceanic peoples may in a general way be spoken of rather as non-moral than immoral. In fact, the moral sense, as understood by more advanced races, must be regarded as still dormant amongst Polynesians, who indulge openly in unbridled licence; Melanesians and Borneans, who glory in the trophies acquired in their head-hunting expeditions; and Papuan marauders, who treat with fiendish cruelty the captives secured for their cannibal feasts. Nor are these atrocities confined to the lower races, as seen by the unspeakable horrors of the cage-prisons in the unprotected Malay States described by H. Clifford (*In Court and Kampong*, p. 161 f.).

In Sumatra also the Battas open hostilities by offering to their war-god a boy eight or ten years old, who is buried to his neck in the ground and then stuffed with a mixture of sliced ginger, red pepper, and salt. When he is nearly raving mad with thirst, he is induced by the offer of a little water to promise to plead the tribal cause in the next world. But, the promise made, molten lead instead of water is poured down his throat, and his head is cut off and buried in an earthenware pot under a large tree in the village. These Battas are idolatrous cannibals, who, before the fight begins, prepare a rudely carved wooden effigy with a square hole in the place of the navel. The pot is then dug up and the soft parts of the head are thrust into the hole, which is closed with a leaden plate. The idol thus becomes animated (*hat hierdurch seine Seele bekommen*), and is at once sent off to the enemy, from whom another is received in exchange, and the pot is put aside for future use (Von Rosenberg, *Die malayische Archipel*, i. 60). And thus we seem to get a hint of how crude animism may in some places have passed through the fetish stage of the indwelling soul up to true idolatry or image-worship. The *Panghulu-balang*, as the Battas call this wooden effigy, has already become a true anthropomorphic entity—'has received its soul'—and, like the war-gods of Olympus, can now champion their cause in this and the next world.

Amongst the Karo Battas the doctrine of soul receives its utmost development. Here the *tendi*, like the *kra* of the Gold Coast negroes (see art. ETHNOLOGY, § 9), is a second *ego*—a sort of 'double' dwelling in the body, which it may occasionally leave—and at death becomes a *begu* (spirit, properly 'shade') on earth, or a *dibatta* (god) of the middle spaces. Often there are as many as seven such *tendis*, which are partly generated as individualized activities or properties of man. Two are clearly distinguished, one more specialized which later becomes a *begu*, the other representing more generally the vital force, and after death resolved into breath, or becoming wind, and returning to the soul of the world (*Weltseele*). Not only men, but animals and even plants, are endowed with *tendis*, and the *Si Dayang*, as the rice *tendi* is called, is represented as a goddess who plays a great part in the creation myth. She is the maker of man, the creative and sustaining power of the universe, the All-life, the gracious mother of nature, these cosmic notions being no doubt due to later Hindu influences (J. H. Neumann, quoted by W. Foy, in *Centralblatt f. Anthrop.* 1904, v. 299).

In the neighbouring Nias archipelago the Malayan natives are both idol- and devil-worshippers, and also head-hunters in the southern districts. Having no idea of a pure bodiless spirit, they fabricate numerous stone and wooden statuettes as tutelar deities, protectors of the chief, of the village, of the weapon, or else guardians against sickness and other troubles. The chief god, however, is *Lubu-langi*, who dwells in the wind, which, although it is invisible, can still be felt. This god is conceived as a tree waving in the atmosphere and shedding fruits which become either spirits or men, forefathers of the present generation, according as they fall in space or on the ground. In fact, Lubu-langi is the origin of everything, and from him comes nothing but good. Their forefathers dwell in constant association with him, and that is why they are invoked for blessings and against all kinds of evils. Here we have a peculiar form of ancestor-cult, which is paid also to the subordinate chthonic god *Batu-beana*, while appeal is likewise made to the other deities, amongst them some goddesses, all collectively called *Aju*. But more numerous appear to be the demons, of whom the most powerful and most dreaded is *Nadáiya*. Of them no images are made, since they dwell in the woods, the fields, the gardens, the houses, even in men and animals when they fall sick. Then they send for the *Eré* (wizard), who smells out the particular spook that is causing the mischief, and bribes him with the heart and blood of a fowl to leave the sick man and go away. If this and stronger measures fail, it is concluded that there are several devils about, and these are got rid of by stopping all the

doorways except one, through which they are driven off by cutting and slashing in all directions and making a tremendous uproar with much shouting, tom-tomming, and beating of pots and cans. The Nias people are not clear about an after-life, but say that the body came from and returns to nothing, while the soul joins the company of the ancestors with Lubu-langi, nothing being said about rewards or penalties. Earthquakes, the tides, eclipses, and other natural phenomena are due to sinister influences, even the rainbow being a net cast out by Nadáiya to ensnare mortals, while comets consist of an ordinary star with a long tail to which a devil clings, careering through space to strew the (Nias) world with woes.

Farther south the Indonesian Mentawi people are similarly plagued with demons, and here, strange to say, the natives of Pora Island migrate after death to an adjacent islet where all become devils, hence this is called 'Devil Island.' Hence also after the burial everybody makes off in all haste, fearing the return of the new-made demon. There are no idols or religious rites, but numerous oracles and omens and divinations by the inspection of birds' entrails, exactly as amongst the old Etruscan *haruspices*; and children are specially guarded against the evil eye of passing strangers. Much dancing accompanies all festive gatherings, which would appear to have a sacred character, since they wind up, if possible, with a human sacrifice, the victim being obtained by raiding a neighbouring island. The *sinétu* (fiends) are of course the root of all evil, and when they are appealed to in the woodlands which they infest, they are supposed to reply in the thin squeaking voice of an old man (Von Rosenberg, i. *passim*).

Most of the other Sumatrans, and all the Javanese, formerly Buddhists and Brāhmans, have been Muhammadans since about the close of the 15th cent.; but the new religion is merely lip service, a threadbare cloak thrown over the still fresh garb of Hinduism, which itself barely conceals the everlasting vesture of pagan times. Here, therefore, and especially in Java, we have three religious systems intermingled, or rather superimposed one on the other (cf. art. ABORIGINES, § 5). Hindu blood still flows in the veins of the Javanese nobility, such as the 'Emperor' of Solo (Surakarta), and the Prince of Jokjokarta, while the triumphs of Hindu architecture are still everywhere conspicuous, as on the Batta and Padang uplands of Sumatra, even in Bali and Sumbawa, and culminate in the stupendous temple of Boro-budur in Central Java. Hence it is not perhaps surprising that the early Indian religious and moral notions still survive and display a more vigorous growth than the arid teachings of Islām. The Qur'ānic texts may be daily read in the tasteless mosques, but in serious trouble Allāh and his Prophet are forgotten, and resort is had to the ancient shrines, where sacrifices and prayers are still offered to the old Hindu deities. Even the primeval tree-cult is kept alive, the chief objects of veneration being various species of the fig-tree, such as the pipal (*Ficus religiosa*) and *F. benjamina*. Beneath the shade of these wide-branching giants the natives often gather to worship the old earth-gods, for whose long-forgotten names those of the Hindu pantheon are substituted. Respect is also paid to the turtle-doves and to the monkeys (*Cercopithecus* and *Somnopithecus*) which have their homes in the branches of the sacred pipal-tree, and even to certain strangely shaped blocks and rocks, carrying the mind back to the stone-cult of primeval times (E. Carthaus, in *Kölnische Zeit.*, Aug. 26, 1906).

Hinduism still holds its ground in Bali and parts of Lombok, but is here also associated with many old superstitions, so that these islands present the strange spectacle of large Hindu communities professing every form of belief, from the grossest heathendom to pure pantheism. It is everywhere evident enough that 'just as Hinduism has only touched the outer surface of their religion, it has failed to penetrate into their social institutions, which, like their gods, originate from the time when Polynesian [Indonesian] heathendom was all-powerful' (W. Cool, *With the Dutch in the East*, p. 139).

A local myth relates how these gods established themselves in Bali after their expulsion from Java by the Muslim invaders in the 15th century. They had first to contend with the wicked Rakshasas, who fiercely resented the intrusion, but in the struggle were annihilated, all but the still worshipped Mraya Dewana. Then new thrones for the Olympians had to be erected as in Java; but there being no mountains at that time in Bali, the four nearest hills in East Java were brought over and set down in the east, west, north, and south, and assigned to the different gods according to their respective ranks.

Hinduism never made much progress in Borneo; nor has Islām anywhere penetrated much beyond the seaboard, so that the great bulk of the Dayaks, Kayans, and other aborigines are still pagans. Head-hunting, cannibalism, and human sacrifices, attended with shocking barbarities, are being slowly repressed by the British and Dutch authorities; but the Muslim and Christian propagandists appear to make little headway amongst the heathen tribes of the interior. All are still in the wild state, and the whole island has not inaptly been described as '300,000 square miles of savagery.' As in Africa, the human sacrifices, formerly universal, were the direct outcome of the prevalent ancestor-worship, the ostensible motive being to dispatch messages to dead relatives, or to honour them by these sanguinary rites. For this purpose a slave was tied up and bound round with cloths, and then, 'after some preliminary dancing and singing, one after another would stick a spear a little way—an inch or so—into his body, each one sending a message to his deceased friend as he did so' (W. B. Pryer, *JAI*, 1886, xvi. 234). The wicked, however, cannot receive their messages, since they are doomed, Sisyphus-like, to be everlastingly clambering up the rugged slopes of Kina Balu, the highest peak in Borneo (nearly 14,000 feet). The good, that is, those who have collected most human heads in this world for provision in the next, easily reach the top, whence they are ushered into heaven. But in other places, where the mountains are not so high, even the elect have to overcome many obstacles during their long wanderings up hill and down dale, across rivers, through fire and water, until 'at last they are safely landed in the heaven of their tribe' (C. Bock, *Headhunters of Borneo*, p. 223).

Dr. W. H. Furness describes the Borneans as 'savages of a high order,' without 'any definite forms of religious worship,' although they make 'wooden idols,' regarded apparently as mere 'scarecrows to frighten off evil spirits' (*Folklore in Borneo*, p. 4). They are 'saturated with superstitions; every pool, every tree, every rock is the home of an evil spirit, and all mysterious noises in the forest are ghostly whisperings. Everywhere are signs and omens to warn man of danger, or direct his course,' and the mountains are so infested with *antu* (demons) that 'the summits can be gained only at the risk of body, and, still worse, of soul' (*ib.* p. 6). Head-hunting 'is part of their religion; no house is blest which is not sanctified by a row of human skulls, and no man can hope to attain to the happy region of *Apo Leggan* unless he, or some relative of his, has added a head to the household collection' (p. 14). The practice is explained by the myth of the great chief *Tokong*, who when on a raid was told by *Kop*, the frog, to carry off the heads of the enemy. Having done so, the war party retreated quickly to the river

down which they had come. After they had again embarked, the current of the stream was, for their sakes, reversed, and like a flash they were carried up-stream to their homes. During their short absence the rice crop had ripened, the sick were all well again, the lame could walk and the blind see; so they ever afterwards observed the custom that Kop had taught them (p. 15). In the Kayan cosmogony there was at first nothing but sky and water, when a huge rock fell from the heavens, and rising above the surface was covered with soil by the action of the little *halang* worms. Then from the sun was dropped the wooden handle of a big sword, which, taking root in the soil, grew to a great tree, with branches spreading over all the new land, and this was followed by a rope-like vine from the moon, which also took root and twined round the tree. Now the vine became the husband of the tree, which gave birth to a male and a female, from whose union are sprung the Kayans and all the other Bornean tribes, and lastly Tokong, father of head-hunting. At first they were only half-human, with head, chest, and arms, but no legs, so that they had to crawl along the ground by their arms, an idea perhaps suggested by the octopus, which plays such a large part in the Oceanic mythologies (pp. 7-9). The Kayan Hades is not in the sky but underground, and, like the Greek Hades, has its Charon and its Styx, a deep wide ditch swarming with worms, and crossed, not by a ferry, but by a fallen tree-trunk which is guarded by the great demon *Maligang*. By him all comers are challenged, and if they have no record of bravery, no store of captured heads, the tree-trunk is shaken until they fall into the ditch, to be tortured for ever by the worm that dieth not. But there are 'many mansions,' as for those dying a violent death, or on the battlefield; for mothers dying in child-birth, or for suicides. In *Apo Leggan*, one of the chief divisions, dwell those dying of sickness or old age, and these 'have much the same lot as they had in this world; the poor remain poor, and the rich maintain their rich estate' (p. 16).

In Malacca the dominant Malays are all nominal Muhammadans; but here, as elsewhere in the Malay world, the cloak of religion is a very loose garment which covers a multitude of primeval rags and tatters. These were never touched or repaired by Brāhman or Buddhist, who appear to have got no farther than *Singapore*, the 'Lion City' over against the mainland. Hence Islām is here directly superimposed on the old heathendom, which it has barely penetrated a little below the surface. Raja Dris, himself a Musalmān, tells us that the people of Perak are still specially noted for many strange customs and superstitions 'utterly opposed to Muhammadan teaching, and savouring strongly of devil-worship. . . . An enormous belief in the supernatural is possibly a relic of the pre-Islām state' (*JAI*, 1886, xvi. 227). One is here reminded, however, that even the Arabs, if they do not worship the devil, still pelt him with stones at Muna near Mecca 'in the name of Allāh.' Referring to the Malays generally, Miss Bird (Mrs. Bishop) wishes that 'it were possible to know to what extent they are a *religious* people as Muslims. That they are bigots and have successfully resisted all attempts to convert them to Christianity there is no doubt, as well as that they are ignorant and grossly superstitious' (*Golden Chersonese*, Lond. 1883, p. 361). Elsewhere (p. 314) she tells us that 'buffaloes are sacrificed on religious occasions, and at the births, circumcisions, marriages, and shaving of the heads of the children of wealthy people. The buffalo sacrificed for religious purposes must be always without blemish. Its bones must not be broken after death, neither must its horns be used for common purposes. It is slain near the mosque with solemn sacrificial ceremonies, and one half is usually cooked and eaten on the spot by the "parishioners."'

But the most striking survival from pagan times is the universal belief in the wer-wolf superstition, which here of course takes the form of the wer-tiger. In Borneo there are wooden idols of tigers with indwelling souls (C. Bock, *op. cit.* p. 226). But in the Malay lands the tiger himself is worshipped, and the belief that men assume his form at night is inextinguishable. H. Clifford remarks that—

'In the Malay Peninsula we live in the Middle Ages. Magic and evil spirits, witchcraft and sorcery, spells and love-potions, charms and incantations are as real and as much a matter of everyday life as are the miracle of the growing rice and the mysteries of the reproduction of species. Tales of the marvellous and the supernatural excite interest and fear in the Malay, but they occasion no surprise. Every Malay knows that strange things have happened in the past, and are daily occurring to them and to their fellows. Thus the existence of the Malayan Loup Garou to the native mind is a fact and not a mere belief. The Malay *knows* that it is true' (*op. cit.* p. 65).

Then follows a wer-tiger story which for vividness and intense horror could scarcely be surpassed. For details, see art. LYCANTHROPY; and for prevalent religious notions in Minahassa and other parts of Celebes, see art. AIR.

Even magic, which becomes gradually divorced from the religions of more advanced peoples, is still interwoven with the beliefs and practices of the Malayan Muhammadans. In his *Malay Magic* (p. 60) W. Skeat tells us that one of the ways by which the Malays 'get magic' is to run against the ghost of a murdered man. As this is not easy, a mystic ceremony must be performed at the grave on a Tuesday at full moon, when the person needing help conjures the departed spirit and states his request. After a time an aged man appears, and to him the request is repeated, and is supposed to be ultimately granted. The magic here in question appears to be what is elsewhere called *mana* (Melanesians), *wakanda* (Dakotans), *orenda* (Iroquoians), *arungquiltha* (Aruntas), and by other names. It colours all primitive beliefs, from which it is inseparable, although by some recent theorists it has been regarded as something apart from religion.

A link between the Malayan and Papuan domains was discovered by Wallace in the island of Jilolo (Halmahera), whose 'Alfuro' inhabitants 'are radically distinct from all the Malay races. Their stature and their features, as well as their disposition and habits, are almost the same as those of the Papuans; their hair is semi-Papuan, neither straight, smooth and glossy, like all true Malays, nor so frizzly and woolly as the perfect Papuan type, but always crisp, waved, and rough, such as often occurs among the true Papuans, but never among the Malays' (*op. cit.* p. 316). The term *Alfuro* applied to these aborigines has no ethnical value, being the general Malay designation of the uncultured non-Muslim peoples in the eastern parts of Malaysia.

From them the transition is easy to New Guinea, the home of the true *Papuans*, on whose religious views much light has been thrown in recent years. In the western parts, subject to Holland as far as 140° E., prevalent features are pure demonolatry and the worship of ancestors represented by the so-called wooden *karwar* effigies of the dead, fashioned by the wizards. In the Sekar district, lately visited by J. S. A. van Dissel, scraps of food, tobacco, and sugar-cane are scattered about wherever goblins are suspected to be lurking. Here the arch-fiends are the so-called *Atitigi*, gigantic monsters of white colour, with an eye in front and another behind, six fingers on each hand, and the right index finger furnished with a very

ong sharp nail. They dwell in underground caves, and hunt down mortals, whom they eat if the flesh is found to their taste. To test the quality, a piece of the flesh is first scooped out with the long finger-nail, and if palatable the victim is roasted and eaten, but otherwise is allowed to go free. These supernatural beings are vulnerable only in the eye-sockets. Here the tabu marks (*kèra-kèra*)—leaves, rags, shells, bast, and the like, with a painted male figure attached to a post sunk in the ground—are very effective, since their violation would bring on not only the vengeance of the owner, but also the wrath of the presiding deity, causing illness and death (W. Foy, *loc. cit.* p. 305).

Dr. A. B. Meyer has made a careful study of the above-mentioned *karwars*, which are met with among the *Mafors* (not *Nufors*) of the North-West Coast, and appear to be real idols, not merely ornaments or emblems, as is often asserted. He calls them *Ahnenbilder*, 'ancestral effigies.'
